BASS STRING: The lowest string on the viols and the unfingered strings of the lutes. From the circumstance that the bass string produced the lowest note that was obtainable on a viol, Shakespeare took the metaphor: "I have sounded the very base-string of humility" (*I Henry IV*, II, 4).

BASSUS: The bass-part in old polyphonic music was often given the Latin form of the name, *bassus*.

BASS VIOL. *v.* VIOLS.

BEAR A PART: A common expression in Elizabethan and Stuart England meaning "to play an instrument in a consort," or "take part in a polyphonic vocal-composition." It was a figure of speech in everyday use in an age when playing and singing correctly at sight were two of the indispensable virtues of the cultured members of society. That celebrated pamphlet of Roger L'Estrange (enthusiastic amateur gambist and Licensor of the Press), *Truth and Loyalty Vindicated*, 1662, contains a typical example of the use to which the phrase was put: "I . . . found a Private company of some five or six Persons. They desired me to take up a Viole, and bear a Part."

BEAT: An ornament like a reversed Backfall. John Playford (*Introduction to the Skill of Musick*) explains it thus:

Written: Performed:

Christopher Simpson (*Division-Violist*, 1659) gives "Plain-Beat" and "Rise" as synonymous terms.

A more elaborate variety of the Beat was the Shaked Beat, given by the same two authorities as follows:

Written: Performed:

BEGGAR'S OPERA. *v.* BALLAD OPERA.

BERGOMASK: Why Shakespeare should make Bottom offer

the Duke “ a Bergomask dance between two of our Company ” (*Midsummer Night's Dream*, V, 1) would be difficult to explain did we not know something of its early history. It was a dance-form of a rustic nature, and originated among the peasants of that part of Lombardy which had Bergamo for centre. These peasants had the reputation—whether deserved or not, I cannot say—for being the most unsophisticated people known; and this probably explains Shakespeare's direction in the scene already mentioned: “ Here a dance of Clowns.”

The form seems to have had its inception in a song peculiar to the district, and which was used to accompany the dance it named. Two specimens of such airs are contained in the *Villote del Fiore* (Bk. III, 1569) of Filippo Azzajuoli, words and music being given. Uccellini's Two and Three-Part Sonatas (1642) give the Bergomask as an instrumental piece. Here it appears that the tune has been taken as a Ground, labelled “ Aria sopra la Bergamasca,” and supplied with a number of variations over a *basso ostinato*.

As a dance the Bergomask consisted of an even number of measures, generally multiples of four, and, according to most authorities, in 2/4 time. Variations in the time-signature may have existed, but two beats to the measure seems to have been the commonest indication. The example written by Piatti, the celebrated violoncellist, himself a native of Bergamo, is usually accepted as being typical of the orthodox form, though its time-signature is 6/8. Mendelssohn, writing the music for the “ dance of clowns ” in *Midsummer Night's Dream*, gives it a different form and treats it with poetic freedom.

The circumstance that the Bergomask was not used at Court in any country may account for the paucity of examples printed; but as absolute music for the lutes and viols, it enjoyed a certain vogue for a time. Used in the country of its origin it was most probably danced to traditional tunes that may never have been written down. A specimen “ Bergamasco ” in lute tablature is given in J. B. Besarde's *Thesaurus Harmonicus* (1603), and reprinted in modern notation by Dr. O. Chilesotti (Ricordi, 1886).

B-FA. }
B-MI. } v. CLIFF, FLAT, and SHARP.

BOMBARD, BOMBARDE : A wood-wind instrument of conical bore, played with a double reed, and the bass of the shalm, or early oboe, family. This instrument was identical with the Continental *bass-pommer*, but should be kept distinct from the modern brass instrument with valves called Bombardon. The wooden bombarde is of great antiquity, and is found illustrated almost as early as any of the shalms. In Gower's *Confessio Amantis* (end of the Fourteenth Century, VIII, l. 2481, 2) there is a reference to it :

In such acord and such a soun
Of bombard and of clarion,

and in the *Squyr of Lowe Degre* (l. 1072) the "Bumbarde" is mentioned. It should be noted that on the Continent the word Bomhart or Pommer was applied to several members of the shalm family, each distinguished by a prefix indicating the pitch ; even the shalm was occasionally called the Bombardino (*v. also* SHALM).

BORE : A dance that attained to great popularity in England. There can be no doubt that the statement of Hawkins—"the Bourrée seldom occurs but in compositions of French masters"—has misled a great many readers. The fact is that a large number of Bourrées, or Bores as they were more generally called here, can be cited, composed both before and after the date at which Hawkins wrote. Some of them, it is true, were but reprints of foreign examples, but as soon as the dance became better known the native musicians speedily supplied original music for it. Musically the Bore usually consisted of the common form containing two repeated sections of four or a multiple of four measures each, and marked with a *caesura* every two measures to adapt it to the steps of the dance. Its rhythm was dactylic (an accented crotchet followed by two quavers), and the first and third beats of each measure received marked stress. Altogether the accentuation was rather vehement, assisted as it was by the stamping of sabotéd feet. According to the almost common rule, the dance was frequently accompanied by voices, and in general it may be said that the form was originally a very gay one, eminently suited to rustic sports. That the Bore ever became a fashionable dance abroad is very doubtful, although later in its history society dancing-masters published chorography for it.

Its popularity in England began at the middle of the Seventeenth Century, and three specimens of it are to be seen in John Playford's *Musick's Delight on the Cithren* (1666), called "Bore," "Boree," and "The Running Boore," the last-named being reprinted in the same publisher's *Musick's Hand-Maide* (1678). By the end of the century a large number of French specimens had been imported, and many of them were included in the "French dances used at Court, and in the Dancing Schools," given by Playford in his *Apollo's Banquet* (1690). It was at about this period that the English composers began to imitate the French productions, and soon a large number were available for use. Typical examples of the form at that period in England are given by Humphrey Salter in his *Genteel Companion for the Recorder* (1683), one called "Mr. Farmer's Borey." A printed book in the British Museum (K. 1, c. 5) contains a "Borry" in manuscript by Henry Purcell. It persisted until the Eighteenth Century, being mentioned by Swift: "From thence came all those monstrous stories that to his lays, wild beasts danc'd borees" (*Ovidiana*). Tomlinson described it in 1726 and gave the steps for it. Even when the dance itself fell out of favour, the *pas de bourrée* remained for use in other dances. Handel often uses the name, and *arie* of his are to be found headed *Tempo de Bourrée*. Its eclipse as a dance did not cause the complete disappearance of the form, for it was still used as an instrumental piece in the Suite, where it occupied the place between the Saraband and Jig usually filled by the guests of the Partita (the *Intermezzi*).

The Bore is generally accepted as a native of the Auvergne, though Taubert, and after him, F. L. Schubert, thought the Spanish province of Biscaya to have been the birthplace of the form. The earliest examples I have been able to trace come from the French province, although the possibility remains, of course, that it was evolved from an earlier Biscayan dance. Both may conceivably have had a common origin in one of the forms of the Branle (*q.v.*), or in one of the local modifications of that dance. In any case, the Bourrée was still being danced in the Auvergne when Rousseau wrote his *Dictionary of Music* in 1764, and De Felice his *Encyclopedia* in 1770. Later writers assert that in Central and South France the form is used at the present day, but how far the old

traditions connected with it have been preserved, I cannot determine.

The vigorous character and forceful rhythm of the Bourrée caused it to be used very frequently in the French opera, more as incidental music than specifically for dancing. Lully's ballets and operas contain it very often, and Marais, Destouches, and Rameau all welcomed it in their works.

Taken into the German suite towards the end of the Seventeenth Century, the Bourrée was naturally treated with greater freedom than was the case when it was written for dancing. Some writers, while using the rhythm of the form, entirely forgot its dance-origin. The *Florilegium Primum* (1695) of Georg Muffat contains a Bourrée in each of six suites, all in regular form ; while the second series of Suites by the same composer (1698) gives another two, one of them an imitation of a French example. In these works, too, we meet with the phrase *Tempo di Borea*, showing that the dance had been so far accepted as to cause the rhythm and movement to be applied to other pieces. Johann Krieger (1697), Niedt (1706), and Johann Mattheson, followed, and the form became thoroughly naturalised in Germany. Bach's use of it proves how much the form had been developed on the Continent, and some of his examples are typical of the manner in which the great Cantor of Leipzig used the ancient dance-forms. In its final development, as exemplified in Bach's work, the Bourrée consisted of Bourrée I, followed by Bourrée II, and closed with Bourrée I da Capo. The Italians also used the form, though in not nearly so popular a manner as the English did, nor in so dignified a way as the Germans. G. B. Vitali (*Balli in Stile Francese*, 1685) and Corelli (*Opera Quarta*, 1692) may serve as typical writers of the Italian "Borea"—although the former frankly imitated the French style.

BOREA *v.* BORE.

BOREE. *v.* BORE.

BRALL. *v.* BRANLE.

BRANLE : A French dance-form, much in favour during the Sixteenth and Seventeenth Centuries, especially in England, and one of the ancestors of musical form. The name was derived from the French *branler*, to sway, and no doubt the form itself took origin in one of the uses of the Bassedanse, in

which the movement of the body may have named the dance. This Bassedanse seems to have been the progenitor of practically all the European dances, and having been evolved so early in the history of music, we cannot be astonished if we find a lack of consistency in its form. Whatever the reason—whether terpsichorean or other—the fact remains that the Bassedanse of the early Sixteenth Century was often to be found written in duple and triple time, the choice being apparently left to the whim of the dancer, who frequently changed from one measure to the other, according to the steps of his dance. This question of the early dances *à double emploi* is a very interesting one. But to return to the Branle. Evolved and developed in France, we find it mentioned there as early as 1529 (Antonius de Arena), and in 1588 Jean Tabourot (Thoinot Arbeau) gave a good deal of information concerning it in his *Orchésographie*. According to most descriptions it was danced in a circle as a round-dance, and was called by Rousseau, Furetière, and other French lexicographers an *air en Rondeau*. Like most of the ancient dances, the Branle was sung as well as danced, was of gay character, moderate tempo, and, latterly at any rate, of duple measure. Examples in triple time are not unknown; notably Mersenne (*Harmonie Universelle*, 1636) gives specimens in 3/2, but by then the form had been widened into a sort of ballet, and between these triple Branles and the triple form the dance had very early in its history there can be no connection. The reigns of Louis XIII and XIV saw the Branle in universal use. At court the form became a dance of ceremony, and for some time it served to open every ball of importance.

Germany and Italy did not seem much attracted towards the dance, but England received it with open arms. Modified to suit the Elizabethan taste, the Branle, more often called Brawl, attained to such favour as it had perhaps not known even in the country of its origin. Its introduction into England must have taken place before the middle of the Sixteenth Century, for David Lindsay's play *Diligence* (1540) mentions it in the epilogue: "Minstrel, blow up one Brawl of France. Let's see who hobbles best." Thence onwards it grew in popularity, until we find it mentioned in the works of our famous writers in a way which suggests that the word must have become household property. Spenser alludes to the form

in the *Faerie Queene*, and Shakespeare (*Love's Labour's Lost*, III, 1) could not overlook so beloved a diversion : " Master, will you win your love with a French Brawl."

The changing of the ruling house did not affect the Branle's popularity. In 1607 Sir John Davies refers to it in his *Orchestra* : " Whereof a thousand brauls he doth compound," and John Day, in *Humour Out of Breath* (1608, II, 2) has : " Love's nothing but . . . a French brawl." It is quite possible that in Stuart times the Branle had grown into a sort of pantomimic diversion, for we find Philip Massinger (1629, *The Picture*, II, 2) saying : " 'Tis a French brawl, an apish imitation of what you really perform in battle."

James I and Charles I used the Branle a good deal at the court in Whitehall, and after the Restoration it was revived by Charles II. Samuel Pepys, after gracing Whitehall with his gossiping presence on December 31, 1662, went home and wrote in his *Diary* : " By and by, comes the King and Queen, the Duke and Duchess, and all the great ones : and after seating themselves, the King takes out the Duchess of York ; and the Duke, the Duchess of Buckingham ; the Duke of Monmouth, my Lady Castlemaine, and so other lords other ladies ; and they danced the Brantle." On November 15, 1666, the diarist entered as follows : " I also to the ball. . . . Presently after the King was come in, he took the Queen, and about fourteen more couple there was, and begun the Bransles." It is a peculiar circumstance that the Branle, as a dance, outlived by a good many years, its own offspring.

BRANSLE. }
BRAWL. } v. BRANLE.

BREAKING THE GROUND : Christopher Simpson, in his *Division-Violist* (1659), speaks of " Breaking the Ground " and defines the phrase as " dividing its notes into more diminutive notes." He also gives, at some length, an account of the differences between Breaking the Ground and Descanting upon a Ground (v. Descant). Thomas Campion, in his little treatise on *The Art of Descant, or Composing Musick in Parts* (1674 ed.), says : " Moreover, it is to be observed ; that in composing of the Bass, you may break it at your pleasure."

BREVE : The name of a note now but very rarely used, and when employed is the longest note of the series, being equal to

two semibreves. In ancient (mensurable) music the value of the Breve varied according to the Time of the composition ; being equal to two semibreves in “ imperfect time ” and three in “ perfect time.” As its name implies, the breve was looked upon as a short note ; a legacy of the early days when only two sorts of note were employed—a long and a short. In the era of mensurable music the Breve was the recognised standard of measurement ; it was called a *Tempus*, and was considered the shortest time in which the voice could develop a full tone (*minimum tempus in quo potest formari plenitudo vocis*, Marchettus of Padua ; and Franco of Cologne says the same in slightly different words).

In transcribing old manuscripts it will be well to remember that the breve written black had a different value from the same note white (*i.e.* written in outline). The difference lay in the circumstance that a change from black to white notes indicated a change of measure from triple to duple, and *vice versa*, the blackening of the breve reducing its value commensurately. This use of the black and white notes dates from the turn of the Fourteenth to the Fifteenth Century ; previously the breve were written black only. John Playford (*Introduction to the Skill of Musick*) probably alludes to this when he says that “ swifter Triple Time is sometimes prick’d in Black Notes,” and although no change of rhythm was understood, the idea of writing a rapid semibreve or minim black, may have been derived from the older custom. The Breve was written as follows :

(*v.* MOOD, TIME, and PROPORTION).

BROKEN MUSIC : A term with many uses and meanings. Shakespeare, in *Henry V* (V, 2), says : “ Come, your answer in broken music ” ; and in *Troilus and Cressida* (III, 1) : “ Fair prince, here is good broken music.” In such cases, “ broken music ” means music in parts. But it can also mean the sounding together of instruments belonging to different families. In the Lord Chamberlain’s Record we read of a violinist engaged to perform in the “ broken consort ” (Vol. 477,

June 16, 1660), and in an entry under date October 16, 1660, we have the phrase again. Here it no doubt meant a consort which included instruments of different categories, such as viols and lutes, strings and wind. Francis, Lord Bacon (*Essay of Masques and Triumphs*), has: "I understand it that the song be . . . accompanied with some broken music," *i.e.* supported by an instrumental accompaniment. The term was also applied to such instruments as harps, guitars, lutes, *etc.*, which could not sustain their notes, and on which the chords had to be "broken."

BUMBARDE. *v.* BOMBARD.

BURDEN: The "burden" of a song was a recurring refrain, sung generally in chorus, at the end of each verse and sometimes at the close of every line. Occasionally the burden was an intelligible motto or phrase, but more often it was composed of nonsense syllables such as "Hey, trolly, lolly," mentioned in *Piers Plowman*. Coverdale, in his "Address to the Christian Reader," prefaced to his *Goastly Psalmes and Spirituall Songes* (1538), says: ". . . they should be better occupied than with 'Hey, nonny, nonny,' 'Hey, trolly, lolly,' and such like fantasies." In Stuart times the burden was reduced to a simple *Fa-la-la* or something like it. Shakespeare, in *Much Ado About Nothing* (III, 4), uses the term: "Clap us into the 'Light o' Love,' that goes without a burden; do you sing it and I'll dance it."

Etymologically the term has nothing to do with the word meaning anything borne, but is from the French *Bourdon* (Late Latin, *Burdo*, a drone bee), the drone of the bagpipe, or the held bass. A continuous, droning pedal-note, like an undercurrent, was called a *bourdon* (as was one of the organ-stops), and from this the insistent burden of the song was named.

Shakespeare employs the term "Holding" in a similar sense in *Antony and Cleopatra* (II, 7):

Make a battery to our ears with the loud music;
The while I'll place you; then the boy shall sing;
The Holding every man shall bear as loud
As his strong sides can volley,

unless he uses the word in place of "Hold" (*q.v.*), and intends that all present shall join in at the close. Ben Jonson's use of

the word Burden is characteristic : “ I will have a canzonet made, with nothing in it but sirrah ; and the burthen shall be, I come ” (*Cynthia's Revels*, IV, 1).

BYSSYNGE SONGES : Very early English cradle-songs or lullabies. The name is to be derived from *Bissyn*, to lull children to sleep (Halliwell, *Dictionary of Archaic Words*, 1847 ; citing the *Promptorium Parvulorum* with the variants Byszyne and Byssynge).

CADENT : A Seventeenth-century ornament used to bridge the space between two descending notes and leading to a close by anticipating the closing note. Although musically and etymologically allied to “ Cadence,” the Cadent must not be confounded with the word still in use. Playford gives the sign for, and the manner of performing, the ornament as follows :

Written: Performed: .

The Cadent could also be “ Shaked ” in the following way :

Written: Performed:

CANARY : A dance-form in jig-rhythm that became very popular in England and which is frequently mentioned by the writers of the Sixteenth and Seventeenth Centuries in a way that suggests it to have been in common use. After much research in this subject I am inclined to think that musically the Canary was little more than a jig (*q.v.*), and that the reason for the special name lay in some difference in the dance. Shakespeare’s “ . . . but to jig off a tune at the tongue’s end, Canary to it with your feet ” (*Love’s Labour’s Lost*, 1588, III, 1), seems to support this theory. In *All’s Well that Ends Well* (II, 1) we have the form mentioned again :

I have seen a med’cine
That’s able to breathe life into a stone,
Quicken a rock, and make you dance Canary
With spritely fire and motion . . .

Fletcher's *Bloody Brother* (1639, II, 2) gives the dance with a quaint conceit :

I'll make you a dish of calves' feet dance the Canaries
And a Consort of Cramm'd capons fiddle to 'em.

Literary mention of the form, then, is fairly early compared with the dates of the Canary abroad ; yet early specimens of the music are very rare. Though examples of the dance are to be found in the Eighteenth Century, there are none in the Fitzwilliam Virginal Book, or in the Virginal Books of Lady Nevell, Will Forster, and Benjamin Cosyn. My conjecture is that the Canary could be danced to any jig-tune, and that, as I have already said, the differences between the two forms were terpsichorean differences only. After the Restoration of Charles II we meet with music labelled "Canaries" ; but it was at a period when foreign names for all things in art were fashionable. It is quite possible that under the old *régime* thees Canaries may have passed as jigs. Thus only can I explain the peculiar circumstance that the form in England should be so frequently mentioned in our literature and so seldom contained in our music-books of equal date. Specimens of the Seventeenth-century Canary are in Playford's *Musick's Hand-Maide* (1663) and in the sixth edition of *Apollo's Banquet* (1690). No. 1 of the latter work is called "The New Canaries" ; and in *Part III* of the same work is to be seen a short suite consisting of "The Princess-Bore (*q.v.*)—Saraband (*q.v.*)—and Canaries." John Stafford Smith printed in his *Musica Antiqua*, 1812, the Canaries from Tabourot's *Orchèsographie* (1588), and also Purcell's Canary from *Dioclesian* (*c.* 1691). As a dance for the ball-room, with prearranged steps, it is given by Tomlinson in 1735, but such an appearance of the form cannot be looked upon as historical ; and the existence of a set dance of this kind need not prove that the Canary lived until then, or even show that it had anything in common with its Sixteenth-century namesake.

The place of origin of the dance is not quite certain, though within narrow geographical limits it can be defined closely enough to serve our purpose. The name is obviously derived from the Canary Isles, and the Spanish influence seems strong upon it. Leo's *Description of Africa* (translated by Pory in 1600) has : "They were and are at this day delighted with a

kind of dance which they use also in Spain, and in other places, and because it took origin from there, it is called the Canaries." Pineda's Spanish-English Dictionary of 1740 defines *el canario* as the name of an "old Spanish dance," and Halliwell's statement that the castanets sometimes accompanied it, helps to give colour to the assertion. Moreover, the rhythm of the Seventeenth-century Canary as it appears in a specimen given by F. L. Schubert (*Die Tanzmusik*, 1867), again points to Spain, especially in the last measure of the example :

Halliwell no doubt obtained his information concerning the castanets from Florio's Italian Dictionary of 1598, which gives *Castagnette* as "little shells, such as they use that daunce the Canaries."

On the Continent the form is to be met with very frequently, especially in France ; but a detailed account of specimens need not occupy space here, since they differ very little, if at all, in rhythm, measure, or character, from the jig or gigue.

CANTUS : In the older part-writing, the name given to the upper voice, generally that performing the melody. In the two-part harmony of the Twelfth Century this upper part, written above the Tenor (*Cantus firmus*) was known as the *Discantus*. It should, however, be remembered that the English term "treble" should not—in the majority of cases—be applied as a synonym for either Cantus or Discantus, for this voice takes the place of the ancient *Triplum*, which was the third voice above the *Cantus firmus* in medieval three-part compositions.

CANZONET : A little song. A popular form of composition taken from the Italian Canzonetta. The word was frequently used in England, Shakespeare having it in *Love's Labour's Lost*, and Ben Jonson in *Cynthia's Revels* ("I will have a Canzonet made, with nothing in it but sirrah," IV, 1). Towards the end of the Sixteenth Century a large number of books containing Canzonets appeared, but Morley's *First Booke of*

Canzonets to Two Voices (1595) may serve as an example. Half a dozen numbers from this book may now be seen in a modern reprint, a little over-barred perhaps, but otherwise excellent and useful (Curwen, edited by Sydney Grew).

CARMAN'S WHISTLE: A term frequently used in Elizabethan and Stuart music-books, having its origin in the circumstance that the carmen of that period enjoyed a reputation for musicianship and whistled all the tunes they heard. Shakespeare makes Falstaff say of Shallow, ". . . sang the tunes he heard the carmen whistle, and sware they were his fancies (*q.v.*) and his good nights " (II *Henry IV*, 3). Ben Jonson in *Bartholomew Fair* (I, 1) also alludes to it: "I dare not let him walk alone, for fear of learning of vile tunes, which he will sing at supper, and in the sermon-times! If he meet but a carman in the street, and I find him not talk to keep him off on him, he will whistle him and all his tunes over at night in his sleep!" A tune called the "Carman's Whistle," very popular in its day, is given in the Fitzwilliam Virginal Book, and also in *My Lady Nevell's Virginal Book* (1591), both harmonised by William Byrd.

CAROL: A song, the text of which was in some way connected with Christmas or the Nativity; a part of the ancient Miracle-Play; a jovial drinking-song; a dance in the nature of the German *Reigen* or the French *Branle*;—all these things the Carol has been in turn. The name, coming through Old French *Carole*, a dance, and later French *Carolle*, "a sort of dance wherein many danced together" (Cotgrave, French Dictionary, 1660), from the Late Latin *Choraula*, a side-form of *Choraulēs*, the flute-player who accompanied the chorus-dance—was first undoubtedly applied to a dance of the Rondo type. How old this dance is, it would be almost impossible to guess, for it has been used in the Miracle and Mystery Play for nearly a millennium, and the verb "to carol" by our most ancient writers. The possible derivation of the word from the Breton *koroll* need not influence the other etymology in the slightest, for both can easily be from the same source; at all events, the Breton word, like the one of Romance origin, meant a round-dance. It is quite conceivable that this round-dance (German, *umme-genden Tantz*; Norman *karole*) was the very germ of all artistic dancing, since it was not the

spontaneous tumbling of irresponsible savages, but the outcome of a premeditated plan.

Accompanied by voices as well as by instruments—sharing this peculiarity with many of the old dance-forms—the carollers stepped round in a circle, holding hands. This dance naturally soon gave its name to the song which accompanied it, and the word Carol was, in England at any rate, applied indiscriminately to both. In Fourteenth- and early Fifteenth-century England, carolling meant singing as well as dancing,—but a subtle distinction was made between carolling and dancing. France observed a similar distinction between *caroller* and *danser*, as did Germany between *reihen* and *tanzen*—in each case the former being less lively than the latter, and indicating a stepping round rather than leaping. “Faire is carole of Maide gent,” we read in *King Alisaunder* (after 1300 ; Weber’s *Metrical Romances*, 1810, l. 1845), and also, in the same work : “There was maiden es carolyng.”

It was no uncommon thing for dancing to be used in the religious services of ancient times, and the dance was admitted on occasion even into the ceremonial of the Christian Church. This being so, no surprise need be expressed at the finding of the Carol incorporated in the mysteries performed within the walls of the churches themselves. Although there were carols set to words appropriate to most seasons of the year—such as summer carols in Wales and winter carols in England ; Easter carols in addition to Christmas carols—the application of the name soon became limited to those songs which made the Nativity their theme. At one time roistering drinking-songs were written to well-known carol tunes, and although later on the form became more reverent, the carol never ceased to be half-secular and essentially the property of the masses. A distinction was ever drawn between the Christmas hymn and the Christmas carol—as if the terpsichorean origin of the latter were just sufficient to deprive it of the highest honours—and while the former was more serious and devotional in the words, and grave and solemn in its music, the latter was always more rhythmical, more joyous, and often quite worldly. It was nothing unusual for the congregation to trip home carolling all the way after having sung the prescribed Christmas hymns within the church. It may therefore not be too much to say that the carol has kept a devotional spirit

alive in masses of people who might never have been influenced by the hymn which, although of deeper meaning, was harder to understand and feel.

One of the oldest English carols traceable is preserved in the British Museum and dates from the Thirteenth Century, but earlier uses of the form can be shown, for it was given in the Miracle plays performed at Christmastide during the reign of Henry II (c. 1170). This song and dance, performed before the manglers erected in the churches, probably constituted the first step towards limiting the carol to Christmas. Many authorities suggest that the Christmas carol, like the holly and mistletoe, was the survival of some heathen custom ; but I think we need go no farther afield than the popular dance for its origin. If ever there was a product of the Middle Ages, it was the carol, song and dance ; and very few things, taken by themselves, reflect so thoroughly and so faithfully the medieval spirit.

CATCH : A canon for three or more voices, so constructed that a great deal of skill was necessary for each voice to " catch " up his part at the right point. This was rendered more difficult by the circumstance that the composition was at first written out in a continuous strain, with little indication as to where each part should enter. Later, however, signs were given to assist the singers. A further development lay in writing the text in such a way that the various entries caused very amusing word-combinations, but often of a suggestive and indecent character. Indeed, some of the best specimens of this class of composition have to be banished from the repertoires of respectable catch-singers on account of the questionable words to which they were set. In the Seventeenth Century the Catch was a very popular form of musical entertainment, and later on societies were formed for the performance of these works and others of a kindred nature.

CATLEEN. *v.* CATLING.

CATLING : The highest, or treble, string of the lute ; the name being no doubt a diminutive of cat from the supposed origin of the strings. Shakespeare uses the word in *Troilus and Cressida* (III, 3) : " What music will be in him when Hector has knocked out his brains, I know not : but I am sure, none ; unless the fiddler Apollo get his sinews to make Catlings on."

And, by analogy, "Simon Catling" in *Romeo and Juliet* (IV, 5) would be the name of a luter, and not a fiddler as Nares supposes, since "James Soundpost" would play on the viol. The term is often found spelled Catleen, and an entry in the Lord Chamberlain's Records for October 20, 1688 (*Vol.* 752, *p.* 342), mentions the payment of £1 "for catleens." Mace (1676) speaks of "Venice-Catlins," probably because good ones were imported from Italy.

CEBELL: An old English dance, very like the Gavotte in construction and measure. How the form obtained its name and whence the latter was derived are alike unknown. The Cebell may equally well have been a modification of the French Gavotte, or an independent invention similar by coincidence to the better-known form. On the other hand it may have been considered identical with the Gavotte from the musical point of view, the differences between them having been terpsichorean only. It appears to have been danced slightly quicker than the Gavotte. Examples of the dance may be seen in *Lessons and Aires for the Harpsichord and Spinnett*, by J. Eccles, D. Purcell, and others (headed "Cibell," and commencing at the half-bar, *alla breve*), and, curiously, one by a French composer writing for an English publisher, in *Lessons for the Harpsichord or Spinet*, by Lully, with the same characteristics. In the last-mentioned work both the Gavotte and the Cebell are used.

C-FA-UT. *v.* GAMUT.

CHACCON, CHACONNE: An imported instrumental piece consisting of a number of variations on a ground-bass, a slow and stately movement, and the characteristic rhythm :

Although a few examples of English origin are to be found, the Chaconne did not attain to very great favour in this country.

The source of the Chaconne is not quite clear : it may be descended from an ancient dance-form of Mauro-Spanish origin, travelling to France *via* Italy. On the other hand, it can easily be the product of the Motet of the Twelfth and

Thirteenth Centuries—or, at least, have been influenced by it. It is even possible that both of these two distinct sources supplied factors towards making the form, which eventually met and became merged. The Italians, and still more the Germans, of the Eighteenth Century, made of the Chaconne a test of originality and imagination almost without equal in its musical importance; and why the composers of England made so little use of the form is a mystery. It is possible that they had had a surfeit of “Divisions” and desired a rest from the endless variations.

The few composers who did use the form in England—among them being Purcell and William Richardson (*Lessons for the Harpsichord or Spinnet*, 1704)—were no doubt influenced by the craze for imitating foreign fashions. In the Lord Chamberlain’s Records for July, 1675, there is an entry referring to a payment “For the fair writing of a Chaccon,” probably copying one of the examples set by the French opera.

The Chaconne filled a very important place in the history of musical form, and was to be met with, danced, sung, and played at different periods in its career;—but its English use was too slight to justify more space being devoted to it here.

CHACCOON. *v.* CHACCON. CHACONNE.

CHAIR-ORGAN: An old name for the Choir-Organ, some authorities holding the view that the term was a corruption of this. Their argument is based upon the circumstance that in cathedrals the choir-organ frequently formed the back of the organist’s seat. But it can quite easily, and more logically, stand for “Cathedral Organ” (though French *chaire*, from the Greek *kathedra*). An interesting entry in the State Papers (Lord Chamberlain’s Records) referring to the Chair-Organ is to be found under date February 3, 1636/7 (*Vol.* 739, *p.* 146), where we read that a warrant was issued to the Signet for “a privy seal of £140, to be impressed unto Mr. Edward Norgate, to be employed for the altering and reparation of the organ in the Chappell at Hampton Court and for the making of a new Chayre organ there conformable to those already made in the Chappells at Whitehall and Greenwich.”

CHAPEL ROYAL: The clergy and musicians who perform divine service for the sovereigns of England. The earliest information we have of the English Chapel Royal is contained in the *Liber Niger Domus Regis* (British Museum; Harleian MSS. 293 and 642, *temp.* Edward IV), and this valuable source gives much material for a history of the Chapel. From it we learn under what conditions the members lived and what food was allowed them, *etc.* "Chaplenes and Clerkes of the Chapelle" were expected to be "endowed with virtues morolle and specikatyve, as of the musicke, shewing in descante . . . suffytyente in organes playinge . . ." For all this the wage of seven pence per day was paid, which was very good remuneration when we remember the value of money in the Fifteenth Century and the fact that clothing, board, and lodging were generally provided. The choir of the Chapel Royal is the oldest of which we have any certain information, and it was probably looked upon as the standard by which other choirs were organised.

During the reign of Edward IV, "Children of the Chappell" numbered eight (later increased), and they were under the direction of a "Master of Songe" who was later known as the "Master of the Children." When their voices broke, the Children were sent at the King's charge to Oxford or Cambridge—"yf they will assente," and the Lord Chamberlain's Records give frequent references to clothing given to boys whose "voices had changed" and who, on that account, had left the Chapel. When their voices merited the promotion they were oft advanced to sing with the "Gentlemen of the Chapel." The first recorded Master of the Children was Henry Abingdon, and his salary of forty marks a year was "for fyndyng, instruction, and governaunce of the children of the Chapelle of our Housholde." Subsequent Masters were Gilbert Banister (1482), William Cornish (1493), William Crane (1510), and later musicians whose names may be found in the Lord Chamberlain's Records.

The Chapel Royal was engaged to officiate wherever the King happened to be, and a good deal of travelling was done; the State Papers containing many entries relating to payments for "riding charges." The Chapels Royal of St. James's Palace and Whitehall, in London, and St. George's, Windsor, are the most important, and at the present time the first and

last are the only ones in regular use. That of Whitehall is visited only on Maundy Thursday in connection with the bestowal of alms to the poor (v. also E. A. Rimbault, *Cheque-Book of the Chapel Royal*, 1872).

CHAYRE-ORGAN. v. CHAIR-ORGAN.

CHEST OF VIOLS: The name given to the complete set of viols and the case in which they were kept. Seventeenth-century England used the whole series of viols (*q.v.*) much as the pianoforte is employed to-day. They were the instruments *par excellence* for chamber use, and thus a chest containing them was part of the furniture of almost every Stuart house. Thomas Mace (*Musick's Monument*, 1676) gives a very good account of such a case, and instructs his readers how to prepare one that would keep their instruments in good playing condition: "First, see that it be conveniently large, to contain such a number as you shall design for your use, and to be made very close and warm, lined through with baize . . . by which means your instruments will speak livelily, brisk, and clear. Your best provision (and the most complete) will be a good chest of viols, six in number, *viz.* two basses, two tenors, and two trebles, all truly and proportionably suited . . ." When a complete set of instruments matching in every detail was not obtainable, Mace recommends that the chest be made up of such as can be picked up, but impressing upon his readers the special necessity for matching them as to size.

The combination of instruments as given by Mace, although the most frequent one, was not the only useful set; some chests contained three trebles and one bass instead of two of each. The compass of the tenor viol was very great and it can easily be understood that, if necessary, the first bass-part of a consort could, with very little trouble, be played by the third tenor, with the added advantage of strengthening the exquisite tone of the tenors.

An advertisement in *Tripla Concordia* (1667) announces the sale of two chests of viols in the following words: "There is two chests of viols to be sold, one made by Mr. John Ross, who formerly lived in Bridewell, containing two trebles, three tenors, and one basse. The chest was made in the year 1598, the other being made by Mr. Henry Smith, who formerly lived

over against Hatton House, in Holborn, containing two trebles, two tenors, two basses. The chest was made in the year 1633. Both chests are very curious work." The two makers mentioned in this advertisement enjoyed a great reputation for excellent workmanship; and others high in popular favour as *luthiers* were Eldred, Jay, and Bolles.

CHURCH MODES: The series of type-scales upon which all medieval music was based, and taken for ecclesiastical use—whence the name—from the older Greek system. Perhaps "Modes" describes these octaves of notes better than "Scales"; for although each contained the seven notes of the present-day series, they did not follow each other with the same constancy (as far as the intervals between them were concerned) as is the case with the modern scale. Thus the First Mode which we must consider consisted of a succession of intervals like this: Tone, Semitone, Tone, Tone, Tone, Semitone, Tone (from D to D) and was called the Dorian mode. The second, or Phrygian, Mode ranged from E to E (Semitone, Tone, Tone, Tone, Semitone, Tone, Tone). The Third, or Lydian, lay between F and F, with the interval succession Tone, Tone, Tone, Semitone, Tone, Tone, Semitone. The Fourth, or Mixolydian, Mode had the Final (or *finalis*) G, and the sequence Tone, Tone, Semitone, Tone, Tone, Semitone, Tone. For the purposes of the present article these four series will suffice to commence with. They were known as the "Authentic Modes," and were adopted by St. Ambrose (Bishop of Milan) in the Fourth Century, for Church use. Gregory the Great in the Sixth Century added four more Modes to this quartette—the so-called "Plagal Modes." These were allied to the Authentic Modes in so far that each Plagal Mode lay below its corresponding Authentic partner at an interval of a fourth, its name being distinguished by the prefix *Hypo*—Thus the first plagal mode, or Hypo-Dorian, was pitched a fourth below the first authentic, or Dorian, and ranged from A to A. In other words, the fourth degree of the plagal mode was identical with the *finalis* of the authentic. The second plagal mode, or Hypo-Phrygian, was in the same way separated from and allied to the second authentic, and lay between B and its octave. In like manner the Hypo-Lydian and the Hypo-Mixolydian commenced from C and D respectively.

The modes in use, therefore, during the reign of Pope Gregory the Great were as follows :

First Authentic Mode
(Dorian)

First Plagal Mode
(Hypo-Dorian)

Second Authentic Mode
(Phrygian)

Second Plagal Mode
(Hypo-Phrygian)

Third Authentic Mode
(Lydian)

Third Plagal Mode
(Hypo-Lydian)

Fourth Authentic Mode
(Mixolydian)

Fourth Plagal Mode
(Hypo-Mixolydian)

These modes were also frequently numbered consecutively, so that the Dorian was known as the First Mode, the Hypo-Dorian as the Second Mode, the Phrygian as the Third, the Hypo-Phrygian as the Fourth, and so on; besides such appellations as *Authentus Protus*, *Plagius Protus*, *Authentus Deuterus*, etc. At some periods a considerable amount of confusion resulted from this varying nomenclature.

Later on more modes were taken from the Greek system and embodied in the set already in use, such as the Ionian, Æolian (with their Plagals) and others. But all were constructed on the same principle, the only difference between them being the varying positions of the diatonic semitones.

CIBELL. v. *CEBELL.*

CINQUE-PACE. v. *GALLIARD.*

CITHAREN, CITHREN. *v.* CITTERN.

CITOLE : A medieval stringed and plucked instrument, smaller in size than the later lutes, and played with a plectrum as well as with the fingers. The body appears to have been most generally pear-shaped—sometimes oval—and the four strings of wire. The back of the Citole was flat—in this respect differing from the lutes, but similar to the cittern of the Seventeenth Century.

Sculptures, and drawings in medieval manuscripts are the only sources of information we have concerning the instrument. It is mentioned in State use at the beginning of the Fourteenth Century when, in 1306, the future Edward II was knighted. On that occasion a “Citoler” was rewarded for his services with one Mark ; but this was not the earliest known use of the Citole in England. Edward the Third’s royal orchestra, such as it was, included a performer on the Citole. The interesting sculptured “Minstrel Gallery” in Exeter Cathedral has a player on the instrument, and Engel, working after a plaster cast of the original, describes the first musician in the series as playing upon the lute or possibly the cittern. But there can be no doubt, I think, that the instrument is a Citole. Several manuscript “Romances” (mostly metrical) of the Fourteenth and Fifteenth Centuries contain references to the instrument, and in one of them the verbal form “Sytolyng” is used. Wiclif erroneously translates the name of one of the Biblical instruments as “Sitol.” John Gower mentions the instrument in *Confessio Amantis* (*Lib. VIII, ll. 829, 1487, and 2679*). Chaucer has it in the “Knight’s Tale” (*l. 1965*) : “A Citole in hir right hand hadde she.” Lydgate mentions the Citole similarly in *Reson and Sensuallyte* (*MSS. Fairfax, 16, Bodleian, Oxford ; and Add. 29729, British Museum*) in *l. 5583*. Common variants of the name itself are Cythol, Cytole, Sitole, Sytholle, *etc.*

In mechanical treatment the Citole resembled the lutes, the bar which held the strings being fastened to the belly, and served at the same time the functions of a bridge, keeping the strings at a sufficient height to enable them to vibrate freely. Its origin is not at all certain. It may have been evolved from some form of psaltery by an ingenious musician who conceived the idea of adding a neck and fingerboard. It may quite as

easily have been a flat-backed modification of an early lute, possibly of Eastern origin and coming North and West *via* Spain or Provence.

The shape and ornamentation of the Citole varied a good deal, but it does not appear to have enjoyed much development; for with the rise of the Lutes and Gittern it fell into disuse, leaving behind fewer traces of itself than were left by the instruments of Ancient Egypt.

CITTERN: A flat-backed, pear-shaped instrument very popular in England at the end of the Sixteenth Century and during the Seventeenth. Exactly when the Cittern was evolved, and what its source was, would be very difficult to decide. The fact that its back was flat and that the back and table were connected by ribs would rule the lute out at once as a possible source. It is more likely to have been derived from some form of the Citole. Its strings were of wire and strung in unison pairs, most commonly four in number. Playford, in *Musick's Delight on the Cithren* (1666), says: "The Cithren is strung with eight Wyre strings, which are divided into four Course, two in a Course." Mace (1676) also alludes to its "Wyar strings." Metal strings were the characteristic feature of the Cittern and distinguished that instrument from the Gittern, or early Guitar, which were strung with gut. This distinction was noted by Michael Drayton in his *Polyolbion* (1613, *Song* IV): "Some that delight to touch the sterner wire chord, The Cythren . . . strike." As time went on, of course, more strings were employed, and even a "fourteen-course" instrument was known. Thomas Robinson (*New Citharen Lessons*, 1609) speaks of such an one which had seven pairs of strings over a fingerboard, and seven single ones alongside. This, however, cannot be considered as a typical specimen of the instrument, and was no doubt influenced by the theorbo. The ordinary four-stringed Cittern was provided with a fretted fingerboard; and a carved head, often elaborately chiselled, surmounted the peg-box with its eight pegs. A plectrum of quill or whalebone was generally used, but the instrument was also played with the fingers, the resultant tone being softer and less metallic. Its effect must have been quite pleasant, and the quality of tone could be modified and varied according to the distance of the plectrum or plucking

TWO CITTERNS (one with Watch-key tuning head)
(*Victoria and Albert Museum*)

finger from the bridge. The sound-hole was circular and fairly large, often filled with a delicately carved and fretted Rose (or Knot, *q.v.*). The tuning of the Cittern, which varied considerably, was peculiar in that the pitch of the strings did not rise in the order usually followed; the string on the extreme left of the fingerboard being tuned higher than its neighbour. The commonest tuning at the change of the century was :

This arrangement made the performance of certain chords very easy and of original effect. The strings, in the order given here, were named Tenor, Bass, Mean, and Treble, and an illustration of the instrument with these names attached is given on the title-page of Playford's *New Lessons for the Cithern and Gittern* (1652).

The head of the Cittern, already mentioned, was often carved most artistically—sometimes into a head of great beauty, sometimes grotesquely. The popularity of the Cittern was such that its head became proverbial. Thus Fletcher in *Love's Cure* (1622 *c.*, II, 2) says : “ You cittern-head ! Who have you talked to, ha ? You nasty, . . . ill-contentanced cur ! ” and Shakespeare makes a point of it in *Love's Labour's Lost* (Act V) :

Hol. I will not be put out of countenance.

Bir. Because thou hast no face.

Hol. What is this ?

Bir. A cittern head.

John Ford, in *The Lover's Melancholy* (performed 1628, printed 1629 ; II, 1), has : “ . . . I hope the Chronicles will rear me one day for a headpiece ”—“ . . . Barbers shall wear thee on their citterns.” This quotation brings us to a very interesting feature in the social life of the early Seventeenth Century. The barber's shop was not only the “ Staple of News,” and the exchange of gossip ; it was also the place where music of all kinds might be heard, and waiting customers would avail themselves of the instruments kept there for the purpose of passing the time away pleasantly. Before his shop was entered the signs of the barber's music were visible in his windows, for the teeth he extracted were

suspended, as an advertisement, at the ends of rejected lute-strings. Of course, the professional musicians were inclined to look with contempt upon the musical pretensions of the barber ; and in Morley's *Introduction* we may read : " You sing you know not what ; it should seem you came lately from a barber's shop, where you had Gregory Walker, or a Coranto, played in the new proportions by them lately found out." But to the ordinary amateur the barber's cittern gave a good deal of pleasure. At the turn of the century it appears as if no author could write of barbers without mentioning the Cittern. Ben Jonson has :

. . . He is my barber, Tom.

He got into a masque at Court, by his wit,
And the good means of his cittern holding up thus
For one of the music . . . (*Staple of News*, I, 2.)

The circumstance that the cittern in the barber's shop was public property explains one or two otherwise mystifying quotations. In an old play we find a character saying of his wife that she was " a barber's citterne, for every serving man to play upon." In the *Silent Woman* (III, 5) Ben Jonson has : " I have married his cittern that's common to all men." Thus, for a lady to be called a cittern in the Seventeenth Century was no compliment.

The mass of allusions to the cittern can only point to one fact, and that is the immense popularity the instrument enjoyed in this country. And yet Grove's *Dictionary of Music and Musicians* says that " the Gittern and Cithren never appear to have had much popularity in England."

Music for the Cittern was written on a stave of four lines in Tablature (*q.v.*). Such a stave, of course, would only suffice for the four-stringed instrument. There does not appear to have been much music especially written and published for the Cittern ; it is quite possible that players helped themselves to any popular tune, or improvised solos and song-accompaniments. The peculiar tuning of the instrument would prevent any other tablature being used than that expressly composed for it ; but from ordinary notation the cittern-player could perform anything within the compass of his instrument with comparative ease. What printed music there is for the Cittern is very rare and difficult of access. The Royal College of Music

possesses a copy of Anthony Holborne's *Cittharn Schoole* (1597), a work containing thirty-two dances, Ayres, and popular tunes for the Cittern, in addition to twenty-three more pieces with an accompaniment for Treble, Tenor, and Bass Viols. In Morley's *Consort Lessons for the Treble Lute, the Pandora, the Citterne, the Flute, and the Treble-Viol*, 1599, we have the Cittern among its contemporaries. The cittern-part only of this work is in the Bodleian Library. Phillip Rosseter's *Lessons for Consort* (1609) contained music for a similar ensemble, the cittern-part of this belonging also to the Royal College of Music. In 1609 also appeared Thomas Robinson's *New Consort Lessons*, containing compositions for two citterns, voice with cittern accompaniment, and others. A few "lessons" are also included for the Cittern with fourteen strings, mentioned earlier. It will thus be seen that although the Cittern was employed in a very frivolous manner in the barber's shop, it was put to more dignified uses by more serious musicians; and Sir William Leighton had a place for it in the accompaniment to his *Teares or Lamentacions of a Sorrowfull Soule*.

Perhaps the most interesting, and certainly the rarest, work on the Cittern is John Playford's *A Booke of New Lessons for the Cithern and Gittern, etc.* (1652). A copy is in the Euing Library (Royal Technical College), Glasgow, and thanks are due to the librarian, Mr. Peter Bennett, for an account of it. The instructions given in the book, according to Mr. Bennett, comprise only the mode of tuning the instrument, the time-signatures, and the value of the notes and rests. *Part II* of the little work contains twenty-four pages of exercises for the Cittern. This book, judging from Playford's preface, appears to have been the second of its kind, the first having probably been a publication of 1650, no copy of which is known to have survived. The Index of the 1652 edition gives the names of fifty-four melodies for the Cittern and nine "Psalms to sing to the Cittern according to the Church Tunes." The secular music consists of the popular airs of the day, melodies that are to be found in many other publications of that period. The rest of the book is devoted to the Gittern.

Playford's venture of 1666 is second in importance only to the foregoing: "Musick's Delight on the Cithren, restored and Refined to a more Easie and Pleasant manner of Playing than

formerly ; and set forth with *Lessons Al a Mode*, being the choicest of our late new *Ayres, Corants, Sarabandes, Tunes,* and *Jiggs*. To which is added several New *Songs* and *Ayres*, to sing to the Cithren ” ; a long-winded title for a small work.

Very early references to the Cittern are rare, and the first I have been able to locate is in a manuscript in the British Museum (Additional 30513). This dates from the reign of Henry VIII, and contains nine pieces for the Cittern in Tablature. An early official allusion to the instrument is made in 1556, when among the New Year’s gifts received by Queen Mary was “ a faire Cyterne.” Kendall’s *Flowers of Epigrammes* (section headed *Trifles*, 1577) makes another Tudor reference to it :

On Saterday I will you send
some Lessons for your Lute :
And for your Citterne eke a few
take leaves till time of fruite.

The Cittern, thus, was in almost every kind of use and in the hands of every class of player. From Henry VIII to Charles II, from Timothy Kendall to Samuel Pepys, the instrument was a source of pleasure ; and whether its environment was the royal palace or the barber’s shop, it was popular everywhere.

CLARICHORD, CLARICHORDE. v. CLAVICHORD.

CLARICON. v. CLAVICHORD.

CLAVICHORD : One of the earliest of the keyboard instruments, differing from the others in many particulars. It was contained in a rectangular case and was played by means of brass or copper pins or elongated studs which set the strings in vibration by contact. The shape of these studs, or tangents, as they were termed, was slightly conical, the flattened end being upward. Placed at the end of a balanced key farthest from the player’s hand, the tangents fulfilled the functions of the hammers in the modern pianoforte. The most noticeable feature, however, of the method employed in constructing this instrument lay in the circumstance that in very early specimens each string was provided with several tangents which operated on the string at different points. This divided the string into sections of varying length and caused it to

produce different notes. Whatever may have been the defects of such a system, it proves that much thought and scientific study must have been devoted to the subject; and, for its period, the idea was highly ingenious. The instrument, then, emerging from scientific hands, was most probably developed from the monochord, or one-stringed instrument used for the determining of pitch for the church singers of the Middle Ages. The process of evolution is clearly defined. Once a number of notes could be produced from a single string, more strings were added to give a greater compass. But it was soon discovered that it was easier to add extra strings than to multiply the tangents. So it came about that the number of the latter was reduced to two, and each string made to play a note with the semitone above it. In this form the Clavichord remained until the Eighteenth Century. The term "fretted" was applied to those instruments with a number of tangents to each string (German, *gebunden*). Later specimens became bichord and even trichord, and the strings, which earlier were of brass, were afterwards more commonly of steel;—sometimes the bass strings were made of brass and the treble of steel. There were even specimens with octave strings added to the lowest bass notes, probably to assist the latter and to fill the bass.

Exactly when the Clavichord was sufficiently developed to merit its name, is not clear; but it must have been a serviceable instrument by the end of the Fourteenth Century. Yet it was not until the commencement of the Eighteenth Century that there was a separate string for each key and note, and the instrument became "unfretted." Its tone was soft and suitable to small apartments, and the instrument survived as long as it did chiefly on that account, and because of the circumstance that it was capable of an interesting effect known in Germany as "*Bebung*," an effect which might be called *vibrato* to-day. It was produced by repeating the finger-pressure on the key several times after the note had been struck, pressing the tangent on to the string, and thus, incidentally, slightly raising the pitch of the note. This effect, added to its capability to produce fine tone-gradations, made it the favourite it was with the Eighteenth-century composers.

The compass of the Clavichord varied considerably according to the period and the number of tangents and strings used. Generally a note was omitted from the regular sequence at

either end of the keyboard, so that the highest and lowest notes that could be played should be notes of frequent occurrence.

Although the Clavichord does not appear to have been as popular in England as were the Virginal and Spinet, there are sufficient historical and literary allusions to it to show that it was used to a considerable extent by artistic musicians. In the Latin form of the name—Clavicordium (*clavis*, a key)—we find it mentioned in English printed books before the end of the Fifteenth Century, though in Germany it appeared in the first years of that century. A Clavichord of this period also is carved in the roof of St. Mary's Church, Shrewsbury. This specimen possesses six strings but shows nine keys ; thus arguing that some of the strings were operated upon by more than one tangent. John Skelton, poet laureate and tutor to Henry VIII, was a great lover of this instrument, and wrote a good deal about it ; in his "Agaynste a comely coystrowne, etc.," we read : "Comely he clappyth a payre of clauycordys" (l. 36) ;—the word "pair" showing that the custom of using a second and smaller instrument, generally tuned an octave higher, simultaneously with the larger one, was very old (v. also Virginal). In Stephen Hawes' *Historie of Graunde amoure and la bell Pucel, called the Pastime of Plesure* (1506), and other works, we meet with the spelling Claricorde, but there can be no doubt that the same instrument is meant. The Privy Purse Expenses of Henry VII give some very interesting information : "1502, January 7. To one that sett the Kings Clevecords xiiis. ivd." "1504, March 6. For a paire of Clavycords, xs." A similar account-book dealing with the expenses of Elizabeth of York (ed. N. H. Nicolas, Camden Society, 1830) contains the entry : "1502, August 19. To Hugh Denys for money by him delivered to a straungier that gave the Quene a payre of Clavycordes in crownes for his rewarde . . . iiij*li*."

In 1663 (November 6) John Hingston, as keeper and repairer of the king's instruments, was paid a sum of money which included a reward for "mending a Claricon." This also was doubtlessly a Clavichord. The change in name was only a passing fancy, probably due to the ignorance of a clerk ; and using Clarichorde as a connecting link, Claricon is not so far from Clavichord. Moreover, we similarly find Harpsicon for Harpsichord at the same period.

English specimens of the Clavichord are extremely rare, and

the only one I have ever heard of by an English builder was the late Dr. T. L. Southgate's example (1700) by Peter Hicks (*v. also* WREST).

CLAVICYMBAL: An old English form of the Italian Clavicembalo (Harpsichord). This instrument was so named on the Continent long before the harpsichord was developed into the form it acquired in the Eighteenth Century, and appears to have been little more than a Psaltery (*q.v.*) with a keyboard. The name Clavicembalo or Clavicymbal may have been applied to instruments played with metal plectra as distinct from those later forms which used leather or quill for the same purpose. At any rate the name is found in Germany as early as 1404. The English "Cymbal" was doubtlessly suggested by the bell-like tinkling produced by these instruments. Stephen Hawes has "Claricymbals glorious" (with the same variation of spelling as is often to be met with in the case of the Clavichord) in his *Pastime of Plesure* (*chap.* 16, 1506).

CLAVICYTHERIUM: A keyboard instrument of the Spinet (*q.v.*) type, differing from the Spinet, however, in that the body, sounding-board, and strings, were set vertically instead of horizontally, thus foreshadowing the upright pianoforte. In every other respect the Clavicytherium was a Virginal or Spinet, and was played by means of jacks and plectra. The latter, in a specimen of the early Sixteenth Century illustrated in Hipkins and Gibb's *Musical Instruments*, appears to have been of metal.

CLEAVE. *v.* CLIFF.

CLIFF: The old term for Clef. It was (and is) the sign prefixed to a composition to indicate its pitch; in other words, it gives the position on a stave of music for a certain note from which "all the other notes in your song or lesson are understood" (Playford). Derived from the Latin *Clavis*, a key, the term is used to determine which voice or instrument shall perform the music which follows it. The old English spelling varied considerably; Cotgrave (*A French and English Dictionary*, 1660) defines the French *Clef* as "a cliffe in musick," and Ford, in the *Lover's Melancholy* (1629), has: "Whom art had never taught cliffs, modes, or notes." In John Playford's *Introduction to the Skill of Musick* we meet with another application of the term. He speaks of a *B Cliff*, belonging to

all parts of the polyphony, and used as we should employ the words "key-signature" to-day, making the note it refers to "half a tone or sound lower (or higher) than it was before." When this so-called B Cliff was used to sharpen a note it was known as *B mi* or *B sharp*, and when written to flatten, it was called *B fa* or *B flat*. In this usage the term Cliff, by its etymology, forestalls our key-signature.

CLOSE-PLAY: A technical term employed by the lutenist to signify that fingers once down on a string should not be removed, in view of the possibility of their being required again in the same position. In Close-Play a finger would remain where it fell on the string until needed elsewhere. An explanation of it is given in Barley's *Lute-Book* (end of the Sixteenth Century): "Thou shalt not need but to remove those fingers which thou shalt be forced, which manner of handling we call *close* or *covert-play*." Thomas Mace (*Musick's Monument*, 1676) is more explicit: "Then take up no stopt Finger, till need so require; for any stopt Finger, remaining still upon its stop, gives you a better advantage, than if it were taken off, as being a sure Guide, to any other stop following. . . ." Be it noted that the violinist of to-day very frequently uses close-play, although the term has fallen completely into desuetude.

CLOSE SHAKE. *v.* SHAKE.

COMPOSURE: A word frequently used in place of the more usual "Composition." An example of such use is to be found in Roger North's *Memoires of Musick* (1728), where, speaking of the music written during the reign of Charles I, he says: ". . . some plain-song consorts I have seen of so late composure."

CONCENT: Used as a noun and verb by the Elizabethans to mean harmony or concord. Spenser speaks of "A lay of love's delight, with sweet concent," and:

Such musicke is wise words with time concented,
To moderate stiffe minds disposed to strive.

Milton, in *At a Solemn Music*, writes: "That undisturbed song of pure concent." The word is derived from the Latin *Concentus* (*concinere*; *con* and *canere*, to sing together).

CONSORT: 1. The equivalent of the modern word concert.

2. Earlier, it signified the simultaneous playing of different

instruments in parts, such as could “consort” together. A “Consort of Viols” would be a party of instrumentalists playing the various members of the viol family. Often as many as six together—two trebles, two tenors, and two basses, or two trebles, three tenors, and one bass (the usual combination in a “Chest of Viols”)—would perform *ensemble*. A composition for one of these combinations of instruments was similarly known as a Consort. In Stuart England there was also a consort of wind instruments, the Lord Chamberlain’s Records containing entries relating to the engagement of musicians for the “Consort of wind musick.” Seventeenth-century music-books often contained music for a consort of Viols, Lutes, Citterns, and other instruments.

When Spenser (*Faerie Queene*, III, l. 40) speaks of the singing of a number of birds together, he says: “That wonder was to heare their trim consort.” Fletcher (*Bloody Brother*) alludes to a “consort of cramm’d capens” in a line quoted in full in the article on the Canary.

CONSORT-VIOL: A bass-viol “of the largest size, and the Strings proportionable” (Playford). It was used for playing in Consort, *i.e.* in *ensemble* music. It found its most appropriate place in the four, five, and six-part Fancies (*q.v.*) so popular at the time of the Viol’s vogue. The reason for the Consort-Viol being of the largest size will be apparent when it is remembered that it required the greatest possible amount of sonority when playing against two, or perhaps three, tenor viols, each capable of producing a grave tone of very full quality. Playford also uses the name Consort-Viol (the music for which was “play’d from the Rules of the Gam-ut,” *i.e.* from ordinary notation) to distinguish the large chamber-music bass from the smaller Lyra-Viol (*q.v.*) which was played “by Letters or Tablature” (*q.v.*), and tuned Harpway (*q.v.*). For the tuning of the Consort-Viol, see VIOLS.

CORANTO: A dance-form supposed by some to have been introduced into France from Italy by Catherine de Medici, and brought to England during the reign of Elizabeth. It became exceedingly popular in Sixteenth-century England, although it was soon divested of most of its original characteristics, and converted into a merry, sprightly measure. Its speed certainly increased, and if not actually as quick as the Galliard and Jig,

it was at least as full of vivacity as both of these forms. The Queen herself was celebrated as a Coranto dancer, and her court was not slow in following suite. As the speed changed, the solemn *terre-à-terre* of the French gave place to a "lofty sprightly dance" (Johnson); and, says Walsh, "I would as soon believe a widow in grief for her husband because I saw her dancing a Coranto about his coffin." The popularity enjoyed by the Coranto in Shakespeare's time accounted for and caused the many allusions to it in the literature of the period. The reference to it in *Twelfth Night* may be seen in the article on the Galliard, and Ben Jonson mentions it also.

In Stuart times the favour shown the Coranto seems to have increased; indeed, it appears that it played the part of the late Victorian waltz in Stuart society, and some writers began to show signs of restlessness under the monotony of the everlasting Coranto. Pepys, attending a court ball on November 18, 1666, observed so little variety in the dances that "the Corants grew tiresome." The ball in question was given in honour of the Queen's birthday, and there were present the King and Queen, the Duke and Duchess of York, Prince Rupert, and the Duke and Duchess of Monmouth. On this auspicious occasion the King led off the dance with the Queen. Some four years earlier the genial diarist recounted his experiences at another ball, where ". . . the King led a lady in a Single Coranto . . . and very noble it was and a great pleasure to see" (*Diary*, December 31, 1662). Pepys's entries bear out Selden's statement: "At a solemn dancing, first you had the grave measures, then the Corrantoes and the Gaillardes" (*Table Talk*, 1689).

Remembering the popularity of the Coranto in England, it will not be surprising to find a great many examples of the dance in the works of English composers from the time of Elizabeth to the period at which the form ceased to be danced, and remained only in the instrumental suite. Many of these were original compositions, of course; but the greater number were French Corantoes modified to suit English requirements. It is, in some cases, difficult to recognise the nationality of many forms printed in England, especially in the Stuart period. The later specimens occurred at a time when the music of the cultured classes was largely influenced by French fashions, and thus a great many Corantoes with French names

may well be purely English ones deliberately misnamed to secure favour for them. The works of Thomas Robinson, Matthew Locke, John Playford, Thomas Morley, Ferrabosco (Stuart members of the family), William Corkine, and a host of others, all contain specimens of the Coranto. Of the two hundred and forty-five dances and airs contained in Playford's *Court Ayres* (1655), no fewer than fifty-five are Corantoes.

The later Suite and Sonata writers used the form in the accepted Continental manner, following the Almain (*Allemande*).

A rapid sketch of the Coranto's foreign history and original form may assist in making the differences clear between the early French form of the dance and its English use. Whether it had its origin in France or Italy, it was in my opinion first suggested by the Galliard. The fact that some authorities describe the original Courante as one of the most serious, solemn, and dignified of dances, need not disprove this theory ; every period and country had its own way of treating the dance-form.

The name, derived from the French *courir*, to run (or from its Italian equivalent), describes one species of the Courante ; that which consisted of a succession of running notes. There were three forms of the dance bearing the name, each differing from the others in rhythm. The Italian form, called Corrente, had as its distinguishing feature a succession of running quavers, a circumstance which may prove that the original form may have been taken from the Italian version of a Galliard with the dotted rhythm smoothed out. The French shape (Courante) contained the rhythm dotted-crotchet, quaver, crotchet, and thus shows a remarkable likeness to the Galliard and its successor the Jig. A hybrid form containing both rhythms is to be met with, and was occasionally used, chiefly by Handel. Bach, Mattheson, and Couperin, to mention only three composers, used both the Italian and French forms, but kept them apart and adhered to the distinguishing titles (*Corrente* and *Courante*). The time-signature was generally $\frac{3}{4}$ or $\frac{3}{2}$, a characteristic of the $\frac{3}{4}$ measure being that the last measure was written in $\frac{6}{4}$, a change that may have been called for by some terpsichorean requirement. Later, when the form ceased to be danced, the $\frac{6}{4}$ measure was used for the whole of the composition. Its form was the usual one of

two or more sentences of eight or a multiple of eight measures, each repeated, and it usually began on the up-beat. The early German writers insisted upon many academic points, but when the form became more elastic, Courantes were evolved that were as unlike the original dance as they could possibly have been. Taking all these circumstances into consideration, then, and remembering the different rhythms employed in the writing of the dance, we may take it that the Coranto formed the connecting link between the early Galliard and the later Canary and Jig on the one hand, and led to the Menuet, and possibly the Waltz, on the other.

CORNEMUSE. *v.* BAGPIPE.

CORNET: A wood-wind instrument very much used in Tudor and Stuart England (the German *Zinke*; but not to be confounded with the modern brass instrument). It was a horn-like instrument made of wood, generally covered with leather, and often elaborately ornamented with ivory and silver. Finger-holes enabled it to produce the different notes within its range. It was made bent or straight, though the curved specimens seem to have been more common. Its tone, according to most contemporary writers, was bright and pleasing when the instrument was well played. Its place of origin is somewhat uncertain, though the very early appearance of allusions to it in English manuscripts would seem to suggest England as one of the first countries to use it, if it was not actually evolved here (Harleian MS. 603; end of the Tenth Century; British Museum; and a Psalter dating from A.D. 1000 in the Cambridge University Library). Harleian MS. 1419A contains a list of musical instruments belonging to Henry VIII, and among them were: "Twoo gitteron pipes of Ivorie tipped with silver and gilte they are caulled Cornettes . . .," and, "xiiij gitteroune pipes of woodde in a bagge of leather they are caulled Cornettes." An account of the Cornet is afforded by one Randle Holmes in Book III of his *Academy of Armory* (British Museum, Harleian MS. 2034, c. 1688): "It is a long and somewhat bending Instrument made of an Horn, and some tyme garnished at the mouth, middle, and end with plates of silver, but generally plaine. It hath six holes above for the fingers, and two under for the thumb. It is a delicate pleasant wind musick if well played and Humored."

Laneham, in a letter of 1575, already speaks admiringly of its tone. It appears that Holmes's Seventeenth-century experiences gave him specimens made of horn, though the leather-covered wooden instruments seem to have been the commonest, at any rate in Tudor times. Stainer and Barrett's *Dictionary of Musical Terms* is not correct when it gives the Cornet as "an obsolete reed instrument not unlike a hautboy . . .", persisting in also calling the *Zinke* "a coarse reed instrument" (article WAITS).

A complete set or consort (*q.v.*) of cornets contained a Treble, a Tenor or Common Cornet, and a Grand Cornet. This set was known as a "nest of cornets." Its compass extended a little over two octaves, the Tenor being pitched a fifth below the Treble, and the Grand Cornet an octave below. The tenor instrument was by a long way the most frequent pitch and it was used in every conceivable form of music all over Europe for at least half a millennium.

Allusions to the instrument become more frequent as we approach the Elizabethan and Stuart writers. "The musicke of Cornettes" is mentioned in the tragedy of *Gorboduc* (1561) and in *Jocasta* (1565). Spenser refers to it in the *Shepherd's Calendar* (1579), and in John Howes' *Familiar and Friendly Discourse* (1587) we read: "I also think it convenient that the children should learne to sing and play uppon all sorts of instruments, as to sound . . . the cornett, *etc.*," which shows the value placed upon the instrument. Ford (*The Sun's Darling*, II, 1) has: "The way is windy and narrow; for, look you, I do but wind this cornet, and if another answers it, she comes." Dekker's masque *The King's Entertainment* shows by a stage direction: "A noise of Cornets, a Consort, a set of Viols," that the cornet was reckoned among the high-class instruments of the day. In the Seventeenth-century drama it was very frequently utilised for sounding at the beginning of the acts, and Beaumont and Fletcher, Drayton (1607), Nathaniel Field (1612), Shakespeare, and Ben Jonson all speak of it or order its use in the stage directions. Marston in *Sophonisba* (Prologue to *Act I*) says: "Cornets sound a march."

The uses to which the Cornet was put were many and highly important. In the orchestra of wind-instruments it held an indispensable place, from the time at which the combination

of instruments had taken some regular form. In the band it can be traced back as far as the Fourteenth Century, and in a work of that century (*Octavian Imperator*, Weber's *Metrical Romances*, 1810, ll. 67, 68) it is already mentioned in the lines : "Ther myghth men here menstralcy, Trompys, taborns, and Cornettys crye." The instrument was much used at court, and the King in 1503 sent his cornettist, Bonatus, with his daughter Queen Margaret of Scotland, to play before her royal friends.

In sacred music the Cornet was much used, and when boys' voices were not available it was pressed into service to supply the parts these should have sustained. In the official account of appointments to Canterbury Cathedral (1532) there are mentioned two performers on the instrument. That they improved the tone of the service there can be no reasonable doubt; "an intelligencer from Rome" was "struck with amazement and admiration" upon hearing "the solemn music, with the voices and organs, cornets and sackbuts" (*Life of Archbishop Whitgift; Biogr. Britt.*, p. 4255). The *Well-Tuned Organ* of J. Brookband (1660) tells us that the services which Charles I attended at Oxford were much improved by the use of Cornets. The particular functions of the instrument are made clear by Laud after he had held a visitation of Canterbury in 1634; he found "in lieu of a deacon and sub-deacon, whose office it was to read the epistle and gospel . . . are substituted two corneters and two sackbutter, whom we most willingly maintain for the decorum of our quire, though with greater charge than we might have done the other." During the Commonwealth the training of boys' voices for the Church service was neglected, with the result that after the Restoration cornets were employed to fill their places. Matthew Locke's *Present Practice of Music Vindicated* (1673) informs us that "For above a year after the opening of His Majesty's Chappell the orderers of the musick there were necessitated to supply the superior parts of their musick with cornets and men's feigned voices, there being not one lad for all that time capable of singing his part readily." Roger North (*Life of the Lord Keeper*), speaking of the cathedrals of York and Durham, says: "In these churches wind music was used in the choir, which I apprehend might be introduced at first for want of voices if not of organs; but as I

hear, they are now disused. To say the truth nothing comes so near, or rather imitates so much, an excellent voice, as a cornet-pipe ; but the labour of the lips is too great, and it is seldom well sounded."

The English players on the cornet enjoyed a high reputation for excellence, and they were engaged to occupy important posts in many a foreign court. The Duke of Lorraine, for example, sent his cornettist Jean Presse to engage players in England (1604) and acquired the services of John Adson and William Burt. Adson remained abroad for almost thirty years, and then returned to the English court as a "musician for the flutes and cornet." The Stuart kings secured themselves against any dearth of good performers by always having two boys in training. Their instructor was Andrew Lanier, and in 1630 he received the sum of £29 16s. 8d. for this service. His two boys, having passed through their apprenticeship, were immediately replaced by two more: ". . . because the two boyes he lately had . . . are, because enabled, preferred to His Majesty's service, these are to certify that in their room I have appointed two others, to be bred by him in musique" (*Lord Chamberlain's Records*, 1639/40). The salaries received by the Stuart cornettists compared very favourably with those enjoyed by the other members of the royal music. John Adson, before mentioned, received £46 per annum (1640), while another method of remuneration is exemplified in the case of Thomas Lanier, who was paid 1s. 8d. a day, in addition to £7 11s. 8d. a year for board-wages and £29 9s. 2d. "for apparrell." This last-mentioned item is unusual, for the common allowance "for livery" was £16 2s. 6d. per annum.

The prices paid for specimens of the instrument at the time of its active use varied according to the amount of work put into them. An example bought for Trinity College (Cambridge) in 1595 cost £1 (a large sum in those days), and the *Household Accounts* of Sir Thomas Kytson, for 1573/4, show that £4 was expended for seven cornets. Andrew Lanier purchased a number of them for use in the royal music, and in 1630 was paid £16 10s. for six specimens—three tenors at sixty shillings and three trebles at fifty shillings. In 1632 as much as £13 was paid for a single cornet, and taking the value of money in those days into consideration, the specimen must have been highly ornamented and loaded with silver.

The rise of the violin and the improvement in the reed-instruments probably caused the eclipse of the Cornet after an uninterrupted artistic use extending over at least three hundred years.

CORTHOL. *v.* CURTAL.

COUNTER: To Counter a song or instrumental composition was, from the beginning of the Sixteenth to the end of the Seventeenth Century, to perform *extempore* divisions (*q.v.*) upon it. John Skelton uses the verb in *The Bowge of Courte* (c. 1515), saying of Riot that "Counter he coude O Lux upon a a potte" (the text alluded to being that of the hymn *O Lux beata trinitas*). The term Countering is to be met with very frequently, and was used in the same sense.

COUNTERING. *v.* COUNTER.

COUNTER-TENOR: 1. The highest male (adult) voice; the Alto. The spelling *Contratenor* (suggestive of its Latin origin) is given in the State Papers, examples being contained in the Lord Chamberlain's Records for May, 1633. In the entry for April 14, 1674, these singers are given as "Counter Tanners."

2. The term was also applied to one of the Means (*q.v.*), or inner strings of the viols; the fourth string counting downwards from the treble being so named.

COUNTRY CRIES. *v.* CRIES.

COUNTRY DANCE: A terpsichorean diversion, purely English, that seems to have been distinguished from other dances by its steps and manner of performance. The music written for it cannot be said to have possessed any peculiarities, for it could occur in practically any dance-rhythm. It is a remarkable thing that English writers of the past should have attempted to explain the name by deriving it from the French *Contredanse*, while French authorities said it "paroit venir de l'Anglois, *country danse*, *danse de campagne*." The fact is that this form is of undoubted native origin, and is mentioned in our literature at a very early date. It was, in its original state, the merry frolic of the countryman and his lass, free in performance, and gay in character. It was not saddled with the traditions of the semi-ceremonial Morris Dance, or the artistic restraint of the ball-room forms.

John Essex, in the Preface to his treatise *For the Further Improvement of Dancing* (1710), says that "Every Country

has had some Particular manner of Dancing peculiar to itself since ye beginning of the World, but this which we call Country Dancing is originally the Product of this Nation, and is used in most of the Courts in Europe . . . ”; and John Weaver, following in 1712, added: “Country Dances . . . is a Dancing the peculiar Growth of this Nation.” Where and when this “peculiar growth” had its roots would be almost impossible to decide; most probably in some of the varied forms of the Branle, developed or adapted to suit the requirements of the dancers. But whatever may have been the *fons et origo* of the Country Dance, the Seventeenth Century saw it at the height of its glory, with John Playford taking advantage of the opportunities it presented. The *Dancing-Master* (1651 and almost a score of further editions) contained a large number of tunes suitable for this form of dancing, together with directions for performance. Only the melody of each piece is given, and this was in all probability played on a viol, violin, bagpipe—or, more certainly earlier—on the pipe and tabor. These tunes were not new in Playford’s day, and many were then already traditional. They included such well-known melodies as “All in a Garden Green,” “Adson’s Saraband,” “Blew Cap,” “An Old Man is a Bed Full of Bones,” “Bobbing Joe,” “Dargason,” and a host of others. Many of these and similar airs were used as thematic material by the virginal composers of the late Tudor and early Stuart periods, and “Sellenger’s Round,” “Trenchmore,” “Greensleeves,” *etc.*, were treated by the composers represented in the Fitzwilliam Virginal Book. And when it is remembered that the earlier editions of the *Dancing-Master* appeared during the Commonwealth, it will be realised how little the Puritan *régime* interfered with the innocent pastimes of the masses. Playford’s instructions show that some of the dances were arranged as “Longways for 6,” “Longways for as many as will,” “A Square dance for eight,” and so on. The last-named was, of course, the Seventeenth-century ancestor of the Quadrille.

The Stuart court, although compelled by some regard for etiquette to open their balls with the recognised forms, such as Pavanes, Galliards, Corantoes, or Branles, according to period, nevertheless brought the evening’s proceedings to a conclusion with a bout of jigging and Country Dances. The passing of Merry England and the introduction of foreign forms, though

many of the latter were influenced by the Country Dance, caused the decline of "the peculiar growth" of this nation. So complete was the change, and so great the mania for things with a foreign name, that, placing the vehicle before the tractor, the scribblers of this country converted the Country Dance into a descendant of the French *Contredanse*.

COURSE: In the language of the lute-player a Course was a string, and in the old books dealing with the lutes we read of "eleven course" instruments (*i.e.* lutes with eleven strings), and so on. The derivation of the word, used in this sense, is not clear. It is possible that the strings, drawn taut and straight, like a running-track, were named by the latter (Middle English, *Course*; Old French, *Cours*; Latin, *Cursus* from *Currere*, to run). The fact that the strings were used in unison-pairs helps to increase the similarity. There is just a possibility of the term being connected in some way with the German *Chor*; Praetorius (*Theatrum Instrumentorum*, 1620) using the expression "Sechs-Choerichte Cither" for a six-stringed cittern.

COURT MUSIC. *v.* ROYAL MUSIC.

COVERT-PLAY. *v.* CLOSE-PLAY.

CRACKLE: A direction belonging to the lutenist, and referring to one of the methods of striking chords on the instruments of the lute family. It would appear that "to Crackle" a chord was to divide it arpeggio-fashion, although Mace's definition is not as clear as it might be. In *Musick's Monument*, 1676, he says: "To Crackle such to three part stops, is only to divide each stop, with your thumb and two fingers, so as not to lose time, but to give each crotchet its due quantity." If the three-note chords were to be distributed between thumb and two fingers "so as not to lose time," it would seem that a solid chord were intended. But the phrase, "give each crotchet its due quantity," suggests that the three notes were to be played separately, though equally. I favour the arpeggio interpretation, not only on account of the last-quoted sentence, but also because Mace gives two other methods of striking, one of them called "Full-Play" (*q.v.*), and the other "Raking" (*q.v.*), which latter appears to me to have come somewhere between a chord in "full-play" and one "crackled" in effect.

CRIES: The “crying” of their wares by itinerant trades-folk is a very ancient institution, and each article had its own traditional melody, the origin of which is lost in the mists of the past. During the Seventeenth Century in England, a popular species of composition took the form of these Cries threaded together to make a sort of vocal Fancy in four or more parts. The *ensemble* sections were interspersed with *solis*, and the whole was often accompanied by a consort of viols. Thomas Weelkes, for example, wrote *The Cryes of London*, as also did Orlando Gibbons, both compositions being contained in Additional MS. 29427 (c. 1616; British Museum), the same volume including the *Country Cryes* of Richard Deering. The last-named composition is given, with slight differences, in Additional MS. 17792. A full account of the separate cries, with their tunes, is given by Sir Frederick Bridge in *The Old Cryes of London* (Novello, 1921).

CROWD: A stringed instrument of great antiquity, originally plucked with the fingers or plectrum, and later—in some forms of the instrument—also played with the bow. A careless comparison between early references and illustrations has often forced the student to the conclusion that between the Crowd, the Rote (*Rotte* and *Rotta*), the Cruit, and the Crwth, there must have existed a close connection. For one thing, they were all played in practically the same way, although later in the history of the individual forms differences were developed that tended to keep them distinct. But, in spite of the fact that we may at the present time treat all these instruments together, they existed in at least four distinct forms, which it will be well to keep apart. There was, in the first place, a Rote or *Rotte* with parallel sides and a hole cut in the upper part of the body for the plucking hand. Secondly, there was a form of Crowd with slightly indented sides, a hole, of varying shape for the fingers of the left hand to pass through (but not so large as in the first case), and strings passing over a bridge and fastened to a tail-piece. Thirdly, the Irish form called

Crowd. 11th C.

Cruit, which appears to be more like the descendant of an early lyre or small harp (the small hand-harp being indeed called "cruit" in Ireland). And fourthly, the Welsh Crwth with bowed strings over a bridge, and plucked strings at the side of the fingerboard. There does not appear to be any close relationship between any of these four forms; and notwithstanding the verdict of many high authorities, I am of opinion that, although the first and second of the forms mentioned may be of common origin, the Welsh and the Irish forms are quite distinct, and may have been evolved in the case of the Crwth from an Eastern lyre, and in that of the Cruit from an early harp. There is nothing extravagant in the latter supposition; commerce between Palestine, Egypt, Greece, Rome, the Levant, and Britannia was very much cultivated even in the remote pre-Christian era. And the parts touched by these travellers were just those which used the instrument in its Welsh or Irish forms.

Every writer on the subject mentions the allusion to the *Chrotta* by Venantius Fortunatus (Bishop of Poitiers, c. 609), and it would seem almost heretical to leave it unmentioned here. From the following century an illustration is forthcoming showing the form of the Rote as it was used in England at that time (Cotton Manuscripts, Vesp. A. 1, British Museum). It is a six-stringed instrument, but no bridge or tail-piece can be discerned. The strings simply extend from the bottom of the instrument to the upper end of the hole through which they were plucked. The sides are parallel, and the top and bottom slightly convex. Such an instrument as this could not have been bowed, and similar examples can be seen in other manuscripts. But in another English specimen of c. 1400—although in shape it is not at all unlike the one just mentioned—the probability of its having been bowed is not precluded. No bridge is shown, it is true, but the strings (three in number) are affixed by means of a tail-piece. The fingering hand is still inserted through a hole apparently cut right through the thickness of the instrument, but no fingerboard is visible. There can be no possible doubt that there must have been one, for no one in their senses would cut a hole through an instrument unless for the purpose of stopping; because there was a nearer way to the strings from the front, if it was only required to pluck them open. Now, if this Crowd of 1400 was fingered,

and had its strings attached to a tail-piece, it was most probably bowed also. It should be noticed that although *Rottes* have been found portrayed with from five to a score of strings, the bowed variety—even in the cases where the bow was certainly used—rarely had more than three. It is important to remember, should there be a danger of confusing these three-stringed, bowed Crowds with the rebecks, that the latter had necks and heads that held the pegs, while the former only had bodies—so to speak—the fingering hand approaching the strings by means of an opening in the instrument.

So far the shape of the Crowd has been oblong, or oblong with slightly curved top and bottom. Another form must now be considered : that of the specimen portrayed in bas-relief in Worcester Cathedral (Choir), and dating from the Thirteenth Century. This variety of the Crowd was oval, about two and a half times as long as it was broad, had a couple of primitive, comma-shaped, sound-holes, a tail-piece, and the hole for the fingering hand was still present. But the chief point of dissimilarity between this Crowd and those already described was the fact that its long sides were decidedly incurved, like those of an elongated guitar ; and I can see no other reason for this incurving, at the place it occurs, than to facilitate bowing. Here, again, no bridge is shown ; this being the only link wanting to make of the instrument one that might be easily bowed. But a French specimen of the Eleventh Century exhibits even this feature ; and in the example in question it is perfectly flat. This would argue that the three strings were bowed simultaneously as chords ; a fact that need not prove the falsity of the bowing theory, for the Welsh Crwth, which was demonstrably bowed, had a bridge of equal flatness.

Now, whether the two forms of the Crowd (or Rote) already treated had a common origin or not, cannot be determined with certainty to-day. They may be related, but so many of the intermediate stages in the evolution appear to be missing, that no advantage can be gained by wasting time on profitless speculation. But one point may be noted ; and that is, at the time of the incurved specimens a distinction seems to have been made between the plucked variety and the bowed. Perhaps the name Rote was applied to the former, and Crowd reserved for the other. Certain it is that, in spite of their similarity, contemporary writers of the Fifteenth Century

mention the two forms together, and they would not do this if *Rote* and *Crowd* had been applied to one and the same instrument. My own observation brings me to the conclusion that the *Rote* was not bowed and that the *Crowd*, in its later medieval development at any rate, was so played.

Literary mention of both names is not rare in England ; in *Sir Tristrem* (Thirteenth Century) the "Croude" is referred to, and Wiclif has "Crowde" in his Testament. In the *Kyng of Tars* (Ritson's *Metrical Romances*, l. 485) we read :

Nas munstral non with harpe ne crouthe.

In *Octavian Imperator* (Fourteenth Century, l. 69) we meet with the form *Roowte*. *Sir Degrevant* (l. 37 ; *Thornton Romances*, ed. J. O. Halliwell, Camden Society, 1844) has the line :

Well to play in a rote,

where the preposition may mean a misprint or slip of the author's pen. *Lybeaus Disconus* (l. 138) also uses the term *Crouthe*. Chaucer frequently made his characters musical and wrote of one who could sing well and "pleyen on a Rote," while John Lydgate (*Reson and Sensuallyte*, MS. Fayrfax 16, Bodl., and British Museum MS. Addit. 29729) has : "Harpys, fythels, and eke rotys" (l. 5579). In the *Squyr of Lowe Degre* the same name occurs, as it does also in John Gower's *Confessio Amantis* (l. 829). Stephen Hawes refers to "Harpes, Lutes, and Crowdes right delicious" (*Pastime of Pleasure*, 1506, chap. xvi.). In Scotland, too, the word used was the English one (*Crowd* ; mentioned in Gavin Douglas' *Palace of Honour*, 1501, printed 1579). Exactly when the instrument fell into disuse would be difficult to determine. The evidence of poets goes for nothing in such cases, for lutes are mentioned by present-day writers. So that when Spenser writes of the "trembling crowd" in his *Epithalamion* (1594) he may have only used the word with a poet's licence. It must be mentioned in passing, too, that the words *Crowd* and *Crowder* may have been applied to the instruments of the Rebeck and Fiddle type and their players, by writers who had no very exact knowledge of earlier distinctions.

In the case of the Irish *Cruit* we have an instrument that, in its earliest forms at any rate, appears to have been more like

a lyre or small harp than were any of the crowds and rotes. A small Cruit, represented on a sculptured cross of the Eighth Century, and a larger one in a similar place dating from the Ninth Century, were both clearly of the harp-type, and could only have been played by plucking. No doubt later developments along certain lines enabled a bow to be used, but under what influences these alterations were made is not clear. It must be noted that authorities on Ancient Irish music look upon the Cruits on the sculptured crosses mentioned above as early harps and nothing more. There is plenty of justification for this ; but it does not prevent the instrument having been developed along two distinct lines—one leading to a bowed Cruit, and the other to the Irish harp.

The Welsh form, although persisting in a highly improved shape until the end of the Eighteenth Century, is not mentioned very early ; indeed, we have allusions to bowed Crowds in England much anterior to bowed Crythau. Whatever may have been the form of the earliest Crwth used in Wales (and it will be seen later that it was most probably the three-stringed Crowd), the last development of it came after considerable outside influence had been exercised. It is mentioned in a poem by “Gruffydd ab Davydd ab Hywell” (c. Fifteenth Century), and an extract from it is given by John Jones (Idris Vychan) in *An Essay on Penilion Singing* (1885). From the description of the Crwth given in this extract it is not quite clear that it refers to the instrument as we know it from existing examples ; and the bow that is mentioned may not be a bow for playing so much as some curved part of the instrument. Gruffydd says that it had “a fine wooden chest” and that its value was “one pound” ; further that it had six strings, “one for each finger and two for the thumb.” The sentence of which I can make very little is : “Its frontlet (or diadem, chaplet) is round as a wheel and the bow is across its short point.”

Hipkins and Gibb in their beautiful work on old instruments illustrate the final form of the Welsh Crwth, and a specimen may be seen in the Victoria and Albert Museum (London). In these the instrument had a hollow body made of a single slab of wood, with the belly glued on to it. Attached to this shallow box was an arch which held at its centre the finger-board and the tuning-pegs. Two circular sound-holes were cut

in the belly, and the lower ends of the strings were fastened to a tail-piece. Between the end of the fingerboard and the tail-piece was placed a bridge of peculiar construction. The right foot rested on the table, while the left, much longer, passed through the left sound-hole and rested on the inside of the instrument's back, thus fulfilling the double function of foot and sound-post. This use of the bridge foot is not an isolated one. A third foot in the centre of the bridge rested, like the right foot, on the belly. Over the fingerboard were mounted four strings, and running alongside were another two; this use of additional strings to be plucked by the thumb was again quite common in many instruments (*e.g.* in the Viola di Bardone or Barytone, several varieties of the Lute, *etc.*). The tuning varied, and the commonest appears to have been :

the first two notes being that of the plucked strings. This accordance was still used in the Eighteenth Century (Edward Jones, *Musical and Poetical Relicks of the Welsh Bards*, 1794). An alternative tuning was :

given by William Bingley (1804) who met a Welshman at Carnarvon in 1801 who played on a Crwth thus tuned. The Hon. Daines Barrington also speaks of a John Morgan who played at Carnarvon in 1801, probably referring to the same performer. The flatness of the bridge is a feature reminiscent of the bridges used on the three-stringed Crowds; individual strings could not have been bowed, and chords chiefly must have been produced. With the peculiar tuning of the instrument some most effective combinations must have been possible.

A three-stringed Crwth—*Crwth Trithant*—is frequently mentioned, which Engel thinks was “a sort of violin, or more properly a rebeck”; and Hipkins is “disposed to agree” with

him. Why Engel should think thus is not clear when the three-stringed *Crowd* above-mentioned can much more probably be the instrument alluded to. Moreover, Hipkins says that the tuning of the *Crwth Trithant* was the tonic, the fifth, and the octave, which was that of the *Organistrum* or primitive hurdy-gurdy, very popular at the period from which date the references to the three-stringed *Crwth*.

CRUIT. *v.* *CROWD*.

CRWTH. *v.* *CROWD*.

CURTAIN-TUNE. *v.* *ACT-TUNE*.

CURTAL: An obsolete instrument, playing the part of the modern bassoon. Its chief characteristic was the doubling of the long tube upon itself so that the finger-holes at either end became equally easy of reach, and so that the fingers and thumb of the same hand could work together. This bending of the tube naturally shortened it, and this circumstance gave the instrument its name (French *Courtaut* or *Courtaud*, shortened or squat). A form still shorter than the ordinary *Curtal* was used, and called the *Racket* or *Sausage-Bassoon*. The *Double Curtal* was pitched an octave lower than the ordinary *Curtal*.

Double Curtal
(*Randle Holme, Academy of Armory*
British Museum Ms. Harleian 2034,
Bk. III 17th Century)

The only old-English account of the instrument which seems accurate, is that given by Randle Holme in his manuscript *Academy of Armory* (British Museum, *Harl. MS. 2034*, *Bk. III*, c. 1688). A sketch of the instrument is also included, and from it we see that the *Curtal* was composed of a sort of knee-piece into which two tubes were fitted in such a way as to form a continuous air channel, bent like a hair-pin. The two tubes were of unequal length, the shorter being connected with the

mouthpiece by means of an S-shaped tube. Holme describes it as follows : “ A Double Curtaile this is double ye bigness of the single . . . and its play is eight notes deeper. It is as it were two pipes fixed in on thick bass pipe, one much longer than the other, from the top of the lower comes a crooked pipe of Brass . . . in which is fixt a Reed, through it the wind passeth to make the instrument make a sound. It hath six Holes on the outside and one Brass key called the double *F fa ut* on that side next the man or back part and two Brass keys the highest called double *La sol re* and the other double *B mi*.” The curious names for the keys of the instrument were probably those of the notes that these keys produced (v. Gamut). Carl Engel mentions a specimen of the Fifteenth-century Curtal in the Conservatoire of Music at Paris, and the existence of this example may account for the full description given in the Encyclopedia of de Felice (1772). Although the instrument was very much used, especially in England, specimens of it are very rare ; and good contemporary accounts are all the more welcome. De Felice says of it : “ Courtaut is nothing different than a shortened fagotto or bassoon, which can serve as bass to the *musettes*. It is made out of one piece of cylindrical wood and resembles a thick stick. It has eleven holes, seven on top ; the eighth, ninth, tenth, and eleventh are underneath. The instrument is pierced throughout its length by two holes ; the seventh hole indicating the connecting-point at which these two tubes meet. In order to make of these two tubes one continuous canal, a small box is adjusted, by which means the wind is carried from the reed to the eleventh hole, in such manner that the air descends and remounts. Besides the holes already mentioned, there are six others : three on the right for those who play on this instrument from the right side, and three on the left for the others. Those that are not used are closed with wax. On the others are placed little funnels of wood called “ udders ” (*tetines*), which penetrate as far as the second canal, into which the holes under the instrument open. Of all these holes, two of the under ones, 9 and 10, give the highest sounds : the six holes, 1 to 6, follow, the sixth hole making the seventh note. The tenth is called the thumb-hole, because it is closed by that member ; it opens into the first canal, just as the six which follow it. The seventh hole gives no sound at all, whether it be open or

closed ; it merely effects or interrupts the continuity of the tube. The udders form the eighth, ninth, and tenth holes, the eleventh serving for nothing but as an exit for the wind."

The date at which the instrument was first used in England cannot be determined with any degree of certainty. Judging from the circumstance that it was enumerated among the instruments in the possession of Sir Thomas Kytson, of Hengrave Hall (c. 1600), the second half of the Sixteenth Century may be a reasonable date to assign to its *debut* in this country. In the *Household Accounts* of the knight just named we read under date December, 1574 : " For an instrument called a Curtall, xxxs." ; and the way the entry is made seems to suggest that the instrument was not well known, or we might expect to find the item " For a Curtal." References to the instrument are not sufficiently numerous to afford materials for an unbroken history of its use, but enough can be gleaned from what we know to enable us to form a fair idea of its functions. In the Chapel Royal the Curtal was used regularly, and at a festival service of the Knights of the Garter at Windsor the instrument in question took part in the accompaniment.

The Lord Chamberlain's Records give a good deal of information concerning the engagement of performers on the Curtal for the Royal Band. In 1663 (June 20) a warrant " to pay Edward Strong, musician, the sum of £50 for three good Curtalls, by him bought and delivered for his Majesty's service " was issued, and in 1669 (November 30) Robert Strong was to receive £52 for " two double Curtolls . . . given to Segnior Francisco for the service of the Queenes Majesty." An entry dated August 30, 1662 (*Vol.* 741) orders Robert and Edward Strong " to attend with their double Curtolls in his Majesty's Chappell Royall at Whitehall." We can form no opinion as to how many players on the Curtals were employed in the royal orchestra, for the entries in the State Papers are not always clear on the point ; several musicians made a habit of playing upon two or more instruments and were often entered simply as " for the wind-music." It is most probable that some of the players on the hautboy performed on the Curtals when the necessity arose. Such a doubling was not unusual, and there is nothing extraordinary in a musician, who understood the treble of an instrument, playing also on the

bass of the same species. Only three or four more references to the instrument—that is to say, references able to add to our knowledge of the subject—are known to me. The double Curtal was represented in the Coronation procession of James II, and the municipal books of the Edinburgh Town Council have an entry dating from 1696, giving the information that the Cornets (*q.v.*) of the Town Waits (*q.v.*) were changed for the “French Hautboye and double Curtle, instruments far more proper. . . .” The instrument persisted well into the Eighteenth Century, and in the “grenadier music” of the Honourable Artillery Company it had a place as late as 1731. At a date not much anterior to this Dr. Robert Creighton wrote the well-known verse in Additional MS. 37074 (British Museum) containing the lines :

I hear a Thunder rolling here beneath,
Where Curtals and Bassoons their murmurs breathe.

Another manuscript in the British Museum (Additional 36710 ; not later than 1732) states that Handel’s pastoral *Acis* needed a “double Curtal” for the accompaniment to some of the songs.

There can be no doubt that the Curtal was, for some time, used side by side with the bassoon which was soon to displace it. Grassineau’s Musical Dictionary of 1740 still gives : “Curtail, *double*, a musical wind instrument like the Bassoon, which plays the bass to the Hautboy.” In this way—as the bass of the hautboy family—the Curtal was used during the whole of its career in England, and although, as we have seen, the instrument was known here in the days of Queen Elizabeth, it did not seem to be very widely used until the middle of the Stuart period.

DESCANT : A term used to signify a disquisition on a theme or ground (*q.v.*). Tyndale (before 1536) has : “Twenty doctours expounde one Text xx wayes as children make descant upon Playne Song.” Richard Edwards (*Damon and Pythias*, 1571) uses practically the same simile : “. . . your playne song to sing descant upon.” Shakespeare employs the term as a verb in *Richard III* (I, 1) : “Unless I spy my shadow in the sun, and descant on my own deformity.” In the *Squyr of Lowe Degre* the word is spelled *dyscant*.

At the period from which these quotations have been taken,

the term had a fairly wide application. In the first place it could mean the part or parts added to a plain song or *canto fermo*, in the nature of divisions ; and thus Tyndale's use of it was musically quite correct. North (*Memoires of Musick*) says "the early discipline of musick in England was . . . to sing plain-song at sight, and moreover to descant, or sing consort parts at sight . . . and this not only of one part onely, but art was so farr advanced that divers would descant upon plaine-song extempore together. . . ." Christopher Simpson in 1659 speaks of "Descant, or Division."

In the Thirteenth and Fourteenth Centuries the word meant the simultaneous sounding of two or more different themes in harmony, and thus was the forerunner of harmony and counterpoint. In this sense John Playford employs the term until near the end of the Seventeenth Century : "The Art of Descant, or Composing Musick in Parts."

Both senses of the word were used at the same time in the middle of the century. Christopher Simpson (*Division-Violist*, 1659), in speaking of the differences that existed between Descant and Breaking the Ground (*q.v.*), says : "Division, or Descant-Diminution, is that, which maketh another distinct, and concurring part unto the Ground. It differs from the former (Breaking the Ground) in these Particulars. That, breaks the notes of the Ground ; This Descants upon them. That, takes the liberty to wander sometimes beneath Ground ; This (as in its proper sphere) moves still above it. That, meets every succeeding note of the Ground, in the Unison or Octave ; This, in any of the Concords."

DIALOGUE : A composition, as its name implies, for two voices, very popular in the Seventeenth Century, not only in England, but all over the Continent of Europe. Its form was rapidly developed and "dialogues" are to be met with in three or more parts. Additional MS. 11608 (British Museum, c. 1656) contains a "Dialogue of Juno, Venus, Pallas, and Paris" in two and four parts, by John Hilton ; and another by Ramsey called "A Dialogue between Saul, ye Witch of Endor, and Samuell's Ghost." *Ayres and Dialogues* were published in large numbers during the second half of the Seventeenth Century, the texts being chiefly pastoral in character. Of especial interest and importance were the

sacred dialogues of the period, which in all probability had their origin in the antiphonal singing of the Middle Ages.

DIAPASON : A Greek term meaning to pass “through all” (the notes) and thus arrive at the octave, whence it came to be the name of the octave itself. Playford explains Diapason as “a perfect Eighth, and contains five whole Tones and two half Tones.” It is easy to see how a word applied to a duplication of a note came to mean, in a general sense, concord ; and in this way it is employed by many writers. Shakespeare uses the word in *Lucrece* (l. 1132) and Milton, in the poem, *At a Solemn Music*, has : “. . . whose love their motion sway’d In perfect diapason.” In its stricter meaning, John of Trevisa (translating Ranulf Higden’s *Polychronicon*) used it as *dyapason* ; and so it is printed in Wynkyn de Worde’s edition of 1495. The last-mentioned work also contains the “Duplex Diapason” or double octave, although the example printed with the text contains a note too many.

In England “open” and “stopped” diapason are terms used in connection with the organ.

DIAPHONY : According to accounts given by Hucbald, Guido d’Arezzo, and other writers of works printed by Coussemaker (*Scriptores, etc.*), Diaphony may be said to have been, for all ordinary purposes, the same as Organum (*q.v.*). This early attempt at harmony produced long successions of fourths or fifths, which, to modern ears, sound intolerable ; but Guido gives examples in which seconds and thirds are more frequently used, with the result that the music is proportionately more interesting. Diaphony had become fairly free by Guido’s time, and the only interval studiously avoided was the tritone (the *diabolus in musica*).

DIMINUTION : 1. In Mensural Music, the halving of the value of the notes, or doubling their speed, by an alteration in the time-signature (*v. TIME, Tempus*).

2. In music of a contrapuntal character, Diminution consists of the restatement of a theme in notes of a smaller value—*i.e.* a subject that has been given in minims or crotchets, being repeated in crotchets or quavers, respectively.

DIRECT : A sign placed at the end of each line of music, and later at the foot of every page, to give the performer notice of the next following note, fulfilling the functions of the "catch-word" in early printed books. Playford gives the sign as follows :

and says that it "serves to direct to the place of the first Note on the next line."

DISCANT. *v.* DESCANT.

DIVIDE. *v.* DIVISION.

DIVISION : To "divide" a piece of music meant to write a variation upon it by dividing the long notes into a larger number of short ones, and generally embellishing it in order to exhibit technical dexterity in writer and performer. In *Lingua* (I, 1) we read : "'Tis plain, indeed, for Truth no descant needs, Una's her name, she cannot be divided." Spenser (*Faerie Queene*, III, I, 40) has :

And all the while sweet Musicke did divide
Her looser notes with Lydian harmony.

Shakespeare uses the noun in *Romeo and Juliet* (III, 5) : "Some say the lark makes sweet division."

The Seventeenth-century instrumental composers in particular were very fond of this form of writing, and the variation-style was exceedingly popular. The majority of the virtuoso show-pieces for the viols consisted of a theme with a number of "divisions," Christopher Simpson having written some interesting specimens. Even the exercises or "lessons" for beginners took the form of some popular tune such as "The Lark," or "John come kiss me now," with simple variations. Thus Playford's *Introduction to the Skill of Musick* (1674 and many other editions) gives "*John come kiss*, with Division to each Strain." The same publisher's *Division-Violin* (1688) prints a number of Grounds suitable for playing division. The division of a ground was often termed "Diminution" (*v.* GROUND *and* DESCANT).

DIVISION-VIOL : A bass-viol of medium size suitable for the performance of ornate divisions (*q.v.*) or variations on a ground-bass. These compositions were often of a very exacting nature, and an instrument that was fairly easy to manage afforded the virtuoso the best chances of success. Both John Playford and Christopher Simpson are unanimous as to the size of instrument best suited to this class of music. The former says : “ a Bass Viol for Divisions must be of a less size (than the Consort-Viol, *q.v.*), and the Strings according ” ; while the latter (*Division-Violist*, 1659) has : “ I would have a Division-Viol to be something a shorter size than a Consort-Basse that so the Hand may better command it ” (*v.* also VIOLS).

DOMPE. *v.* DUMP.

DOT : In old English music a term less frequently used than Prick or Point (*q.v.*).

DOT-WAY : A species of Tablature (*q.v.*) used in writing music for the Recorder and the Seventeenth-century Flageolet. It consisted of as many lines as the instrument had finger-holes, and each dot placed on a line represented a finger placed on the corresponding hole of the instrument. Humphrey Salter’s *Genteel Companion for the Recorder* (1683) and Thomas Greeting’s *Pleasant Companion* (for the Flageolet, 1682) both give their lessons and pieces in this tablature. Salter says that some writers used a seven-lined stave and others six ; he employs six only, adding a “ short line underneath ” in the nature of a ledger-line when he requires it ; his idea being that “ more do but hinder the readiness of sight.” The top line of the system referred to the under hole which was stopped with the thumb ; the second line belonged to the first hole above the instrument ; the third line to the second hole, and so on. These holes were stopped with the fingers of the left hand in regular rotation, and when the digits of that hand were all employed, those of the right followed in the same way. The Pinching-Notes (*q.v.*) were indicated by the dot being crossed with an horizontal line, thus forming a plus-sign. Salter’s instructions are rather quaintly worded, as for example, “ stopping all the holes is eight dots, up with the little finger of your right hand is seven dots, *etc.* ” The last three measures of a short piece given in the *Genteel Companion* are as follows, the

the second stave containing the same three measures in ordinary notation :

DOUBLE : Very similar to a simple division (*q.v.*), consisting of an embellished version of a short instrumental movement. Such simple variations on the stereotyped dance-forms were often called Doubles, and the works of Bach and his contemporaries abound in examples. The term persisted until well into the Eighteenth Century.

DOUBLE BACKFALL. *v.* BACKFALL.

DOUBLE CURTAL. *v.* CURTAL.

DOUBLE FALL. *v.* FALL.

DOUBLE RELISH. *v.* RELISH.

DOUBLE SACKBUT. *v.* SACKBUT.

DOUCET, DOUCETTE. *v.* RECORDER.

DRIVING NOTES : Syncopated notes were named Driving Notes in Seventeenth-century England ; that is to say, they were urged or driven through the ensuing accent. John Playford defines the term with “*Syncopation* is when the beating of Time falls to be in the midst of a *Semibreve* or *Minim*, etc., or, as we usually term it, Notes driven till the Time falls even again ”—“ Driven Notes ” being a common variant for Driving Notes.

DROMSLADE : A variant spelling of Drumslade (*q.v.*) probably betraying the Dutch origin of the word.

DRUMSLADE : A term derived from the Dutch *Dromstade*, a drummer, and used in England to designate that class of musician, and also, through error, the instrument itself. When the word was first used here is difficult to determine. The State Papers speak of Tabrets until the first half of the

Sixteenth Century, and in an account for expenses connected with the funeral of Henry VIII (Lord Chamberlain's Records, February 21, 1547/8) a "Drume player" is mentioned. In the Privy Purse Expenses of Henry VIII (May 14, 1532) we read : "Item . . . Paied to hans Pyper and Bartholomew his ffellawe Dromslades for their lyverayes xlv.s.," while on September 6th of the same year a similar sum was paid to "Christopher Drombeslade and his fellawe for ther lyveray coots." Queen Elizabeth's accounts show the employment of three *Drumsteds* at "fee apeece 18*l.* 5*s.*," the word here exhibiting a spelling very like the Dutch original. Later in the Sixteenth Century the terms Drumplayer, Timpanist, and Drumslade alternate, and are often to be found used in reference to one and the same performer.

D-SOL-RE. *v.* GAMUT.

DUB : An old name for the Tabor (*q.v.*) and used colloquially. Its derivation is doubtful, but may be onomatopoeic ; George Gascoigne in his *Flowers* (Sixteenth Century) having : "The Drummes crie dub a dub, the braying trumpets blow." Beaumont and Fletcher likewise have : "how the drum dubs." Just as the word Drum itself comes to us from the Dutch, so may Dub come from the East Frieslandic *Dubbe*, a blow, and *Dubben*, to strike.

DULCIMER : An ancient stringed instrument almost identical, in its earlier forms, with the Psaltery (*q.v.*), except that it was always played by striking the strings, generally of metal, with small hammers or beaters made of a flexible material to give resiliency, while the other was played with the fingers or a plectrum. The Dulcimer thus became the ancestor of the modern pianoforte with hammers. Sometimes the strikers of the Dulcimer were provided with double heads, one being covered with soft, and the other with hard, material, so that different shades of tone could be obtained. The strings ran over continuous bridges in the earlier forms, and over small, separate, bridges—one for each string—in the later. Being divided by the bridges into parts of unequal length, the strings could be struck on either side of one of the bridges, each part producing a different note. Some of the sections were unfit for use, and a certain amount of skill and practice was necessary to hit off the correct notes at will. The tuning-pins ran

along one of the short sides of the instrument, and the sounding-board was not infrequently perforated with one or more fretted circular sound-holes. The tuning varied in different countries ; generally to a diatonic scale in England, and, later, on the Continent, to a chromatic scale. The strings, divided by the bridges, naturally gave different series of notes, those obtained with the commonest tuning being between :

with F natural, in one set ; the same an octave higher in the next set ; and from the D on the fourth line of the treble stave to its octave, with the F sharp, in the rest of the strings used.

The instrument is mentioned as the *Dowcemere* in the *Squyr of Lowe Degre* (l. 1075) and as *Doucemer* in Stephen Hawes' *Pastime of Plesure* (chap. xvi, 1506). Historical references to it are frequent enough, and as an example it may be mentioned that at the Westminster entertainment of 1502 the "dusymmer" was played by female musicians. Pepys (May, 1662) speaks of it as a novelty, the Virginal and the Spinet having probably robbed it of much of its vogue : "Here among the fiddles I first saw a dulcimere played on with sticks knocking of the strings, and is very pretty." A month later he heard it again in a tavern.

The name "Dulce Melos" appears as early as the end of the Fourteenth, or the beginning of the Fifteenth Century, and was applied to a keyboard instrument (v. *Vierteljahrschrift fuer Musikwissenschaft*, 1892, p. 95). The Psaltery may have been first played with hammers in Germany, since the Italians call the Dulcimer the *Salterio tedesco*. The German name for it, however, is *Hackbrett* ("chopping-board" ; so called from the movements of the beaters). The Dulcimer is still used in Hungary as the *Cimbalom*. In Italy it was known as *Cembalo*, whence "Clavicembalo" for Harpsichord. I have heard it played in so-called Hungarian Bands in England, and one musical mendicant of twenty-five years ago lingers in my memory, for I used to hear him play a rather shabby dulcimer in the suburban trains of the Great Eastern Railway.

DUMP : A form of dance of which very little is known, and its peculiarities as a dance are equally obscure. Shakespeare mentions it twice ; once in *Lucrece* (ver. 161) : “ Distress likes dumps when time is kept with tears ” (which would lead us to the conclusion that the form was a melancholy one), and again in *Romeo and Juliet* (IV, 5) : “ O, play me some merry dump to comfort me,” where the “ merry ” may be a joking play on words. Humphrey Gifford’s *Gilloflowers* contains a poem entitled “ A Dolefull Dumpe,” and two more labelled “ A Dumpe ” and “ A Dumpe by his friend G.C.” It is possible that the term was applied in the Sixteenth Century to elegiacs and thence to similar music. At the same time, the rhythm of a Dump called *Lady Carey’s Dumpe* (about 1600) cannot be said to be particularly dismal :

DUPLA : In Mensurable Music a doubling of the speed, generally indicated by the figure 2 next to the signature (cf. DIMINUTION, 1).

E-LA-MI. v. GAMUT.

ELEVATION : An ornament leading up, as its name suggests, from a low note to a higher one :

A variant of this embellishment was the “ Shaked Elevation ” :

(John Playford, *Introduction to the Skill of Musick*).

Christopher Simpson, in the *Division-Violist* (1659), speaks of a different kind of Elevation applicable to the Viols only :

“ Sometimes a note is graced by sliding to it from the Third below, called an Elevation, now something obsolete. This sliding a Third is . . . alwayes done upon one String.”

ENTRY: A term used in the Seventeenth and Eighteenth Centuries for what we call a Prelude to-day. It was sometimes applied fairly loosely to the opening movement of a Suite or Set of short pieces, having been doubtlessly suggested by the French *Entrée*. Roger North (*Memoires of Musick*, 1728) writes of pieces beginning “ with an entry,” and praises “ the entrys of Baptist.”

FA. *v.* ARETINIAN SYLLABLES and GAMUT.

FABURDEN, FA-BURDON. *v.* FAUX BOURDON.

FADING: Another name for the Burden (*q.v.*) or refrain of a song in Elizabethan England. J. O. Halliwell (*Dictionary of Archaic Words*, 1847) says that the Fading was the name of an Irish dance, “ and also the burden of a popular Irish song of a licentious kind.” Its use in England as a popular designation for the refrain of a song may have been extended from this sense. See also the quotation from Beaumont and Fletcher’s *Knight of the Burning Pestle* in the article JIG.

FA-LA: A vocal (polyphonic) composition of a popular character with these Solmisation syllables as text. In some cases the whole work was sung to these syllables, sometimes only the refrain. It dates from the end of the Sixteenth and the commencement of the Seventeenth Century, *i.e.* during the vogue of the Madrigal, and some of the most celebrated of English musicians wrote in this form. As vocal accompaniments to ancient dances, monodies on such syllables date from the early Middle Ages.

FALL: The Cadence or Close of a musical phrase was, in Shakespeare’s day, termed a Fall (*cf.* “ That strain again, It had a dying fall,” *Twelfth Night*, I, 1). John Playford gives a “ Plain Fall ” as an ornament connecting a note with another of lower pitch, and a “ Double Fall ” as one which descended to a note below the next chief note. “ A Fall to take breath ” is given in the *Introduction to the Skill of Musick* as one in which a short rest is inserted between the high note and the commencement of the ornament.

FANCY : A free form of composition for instruments, which may be looked upon as an English invention of the middle Sixteenth Century. The fact that Fantasies existed on the Continent of Europe does not influence this statement, since the method of handling and the nature and character of the true English Fancy differed so much from the foreign Fantasia, that no doubt can exist as to the native origin of the form. The fashion which sanctioned such writing undoubtedly owed its inception to the popularity of the instrumental In Nomine (*q.v.*), and once the writers of the period had broken away from the older conventions, they began to realise that their powers of invention and imagination were quite equal to the demands placed upon them by the new vogue. The sets of dance-forms were becoming too elementary for the great virtuosi of the time, and something more than mere variations (divisions) on a given theme was necessary to afford adequate expression to the growing technique of our instrumentalists. To meet this demand the Fancy came opportunely, and some of the later (middle of the Seventeenth Century) specimens are fine examples of instrumental writing. Though chiefly used for the stringed and bowed instruments, practically any combination could play the Fancy, and for some time it was the principal form of chamber-music.

How popular the Fancy must have been in Shakespeare's day is shown by the allusion to it in *II Henry IV* (III, 2), a use which proves that the meaning of the term must have been familiar to all: "He came ever in the rearward of the fashion: and sung those tunes to the overscutched hus-wives that he heard the carmen whistle, and sware they were his fancies or his good-nights."

Christopher Simpson gives the recipe for the Fancy as it was written before the middle of the Seventeenth Century: "In this sort of Musick the composer (being not limited to words) doth imploy all his art and invention solely about the bringing in and carrying on these fuges according to the order and method formerly shewed. When he has tried all the several ways which he thinks fit to be used therein, he takes some other point, and does the like with it, or else, for variety, introduces some chromatic notes, with bindings and inter-mixtures of discords; or falls into some lighter humour like a Madrigal, or what else his own fancy shall lead him to; but

still concluding with something which hath art and excellency in it."

Although the Fancy allowed the writer a good deal of freedom as far as its actual form was concerned, the rules that convention imposed upon its writing soon made of it something that was looked upon with a certain amount of awe by the lover of the popular muse. It is peculiar that a form of composition intended to break away from stiff and stereotyped forms should itself become almost as formal. The result was that after having enjoyed great popularity for a couple of generations the Fancy began to decline in favour in the middle of the Seventeenth Century ; so much so that we find Simpson saying, " This style of music was much neglected because of the scarcity of auditors that understand it ; their ears being more delighted with light and airy music " (*Compendium*, 1667). This, no doubt, was the result of Charles the Second's peculiar taste in music, and his encouragement of French fashions to the detriment and neglect of the older English forms. Charles I, on the other hand, was a great admirer of the Fancy, and was probably responsible for the writing of a large number of them by reason of the grace with which he received their composers. John Playford tells us that Charles " could play his part exactly well on the Bass-Viol, especially of those incomparable Phantasies of Mr. Coperario to the Organ." Charles I, whatever he may have been as a king, showed considerable talent and taste as a musician, and his love for the Fancy did English music as great a service as Charles the Second's dislike for it sealed the fate of the form, and commenced an era of foreign influence upon our native art.

Examples of the Fancy are very frequent and no difficulty need be experienced in locating them. Lady Nevell's Virginal Book (before the end of the Sixteenth Century) affords two examples by William Byrd. Orlando Gibbons' manner of writing in this form may be seen in the two specimens contained in Benjamin Cosyn's Virginal Book. Richard Deering's work is exhibited in the British Museum manuscript Additional, 17786/91, and Additional 29366/8. In printed form there are seven specimens in John Dowland's *Varietie of Lute Lessons* (1610). In manuscripts dating from the middle of the Seventeenth Century the Fancy becomes so frequent that it is scarcely possible to refer to one without finding

examples by such men as Ferabosco, Gibbons, Jenkins, East, Lawes, Cooper, *etc.* Even Purcell still used it ; but by then it was the property of the academician, and it had ceased to make any popular appeal.

Before leaving the Fancy it is necessary to note a great difference of style and character between the examples we find at the end of the Sixteenth and the beginning of the Seventeenth Century, and those present in such huge quantities about fifty years later. The difference is sufficiently great to cause us to be suspicious that the two species may possibly come from different sources. There is always the likelihood that the earlier, Elizabethan Fancies, may be the English development of the Italian Fantasia ; but even if this be so, the English claim to the form as exemplified in the Stuart examples cannot be gainsaid ; and these were the brilliant children of the semi-virtuose, semi-ecclesiastical *In Nomine*.

FANTASIE. v. FANCY.

FAUX BOURDON : A form of discanting on a Plain-Song, consisting in the Treble and the Alto singing at intervals of a sixth and a third above the Tenor. Each phrase, however, opened and closed with the octave and fifth above the *cantus firmus*. The plain-song was not sung, and served only for the other parts to read from, their music being improvised from it. Chilston says of Faburden (or Faux Bourdon) that it " hath but two sights (*i.e.* positions), a third above the plain-song in sight, the which is a sixth from the treble in voice ; and an even with the plain-song in sight, the which is an eighth from the treble in voice. These two accords the faburdener must rule by the mean (*Altus*), *etc.*" Gulielmus Monachus (Coussemaker, *Scriptores*, III, 273 *et seq.*) indicates that Faux Bourdon was very popular in England and gives an example. In this he uses two staves ; the lower gives the unsung plain-song, and the upper the three-part harmony. The tenor part he writes in open notes, with the altus above and the treble below (sung, naturally, an octave higher) in black notes. Faux Bourdon was used in England certainly at the very beginning of the Thirteenth Century, and was most probably of still higher antiquity. Later meanings applied to the term do not concern us here.

F-FA-UT. v. GAMUT.

FIDDLE : This term, although used to-day as a colloquialism for “violin,” was once employed to designate an instrument very different. The name as well as the instrument itself can be traced back to Saxon times (*Fithele* ; and *Fithelere*, a fiddler), and illustrations of it, as given in early manuscripts, show it to have been rather broader and shorter than the Rebeck, and strung with four strings. A closer description would involve too much imagination being employed, since the *Fithele* borders closely on other, kindred, instruments. It is quite likely that in the Saxon period, as to-day, the word was used to mean any bowed stringed instrument. A drawing in Cotton Manuscript (British Museum, *Tiber. C. VI*) shows a pear-shaped body, two small sound-holes, a tail-piece, a square head with four pins for tuning, and an arched bow. Whether the back of the instrument was flat or vaulted cannot be determined from the illustration, and we are thus robbed of one of the most important pieces of information. The frequent references to it that are to be found in the literature of the period between the Thirteenth Century and the rise of the true Viols, prove how common it must have been. But whether the word Fiddle or *Fithele* (or variation) so used, was meant to apply to a flat-backed instrument or to a vaulted one ; to a four-stringed fiddle or to a three-stringed rebeck ; to a primitive viol or any of the instruments in Virdung’s collections of *Geigen* ; is not always clear. The word *Fydelys* is used in the Fourteenth-century metrical romance *Octavian Imperator* (l. 70), and the Anglo-Saxon form *Fithele* employed by Chaucer in the Prologue to the *Canterbury Tales*.

Anglo-Saxon Fithele

FINAL : 1. The note in the Church Modes which occupies the position of the present-day tonic.

2. The last note (*finalis*) of a ligature (*q.v.*).

FIPPLE-FLUTE. *v.* RECORDER.

FITHELE. *v.* FIDDLE.

FLAGEOLET : A small, high-pitched member of the fipple-

flute family, and the last survivor of the instruments of the Recorder (*q.v.*) class. Its head was of the whistle type and the body bored with six holes, four stopped with the fingers in front, and two at the back for the thumbs. The fingering, which was peculiar, is given in Thomas Greeting's *Pleasant Companion for the Flageolet* (1682). The instrument was played from a Tablature (*v.* DOT-WAY), and could produce notes outside of its natural series by a certain manner of blowing (*v.* PINCHING NOTES). The Flageolet was exceedingly popular in the Seventeenth Century, and Pepys refers to it no fewer than thirty-one times, had his wife taught, and played alone and in duets with her whenever he had the opportunity. In the ale-house he would produce his instrument from his pocket and kill time with it; on moonlight nights he would play it in his garden. On January 20, 1667/8 the diarist wrote: ". . . did stop at Drumbleby's, the pipe-maker, there to advise about the making of a flageolet to go low and soft; and he do shew me a way which do do, and also a fashion of having two pipes of the same note fastened together, so as I can play on one, and then echo it upon the other, which is mighty pretty." Since the uses to which Pepys put the instrument are typical, there will be no need for multiplying quotations. The Double-Flageolet mentioned was probably different from the instrument made by Bainbridge at the beginning of the Nineteenth Century. The innovation, which did not live long, consisted of two flageolets, differently holed, set into an adapter which united them to a single mouth-piece. The ordinary Flageolet—of the true fipple-pipe type—is not yet extinct.

FLAT: The state in which a note is too low in pitch. As a noun the term is the name of a sign used to lower the pitch of a note by a semitone. As in the case of the expression "Sharp" (*q.v.*), Flat replaces Playford's "B fa cliff." It was used in the Seventeenth Century to indicate a minor interval, chord, tuning, or key, just as Sharp meant the same in the major. Thus a "Flat Third" was a minor third, and the tuning of a viol "Haraway Flat" one to a minor chord (*v.* HARPWAY.)

FLOURISH: A military trumpet-call, for signalling purposes. The term is of far too frequent occurrence to necessitate a description of its uses. "A Flourish of Trumpets" is a very common stage direction in Elizabethan literature. Shakespeare,

in *Antony and Cleopatra* (II, 7), follows the observation, “. . . sound and be hang’d, sound out,” with the direction, “Sound a Flourish with drums.” Later on, the word came to mean any ornamental scale-passage of a showy type. Playford uses it as synonymous with “Graces.”

That the Flourish, in its first-mentioned sense, was distinct from the Sennet (*q.v.*), is clearly shown in Thomas Dekker’s *Satiro-mastix* (1602): “Trumpets sound a florish, and then a Sennate.”

FLUTE DOUCE. *v.* RECORDER.

FORLANE: A dance-form descended from the Galliard, and partaking of the characteristics of the latter. Written in 6/4 or 6/8, the dance varied a good deal in rhythm with the changing eras, but the unaltering feature was the jig-rhythm of dotted-quaver, semiquaver, quaver. The form was a localised one in the province of Friuli (Northern Italy) and was only used occasionally in other countries. Whether we meet it in France, Germany, or England, it is always as a novelty and a curiosity. Tomlinson gives it in his “New Dance ‘Shepherdess’” (1716) to French music, the whole thing probably being a simple imitation of the Venetian gondolier’s dance. John Stafford Smith’s *Musica Antiqua* (1812) affords another example which, says the editor, “was printed in England in 1711, and called ‘The Furlong,’ used probably by the Waits of London and Southwark.”

FRETS: A method of mechanically dividing the fingerboards of stringed instruments into semitone intervals. This was effected by a variety of means—either by inlaying thin strips of metal, ebony, or ivory, across the fingerboard, or by tying lengths of catgut round the neck of the instrument so that they crossed the fingerboard under the strings. Mace (*Musick’s Monument*, 1676) gives a complete and lucid account of the method employed in fretting the lutes, and explains how the distances between the frets should be gauged.

When a finger depressed a string on to a fret (either by falling directly over the fret, or just behind it), it stopped the string in such manner as to produce a note the pitch of which depended upon the position of the fret. Such a system of note-finding was mechanical at best, and was a legacy of the lutes, which, owing to the number of strings used, and the

various tunings employed, had some excuse for them. Playford says that playing the viols by frets was well enough for a beginner, but advised their removal as soon as the student had gained proficiency enough to find the correct positions for the several notes by ear alone. The fret, although the term has fallen out of common parlance, is still used on the mandoline, guitar, and kindred instruments.

The derivation of the word is doubtful. Three possible sources for it are the Old French *Frete*, a ferrule; the Spanish *Frete*, a narrow band (used in heraldry), and *Freter*, to cross (J. B. B. Roquefort, *Glossaire de la Langue Romane*, 1808). A meaning suggested by one of these may have been "to encircle with narrow bands," a sense in which we find the verb employed in *Piers Plowman* (*Vision of Lady Meed*): "Fairly her fingers were fretted with rings." The catgut frets of the viols "fretted" the neck of the instrument in this way, and a specimen of the Tenor Viol (1652) in my possession clearly shows the marks left by these frets.

The word was used so frequently in old English literature that we are forced to the conclusion (if further proof were needed) that music must have been so universally cultivated that the technical term was used in everyday speech. Shakespeare (*Taming of the Shrew*, II, 1) has: "I did but tell her she mistook her frets. . . . Frets, call you these? said she, I'll fume with them"; and in *Hamlet* (III, 2) we read: "Though you can fret me, you cannot play upon me." These two examples are typical of an enormous number of quotations that could be instanced.

The use of Frets made a system of notation, other than the one in general use, possible (*v.* TABLATURE).

FULL-PLAY: In lute playing the performance of full chords struck right across the strings, and used to differentiate chords from single-stop playing.

FURLONG. *v.* FORLANE.

GALLIARD: A dance of Italian origin that came to England by way of France and enjoyed an immense vogue here. A great number of examples are extant, and may be seen in practically any of the Elizabethan music-books—some of England's most celebrated composers writing in the form. In the Arundel Collection of Manuscripts there is a Galliard called, with the

Saraband which it follows, "The King's Masque"; and this specimen undoubtedly dates from the reign of Henry VIII, a very early date at which to find these two forms together. *Parthenia* contains ten Galliards by William Byrd, Dr. Bull, and Orlando Gibbons. It is naturally represented in the Fitzwilliam Virginal Book, and one example by Peter Phillips (1592) is noteworthy as containing ten sections, each of eight measures; the penultimate part being labelled *Saltarello*, a name which is in this case, I suppose, to be taken in its etymological sense only and may have been suggested by the prevalence of the Volte (*q.v.*). Robert Dowland, in his *Varietie of Lute Lessons* (1610), gives seven most interesting specimens of the Galliard; six of them by his father, John Dowland, and the seventh—unsigned—is, like the seventh Pavane, by Robert himself. All the examples quoted are in Tablature.

How popular the Galliard was in England may be more readily gauged from the fact that its name was used by most of the contemporary writers without any further explanation, proving that its meaning must have been familiar to all. Thus Shakespeare, in *Twelfth Night* (I, 3), intersperses Sir Toby's utterances with many illuminating passages referring to the dance: "What is thy excellence in a Galliard, Knight?"—and, later—"Why dost thou not go to church in a Galliard, and come home in a Coranto?"; and yet again—"I did think by the excellent constitution of thy leg, it was formed under the star of a Galliard." An interesting allusion to a variant name for the form is given in *Much Ado about Nothing* (II, 1): "Wooing, wedding, and repenting, is as a Scotch Jig, a measure, and a cinque-pace. The first is hot and hasty, like a Scotch Jig, and full as fantastical; the wedding mannerly modest, as a measure, full of state and antientry; and then comes repentance; and with his bad legs falls into a cinque-pace, faster and faster, till he sinks into his grave." The *Cinque-pace* was the Galliard, so called because of the five steps (*cinque pas*) of which the dance was composed. Another form of the same variant was "Sink-a-pace." Finally, in *Henry V* (I, 2), we have:

And bids you be advised there's nought in France
That can be with a nimble galliard won.

Shakespeare's frequent use of the word compels us to the

conclusion that in the poet's day it had already become the property of the merry reveller of the middle classes. Yet, at a not much earlier period it was used as a court-dance in England, as it was in France during the reign of Henri III (1574/89), where it was hampered by all the restrictions of the true court measure.

In conformity with the first law of artistic endeavour—the demand for variety—the Galliard was always used to follow the stately and dignified Pavane (*q.v.*), and in this order we generally find them written as well as danced. The lives of the two forms practically synchronised, for when the one vanished, at about 1650, the other fell out of favour also. Their places were taken by the Saraband and Jig. Occasionally a Galliard is to be found following a Saraband during the period of transition, and to prove that the former gave place to the Jig it will only be necessary to mention that we find Galliards and Jigs wedded to Pavanes and Sarabands indiscriminately—the two names being applied to what was in effect one and the same form.

The popularity of the Galliard on the Continent was, if possible, even greater than in England. Its name was derived from the French *Gaillard*, *Gaillarde*, “merry,” “joyous,” “gay,” and the original dance was usually written in $3/2$ time. Later we find it in almost any triple measure. Arbeau (or Tabourot, to give him his correct name) gives a good deal of information concerning the manner of the Galliard's performance in his *Orchésographie* (1588). It should be noticed, in passing, that another name frequently applied to the form was *Romanesca*, or *Romanesque*, a term used to show that the place of the Galliard's birth was Rome.

The form was fairly popular in Germany also, but the majority seem to have been the work of foreigners to that country. As was also the experience of the Galliard's daughter—the Volte (*q.v.*)—the mother-dance was the subject of much criticism. Praetorius, sombre monk, condemned it as “an invention of the devil, and full of shameful and obscene gestures and immodest movements.” Even the genial Tabourot mentions a Galliard that he witnessed, which was “so abandoned, and the extravagance of its steps such, that the bare knees of the dancer would have been visible at each leap, had she not with her hands held down her dress.” Which

sung (*v.* SOLMISATION), gave the system its name. *A-Re* was the note above it, *B-Mi* the next above, followed by *C-Fa-Ut*, and so on. These designations thus not only named the notes, but also gave their absolute pitch. With the above chart in view such titles as “Suite in *D-Sol-Re*” or “*a-la-mi-re*” (or *a-lamire*), *etc.*, are easy to understand.

“Gamut I am, the ground of all accord,” says Hortensio in *Taming of the Shrew* (III, 1), and a study of what has been said on the subject will explain the many musical allusions made in this play. Skelton already speaks of “alamyre” in *Colin Clout* (l. 107).

GAMUT-STRING. *v.* TENOR STRING.

GAMUT-WAY: A term used in the Seventeenth Century to distinguish music set in ordinary notation from that written in one or other of the Tablatures (*q.v.*).

GAVOT: A dance of French origin which became very popular in England. Appearing in this country soon after it had been taken up in the French opera, we find a specimen by John Banister in Matthew Locke’s *Melothesia* (1673), consisting of four sections of four and eight measures alternately. The *Tempest* music of Locke (1675) also included a Gavot of sixteen measures repeated. The form does not seem to have been very well known as yet, for Humphrey Salter, having probably received faulty information, wrote a “Gavot” in 6/4 (*Genteel Companion for the Recorder*, 1683). Further early examples of the form are contained in Playford’s *Musick’s Hand-Maide* (Part II, 1689), and in *Apollo’s Banquet* (Part II, Ed. 6, 1690). In the last-named work the Gavot is included in a composite set called “Branle” (*cf.* the set of Branles in Arbeau’s *Orchèsographie*). Since the French forms were so fashionable in England at the end of the Seventeenth Century and the beginning of the Eighteenth, the Gavot was industriously danced in English society; but that it rivalled the Menuet in popularity I should not be as ready to assert. All things considered, I am of opinion that the Gavot in England was more often used as an instrumental piece than as a dance.

Deriving its name from the natives (*Gavots*) of the Pays de Gap (Dauphiné), the Gavot is much more ancient than most works of reference would have us believe. Arbeau’s set of Branles, to which “they gave this name of Gavotte,” dates

from 1588, and taking into consideration some of the customs that Arbeau connects with the performance of the dance, there can be very little reason for doubting that the Gavot, which became so popular in the Eighteenth Century, had its origin in the older duple Branles. In Besarde's *Thesaurus Harmonicus* (Cologne, 1603) the Gavottes are all given as parts of the Branles, and Praetorius is one of the first to use the form independently (*Terpsichore*, 1612). A Gavotte by Henry le Jeune (before 1600), and transcribed by Mersenne (*Harmonie Universelle*, 1636), completes the list of very early specimens.

It was not until the last quarter of the Seventeenth Century that the Gavot received its regular form. It consisted, as did nearly all the other old dances, of two sections of four and eight measures, each repeated, in $2/4$ time. One of the accepted rules of the dance was that it should commence at the half-bar, and its character was generally gay. Historically the Gavot followed the path of the Menuet, but stopped when it had reached the dignity of use in the Suite ; its dance origin was then lost sight of, and pieces bearing the indication *Tempo di Gavotta* followed, to remind musicians that a popular dance of that name once existed.

In the country of its birth the Gavot was changed from a joyful country measure into a true Court-dance. Originally employed at fancy-dress balls to create the correct atmosphere for the revellers appearing as *Gavots*, it became so much liked that soon every Menuet was followed by a Gavot. In this use it maintained the artistic aims of a century earlier by wedding contrasting forms for the sake of variety. And if a dance did not possess the contrasting spirit by nature it was modified to do so ; a circumstance that accounts for the same dance having differing characteristics in different countries and at different periods. So it came about that the stately, shuffled, and triple Menuet was rounded off by the performance of a duple dance which, though also a *danse grave*, allowed of the feet leaving the ground. It is possible that when the Gavot was used alone as a show-dance it was invested in more dignity, and even touches of deeper expression and tenderness entered into its composition. As time went on the Gavot became more stately, and eventually it differed but little from the Menuet, except in measure. In all its forms the Gavot was very popular, and not less so because it brought into high society all

the customs attending a kissing-dance. Although the bestowal of bouquets or chaplets sometimes took the place of the kiss, there were many who thought the exchange an unfair one, and adhered to the older custom.

Coming into vogue during the reign of Louis XIV, we find the Gavotte represented in many of the works of Lully. They are generally in regular form, and in these cases we can be tolerably certain that they were actually danced. In other places we meet with specimens containing, for example, nine measures, which were less suitable for terpsichorean purposes. The example in Lully's *Roland* is followed by another marked *Lentement*. Under the fifteenth Louis the Gavotte was produced in greater numbers, and in some cases the form was already much widened. By the time Gluck wrote *Paride* we find a Chaconne which had an interpolated Gavotte to relieve the monotony of the ever-recurring varied theme. This example consists of six sections of eight measures each, after which the Chaconne is resumed. *Iphigénie en Aulide* (1774) contains a Passecaille treated in a similar manner, and probably for the same reason. Here the Gavotte in the major is followed by one in the minor in true Trio form, the major section being then repeated. The Gavotte in *Alceste* (1776) is also in its most complete form, and is made up of a major and a minor section, followed by the first *da Capo*.

The dance that under Louis XV had been rigorously kept on the stage of the Opera, was brought into the salon by Marie Antoinette, and the introduction of the Gavotte into the State balls ensured for it the homage of society. The national upheaval that succeeded, swept all things artistic into an abyss of wantonness and vandalism. The Reign of Terror seized upon it, and in grim irony it was employed to dance to the death-song of the thousands who fell under the triangular knife. During the Directoire an attempt was made to revive the forms that were fashionable before the national suicide; but the response was feeble, and the Gavotte, though in use for some time, gradually died out.

Germany was the first of the neighbours of France to receive the Gavotte. Dancing-masters travelling from France to Germany soon after the form's inception, brought it with them to be taken over by the German musicians. In such a way Praetorius learned that another of the age-old dances had been

given fixed shape. The result in his case took the form of six Gavottes which he included in one of his Branles (1612). The year 1668 still found the Gavotte used in the Branle (Becker's *Musicalische Frühlings-Früchte*) ; but in 1695 it is seen in the instrumental Suite. Moffat's *Florilegia* may consist of very loosely and irregularly constructed sets ; but they are suites nevertheless, and the Gavotte is used alone as a purely instrumental form. Here the shape is generally the strict one of four repeated measures in the first section, and eight in the second, though there are some exceptions where the number of measures is a multiple of four. Mattheson increased the tempo considerably, and generally wished to have them very quick (some even *Prestissimo*). Later specimens will be familiar enough. Every player of the Bach suites, for whatever instrument, will know them. A second Gavotte was frequently added to the first, and this, in some of Bach's Partitas, was written *à la Musette* (*i.e.* with a persistent drone-bass).

Handel often used the Gavot as he did the Menuet—to close the Overture (*e.g.* in *Semele*). In this, as in many other examples by both Bach and Handel, the form was very unlike the original dance in its treatment, and very often a large and irregular number of measures was written ; and to show how utterly these composers severed the form's connection with the dance, it will only be necessary to cite the Gavotte in *Joshua*, where it serves as an *Aria*.

A curious rule applied to the form early in the Eighteenth Century is quoted by Walther in 1732. He says that “ the first section should not end on the key-note of the Gavotte, but on the Third or Fifth ; if it end on the key-note it is as if a Rondeau were being made.” A glance at a few of the examples will show how often this rule was observed.

The Gavot, although it enjoyed so long a life, cannot be said to have influenced music very much ;—it added a new form to the Suite (where it was placed between the Saraband and Jig, side by side with, and often in place of, the Menuet) it is true ; but its influence stopped there.

GHITTERN. *v.* *GITTERN.*

GIGGE, GIGUE, GYGGE. *v.* *JIG.*

GIMEL: An early form of harmony (descant), in which two voices moved in similar motion, at varying intervals according

to the period, as an accompaniment to a *cantus firmus*. When these parts were anything but a Third apart, the Gimel was known as “ad modum Faux Bourdon” (v. FAUX BOURDON). According to Monachus (Fifteenth Century) the Gimel was a purely English manner of writing. Gawine Dowglas (Gavin Douglas) mentions “Gemmell” as late as 1579 (*The Palice of Honour*).

GITTAR. v. *GITTERN*.

Gittern Medieval Form.

(*British Museum Ms Arundel 83. fol 134b*)

GITTERN: Instruments bearing this name have been found mentioned in manuscripts and printed books from the beginning of the Fourteenth Century until well into the Eighteenth; descriptions and illustrations differ to such an extent, however, that a great deal of care is necessary to prevent confusion. The advent of the Guitar added to the muddle in which the history of the Gittern found itself, and the similarity of the two names caused many instruments to be misnamed. Placing all the evidence at our disposal side by side with whatever pictures, sculptures, and descriptions are left us, we must come to the conclusion that the history of the Gittern (using this name for convenience as most historians have used it—to designate the forerunners of the modern guitar), falls into at least three distinct and clearly-defined periods: In the Middle Ages an ornamental instrument of quaint design and curious handling; in late Tudor and Stuart times one closely akin to the Cittern (*q.v.*); and, thirdly, the form with indented sides. It must be clearly understood that the salient feature of a Guitar is the incurvation of its sides—the rounded “waist,” or hour-glass shape. The Gittern of the Middle Ages and the Gittern of John Playford’s day did not exhibit this feature. The first was a rather elongated instrument, unlike

either of the others; the second was pear-shaped like the Cittern. If, then, these three forms are treated together, at this place, it is not done in order to evade the task of distinguishing between them; but, rather, to collect the material into one spot and thus be better able to see what connection the one may have had with the other. It should not be supposed that I am accepting the three forms of the Gittern as chronologically successive, or that any one of them can be said to be descended or derived from another. It is my opinion that all three forms had distinct and different origins, and that it was only the practice of the masses to call any plucked instrument a Gittern or a Guitar, as soon as they were sure that it was not a lute, that caused the confusion that exists.

The Medieval Gittern is an instrument concerning which not much doubt can exist. It probably came to England during the Thirteenth Century in the hands of wandering minstrels, for in the so-called Ormesby Psalter (Bodleian Library, Oxford) there is an illustration of it. From a number of early drawings we can tell that the Gittern of this period was strung with four strings, most probably always of gut, passing over a bridge and terminating at a tail-piece which was fixed over an end-button that was often highly ornamented with carving. In this feature the Gittern of the Middle Ages differed largely from the lutes (where the strings were fixed to a bar on the table), from the Cittern (where each string had its own button or stud on the bottom rib of the instrument), and from the modern Guitar (where we once more have the strings fastened to a bar fixed to the belly—a survival of the method used in the lutes). As far as can be seen from the drawings, the strings were vibrated by means of a plectrum. Most peculiar was the manner in which the neck, head, and body of these Medieval Gitterns were connected. The neck appears to have had an enormous depth so that it reached to the plane of the flat back of the instrument, which was continued to form one unbroken line with the back of the neck. An oval hole in this deep neck permitted the hand of the player to encircle the fingerboard. Arundel Manuscript 83 (British Museum, early Fourteenth Century) illustrates the feature I have been attempting, inadequately, to describe in words. There is still preserved an actual example of the Fourteenth-century Gittern. It is at Warwick Castle, and a facsimile (from which Carl Engel knew

the instrument) is in the Victoria and Albert Museum (London). The date 1578 in the Warwick Castle specimen was added at one of the periods of restoration through which the instrument had to pass. This Gittern is elaborately ornamented with carving, and the music it produced during its prime must have been quite good for its era. Such was the instrument of which Langland wrote (*Piers Plowman*), and to which Chaucer alluded several times: "And as wel coude he playe on his giterne" (*Miller's Tale*, l. 3333), and again: "And Absolon his giterne hath y-take" (*Id.*, l. 3353). It is also mentioned in *The Cokes Tale* (l. 4396), and the plural form *Giternes* is to be found in *The Pardoner's Tale* (l. 466). Chaucer employs the verbal form of the name in the *Miller's Tale* (l. 3363): "Ful wel acordaunt to his giterninge." In the *Squyr of Lowe Degre* we meet with the form *Getron* (l. 1070), and in *Octavian Imperator* (l. 69; Fourteenth Century) the spelling *Gyterne*.

The late Tudor and the Stuart form of the Gittern was pear-shaped, and it was treated at that period much as the Cittern, with the important difference, however, that the strings were of gut instead of wire. Henry the Eighth's list of instruments contained "four gitterons, which are called Spanish Vialls." It is quite possible that these Gitterns had nothing to do with Spain, and that since they were—in a different form—as popular in Spain as the Viols were in England, they were named Spanish Viols. However this may be, the fact remains that John Playford's *A Booke of New Lessons for the Cithern and Gittern* (1652) treats the two instruments as kin. Laneham says: ". . . sometimes I foot it with dancing, now with my Gittern, and else with my Cittern," and this, together with Playford's title-page, should suffice to point out the error to those who state that the Gittern and the Cittern were one and the same instrument. The shape of this Gittern was certainly very like that of the Cittern, but other differences must have existed beyond that of the strings. Very late specimens of the work of Preston were still called Gitterns, and sometimes Guitars, although to all appearances they were Citterns. Such a pear-shaped Gittern had keyboard mechanism applied to it early in the Nineteenth Century, but the innovation did not prosper. Variant spellings of the name in Tudor times were Gitterne, Ghittern, and Gythorne. It should be observed that in every one of these references, and in every one of these

quotations, whatever form of the word has been used the final *n* has been present. I merely wish to draw attention to the fact, because when the instrument with the incurved sides arrived in England, it was called a Gittar in a host of variant spellings ;—but in all of them the *n* is absent. Is it not possible for the Guitar with indented sides to have been derived from an entirely different source and to have obtained its name similarly ?

We now arrive at the true Guitar. How early it came to England is not quite clear ; but it is highly probable that it was introduced early in the Sixteenth Century. Returning to the four Gitterons or “ Spanish Vialls ” of Henry VIII, it is quite likely that these were Spanish Guitars ; the *Vihuela*, which probably suggested the “ Vialls,” having been the name of a particular kind of Guitar (with six strings instead of four). Just as the Stuart Gitterns and Citterns were strung with unison pairs of strings, so were the Seventeenth-century Guitars ; thus combining two features—the unison pairs of strings of the older instrument and the incurved sides of the newer ;—differing from the other in shape of body, but being similar in stringing. Of course, the fact that these strings were gut and not wire, made the playing of them with the finger more pleasant, and it is possible that the softer tone of the finger-plucked gut strings was so superior to that of the plectrum-twanged wire that the instruments of the Cittern family owe their demise to this circumstance. But though the Guitar still adhered to the unison pairs of strings common to the Gittern, the most frequent number was now five instead of four. It was not until the last quarter of the Eighteenth Century that the five unison course gave way to the single strings, and their number raised to six. A few comparatively early references to the Guitar (*i.e.* the newer instrument with the incurved sides) are to be found in the State Papers, and I think we shall be fairly safe in accepting all references that contain the name spelled without the final *n* as relating to the modern, or Spanish, Guitar. In the list of “ musicians in the Mask, 1674,” were the names of four players on the “ Gittars ” ; in the list of materials supplied for their costumes they are spelled “ Gytarrhs ” ; and in the bill for making the same they are referred to as “ Kittars.” Now, I submit that at this date the instrument mentioned could easily have been the Gittern ; but that the spelling of the word indicates that the more

recently imported Guitar is meant. In the Lord Chamberlain's Records for 1686 there is an "Order that the sum of £10 be paid to John Abell, musician in ordinary to his Majesty, for a guytar by him bought for his Majesty's service in his bed-chamber." Here we have the name in what is practically its present-day form; and yet, at that time, Gitterns were still being used, as well as Citterns.

The improved tone produced by the Spanish Guitar when used for accompaniment probably caused the older instrument to be displaced, but there can be no case in favour of the Guitar having had its origin in the Gittern. The Gittern was the predecessor of the Guitar, just as the viol was the forerunner of the violin; but in neither case was the one the ancestor of the other, for this honour is shared by many forms.

GITTERON PIPES. v. CORNET.

GLEE: A form of vocal composition, peculiarly English, in three or more parts, most commonly for male voices. The characterising feature of the Glee was that each of the parts was a solo part, and was not to be doubled. Despite the suggestion of its name, the nature of the composition could be grave or gay, for the word was derived from the Anglo-Saxon *Gle*, which simply meant "music." There is no especial reason for supposing, as some authorities do, that the Glee was originated in some way to fill the place of the Madrigal, or that it was a development out of that form. It is far too recent for that, and the interval which elapsed between the Madrigal's popularity and the rise of the Glee was too great for any direct connection to be established. Moreover, the two differed enormously in form, contents, and construction. The continuous contrapuntal treatment of the Madrigal, and the "fuges," as the Elizabethan writer terms them, are alike absent from the Glee, which harmonised more frequently vertically, and loved to hasten to a multitude of cadences. This latter characteristic was caused by the circumstance that the Glee contained a large number of subjects, with hardly any development worth mentioning. The true Glee, as illustrated by its best examples, needed no instrumental accompaniment, although many compositions appeared bearing the name and provided with an accompaniment. These should not be termed Gleees at all. The word is used as early as John Playford's time, and many collections of

part-songs were published containing what are labelled "Glees," but which bear little resemblance to the Glee of a century later. The composition, true to name, belongs properly to the Eighteenth and beginning of the Nineteenth Centuries, and the most popular writers in this form (alphabetically arranged) were: Attwood, Battishill, Bishop, Callcott, Cooke, Danby, Horsley, John Stafford Smith, Spofforth, Stevens, and Webbe.

GLEEMEN: The musicians of Anglo-Saxon England, who derived their name from the Anglo-Saxon *Gle*, music. The word is not to be traced to the Anglo-Saxon *Gligg*, meaning "merry," when used in the musical sense. The term "glee" (=music; and not to be confounded with the more modern Glee treated above), is to be found as *Glew* at the middle of the Thirteenth Century, and as *Glu* (=armonia, minstrelsy) in the *Promptorium Parvulorum* (1440). In *Kyng Alisaunder* we have "Orgles, tymbres, al maner gleo"; and in *Havelock the Dane* there is the form *Gleumen*.

The Gleemen in Anglo-Saxon England were the forerunners of the later minstrels, and it was due to their customs and traditions that some very ancient forms were retained and preserved. Their music, added to that which was brought in by the Normans, formed the basis for a national English school of music.

GOOD-NIGHT: The name of a form of composition in Sixteenth- and Seventeenth-century England. It was distinguished by no particular characteristics, and was most probably used as the concluding item of an entertainment. In Mason and Earsden's "Ayres that were Sung and Played at Brougham Castle . . . in the King's Entertainment" (1618) there is a piece entitled "The King's Good-night" in lute-tablature. Shakespeare uses the word in *II Henry IV* (III, 2) in the quotation already given (s.v. FANCY).

GRACES: The older term for Ornaments, still used in the present-day expression "Grace-notes." The English music of the Sixteenth, and particularly the Seventeenth, Century, was embellished with many now obsolete Graces. Chief among these were the Beat, the Cadent, the Fall, the Elevation, the Springer, the Relish, and the Backfall, together with many variants such as certain of the foregoing "shaked,"—i.e.

incorporating a trill. An account, and an example, of all these graces will be found under their respective headings.

GRADUAL: In the Roman Catholic service the *responsorium graduale* was a psalm sung after the Epistle and answered by the choir. It received its name from having been sung *in gradibus ambonis* (on the steps of the *ambo*). This "response" style was not always persisted in, and the compositions of the English musicians of the Sixteenth Century took quite a different direction.

Another meaning applied to the word was that of a book containing service-music belonging to a certain category (*v.* Antiphonal). In Middle English the form *Grail* or *Grayle* was used for this book, and in the Sixteenth Century *Grall* was a common designation.

GRAIL, GRALL, GRAYL. *v.* GRADUAL.

GREGORIAN CHANT: A name applied rather loosely to the music of the Roman Catholic ritual, not because Pope Gregory the Great (Sixth Century) composed the chants bearing his name, but rather because during his occupation of the papal chair the form of the musical service became fixed. Much that he used was in existence before his time, and a good deal was added later (*v.* Gevaert, *Les Origines du Chant liturgique de l'église latine*, 1890). At the same time Gregory was sufficiently responsible for the form of this music to justify us in preserving his memory in the term. There can be no doubt that he rescued Church Music from the decadent state into which the Ambrosian music had fallen. Much of the then already obsolete procedure was abandoned, and the music of the Church service gained comparative freedom. The tradition newly founded by this Pope was adhered to more or less strictly in different countries. In England, whither the Roman singers came in the year 604, the clergy was especially faithful to Gregory's system—Benedict, Bishop of York, inviting more singers from Rome in 678. It was not until the Sixteenth Century that serious liberties were taken with it, and thence onward there was an ever-increasing danger of the service-music of the Sixth to the Eighth Centuries being lost in a muddle of slipshod rendering and so-called "improvements." In the Nineteenth Century, however, the French Benedictines commenced an organised restoration of the old

traditions, and in 1881 appeared the first edition of *Les Mélodies grégoriennes d'après la tradition*, which has served as the chief source of the Plain-song in Roman Catholic use. Another edition, claiming equally to be after the true tradition of the period immediately following the death of Gregory, is known as the "Ratisbon Edition." A later edition (Twentieth Century) by the authorities of Solesmes, is now the officially accepted one.

GROUND : Originally meaning the basis upon which all things stood, the term later came to be applied to the groundwork upon which the musicians of the Sixteenth and Seventeenth Centuries based their compositions. This foundation, afterwards known as the Ground-Bass, consisted of a short passage of four or eight measures, repeated as often as the ingenuity of the writer could invent fresh divisions (*q.v.*) or descant (*q.v.*) upon it. The melodies were varied and the harmony altered at each re-appearance of the Ground, and the writing of Divisions on a Ground was a favourite occupation of the old English musicians.

GUIDONIAN SYLLABLES. *v.* ARETINIAN SYLLABLES.

GUITAR. *v.* GITTERN.

GYTERNE, GYTHORNE. *v.* GITTERN.

HARP : A plucked stringed instrument of great antiquity and doubtful origin. So many nations of the remotest past used the Harp in some form or other that it is quite possible for the various types to have been developed from separate sources, though coincidentally similar. Very strong claims to the early development of the Harp can be made by Egypt, the ancient Teutonic peoples, and the Keltic nations, and which of these really first used the instrument may be impossible to decide to-day. One thing, however, must be borne in mind, and that is the circumstance that the Harp of Ancient Egypt possessed no front pillar, while the instrument of Western development had this support. Whether this fact points to separate sources for the two types must again be left an open question. As far as the British Isles are concerned, even, it is not at all easy to fix upon the identity of original types. The very names given to the various forms help to complicate the issue and strengthen the supposition that the different species of the Harp were

developed very long ago, uninfluenced by one another. The name Harp is of Teutonic origin (the Anglo-Saxon *Hearpe* ; Middle English, *Harpe* ; German, *Harfe* ; Old High German, *Harpha* ; from the Teutonic type *Harpon* : Anglo-Saxon verb, *Hearpian*, and the performer, *Hearpere*), and would seem to argue that the instrument, like the name, came to England with some of those hardy Norsemen who descended upon our shores very early in our known history. It is also possible, and in my opinion highly probable, that even the Romance countries (Italian, *Arpa* ; French, *Harpe* ; Portuguese, *Harpa*)

Anglo-Saxon Harp
(*British Museum Ms. Tiberius C VI*)
(11th Century)

Anglo-Saxon Harp,
(12th Century)

had the name and the instrument from a Northern source, *via* the Norse settlers in the North of France. In the case of the Keltic peoples, the same similarity of name occurs : Brittany, *Telen* ; Wales, *Telyn* ; and Cornwall, *Telein*. The Gaelic sub-division used the distinct name *Clairsech* (Ireland), or variant. Although many eminent authorities on the Harp and on Irish music say that the Cruit or Crot, mentioned in the article on the Crowd, was an ancestor of the Western Harp, I do not think it had much to do with it. There can be no doubt that the early Crots, figured on the Eighth and Ninth-century sculptured crosses, suggest primitive hand-harps ;

but it is my opinion that it developed along different lines from those followed by the instrument that produced the true harps. The Irish Cruit must on no account be confused with the Welsh Crwth or the English Crowd; but at the same time, I think it was developed into a kindred form.

So many pieces of evidence could be produced to prove that the Harp came to England from one of the Norse countries or from Ireland, that it would be very difficult to decide with absolute certainty whence the Anglo-Saxon Harp really came. Personally, judging by the evidence of its form and name, I think it was brought hither from the North-West of the European Continent. There is strong proof of undoubted Irish influence in the early religious settlements in various parts of England; and it is not impossible for the Harp to have been introduced with one of these. Both sources may even have supplied the modified instrument common in the England of the Saxons.

Used here at that period, the Harp was a triangular instrument held by one hand and played with the other, generally used by the Glee-men (*q.v.*) to accompany their own or others' singing. In common with the practice prevalent among their kinsfolk on the Continent, the early Saxons in England used the Harp for all festive occasions, the instrument passing round the banqueting hall as one guest after the other accompanied himself in song. So common an instrument was the Harp in England from the Fifth Century to the Eleventh, that the story of King Alfred's minstrelsy in the Danish camp can quite easily be true. The stringing of the ancient Harps varied, of course, very considerably, and the tuning, like that of the organs of the same period, was probably modal, or to a

Irish Harp

(Rough sketch showing average 11th Century Irish harp)

chord ;—certainly not chromatic. It is quite likely that the addition of strings to the Harp followed the addition of pipes to the organs, and that as the harmonic system changed, the stringing and tuning of all the instruments in use became altered to suit. With the modern Harp and its transposing mechanism, we can have nothing to do in this work.

HARP-GUITAR : An invention of the late Eighteenth Century, thought out by Edward Light, a London maker who evolved quite a number of such modifications of existing instruments. The Harp-Guitar was tuned and manipulated like the ordinary Guitar, but had a couple of new strings added to the bass side. The shape of the body was altered to approach nearer to that of the harp. The instrument did not enjoy long or great popularity. The music written for it was a sixth above the sounds produced.

HARP-LUTE : A kind of hybrid instrument, between a harp and a lute, strung with gut and covered strings, and treated musically as a Guitar. It was the invention of Edward Light (London, c. 1798), and was the subject of subsequent improvements. One of the latter took the form of “ditals” or, as Light himself describes them, “thumb-keys,” which were “certain pieces of mechanism, each of which, when pressed upon, will produce the depression of a stop-ring, or eye, which draws the string of the Harp-Lute down upon a fret. . . . This mechanism has the property of holding the string fast in such position as long as may be after the pressure of the finger or thumb is removed.” When every string was provided with such keys, the instrument was called the Dital Harp.

HARPSICALL. *v.* HARPSICHORD.

HARPSICHORD : A keyboard instrument of wing-shape (something like a Grand Pianoforte on a small scale) and played by means of plectra made of leather or quill affixed to Jacks (*q.v.*) as in the Virginal and Spinet. For convenience of reference be it noted that the Harpsichord was known as the Clavecin in France and as the Clavicembalo in Italy. The evolution of the Harpsichord is easy to follow. The addition of an auxiliary instrument with strings an octave higher was made in comparatively early times (*v.* virginal *and* spinet). These octave strings were later added to those on the existing sound-board. A stop was then added that could bring these strings into

HANDEL'S HARPSICHORD

(Victoria and Albert Museum)

action or not, as desired. From such a beginning the rest was simple. By introducing stops that could bring one or all the strings in a bichord or trichord action into operation, some gradations of tone were achieved. Tschudi, by inventing the "Venetian Swell" (1769), added another device which, by opening and closing like a shutter, allowed as much of the tone to emerge as was desired. Another stop would cause a row of Jacks to act on the strings nearer the bridge, and thus produce a peculiar tonal effect. All these stops had names, such as Cymbal, Lute, Buff (a damper-stop), Unison, *etc.* So it came about that by the Eighteenth Century the Harpsichord, with its two keyboards and half-dozen stops (and pedals to put all the stops out of action without removing the hands from the keys), was an instrument capable of a certain amount of variety in effect.

The instrument known as the *Clavicembalo* appeared on the Continent of Europe as early as the beginning of the Fifteenth Century; but exactly when the Harpsichord arrived in England is not quite clear. When it was introduced, it was most probably from the Netherlands. Whether the instruments "with stops" mentioned in the Privy Purse Expenses of Henry VIII were Harpsichords, as we understand the term, is not certain; there is plenty of evidence, though, to make it appear that instruments by the elder Ruckers were brought from Antwerp pretty early (Seventeenth Century). By that century, indeed, the Harpsichord had become fairly popular in England, for we find it mentioned in the State Papers in a way that does not make them look like novelties. It must, however, be remembered that the early specimens were placed upon a table for performance, and were devoid of pedals such as were afterwards added. On November 6, 1663, John Hingston (Organist and Keeper of the King's instruments) was paid for "mending the organs and harpsicords . . . also for mending her Majesty's harpsicord that stands in her own chamber. . . ." And if the word "harpsichord" was used at a period when "virginal" was still being loosely applied to all the keyboard instruments, it must prove that the instruments referred to must have been, in fact, something different. The Lord Chamberlain's Records for August 20, 1663, already mention the Harpsichord. On November 3, 1664, "pedalls" are mentioned in the same records; and since they are not

spoken of earlier, we may assume that they were applied at about this time. In the list of musicians for the Mask of 1674, the instrument appears as "Harpsicalls," a not unusual spelling. "Harpsycon" and "Harpsicon" were two more variations of the name, appearing in publications of Playford and his contemporaries. The account for 1675 includes the sum of ten shillings "for strings for the harpsicords and pedalls for half a year," and £2 "to Mr. Haward, the virginall maker, for mending the harpsicords." The same account gives the item: "For a greate harpsichord with three ranks of strings for his Majesty's musick in the hall and in the privy lodgings, £30," probably referring to a trichord instrument. Payments for accessories for, and repairs to, the Harpsichords are entered under date August 19, 1678. In 1685 (August 31) Henry Purcell was sworn in as a musician-in-ordinary for the "Harpsicalls."

John Evelyn mentions the instrument in his *Diary* under date November 20, 1679, when he heard an Italian play. The Harpsichord seems to have been kept more particularly in the hands of musicians and serious students, its cost probably preventing it from becoming as popular with the masses as, say, the Spinet. The higher classes of society, of course, had the instrument in their music-rooms, and rather troublesome they must have found them. The tuning of the strings and the adjustment of the Jacks with the complicated mechanism of the stops and pedals, not to speak of the difficulties provided by the octave-string and its tuning, certainly made the Harpsichord an expensive instrument to maintain in good playing order. Its most important function was to accompany the voice in the opera, and a Harpsichord was always near the conductor's hand at rehearsal and performance.

One or two special specimens of the instrument should be mentioned. The one belonging to Handel, and made by Andreas Ruckers (Antwerp) in 1651, is rather plain in appearance, but must have been excellent in tone when at its prime. It is now in the Victoria and Albert Museum (London). Kirkman also, at the end of the Eighteenth Century, made some excellent specimens of the Harpsichord, and examples of his workmanship are, to my own knowledge, still in daily use. A particularly sumptuous instrument was made by Tschudi and Broadwood for the Empress Maria Theresa in

1733—a specimen representing the highest point in the development of an instrument that had been in use in various forms for three centuries, and which was destined, very shortly afterwards, to be dethroned by the Grand Pianoforte with hammers. A picture of this (the “Empress Harpsichord”) is given in *Musical Instruments, etc.*, by Hipkins and Gibb (1888).

HARPSICON. *v.* HARPSICHORD.

HARP-THEORBO : An instrument with a fretted fingerboard and plucked strings invented round about 1800. As its name suggests, it was a compromise between the harp and the lute, leaning more towards the lute. It was one of a number of similar inventions of that period, and probably intended to supply a want felt after the complete eclipse of the last of the lute-family. Like the other instruments of this nature, the Harp-Theorbo did not live long. A specimen may be seen in the Victoria and Albert Museum (London), made by Harley (*c.* 1800).

HARP-VENTURA : A handsome instrument of artistic appearance, named after its inventor, Angelo Benedetto Ventura, Guitarist and teacher of music to Princess Charlotte of Wales. In form it was a peculiar mixture of instruments ; the front pillar of a harp, the tuning-pegs of the same ; a series of fretted fingerboards ; all added to a resonance-chamber that was highly ornamented with painting and gilding. There were no bridges, and the strings were fastened at their lower ends in a manner reminiscent of the lutes. The lower strings, not passing over fingerboards, were only struck open as accompanying chords ; while the treble series of strings, running over the fretted fingerboards, supplied the melody. A specimen (dating from the early Nineteenth Century) is preserved in the Victoria and Albert Museum (London).

HARPCWAY : A tuning of the bass-viol, differing from the usual one of fourths with an intermediate third.

The Harpcway tuning was applied chiefly to the Lyra-viol or bass-viol played Lyraway, and consisted of accordance to a regular chord, either major or minor. The phrases “Harpcway Sharp” and “Harpcway Flat,” so frequently seen at the head of Seventeenth-century pieces, mean that the instrument was to be

Harpcway Flat

Specimen of tuning given for playing the Viol “Harpcway.”

tuned to the given chord. Indeed, music written in Tablature (*q.v.*) could not be performed at all if the instrument were not tuned as prescribed ; for it must be remembered that the signs (letters or other characters) used in the Tablatures do not represent visually the actual notes heard, but indicate only on which frets and on which strings the fingers of the player are to descend. The pitch of the sounds produced are, of course, dependent entirely upon the tuning of the instrument. For the force of the words “ Sharp ” and “ Flat ” when used in conjunction with the term Harpway, see the articles *SHARP* and *FLAT*.

HAUTBOY : A wood-wind instrument with a double reed. The pipe known as the Hautboy in England must not be looked upon as distinct from every other, but rather as one stage in the development of the instrument which commenced its career as a Shalm (*q.v.*) and ended it as an Oboe. During this process of evolution, two features remained constant ; the double reed (although in finish and effect it became much improved), and the conical bore of the tube. The plain finger-holes of the early Shalms gave place to a modern system of keys. The name, then, designated the improved Shalms of the Sixteenth Century, and the Oboe of the Eighteenth and early Nineteenth Centuries. It is to be derived from the French *Haut bois*, “ high wood,” which describes the material of which the instrument was made, and gives its pitch, for, though tenor and other Hautboys were known, the treble was by far the commonest. When the word Shalm was dropped and the other applied cannot be fixed with certainty. It appeared, however, in *Gorboduc*, by Norton and Sackville (first acted in 1560/1), where it was named in “ the order and signification of the dumb show before the fourth act.” After this date its use became more and more common.

From the first quarter of the Seventeenth Century onwards, the words Hoboy, Hoaboye, Hooboy, or some such variation, are of very frequent occurrence in the State Papers. The instrument occupied an important position in the military music of early times, and under date July 10, 1678, we read : “ Account for liveries for two hautboys for the troop of Grenadeers under his Grace the Duke of Monmouth for the war against the French king ” (*Lord Chamberlain's Records*).

A more peaceful entry is that of September 29, 1686, where liveries are ordered "for twelve hautboyes . . . for the first, second, and third Troops of Guards, to be made ready against his Majesty's birthday" (*Id.*).

The mere mention of the word Hautboy presumably meant the treble instrument, though occasionally we find the pitch given, as on November 2, 1664, when the "treble hoboy" is referred to (*Id.*). The "Tenner hoboy" is mentioned in 1665 and again in 1684/5 (*Id.*). As soon as the Hautboy became an Oboe it ceased to come within the plan of this book.

HAY: A Sixteenth-century country-dance of the "round" type. Dr. Johnson supposes that it obtained its name from the sense of "to dance in a ring: probably from dancing round a hay-cock." This is not a very convincing derivation, but no better can be advanced. The dance is mentioned in *Martin's Month's Minde* (1589): "Hayes, jiggcs, and roundelays"; and in Michael Drayton's *Nymphidia*: "There dancing hays by two and three, Just as their fancy casts them." Shakespeare, in *Love's Labour's Lost* (V, 1), has: ". . . or I will play On the Tabor to the Worthies, and let them dance the hay." Sir John Davies also mentions it in his *Orchestra* (1594). James Howell, in the Seventeenth Century, gives the dance in its appropriate atmosphere.

Shall we go daunce the hay?
Never pipe could ever play
Better shepheard's rondelay.

Survivals may exist locally, and at least one modern composer has revived the name.

HEXACHORD SYSTEM: Although not coming specifically under the heading of "Old English Music"—for the system of Hexachords was in universal use—some knowledge of it is absolutely necessary if many of the matters connected with Medieval music are to be understood. The Hexachord, in the simplest language, was a scale-like succession of six notes, modified, where necessary, always to produce a semitone between the third and fourth degrees. This improvement on the older tetrachord system was introduced in the Eleventh Century and used for the then instituted Solmisation (*q.v.*). The common error of supposing that Hexachords could be based upon any note must be avoided; for, although they

were repeated in the octave, there were only three different species. These commenced from three notes in the series treated in the article GAMUT (*q.v.*). It is obvious that a set of six diatonic notes commencing, say, from F, could not contain a semitone between the third and fourth degrees unless the B were modified in some way (for the tritone, F-B, was *diabolus in musica*, and carefully to be avoided). Therefore, the B in this Hexachord was flattened by a semitone and called *B-rotundum* (or, as we should say, B-flat); the B-natural was termed *B-quadratum*. The Hexachord starting from G was known as *Hexachordum durum*, or "hard" Hexachord, that beginning on C the Natural Hexachord, and the one commencing on F, the "soft" Hexachord (*H. Molle*).

Using the series of twenty notes adopted as the complete range in the Eleventh Century, the Hexachords, commencing as they did from the G, C, and F of each octave, would number seven, arranged as follows :

The diagram illustrates the seven hexachords of the medieval system, arranged vertically from the Seventh at the top to the First at the bottom. Each hexachord is shown on a five-line musical staff with a treble or bass clef. The notes are labeled with their solfège names: Ut, re, mi, fa, sol, la. Dotted lines connect the notes of adjacent hexachords to show the continuous scale.

- Seventh Hexachord:** Treble clef, notes G, A, B, C, D, E (Ut, re, mi, fa, sol, la).
- Sixth Hexachord:** Treble clef, notes F, G, A, B-flat, C, D (Ut, re, mi, fa, sol, la).
- Fifth Hexachord:** Treble clef, notes E, F, G, A, B, C (Ut, re, mi, fa, sol, la).
- Fourth Hexachord:** Treble clef, notes D, E, F, G, A, B (Ut, re, mi, fa, sol, la).
- Third Hexachord:** Bass clef, notes C, D, E, F, G, A (Ut, re, mi, fa, sol, la).
- Second Hexachord:** Bass clef, notes B, C, D, E, F, G (Ut, re, mi, fa, sol, la).
- First Hexachord:** Bass clef, notes A, B, C, D, E, F (Ut, re, mi, fa, sol, la).

These notes from the bottom G to the top E received at the same time the alphabetic names by which we still know them, and this innovation, like nearly all the musical inventions of the Eleventh Century, was attributed to Guido d'Arezzo. The notes of each Hexachord were sung to the Aretinian Syllables (*q.v.*).

This system of vocalisation answered very well so long as the music remained within the limits of a single Hexachord ; when, however, the melody extended beyond those limits, it was found necessary to institute some method of changing the nomenclature of the notes in each Hexachord. The plan evolved was that known as Mutation, and it consisted of naming the first note of each Hexachord *Ut*, and following with the other syllables in their usual order. It will be seen at once that the *Ut* of the first Hexachord (which was G), becomes a C in the second, and an F in the third, and so on—the semitone always falling between *mi* and *fa*. When a vocalist was required to sing a passage which took him from one Hexachord to another, he simply used the syllables proper to the Hexachord from which he started, and changed (*i.e.* resorted to Mutation) when he found the compass too great. A glance at the table given in the article on Gamut will make clear how such passages were sung. In general practice the change between the first and second Hexachords (and their octave duplications) was effected by singing *re* in place of *sol*, and then continuing with the names of the new Hexachord. This when the passage ascended. When it descended, the *mi* of the second Hexachord was replaced by the *la* of the first. Mutation between the first and third Hexachords could not take place in one step, since the B-flat in the third Hexachord would cause endless trouble. Mention of the *B-rotundum* reminds us that another of the reasons for Mutation was to find a name for this flattened B, when it occurred after the notes of a “ hard ” or “ natural ” Hexachord. In order to find a syllable that would express the B-flat, Mutation to the “ soft ” Hexachord was necessary. It is, perhaps, remarkable that once the notes were named from G to E, a seventh syllable was not added to cover the series from one note to its octave, and thus avoid the necessity for Mutation. But this would have anticipated the scale-system which uses a leading-note ; and until the modern idea of keys with their attendant signatures was evolved,

such a step was impossible. In the changing of *B-quadratum* to *B-rotundum*, however, we see already the germ of this idea. The question of Mutation was probably the weakest spot in the whole Hexachord system, but no other method was possible so long as the scale consisted of six notes. The whole cumbersome series with its Mutations and its *B fa* (B-flat) and *B mi* (B-natural) persisted as long as Solmisation was practised—*i.e.* for over six hundred years (*see also* GAMUT and SOLMISATION).

HOBODY. *v.* HAUTBOY.

HOCKET : Sometimes called Hoket or Ochetus. This was a form of composition interrupted by a number of rests, so that the passages were abruptly truncated. The word is in all probability a corruption of *Hocquet*, a hiccup, and in its musical application was used by writers as early as Robert de Handlo (1326 ; reproduced by Coussemaker in *Scriptores*, I) to refer to music thus haltingly constructed of notes and pauses. An alternative term, much used in the Medieval Latin treatises on music, was *Truncatio* (*Truncatio idem est quod hoket*).

HOKET. *v.* HOCKET.

HOLD : The Seventeenth-century term for a Pause. The sign used for it differed somewhat from the present-day indication, and was made thus : . Its function coincided exactly with that of the modern Pause in that it was most commonly set over the concluding chord of a composition. John Playford and Christopher Simpson (1665) both allude to its employment over certain notes in the body of a work which it was desired to lengthen or insist upon for the sake of expression. Variant terms for the Hold were Arch and Stay.

HOLDING. *v.* BURDEN.

HORNPIPE : 1. A wind-instrument of British origin, localised chiefly in Cornwall and Wales. As *Corn-bib*, or *Pib-corn* we find the pipe in Wales ; and in Ireland, Cornwall, and Brittany as *Pib-corn* or *Piob-corn*. These three countries using a similar name may point to a Keltic origin for the instrument. The antiquity of the Hornpipe as an instrument can scarcely be determined. A pipe or horn would have been used by pastoral peoples from the remotest periods. A manuscript

Vocabulary dating from the Fifteenth Century (Trinity College Library, Cambridge) translates the Latin *Cornubium* with "Hornpipe," while another such primitive dictionary by a "brother Galfridus" (c. 1440) also includes the word.

The Hornpipe was a wooden pipe furnished with finger-holes and a bell of horn. It was played with a reed of the single beating type, which also was covered with horn. This accounts for the early descriptions of the instrument stating that it was a pipe with "a horn at each end." Robert Greene (died 1592) mentions the Hornpipe as an instrument: "and so desiring them to play on a horn pipe, layde on the Pavement lustily with his leaden heeles" (*Greene's Groatsworth of Witte*). Ben Jonson in the *Sad Shepherd* (I, 2) speaks of awakening "the nimble hornpipe and the timburine." In Dryden's day the word was still applied to the instrument, for in his translation of the *Æneid* he has: "The shrill hornpipe sounds to bacchanals." The *Tatler* (No. 157) even has: "Trumpet and Welsh harp; hunting-horn and hornpipe."

2. As a dance the Hornpipe was named by the instrument which accompanied it originally, and for which the earliest examples were doubtlessly written. This being the case, the nature of the dance must have been pastoral. This may come as a surprise to those who only associate Hornpipes with sailors. But during its long career the dance had many forms, and both duple and triple measure. As may be expected, we meet with early mention of the Hornpipe as a dance in those parts of the country that used the instrument—Chaucer already alluding to the "Horne-pypes of Cornewayle." In a Mystery-play of 1485 there is the stage-direction: "Here mynstrellys, an hornpipe." As a written composition, the Hornpipe appears among the works of Hugh Aston, an organist in the reign of Henry VIII, and one of the celebrated men in the history of Tudor music. John Stafford Smith, in his *Musica Antiqua* (1812), gives the example in modern notation. Spenser alludes to the way in which the instrument named the dance in the *Shepherd's Calendar* (1579):

. . . a lusty tabrere
That to the many a hornpipe played,
Wherto they dauncen each one with his maid.

In the days of Queen Elizabeth the Hornpipe was fairly popular, and by that time it had reached a point in its history at which it was an accepted form ; and in a list of fashionable dances, Barnaby Rich (1581) included it. Morley (1597) likewise says there were " many other kindes of Daunces as horne-pypes, *etc.*" Later on the dance became localised ; different varieties probably being peculiar to certain districts. Ben Jonson says :

. . . fetch the fiddlers out of France
To wonder at the Hornpipes here,
Of Nottingham and Derbyshire.

The last-mentioned county was noted for its Hornpipes as late as 1709, when the *Tatler* (No. 106) has : " Florinda . . . having danced the Derbyshire Hornpipe in the presence of several friends." In Lancashire, too, the form was very popular. Near the end of the Eighteenth Century it was much used on the Stage as *entr'acte* music, in duple measure. It was mentioned so frequently in Nineteenth-century literature that we may take it to have been exceedingly popular then. H. Martineau, in *The Manchester Strike*, says : " It appeared from the heavy tread and shuffling of feet that some were dancing hornpipes." Lytton as late as 1849 has : " My father . . . could conjure wonderfully, make a bunch of keys dance a hornpipe " (*The Caxtons*). Even Tennyson in *Amphion* wrote :

The gouty oaks began to move
And flounder into hornpipes.

Exactly when, and by which means, the Hornpipe became popular with sailors, cannot be fixed with certainty. In the older references it was generally the shepherd or rustic swain who danced the Hornpipe. There is the possibility that the sailors' Hornpipe had nothing to do with the pastoral form at all, and that it was related to the Dutch *Matelotte*.

The earliest specimens of the Hornpipe were practically all written in a triple measure, and examples may be seen in Matthew Locke's *Melothesia* (1673), in Humphrey Salter's *Genteel Companion* (1683), and in Playford's *Apollo's Banquet* (1690). Henry Purcell, in the appendix to *Bonduca* (1695), of

which I happen to have a copy of the reprint, gives two triple Hornpipes ; one beginning :

and the other commencing :

In *King Arthur*, Purcell wrote two more Hornpipes, this time in 6/4 ; one with the rhythm :

and the
other :

Exceptionally, as in Playford's *Musick's Delight on the Cithren* (1666), we meet with a duple Hornpipe, but this was very unusual so early. It is possible that some Seventeenth-century composers were guided more by the spirit of the pieces than by their form, when they chose names for them.

The regular form for the Hornpipe was the usual one of two repeated sections each of four or eight measures. The change of time came about at the middle of the Eighteenth Century, the duple time-signature becoming more frequent until it entirely displaced the older triple form. As a duple dance the Hornpipe was used on the Stage until the middle of the Nineteenth Century.

HURDY-GURDY : The idiomatic name for the Organistrum, an ancient stringed instrument with many mechanical contrivances. Essentially it consisted of an oval body with indented sides, and fitted with a wheel turned by a handle—which wheel vibrated the strings much as a violin-bow operates. In its earliest days the number of strings was three, tuned to a key-note with its fifth and octave. The strings could only be vibrated simultaneously, but the continuous repetition of fourths and fifths was not considered unmusical

when the Organistrum was popular. Later, a larger number of strings appeared, with a couple of Bourdons, or open strings playing a persistent drone bass (a fifth). The stopped strings were operated upon from a keyboard or similar contrivance, and it seems highly probable that this instrument was a favourite one for vocal accompaniment from the Tenth Century to the Twelfth. Variant names, used in different countries, were, *Vielle*, *Bauernleier*, *Drehleier*, *Lira Tedesca*, etc., and the instrument, provided with a chromatic series of notes, and improved action, is still to be seen occasionally in the hands of perambulating beggars. In France some exceedingly elaborate and expensively ornamented specimens were made during the Eighteenth Century.

IMPERFECT OF THE LESS. v. MOOD.

IMPERFECT OF THE MORE. v. MOOD.

INITIAL: In Mensurable Music the name of the first note in a Ligature (*q.v.*).

IN NOMINE: A term applied in the late Sixteenth and early Seventeenth Centuries to a form of instrumental composition. It was always polyphonic, and its distinguishing feature was the use of a few notes of an ancient Church chant named, after the first words of the text, "In Nomine Domine." This ecclesiastical motive was given to one of the inner parts of the consort—generally the tenor—and was carried right through the piece in long sustained notes as it was in its original (vocal) form. While the instrument performing this part was thus occupied, the others of the *ensemble* descanted freely above and below it; and with the standard of technical workmanship in this class of writing as high as it was at the time, many very interesting compositions bearing the name were evolved. The practice which the English musicians of the Seventeenth Century had in all kinds of "division," stood them in good stead here, and there can be little doubt that the In Nomine was the germ from which the English form of the Fantasia (or Fancy, *q.v.*) grew. Many beautiful art-forms were developed from very simple origins, and the In Nomine, consisting as it did of "only descanting upon the eight notes with which the syllables (*In Nomine Domine*) agreed" (North, *Memoires of Musick*), was the ancestor of perhaps the most

essentially English form of instrumental composition. The name, before this use of the motive became popular, was, of course, applied to many vocal devotional works in the Catholic liturgy.

Specimens of the instrumental *In Nomine* may be seen in many manuscripts preserved in different libraries; the British Museum including some by Thomas Tomkins, Simon Ives, and John Jenkins, generally in five parts (Add. 17792; first quarter of the Seventeenth Century; and Add. 29290, c. 1650). Huge quantities of *In Nomines* were written, and the greatest difficulty is that of selecting characteristic examples.

INTERLUDE: A term used in many senses at different periods. Employed in the Fifteenth and Sixteenth Centuries to designate a kind of allegorical play, masque, or mystery, it sometimes contained music (as, for example, Rastell's *Interlude* of The Four Elements). In this use it approached the Italian *Intermezzi*, which later were developed to such important proportions (v. my paper read before the *Musical Association*: "The Intermezzi of the Opera," printed in the *Proceedings of the Mus. Assoc., Session 43*; 1916/17). In its broadest sense the word meant any piece of music played between two sections of another work.

Organists at one time applied the term *Interlude* to short pieces sandwiched between the verses of a hymn, a procedure that was followed on the Continent to an even greater extent than in England.

INTONATION: Originally the short phrase that led to the Reciting Note of a chant, and later the opening of precented portions of the divine service. The Intoning of the first notes secured the pitch of the whole, and once the Precentor had done this, the fate of the ensuing chant was not so much left to chance.

INTONING: In Church music the singing of the opening of chanted portions in the service by the celebrant, his deputy, or a very small number of choristers who could be trusted to set the chant in its correct pitch. Although the Intoning of the liturgy was generally of a monotone nature, versions that were harmonised wholly or in part are not unknown.

INTROIT: A text from the Scriptures, set antiphonally, and

sung before and after a psalm, the whole forming the opening section of the Mass. The music of the Introit was modal and chanted (Gregorian).

INWARD PARTS: The inner parts or voices of polyphonic music, between the treble and the bass. Playford uses the term in this sense in the phrase, "be it Bass, Treble, or any Inward Part," and again when he describes the Tenor-Viol as "an excellent Inward Part."

JACK: The upright slip of wood that carried the quill, piece of leather, or metal, used as a plectrum in the instruments of the Virginal, Spinet, and Harpsichord class. The quill was fastened on to a movable tongue at the upper end of the Jack, and after having twanged the string on rising, was taken back by the hinge on the movable part so that it should not repeat the note in descending. When the Jack had returned to its original position—*i.e.* when the other end of the key had risen—a slight spring returned the quill-carrier to its place for the next note. Over the head of the Jack was a slip of cloth which damped the string when the Jack descended (*v.* VIRGINAL).

The word Jack is common in Old English to mean any implement fulfilling the functions of a servant—as, for example, a boot-jack. Shakespeare alludes to the Virginal Jack in Sonnet 128 :

Do I envy those jacks that nimble leap
To kiss the tender inward of thy hand,

though how the Jack could come anywhere near the "inward" of the player's hand is a mystery ; unless the poet is wrong for once in a musical allusion, and speaks of the keys as Jacks. Chapman, in *Monsieur d'Olive* (1606), also refers to it in the lines : "The weaver, Sir, much like a Virginal iack, Starts nimbly up. . . ."

JIG: A dance-form of undoubtedly British, and most probably English, origin. In triple time its rhythm was the same as that of the Galliard, whose place it took. There can be very little doubt that such a dance with the rhythm—dotted-crotchet, quaver, crotchet—must have existed very early in the history of civilisation. It was a tripping measure that probably came spontaneously to the first dancer who felt genuinely happy.

This dotted rhythm was a characteristic feature of the true British Jig, and it must be borne in mind when a modified form is met with that was developed when the Jig was taken to the Romance countries. A considerable amount of disagreement exists among authorities as to the original nationality of the form. German and French writers of the Eighteenth Century call it "the English Jig," while Grove contents himself by saying that it was "an old Italian dance."

The word is found in a great many forms—*Gigue*, *Gique*, *Gigua*, *Giga*, *Chique*, *Gig*, *Gigg*, *Gigge*, *Jig*, *Jigg*, *Jigge*, *Jeg*, *etc.*—and the general practice is to derive it from *Gigue*, a fiddle, thus forming what was considered a parallel to the *Musette*, *Loure*, *Tambourin*, *Hornpipe*, *etc.*, by naming the dance after the instrument that was supposed to accompany it. But very little etymological research will be necessary to prove that the one had very little to do with the other; that where the noun *Gigue* or *Giga* was used to mean the instrument, the dance-sense was not applied; while those dialects that used the verb *Giguer*, meaning "to dance," did not have the noun at all.

The earliest references to the word *Jig* or *Gigue* deal with the instrument and not the dance. In this sense it is to be found in a German poem of the middle of the Twelfth Century, in Wolfram von Eschenbach's *Parsifal* (c. 1220), and in a vocabulary of John de Garlandia (c. 1225), in the last-named of which we find the following entries: "*Giga* est instrumentum musicum de quo dicitur *Organicos imitata modos, etc.*," and later on: ". . . et dicitur Gallice *Gigue*," and yet again, "*cum sistro, cum giga, cum psalterio*"; statements that leave no room for doubt that the word, at that period, was applied solely to a musical instrument. Not much later Dante (1265/1321) uses the word, in his *Divina Comedia*, in the same sense:

Et come giga et arpa intempra tesa,
Dimolte corde fa dolce tintinno.

(*Paradiso*, XIV, 118/119.)

Here, again, no doubt can be entertained that anything but an instrument is meant. A *Nominale* of the Fifteenth Century (British Museum) gives the word *Giga*—still meaning an instrument only—and also *Gigator*, the player. In Middle High German we know the term *Giga* and also its verb *Gîgen* to have

been used in connection with the instrument—a word from which the Modern German *Geige*, violin, was derived. Under certain circumstances the word *Gîgen* could mean “to dance after” (*nachtanzen*), and thus a possible connection is found between the two meanings. But what holds good in Middle High German need not necessarily apply in any other country. The Middle Low German language had the diminutive *Gigel*, meaning the instrument also, as is proved by the following erroneously translated passage: “De hilligen evangelien noemen se gygelen unde lyren,” and also “der Gigelen Klang.” We thus see that hitherto the word was used exclusively in Italy, Germany, and England to mean a certain stringed and bowed instrument of music.

In France we meet with both meanings, each in different parts of the country. Godefroi (*Dictionnaire de l'Ancienne Langue Française*) tells us that the *Gigue* was a stringed instrument, usually with three strings, and played with the bow; but that the verb *Giguer* meant “to romp” or “to leap.” What connection the noun had with the verb it is impossible to decide to-day; but it is interesting to note that the same occurred in the Middle High German. We cannot agree with the authorities who derive the name of the dance from that of the fiddle on the strength of this evidence alone. There is, on the other hand, the strongest reason for supposing that the noun and verb came from entirely different sources, especially so since some French dialects used the verb and not the noun, and *vice versa*. We find the term (always meaning the same instrument) in the Provençal patois as *Gigua* or *Guiga*. The Norman dialect did not contain the noun *Gigue* at all, but had only the verb *Giguer*, which meant “to leap” or “to dance.” Henri Moisy compares it with the English “to Jig.” It will be interesting to note how, from now onwards, those dialects derived from, or influenced by, the Romance languages have the noun *Gigue* meaning the instrument, and those having a Northern origin possess the verb *Giguer*, signifying “to caper.” Menage (*Dictionnaire Etymologique*, 1694) says the *Gigue* was “a piece of music of a merry nature,” and adds that in Scotland the word was used to mean a very merry dance-air. This, of course, proves nothing in favour of France having been early to use the word in its dance-sense. The lateness of the dictionary's date would place it out of the question at once,

for we had the Jig in England as a dance more than a century earlier. The fact that the Scotch meaning was known in France is not surprising ; the intimate relations that existed between the two kingdoms would account for that. We shall see that neither Italy, Germany, nor France used the name to signify a dance until comparatively late.

Turning our attention to England, we find the word used successively in all its meanings, the last being its dance signification ; and since this last stage was arrived at before the close of the Sixteenth Century, we may, with perfect assurance, assert that the dance called *Gigue* or Jig was first used as such, and was first so named in this country, and that it wandered to the various countries of Europe. The first references to the word here as elsewhere dealt with the instrument. But about the middle of the Sixteenth Century a new meaning came to be applied to it. We find it used to mean a kind of ballad. It was a ridiculous metrical composition, sometimes rhymed, sung by the clown, who followed it with a dance—which dance was always performed to music supplied by Tabor and Pipe. Be it noted that the fiddle was not used thus early for the purpose. Here the connection between the ballad and the dance performed to the tune is pretty obvious. Beaumont, at the turn of the century, says : “ A Jig shall be clapped at, and every rhyme praised and applauded.” Ford uses the word in the same sense : “ Petrarch was a dunce, Dante a Jig-maker.” So also did Joshua Sylvester, in his translation of “ G. de Saluste du Bartas, his devine weeks and workes ” (1605) :

If neere unto some Eleusinian Spring,
Som sportfull Jig som wanton shepherd sing,
The ravisht Fountaine falls to daunce and bound.

So we see that the rhythm of the sung Jig, or ballad, was one very well adapted to a merry dance. John Florio, an Italian, writing his Italian-English Dictionary in England (1611), although influenced by the English meanings applied to the word, nevertheless gives *Giga* as a fiddle ; and this would seem to prove conclusively that in Italy the word came to mean a dance very much later than in England. Christopher Marlowe, in *Tamburlaine* (1587), announces his intention of freeing the Drama “ from jiggging veins of rhyming mother-wits, And such

Conceits as Clownage keeps in pay.” Shakespeare’s *Love’s Labour’s Lost* was an early play, and being that, we find the word still used in its ballad meaning: “but to jig off a tune at the tongue’s end, Canary (*q.v.*) to it with your feet . . .”; while in “He’s for a Jigg or a tale of bawdry” (*Hamlet*, II, 2) it may have been used in the same sense. Later on in *Hamlet* we find exactly the same use as with Ford: “O God! your only jig-maker”—in a scene where only a merry quip or jingling rhyme can be meant. And Ben Jonson, dedicating his Catilene to the Earl of Pembroke, says: “. . . in these jig-given times, to countenance a legitimate poem.” Nash, in 1596, speaks of a “Jigge in English Hexameters” (*Have with you to Saffron Walden*).

Now, these doggerel ballads of the clown were danced;—could not the song used by the mountebank have named the dance? Does not the *Spectator* have it very much later, “a certain jiggish noise to which I dance”? This is at least as logical as to connect the dance with *Giga* the instrument. Even the German, Riemann, says that the name is of English origin and has nothing to do with the instrument.

The fact that the Norman dialect had the verb meaning “to jig” would cause our eyes to turn Northwards for the source of the dance-name. In Scandinavia is to be found the original form of our word Jig. There is the Icelandic *Geiga*, which passing through Middle English (*Gigge*) became the modern Jig, meaning anything round or revolving. Examples of such use are frequent. We have “Whirligig,” and “Jig-machine,” and the wheels of the light carriage known as a Gig; also a spinning-top, according to Shakespeare’s “Go, whip thy gig” (*Love’s Labour’s Lost*, Act IV). This doublet of Jig was used to mean “to spin” until comparatively late. The writers of the Seventeenth Century still used that word in the last-mentioned sense: “No wonder they’ll confesse no losse of men; for Rupert knock’s ’em till they gig agen.”

What is more natural than to suppose that a word meaning “to revolve” should have been taken to designate the verses with a constantly recurring refrain, and that such a set of verses, being sung by the clown, should have given its name to the dance which was performed to the same tune. A curious inversion of meaning meets us in Scotland. There, “to jig” meant to play the fiddle, a meaning that the

language most probably owed to France for the reason already given.

In England we have the last link of the chain—the Jig as a dance. Lady Nevell's *Virginal Book* (1591) was probably the first work to contain the word as the name of a piece of dance-music (*Galliard Gygge*), and Thomas Robinson (1603) followed closely after. Not much later the writers of the period employed the term in the dance-sense. Thus Fenton : “ Those elegant delights of Jig and vaulting,” and Beaumont and Fletcher (*Knight of the Burning Pestle*, IV, 1) make the citizen's wife say : “ George, I will have him dance fading ; fading is a fine Jig, I'll assure you.”

Summing up all this etymological evidence, then, we may take it that the word Jig meaning a dance is to be traced to a Northern source *via* the ballad meaning of the late Sixteenth Century ; and that it had nothing to do with the *Giga*, or fiddle. The connection that appears to have existed between the two in one or two isolated cases was probably accidental.

The Jig as a dance succeeded the older Galliard in the musical scheme ; and having practically the same spirit and rhythm, changed places with the older form almost imperceptibly. It was written in almost any triple measure— $\frac{3}{8}$, $\frac{3}{4}$, $\frac{6}{8}$, $\frac{12}{8}$, or $\frac{6}{4}$ —had the light rhythm of dotted-crotchet, quaver, crotchet (or these values halved or doubled according to period), and, before the form was extended by later composers, consisted of two repeated sections of four or eight measures each. The Old English writers usually gave the time-signature as “ 3 in 1,” but the indication “ 2 ” or “ 4 ” was often used. It must not be supposed from the latter circumstance that the Jig was ever a duple form ; the “ 4,” for example, merely meant four beats to the measure, which would reduce a $\frac{12}{8}$ bar to four measures of $\frac{3}{8}$ each. It is, of course, impossible to say when the first piece of music was written in the English Jig form and rhythm. In all probability such music was sung and danced to long before the name was applied to it. In the reference of Barnaby Rich (1581), “ the dances in vogue were measures, galliards, jigs, *etc.*,” we see that the Jig and the Galliard were used side by side ; and they were doubtlessly used together until their similarity caused the latter to be dropped, and the former developed. The *Galliard Gygge*, already alluded to, was composed by William Byrd, and is the

only piece thus named among several other Galliards. In this specimen we probably see one of the fruits of the period of transition, in which the native and alien forms became merged. Benjamin Cosyn's *Virginal Book* (c. 1600) contains several Galliards but no Jigs so-named. Thomas Robinson's *Schoole of Musicke* (1603), on the other hand, contains five Jigs. Robinson's use of the French form of the name—*Gigue*—was most likely caused by the desire to make the work appear more artistic and fashionable; in the Introduction, however, he spells it *Iigge*. In 1607 Thomas Ford published his *Musicke of Sundrie Kindes*, and includes Galliards and Jigs side by side. It will thus be seen that the Jig had not yet reached the popularity with musicians that it attained to shortly afterwards, and that it had not yet succeeded in ousting the Galliard. Although Ford uses the name *Jigge* on the title-page, only one of the "Lessons" is so named—No. XV, "Whipit and Tripit, M. Southcotes Jig." The other four examples are No. IX, "The Wild Goose Chase"; No. XI, "And if you do touch Ile crie"; No. XIII, "Why not here"; and No. XVII, "A Snatch and away." All of them exhibit the dotted rhythm mentioned above as being typical of the true English Jig. The names bestowed on these specimens suggest that words were added to the tune, and that the Jig, like most of the other old dances, was also sung. The form seems to have been a "popular" one, and the composers of "choice" music were rather chary of using it. Thus, Robinson's *New Citharen Lessons* (1609) only adds one more example to the list; *Parthenia* (1611) contains only Galliards; and the same occurs in Robert Dowland's *Varietie of Lute Lessons* (1610), in Morley's *First Booke of Consort Lessons* (1611), and in William Forster's *Virginal Book* of 1624. By way of contrast, the Fitzwilliam *Virginal Book*, although parts of it are earlier, gives us some very interesting examples of the Jig;—specimens that are worthy of notice not only because they were written by some of England's best musicians, but also because they show some deviation from the accepted form. "Nobodies Gigge" (No. CXLIX) by Richard Farnaby, and Giles Farnaby's "Gigge" (No. CCLXVII) are both in Common time. To find pieces labelled "Jig" in common time is by no means as unusual as might be expected, especially at this period;—in most cases the spirit of the piece would have

dictated the title rather than the measure. Such Jigs were intended only as instrumental pieces, and not for dancing. In the same way can the Sixteenth and Seventeenth-century "Marches" in $3/4$ be explained. This naming of a piece by its character is also most probably responsible for such movements as the "Gigue-Almaines" which we often see in the late Sixteenth and early Seventeenth Century; they were for the most part duple as the true Almain, but were to be performed in the light, tripping manner peculiar to the Jig. Further examples in the Fitzwilliam Virginal Book are the "Gigge—Dr. Bull's Myselfe," in good form; a "Gigge" in $6/4$ also by John Bull, having the typical rhythm, but containing two measures in common time; and a "Jigg" by William Byrd, in $6/4$, which is a true English Jig in rhythm and spirit.

It was during the reigns of the first two Stuarts that the Jig seems to have enjoyed its greatest popularity. Although most probably not used as a true Court-dance, there can be little doubt that it was danced occasionally at the royal merry-makings, especially under the Merry Monarch. At the middle of the century the form underwent a change, and it came to be looked upon more generally as a purely instrumental piece, just as were the Jigs in *Parthenia*. Of course, it was still danced on the village-green and at popular gatherings—the different editions of Playford's *Dancing-Master* prove that. The edition of 1652 contains several examples of the form, used as Country-Dances, such as "Kemp's Jegg," "Lord of Carnarvon's Jegg," "Millison's Jegg," "Solomon's Jigge," and others not called Jigs, but which, from their rhythm, may be taken as such. Playford's *Court Ayres* (1655) contains several examples by such writers as William Lawes, Benjamin Rogers, Richard Cobb, George Hudson, *etc.*, while the same publisher's *Musick's Hand-maide* (1663) gives a further selection. Each successive publication now seems to afford more and more specimens, and the name was often not attached. The form had been accepted, and was used, as an instrumental piece pure and simple. Even then the Jig was still used as a dance in ordinary circles, and several extracts from contemporary books prove it. Pepys writes in his *Diary* (October 11, 1665): "My wife and Mercer, and Mrs. Barbara danced, and mighty merry we were, but especially at

Mercer's dancing a jig, which she does the best I ever did see, having the most natural way of it and keeps time the most perfectly I ever did see." Nearly a year later Mercer once more amused the diarist (August 14, 1666) by dancing a Jig. John Playford suggests that in 1652 "the Gentlemen of the Inns of Court, whose sweet and ayry Activity has crowned their grand solemnities with admiration to all Spectators," also saw in the Jig's sprightly measure a relaxation from their sedentary occupation. This fact may account for the titles, "Inner Temple Jig," "Middle Temple Jig," "Lincoln's Inn Jig," and "Gray's Inn Jig," which we find in Playford's *Apollo's Banquet* (1690) among several other examples of the form. The Jig, therefore, was developed along two distinct lines; one as an instrumental piece, free in form, and the other as a dance. Before the Stuart régime ended the Jig was so popular as a dance that no entertainment or other occasion when many assembled, closed without a Jig.

The passing of the crown to the House of Hanover marked the decline of the popularity of the Jig; and with Handel and his contemporaries the form was considered more the movement that closed the formal Suite and less as a dance. It must not be supposed that Handel influenced the form of the Jig. His early examples are rather in the form that the Jig acquired when it was borrowed by Italy. In that country the dotted rhythm was smoothed out, and returned to England as the Italian *Gigue*, a form of running triplets. In some of Handel's examples the two rhythms are used together, just as this composer employed the rhythms of the *Courante* and the *Corrente* merged into one hybrid form.

The question as to whether Scotland or Ireland was the first to have the Jig from England is easily answered. Dated references give Scotland the earlier possession of the form. Thomas Morley, already in 1597 (*Plaine and Easie Introduction*) says: "And I boldly affirme, that look which he bee who thinketh himselfe the best descanner of all his neighbours, enioyne him to make but a Scottish Iygge, he will grossly erre in the true nature and qualitie of it." This gives us Scotch Jigs very early; and it also shows that these dances certainly possessed a special "nature and quality" of their own, in spite of the authorities who say that the British Jigs did not appear to have had any peculiar characteristics. Shake-

speare mentions the Scotch Jig in 1599 (*Much Ado About Nothing*). The form does not seem to have become popular in Ireland until the second half of the Seventeenth Century, no examples bearing that name and possessing the requisite rhythmical character having been found before that time. To attempt to find the original source of so natural a rhythm is an almost hopeless task. If, as Boehme (*Geschichte des Tanzes, etc.*) says, the Jig was a Keltic form, why should not the Galliard, Canary, Siciliano, *etc.*, also be Keltic? for all possessed the same rhythmic figures. The most we can do in regard to the Jig is to discover where the dance with this well-known rhythm was first called "Jig," and where it was first danced. And the answer to these questions, as the above evidence shows, is in both cases, England.

But if Ireland was the last to make it welcome, that island was also the last to retain it in favour. To-day the term Jig is immediately associated with the green isle, and an "Irish Jig" is held to be synonymous with anything light-hearted and gay. Perhaps the best account of an Irish Jig as it was actually danced by the country-folk a century ago is to be obtained from Lady Morgan's *Patriotic Sketches of Ireland* (1807): "In the centre of the field . . . a distaff is fixed in the earth, on which is placed a large flat cake; this cake is the signal of pleasure and becomes the reward of talent. . . . At a little distance from this standard of revelry is placed its chief agent, the piper, who is always seated on the ground, with a hole dug near him, into which the contributions of the assembly are dropt. . . . At the end of each Jig the piper is paid by the young man who dances it, and who endeavours to enhance the value of the gift by first bestowing it on his fair partner; and although a penny a Jig is esteemed very good pay, yet the gallantry or ostentation of the contributor . . . sometimes trebles the sum which the piper usually receives." Such was the natural environment of the Jig—one most suitable to its merry and often riotous movement. It should be noted that it is still a piper who accompanies the dance, and not a fiddler. It would, of course, be very hazardous to say that Jigs were never fiddled; but in the case of nearly every older piece of evidence it is the tabor and pipe or the popular bagpipe that is mentioned.

In France the *Gigue* appears with Lully's early operas and

is mentioned by La Bruyère (*Les Caractères, etc.*, 1688). Sebastian de Brossard, too, speaks of the form and says, "Gigue is an air for instruments, rich in dotted notes and syncopation, which render the melody gay, and, so to say, tripping"; a description that makes it sound very like the true English Jig. The misplaced accent, also, is by no means rare in old English examples of the dance. Lully used the form only in the operas composed between 1682 and 1685, a fact that makes it all the more apparent that it was only an importation into France. Charles II sent many of his private musicians to France to acquire the French style which he admired so much—John Banister and Pelham Humphrey, to mention only two—and these English musicians may quite conceivably have taught the French composers one or two English forms. The dates of these visits and those at which Lully's operas containing *Gigues* appeared, fit so nicely that the probability is very great that they were suggested by the Englishmen. Colasse and Destouches used the form later, but one used some of his master's material, and the other imitated him very closely. Between 1700 and 1710 Feuillet attempted to revive the *Gigue* as a dance, and wrote *Chorography* for it, employing the Lully music; but these dances had little or nothing in common with the jolly British Jig, being really elaborate ballets for use on the stage by professional dancers.

In Italy there was an even greater scarcity of *Gigues* as dances, and as a movement in the early Suite it was by no means as common as were many of the other forms. The Italians generally removed the rhythmic characteristics of many of the dance-forms, and nowhere is this more plainly discernable than in the Jig. Just as they omitted the dots from the French Courante and made of it a Corrente, so did they transform the English Jig into a succession of running triplets, a figure of which the Italians were ever fond.

Germany likewise had the Jig from England, but used it almost exclusively as a suite-movement. From Froberger (1649), Rieckh (1658), and Becker (1668), to Bach, the *Gigue* was used as an instrumental movement only, and examples of it in this environment need not be quoted.

There can be no doubt that the Jig played an important part in the history of certain musical forms; and from a gay dance-

tune of eight measures, it became gradually extended, until it was employed in an important position in the Suite, and suggested the characteristic rhythm of the closing sections in many examples of the Sonata and Concerto.

KIT : A small stringed instrument much used by the dancing-masters of the Eighteenth Century. In this use it had four strings and was shaped like a miniature violin, its pitch varying according to different writers, from a unison with the violin to a fourth, fifth, or even an octave above. Praetorius says that it sometimes had brass or steel strings. Earlier examples were shaped like a baton (without corners or bouts), and during one period of its career it had only three strings. A good deal of confusion and doubt exists in the nomenclature, and we cannot be at all sure when *Poche*, *Pochette*, *Quart-geige*, and Kit were synonymous terms, and when not. The Kit in very early references may have been a pocket-rebeck. The word is mentioned in Rastel's *Interlude of the four Elements* (early in the Sixteenth Century), but we cannot be sure as to which form of the instrument it refers :

Kit
(Mersenne:
Harmonie Universelle, 1636)

This daunce would do miche better yet,
If we had a Kit or Taberet.

KNOT : Sometimes called the Rose. The fretted and often elaborately carved circular sound-hole cut in the tables of lutes and similar instruments. A large amount of highly artistic work was often put into this feature, and the *luthier* not infrequently strove here to exhibit his skill in the handling of his

tools. Some specimens are exceedingly delicately cut, and beautifully designed.

LA. v. ARETINIAN SYLLABLES and GAMUT.

LARGE: (*Duplex Longa* or *Maxima*). In Mensurable Music, a note equal in value to two Longs (*q.v.*) and sometimes to three Longs. In form the note was as follows:

In the earliest manuscripts the Large was written as at *a.* and *b.* (as black notes); about the middle of the Fifteenth Century it appeared as at *c.* (open; white; in outline), and the black note returned for reduced note-values. The corresponding rests were written as at *d.*; covering three spaces when Perfect, and two when Imperfect. The Large or *Duplex Longa* was not evolved until the time of Franco of Cologne, when it was written, as its Latin name implies, as a double Long (*v. also MENSURABLE MUSIC and MOOD*).

LAVOLTA, LAVOLTE. v. VOLTE.

LESSON: A short composition of no especial characteristics, but which had to be suitable for the purpose of study. In the Sixteenth and Seventeenth Centuries, and even persisting well into the Eighteenth, the Lesson took the place of what we should to-day call an exercise or *étude*. "Lessons for the Recorder," or "Short Lessons for the Bass-Viol" were common titles at the head of Elizabethan and Stuart pieces. The word was in everyday use in Shakespeare's time and Hortensio, in the *Taming of the Shrew*, disposes of Lucentio with the snubbing remark: "You may go walk, and give me leave a while; My Lessons make no musick in three parts"; meaning to imply that he and the lady could make all the harmony required without the aid of a third part. Only Shakespeare could turn a phrase with such rich and subtle meaning, and it is to him and his literary contemporaries that we owe so much for having kept all account of many old terms from becoming lost.

LETTERS, or BY LETTERS. v. TABLATURE.

LIGATURES : In Mensurable Music the Ligature was a species of notational contraction for the music sung to one syllable of the text. This applies to the semibreve and notes of greater value. The Ligature was written in several forms, such as that of the *Ligatura recta*, where the square notes were placed closely together, the *Ligatura obliqua*, in which the first vertical stroke of the first note was connected with the second vertical stroke of the second note by a pair of parallel lines, and a mixed form in which both of the foregoing were used :

Certain clearly defined rules fixed the values of the notes in Ligature, values which varied according to the position of the notes in relation to their neighbours, and according to the presence or absence of tails to the notes. Any number of notes could be tied together (*ligatus*) in *Ligatura recta*, but the *Ligatura obliqua* could contain only two notes, the pitch of which was determined by the position of the vertical strokes that commenced and ended the parallelogram.

When the first note of a Ligature was a Breve it was said to be *cum proprietate* (i.e. normal), and when the first note was a Long it was *sine proprietate*. What is *cum proprietate* in an ascending Ligature is *sine proprietate* in a descending one, and *vice versa*. When the structure of a Ligature causes the first note (and consequently the second also) to be read as a semibreve, that Ligature was said to be *cum opposita proprietate*. Franchinus Gaforius (1496) says : “ Every ascending Ligature of which the first note has no tail is *cum proprietate* ; similarly every descending Ligature of which the first note has a tail descending on the left side is *cum proprietate*. The first note of every Ligature *cum proprietate* is a Breve. They are therefore in error who read the first note of an ascending oblique Ligature as a Long.” A tail ascending makes the Ligature *cum opposita proprietate* and converts the first two notes (and both if there are only two in the Ligature) into semibreves—both because one semibreve by itself could not exist in the days when the semibreve had no fixed value and was *ultra mensuram*. It will be seen from what has been said of the Ligature *cum*

opposita proprietate that if the first note (Initial) has a tail ascending on the left side, both that note and the succeeding one are semibreves. All notes in Ligature which have a tail descending on the right side are longs. This rule, however, does not apply to the last note (Final) of a Ligature. Provided that nothing which has already been said alters their value, all the intermediate notes of a Ligature (*Notae Mediae*) are breves. If the first note has a tail descending on the left side it is a breve. When the Initial has no tail it is a long if the second note descends, and a breve if the second note ascends. All notes in a Ligature that have a tail descending on the right side are longs. Every *Finalis* (last note) of an oblique Ligature is a breve, the same applying to the final of a *Ligatura recta* if the note preceding it is a lower note. If the preceding note, however, is higher, then the final becomes a long. The three conditions just mentioned are upset if in a Ligature of two notes the first has an ascending tail on the left, in which case they are, of course, both semibreves. A final that has a tail on the right side is a breve if the tail ascends, and a long if the tail descends. Furthermore, the point of perfection could be added to any note in Ligature, whether *recta* or *obliqua*.

It will be seen that there are sufficient rules and regulations relating to the correct interpretation of these products of the Middle Ages to cause every intending translator of ancient manuscripts to pause and consider before making the attempt. The study of this subject, of which the foregoing is but the barest possible outline, will amply repay the student by opening for him a field of research in which all too few are at present occupied (*v. also* MENSURABLE MUSIC).

LITANY: A prayer of a supplicatory nature, of very great antiquity. The origin of its later form was most likely in the monotone singing of the *Kyrie* (not as part of the Mass), a form that was later developed in bulk and rendered still more impressive by the addition of rich harmonies. It is interesting to note that the Litany was the first of the prayers to be translated into English. The early English examples of the Litany—*e.g.* that contained in Day's *Certaine Notes, etc.* (1560)—and the later specimens by Tallis, followed the tradition of the time by keeping the Plain-song in the Tenor part, thus

preserving the original character of the prayer, while it was beautified by the surrounding harmony.

LONDON CRIES. v. *CRIES.*

LONG: In Mensurable Music a note equal in value to two or three breves (*tempora*), according to Mood (*q.v.*). Like the Large, it was first written as a black note, and later as an open one with a tail on the right side. It may be described as a breve with a tail:

The rest of the same value was written as at *c.* when Perfect (*Pausa Modi*), and as at *d.* when Imperfect (*Pausa Longa*).

The tail of the Long could be placed on either side of the black note; but in the case of the open note it was of the utmost importance that it should be on the right side, and descend. The reason for this will be seen when Ligatures (*q.v.*) are studied.

LUTE: The name of a large and highly important family of plucked stringed instruments. In the Sixteenth Century and the first half of the Seventeenth, the Lutes occupied the position, as accompanying instruments, of the pianoforte of to-day, and were even more ubiquitous. In the physical aspect they were composed of a flat table or belly, and a vaulted, pear-shaped back made up of a number of narrow ribs glued together—the latter being often fluted, ribbed, or inlaid. The fingerboard was fretted, most commonly by having lengths of catgut tied round the neck and passing over the fingerboard under the strings at chromatic intervals. The strings were of catgut and arranged in pairs tuned in unison (*v. COURSE and RANKS*); they ran from the pegs to a bar affixed to the lower part of the belly. Each string had its own name, as in the case of the Viols; the highest string on the Lute being called the Catling. No bridge was used on the Lutes, and the strings were kept at the requisite distance from the fingerboard and belly by the transverse bar to which they were fixed. The heads of the Lutes were generally bent back at an angle with the neck, thus offering more resistance to the

pull of the strings. The number of the latter varied with the period, but six was the most usual for the stopped strings (*i.e.* those running over the fingerboard); additional strings were added later at the side of the fingerboard, and tuned from a separate peg-box situated at the side of the other, or arranged as an extension from it. But the addition of these bass-strings changed the character of the ordinary Lute and made of it a Theorbo or an Arch-Lute (see these). Mace's *Musick's Monument* (1676) is perhaps the most valuable work for the study of the Lute in its English use, and most of the information we have on this branch of the subject is from its pages. Thomas Mace explains how the instrument is to be handled, treated, and strung; how tuned, and how the frets were to be "laid." The method of tuning varied considerably, and no useful object can be served by occupying space with such a fluctuating quantity. Naturally, as with all fretted instruments, the tuning and the Tablature (*q.v.*) from which the music was read had to go hand in hand.

A history of the Lute, to be complete, would occupy a volume at least as large as the present one, and consequently only the barest indication of its sources can be given. Of Oriental origin (Arabic, *Al'ud*; Spanish, *Laud*; Portuguese, *Alaude*; Provençal, *Laut*; Old French, *Leut*; Middle English, *Lute*) and introduced into Western Europe at the time of the Crusaders, the form of instrument used in this country would date from the Middle Ages and the Renaissance. By the time the later Tudor craftsmen worked the artistic appearance of the Lute was much improved and some exceedingly beautiful work is to be found. The sound-holes, for instance, varying in number from one to three, were often most elaborate examples of the *luthier's* art, being delicately fretted and carved. Famous makers existed in all the countries of Europe; but England was not in the rearward, for Vincenzo Galilei already remarked that the Lutes of English manufacture were the best (*Dial. della Mus.*).

References to the use of the instrument in England occur very early. Already at the beginning of the Fourteenth Century we are told that a luter received forty shillings for his performance at Westminster. Another very early allusion is in the Hosteller's account for Durham Priory (1361/2): "In uno viro ludenti in uno loyt . . .," and it is to be hoped that

the lutenist's playing was better than the scribe's Latin. Langland in *Piers Plowman* says that Truth "thanne lutede in a loud note," while Chaucer, who mentions practically all the contemporary instruments, has in *The Pardoner's Tale* :

Wheras with harpes, lutes, and guiternes,
They dance and plaie at dis bothe day and night.

Gower also alludes to the Lute in *Confessio Amantis* (1390 ; l. 2679).

The "Household Account-Books" of many noblemen under Tudor rule afford a good deal of information on the subject, especially as far as it concerns the instruments in private use. Thus in 1495, "To Hugh Denes for a lewte xiiis. iiid.," and in 1501, "For a lewte for my Lady Margaret, xiiis. iiid." A Lute which the king gave as a present to his daughter, Princess Mary, cost the same sum (Nicolas, *Privy Purse Expenses of Henry VII*). Elizabeth of York also kept accounts of expenditure, and in the entry for July 5, 1502, we read : "To Giles lewter for stringes for the Quene of Scottes lewte, xs."

Henry VIII was a thorough musician, and employed a large number of musicians. In July, 1509, the Master Giles already mentioned is entered in the State Papers as a luter with the salary of 22s. 2d. per month. The instruments belonging to the king were in the charge of Philip van Wilder and a list of them is preserved in the British Museum (*Harl. MS.*, 1419). On *folio 202b* there is entered : "A Lute being in a case cheste fasshion of Timbre covered wt. leather," a further "xxiiij Lutes wt. xxiiij cases to them," and (*f. 205b*) : "a litle Venise Lute wt. a case to the same." Henry, as is well known, treated any musician who could show talent out of the ordinary very generously ; and the Venetian ambassador, writing home, described a concert at which he met "a Brescian whom the King paid 300 Ducats a year for his Lute-playing." On the same authority we have it that Henry himself played the Lute very well. Society followed the King's example, and the account-books of many of the nobility contain entries referring to payments for instruments and performances. And contemporary literature is just as full of allusions to the instrument as the records are. All of the children of Henry VIII played the Lute, and in saying this it might be remarked that

everyone learned the instrument, for no education was considered complete without that accomplishment. If the references to the Lute be any indication, the very air of England must have trembled with the music of that instrument. It was heard everywhere, and it was frequently placed in the hands of the heroine and played on the stage, just as was the viol a century later. Such uses are to be found in Heywood's *Woman Killed with Kindness* and Shakespeare's *Taming of the Shrew*, in the latter a very humorous scene being given in which the Lute and its frets are used very punningly. It is mentioned in *Much Ado about Nothing* (II, 1): "God defend the lute should be like the case." Stage directions often ask for the instrument, as in Marston's *Sophonisba* (Act V): "A base Lute and a Treble Violl play for the act," and in Ben Jonson's *Masque of Hymen*: "full music of twelve lutes." So ubiquitous did the Lute become in Elizabethan England that a box of strings for that instrument was a common gift, and it was one that even the Queen deigned to accept from her Court-musicians at New Year. The instruction-books of this period were, *The Science of Luting* (1565) and an edition of Adrien le Roy's *Brief and Easy instruction to learne the tableture, to conduct and dispose the hand unto the Lute* (1588), translated into English by J. Alford. As in the case of the viols, the lutenist had often to content himself with vocal music arranged to suit his instrument, and a typical example of this is seen in Thomas Morley's *Canzonets or litle short Aers to five or sixe voices* (1597), in the dedication to which the editor says: ". . . I have also set them Tablature wise to the Lute in the Cantus Booke for one to sing and plaie alone when your Lordship would retire yourself and bee more priuate. . . ."

The passing of the Crown to the House of Stuart only increased, if possible, the popularity of the Lute. Allusions to it are more frequent in the works of contemporary writers, one of the most interesting containing a scene that is in reality a burlesque on a Lute-lesson. This is Cyril Tourneur's *Atheist's Tragedie* (1611; Act IV): "Well said: A lesson o' th' Lute to entertaine the time with till she comes"—"Sol, fa, mi, la,—Mi, mi, mi,—Precious! Dost not see *mi* betweene the two Crotchets? Strike mee full there—So—forward. This is a sweet straine, and thou finger'st it beastly. *Mi* is a laerg there, and the prick that stands before *mi* a long; alwaies halfe your

note.—Now Runne your division pleasingly with these quavers. Observe all your graces i' the touch,—Heere's a sweet cloze—strike it full, it sets off your musicke delicately.”

The official lists of musicians active at Court give all the information we require respecting appointments to positions in the royal music and the salaries paid. In 1604 Philip Rosseter was engaged as a lutenist with the salary of £20 per annum in addition to £16 2s. 6*d.* for livery. Six years later the wage of the lutenists was raised to £40 and then to £50, quite large sums in those days. The celebrated Robert Johnson was appointed in 1604 and received 20*d.* per day and the usual livery money. This musician's father, John Johnson, was one of the most celebrated of the Elizabethan lutenists. Another celebrated player was Thomas Cutting, who succeeded John Dowland in the service of the Danish king. The chief works of the period were three books of *Songs or Ayres of Four Parts* with an accompaniment for the Lutes by John Dowland, the *Schoole of Musicke*, dealing with the Lute and several of its relatives, by Thomas Robinson (1603), and the *Varietie of Lute Lessons* by Robert Dowland (1610). The last-named work is very valuable, since it contains, besides several pieces for performance, an English version of Besarde's classic instructions (from his *Thesaurus Harmonicus*, Cologne, 1603), “a short Treatise thereunto appertayning by John Dowland,” and several practical hints. Further representative works giving music for the Lutes were Robert Dowland's *Musical Banquet* (1610) and William Corkine's *Ayres to singe and play to the Lute* (1610).

In the reign of Charles I the instrument still showed no signs of declining from favour. Roger North (*Memoires of Musick*) says: “The Lute was a monopolist of the ayery kind, and master, gentlemen, and ladyes, for the most part used it.” The viols were beginning to be serious rivals, but it was some time before the Lutes fell from favour. It will not be necessary to quote largely from the Lord Chamberlain's Records, for these are sufficiently easy of access now, and have been quite well catalogued; but one manuscript (British Museum, Add. 5750) is worth quoting as being typical: “Charles R. . . . Whereas wee have appointed Robert Dowland to be one of our Musicians in ordinary for the consort in the place of his father Doctor Dowland deceased, and are pleased to allow him for his wages

twenty pence by the day, and for his livery sixteen pounds two shillings and sixpence by the year ; We doe hereby will and command you out of our treasure from time to time remayning in your custody to pay or cause to be paid to the said Robert Dowland or his assigns the said wages . . . from the day of the death of his said father for and during his naturall life, at the four usual termes or feasts. . . . Given under our Signett at the palace of Westminster the six and twentieth day of Aprill in the second yere of our Raigne. . . .” Subsequent names of lutenists include Robert Johnson, Nicholas Lanier, Henry Lawes (1630), Lewis Evans (1633), William Lawes (1635), George Hudson (1641), John Mercure (1641), and many others. The official “stringer” of the Lutes was William Allaby (1641); and in view of the contemporary jest that three-quarters of a lutenist’s life was spent in stringing and tuning, the appointment of a stringer must have saved a considerable amount of time. Five pounds a year was the usual sum allowed to the lutenists for their strings. The prices paid for Lutes in the Stuart period varied from £10 upwards according to the amount of ornamentation and the materials of which they were made. A fellow commoner of Trinity College, Cambridge, paid 3s. for borrowing a lute for one month, 3s. for “two dozen small strings” (Catlings), and 5s. for “learning one month on lute.”

The publications of the second half of the Seventeenth Century included John Playford’s *Select Musically Ayres and Dialogues* with Lute and Theorbo accompaniment (1652), a similar work in 1653, and another in 1659.

After the Restoration the Lutes began to decline seriously from their popularity, and the great vogue of the Viol family and the growing fashion of the newer Violins soon caused them to be neglected. So much so, that by the time Mace wrote in 1676, he had to bewail the fact that “the world is grown so slight ; full of new Fangles, and takes their chief delight in Jingle-Jangle. With Fiddle-Noises ; Pipes of Bartholomew. . . .” John Rogers, though already advanced in years, was at that time the Lute’s best friend, and with men like John Jenkins still writing, and social butterflies like Samuel Pepys still playing, the Lute could not yet be said to have become obsolete. References to the instrument are contained in the State Papers until the very end of the Seventeenth Century ;

and in 1715 a post of lutenist was created at the Chapel Royal, musicians being appointed to fill it until as late as 1752 (John Immyms). During the lifetime of this player the post became a sinecure. Thence onwards it remained only as a means of increasing the salary of the Master of the Children of the Chapel until the death of the last holder of that position—William Hawes—in 1846, when it was suspended (*v. also* ARCH-LUTE, THEORBO, PANDORA, ORPHERION, *and* MANDORA).

LYONS : A name often used in the Seventeenth Century for the bass-strings of the Lutes, probably because the best quality were imported from Lyon (France).

LYRA-VIOL : A Bass-Viol of the smallest size used for solo-performance in showy and technically difficult works. Its small size rendered it easy of manipulation, and its light strings “proportionable” (as John Playford has it) to its size, made it of ready and facile speech. The term was also employed to designate a viol tuned to a chord, and used with music written in Tablature (*v. HARPCWAY, TABLATURE, and VIOLS*). A work containing such music was Playford’s *Musick’s Recreation on the Lyra-Viol* (1652), and many books of a similar nature were published at about the same period. John Jenkins was a very celebrated performer on the viol treated in this manner, and Roger North (*Memoires of Musick*) says : “His talents lay in the use of the Lute and Base or rather Lyra-Viol.” He was once “brought to play upon the Lyra-Violl afore K. Charles the First, as one that performed somewhat extraordinary. And after he had done, the King sayd he did wonders upon an inconsiderable instrument.”

The instrument just mentioned, which was only an ordinary bass-viol tuned in a particular manner, must not be confounded with the Lyra, which had any number of strings, from seven to twenty-four, in addition to *Bourdons* or bass-strings, which in some forms of the instrument ran through the back of the neck and were plucked with the thumb, while the strings passing over the bridge were bowed (*v. also* BARYTONE).

LYRAWAY : Tuning the Bass-Viol to a chord, and playing it from a letter-tablature. This system was possible only so long as instruments were fretted, and it was undoubtedly an idea borrowed from the lutenist. For an unmusical ear this method of performance had certain advantages, for all that was neces-

sary was to drop the finger best able to stop a given fret (indicated by a letter) on the right string (shown by the line of the stave on which the letter stood). But the system had its disadvantages, the chief of which were that tempered intonation was next to impossible, and that in the case of a string being out of tune, no amount of finger-manipulation could compensate for it. John Playford (*Musick's Recreation on the Viol, Lyra-way*, 1669) was of opinion that this manner of using the Bass-Viol was of comparatively late evolution. He says: "The first Authors of Inventing and Setting Lessons this way to the *Viol* was Mr. *Daniel Farunt*, Mr. *Alphonso Ferabosco*, and Mr. *John Coperario*, alias *Cooper*, who Composed Lessons, not only to play alone, but for two or three *Lyra-Viols* in Consort." This latter circumstance shows a big development of the idea, and with the physical characteristics of the Lyra-Viol (*q.v.*) what they were, a consort of these instruments must have been of very fine effect. Examples of Lyraway tunings can be seen in Tobias Hume's *Ayres* of 1605, Ferabosco's *Lessons* of 1609, and Playford's *Musick's Recreation*, *etc.* (1652 and 1669), mentioned above.

Roger North (*Memoires of Musick*) speaks of Thomas Baltzar, the famous Swedish violinist of the Seventeenth Century who became very popular in England, having used a "lyra-tuning and conformable lessons," for the violin. This would doubtlessly have been a case of the mistuning, or *Scordatura* as it was called on the Continent of Europe, and was probably not used with a tablature, and, in the case of Baltzar, certainly not with frets.

MADRIGAL: A form of vocal composition that became very popular in England, and attained to such a high plane of artistic excellence that it is deserving of the closest study. Some of the English examples of the late Sixteenth Century are as beautiful as they are interesting, and fully worthy of being considered typical specimens of native musicianship at a period when this country stood second to none in the art.

Although various forms were used in different countries and periods, the English Madrigal was treated as a part-song unaccompanied by instruments. It reflected the spirit of the time exactly, and written by such men as Byrd, Morley, Wilbye, Dowland, Gibbons, *etc.*, to the texts that only the Elizabethan

era could supply, it was a form of musical art, the passing of which can only be deeply deplored. Contrapuntal writing was a salient feature of the Madrigal—or, as Christopher Simpson (*Compendium of Practicall Musick*, 1667) quaintly puts it: “Of vocal Musick made for the solace and civil delight of man there are many different kinds; as namely, Madrigals, in which fugues and all other flowers of figurate musick are most frequent. . . .”

The Madrigal came to England *via* the Low Countries in the last quarter of the Sixteenth Century, and so great a favourite did it become, and so well suited was it to the taste and talent of the English composers, that it became here a form that could scarcely be improved upon. The music was written in any number of parts, from two to six, or even eight, but there was nothing to prevent these parts being doubled, and the works of this class sung by a small or medium-sized body of vocalists. In this particular (as also in style of writing) the Madrigal differed from the Glee, in which each part was a solo-part. The period of the Madrigal's pre-eminence in England was comparatively short, for by the end of the first third of the Seventeenth Century it was no longer the popular favourite it had been when the House of Tudor made way for that of Stuart. Perhaps the lighter tastes of the latter sovereigns had something to do with the change of style; but a more powerful factor to bring about the decline of the Madrigal was no doubt the changing direction of the national talent, which tended more and more to the dramatic style. At any rate, it was not only in England that the Madrigal fell from favour at this period, for it vanished as rapidly on the Continent of Europe also.

The derivation of the name has occasioned a good deal of speculation, but the etymology that appeals most strongly to me is the one which traces the word from the Greek and Latin *Mandra*, a stable, whence Italian *Mandra*, a sheepfold, herd, or drove. From this source came the Italian *Mandrigale*, a shepherd's song (*cf.* *Mandriale*, *Mandriano*, “a herdsman, a grasier, a drover,” Florio, *Dictionary*, 1598). This lexicographer already defines Madrigal as “a kind of short songs or ditties in Italie,” also mentioning the form *Madrigale* (the suffix being the Latin—*calis*). Assuming this derivation to be the correct one, the pastoral character of the early Madrigals is explained,

Various museums and private libraries possess specimens of English music-books containing examples of the form, but they are not always easily accessible to the ordinary musician. It is therefore an especially fortunate circumstance that a fine collection of specimens by English writers is now available, published by Stainer and Bell, and edited by Dr. E. H. Fellowes. This edition is excellent and representative, and a special word of praise must here be given to Dr. Fellowes for the admirable and almost reverential way in which he has handled this music, especially on the controversial subject of the barring. Separate voice-parts were not barred during the Madrigalian era, and the omission has been made good as far as the changing metres allowed it, in an artistic and respectful manner.

MANDORA: A small pear-shaped, vaulted-backed, gut-stringed instrument of the Lute family. It is illustrated as early as the end of the Fourteenth Century, in a missal, and was probably used as far back as the Twelfth Century. The music of the period, of course, had no great compass, and consequently the short neck with which the instrument was provided was sufficient. By the Sixteenth Century it had become very popular in these islands and was much improved, the number of the strings being raised to five pairs. It was played with a plectrum and sometimes with the fingers. A book of tunes for the instrument is present in manuscript in the Advocates' Library at Edinburgh. The Mandora was used side by side with the larger lutes at this period, and sometimes a case would contain a pair—the Mandora being probably used for the melody and the larger lute for the accompaniment.

MASQUE: A form of entertainment introduced into England from Italy early in the reign of Henry VIII. In the country of its origin the Masque was an elaborate and often lavish spectacle that did much towards the development of stage-technique. The subjects chosen were generally allegorical or incidents from classic mythology, and there was often abundant opportunity for mechanical effects of the most amazing order. The costumes were usually very sumptuous and the scenery, besides being painted by the foremost artists of the day, was prepared regardless of expenditure. The most celebrated poets of the time provided the text, and the music was written

by musicians whose names are still remembered, and who stand out in the history of music as important figures. The enormous expense of such productions, especially when we take into consideration the relative value of money in the Sixteenth and Seventeenth Centuries, was sufficient to prevent the Masque from becoming very popular on the public stage, and it was confined almost exclusively to the ball-rooms or private theatres of royalty and the most wealthy and influential of the nobility. A further reason for the great favour enjoyed by the Masque in high society and other cultured circles was that the music and dancing-loving aristocracy could take part in the performances themselves, and many cases are on record of kings, queens, and princes having played in Masques. All that has been said of the Masque so far applies to all the countries that used this form of entertainment.

In England the Masque appears to have been introduced by Henry VIII very early in his reign. We know that his relations with the Italian States were very intimate, and that Venetian embassies passed to and fro. It would not be difficult to visualise the alacrity with which the pleasure-loving Tudor would seize the opportunity of preparing such spectacles for his own edification, especially when the result was likely to be artistic in every way. But the Masques of Henry VIII differ very much in character from those of the Stuarts. In Hall's *Chronicles* we read of a kind of masked dance in which the king took part, and which the chronicler calls a "Mask, a thing not seen before in England"; but he makes no mention of a plot or of stage and scenery. In short, Henry's Masque appears to have been little more than a fancy-dress and masked dance, a weak imitation of the glories of the Italian Masque.

By the time that men like Ben Jonson, Shirley, Beaumont, and Chapman were writing the poems, and composers like the brothers Lawes, Alfonso Ferabosco, Matthew Locke, Christopher Gibbons, Lupo, and Campion were supplying the music, the Masque had become more like its Continental prototype. A few printed works illustrate the class of music used in England for the Masque: "The Description of a Masque presented before the Kinges Majestie at Whitehall on Twelfth Night last, in honour of the Lord Hayes and his Bride," 1607; "Ayres" by Alfonso Ferabosco, 1609; "The Masque of Flowers presented by the Gentlemen of Graies-Inne at the

Court of White Hall," 1613 ; and " Ayres Made by Severall Authors and sung in the Masque at the Marriage of the Right Honourable Robert Earle of Somerset and the Right Noble Lady Frances Howard," 1614. There can be no doubt that these Masques were the forerunners of the English opera.

The Lord Chamberlain's Records contain several entries relating to the Masques performed at Court, and one or two examples will suffice to show their nature. On May 20, 1627, a warrant was issued " to pay Andrew Miller for making fifteen long gowns for musicians, for the Queen's Masque performed at Christmas, 1626 " ; on January 19, 1633/4 a warrant was prepared " for payment of £16 to John Keely and John Laurence for two treble lutes, against his Majesty's Masque at Shrovetide, 1633 " ; and early in 1675 we have a large number of entries dealing with the famous Masque of that year, huge sums of money having been paid (or owed) for costumes, music, and instruments. As early as 1610 (Christmas) the " Rewards to the persons imployed in the Maske " amounted to quite respectable sums for that period. For example, " To Mr. Alfonso (doubtlessly Ferabosco), for making the songes £20 ; to Thomas Lupo for setting the dances to the Violins, £5 ; to the twelve musicians that were priests, that songe and played, £24," and so on.

No account of the Masque, however short, should be allowed to ignore *Comus* by Milton and Henry Lawes. Composed for performance at Ludlow Castle on the occasion of the Earl of Bridgewater's visit as Lord President of the Council in Wales and the Marches in 1634, the masque was a fine example of this class of work. It was published afterwards, and a modern reconstruction of the work by Sir Frederick Bridge and W. Barclay Squire is published by Novello.

MASS: The celebration of the Eucharist, and the music to which certain parts of the service are sung. At different periods the musical complexion of the Mass varied very considerably from a chanting in Plain-song to elaborate polyphonic compositions of the highest possible order. It was only natural that some composers, more concerned for the originality of their music than for its fitness to the text, should have so far abused their opportunities as to cause exception to be taken at the whole system of polyphonic writing for this

service. It was only the fixing of certain rules and laws to govern the composition of Masses that prevented the devotional spirit being ignored, and the atmosphere which the Mass was to create, overlooked.

The first Masses were simply of chanted Plain-song, and even when the development of counterpoint enabled composers to elaborate their sacred work, the Plain-song was retained (as *Cantus Firmus*) and the various parts of the polyphony worked round it. Occasionally secular tunes of a popular character were utilised as thematic material, and the Mass named after the melody used. These works were naturally not written during periods worthy of imitation, and were only of an evanescent nature. Countless methods of setting the well-known texts were employed at different times, but after all had been tried, the tendency—directed as much by the higher artistic instincts of the best writers in the form as by the canons of Cardinals and Popes—was towards unity of treatment and fitness of materials. So many of the best examples of the Mass at different periods can now be seen in modern reprints, that it will not be necessary to quote them here.

The sections of the Mass to be treated musically are the *Kyrie*, *Gloria*, *Credo*, *Sanctus*, *Benedictus*, and *Agnus Dei*. These movements are interspersed with the remaining portions of the service, chanted or recited. The regulations imposed by Pope Pius X upon composers of Masses make very interesting reading, and must be studied by those who hope to have their music used. They are largely repetitions of older laws, and may be seen in Sir Richard R. Terry's *Catholic Church Music*.

MASTER-NOTE : 1. The note immediately below the key-note of the scale, to-day known as the Leading-note.

2. The name often given to the semibreve, probably because it was used as the standard of measurement in the Seventeenth Century. Notes larger than the semibreve were termed "Notes of Augmentation" and those which were smaller "Notes of Diminution," with the semibreve common to the two series. John Playford heads a chapter : "Of the Keeping of Time by the Measure of the Semibreve, or Master-Note."

MEAN : A term loosely applied in the Sixteenth and Seventeenth Centuries to any part, voice, instrument, or string,

lying between the treble and the bass. Thus, the Alto and Tenor were Means, and Shakespeare uses the word punningly in *Love's Labour's Lost* (V, 2): ". . . nay, he can sing a mean most meanly. . . ." Cyril Tourneur, in *The Atheist's Tragedie* (1611), has the great musical truth: "But trebles and bases make Poore musick without means." While on this subject notice must be taken of the Counter-Tenor (*q.v.*), also a Mean. By analogy, the strings of the Lutes and Viols between the highest (treble) and lowest (bass), were named Means, the Small Mean being the second string counting downwards from the treble, and the Great Mean the third string. Playford even applies these two terms to the A and D strings of the modern violin. The treble string of the Lutes and Viols was often called the Minikin; but whether this was a further diminution of Small Mean is not clear, although it would be quite in keeping with the practice of the times.

MEASURE: In Elizabethan England a term used loosely to mean a dance. Later its application appears to have been restricted to the slower and more dignified forms. Sir John Davies (*Orchestra*, 1594) settles the question as to the character of the Measure in the lines:

Yet all the feet wherein these measures go,
Are only spondees, solemn, grave, and slow.

Shakespeare in *Much Ado about Nothing* (II, 1) shows that it signifies a movement "mannerly modest . . . full of state and antientry." I have not met with any dance-form called "A Measure" showing any peculiar characteristics, and can only suppose the name to have been applied generically to the slow and solemn dances which usually at Tudor and Stuart balls preceded the quicker measures such as, successively, the Galliard, the Coranto, and the Jig.

MENSURABLE MUSIC: Measured music as distinguished from the older *Cantus Planus*, or Plain-song, in which the only measure was that fixed by the rhythm of the text to which the music was set (*v.* PLAIN-SONG). This singing of notes of undetermined time-value answered well enough so long as the music was unisonal, or in octaves, fifths, or fourths, and all the parts moved uniformly. But the moment that more elaborate harmonisation was evolved, it must be obvious that some

means of measuring the notes had to be devised. Exactly when this took place it is not possible to determine. To Franco of Cologne is sometimes given the honour of having fixed various signs and of having given them certain values. But even Franco himself writes of earlier authorities on this subject, and it must remain an open question as to who first used measured music, and when he flourished. It is quite possible that the idea was gradually developed, and there are signs that point in this direction. Judging from all accounts, it is not possible to place the use of Mensurable Music earlier than the opening of the Twelfth Century.

It must be plain that a complete consideration of this important and fascinating subject cannot find place or space in a work of this kind ; but a fair idea of it may be gained if the articles on Breve, Large, Long, Mood, Time, Prolation, Alteration, and Proportion are first read. The Neumes (*q.v.*) used in Plain-song undoubtedly supplied the first notes, and once these had come into use and their utility proved, there was nothing in the way of further development. It would be absurd to suppose that measured music, *per se*, did not exist before the Twelfth Century, because people danced rhythmically, I suppose, from the earliest times in the history of mankind. But there was no system of making clear to the eye the relative duration of the various notes. It was probably the alternation of duple and triple rhythms in the dance that primarily suggested the Long of three *Tempora* and that of two—the Perfect and the Imperfect Moods.

Bearing in mind what has been said in the articles alluded to above, it will now be necessary to trace the connecting links in the historical chain. The earliest notes in use—that is, at the period when music begins to interest us—were the Long, the Breve, and the Semibreve. The first two had their two determined values ; the Semibreve still remained indeterminate—*ultra mensuram*—and there could be any number of them, from two to a dozen, to the Breve or *Tempus* (Marchettus of Padua). Later on the Semibreve also came under the rules of Time (*Tempus*), and thence onward the basic principles of Mensurable Music, until the abolition of the Perfect and Imperfect Moods, remained unchanged.

The most noticeable feature in Mensurable Music was that the duration of a note was fixed in the first place by the signa-

ture which indicated the Mood or Time ; in the second place by its position in relation to the neighbouring notes. The principles of Alteration (*q.v.*) must be understood before this can be clear. For a Breve could endure for one or two beats (*Tempora*), according to its position. But the rule of Alteration only apply when not more than two Breves stand between two Longs. When there are more than two, a great deal of variation in the procedure must occur. In such a passage as :

the requirements of the Perfect Mood are satisfied by interpreting and grouping the notes thus :

the two Longs can both be perfect, and the three Breves complete what we should call a similar measure. But such a succession of notes as the following :

would have to be grouped thus :

to keep the Mood perfect. Had there been six Breves instead of five in the last example, the last Breve would have been altered and the closing Long perfect, thus :

The necessity for the rules governing Alteration, naturally, only arose in the Perfect, or triple, Mood. The Point of Perfection (*q.v.*) fulfilled the functions of the present-day dot, and converted any note in Imperfect Mood or *Tempus* into a Perfect one. From what has been said above concerning

variable numbers of Breves between two Longs, it will be seen that the interpretation of the notes depended largely upon the rhythm required. But if *one* Breve fell between two Longs, either of these Longs could be made Imperfect by it. That is, the phrase :

could be performed as :

or as :

The ancients based the rhythmic performance of their music upon half a dozen "modes" corresponding with recognised metres. The first was Trochaic,

and it will be at once obvious that the Perfect Mood could not be maintained if the Long were counted, as it should be, as three Breves ; for these three Breves added to the one which follows the Long, would produce a duple figure, not intended by the composer. The Long is therefore rendered Imperfect by the following Breve, and the phrase read :

instead of :

for it must never be forgotten that in the Perfect Mood the Long has the value of three Breves. In the second mode, Iambic, the same thing happens, and the Long is treated, because of the Breve which precedes it, as an Imperfect one :

becomes

and not

The third (Dactylic) mode :

called Alteration into use, for the triple rhythm could only be maintained by doubling the value of the second Breve, and keeping the Longs perfect, thus :

The fourth mode (Anapaestic) followed the same lines ; the second Breve of the rhythmic figure :

was altered to produce :

The fifth mode used only equal notes, and according to the accepted rule these were all Perfect.

Some indications concerning rests and time-signatures are given in other articles in this work, but as a rough guide to the latter it should be remembered that Perfect Time (triple) was shown by a circle, and Imperfect Time by a broken circle, semicircle, or capital C. A dot inside this mood-signature told that the Prolation (*q.v.*) was to be Perfect or Major, the absence of the dot indicating Imperfect or Minor Prolation. Other variations in the signature are dealt with in the article TIME (*Tempus*).

Another important branch of mensurable music is the study

of the change of rhythm effected by the use of black notes in place of white. This is alluded to in the article *PROPORTION*. But little more than an allusion is possible here, for it is a subject that requires a book to itself. The reader is referred to the articles in this volume mentioned above, in addition to that on *Ligatures*. Works dealing with the subject at greater length and in trustworthy manner are : Coussemaker, *Scriptores* ; Volume I of the *Oxford History of Music* (Professor Wooldridge), and Heinrich Bellermann, *Die Mensural Noten und Taktzeichen des XV und XVI Jahrhunderts*, Berlin, 1858.

MI. v. ARETINIAN SYLLABLES and GAMUT.

MINEVEY : Most probably a corruption, due to faulty orthography or typography, from Minuey, a Seventeenth- and early Eighteenth-century spelling (on phonetic lines) of Minuet (*q.v.*). Such spellings as Minuvey and Minnua are to be met with. Nevertheless, it is a peculiar circumstance that Salter's *Genteel Companion for the Recorder* (1683) should use these spellings and also give a "French Minnuett." Undue importance should not be attached to this, for orthography was a very vague art in those days ; and the most ordinary words are often spelled in the most fantastical manner.

MINIKIN. v. MEAN.

MINSTREL : Originally the Minstrel was most probably the assistant of the troubadour—and, as far as concerns us in this book, his accompanist. Though used to-day in a much wider sense, the word Minstrel appears to have been applied solely in the Middle Ages to such an instrumentalist. At all events the Minstrel was a trained musician and capable of performing important musical services when necessary. They even appear to have assisted at divine service, Rimbault quoting Rymer's *Foedera* in support of this. Certainly of French origin the Minstrel entered the musical scheme of England after the Norman conquest, and influencing the Saxon Gleemen, and perhaps also influenced by the latter, founded a national system of music that had as its chief form of expression the Ballad (*q.v.*). The instruments used by the Minstrel were probably the harp, crowd, rebec, citole, psaltery, and so on, according to period ; and when employed in the royal service he fulfilled the functions of the later consort. Exactly what is

meant by the term Minstrel when used by the later Tudors is not clear. It may merely have been a survival of the old name and applied to instrumentalists whose duty it was to accompany the singers, to play during banquets, and the like.

In the Wardrobe Accounts of Edward I we read: "To Minstrels and a Harper making their minstrelsy before the Prince between the Twelfth day of May and the Ninth day of June, 1300 . . . 3s." During the reign of Edward III the wages of the Minstrel amounted to 20s. a year. The records show a number of grants to Minstrels during the reign of Henry VI (from the year 1423 onwards). By the time of Henry VII the term seems to have been applied to instrumentalists generally, for records of that reign state that when the musician John Cliff went to France with the late king, he was accompanied by "seventeen Minstrels his companions." The term "Minstrelsy" would appear to have been applied exclusively to instrumental music.

MINUET : The English spelling of the French Menuet, a dance exceedingly popular in society and on the stage in the Eighteenth Century. Indeed, it was part of the social life of the period during which it was in vogue. It came to England from France soon after its appearance in the operas of Lully, and was fairly common in late Stuart publications. But in these it was given frankly as a new French dance. Playford's *Apollo's Banquet* (ed. 6, 1690) intimated on the title-page that the work included the "newest French dances now used at Court and in the Dancing-Schools," and among them were several Menuets. *Musick's Hand-Maide* (1678) also calls the form "the new Menuet." New it was to England, of course; but in France it had had a long period of development before it reached the proud position it occupied when it spread from its native country to these islands. Nearly all the music-books published after those already mentioned contain the dance.

It was during the reign of the last Stuart sovereign, and those of the first three Georges, that the Menuet received the greatest attention here, due, no doubt, to Court influence; for the Menuet was as popular at the Georgian Court as the Branles and Corants were in Stuart, and the Pavanes and Galliards in Elizabethan, England.

For the purpose of the dance a great deal of music was written

during the period last mentioned ; every royal birthday was greeted by the publication of an oblong volume containing a special Menuet for the occasion, and what the Court did was naturally copied by society. At Bath the Menuet was a regular and welcome feature, and Beau Nash's balls usually commenced with two hours of Menuet-dancing. In the spa's palmy days the Menuet was as popular in England as it was on the other side of the Channel ; and to dance it well was a sign of gentility here as well as in France. And even Macaulay, in his *History of England*, has it that "Her authority was supreme in all matters of good breeding, from a duel to a Menuet."

The story of the Menuet is interesting and important. It rose from humble beginnings as a rustic Poitevin measure to be a dance which left more traces of its existence on musical form than perhaps any other. It played a part in the formation of its era's manners and beautified the best forms of musical composition, from the pianoforte-solo to the Symphony. How ancient it is would be almost impossible to decide ; for it sprang from a dance that had been used for generations in various parts of France, and particularly in Poitou. It is most likely to be derived from a form of the Branle, and in its original form—rustic, lively, gay—it seemed to have been very unpromising material from which to evolve the stately measure of the Eighteenth Century. Lully was probably the first to use it in anything like the form that became so popular ; certainly his Menuets were the first of any musical value. And the specimens with which Lully supplied the French stage were the models upon which the later examples were based. It is no exaggeration to say that from this date onwards almost every ball in Europe was opened by the "Queen of Dances," until the two revolutions (the French and the Waltz) dethroned it, and left it as a charming ingredient at the disposal of the Suite-builders.

Like most dances taken from a rustic environment, the Menuet became slower and more stately when adopted for use on the stage and in Society's ball-rooms. It enabled its performers to evolve the most graceful and artistic movements imaginable ; its dignity preserved from weightiness by the charm and grace with which the dancers of the period endowed it. But it showed also the artificiality, the snobbery, the

arrogance, and the affectation of the Eighteenth Century ;— the little steps that gave the dance its name (*menu*, small) pictured the mincing gait of the affected dandy ; and the humble curtsy of the lady heightened by its very humility her haughty self-complacency.

The commonest time-signature of the Menuet was $3/4$, and the music was generally contained in two sections of four or eight measures, each repeated. Each section was divided from its successor by a marked *caesura*. The later forms of the dance, used as instrumental compositions only, were made up of a first Menuet followed by a second (usually in the relative minor and sometimes in the form of a Trio—*i.e.* in three-part harmony), and closed by a repetition of the major Menuet. In the Suite it took its place, as did all the *Intermezzi* or interpolated forms, between the Saraband and Jig.

It would be out of place to continue with the Menuet's further development, and the importance it assumed in Beethoven's hands ; for these belong to the musical history of other countries. But the fact must not be ignored that the Menuet did not stop where the English musicians left it.

MIXED DIVISION : At a period when fine distinctions were drawn between Division, Descant, and Breaking the Ground (*q.v.*), a Mixed Division was one which combined the use of all three devices in one composition.

MODUS, MODE. *v.* MOOD.

MONOCHORD : An instrument consisting of a sound-box over which was stretched a single string, used for experimental purposes in musical physics. A movable bridge served to divide the string into any required proportionate parts, and the whole system of interval-ratios and many other musico-physical phenomena were discovered by its means. Its use dates back with certainty to the days of the ancient Greek physicists and probably to the scientific culture of the Nile. In the Middle Ages the Monochord was employed to determine the pitch for vocalists, and its influence on music generally has been a very powerful and far-reaching one. At first plucked with the finger or plectrum, and later played with a bow (the number of strings having also been increased), the Monochord in all probability first suggested the clavichord on the one hand, and the trumpet-marine and many other bowed

instruments (*e.g.* the organistrum) on the other. Care should be exercised when dealing with the word, especially when spelled *Manichorde* with an *a*, and still more so when in the phrase “a pair of Monochords,” for it is easy to confuse the true Monochord for experimental purposes with *Manichorde* and *Manicordo*, which are the French and Italian respectively for Clavichord.

MOOD: A term used in Mensurable Music to express the relative values of the Large (*Maxima*), the Long, and the Breve. The *Modus Major* dealt with the Large and the Long, was Perfect when the measure was triple, *i.e.* when each Large contained three Longs, and Imperfect when the measure was duple, *i.e.* when each Large contained two Longs. The use of the Great Mode is very rare. The signature was :

when Perfect, and when the Time (*Tempus*) (*q.v.*) was also Perfect. The broken circle : C (or C2) indicated the Imperfect Mood. A large amount of variation in the signature could occur, according to whether the Time was Perfect or Imperfect, and so on. In dealing with this subject in the amount of space that can be allowed it, there is great danger of committing sins of omission ; and before the transcription of Medieval manuscripts is attempted, the reader is recommended to digest Heinrich Bellermann's *Die Mensuralnoten und Taktzeichen*, *etc.*, Berlin, 1858.

In the *Modus Minor* (Lesser Mood) the measurement was Perfect when each Long contained three Breves, and Imperfect when it was worth only two. The signature of the Minor Mode Perfect (when the Time was also Perfect) was :

or :

and when the Time was Imperfect the same with a broken circle (C ; which was the ancestor of the present-day signature for common time).

The complication of the system will be apparent when it is remembered that in a single composition the *Modus Major*

Perfectus could be used together with the *Modus Minor Imperfectus*. That is to say, every Large would contain three Longs, but every Long only two Breves. This is but one example of such "Moods." Thus in *Modus Major Perfectus* with Perfect Time, the Large would be equal to three Longs or nine Breves ; in *Modus Major Perfectus* with Imperfect Time, it was equal to three Longs or six Breves. Similarly in *Modus Minor Perfectus* with Perfect Time, the Long was equal to three Breves or nine Semibreves, and in *Modus Minor Perfectus* with Imperfect Time, to three Breves or six Semibreves (*v. also* MENSURABLE MUSIC, TIME (*Tempus*), and PROLATION).

MORISCO. *v.* MORRIS DANCE.

MORRIS DANCE: A folk entertainment of high antiquity that varied in character according to period, from a solo dance and one for half a dozen men, to an elaborate spectacle or pageant with many characters and mummings. Its origin seems lost in the mists of the past, and several sources might with equal justice be suggested for it. Its features are such that it may be regarded as a survival of some ancient ritual ; alternatively, it may be a descendant of a dance, already popular in France during the Sixteenth Century, the Morisco ; thirdly, it may be a survival (in one of its forms at any rate) of one of those peculiar dances of armed men, pantomimic in nature and in vogue with even savage races ; fourthly, it can be a simple folk-dance to which were added, from time to time, various trimmings in the form of ceremonial and historical or legendary happenings. Of all these possible origins, the only one from which we can trace the Morris Dance in any logical sequence, is the Morisco. Tabourot in his *Orchèsographie* (1588) says that in his youth (*i.e.* early in the Sixteenth Century) he saw the Morisco danced by boys with blackened faces, *etc.* ; and this circumstance, added to the etymology of the name, would seem to point to a Moorish origin for the dance. Whether this Morisco, or the pantomimic dances bearing the same name in other parts of the Continent of Europe, had much in common with the Tudor Morris Dance is another matter ; but the suggestion may quite easily have come from the Morisco, while the English talent for dancing and masking may have supplied the rest.

The date at which the form came to England can similarly

only be guessed at. Most writers suggest that the reign of Edward III was the period, and that John of Gaunt brought the dance from Spain. If we could fix upon the Spain of that era as the birthplace of the Morris Dance, then we could not deny it a Moorish origin. The dance is mentioned and alluded to frequently, but no clear idea of its nature can be formed until it had become thoroughly Anglicised, and ornamented with all the gaiety and imagination of the Tudor revellers. By the time of Henry VIII it had reached a state of popularity unequalled perhaps in any other amusement. Thence onwards it was elaborated and expanded, its original features having probably long been lost—the fate of the original characteristics in many of the ancient dances. The dancers alone soon ceased to satisfy the desire for pageantry, and gradually more and more figures were introduced into the game. There can be no doubt that from a simple dance with certain marked characteristics, whether of a semi-religious or military nature, it became a sort of allegorical masque, or spectacle with dancing. Whether these additional personages acted in dumb-show; whether they sang or spoke; whether they merely paraded; whether they danced; are questions that cannot be answered with any degree of certainty to-day. Whiffers (*q.v.*), hobby-horses, fools, kings, queens, squires, and such representative characters, as well as particular figures like Robin Hood, Maid Marian, Friar Tuck, and Little John, came and went as the Morris Dance passed through its kaleidoscopic career from century to century.

As far as can be ascertained, therefore, the Morris Dance became a combination of many forms; probably the serious, ritualistic, and exacting original dance was so confused and mixed with the May-day revellings and similar rejoicings, that no attempt was made to separate them. It was only when the added pageantry fell away that the Morris Dance emerged as a set dance, with varied figures, for six men who belonged to a very conservative body of experts. In this form the dance survives to-day in certain parts of England.

The fact that the Morris Dance was performed by men only would seem to point to its having had an origin far removed from the maypole spirit with its flirtation and kissing. The cake that was often carried at a sword's point might have been a burlesque or a survival of some ceremonial of deeper meaning.

Furthermore, the sword took part in too many of the ancient spectacles for it to be dismissed from the history of the Morris Dance without consideration. The more the question of this dance is studied the more fascinating it grows, and, at the same time, the more involved and entangled do the threads of its descent become.

Henry Machyn, citizen of London, tells us in his *Diary* (May 26, 1555) that there "was a goodly May-gam . . . with gyant and hobehorsses, with drumes and gones, and mores danse and with other mynsterelles" (at Saint Martin's-in-the-Fields). But by the time that Ben Jonson wrote, the Morris Dance had become very vague, and each locality seemed to have had its own traditions concerning its performance. "They should be Morris dancers by their jingle, but they have no napkins,"—"No, nor a hobby-horse,"—"Oh, he's often forgotten; that's no rule; but there is no Maid Marian nor Friar amongst them; which is a surer mark. Nor a fool that I see." Bells seem to have been the inseparable adjuncts of the Morris dancer for a long time. In Greene's *Groatsworth of Witte*, 1617, we read: ". . . and wanted nothing but bels, to bee a Hobby horse in a Morrice"; and in Fletcher's words: "My spurs jingle like a morris dancer." As late as 1772 a penny book gave evidence to the existence of a Morris Dance with a cleric, a beggar, and the Robin Hood quartette.

Shorn of its dispensable adjuncts the Morris Dance was an affair of gravity, not to be attempted in a flippant spirit. Physically, even, it was not easy of performance if it was to keep to tradition. Admission to the guild of professional Morris Dancers was not easy. The candidate had to submit to all the rules of the society, which was very conservative, and obtain his own costume, which was a matter governed by age-old traditions. His training was long and severe, and the result was a dancer who possessed the agility and knowledge of the form that were necessary to make of his performance the serious thing it was considered to be. The costume of the Morris Dancer consisted of a top-hat, white shirt, light breeches, strong boots, woollen stockings, a multitude of coloured and plaited ribbons and rosettes, and a number of bells fastened by a band below the knee.

The music of the true Morris Dance was supplied by the tabor and pipe, or the popular bagpipe. The latter instrument in

connection with the dance is mentioned in a song dating from 1660: "Harke, Harke, I hear the dauncing, And a nimble Morris prancing; The bagpipe and the Morris bells." The falling into desuetude of the pipe and tabor, and, I suppose, the inability to procure a bagpiper readily in the South of Britain, caused the violin to take up the position of accompanying instrument and time-keeper.

It will be seen, therefore, that the Morris Dance at some periods in its history was an entertainment that helped to acquire for England the epithet of "merry"; at other times it was a careful, artistic, and canonical observance. There are still a few sets of Morris Dancers left in England, and men like Mr. Cecil J. Sharp are doing good work in reviving this form of old English art. His publications, *The Morris Book* (Novello, 1907) and others, dealing with various forms of the dance, are well worth reading by those interested in the revival (*v. also* SWORD DANCE).

MOTET: A term applied at different periods to compositions of varying character, but eventually used more exclusively to designate a work for sacred use, set to a Latin text generally (selected from the Psalms or other part of the Scriptures—sometimes even paraphrases on these), and treated in a *capella* style. Solo-Motets were not unknown, but the form in part-writing was and is by far the most common. In this use the Motet would date from the second half of the Fifteenth Century. Used to expand the Mass service, the Motet vanished as such in England at the change of the State-religion, and was replaced by the Anthem (in its "Full" form).

During the period of its greatest popularity the Motet was distinguished by the peculiarity that each voice-part was often given a different text, a feature that must obviously have pointed the way to vast changes in vocal writing, both dramatic and musical.

The form enjoyed a great vogue in Catholic England, and William Byrd's *Cantiones Sacrae*, as well as those of Thomas Tallis, both of which works contained what were really Motets, may be looked upon as typical of the work done in England with this form. They would suffer very little when compared with even the best of the continental examples. It has already been hinted that the Motet appeared in various forms

in different stages of its long career, and it must be remembered that very early in its history it was a secular song. This must be borne in mind when Seventeenth-century secular compositions are met with bearing the title "Motet." Orlando Gibbons, for example, issued his *Madrigals and Mottets* in 1612, and such use of the word is not an isolated one at the period. The secular application of the term was not confined to England by any means, and it was probably used in that sense on the Continent before sacred Motets were ever written. Cotgrave's French-English Dictionary (1660) gives the French *Motet* as meaning "a verse in musick, or of a song, a poesie, a short lay"; while Florio's Italian-English Dictionary of 1598 (*A World of Words*), defines the Italian *Motteto* as "a dittie, a verse, a jigge, a short song, a wittie saying." And this last definition probably gives us the original meaning of the term (*cf.* French *Mot*, a word).

MUTATION. *v.* HEXACHORD SYSTEM.

NAKER: The Medieval kettledrum of Arabian origin, if the etymology of the name can be accepted as evidence. The earliest specimens appear to have been very small, so that a pair of them could be held by one hand and beaten with the other. They had convex bodies of wood or metal, and a single head of skin. As the increased resources of the West were applied to its construction the Naker grew in size and became a hemispherical shell of metal (generally copper) with a vellum head; the latter being tunable in the most highly developed specimens. The Naker is mentioned very early in our literature, having probably been brought from the East by returning Crusaders. The first traceable reference to its musical use is in the records relating to Edward I (beginning of the Fourteenth Century). In Tudor days the instrument was already known as the "Kettell drom" (1551). From this date onwards many references to the instrument are to be found in the State Papers, and it had become, by now, the accepted form of drum for mounted bands. It was used, as it is to-day, in pairs, one on either side of the horse's shoulders. In the symphony orchestra the descendants of the Naker, now known as *Timpani*, play an important and interesting part.

NEUMES: The signs used in the earliest days of writing music. Intended originally as aids to the memory in singing the

chanted portions of divine service, a very complete code of such symbols was evolved, which passed through a long process of development until the modern system of notation emerged. Thus the *Punctum* (a grave accent), in its earliest form merely a dot, became the square note of Mensurable Music; the acute accent (*Virga*), a nail-shaped sign like a dot with a tail, was developed to a shape that produced our tailed notes. Neumes in huge numbers were constructed by various combinations of these accents, and a complete study of this subject would need a considerable amount of space. A few examples must therefore suffice, some specimens of each form in different countries and periods being given.

Grave accent (<i>Punctum</i>):	•	•	◆	/	■	■	•
Acute accent (<i>Virga</i>):	/	/	/	┐	┐		┐
Clivis (A combination of the above two):	∧	∩	∧	┐	┐	┐	┐
Podatus:	✓	✓	✓	┐	┐	┐	
Climacus:	/.	/.	/.	┐.	┐.	┐.	┐.
Torculus:	∩	∩	∩	∩	┐	┐	┐
Porrectus:	/	/	/	┐	┐	┐	┐

Many other combinations were evolved which were more or less complicated, some signs standing for quite elaborate groups of rising and falling notes. A study of manuscripts of known date is a great help to the understanding of the Neumes, and the best authorities for their interpretation are the *Scriptores* of Gerbert and Coussemaker, and the Benedictine *Paléographie Musicale* (Solesmes).

NOISE OF MUSIC: In Elizabethan and early Stuart England the word Noise was not always used, in a disparaging sense, to mean unpleasant sounds. In those days it frequently meant nothing worse than our word Sound, and Spenser refers to even a "heavenly noise." In Shakespeare's time a Noise of Music was a haphazard combination of instrumentalists not numerous enough to constitute a "band." In *II Henry IV* (II, 4) we

have : “ And see if thou cannot find Sneak’s noise ; Mistress Tearsheet would fain hear some music ” ; while Heywood (*Iron Age*, Act III) alludes to the same when he writes :

Where’s this great sword and buckler man of Greece ?
Wee shall have him in one of Sneakes noise,
And come peaking into the Tents of the Greeks,
With will you have any musicke Gentlemen ?

Ben Jonson, in *The Tale of a Tub*, says : “ Press all the noises of Finsbury in our name,” a sentence that would be unintelligible without this interpretation. The *Diary* of Samuel Pepys and Dryden in the *Maiden Queen* both allude to a “ Noise of Fiddlers,” meaning a set or consort of these instruments. In the article on the Cornet it will be seen that “ A Noise of Cornets ” was also used. At a date anterior to these quotations the term was applied even to the voice, and we read of “ a noise of singing children.”

NOTATION : The system of signs and symbols by which the pitch and duration of musical sounds are made visible to the eye. The notation used in ancient times differed considerably in different periods, and for a very long time it was in a state of flux. Commencing with the Neumes (*q.v.*), or signs which indicated the rise or fall of the voice in Plain-song, the notation of music was developed as the rapidly increasing demands of harmony called for more exact means of writing down the sounds required. The Neumes did not stand for fixed notes or intervals, and their object was only to serve as an aid to the memory of singers who had learned the song from a teacher or by tradition. Differences of pitch were at first shown in a very rough-and-ready way by writing the Neume relatively higher or lower—dots or points being used later for this purpose. He must have been a genius who first thought of the brilliant though simple expedient of ruling a line to indicate one fixed note, and to write the signs representing higher or lower sounds above and below the line. This line was written in red ink, and all the signs placed upon it were of uniform pitch (F). Once the beginning had been made, the rest was easy. A second line was added above the existing one, coloured yellow, and bearing the signs of the sound a fifth above that on the red line. The note on the yellow line, therefore, was C. A black line between the two coloured ones was then added, and made

to bear the note A. A fourth line above the yellow one completed the old stave, and, indeed, was sufficient for the ordinary range of music at the period. Later, however, when musicians desired to write all the parts of their polyphony on one stave, a greater number of lines was employed, and staves of from four to a score of lines were not infrequent.

The rise of polyphony made music capable of exact measurement a necessity ; and with the advent of Mensurable Music a new epoch in the history of notation had begun. The change from the Neumes to the complete series of symbols used when Mensurable Music was at its prime was not effected suddenly, or even rapidly. For some time two notes had to suffice, a long one and a short. More complicated harmonisation compelled composers to give these notes fixed values. More notes of varying value were gradually added, a means of indicating the Mood or Time developed, and a system of grouping notes sung to one syllable of the text (Ligatures) was called into being (*v.* MENSURABLE MUSIC). The notes used were the semibreve, at first of indeterminate length (*i.e.* merely a short note), the breve, the long, and the large (or *Duplex Longa*), all of which see. The lozenge or diamond-shaped note followed, and was eventually displaced by the modern round note. The dividing of the music into sections of equal length, each containing regularly recurring accents—that is, the use of bar-lines—followed, and the notation of music settled in a form which, with only minor alterations, it still shows (*v.* BARRING, BREVE, CLIFF, LARGE, LIGATURE, LONG, MOOD, PROPORTION, and TIME (*Tempus*)).

NOTES OF AUGMENTATION : The semibreve, the breve, the long, and the large (*q.v.*) were known as Notes of Augmentation in the Seventeenth Century ; that is, they were multiples of the semibreve, or Master-Note.

NOTES OF DIMINUTION : The minim, crotchet, quaver, and semiquaver were, conversely to the case of the Notes of Augmentation (*q.v.*), fractional parts of the semibreve (*v.* MASTER-NOTE).

OATEN PIPE. *v.* SHALM.

OCHETUS. *v.* HOCKET.

OLIPHANT : A horn made of ivory (Old English, *Olifaunt*,

Olifant, elephant), used for hunting and also for signalling in peace and war. It is of very great antiquity, the Victoria and Albert Museum (London) possessing very ancient specimens richly carved. It is mentioned in the story of Roland and Oliver (*temp.* Charlemagne).

ORGAN : A highly important keyboard wind-instrument, which had a tremendous influence upon the progress of musical art. It is obvious that a complete account of so vast a subject, especially in its modern aspect, cannot be given here ; but a summary of the principles underlying the use of the instrument in early times must not be omitted from such a work as

Medieval Organ

(Roughly sketched from an illustration in a MS. at Trinity College, Cambridge,—itself a crude copy of a drawing in a Netherlandish Psalter)

this. Fundamentally, the Organ was, and is, a collection of wind-instruments—one or more series of pipes made of various materials, and giving forth sounds by different means, such as fipple-heads, reeds, and so on. The pipes were made to speak by the action of wind admitted by the withdrawing of a slide in the older specimens, and by the depressing of a key in the more modern—which wind was supplied from bellows worked by hand or foot power, and, later, from mechanical “blowers.”

The earliest references to Organs in England relate to an instrument belonging to the end of the Seventh Century. St. Aldhelm, Abbot of Malmesbury, describes the Organ of his period, and from his account we can form the opinion that the instrument was already of some size and furnished with a

fairly large number of pipes. The Venerable Bede (beginning of the Eighth Century) also left some account of contemporary Organs, and from his writings we can gather that the tone they produced was full and pleasant, and that the notes spoke by "wooden tongues" admitting the wind to the required pipes by their withdrawal and silenced by their return. The entire compass of these Organs probably did not exceed an octave, and a complete chromatic scale was not used. These limitations, added to the difficulty of working the slides, made multiple Organs a necessity ; that is to say, each organist could find hands enough to play one part only, and polyphony had to be produced by a different player for each part. This may account for the presence of the two or even three performers that we see pictured in some of the Medieval Organs. There appears to be no indication of a keyboard until the end of the Eleventh Century. With the introduction of these ready means of making a note sound by the action of a single finger, the playing of several parts simultaneously became much easier, and consequently the number of pipes was increased and the chromatic gaps filled in. But it was not until the Fifteenth Century that the Organ became fully chromatic, and at about the same time reed-pipes were added. The Psalter of Eadwin (Trinity College, Cambridge) contains an illustration showing such an early Organ as is described above, with two players and four blowers. A monk of the Tenth Century (one Wulstan) wrote of an Organ in Winchester Cathedral which required three players, a large number of blowers at the bellows, and which had as many as four hundred pipes. But it must not be supposed that this was really such a large Organ ; it meant that the aggregate number of pipes was four hundred, but that they were operated by different musicians from different sets of slides ; the instrument thus being really a combination of three distinct Organs. Once the keyboard had come into common use, and reed-pipes added, the scope of the instrument was considerably widened and the way made easy for further additions and improvements. The presence of two or three players at the Organs of the Middle Ages, as I have mentioned above, argues that each played his own part, and what these parts were in relation to one another a glance at the articles on Organum and Faux Bourdon will make clear (*v. also* REGAL, PORTATIVE, and POSITIVE).

ORGANISTRUM. v. HURDY GURDY.

ORGANUM: Probably the most ancient form of harmony, consisting, in the first instance, of two parts separating diatonically from the unison to the fourth and returning to the unison in the same way. At the time of Hucbald (Ninth Century) the Organum became a parallel sequence of fourths and later of fifths, and, frequently, the doubling of both parts in octaves. John Cotton (end of the Eleventh Century), after Guido d'Arezzo had instituted the crossing of parts, already developed the Organum to what became a true descant. Much on this subject is contained in the writings of the theoreticians included in Coussemaker's *Scriptores*, but a certain amount of confusion in nomenclature exists (v. also *DIAPHONY*).

ORPHERION: A plucked instrument handled as were the lutes, and popular very early in the Seventeenth Century. Mace (*Musick's Monument*, 1676) says that the "Auferions" had wire strings like the Pandora, and again like the latter instrument, had the strings in unison pairs. Their number varied from seven to nine pairs. A peculiar feature in the manner of stringing lay in the circumstance that the transverse bar which held the lower ends of the strings was affixed to the table in a slanting direction, and not at right angles to the centre-line as in the lutes. The slant ran upwards on the treble side, and had the effect of making the upper strings shorter than the lower ones. Since it was a fretted instrument, it followed that the frets had to be adjusted slantingly across the fingerboard to make up approximately for the slant. The advantage of this arrangement lay probably in the fact that the lengthened bass-strings gave greater resonance, and the shorter treble and means made for greater economy—not in the length of string used so much as in the reduced number of breakages. Still, with wire strings the latter could not have been a very important item.

In John Dowland's first and second books of "Songes and Ayres of foure parts with Tablature for the Lute. So made that all the partes together, or either of them severally may be sung to the Lute, Orpherion, etc." (1600), the instrument is used for accompanying purposes. Three years later Thomas Robinson issued his "Schoole of Musicke: wherein is taught the Perfect Method of true fingering of the Lute, Pandora,

Orpherion . . . ”; and in 1607 the instrument is once more mentioned in the title of Thomas Ford’s *Musicke of Sundrie Kindes*.

PANDORA, PANDORE (or BANDORE): A plucked instrument strung with wire (Mace) and used to supply a bass. Like the lutes, the Pandora had its strings mounted in unison pairs or ranks. The outline of the resonance-chamber was not a continuous curve, but was waved in three convex scallops on either side. It is quite possible that individual specimens may vary a good deal in outline. The instrument is mentioned as early as 1566 when George Gascoigne mentions it in the Euripidean tragedy *Jocasta* (in “the order of the dumme shewes and Musicke before every Acte”). Thomas Heywood, in the *Fair Maid of the Exchange* (1607), has: “What’s her haire? faith to Bandora wiars, theres not the like simile. . . .” In 1603 Thomas Robinson names it on a title-page as an accompanying instrument, and in 1611 Thomas Morley published his “First Booke of Consort Lessons . . . for sixe instrumentes to play together: viz.: the Treble Lute, the Pandora, the Citterne, the Base-Violl, the Flute, and the Treble-Violl.” If such a serious musician as Morley wrote for the instrument in such company, it must have been capable of producing very artistic effects. Samuel Pepys still alludes to it in 1662 when we find the entry: “Waked very early; and when it was time, did call up Will, and we rose, and musique (with a bandore for the base) did give me a levett” (October 15th).

PASPIE. v. *PASPY*.

PASPY: A dance descended from one of the forms of the Branle (*q.v.*) as the latter was used in Basse Bretagne, and known in France as the Passepiéd, from which the English name was (to some extent phonetically) derived. During a career of nearly two centuries the form became an exceedingly popular measure in practically all the art-loving countries of Europe.

The Paspy became known in England before the end of the Seventeenth Century, and Playford’s *Apollo’s Banquet* (1690) contains three examples. Thence onwards it was of comparatively frequent occurrence, became an integral part of the English musical scheme, and found writers in almost every

musician of note, including Purcell. Early in the Eighteenth Century several French writers published collections of Harpsichord and Spinet music in England, and their work no doubt largely influenced the English composers of Paspies. But even in the Seventeenth-century purely English specimens the original form was not by any means strictly adhered to, and a good many liberties were taken with it. The research worker has to differentiate very carefully, when he is examining specimens of these ancient dances, between those examples written specifically for terpsichorean purposes and those composed purely as pieces of instrumental music. Tomlinson's treatise on the dance (1715) gives a specimen by a French dancing-master, in 6/8 time, with instructions how to dance it. This example is interesting since it is called "Passepiéd Round O"; which may, of course, have been the result of caprice, but which may, on the other hand, have been quite conceivably an indication that the Paspy was, in England, a round-dance, as it was originally in Bretagne at the period when it was known as a variety of the Branle.

In its original state the Passepiéd was a joyous dance high in favour with the seafaring population of Brittany; and the proximity of this part of France to Poitou may be an explanation for the great likeness that many authorities have found between the Paspy and the Menuet. Rousseau tells us that the older form was very like the Menuet, but quicker in *tempo*; and adds that another point of difference between the two forms was that the Passepiéd allowed of syncopation, while the Menuet did not. Compan and Brossard both bear out the musical philosopher in this opinion.

The character of this dance was light, merry, and full of gaiety; Niedt (*Handleitung zur Variation*, 1706) describes it as an exceedingly quick dance in which the feet were expected to exhibit exceptional agility, deriving the name from this circumstance. Mattheson says that the Passepiéd was never sung—a very peculiar distinction when we remember that almost without exception the old dances were accompanied by voices as well as instruments. As might be expected in a form that owed its origin to the Branle, the Passepiéd appears to have been written in a duple measure before it became the well-known triple dance of the Seventeenth Century. This peculiarity was not uncommon in the Sixteenth and early

Seventeenth Centuries, when many of the ancient dances had duple and triple forms. Tabourot (*Orchésographie*, 1588) mentions a duple variation of the Passepied. In the Seventeenth Century, however, the triple form became fixed, and it is to be found written generally in $3/8$ or $3/4$, the former being by far the most frequent measure. It was conventional for the form to commence on the up-beat, and another custom required it to be in the major. Later in its history the same methods were applied in its development as were used subsequently with the Menuet. The form it acquired when used as an instrumental piece was that of a major Passepied followed by one in the minor (in Trio form), the first Passepied being then repeated. In this shape it entered the stereotyped suite as one of the forms interpolated between the Saraband and Jig. It became further enlarged in the hands of some composers, and examples were written with as many as four sections, some of them repeated more than once. Grove says the Passepied concluded in the key of the third and fourth sections, which were in the minor; but most of the specimens I have seen containing more than two sections have the first (major) portion repeated after the minor section has been played. The experience of F. L. Schubert must have been similar, for he says that the close should be major in any case. The use of so many sections in this form prepared the way for the Passepied with variations, and several examples in this shape are to be found in the works of the Eighteenth-century composers.

The history of the Passepied is quickly told. The original dance of the "round" nature was brought to Paris by itinerant musicians, and first danced in the streets of that city in 1587. Whether this was in the duple measure or not, we have no means of determining; but I should be inclined to think that it was. Mersenne's *Harmonie Universelle* of 1636 gives two specimens of the *Passepied de Bretagne*, both being still duple. The change to the triple form must have taken place when the dance left the streets and became an artistic form in the court ballet of Louis XIV (1643/1715). Lully, Destouches, and Colasse, used it frequently in their operas, Marais wrote it in regular form, and Couperin affords an example of the Passepied with variations in the second *Ordre* of his Clavecin pieces (1713). By the time that Gluck wrote

(*Iphigénie en Aulide*, 1774), we find the phrase *mouvement de Passepiéd*, and this, as in the case of *Tempo di Menuetto* and *Tempo di Borea*, is a certain sign that the form had been converted to purely instrumental use. The Germans did not make much use of the form. Although already mentioned by Praetorius in 1612, we do not find many examples, and Bach, when he wrote his *Passepiéds*, adhered to the original form only so far as it suited his purpose. In spite of this paucity of instrumental *Passepiéds* in Germany, the form was much danced there ; and the only explanation I can offer is that the French dancing-masters who took the form to Germany used French music for their performances.

The various constructions, measures, and methods used at different periods in France in the writing of *Passepiéds*, must be carefully studied if the reason for the variations in the English forms of that dance are to be understood. Its gay character and the merry agility of the movements required for it, made it a favourite in England ; and in this case, as in that of many another naturalised form, the original shapes and usages are all too often overlooked.

PASSAMEZZO : A Sixteenth-century Italian dance concerning which a considerable amount of doubt exists. If the only information obtainable were that of Arbeau (1588)—who says that when the musicians played the Pavane (*q.v.*) less heavily, it was called *Passe meze*—we should be justified in cataloguing the form as a variety of the Pavane. But we have sufficient evidence to prove that the two were distinct dances, although they have so often been confused. At the same time there can be little doubt that the *Passamezzo* was suggested primarily by the Pavane.

In Elizabethan England the form was a great favourite, although musically it may not have been treated as a distinct form in this country. In the English musical publications the name is usually to be found in association with another. Thus we find the term *Passamezzo Pavana* applied to a composition by William Byrd in the Fitzwilliam Virginal Book, and to another in the same manuscript by Peter Philips. It is possible that these were merely Pavanes written in a rather more florid style, and that they were movements upon which the *Passamezzo* could be danced. Each of the examples just

quoted is followed by a *Galiarda Passamezzo*, which once more makes the meaning of the word, as it was used in England, uncertain. A consideration of the Italian uses of the name, however, may help to clear up this doubt. Thomas Robinson's *Tablature Schoole of Musicke* (1603) also contains a *Passemezo Galyard* and a *Passamezzo Paven*.

Whether Shakespeare actually used the term in *Twelfth Night* (V, 1), as quoted by many writers, must be left an open question owing to the varied readings given in different editions. The popular issues of the poet's works give the quotation as follows: "Then he's a rogue, and a passy-measures pavin." Theobald in his edition of 1733 (after "a faithful collation of all the printed copies") gives this version: "Then he's a rogue, and a past-measure *Painim*," which affords an entirely different reading. The reason for this would seem to be a difference between the first and second folios: in the one we find the word *Panyn* and in the other *Pavin*. The latter was the word most probably used by the poet, for by turning the first *n* in *Panyn* we should obtain *Pauyn*, the common English spelling of the dance-name. And a turned letter was by no means of infrequent occurrence. But whatever Sir Toby meant to say on the occasion in question, it is sufficient for our purpose to know that at the beginning of the Seventeenth Century (the time of the folios) the term Passy-measure was used to qualify Pavane, and it is of equal importance to us whether it originated with Shakespeare or one of his first editors. Suffice it to be established that the word was well enough known to have been used in a popular comedy.

The Passamezzo of Italy was of a simple and smoothly flowing nature; and though, according to all authorities, less slow than the Pavane, it was by no means a quick dance. The name, as it is given by Besarde in 1603, was *Pass'e Mezo*, and this, allowing for elision, was most probably derived from the Italian for "a step and a half," which was no doubt a feature of the dance. Such a derivation as the one from *Passer*, to walk, and *Mezzo*, middle—because the steps led the dancers across the centre of the room—is barbaric and cannot stand. Hawkins says that the Passamezzo was merely a diminutive of the Galliard; but he evidently came to that conclusion after seeing the term *Galiarda Passamezzo* in one of the Elizabethan manuscripts.

The antiquity of the form is considerable, for it can be traced back to the date of the early Pavanes. A collection of Italian forms published by the Gardano press in 1551 contains three "new" *Pass'e mezi*, which proves that older ones must have been extant. Besides this collection, the Gardano press issued another volume by Francesco Bendusi, which contains the dance. *Il Ballerino* (Venice, 1581) and *Nobiltà di Dame* (Venice, 1600) both include examples of the Passamezzo. Like nearly all the contemporary dance-forms, the Passamezzo was also sung.

In France the form was used as an Italian visitor, and in Germany also the examples printed show that the country of the Passamezzo's birth was not lost sight of, and a great many of the known specimens were written by Italians who published their works in Germany. In the Seventeenth Century the dance was probably less used for terpsichorean purposes, and its treatment in free form with many variations proves that it soon became an instrumental show-piece which gave the lutenists of the period some material for technical display.

The fact that the earliest known examples of the Passamezzo were published in Venice may account for its popularity there ; and the same circumstance probably explains its being known in England so early, for the relations between this country and Venice were very cordial in the Tudor period.

PASSECAILLE : An instrumental form in triple measure derived from an ancient dance, and consisting of sets of variations on a ground-bass. In construction it was very like the Chaconne (v. CHACCON) and only in mood and spirit did it differ. In the late Seventeenth and early Eighteenth Centuries distinctions were observed between the two forms, the chief being that in the Chaconne the theme was supposed to be kept in the bass, while in the Passacaglio (to give the form its more common—Italian—name) it could be used in any part of the harmony. Further, it was decreed that the Passecaille should be in the minor and the Chaconne in the major, and specimens may be seen in which the minor sections are labelled *Passacaglia* or *Passacaglio*, and the major parts *Chaconne* or *Ciaconna*. These rules were soon broken, and both forms are to be found in major and minor.

Like the Chaconne, the Passecaille did not become very

popular in England. Receiving it from France, as the form of the name suggests, a few writers tried their hands at it and found it—like the Chaconne—too heavy for their style. A specimen may be seen in John Playford's *Musick's Delight on the Cithren* (1666), where it is called "Passingala," and another in *Apollo's Banquet* (1690). A third example is contained in Purcell's *King Arthur*.

As a dance the Passecaille in England did not differ much from the Chaconne. In Tomlinson's *Treatise on the Dance* (1735) we find the form called "our Chaconne."

PASSINGALIA. v. PASSECAILLE.

PASSYMEASURE. v. PASSAMEZZO.

PAVANE: An interesting and important dance-form of the Sixteenth Century. Written in duple measure, it was slow in tempo and dignified in character. Although it became so popular in England, the Pavane was only a naturalised alien. It had its origin in Italy and came hither *via* France. One of the earliest, and at the same time most accurate, accounts of the dance is that given by Tabourot in his *Orchésographie* (1588). He says that the Pavane was slow, solemn, and dignified in movement; invested in a high degree of majesty. Its evolutions were sufficiently stately and grave to allow the gentleman to dance it "in his helm and sword—while you others, clad in your long robes, can also take part." No frivolity was allowed to detract from the solemnity of the dance at that period; the ladies were to perform their part in it "with an humble countenance and downcast eyes—glancing occasionally at their partners with virginal modesty." This character caused the Pavane to be much in demand, not only at court functions, but also at weddings and other religious and solemn festivals. It could be danced, said Tabourot, "by Kings, princes, and grave seigneurs with their grand mantles; and by Queens, princesses, and ladies with their long trains." If further proof of the manner of the Pavane's performance were needed, it would be forthcoming in the statement that the ladies' court-trains were carried throughout the evolutions by maids-of-honour.

In agreement with the custom of the period, the Pavane was sung as well as danced, and many beautiful examples have been preserved in the music-books of the time. The specimen given

by Tabourot in his book—*Belle qui tiens ma vie*—is a splendid example of popular secular music at the time of the Great Armada.

Upon the Pavane's first introduction into England, its association with ceremonial functions was not so far forgotten as was a little later the case. Exactly when it was first imported is not quite clear; but the close relations between the English court and Italy—notably Venice—during the reign of Henry VIII, may account for its early appearance here. This is the only way in which we can explain the circumstance that the form was well enough known and liked for the king himself to have essayed an imitation. The Arundel Collection of royal manuscripts contains one of a number written by Henry VIII under the title of "King Henry's Pavyn." This specimen was transcribed and printed by John Stafford Smith in his *Musica Antiqua* (1812). Elizabethan examples are more frequent, and early Stuart specimens may be seen in *Parthenia* (1610), with an interesting Pavane by John Bull; in the works of John Dowland the lutenist (1605); in John Playford's *Court Ayres* (1655); and many other publications of the period.

As a dance the nature of the Pavane became modified by environment. Tabourot's sumptuously robed and cloaked figures made dignified motion imperative; and a long train, carried by servants, precluded in itself all careless and thoughtless movement. But when the form was borrowed by the masses and used on the village-green, the local spirit soon converted it into something more congenial to its own taste. Musically the Pavane fulfilled an important rôle, and many forms used later owe their existence to that dance. Thus one form of the Italian *Canzone* is descended from it, and one of its most beautiful developments was the *Largo* in the French Overture at the end of the Seventeenth Century.

A variation of the Pavane, known as the Spanish Pavane, was also very popular all over Europe, and particularly in England; but whether the differences extended beyond the terpsichorean aspect of the subject, I cannot say. I have not found any music specifically written for the Spanish Pavin with any characteristics differing markedly from those of the ordinary form. Literary mention of both varieties is frequent. Ford, in *The Lady's Trial* (1639), has as a stage direction

(II, 1): "Fulgoso whistles the Spanish Pavin," and Ben Jonson, in *Act IV, Scene 2* of *The Alchemist*, says: "Your Spanish Pavin is the best dance." And if the existence of a popular tune of the era known as "The Spanish Pavin" accounted for Ford's direction, it would not do so for Jonson's use of the term.

The derivation of the name is simple. Pavane, for *Pavana*, *Paduana*, or *Padovana*, fixes upon Padua in Italy as the place where the dance first acquired popularity. The etymologists of the Eighteenth Century and their short-sighted imitators connected the word with the Latin *Pavo*, a Peacock, and in the dignity of the Pavane's movement found support for their crazy derivation, because "it was danced with singular motions of the feet so as to form a wheel, as is the habit of peacocks when in their pride" (Walther, *Lexicon*, 1732). This, of course, is sheer nonsense; the nobility of the dance and the similarity of its name to that of the peacock are accidental. One glance at the *a* in the centre of Pavane and another at the *o* in the root of *Pavo*, *Pavonis*, will suffice to cause the rejection of this barbarous etymology.

When danced in artistic circles the duple Pavane was invariably followed by the triple Galliard (*q.v.*), thus subscribing to the first principles of artistry, the demand for variety. Used together and almost inseparably until both became antiquated, the Pavane and the Galliard were followed by, and eventually made way for, a similarly contrasting pair of dances—one slow and the other quick—a pair of forms that under the names of Allemande and Courante were later to open the classic Suite.

PAVIN, PAVYN. *v.* PAVANE.

PERFECT OF THE LESS. *v.* MOOD.

PERFECT OF THE MORE. *v.* MOOD.

PINCHING NOTES or PINCHED NOTES: Harmonics on the Recorder and Flageolet, obtained by increased breath-pressure in blowing, the octave above the stopped note being produced. "To play these on the Recorder," says Humphrey Salter in *The Genteel Companion* (1683), "you must bend your left Thumb, and let it be half over the hole underneath the pipe, for that belongs to the upper line (*v.* DOT-WAY) where the pinch is made, and pinch the nail of your Thumb in the hole,

then blow your Recorder a little stronger than you did when you played the other notes, and you shall find the Recorder sound eight notes higher." In playing the "Pincht Notes" the seventh hole had to be left unstopped (*v.* FLAGEOLET *and* RECORDER).

PLAGAL MODES. *v.* CHURCH MODES.

PLAIN BEAT. *v.* BEAT.

PLAIN FALL. *v.* FALL.

PLAIN-SONG: Broadly speaking, Plain-song was the unison unmeasured chant in use before the evolution of measured music. Later the meaning of the term was more narrowly applied, and used, often in its Latin form *Cantus planus*, to distinguish the unharmonised Gregorian chant from harmonised Mensurable Music. Its origin is to be sought in the earliest forms of religious worship, and there can be little doubt that in the Temple itself some such recitative was already used. Evidence of its employment in the Christian Church is available to prove its existence in the earliest centuries of the Christian era. Its character was modal, and its rhythm dictated by the scansion of the text. There seems to be no doubt that the more ancient Plain-song was less monotonous than the later, for everything points to the sense of the words having been carefully considered in the chant. But later "reformers" have all too well succeeded in stretching out the shorter notes of the recitative until a chant of almost equal notes resulted. By the end of the Sixteenth Century the monotony of the rhythm of Plain-song must have already been a characteristic feature, for in *Lingua* (before 1607, I, 1) we read: "The tedious plain-song grates my tender ears."

Plain-song still survives in the Church of England (High Church) and especially in the Roman Catholic service, where it remains to the present moment as an immensurable chant. Its English history began with the arrival of St. Augustine, and practised fairly true to tradition ever since, having been retained in part, even during the troublous times of religious flux in the Sixteenth Century.

The study of Plain-song is interesting and important from another, and often overlooked, point of view; namely, that of its influence upon the system of notation—many of the signs and symbols in present use having been directly borrowed from

those employed in the Plain-song of very ancient times (*v.* NEUMES; also the Benedictine *Paléographie Musicale* of Solesmes).

PLATE: A name sometimes given to the fingerboard of the viol, Christopher Simpson (*Division-Violist*, 1659) speaking of the "Plate or Fingerboard."

POINT: A term used, alternately with Prick, to mean what is now known as a Dot. Playford speaks of a "Pointed Minim" as being equal to three crotchets, thus showing the word to have been synonymous with our dot. Various kinds of Point (*Punctum*) were known in Medieval and later music, and these will be found under their respective headings.

POINT OF ADDITION: A variant term for Point of Perfection (*q.v.*). Writers so far apart as Glareanus and John Playford use both these expressions to mean the same thing.

POINT OF ALTERATION. *v.* ALTERATION.

POINT OF AUGMENTATION: A dot which (like the same sign to-day) increased the value of a note by half its original worth. Used in connection with Mensurable Music, it would have the force of the Point of Perfection.

POINT OF DIVISION: In Mensurable Music, a dot placed between notes, or over them (where the present-day bar would be drawn and fulfilling the same functions in some cases), in order to make clear to the performer how the music was to be measured. It was of especial use in such places where doubt might enter into the interpretation of a note's value (*cf. also* ALTERATION). This dot was called the *Punctum Divisionis*. Glareanus (*Dodecachordon*, Chap. x) says that the Point of Division, under certain circumstances, caused Alteration: ". . . secunda perpetuo duplatur, non prima . . .," and then: ". . . id autem punctum divisionis saepius indicat." In all probability the modern bar is a descendant of the Point of Division.

POINT OF PERFECTION: In the old measured music a dot placed after a note in the Perfect Mood (*q.v.*), and used to render its measure once more perfect after its position in relation to other notes, had deprived it of its perfection. In such cases the force of the *Punctum Perfectionis* was the same as the

present-day dot, for it converted a long containing two breves into one equal to three breves. Glareanus, in one of his musical examples (*Bk. III, Chap. iv, Dodecachordon*), shows that, in his mind, the Point of Perfection and the Point of Addition were practically the same.

POLIPHANT : A plucked instrument of which next to nothing is known. Playford attributes its invention to Daniel Farrant, a well-known violist of the period, and mentions it in *Musick's Recreation on the Viol, Lyraway* (1661) : "Daniel Farunt . . .

was a person of much ingenuity for his several rare inventions of instruments, as the Poliphant and the Stump, which were strung with wire. . . ." Randle Holme, in his manuscript *Academy of Armory* (*Bk. III, Harleian MS. 2034, British Museum*), gives an account and a drawing of the instrument—the only trace of it that I have been able to find. Says Holme : "A poliphant of some called a poliphon. It is an hollow yet flat kind of Instrument, containing three dozen and five wire strings to be played upon." The sketch shows a shallow sound-box of fantastic shape, with a much scalloped outline,

a bridge with a double curve, and three small sound-holes—two circular and one heart-shaped. Playford (*Introduction to the Skill of Musick*) had it from “an ancient musician” of Queen Elizabeth that her Majesty “did often recreate herself on an excellent Instrument called the Poliphant, not much unlike a Lute, but strung with wire.” Unless Elizabeth played upon the Poliphant in the very last years of her life, I cannot see how her use of it and its invention by Farrant can be reconciled.

PORTATIVE : As its name implies, a small organ of a portable nature. Such instruments appear very early in the history of the organ, and it was only the increased size and weight caused by a greater number of pipes and manuals that brought the term Positive (*i.e.* immovable organ) into being. The Portative, is mentioned in the early metrical romances, and it must have been in common use in England before the Fifteenth Century. It should not be supposed, however, that the organ bearing this name was in any way an harmonium-like imitation of the larger instrument;—the Portative, however small it was, always had pipes and was generally blown by a second person at the bellows.

POSITIVE : A term once in use to designate an organ in a fixed position, to distinguish it from the smaller and lighter Portative (*q.v.*), which could be carried from place to place. Later on, the word was applied to one of the manuals of the Church organ to keep it distinct from the accompanying, or choir, organ. In spite of these two specific uses of the word, it was often employed loosely to any organ for chamber use that was too large to be called a Portative.

Positive

(*Seb Virdung. Musica getutscht, etc. 1511*)

PRICK I : As a noun. In the Seventeenth Century the word Prick was frequently used in place of the more usual “Point” (*q.v.*).

PRICK II : As a verb. Tudor and Stuart music, when written down and not performed extempore, was said to be Pricked ; and a piece of vocal music thus written was a Prick-song. The State Papers of Henry VIII already contain a reference to this word when the payment of £20 “for a prick-songe boke” is authorised. Shakespeare refers to it in *Romeo and Juliet* (II, 4): “He fights as you sing prick-song, keeps time, distance, and proportion. He rests his minim, one, two, three, in your bosom.” John Playford, after the middle of the Seventeenth Century, still used the term, saying: “when any of the parts . . . shall come to be prick’d out.”

The verb To Prick and the noun Pricker were applied almost exclusively to the writing of music and to the writers respectively, until the Eighteenth Century. Various amounts in payment for the “pricking” of music for the Chapel Royal and the King’s Chamber-music are frequently mentioned in warrants preserved in the Record Office. Thus in 1668 (April 17), the authorisation to pay Louis Grabu a sum of money for music-writing included the item, “for the prickers dyett”; in 1673 (May 23) the warrant included payment for the “prickers dyes” (ink); in 1675 (May 27) for “pricking the tunes in the Maske, and for paper, pens, and inke. . . £10”; in 1692 (June 24) Dr. Staggin, Master of the King’s Musick, received £59 6s. for “Pricking severall compositions,” stationery and the prickers’ food being included; and so on, until the joint reign of William and Mary, when we still find the word in the same use (June 22, 1698).

PRICK-SONG. v. PRICK II.

PROLATION : In Medieval music the term Prolation was used to designate the relation of the minim to the semibreve. It is not so ancient as Time (*Tempus*) or Mood, for it came into use only with the minim, which appeared early in the Fourteenth Century. Prolation was Major (sometimes called *Prolatio Perfecta*—on the Continent, at any rate) when the semibreve contained three minims, and Minor when it equalled two. The indication as to whether Prolation was Major or Minor was given by a dot in the centre of the circle or semicircle which showed the Time (*q.v.*). The number of minims that went to make up a rhythmic measure (for want of a better term in the absence of bars) varied, not only according to the nature of the

Prolation used, but also according to the Perfection or Imperfection of the *Tempus*. When Time was Imperfect, for instance, and Prolation Perfect, there were six minims to the

breve ()

when Time and Prolation were Perfect the breve contained nine minims, owing to the fact that it was equal to three semibreves, each containing three minims. Similarly, six minims went to the breve when the Time was Perfect and the Prolation Minor ; and four when the Time and Prolation were both Imperfect. In Minor Prolation the values of the notes could be halved in value (or doubled in speed) when a line was drawn through the signature (*cf.* TIME). It by no means follows that every part in polyphonic music was given the same time-signature ; for it frequently happened that one

part would be prefixed with  and another with , each part having to be read according to its own indication. In such cases the remarks made concerning the halving of the values apply. When all the parts showed the signature with the line, it indicated merely an increased *tempo*—not necessarily doubled speed.

PROPORTION : In ancient music the ratios by which a rhythmic measure was divided, serving the purpose, to a certain extent, of our modern time-signatures. It will be understood by those who have mastered the mysteries of Mood, *Tempus*, and Prolation (*q.v.*), that that which we call a triple measure to-day could be subdivided in duple time, that a duple measure could have duple subdivisions, and a triple one, triple. These alone give a considerable number of possible “Proportions,” quite apart from intricate mixtures of rhythms. Furthermore, proportion fixed the relative rhythms of the various parts performing in harmony, when each part was perhaps read in a different, though harmonisable, proportion. An example of the latter is to be seen in Heyden’s *De arte canendi*, in which the Discantus part is written with the *integer valor notarum* (*i.e.* the average or normal time-value of the breve, semibreve, minim, *etc.*—according to period), the Tenor in *Proportio tripla* (3/1, or 3 in 1), and the Bassus in Imperfect Time *Diminutum*, the whole giving in places what is really

duple bass and treble parts to a triple tenor part. Combinations of various rhythms were thus quite common in Mensurable Music, and without this system of *proportiones*, no harmony could result, especially when we remember the absence of the bar. Fractions were the commonest means of indicating the Proportion, and no difficulty need be experienced in interpreting the works in which it occurs, if the correct time-values be given to each individual part. In the example of Heyden just mentioned, it simply meant counting three semibreves to the breve in the tenor, and two in the treble and bass. Changes of Proportion are quite frequent in the middle of a piece, and a certain amount of care is necessary to avoid overlooking them.

The subject of Proportion is a very large one, and includes the *Proportio Hemiola*, or the writing of, *e.g.*, semibreves black instead of white, thus giving them the value of three black semibreves to the breve; this would often occur in a piece with a duple time-signature, and meant a change to triple time, while the accompanying voices might still be going on in the duple. As soon as these blackened notes appeared in outline again, the original Mood or *Tempus* was restored. Care must be exercised not to read a "black minim" as a crotchet, for the black minim stands to the white minim in the ratio of two to three. The writing of minims as black notes was called *Hemiolia prolationis*. The *Proportio Sesquialtera* had varieties, as had nearly all of the others, the most frequent being a ratio of three to two. *Proportio Sesquitertia* was as four to three. Sebaldus Heyden, treating of this subject, stops here and says that he leaves the other Proportions out, because they are of no use to the practical musician, and are only to be regarded as mathematical conjuring-tricks. Nevertheless, a large number of compositions may be found containing the most extravagant time-ratios, such as $7/4$, $9/5$, $11/7$, $13/9$, $13/7$, *etc.* (*Musice Practica*, Franchinus Gaforius). Unfortunately, a work of this size allows no space for a closer consideration of this highly fascinating subject.

PSALTERY: A stringed instrument played by plucking with the fingers or a plectrum. It is to be met with in a variety of shapes, the shallow sound-box being chiefly triangular, square, or oblong; or a modification of one of these forms produced by

the cutting off of the corners and rounding the new edges concavely. The number of strings varied with the period, and the method of playing differed according to the skill of the performer and the fashion of the country. Illustrations of it most commonly show it played by being held upright with one hand, while the other plucks the strings; or resting flat on the knees of the seated performer, leaving both hands free to pluck and damp the strings. In an old metrical romance, for instance, we read: "Shee laid a sauter on hir knee, Ther on shee plaid full lovesomelye." Its antiquity can scarcely be determined. It was an instrument of simple construction and must have been discovered or evolved very early in history;—in fact, it may be an improvement on one of the

Hec est forma psalterii

Psaltery

(British Museum Ms. Tiberius C. VI. fol 17b, Anglo-Saxon 11th Cent^y)

Psaltery

(British Museum Ms. Arundel 83, fol. 63b)

biblical instruments, or, at all events of Asian origin.

The tone of the Psaltery must have been quite pleasant and Mersenne as late as the first half of the Seventeenth Century was very enthusiastic over its sweetness. But Mersenne must not be followed too closely with regard to the Psaltery, for he appears to have mixed it up with the Dulcimer (*q.v.*), and it may

have been the latter instrument which pleased him so much. Still, there is every excuse for Mersenne's ambiguity, for psaltery and dulcimer were sufficiently alike to mislead any but a most careful observer. The two instruments differed

in the method of playing and manner of stringing (*v.* DULCIMER).

The first literary mention of the Psalterly that I have been able to trace is that of Robert Mannyng, or Robert de Brunne (*c.* 1300), when he speaks of the "Sautre." At the famous Westminster festival of 1306, players on the Psalterly were active, and one of them, Gillotin or Gillot le Sautreur, was paid forty shillings for his services; while a mark was bestowed on Janin le Sautreur. Chaucer frequently mentions the instrument:

And al above ther lay a gay sautrye,
On which he made a nightes melodye.

(*Miller's Tale*, 3213/4).

and later on:

He kist hir swete, and taketh his sautrye,
And pleyeth faste, and maketh melodye.

(*Id.* 3305/6).

The instrument is also mentioned in Gavin Douglas' *Palace of Honour* (1501). These citations could be multiplied a hundred-

fold, for the Psalterly seems to have been in everyone's hands, and there is scarcely a writer of the Fourteenth and Fifteenth Centuries who does not name it.

Psalterly

(*British Museum MS.*
Add. 19352. fol. 188b.
A.D. 1066)

It is clear that the Psalterly with its plucked strings, first with the fingers and then with the plectrum, was the humble forerunner of keyboard instruments like the Virginal, Spinet, and Harpsichord, in which the strings were brought into vibration by the keys causing plectra of some sort to twang them. And it was the growing popularity of these

its successors in the Sixteenth Century that caused the decline of the Psalterly. Still, it persisted in small country communities, among people who could not afford the luxury of the then very expensive keyboard instrument, for quite a long time.

Illustrations of the Medieval Psalterly may be seen in several

British Museum manuscripts, such as *Additional* 35166 (late Thirteenth Century), *Tiber*, C. VI (Anglo-Saxon, Eleventh Century, ff. 16*b*, 17*b*), *Ar.* 157 (Early Thirteenth Century, f. 71*b*), *Additional* 19352 (1066, f. 188*b*), and others. The roof of Manchester Cathedral (1465) is ornamented with some fine carvings of angels playing instruments, one of them handling a Psalter with quite a score of strings.

QUATRIBLE : A descant in fourths, as the Quinible was one in fifths (*v.* QUINIBLE).

QUINIBLE : An extemporised added part harmonised in fifths, obviously used in an era when consecutive fifths were not forbidden. It was of frequent occurrence, and, to our ears, of horrible effect. The treatise of Chilston (end of the Fourteenth Century) contains the rules that were applied to descanting in Quatrible and Quinible. He says that the Quatrible was to be sung by a child, which is obvious when we are told that it “begynnyth in a twilfth above” (the Plain-song). Cornish, in his *Treatise between Truth and Informacion*, still uses the word Quatrible in 1528.

Chaucer’s use of the word shows at once how the term was employed, how common it must have been to stand inclusion in the *Canterbury Tales* without further explanation, and exactly what it meant to the ordinary layman :

In twenty manere coude he trippe and daunce
After the scole of Oxenforde tho,
And with his legges casten to and fro
And pleyen songes on a small rubible ;
Ther-to he song som-tyme a loud quinible.

(*Miller’s Tale.*)

QUINTUS : In the part-writing of the period that had the Sixteenth Century as its centre, the Quintus was the fifth part in compositions of more than four parts. It was not an independent voice, and only duplicated one of the others. In some compositions it was a second treble, in others a second tenor, and so on. Frequently the range of the music contained in the Quintus part extended from one part to another, and it was thus sometimes called *Pars Vagans*, or “wandering part.” When it is said that the Quintus was not an independent part, it must not be supposed that it actually duplicated another part note for note, but only that it was written in the pitch of one of the other parts.

QUIRE : The more truly English spelling of Choir, which is a pedantic variation influenced by more recent foreign fashions. The prayer-book still uses the spelling Quire. So also in Playford : “ Then followeth the Apostles Creed, which is sung by the whole Quire.” In *The Squyr of Lowe Degre* (l. 789) we meet with the form *Quere*. Shakespeare uses the older form of the word in *Henry VIII* (IV, 1), though this has been changed in modern reprints. Francis, Lord Bacon (*Essay of Masques and Triumphs*, has : “ I understand it, that the song be in quire. . . .”

QUODLIBET : A musical joke much enjoyed in the Sixteenth, Seventeenth, and Eighteenth Centuries. It consisted originally in a number of musicians simultaneously singing or playing on instruments whatever melody occurred to them. Tunes sacred and secular, slow and fast, were blended together into a “ harmony ” that was strikingly original, if nothing else. Cleverly performed, the Quodlibet could give much pleasure to an adroit musician, and as a relaxation from the more formal occupation of writing and singing music conforming to very strict rules, it served some useful purpose. The incongruity of many of the combinations was oft-times highly amusing. Later on, the name was given to certain classes of written and properly harmonised music, but still constructed out of the interweaving of varied airs.

QUOTLIBET. v. QUODLIBET.

RACKET. v. CURTAL.

RAKING : Sweeping the finger across the strings in playing chords upon instruments of the lute species. At one time the entire chord was played by striking the finger across the strings from the bass upwards ; but towards the end of the Seventeenth Century the “ fashionable way of playing them,” according to Thomas Mace (1676), was “ only to hit the Bass with your Thumb, and Rake down all the other three letters, with your Forefinger, at the same time.” By “ letters ” Mace means notes (*cf.* TABLATURE).

RANKS : The unison pairs of strings on the lute, cittern, and kindred instruments. The best teachers of the Seventeenth Century recommend that the two strings of each Rank be fairly close together, but that the Ranks themselves should be

as far apart as could be conveniently managed, in order to facilitate play.

RANT : An ancient dance of doubtful origin. It is possible that the name was derived from the verb "to rant," to use violent or bombastic language, and thus may have referred to a dance of wild character and formless type. If this were so, it may be traced to the Old Dutch *Ranten*, to dote or rave (cf. Westphalian *Rantern*, to prate; Provincial English, *Randy*, wild, or mad; Low German, *Randen*, and Modern German, *Ranzen*). Such a derivation would make Rant related to *Ranz*, a very ancient dance-tune (cf. *Ranz des Vaches*). The Stainer and Barrett *Dictionary of Musical Terms* advances the theory that Rant is a corruption of Coranto; but, although this may be etymologically possible, the rhythms of the two forms differ to such an extent that the idea cannot be entertained.

In Stuart publications we sometimes meet with pieces called Rant, the most frequent being John Jenkins's *Mitter Rant* (Playford's *Musick's Hand-maide*, 1678, and other contemporary publications). Two other popular airs of the period were the *Fleece Tavern Rant* and the *Peterborough Rant*, both by Jenkins. It is not outside of the bounds of possibility that the genial old Jenkins applied the name to these compositions himself, and that it never really attained to general acceptance. The use of the word in Mrs. Centlivre's comedy, *The Platonick Lady* (1707), may thus only be a play on words given into the mouth of the misunderstanding Mrs. Dowdy: "I'll lead you a Courant, Madam,"—"Ay, a Rant with all my Heart; I dan't understand the Names, let en be a Dance, and 'tis well enough."

RAY or RAYE : A dance of which little or nothing more is known than can be gathered from the etymology of the name. Alexander Barclay (*Eclogues*, 1508) uses the word in the line: "I can daunce the raye, I can bothe pype and syng,"—and its derivation is from Middle Dutch *Rey* or *Reye*, "a round-dance" (Hexham's *Large Nether-dutch and English Dictionarie*, 1658). Chaucer (*House of Fame*, l. 1236) mentions it: "Pypers of the Duche tonge, To lerne . . . daunces, springes, Reyes. . . ." The Modern Dutch is *Rei*, which is most probably cognate with the German *Reihen* or *Reigen*. This

would make of the form something like the Branle (*q.v.*), from which it would be, in such case, derived.

RE. *v.* ARETINIAN SYLLABLES *and* GAMUT.

REBECK : A bowed stringed instrument of great antiquity of Eastern origin, and introduced into Europe as early as the Eleventh Century, probably by the Crusaders. The name, derived as it is through the Old French *Rebec* (also spelled *Rebebe*), from the Arabic *Rebab*, *Rababa(t)* (M. Devic, *Dictionnaire Etymologique de tous les mots d'origine Orientale*, in the supplement to Littré's Dictionary), already betrays the source of the instrument. It is sufficiently proven that the use of the bow

comes from the East, and the Rebeck must be counted among the first of the bowed instruments in Europe. Its shape was generally that of an elongated pear with a vaulted back, and it was provided with a couple of small sound-holes, one on either side of the bridge. It had three strings attached to a tail-piece. The neck does not appear to have been distinct from the body, but was formed by the narrowing of the latter. Whether the Rubebe (Rubible, Ribible) was identical with the Rebeck, or a

variation of it, is not clear ; but the name is evidently from the same source, and if any differences existed between the two forms, these must have been evolved before the instrument came to Europe, for both are named at the same period. As might be expected, the Rebeck came to us *via* Spain and France, unless, as I have already hinted, the returning Crusaders brought it with them directly from the hands of the Saracens.

Drawings of the instrument are to be seen in British Museum manuscripts, *Tiber. C. VI* (Anglo-Saxon, Eleventh Century) ; *Ar. 157* (Early Thirteenth Century), and many others, besides carvings in different cathedrals.

The Rebeck had a place in the royal bands of the Tudor sovereigns, and in Egerton Manuscript 2604 (British Museum, 1525/6) there are mentioned three "Rebikes." The Fifth Earl of Northumberland employed a large body of singers and instrumentalists, including a Rebeck. According to his

Household Book (1512) the wages of the player on the latter amounted to “xxxiijs. iiij*d.*,” and on New Year’s Day “in the mornynge, when they doo play at my Lorde’s chambre doure,” one pound was shared among the Tabret, Lute, and Rebeck, as a seasonal gift. The instrument is named as late as the time of James I, when a list of fees paid to musicians shows that rebeck-players were still employed (*Stowe MS.* 574, *f.* 16*b*; British Museum).

In ancient literature the Rebeck is mentioned so frequently that it is difficult to select characteristic quotations. It is referred to as the Ribible in the *Squyr of Lowe Degre* (l. 1071), and in Lydgate’s *Reson and Sensualite* (l. 5581/2):

Lutys, Rubibis, and Geterns,
More for estatys than taverns.

Chaucer uses both forms of the name; Rebekke in *The Frere’s Tale*, and Ribible in *The Cokes Tale* (*cf.* also quotation in article on Quinible). Stephen Hawes speaks of Rebeckes in 1506 (*Pastyme of Plesure*, Chap. 16), and Michael Drayton in *Eclogue II* (*The Shepherd’s Garland*) says:

He turn’d his rebec to a mournful note,
And thereto sung this doleful elegy.

Milton, in *L’Allegro* (“and the jocund rebecks sound”), still finds use for the instrument, as he does again in his *Areopagitica*. Shakespeare, too, in *Romeo and Juliet* (V, 5) names one of his minstrels Hugh Rebeck.

REBIKE. *v.* REBECK.

RECORD: As a verb this term was a common one in Elizabethan England for the sense “to sing” or “to warble,” and was especially used to mean the singing of birds, being thence applied to human music-making. A typical example of the literary use of the word is to be found in the Chorus to *Act IV* of *Pericles*: “. . . or when to the Lute She sung, and made the night-bird mute, That still records with moan. . . .” Another is given by Fletcher in *Valentinian* (II, 1, before 1618/9): “For you are fellows only know by note, As birds record their lessons.” William Browne’s use of the term shows that it was employed indifferently to human and feathered vocalists: “So while the nymph did earnestly contest,

Whether the birds or she recorded best ” (*Britannia’s Pastorals*, Book II, Song 4). An entry in the *Promptorium Parvulorum* of c. 1440 shows how early the term was used to mean the learning of exercises : “ Recordyn lessonys, *Recordo*, *Repeto*.”

RECORDER : (English Flute, Common Flute, Fipple Flute, Flute Douce, Doucet, Doucette, *etc.*). A wind-instrument of the fipple-pipe, or whistle-headed family, very popular in England for more than three centuries. The essential features of the Recorder were a notch cut into the tube near the upper end, a plug inserted into the pipe at the notch which partly closed the former, and thumb-holes at the back of the instrument. The wind struck the lower edge of the notch and produced the whistle-like tone characteristic of the instrument. This principle is applied to all sound-producers of the whistle type, from the earliest instruments of Græco-Roman times to the modern organ pipe. The instruments of this class were all blown directly, thus being differentiated from the later *flauto traverso*. Their tone was soft and caused them to acquire the name of *Doucet* or *Flute Douce*. Bacon (*Sylva Sylvarum*, 1627) alludes to this when he says “ recorders which goe with a gentle Breath,” thus drawing a comparison between them and the “ *Flutes* and *Fifes* which will not giue *Sound* by a Blast at the end, as *Recorders* doe, but are blowne at a Small Hole in the side.” The distinction between the direct and the transverse flutes is thus made clear. Lydgate (early Fifteenth Century) already mentions the difference in tone between the Recorder and the other pipes when he says : “ Lowde shallys and doucetes.” Chaucer (*House of Fame*, ll. 1220/1) also uses the name “ Doucet ” :

That craftely begunne pype
Bothe in doucet and in rede.

The Recorder was made in several sizes of different pitch, Praetorius mentioning as many as eight. Whether all these were ever used together is open to doubt, and I think that the ordinary quartet, consisting of Treble, Alto, Tenor, and Bass (as in the case of most other instruments), was the combination most usually employed for concerted music. Such a quartet is preserved in the Grosvenor Museum at Chester, and is believed to be the only complete set in original condition. Of these instruments, the Treble has a range up to the F above

THE CHESTER RECORDERS

(Photograph by Professor R. Newstead, F.R.S., and lent by Dr. Joseph Cox Bridge, M.A., to both of whom grateful acknowledgment is made)

the treble stave, and is pitched in F. The Alto is in the key of D, the Tenor in C, and the Bass in F, its range being down to the first D below the bass-stave. The Treble was thus an octave above the Bass, with the two means between them, a fourth and a fifth below the Treble respectively. Smaller Recorders were made which had a still more extended upward compass, and larger basses which descended lower. The increased size of the latter made some device necessary which would enable the player to reach the head of the instrument and still finger with ease. The difficulty was overcome by the use of a bent tube which carried the air from the player's lips to the top of the Bass-Recorder.

The makers of the early Recorders are unknown ; but from the Eighteenth Century, Bressan (who made the set at Chester) and Stanesby (father and son) may be mentioned. The last-named maker was probably the last of the famous English workmen, and later than this Recorders in sets were probably not made. The Bass fell into disuse first and was followed by the others in order ; but the instrument, in some form or other, persisted until very late, and the Nineteenth-century flageolets were really nothing but high-pitched Recorders. Their manipulation may vary somewhat from that of the Recorder, but they still possess the notch, the fipple, the direct blowing, and the thumb-hole at the back of the tube. Such flageolets were named " English Flutes " by those who made them, and under this name the early true Recorder often went. The fact that the Chester quartet is of so late a date renders it less valuable from the historical point of view, but specimens of earlier Recorders, though not in complete sets, may be seen in many museums ; a quartet in Nuremberg being complete except for a reproduced treble. These specimens date from the Sixteenth Century.

Recorders, like some other wood-wind instruments, were sometimes made double—*i.e.* with two pipes side by side, and intended to be used together ; one probably playing the melody while the other supplied the accompaniment. This use of double-pipes is very ancient and was already cultivated in Dynastic Egypt, as well as in Greece and Rome.

The English text-book for the instrument is " The Genteel Companion : Being exact Directions for the Recorder : With a collection of the Best and Newest Tunes and Grounds extant.

Carefully Composed and Gathered by Humphrey Salter, 1683." This book gives rules on fingering, cross-fingering, the production of harmonics ("Pinching Notes"), *etc.*, and the music is printed in a special kind of Tablature. It should be noticed that many writers speak of a hole in the instrument covered with skin as a characteristic feature. They probably derived their knowledge from an example in the Victoria and Albert Museum, which has such a hole. What this hole was intended for is not clear—perhaps it may have been accidental, or even experimental. Humphrey Salter describes his instrument fairly minutely, but says nothing of such skin-covered openings; moreover, the instrument in the museum is not Sixteenth Century, as is generally supposed, but Nineteenth Century.

Literary allusions to the instrument, and drawings of it, appear rather early in English history, the latter going farther back than the former. The University Library of Glasgow, and the Bodleian, Oxford, possess Psalters containing pictures of the Recorder, one dating from the Twelfth Century and the other from the Thirteenth. Early metrical romances, such as *The Squyr of Lowe Degre*, mention the instrument; and in the work alluded to it is given as "Recorde" (used as a noun). These early specimens cannot have been very perfect instruments; although the pictures represent them with a number of finger-holes the *Promptorium Parvulorum* (first half of the Fifteenth Century) gives a Recorder as a "lytyl-pype, *canula*," not a very happy definition. But the Latin writers usually referred to it as *Fistula Anglica* (English flute or whistle). The transverse flute was then already known as *Fistula Germanica*. A verse attributed to the reign of Henry VII, and once on the wall of the Leckingfield Manor-house (Yorkshire), is interesting as it draws attention to the technicalities of performance:

The Recorder of his kind the mean doth desire;
 Manifold fingering and stops bringeth from him his notis clear;
 Whoso list to handle an instrument so good
 Must see in his many fingering that he keep time, stop, and mood.

The "manifold fingering" probably refers to cross-fingering, "pinching," *etc.* Towards the end of the Sixteenth Century, John Howes (*A Familiar and Friendly Discourse*) suggests

that children should learn the Recorder in addition to other instruments ; and many other allusions to the instrument could be cited. Shakespeare alludes to the Recorder more than once ; the remarks passed by the Amazonian queen on Quince's performance immediately springs to mind : " Indeed he hath played on his prologue like a child on a Recorder ; a sound, but not in government " (*Midsummer Night's Dream*, V, 1). The scene in Hamlet, in which the instrument plays an important part, is too well known to need quotation. Milton still uses the word in *Paradise Lost*, and in a way that shows the instrument to have been kept distinct from the flute at the middle of the Seventeenth Century :

. . . anon they move
In perfect phalanx to the Dorian mood
Of flutes and soft recorders ;

the softness of the tone being once more remarked. There is no reason for suspecting the accuracy of Milton's musical allusions, for he was an accomplished musician—as was his father—and at the house in Bread Street, London, the poet met the most celebrated musicians of the day—the whole of the Playford *coterie*. John Evelyn uses the term Flute douce in 1679 (November 20) : " There was also a *flute douce* now in much request for accompanying the voice."

The historical references to the Recorder are interesting, and afford a good idea of the uses to which the instrument was put. Henry VII employed players on the Recorders, and his bluff son, enthusiastic musician that he was, must have had a special liking for the instrument, judging by the number he had in his possession (list in *Harleian MS.* 1419, British Museum). On some of these he doubtlessly played himself, for we are told that he performed on the Recorder as well as on sundry other instruments. A very sumptuous set is described in the manuscript just mentioned : " Item. A case covered with crimeson vellat havinge locke and all other garnissements to the same of Silver gilte with viii Recorders of Iverie in the same case twoo bases garnished with silver and guilte," and a very costly set of Recorders this must have been. Among the other entries are : " Item. One case with vi recorders of Boxe in it " ; " Item. viii Recorders greate and small in a case covered with blacke leather and lined with clothe " ;

“Item. Twoo base recorders of waulnuttre one of them tipped with silver the same are butt redde woodde”; “Item. vi Recorders of Ivorie in a case of blacke vellat.” There were over half a gross of Recorders in his collection. At the burial of Queen Elizabeth seven musicians for the Recorders drew allowances for mourning liveries; they were Alphonso Lanier, Robert Baker, and five members of the Bassano family (Lord Chamberlain’s Records, 1603). Private music-lovers of that reign also used the instrument largely, if the case of Sir Thomas Kytson is to be taken as typical;—he left several specimens, seven of them in one box.

With the accession of the first Stuart, the Recorder became still more popular, and thence on to the end of the century we find them mentioned uninterruptedly in the State Papers. The list for July 15, 1628 (excusing musicians from paying subsidies), contains the names of six players on the Recorders. In 1635/6 there was a “warrant to pay £4 15s. to John Adson for a treble Cornet and a treble Recorder.” The players on this instrument are alluded to again on November 12, 1663; and so it would be possible to go on quoting, but for the similarity of the entries. Four performers only are mentioned in the list of “Musicians in the Mask, 1674”; probably the basses had partially fallen into disuse by then, having been replaced by newer bass instruments. The records of the City of London show that the Recorder was used in the civic pageants round about 1675. In 1683, as we have seen, Salter’s *Genteel Companion* was published, which shows that the popularity of the Recorder—in its treble and tenor forms, at any rate—was not yet on the wane. In 1683/4 (February 16), Henry Purcell was appointed keeper, *etc.*, of all the king’s instruments, which included several Recorders. And when, in 1695 (November 30), “Dr. John Bull and Mr Bernard Smith” were appointed “in the place of Mr. Henry Purcell, deceased,” Recorders were still in the collection. We cannot leave the century without seeing what Samuel Pepys has to say on the subject. On April 8, 1668, he writes: “. . . I to Drumbleby’s, and there did talk a great deal about pipes; and did buy a recorder, which I do intend to learn to play on, the sound of it being, of all sounds in the world, most pleasing to me.”

In the Eighteenth Century the references become fewer, but this does not argue that they had become obsolete yet;—in

the early years of the century at all events. It is possible that the gradual changing of its name may have caused some allusions to it to be overlooked. It was often referred to simply as "Flute," and sometimes as "Common Flute," the *Traversa* being known as the "German Flute." Handel was very fond of the Recorder and made great use of it. He was always careful to make clear which family of instruments he intended should perform any particular passage; and in the Handel Society's issue of his scores, the distinction is clear between the *Flauto* (Recorder species) and the *Traversa*, occasionally *Flauto Traverso* (German Flute). The Bass Recorder, for which Handel also wrote parts—but called it the Bass Flute or the English Bass-Flute—was as good as obsolete, as far as common use went. It is curious that the good old title fell into disuse before 1700, and the noble family became known as "flutes" and "common flutes" at that period. Dr. Joseph C. Bridge (lecturing before the Musical Association on *The Chester Recorders*, Session 27, 1901) is of opinion that although the treble Recorders were still being manufactured as late as the middle of the Eighteenth Century, the bass had died out long before. He also said that since Malone, commenting on the *Hamlet* quotation on the Recorder, did not have the vaguest notion as to what sort of an instrument it was, we were forced to the conclusion that the big fipple-flutes were quite unknown by the middle of the Eighteenth Century, and that by the end of it the whole family was extinct (*v. also* DOT-WAY, FLAGEOLET, and PINCHING-NOTES).

REEL: An ancient dance-form chiefly used in Scotland, where it was, and is, performed by two couples. It is not possible to fix upon its origin with any degree of certainty. The name could have been derived from a Scandinavian source (*cf.* Danish *Riel* or *Riil*; and Norwegian *Ril*), or from the Teutonic word (through Anglo-Saxon) meaning to turn rapidly. Even a Keltic origin could be suggested for the form. It consisted of the usual four or eight measures repeated, common to most dances, and the time-signature was generally 4/4, though specimens in 6/4 are to be met with. A variant used in Ireland differs chiefly in point of speed. The Reel, taken altogether, is of interest from the terpsichorean rather than from the musical point of view. In England some of the Sword-

dances were closely akin to the Scotch Reels, except that the number of couples engaged was three. Skeat, quoting from Todd, gives : " Geilles Duncane did goe before them, playing this *reill* or daunce upon a small trump " (*News from Scotland*, 1591), and on the strength of this, several writers have supposed that the person mentioned performed the Reel as a solo-dance. Personally, I think the piece was merely played upon a small " trump " on the occasion in question, and not danced at all. The music of the Reel is generally a succession of equal quavers, with occasional semiquavers—but differing from the Strathspey (*q.v.*) in that it rarely has the dotted rhythm peculiar to the latter.

REGAL : A small portable organ sometimes with a single set of pipes and occasionally with a double set (" a pair of Regals ") ; producing its music by means of reed-pipes—chiefly of the beating type, set into vibration by air from bellows at the back of the instrument. Later on the Regal was supplied with further pipes of varying types, but the name was still applied to the newer instrument, which may be described briefly as a portable chamber-organ. Coming into use at about the middle of the Fifteenth Century, the Regal became very popular in England, and by the time that the more developed forms of the instrument were evolved in the first half of the next century it was in very common use. It was very artistic in construction and a good deal of ornamentation was frequently put into it. References to the Regal in the State Papers are fairly frequent and show that the instrument was used by the best musicians of the period. The Lord Chamberlain's Records for May 28, 1560, refer to a warrant to deliver " five yards of crimson velvet, to cover one payre of regalls, and one yarde of purple satten to line the same." A similar entry refers to " four pair of regalls and virginalls " and provides for the supply of crimson velvet for covering them, and for payment for " ornamenting the same with gold and silver lacquer." On June 10, 1673, Henry Purcell was admitted as " keeper, maker, mender, repayrer, and tuner of the regalls, *etc.*," and ten years later the instrument was still mentioned. In 1697 the celebrated Bernard Smith is given in Volume 487 of the Lord Chamberlain's Records as Organ maker and " tuner of the regalls." In 1699 the salary attached to this post was forty

pounds per annum. Exactly what the use of the Regal was so late in the Seventeenth Century is not clear ; it is possible that the name was still attached to the formula of appointment, while the instrument no longer served. The environment, *par excellence*, for the Regal was in the music-room or great hall of the cultured classes in the Middle Ages.

RELISH I : Used as a verb, To Relish meant, in the Seventeenth Century, to embellish with graces or ornaments. The writer of *Lingua* (I, 1) gives the term this sense when he writes : " O, but the ground itself is naught, from whence Thou cans't not relish out a good division." Shakespeare, in *Two Gentlemen of Verona* (II, 1), has : ". . . to relish a love-song like a robin-redbreast."

RELISH II : As a noun the word was the name of a particular ornament that had a couple of variations in the Double Relish and the Sliding Relish. The nature of the grace will be understood from a couple of the commonest interpretations given to the term Double Relish in Playford's day :

RIBIBLE. v. REBECK.

RIGADOON, or RIGODOON : A dance-form in duple time, not unlike the Bourrée (Bore), and being to the natives of Provence what the Bore was to those of Auvergne. Generally written in *alla breve*, with three or four repeated sections each of four measures, the form was lighter and quicker than the Bourrée ; it commenced on the last quarter of the bar and ended on the third. It was customary to write the third of the four sections a third lower than the others, in order to create a pleasing contrast in tone-colour, and to make of it a true Trio (*i.e.* in three parts). Some uncertainty exists concerning the derivation of the term, some authorities stating that the dance

was named after its supposed inventor, one Rigaud. The popularity of the form in England caused more than one attempt to be made to find an origin for the name in this country, and the derivation from *Rig*, a frolic, trick, or wanton romp, has been suggested ; but where the rest of the word is to be sought these ingenious etymologists do not divulge.

Coming to England during the last quarter of the Seventeenth Century, the form was used by Henry Purcell, a specimen of whose "Riggadoon" was published by John Playford in *Musick's Hand-maide* (1689). Henry Playford's *Apollo's Banquet* (1690) contains two examples of the dance, one of them being in triple measure. Both of these last-named Rigaudons are included in the "newest tunes of dances," and the uncertainty of the measure seems to prove that it was not yet very well known in England. Mention of the form in the Eighteenth Century is generally confined to set-dances composed by French dancing-masters (*v.* Weaver's *Art of Dancing*, 1706 ; and Tomlinson's *Six Dances*, 1720).

In the country of its origin the Rigaudon was of a light and lively character, and, according to Richelet, "a joy and a pleasure to dance." It became exceedingly popular until, in 1664, the Parliament of Provence prohibited its use. Like most of the dance-forms that were taken from the village-green into the Court ball-room, the Rigaudon was changed considerably by its elevation. The spontaneous movements of the countryman gave place to a more settled and pre-meditated step which ultimately outlived the dance itself. Its use at Court in France extended from the reign of Louis XIII to the date at which the Revolution swallowed it up in the general ruin.

The Suite-writers used the Rigaudon extensively, and the examples they evolved were often of an elaborate nature, abounding in technical difficulties for the instruments to which they were assigned. Though already mentioned by Mersenne (*Harmonie Universelle*, 1636), we do not meet with the form in common use until we arrive at the time when Lully and his followers were writing for the opera of Louis XIV. During the latter part of the Seventeenth Century and the first half of the Eighteenth, the Rigaudon was of very frequent occurrence, only falling below the Menuet and Gavotte in point of numbers.

The use of the form in England cannot be considered as

universal as that of some of the earlier dances, such as the Pavane, Galliard, and Coranto ; and it was probably only the prevailing taste for French forms in art that popularised it at all in this country.

RISE. *v.* BEAT.

ROTE, ROTTA, ROTTE. *v.* CROWD.

ROUND : An exceedingly ancient form of English vocal composition, being a Canon in the unison or octave, but differing from the Canon chiefly in this respect. In the earliest days of its career the Round was a serious piece of writing, and although generally provided with secular words, some examples have an extra text of a sacred nature. This is the case in the most ancient specimen known, the old Round "Sumer is icumen in" (*Harleian MS.* 978 ; British Museum ; early Thirteenth Century). Like its successors this Round exhibits the usual form of a serious Catch for four voices which enter one at a time at stated intervals, and supported by a two-part *Pes* or bass. The composer (given by William Chappell in *Popular Music of the Olden Time* as John Fornsete, a monk in the Abbey of Reading) added instructions for the performance of the Round to the music : "Hanc rotam cantare possunt quatuor socii. Paucioribus autem quam tribus aut saltem duobus non debet dici ; praeter eos qui dicunt pedem. Canitur autem sic : Tacentibus ceteris, unus inchoat cum his qui tenent pedem. Et cum venerit ad primam notam post crucem (✠), inchoat alius ; et sic de ceteris. Singuli vero repaudent ad pausaciones scriptas, et non alibi, spatio unius longae notae."

That the Round was very popular at the period in which "Sumer is icumen in" was written, and common even earlier, is clear from the writings of Walter Mapes (a prelate of Oxford) of a date anterior to that of the Round just mentioned. Later the form became hopelessly entangled with the Catch, and often there was little to choose between them except, perhaps, in the decency of the words used—especially in the Seventeenth Century (*v.* CATCH).

The term Round was also applied to the round-dance, so called from the circumstance that it was performed in a circle (*cf.* the German *Reigen*). In this use it often appears as "Round O," *Apollo's Banquet* (Playford, 1690) containing four specimens so labelled,

ROUND-O. *v.* *ROUND.*

ROYAL MUSIC: The sovereigns of England have always entertained a body of singers and instrumentalists, generally known as "The King's Musick." From Saxon days, when perhaps a few Gleemen (*q.v.*) were employed, or Norman times when "Minstrels" took their place, to the late Seventeenth Century, when the king had a full staff of musicians (strings, wind, percussion, vocalists, and accompanists), a fully equipped Chapel, and often private chamber-musicians also—the King's Musick was a feature in the musical life of England, and the standard by which all other organisations were measured. Henry the Seventh's musicians included: Eighteen Gentlemen of the Chapel (among whom were organists, *etc.*), five sackbuts and shalms, several trumpeters, and minstrels (*q.v.*). Henry VIII was more ambitious, as became so able a musician, and if the list of instruments belonging to the king (*Harleian MS.* 1419; British Museum) counts for anything, enough performers were employed to provide excellent musical results. At the Coronation of Edward VI there were twenty Gentlemen of the Chapel, eighteen "Trumpettors," sixteen "Musicians" (among whom were several well-known violists), five flutes (probably Recorders), two "Vialls" (presumably Bass-Viols), a Harper, a "Bagge piper," four "Syngers," nine "Singinge men," "The King's Harper," and seven of the "King's Majesty's musicians" (private music). At the funeral of Queen Elizabeth there were in the royal service: seven "Violins" (Treble and Tenor Viols; *v.* article on the Viols), seven Recorders, seven Flutes, six Hautboys and Sackbuts, five "Lutes and others," twenty-two Trumpeters, and four "Drums and Fiffes." The number of performers on any particular instrument varies from year to year; but as a general rule is tended to increase as time went on.

In the reign of Charles I the "list of his Majesty's musicians" (in 1641) contained the names of "Master of the Musique" (Nicholas Lanier), eighteen "for the wind Instruments," thirteen "for the violins," twenty-three "for Lutes, Violls and Voices" (a list that contains such celebrated names as those of John Lanier, Nicholas Duvall, William and Henry Lawes, John Wilson, Diedrich Steffkins, Daniel Farrant, and John Mercure), one Harper, one Virginalist, one instrument-maker,

and one "Organ keeper and tuner," not to mention one "musician extraordinary and stringer of the lutes." Charles the Second's musical establishment was very large, and a list of musicians "paid in the Treasury of the Chambers Office" in 1668, for example, shows fifteen violins at £46 10s. 10*d.* each per annum, seven more at £46 12s. 8*d.*, and two at £58 14s. 2*d.*; three composers (including Matthew Locke at £46 10s. 10*d.*), three musicians "for the Wind Musick," and others. The private musicians of the king in that year numbered ten, in addition to Dr. Gibbons as Virginal-player, John Hingston as Organ-tuner and repairer, and Richard Hudson (succeeded by Brockwell) as Keeper of the King's Instruments. In addition to the usual consort, Charles II formed an exquisite band of twenty-four violins, modelled on the lines of the French *violons du roi*, such men as John Banister (the Elder) and Lewis Grabu directing them.

The duties of the royal musicians were not light. They were compelled, under threat of instant dismissal, to keep themselves in proper practice and were expected to rehearse punctually and regularly. Their services were required for coronations, royal funerals, marriages, and receptions in honour of foreign embassies; besides the usual work of performing at State balls, Masques, and assisting at special performances at the play-house patronised by the king. Music while the royal family was at dinner was probably supplied by the king's private chamber-musicians. There can be no doubt that the example set by the Court was followed by the nobility; and, as is to be expected, each grade of society imitated the one above it as far as their means would allow. The result of this was a very active cultivation of the musical art in England; and to a great extent the high standard of native music, especially under the later Tudors, was due to the encouragement, patronage, and personal example of the sovereign. Henry VIII sowed the seed of England's musical pre-eminence under Elizabeth, and, as far as his music was concerned at least, we might say with all due deference, *O, si sic omnes!*

RUBIBLE. v. REBECK.

RULES: In the Sixteenth and Seventeenth Centuries the lines upon which music was written were frequently termed Rules.

Playford speaks of a scale or Gam-ut (*q.v.*) “drawn upon fourteen Rules and their Spaces.”

SACKBUT : The old English name for the Trombone. Like its improved successor, the Sackbut achieved absolutely true intonation by means of a sliding tube that lengthened and shortened the whole, thus producing the notes required. By modulating the distance of the slide the player could gauge the intonation with a niceness only obtainable on stringed instruments stopped by fingering. It is a peculiar circumstance that an instrument used in England so long under one name should decline in favour, to appear again under a new name—the Italian augmentative form, *Trombone*.

The story of the Sackbut resolves itself into nothing more than the early history of the Trombone in England. A mural painting by Dürer on a wall in the Town Hall of Nuremberg (end of the Fifteenth Century) will show how little antiquated the Sackbut looked. The error of supposing this instrument to have been a distinct type must be avoided. In France it was called the *Saquebute*, in Germany the *Busaun* or, as is still the case, *Posaune*; in Italy its name was always *Trombone* (*i.e.* great Tromba).

The development of the idea of a wind-instrument capable of altering its pitch by lengthening and shortening its tube must have begun very early. But the notion of a double tube sliding did not materialise until the single, straight tube had passed through a long period of experiment, during which it was first folded upon itself in a loop. This doubling of the tube would easily have suggested the idea of making joins so that one of the bends could be drawn out and back. This development must have been complete by the end of the Fourteenth Century, although the instrument was not introduced into England in its perfect form until the second half of the Fifteenth. At about this time it appears in the form shown in Dürer's picture. Additional Manuscript 7099 (British Museum) contains the item: “May 3, 1495. To foure Shakbusshes for their wages, £7.” If four specimens were already used in the royal service before the end of the century, it is safe to assume that they were introduced somewhat earlier. The illustration of the Posaune (*Busaun*) in Virdung's work of 1511 shows an instrument differing very little from the modern form. Shortly

before the date of that book, the manufacture of Sackbuts was taken up by the Neuschel family of Nuremberg, and Hans Neuschel, and his sons Hans and Georg (Jorg), were the acknowledged makers of first-class instruments of this category.

The country from which England received the Sackbut can probably be determined by a consideration of the etymology of the name. No useful purpose will be achieved in giving all the suggested derivations of the word, and I shall not waste space on speculation. There can be little doubt that the Sackbut came from one of the countries that used a kindred name for the instrument. These are France, Spain, and Portugal. Now, in the earliest English references we find the spelling *Shakbusshe* (*temp.* Henry VII, and the Lord Chamberlain's Records), and, not finding the final *t*, we must search the languages that likewise did not use this consonant. Such a procedure would rule France out, and cause us to turn to the Iberian Peninsula. In a list of Queen Isabella's instruments of music there are the entries: "One Sacabuche of silver in three pieces. . . . Another Sacabuche Grande of silver which has two pieces" (*c.* 1500). In Spanish the word *Sacabucha* was used, says Skeat, to designate a tube or pipe which serves as a pump (Spanish *Sacar*=to draw out, and *buche*=a maw or stomach). While agreeing with Skeat's etymology of the first half of the word, we must oppose the second half. A better derivation would be from the Spanish *Bucha*, evolved from the Latin *Buxus* (boxwood), from the pipes made of that material. And to strengthen this argument we have the Portuguese form *Sacabuxa*. The name of the instrument, then, if not the instrument itself, comes from Spain or Portugal, and though France and the Low Countries in all probability obtained the word from the same source, there is nothing to show how the final consonantal sound became changed to *t*. When dealing with imported terms at the end of the Fifteenth Century we must be guided more by the sound than by the appearance of a word. The spelling of foreign, and often of native, words was more frequently phonetic than not. The earliest uses of the word show the Spanish pronunciation more clearly than the French, and why the French form of the word was afterwards adopted is a mystery. We need not occupy space with a dissertation on derivations clearly founded on error, and thus we can ignore the identification of the name with the Chaldee

Sabeca (via *Sambuke*). But the mistake has led more than one otherwise trustworthy authority to speak of the Sackbut as a kind of stringed instrument.

The Sackbut is frequently mentioned in the literature of the Sixteenth and Seventeenth Centuries; in fact, so often do we find it that quotation will be unnecessary, since everyone will have come across at least one such reference in an early play or other work. Similarly, the Lord Chamberlain's Records contain entries relating to the appointment of players on the Sackbut, the purchase of instruments, and so on, from 1503 uninterruptedly until the end of the Seventeenth Century. During the last-named century the English players enjoyed a European reputation, and they were much sought after by foreign princes. During that period, too, the instrument must have been capable of excellent effects, and played as it was, through a mouthpiece more conical than cup-shaped, the tone must have been softer than we are accustomed to from its successor. The Sackbut was used in varying numbers in the royal band (ten players being maintained at one time) and in the Chapel Royal, to accompany the sacred music. During the reign of Henry VIII it was already used in Canterbury for a like purpose.

In the Eighteenth Century the Sackbut passed through a peculiar and unaccountable experience. Early in the century Robert Creyghton still mentions it with "its unfolded tubes of brass" (*Add.* 37074, c. 1727; British Museum), but whether it was still a popular instrument is very much open to doubt. It did not fall out of use entirely, for in conservative organisations such as the royal band it was still employed. But as an instrument in common use it was gone. So much so, that during the Handel festival of 1784 Dr. Burney had the greatest difficulty in securing performers on it, and was only helped out of his quandary by six players employed in the King's own band. On that occasion the instrument was used in the set, Tenor, Bass, and Double Sackbut (Contra-bass). When in the Nineteenth Century the Sackbut reappeared in England, it was with an Italian name, and as Trombone it has since been known.

SARABAND: A dance-form of great importance, which, after passing through an interesting and eventful career, finished

as an indispensable movement in the classic Suite. Originally a slow and dignified dance, the Saraband was quickly relieved of its solemn characteristics when it came to England, and became a sort of Country-dance after the style of a Sir Roger de Coverley ; and the music written for it was naturally also affected in the same manner and to the same degree. But before the change was completely wrought, it enjoyed considerable favour in a shape somewhat similar to its French form, to which we shall return later.

Charles II was particularly fond of the Saraband and it was consequently much used at his Court ; nor was he above taking part in it himself. But the tendency was to make it an altogether lighter dance than it had been on the Continent, and it was this tendency that made it the popular form it became. Indeed, when a certain Italian named Francisco composed a Saraband while visiting England, it became such a prime favourite that the Chevalier de Grammont felt impelled to write : “ It either charmed or annoyed everyone, for all the guitarists of the Court began to learn it . . . and a universal twanging followed.” It is therefore not surprising to find all the composers of that reign busily engaged in creating new music for this dance. John Playford, in his *Musick's Handmaide* (1663), gives nine pieces suitable to the dance, some of them by William Lawes. The 1678 edition of the same work contains eight new Sarabands ; while the second part, published in 1689, gives two more specimens by Dr. John Blow. Playford's *Musick's Delight on the Cithren* (1666) contains five Sarabands in Tablature on a four-line stave, two being by Matthew Locke, two by Dr. Charles Colman, and one by Simon Ives. *Apollo's Banquet* (1690) followed with another four examples. Playford's *Court Ayres* (1655) contains no fewer than fifty-three Sarabands, and this alone can give us a very good idea of the “ universal twanging ” of Sarabands that followed the first admission of the form into high society. The fact that the work just mentioned was published during the Interregnum makes no difference, for secular music suffered little, if at all, under the Commonwealth. The specimens given in these publications show how completely the Saraband in England had deviated from the path marked out for it in France.

Originating in the Middle Ages in Spain, the Saraband was a

form possessing strong Spanish characteristics with more than a tinge of orientalism. Whether it was a Moorish dance influenced by Spain, or a Spanish dance modified by the conquering Moors, need not detain us. A great many derivations for the name have been suggested, but the most likely seems to be that from the Spanish *Sarao*, a ball or meeting for dancing. Pineda's *Spanish Dictionary* (1740) gives *Sarao* as coming "from the Arabick," thus giving an Arabic name to a dance that was probably largely influenced, if not actually originated, by the race that occupied Spain.

The descriptions given by early Spanish writers force us to the conclusion that the Saraband must have been a dance deserving of very severe criticism. The historian Juan de Mariana (1536–1624), in his *Tratado contra los Juegos Publicos*, says: ". . . at this point mention need only be made that among the other inventions that these late years have produced, there is a dance and song so wanton in its words and so ugly in its movements, that it is enough to fire the most virtuous." On another occasion Mariana calls it "el pestifero baile de Zarabanda." The use of the word *baile* and not *danza* is significant, for on the authority of Gonzalez de Salas (middle of the Seventeenth Century), the *baile* was a dance in which the whole body was free to indulge in all sorts of movements, whereas *la danza* did not permit even the arms to assist, and in it the feet alone were allowed liberty of motion. The sinuous and suggestive movements of the body in the *baile* help to make more certain of the Moorish descent of the dance. Even Cervantes attacked it, and Guevara was of opinion that the shameful freedom of the Saraband was rapidly becoming "a disgrace to Spain." The result was that shortly before the close of the reign of Philip II (1598) its use was prohibited for a time.

In Spain at about this period the Saraband was generally danced solo by women, who accompanied themselves with song and castanets; sometimes, in place of the latter, on the guitar; and skilful performers were much sought after.

At the end of the Sixteenth Century the form crossed the Pyrenees into France. The cultured taste for art in France at this period soon gave the Saraband an aspect it had never presented in the country of its infancy. It was rapidly purified of its objectionable characteristics, and became one

of the most popular dances that the Sixteenth and Seventeenth Centuries possessed. Becoming popular at a time when dances like the Pavane were high in favour, the Saraband was used in an exceedingly grave and stately manner. Its measure was triple, its construction the common one of two eight-measure sections repeated, and its rhythm—like that of the Chaconne—

usually :

When the form had been accepted as a purely instrumental movement and its dance origin lost sight of, some composers wrote even extended Sarabands with variations. In the Suite it was placed between the Courante and the Jig, thus completing with the opening Allemande (Almain) the *Partita* of the classic period of Johann Sebastian Bach.

As a dance the Saraband was known in at least three forms. First, as the solo dance of an abandoned Spanish coquette ; secondly, as a picturesque, stately, and ballet-like creation of the French opera and Court ; and, thirdly, as the merry, light, and innocent Country-dance which it became in England.

SENNET : A military signal obviously different from the Flourish (*q.v.*). It is ordered in a great many Elizabethan stage-directions, and Shakespeare in common with his contemporaries often has “a Sennet sounded.” The term is to be derived from the Latin *Signum* through Old French *Sinet*, *Senet*, *Segnet*, a little sign or signet, and hence a signal. Some authorities (*e.g.* Grove, Stainer, and Barrett, *etc.*) suggest an etymology from the word meaning seven, and suppose the Sennet to have been a signal of seven notes. Such a derivation cannot explain away such Old English spellings as Cygnet, Signet, and Signate.

SEQUENCE (SEQUENTIA) : A hymn dating from the Ninth Century and used to follow the Gradual (hence “Sequence”). In its original form it was a composition using for its text the vowel of *Alleluia*, a sort of jubilating rhapsody. Such pieces of music were termed, from their use, *Pro Sequentia* ; and by a contraction of the abbreviated form *Pro sa*, they became known as *Prosa* or Prose. Pope Pius V, in the second half of the Sixteenth Century, abolished most of the Sequences, leaving only the few still in use.

SERPENT: A wood wind-instrument of bass pitch, played through a cup-shaped mouthpiece. It was thus akin to the Cornet (*q.v.*) and acted as the bass to that category of instruments. Made of two pieces of shaped wood and covered with leather, the long (eight feet) tube was rendered capable of being managed by three U-shaped curves, the instrument ending at the bell-end in a bend of a half-circle. This sinuous curving of the body gave the Serpent its name. The tube opened gradually from a little over half an inch at the mouthpiece adapter to about four inches at the bell. The hemispherical mouthpiece was made of various materials—in the early specimens generally of ivory—and was connected with the body-tube by a brass fitting. The length of the instrument was divided by six finger-holes, arranged in two groups of three, not very far apart, but at a great distance from the mouthpiece and bell respectively. The series of notes that could be produced varied enormously with the period and the dexterity of the player. So also did the compass, all other things being equal. The range extended from just over two octaves (de Felice, *Encyclopédie*, 1772) to four octaves (Lichtenthal, *Dizionario della Musica*), but the latter referred, of course, to the late specimens of the instrument and quite exceptional performers. Keys were added to the instrument in the Eighteenth Century, and when it was admitted into the English military bands it was often made of metal. Concerning its tone, the critics of the Serpent differed as much as they did touching the tone of the Cornet. Judging by all the evidence, I should imagine that the tone, like the technique, depended upon the player; for overblowing easily rendered it rough and harsh. Treated very carefully the Serpent was capable of tonal effects that were very useful for certain purposes. Used in small country churches (especially in France, where it was known as *Serpent d'Eglise*) it supported the choristers' music in place of the absent organ. In England, too, it was often used for a similar purpose, and it persisted until the end of the Eighteenth Century—in remote communities even as late as the Nineteenth. Composers of note used it occasionally, Wagner and Mendelssohn, among others, writing parts for it in isolated works. The active life of the Serpent extended from the end of the Sixteenth Century to the first half of the Nineteenth, when it was superseded by the bass-tuba.

SERPENT

SESQUIALTERA. *v.* PROPORTION.

SET or SETT : The old English name for Suite ; a succession of short pieces strung together, and connected only by their character, and sometimes by their key. A consideration of the history of the Set would run on practically the same lines as a dissertation on the Suite or Partita, of which it was the English counterpart.

SHAKE : The word Shake was used in the Seventeenth Century as we employ the term Trill to-day. The "Shaked Grace" differed from the "Smooth Grace" in that a trill or rapid repetition of a pair of notes formed part of it. The "Close Shake" is rather difficult to understand in an age that knows no frets on the bowed instruments ; but Playford's description, together with the ingenious way in which he illustrates it, should make its nature clear. "The Close Shake is when you stop with your first finger on the first fret and shake with your second finger as close as you can." Trilling with a finger as close as possible to another would produce very little difference in pitch in the case of a fretted instrument, for it must not be forgotten that the finger has to be advanced to the next fret to produce a note a semitone higher. Playford illustrates this as follows :

where the varying elevation of the A shows that although there is an audible effect from the action of the trilling finger, the difference in pitch is not as great as a semitone. The modern violinist produces what is probably equal, musically, to the "Close Shake" when he employs *Vibrato*.

An Open Shake is "when you stop with your first finger on the first fret and shake with your third finger on the third fret" (Playford), thus producing a trill the two notes of which were a whole tone apart. Simpson (1659) adds that wider than two frets, or a whole tone, "we never shake."

SHAKED BEAT. *v.* BEAT.

SHAKED CADENT. *v.* CADENT.

SHAKED ELEVATION. *v.* ELEVATION.

SHALM or *SHAWM*: An ancient wood-wind instrument of conical bore, played with a double reed, and made in a variety of pitches from treble to bass (*v.* BOMBARD). It was provided with a number of finger-holes, which produced a useful range of about ten notes. Later, when the instrument became developed, the position of the reed was altered, the finger-holes were supplied with keys, and the bore of the tube reduced considerably (*v.* HAUTBOY).

The name of the instrument was derived from the Old French *Chalemie* (also *Chalemelle*), "a little pipe made of a reed or of a wheaten or oaten straw" (Cotgrave, 1660), which in its turn was borrowed from the Latin *Calamus*, a reed (under Greek influence). The French word *Chalumeau* came after the English Shalm was in use, and thus was not the ancestor of the latter. In Germany the instrument was called *Schalmey* (Modern German, *Schalmei*), Praetorius (*Syntagma Musicum*, 1619) giving illustrations of the whole family, from Discant Schalmey to the Bass-Pommer. The "oaten pipe," referred to so often by the Sixteenth-century writers, was most probably a primitive Shalm, especially when we remember Cotgrave's definition.

The name, in the spelling Shalmye, is found in Chaucer's *House of Fame* (l. 1218): "That maden loude menstralcyes In cornemuse and Shalmyes"; and in Gower's *Confessio Amantis* (end of Fourteenth Century; *Lib.* 8; l. 2483): "With Cornemuse and Schallemele." One of the inscriptions on the walls of the Lekingfield Manor-house (copy in the British Museum; *Royal* 18 D. II) says that "A shawme makethe a swete sounde," *etc.* (*temp.* Henry VII). During the reign of Henry VIII the instrument attained to Court use, and in the *Privy Purse Expenses* of that sovereign there is the entry: ". . . paied to phillip of the pryvay chambre for a shalme xxvjs. viiijd." (February 25, 1530). Sir Thomas Elyot, in the *Castel of Helthe* (1533), recommends the playing of Shalms for the reason that he gives when approving of the Sackbut, for they "requyre moche wynde" and are thus beneficial to the "entrayles whiche be undernethe the mydrefie."

The exact meaning of the qualifying "still" or "styll" in the phrase "Styll Shalmes," as we find it in the Lord Chamberlain's Records (*e.g.* for a coronation, apparently that of Henry VIII, 1509, and in other places), is not quite clear. The same

list also includes the names of musicians for the "Sakbudds and Shalmes of the Privee Chambre," and we are forced to the conclusion that between Shalms and Still Shalms some difference must have existed. Some authors suggest that the word "still" referred to pensioned musicians, but I prefer to connect the adjective with the same one used with the *Zinken* (Cornets) on the Continent, where "Stille Zinken" meant softer toned Cornets (*Cornetto Muto*), the difference being due to an alteration in the fitting of the mouthpiece. It is quite possible that some similar procedure made of the ordinary Shalm a "Still Shalm." In the Henry VIII entry just alluded to, the first musician mentioned is termed the "Marshall." Now, in the early history of the Waits (*q.v.*) the word *Marshall* was often applied to the leader or conductor of such a band of municipal musicians. If this has any bearing upon the subject under consideration, it will prove that the "still shalms" were the instruments known as Waits and played by musicians bearing the same name (*v.* WAITS).

SHALMEY, SHALMOY. *v.* SHALM.

SHARP: To-day the adverb is used to indicate that the pitch of a note is too high for perfect intonation, while the noun is the name of the symbol used to raise the pitch of a note by a semitone. In these uses the word replaces John Playford's *B Mi Cliff* (*v.* CLIFF.) But in Playford's day the expression "sharp" was employed more commonly to indicate a major interval, chord, tuning, or key. Thus we meet, and can explain, such phrases as "Sharp Third" (a major third), and "Harpway Sharp," an accordance by which the strings of the Bass-Viol were tuned to the notes of a major chord (*v. also* HARPWAY).

SHAWM. *v.* SHALM.

SIGNED CLIFFS: The name given in the Seventeenth Century to the Treble, Tenor, and Bass Clefs, because "they are always set at the beginning of the Lines on which is prickt the Song or Lesson" (Playford). Christopher Simpson calls them the three "Signal Cliffs" (*Principles of Practical Music*, 1665).

SINK-A-PACE. *v.* GALLIARD.

SLIDE : An ornament, obsolete as such in England, which consisted of a rapid series of notes connecting two successive notes of a composition diatonically. Its motion was either ascending or descending, according to the position of the second note, and it differed very little from the Elevation (*q.v.*) :

Written: Performed: Written: Performed:

In some of the older Virginal-Books an oblique line cutting the stem of a note showed that a Slide was intended. In such case, and, indeed, in all other cases also, the note written or printed was the last note of the ornament. This Grace, though its name has fallen into desuetude, is still used, being written out as Grace-notes.

SLIDING RELISH. *v.* RELISH.

SLUR : A word still in use to designate the sign for *legato* performance, but employed in the days of the Lutes to a succession of notes that could be played in an ascending direction upon any one string. In Lute-playing only the first note of the Slur was struck, the remaining fingers falling successively, and merely suggesting, by the rising ring of the string's vibration, the effect of elevation. The result of such manipulation was a kind of upward glide, which connected the first (struck) note of the Slur with the next struck note by a sort of faint *glissando*. A certain amount of virtuosity was necessary to perform this delicate embellishment really well, and it was used probably only in the most artistic of solo work.

SNAP, or SCOTCH SNAP : A peculiar rhythmic figure, not unknown in Seventeenth- and Eighteenth-century Italy, that characterises a good deal of Scottish music, particularly the Strathspeys. It consisted of the reverse form of a very common figure in dance-music (dotted-quaver, semiquaver) :

the short note taking the accent.

SOB, SOBB : A term employed by the lutenist to name an effect produced by reducing the finger-pressure on the strings immediately after the latter had been struck. Mace (*Musick's Monument*, 1676) describes the procedure as follows : " Cause them (the strings) to sobb, by slacking your stopping hand so soon as they are struck ; yet not to unstop them, but only so much as may dead the sound on a sudden. This gives great pleasure in such cases." The peculiar vibration of the Lute-strings produced many charming and delicate effects, such as the Slur (*q.v.*) and the Sob, difficult to understand to-day without practical examples.

SOL. *v.* **ARETINIAN SYLLABLES** and **GAMUT**.

SOLFAING. *v.* **SOLMISATION**.

SOLMISATION : The practice of singing to a series of syllables (*v.* **ARETINIAN SYLLABLES**), adapted by Guido d'Arezzo to fit his Hexachords in the same manner as the earlier Greek system of nomenclature applied to the tetrachords. The Eleventh-century monk realised the difficulty of teaching pupils the mysteries of his scale-series, mutations, *etc.*, without some ready means of memorising the sequence of the syllables and the notes they represented. To this end he evolved the hymn to St. John, mentioned in the article **ARETINIAN SYLLABLES**, and arranged them in such a way that the *Ut* of the verse was sung to a C, the *Re* to a D, the *Mi* to an E, the *Fa* to an F, the *Sol* to a G, and the *La* to an A. The series of notes which he named by these means constituted the " Natural Hexachord." When a melody happened to overlap, in either direction, the limits of a single hexachord, mutation had to be resorted to (*v.* **HEXACHORD SYSTEM**).

In England the term Solfaing (not to be confounded with the modern Tonic Sol-fa System) was often employed in place of Solmisation. John Dowland, in his translation of the *Micrologus* of Ornithoparcus (1609), used the verb " to solfa," and also the expression " The Rules of Solfaing." A similar use of the word as applied to " Lessons " or exercises is to be seen in the book-title : " In Nomines and other Solfainge Songes."

SPANISH VIAL. *v.* **GITTERN**.

SPINET : A keyboard instrument closely resembling the Virginal (*q.v.*) in its action, but differing from it in shape. While

the true Virginal was in a rectangular case, the Spinet was in the form of a harp laid horizontally. The keyboard ran obliquely when compared with the central line. Sometimes the outward form of the case was five-sided—the longest side being generally the back and the next in point of length the keyboard front; the remaining three short sides connected these two; one on the left-hand side, and two on the right. In some instruments the side containing the keyboard was the longest. The name of the instrument is thought by some to have been derived from that of its supposed inventor, one Joannes Spinetus of Venice (c. 1503); but the more likely derivation would seem to be from *Spina*, a thorn or point, referring, of course, to the quill plectrum. Only by accepting the latter origin for the word can I reconcile such spellings as *Espinette*, which we meet with (*inter alia*) in the *Diary* of Samuel Pepys. Beyond the difference in shape, practically all that was said of the Virginal applies here also; except that, perhaps, the Spinet outlived the other.

The Spinet certainly dates from the reign of Henry VIII, in its English use at any rate, for *Harleian MS.* 1419, containing a list of the king's instruments, includes: "Two faire paire of newe long virginals made harpe fashion, of cipres and keis of Ivorie." But during the second half of the Seventeenth Century the Spinet rose to a point of popularity in England that entirely eclipsed its earlier vogue. The most famous makers were John Hitchcock, Stephen Keen, and Charles Haward (Hayward?). Spinets autographed by Hitchcock are to be found between 1664 and 1703. Keene worked as late as 1719. The last-named builder is advertised by Playford as follows: "Mr. Stephen Keene, maker of Harpsycons and Virginals, dwelleth now in Threadneedle Street at the sign of the Virginal, who maketh them exactly good, both for sound and substance." Examples of Spinets made by Thomas Hitchcock (late Seventeenth Century and early Eighteenth), and by Johannes Player (c. 1700), are to be seen in the Victoria and Albert Museum (London). Pepys had a peculiar name for the instrument, for on June 14, 1661, he enters: "I sent to my house, by my Lord's order, his Shipp and triangle Virginal"; but the use of the word "triangle" shows clearly that the instrument meant was a Spinet. But on April 4, 1668, Pepys writes: "To White Hall. Took Aldgate Street in my way,

SPINET

By John Player, *ca.* 1700
(*Victoria and Albert Museum*)

and there called upon one Hayward, that makes Virginalls, and there did like of a little espinette, and will have him finish them for me ; for I had a mind to a small harpsichon, but this takes up less room." On July 13, 1668, he adds : ". . . I to buy my espinette, which I did now agree for. . . ." Two days later : "at noon is brought home the espinette I bought the other day of Haward ; cost me £5."

Some of the foreign Spinets were very elaborate. One by Hans Ruckers of Antwerp had a smaller instrument, tuned an octave higher, placed on the left-hand side of the larger keyboard ; this was a survival of the practice resorted to in the earlier Virginalls, and which accounts for the expression "a pair of virginalls." A beautiful example of Italian work is preserved in the Victoria and Albert Museum, by Annibale dei Rossi of Milan, dated 1577, and decorated with nearly two thousand precious and semi-precious stones. This specimen has a compass of four octaves and a semitone.

SPRINGER : An ornament in common use during the Seventeenth Century, and given by Playford as follows :

Christopher Simpson said that the Springer made "the Sound of a note more acute, by Clapping down another Finger just at the expiring of it."

STAY. *v.* HOLD.

STILL SHALM. *v.* SHALM.

STING : An embellishment in lute-playing, of similar effect to the left-hand Vibrato of the violinist. No modern phraseology could describe this effect so well as that used by Thomas Mace (*Musick's Monument*, 1676). After saying that the grace was not "modish in these days," he continues : "First strike your note, and as soon as it is struck, hold your finger (but not too hard) stopt upon the place (letting your thumb loose) and wave your hand . . . downwards and upwards, several times, from the nut to the bridge ; by which motion, your finger will draw, or stretch the string a little upwards and downwards, so, as to make the sound seem to swell with pritty unexpected

humour, and gives much contentment upon cases." This effect is, of course, perfectly easy to understand; the waving motion of the hand rolled the tip of the stopping finger backwards and forwards in such manner as alternately to sharpen and flatten the note very slightly. This produced the faint "beat" responsible for the tremulous note.

STRATHSPEY: A dance peculiar to Scotland, not unlike the Reel, except that it is slower. A feature of the form is its dotted rhythm in duple time. Although it was probably danced earlier, named specimens of the Strathspey are not found before the Eighteenth Century. Writers of that period were not always careful to keep this form and the Reel distinct, and we must conclude from this circumstance that with slight modifications the same music could be made to serve for both dances. The music written specifically for the Strathspey, however, shows a frequent use of a characteristically Scottish rhythmic figure of a very short note, taking the accent, preceding a longer one:

and known as the "Scotch Snap."

STUMP: Beyond the fact that this was an instrument strung with wire, and that Daniel Farrant was its inventor, nothing is known of it. The only reference to it that I have been able to trace is the one made by Playford in 1661 (*v.* POLIPHANT).

SWORD DANCE: A very ancient dance that bears a close resemblance in many respects to the Morris Dance, though there is sufficient to separate them. It is true that sword-bearers were common adjuncts to the Morris, but the mumming that was added to the latter keeps it distinct from the true Sword-dance. The Morris (*q.v.*) seems to have been a later development, and was subject to many influences at different periods; yet the possibility is present that—in one of its aspects at any rate—it may be descended from the Sword-dance. Still, the fact remains that such dances as the *Danse des Bouffons* and the *Matacins*, both using sword and shield, were mentioned by Tabourot at the same time as he speaks of the Morisco; so that an equal possibility remains that the Sword-dance may have been derived from one of these. But

whatever its origin, it is undoubtedly of great antiquity, and may have had its beginnings in some primitive war-dance. It is quite likely that the wooden staves used by the Morris dancers in the South may have been borrowed from the swords of the dancers in the North of England.

The character of the Sword-dance was that of a serious and complicated performance; its movements were exceedingly intricate, and they called for great physical activity and a quick brain. It was invariably danced by men only, and in some some parts of the country it is still cultivated. Mr. Cecil J. Sharp, who is responsible for *The Morris Book*, also collected music and steps for the Sword-dance (Novello), and his researches bear all the signs of authority.

TABERET. v. TABOR.

TABLATURE: A system of musical notation in which letters, figures, and other signs took the place of the usual method of writing notes. As far as England is concerned the system was employed chiefly for the music of Lutes, Viols, Citterns, and other fretted instruments, and for wind-instruments like the

1. Lute Tablature

(Robt Dowland: *A Musical Banquet*, 1610)

2. Viol Tablature

(John Playford: *Musick's Recreation on the Viol*, *Lyra-wray*, 1661).

Recorder and Flageolet. On the Continent of Europe Tablatures were even used for the keyboard instruments, but this never became popular in England. For the other instruments mentioned, however, this method of writing was very largely used, especially towards the end of the Sixteenth Century and the first half of the Seventeenth.

Commencing with the "letter" Tablature for the lutes, the system was in principle very simple. A staff of lines as numerous as the strings of the instrument carried letters of the alphabet corresponding to the frets on the fingerboard. The

letter *a* on the second line, for example, meant the first fret on the second string; an *e* on the fourth line represented the fifth fret on the fourth string, and so on. The times values of the notes were given by the note-tails used in ordinary notation, placed over the stave of Tablature. Music for the Cittern or Gittern was written on a four-line stave, one for each string (or, rather, pair of strings). In like manner, the Tablatures for the Viols were written on six or seven-line staves, according to the stringing of the instrument. Since each fret on all these instruments was at the distance of a semitone from its neighbour, it follows that on the same line of the stave, *a* and *b* were a semitone apart, *a* and *c* a whole tone asunder, and so on. Such a system, of course, was possible only so long as the instruments were fretted. In the case of wind-instruments, figures sometimes replaced the letters, each number applying to one of the finger-holes. A different method was applied for the Recorder and Flageolet, for which the "Dot-way" system (*q.v.*) was used. The different Tablatures varied slightly in different countries and periods, but none are really difficult to decipher.

TABOR: A drum varying in size and method of handling according to the period. The word itself is of great antiquity, and occurs in our literature very early. Derived from the Spanish *Atambor* (the initial *A* of which betrays a Moorish origin) the word—and presumably the instrument also—passed through Old French and Middle French *Tambour*, to the English of the Thirteenth Century (*Tabour*). In this form the word is to be found in *Havelock the Dane* (Ed. Skeat; l. 2329): "The gleumen on the tabour dinge"; in Stephen Hawes' *Pastyme of Pleasure* (1506; Chap. xvi); and in Shakespeare's *Winter's Tale* (IV, 4): "O, Master, if you did but hear the pedlar at the door, you would never dance again after a tabor and pipe." At about the date of the last-named play, the *u* of the French word was dropped. As "Taborn" the instrument is mentioned in *Octavian Imperator* (Fourteenth Century; ll. 67/8): "Ther mygth men here menstralsye, Trompys, Taborns, and cornettys crye." The diminutive form "Tabourine" (not to be confounded with *Tambourine*) was also frequent, and may have had something in common with the long, narrow, Provençal drum called *Tambourin*.

Shakespeare uses this word in *Antony and Cleopatra* (Act IV) : "Trumpeters, With brazen din, blast you the city's ear, Make mingle with our ratling tabourines." The variant *Tabouret* was contracted to the familiar biblical *Tabret*. The player on the Tabor was called a *Taborer*, or *Tabrere* ; in the latter spelling Spenser used it in the *Shepherd's Calendar* (May 23, 1579) : "A lusty tabrere That to the many a hornpipe played."

The Tabor in its commonest form was small and light, but covered at both ends with skin. It was attached to the left wrist or thumb of the player by a loop, and beaten with a single stick held in the right hand, while the fingers of the left hand played on the pipe (*v.* TABOR-PIPE). Larger Tabors were carried obliquely on the left side, suspended from a belt and played by beating with two sticks on the uppermost head.

TABORINE. *v.* TABOR.

TABOR-PIPE : A small instrument of the whistle or fipple-flute type, with two finger-holes in front, and a third for the thumb at the back of the pipe. As its name implies, it was almost inseparable from its companion, the Tabor or hand-drum ; and together they supplied the music for the rustic dances of old England. The bore of the pipe was a cylindrical one, and on account of its evenness a rich supply of harmonics was procurable. With the assistance of these the range of the pipe covered an octave and three notes, though not completely chromatic. The Tabor-pipe was manipulated by the left hand only, leaving the right free for beating the drum.

TABRERE. *v.* TABOR.

TABRET. *v.* TABOR.

TANGENT : The brass pin or stud which was the characteristic feature of the Clavichord (*q.v.*). It was about an inch in height, broadened at the head, and tapering to the point at which it was fixed into the end of the key farthest from the player's hand. The depression of the key caused the Tangent to rise and strike the string stretched above it. This method of playing did not cause the whole length of the string to vibrate in a way that would produce one tone, but divided it into two portions, one much larger than the other. Both of these parts vibrated, but the unwanted section was damped by

means of a strip of cloth interlaced between the strings. Now, since the tangent formed, at one and the same time, the bridge and the hammer, it follows that sounds of only a certain strength (or lack of strength) could be obtained; for the moment that the strings were struck too forcibly, the pitch of the note was raised. The tone however, such as it was, proved to be of a very sweet quality, and on that account the instrument played by Tangents persisted in favour for a long time. More than one Tangent could be used for each string, the pitch of the note depending upon the position of the Tangent (*v. CLAVICHORD*).

TENOR STRING: The fifth string of the Viol, counting downward from the treble. This string was in the ordinary accordance tuned to G, and hence was often named the Gamut-string.

THEORBO: A large lute, sometimes used as the Tenor instrument in a consort of lutes (when the Arch-lute was also used), and sometimes as the Bass. It differed from the ordinary lute in that it had extra bass-strings at the side of the fingerboard (not over it), which were plucked with the thumb to provide a bass. They were tuned from a peg-box situated at the side of the ordinary one, or, as in many examples, from pegs in a second head placed above the other as an extension. These extra strings were only used unstopped. In appearance the Theorbo was a very complicated instrument, and we can very well understand how it came about that when Inigo Jones brought an example to England, the authorities at Dover mistook it for a Popish infernal machine, and sent the bearer of it to the "council table" for trial. The strings passing over the fingerboard were mounted in unison pairs as usual, and the Theorbo was possibly even more popular in England as an accompanying instrument to the voice than was the ordinary lute. This system of using extra bass-strings was a very ancient one and can be seen in use in many of the very early plucked instruments. Thomas Mace (*Musick's Monument*, 1676) says that "the Theorbo is no other than that which we call'd the old English lute," and that it was originally so called. He adds that as many as twenty-four strings were used on the instrument and that he personally—"truly on my Theorboes I put twenty-six strings."

The Lord Chamberlain's Records abound in references to the

Theorbo, but a selection of them will suffice to show how common it was. On June 6, 1629, a warrant was issued to pay £20 to John Coggeshall for a year's supply of strings for "his Majesty's lutes and theorba," a like sum being paid on other occasions. In 1632 the sum of £15 was paid to Mr. Roberts for a "theorba," and in 1633 a similar sum was given to Nicholas Lanier for another example. In the list of musicians for 1660 John Jenkins appears as a musician on the Theorbo in the place of John Coggeshall, and John Lylly in succession to John Kelleve. Captain Henry Cooke, Master of the Children of the Chapel Royal, taught the choristers to play on the lute, theorbo, and other instruments, and in 1667 received £110 for the work—a sum which included strings, "fire for the musicke roome," and other extras. Entries referring to payments for such service are frequent. In 1673 Pelham Humphrey, the new Master of the Children, received £6 each for two Theorboes supplied for use in the schoolroom, cheaper instruments being thus employed for teaching purposes. In 1679 the cost of a Theorbo for professional use was £14, but in 1662 Henry Cooke received £20 for one, no doubt a fine specimen, richly ornamented and possibly old—for twenty pounds was a large sum of money at the middle of the Seventeenth Century. The instrument was used well into the Eighteenth Century, and only the improvement in the keyboard instruments caused its decline.

THOROUGH-BASS : A bass-part written continuously throughout a composition, and on that account also called Through-Bass (Italian, *Basso Continuo* ; German, *General-Bass*). It was indicated by one or more figures placed under the bass notes of a harmony, each figure referring to a note of the chord required ; this provided the basis of the accompaniment, and the intelligent use of the system required the ready brain of a really well-schooled musician. It appeared first in Italy at about the commencement of the Seventeenth, or perhaps the very last few years of the Sixteenth, Century. There seems to be little reason for supposing that this method of indicating the bass was the invention of any one person ; it would appear rather to have been called forth by the necessity for some such means of writing a support for the monodies then becoming popular. The enthusiastic *coterie* of musicians and

noblemen who made of Florence so important a musical centre at that period provided in their works the earliest examples of Thorough-Bass. In England it was taught in the last quarter of the Seventeenth Century, although, of course, isolated compositions printed earlier already show it—used probably in imitation of foreign examples.

THREE IN ONE or THREE TO ONE. v. PROPORTION.

THUMP: A form of composition of which little seems to be known; possibly only a variant of Dump (*q.v.*). It was mentioned in Thomas Ford's *Musick of Sundrie Kindes*, 1607: "A Pill to Purge Melancholie; M. Richard Martin's Thumpe."

TIE: In addition to the usual sense of this term—that of connecting two notes of the same denomination over an intervening bar—there was applied an older one which gave it the force of the present-day "slur," or sign of the *legato*. "The second sort of Tye," says Playford, "is, when two or more notes are to be sung to one syllable, or two notes or more to be plaid with once drawing the bow on the Viol or Violin"; a sentence which shows the old meaning in the first half and the modern sense in the second.

TIMBREL: An ancient tambourine; a shallow hoop of wood

Timbrel

(From a small drawing
in British Museum Ms.
Harleian 6563, ca. 1330)

covered on one side only with skin, and having a varying number of metal "jingles" in the wooden frame. In the *Promptorium Parvulorum* (first half of the Fifteenth Century) the form *Tymbyr* occurs, and is defined as "a lytyl tabowre, *Timpanillum*." "Tymbres" are mentioned in *Kyng Alisaunder* (Weber's *Metrical Romances*). Gower, in *Confessio Amantis* (ll. 1843/4) has:

Wher as sche passeth be the strete
Ther was ful many a tymber betē.

a spelling that with French influence would explain the name for a performer on this instrument (*Timbestre*; *Romaunt de la Rose*, l. 769). *Timbrelle* and *Tymbrelle* are clearly derivatives from *Timbre* or *Tymbyr*, and examples of the use of the word,

and its more modern descendant, Timbrel, will be too common to need quoting.

A performer on the Timbrel is clearly shown among the figures in the "Minstrels' Gallery" of Exeter Cathedral (Fourteenth Century), and a drawing in *Harleian MS.* 6563 (British Museum), dating from the early years of the Fourteenth Century, shows the Medieval form of the instrument very well. The specimen illustrated has four jingles, and a straight line drawn across the parchment would suggest a catgut "snare," still used on the modern side-drum.

TIME (TEMPUS): In Medieval music the quantitative relationship between the Breve and the Semibreve, the term being also used to designate the Breve itself as a unit of measurement. In Perfect Time (*Tempus Perfectum*) the breve equalled three semibreves, and was thus the contents of what we should call one measure in triple time. In Imperfect Time the breve contained only two semibreves. The signatures were a circle for the Perfect, and a broken circle or a semicircle (later the capital C) for the Imperfect. A line drawn through these signs halved the values of all the notes. Reversing the semicircle thus:  halved the values likewise, and a line through this sign further reduced the duration of the notes to a similar extent. A passage with the prefix:  was thus four times as fast, and one with the signature:  twice as fast, as one marked with the simple: . Fractions were sometimes used to reduce the values of the notes in the same way, as $C \frac{2}{1}$, $C \frac{6}{3}$, etc. The indication $C2$ is also frequently to be met with (*see also* MENSURABLE MUSIC, MOOD (*Modus*), and PROLATION).

TOY: A light and trifling composition, frequently mentioned in late Sixteenth- and Seventeenth-century literature. It seems to have possessed no particular features that could make of it an accepted form, and Mace's description of it (1676) probably fits it exactly: "Toys or Jiggs, are light squibbish things, only fit for Fantastical and Easie light-hearted people; and are in any sort of time." There are three specimens of the Toy in the Fitzwilliam Virginal Book and another in Benjamin

Cosyn's Virginal Book (beginning of the Seventeenth Century). In *Musicke of Sundrie Kindes* by Thomas Ford (1607) there is a trifle called, "A Snatch and Away ; Sir John Paulet's toy," and this use of the word is typical of many.

TRIPLA (*PROPORTIO TRIPLA*): The indication of triplicity in Mensurable Music. Sometimes it merely meant the same as Perfect Time or Mood, in which three notes of any value went to one immediately above it in the series (three breves to the long, and so on). Frequently the Tripla time (shown by a figure 3 above or below the stave) indicated the same as our modern triplet sign, and it was used when such a triple figure occurred in the body of a composition. In the Seventeenth Century the term was used simply to show triple time as distinct from duple. Some writers understood a quicker tempo to accompany the demand for Tripla ; *i.e.* a rhythm of threes in the time of twos.

TRIPLEX : An old term for triple time (*v.* TRIPLA). Shakespeare uses it in *Twelfth Night* (V. 1) : "the triplex, Sir, is a good tripping measure." The word was also employed to designate the third part in polyphonic music.

TRIPLUM. *v.* CANTUS.

TROPES : Interpolated pieces of vocal music used to extend the dimensions of the sacred service music, out of which grew the Sequences (*q.v.*). They became expanded as time went on, and eventually were given their own texts. The period during which the Tropes found favour lay between the Ninth and Sixteenth Centuries, after which they gradually fell out of use leaving only the few Sequences still in divine service.

The term was also applied to the closing *formulae* of the lesser doxology attached to the Introit. Each of the Church Modes originally had its own Trope, but later on a greater number for each mode was used.

TRUMPET MARINE : A very ancient stringed instrument played with the bow, and most probably evolved from the still more ancient Monochord. It must be remarked at the outset that the instrument came to England fairly late in its career, and when it did arrive was looked upon more as a curiosity than as a musical instrument calculated to give pleasure to a society already accustomed to far better things. Nevertheless,

it was much used for the scientific observation of musico-physical phenomena, and thus deserves some consideration. There are not many references to it in our older literature, but such as there are require explanation. Moreover, the accounts given of it are usually so incomplete and full of error, that something on the subject may be of service. Samuel Pepys, writing in his *Diary* under date October 24, 1667, says: “. . . we in to see a Frenchman, at the house, where my wife's father last lodged, one Monsieur Prin, play on the trump-marine, which he do beyond belief; and the truth is, it do so far outdo a trumpet as nothing more, and he do play anything very true, and it is most admirable and at first was a mystery to me that I should hear a whole concert of chords together at the end of a pause, but he showed me that it was only when the last notes were fifths or thirds one to another, and then their sounds like an Echo did last so as they seemed to sound all together. The instrument is open at the end, I discovered; but he would not let me look into it, but I was mighty pleased with it, and he did take great pains to shew me all he could do on it, which was very much; and would make an excellent concert, two or three of them, better than trumpets can ever do, because of their want of compass.” Pepys's mystification would not have been so great at the vibration of the natural harmonics had he but been able to satisfy his curiosity by peering inside the instrument and seeing the sympathetic strings there. But before going into the history of the instrument it will be interesting to notice that a concert, such as the diarist thought advisable, was actually advertised. In the *London Gazette* for February 1-4, 1674/5 (No. 961), was the announcement: “A Rare Concert of four Trumpets Marine, never heard of before in *England*. If any persons desire to come and hear it, they may repair to the *Fleece Tavern* near *St. James's*, about two of the Clock in the afternoon every day in the week, except Sunday. Every concert shall continue one hour, and so to begin again. The best places are one shilling, the other sixpence.”

Although the Trumpet Marine was an amusing novelty when it was first introduced into England, it had passed through more than five centuries of usefulness. A representation of the instrument on the coping-stone over the door of the Abbey of Vezelay dates from the Twelfth Century; it is

mentioned in a Fifteenth-century manuscript of Froissard ; and when printed books became fairly common, accounts of it multiplied. Virdung gives an account and an illustration of it in 1511, and Agricola, in his *Musica Instrumentalis Deudsch* (1545), prints amusing metrical hints on its handling, and suggests that letters be painted on the fingerboard to assist the performer in finding the positions of the notes. The *Dodekachordon* of Glareanus (1547) gives a very full description.

It would be very unsafe to give to any particular country the credit for having invented or evolved the Trumpet Marine ; but judging by the popularity it enjoyed in Germany very early in history, it would not be too speculative to look for its place of origin in that country. From the Thirteenth Century to the Sixteenth it was in great favour there—in the hands of the masses as well as in the study of the physicist. By the third quarter of the Eighteenth Century it had penetrated into every corner of Europe—and yet, to-day, it seems as little known as if it had belonged to the antiquity of Ancient Assyria.

In physical respects the Trumpet Marine, or Tromba Marina, as it was more generally known on the continent of Europe, consisted of a long, narrow, triangular box running in a gradual taper from its open base to the head or peg-holder. Perhaps the best description of it would be that it was constructed of three long (often six or seven feet) boards each in the shape of an isosceles triangle, so put together that the open end showed an equilateral triangle. It was, in the first stage of its career, provided with a single string which passed over a bridge that was one of the characteristic features of the instrument. This bridge, or shoe, as the old Germans called it, was curved in shape, one of its feet resting firmly on that side of the box which formed the belly, while the other foot, very slightly shorter, lightly touched the table. The result of this unequal pressure was to cause the vibrating string to set up a rattling between the short foot and the belly, and give the tone of the Trumpet Marine the peculiar buzzing quality that was its particular feature. Sometimes a morsel of ivory, glass, or metal was fixed to the loose foot of the bridge, the vibration of which, enhanced by a piece of glass let into the belly under the foot and against which it rattled, still further increased the buzzing effect. The tone that resulted was, according to many

writers, so like that of a trumpet that no further search after the origin of the first half of the name need be attempted. The string was put into vibration with a short bow applied near the bridge. In operation, the instrument rested against the shoulder of the standing performer, its wide end on the ground. The string, which was of the thickness of a 'cello D-string, was stopped lightly with the thumb, and only harmonics were used. This being the case, it produced only the series of notes peculiar to the natural trumpet.

The fact that the instrument was particularly adapted to the production of overtones caused it to be developed, and further strings of varying length and differing tuning were added. These extra strings were not played with the bow, but merely used to vibrate in response to some note produced on the bowed string. Glareanus mentions a two-stringed Trumpet Marine. Praetorius gives the information that the first added string was half the length of the bowed string, thus producing the octave ; but this, of course, was unnecessary, since modification by means of the tuning peg could easily have secured an octave without undue consideration for the length of the string. Praetorius (*Theatrum Instrumentorum*, 1620) gives an illustration of a four-stringed specimen, each string of different length. This particular picture shows the construction of the instrument very well. In Germany the term Tromba Marina seems to have been reserved for the older monochord form, and a variant—Trumscheidt—was used for the three- and four-stringed specimens (*v. Valentin Trichter, Curiöses . . . Exercitien Lexicon*, 1742). The sympathetic strings that interested Pepys so much were often placed inside the sound-box, and thus produced very peculiar effects from no apparent cause. Vidal speaks of such an example in the Conservatoire of Paris, and another with forty-two sympathetic strings is in the Victoria and Albert Museum, London. The present writer remembers having seen a very fine collection of these quaint instruments in the museum of Dr. D. F. Scheurleer at The Hague.

The tone produced by the Trumpet Marine varied with the skill of the performer, and judging by the widely different opinions expressed by many writers, one is forced to the conclusion that the skill of the performers varied too. The combination of the floating tone produced by harmonics with

the rattling of the loose foot of the bridge must have been very original, and need not have been at all unpleasant. When Paganini removed three strings from his violin, and played harmonics, he merely converted his instrument into a small Trumpet Marine in effect; for the tension of the single string (G) depressed one side of the bridge only, leaving the other foot fairly loose and capable of independent vibration. Who knows how far the peculiar effects produced by the great violinist were due to such physical causes?

A great many improvements were introduced, but the present-day importance of the instrument will not merit more details being given under this head. The uses to which the Trumpet Marine was put were many and varied. Its social status fluctuated in different centuries, and those to whom it appealed ranged from the wandering vagabond to the ducal minstrel. In 1619 Praetorius said that "the minstrels carried it about the streets"—yet at the same time it was being used in the laboratories of the serious students of acoustics. One of the most dignified of its uses was to fill a part in the musical service of the nunneries. In this environment it probably took the place of the inaccessible wind-instruments, and it was employed in complete sets of three or four. In the hands of a careful player—one whose hand on the bow was not too heavy—the tone must have been eminently suited to accompany the vocal *ensemble*. Personally, I see no reason why they should have been less musical than, say, the Bass Cornets. In France the Trumpet Marine became very popular, and in 1666 no fewer than six performers on it were on the lists of the French king's musical establishment. Yet more amazing is it to find that as late as 1767 there were still references to it in the French State Papers. Its use in England was, as we have seen, only very slight from the musical point of view—although learned societies made a good deal of it for acoustical research.

TRUMP-MARINE. *v.* TRUMPET MARINE.

TUCK. *v.* TUCKET.

TUCKET: A military call stated by Francis Markham (1622) to have been "a signal for marching used by cavalry." This shows clearly how closely Shakespeare could keep to facts when he introduced technical details: "Then let the trumpet sound the tucket-sonance and the note to mount" (*Henry V*,

IV, 2). The derivation of the term would be through Old Northern French *Touket*, and Old French *Touchet*, a blow, from a Teutonic source (*cf.* German, *Tusch*, a flourish of brass). The *Tucket* may, originally, have been a drum-signal, as the Teutonic word from which it had its name had the sense of "to touch" or "to beat," and especially so since the noun *Tuck* meant a drum-beat (*cf.* the Italian *Toccata*, touched; *i.e.* music touched or struck on a keyboard, as distinct from *Sonata*, sounded, and *Cantata*, sung).

TUT : In lute-playing the Tut was the sudden deadening of a note just played, by damping the vibration of the string with the next finger.

TYMBYR. *v.* TIMBREL.

UT. *v.* ARETINIAN SYLLABLES *and* GAMUT.

VIAL, VIALL. *v.* VIOLS.

VIOLS : A family of bowed stringed instruments that became exceedingly popular in England. Indeed, they became so acclimatised in this country, that their foreign origin, at one period at any rate, was almost lost sight of. The influence they exercised on the history of English instrumental music was very great, and in this class of composition the English use of the Viols even affected continental art. In its commonest form the Viol was used in three sizes and pitches—Treble, Tenor, and Bass—and combined as mentioned in the article CHEST OF VIOLS. The instruments of this family are distinguished from those of the modern violin species by having a flat back, sloping shoulders, C-shaped sound-holes, a tail-piece fixed on a notched pin, and generally six strings. Their tone was soft and sympathetic, eminently suited to the music of the period, and especially well-fitted to be an accompaniment for voices—a use in which the Viols might be profitably revived to-day. The Treble-Viol was the first of the family to disappear before the irresistible invasion of the Violin. Its six strings were tuned in fourths with an interpolated third, as follows :

showing a tremendous range when compared with the modern violin. Possibly the gravity of the bass-string used on the

body-size of the Treble-Viol was too great ; and this circumstance, added to the greater facility with which the violin could be handled, conspired to hasten the demise of the treble.

The Tenor-Viol was tuned a fifth below the Treble :

It was, as John Playford says, “an excellent inward part (*q.v.*) and much used in Consort (*q.v.*), especially in Fantasies and Ayres of three, four, five, and six parts.” To ensure proper resonance for strings of such gravity, the size of the sound-box (body) had to be proportionately greater than that of the modern viola ; and a specimen of the instrument in my possession is in its original condition. This is a very rare state of affairs, since vandal modernisers have been all too busy cutting down the depth of the ribs of the old Tenor-Viols in order to make them as easy of manipulation as the viola. The result of such cutting down was to reduce the air-contents of the body and thus entirely destroy the balance between string-weight and body-resonance. My example is labelled : “William Turner, at ye hande and Crowne in gravelle Lane nere Aldgate London, 1652,” and thus dates from the period of the instrument’s greatest popularity. The marks of the old catgut frets can still be seen impressed in the varnish of the neck. It was the custom to apply frets to all the instruments of the Viol family, even when they were not used Lyraway (*q.v.*), Playford observing that it was “a most sure and easie way for the first entring of Scholars, and after, to cut them off when they become perfect in the knowledge of all the several notes.” Certain it is that the difficult divisions of Christopher Simpson could not be played easily with frets in the way of free movement for the left hand.

The Bass-Viol, or Viola-da-Gamba (leg-viol), because it was played between the legs of the performer, was used in three different sizes according to the particular purpose for which it was required. These were known as the Consort-Viol, the Division-Viol, and the Lyra-Viol (see these three headings). The tuning of the Consort-Viol was like that of the Treble-Viol, but an octave lower. The Lyra-Viol, of course, was tuned to

TENOR VIOL, by William Turner, London, 1652

In the author's possession

Size : Back, $16\frac{1}{2}$ in. ; Greatest Breadth, 9 in. ; Length over all, $28\frac{1}{2}$ in. ; Finger-board, $10\frac{3}{4}$ in. ; Ribs, $2\frac{3}{4}$ in Left Sound-hole, 2 in. ; Right Sound-hole, $2\frac{1}{4}$ in.

the chord indicated in each piece of music written for it and played from Tablature (*v.* LYRAWAY).

Each string of the Viol had its own name, counting from the highest downwards, as follows: Treble, Small Mean, Great Mean, Counter-Tenor, Tenor, and Bass.

The uses to which the Viols were put in England were of great interest and importance. Chronologically the predecessors, and later on for a time the contemporaries, of the violin family, though historically and structurally they had less to do with their successors, the Viols—in all probability introduced into England from the Netherlands—enjoyed a vogue here unequalled in any other country. Nowhere in Europe were the Viols clung to so tenaciously, and nowhere were they given up in favour of the violins with greater reluctance. The English performers brought their virtuosity to a very high pitch, and many foreign students came to England to perfect themselves in the art of Viol-playing. For this purpose Maugars came from France, Paul Kress, David Adams, Vogelsang, August Kuehnel, and others, came from Germany. At this period the technique of the English gambists exceeded that possessed by those of any other country, and the music written here often asks for great dexterity. Most of the musical publications at the beginning of the Seventeenth Century were arranged so that the Madrigals and Ayres which they contained could be performed equally well on the Viols. The decline of the Madrigal and the rise of technique soon made the composition of special music for the instruments of the Viol family an absolute necessity. At first the old vocal music sufficed and it was used for some time; but the advent of the craze for Divisions (*q.v.*), and the successive development of the In Nomine and the Fancy (*q.v.*), provided music to meet the popular demand. So rapid was this development of purely instrumental music that scarcely a single generation separated the time when the violist was compelled to play a well-known song if he wished to have a solo, from the period at which elaborate suites and fantasias were being written on an almost wholesale scale, specifically for each and every member of the Viol family, and for all of them in consort. Anthony Holborne, only four years before James I ascended the throne, issued a typical specimen of the former class of composition—music that could be played on

wind-instruments, stringed-instruments, or sung. Giovanni Coperario (*né* John Cooper), Alphonso Ferabosco III, and their numerous contemporaries, were writing true Viol music, intended for this one purpose only, under the very next sovereign.

The State Papers preserved in the Record Office and a few public and private collections of manuscripts afford all the information necessary to give us a good idea of the instrument's English history. In 1526 the list of the royal musicians of Henry VIII contained fifteen trumpets, three lutes, three rebecks, three taborets, a harp, two viols, four drumslades, a fife, and ten sackbuts; but whether these instruments were ever used in combination is very open to doubt. The moral to be drawn from this list lies in the fact that only two viols appear in a list containing a great amount of percussion and brass. And even these two viols were played by foreigners—two Flemings named Hans Hossonet and Hans Highorne—at a salary of “xxxiiis. iiij*d*. paide monethly” each (*Egerton MS.* 2604; 17 Henry VIII). Only six years later mention is made of “three of the Viols,” a remark that would point to the probability that there were more than three of them by then. The new names are now Italian. During the reign of Henry VIII a constant stream of embassies passed between England and Italy—and particularly Venice—and it is not at all surprising that many Italian musicians should be preferred to positions in the royal music. Henry had a very highly developed taste in the art, and his discrimination was well known. Therefore he rarely allowed a good player to enter any other service once he had formed a good opinion of the foreigner's performance. The Audit Office accounts for 1540 state that “Alberto da Venitia, Vincenzo da Venizia, Alexander, Ambroso, and Romano da Milano, and Joan Maria da Cremona” were appointed as “Vialls” during the king's pleasure at a wage of twelve pence per day. Henry's collection of viols was of very respectable size and quality (*v. Harleian MS.* 1419A). Exactly when English players first appear in the royal band cannot be fixed with certainty; but the first native name I have come across in the State Papers is that of Thomas Kentt “lately admitted to the Vialles in place of greate Hans deceased” (1549; Lord Chamberlain's Records). In 1554 (December 23) Thomas Browne was engaged as one of the

“Vyalls.” In 1555 the word “Violon” is used, and we find it frequently during the reign of Mary Tudor and Elizabeth. These entries have caused many authorities to come to the conclusion that the modern violin was used in England thus early in the Tudor era. I shall return to this point later; for the moment let it suffice that I consider the term “Violin” to have been applied to the smaller Viols—Treble and Tenor—thus giving the Italian diminutive termination its proper sense, while the word “Viol” was employed for the larger, or bass, viol.

The accession of Queen Elizabeth and the general elevation of the musical plane in England had their effect upon the viols. Their use became more extended, and the excellence of the composers of the period settled the artistic future of the instrument. At Court the Italian performers were still employed, but English names began to become more and more frequent. The entries in the State Papers of that period provide a good deal of very interesting information of every kind. Thus, *Additional MS.* 5750 (British Museum) tells us that a “sett of Vyalls” cost the Queen “the some of 15 poundes.” It is also instructive to note that the Italian players, who have hitherto been described as “Vials” or “Violons,” appear in 1559 as “Violetts.” There can be no doubt that the same Viols were meant in each case, and that “Violet” was used as a diminutive for Viol just as was “Violon.” The prices paid by Elizabeth for a set of Viols seems to have been a usual one, for the “Account Book” of Trinity College, Cambridge, for 1595 gives the item: “xiii*li* for a sett of Vialles.” The cost of “viall strings and mending ye College Instruments” was twelve shillings. Sir Thomas Kytson, of Hengrave Hall, paid 20*s.* for “a treble violin” in 1592, and when he died he left “six violenns.” I have no doubt that Treble and Tenor Viols were meant in each case.

Towards the end of Elizabeth’s reign the way in which the Viols were used is very interesting to note. Besides the work of 1599 already alluded to (*Pavans, Galliards, Almains, and other Short Aeirs both Grave and light, in five parts, for Viols, Violins, and other musical Winde Instruments*) Anthony Holborne published a *Cittharn Schoole* in 1597, which contains, among other compositions, twenty-three pieces for the Cittern in Tablature, with an accompaniment in ordinary notation

for the Bass-Viol, and two for the Cittern accompanied by Treble, Tenor, and Bass Viols. In this case also, I am of opinion that Holborne meant Treble and Tenor Viols when he spoke of "violins" on his title-page. Another work which shows a typical use of the Bass-Viol as an accompanying instrument, is John Dowland's *Second Booke of Songs or Ayres . . . with Tablature for the Lute or Orpherian, with the Violl de Gamba* (1600). At the end of the last Tudor reign a new figure of great importance in the history of the Viols rose above the musical horizon in the person of Alfonso Ferabosco II (born c. 1580). He was "an excellent composer for instrumental Musick" (Anthony Wood), and was one of the first to write music Lyraway (*q.v.*). His importance lies in the circumstance that he, more than any other one musician, laid the foundations for that English school of Gambists and writers for the instrument which, according to Maugars (one of its most celebrated foreign pupils), surpassed all others in the world.

The question of the use of the modern violin in Tudor times is interesting and worthy of being cleared up. Carl Engel thinks that violins were used together with viols, lutes, *etc.*, from the time of Elizabeth onwards; the Rev. F. W. Galpin says: "Violins, as distinct from Viols, had already been included in the King's music; and at the time of Henry the Eighth's death they were played by six Italians from Venice, Milan, and Cremona. . . ." These two quotations are representative of many; and it may be well to consider a few pieces of evidence in opposition to these statements. For true violins to have been firmly established as orchestral instruments by the middle of the Sixteenth Century, would have made it necessary for the very earliest specimens to have been introduced. It is, I think, fairly well established that no instrument of the modern violin-family was made before the middle of the Sixteenth Century. It is, of course, quite possible, chronologically, for early examples to have been brought to England, especially when we remember how active was the correspondence between this country and Italy during the reign of Henry VIII. But to expect at least six violins to be accepted as an integral part of Henry's orchestra so early in the career of the new instrument is, I think, rather too much. When authenticated cases of their importation are recorded,

the fact is especially noted as something unusual. On March 14, 1637/8 a "Treble Violin bought . . . for his Majesty's service" was paid for with the sum of twelve pounds (Lord Chamberlain's Records of that date), and on January 31 of the same year a similar amount was paid for "a Cremona Violin to play to the Organ." Here, clearly, treble viols are not meant, and this reference is probably the first in which the celebrated products of Cremona are mentioned. These entries occur more than eight decades later than the first mention of "Violins" in the State Papers. Had violins been used in England for so long a time, we should certainly not have had to wait until the mid-Stuart period for famous English performers on it to appear; especially when we remember the state of technical excellence shown by the native violists. How can the fact be explained away that we have to wait until Playford's *Introduction to the Skill of Musick* appeared before we find a picture of the true violin? The confusion, I suggest, was caused by the musicians of Tudor England modifying the Italian diminutive *Violino* for the purpose of naming the "small viol." The Italians themselves used the word *Violino* when referring to true Viols. An Italian chap-book of c. 1550 has on its title-page a picture of an old viol and the name *La Violina, etc.* The circumstance that the early players on the Viols at the court of Henry VIII were Italians, would help to explain the use of the Italian term. Furthermore, before the Restoration the violin was considered to be a far more inferior instrument, socially, than the Viol. Anthony Wood tells us that the gentlemen who attended music parties played on Viols, "for they esteemed a violin to be an instrument only belonging to a common fiddler, and could not endure that it should come among them, for feare of making their meetings to be vaine and fiddling." This being so, would so artistic a pair of sovereigns as Henry VIII and Elizabeth have employed them in their bands? It was necessary for a Charles II with his French tastes to make this innovation, and his imitation of the French king's band of violins was really the first sanction given the newer instrument. And even then many of the more orthodox among the older musicians complained bitterly at the change.

To return to the history of the Viols. The succession of the house of Stuart marked the beginning of the greatest period

for the Viols in England. They came more and more into favour, even usurping the place hitherto held by the lutes. Composers and publishers encouraged the fashion by issuing ever-increasing quantities of music for the Viols. It was part of everyone's education to learn at least one of the instruments of the family, and to play on it at sight (Peacham, *Compleat Gentleman*). The literary works of the Seventeenth Century abound with references to chance visitors being asked to take up a Viol and "bear a part" in the consort. This explains the ubiquity of the Chest of Viols (*q.v.*). The manner in which the playwrights of the era helped themselves to the instruments proves how common they were. In *Twelfth Night* (I, 3) Shakespeare gives the sentence, "he plays o' the Viol-de-Gamboys" to prove the culture of one of his characters; and in *Pericles* (I, 1) we have :

You are a fair viol and your sense the strings,
Who, finger'd to make man his lawful music,
Would draw heaven down and all the gods, to hearken.

In George Chapman's comedy *Monsieur d'Olive* (Act III, 1606) a dandy of the period says : "Here shall stand my Court Cupbord, with its furniture of Plate : Heere shall runne a Winde Instrument : Heere shall hang my base viall : Heere my Theorbo : and heere will I hang myselfe." Middleton, in *A Trick to Catch the Old One* (1608), says : "She now remains in London to learn fashions, practise music ; the voice between her lips, and the viol between her legs, she'll be a fit consort very speedily"—a reference that shows how early the ladies played the Gamba in Stuart England. With this evidence of the instrument's popularity it will not be necessary to draw on the State Papers for further proofs. Suffice it to say that the *Calendar of State Papers* contains countless entries concerning the appointment of violists, their work, and their instruments.

During the Commonwealth the Viols suffered no neglect, in spite of the historians who would have us think of this as a mirthless and songless period. The Puritan wife of the Puritan soldier, Colonel Hutchinson, said of her husband that "he had a great love to music, and often diverted himself with a viol on which he played masterly." Of course, there were a few fanatics who thought that because the puritanical decree

went forth against the ornate Cathedral music, all music should be banned. The notorious Solomon Eagles, who became a Quaker in 1660, burned his Viols and music. But the action of a few men like Eagles did not prevent music being cultivated very largely during the Commonwealth, though more space cannot be spared for a history of the music of those famous eleven years than suffices to draw attention to the musical publications that appeared. In 1653 East's *Fantasies for Viols* were issued. Roger L'Estrange's description of a private concert attended by Cromwell will be enough to show that the Protector did not ban music secularly, and since it includes references to the Viols it is worth quoting once more : " Being in St. James his Parke, I heard an Organ Touched in a little Low Room of one Mr. Hinckson's (John Hingston). I went in, and found a Private Company of some five or six Persons. They desired me to take up a Viole, and bear a Part. . . By and By (without the least colour of a *Design* or *Expectation*) in comes *Cromwell*. He found us playing and (as I remember) so he left us."

With the accession of Charles II the violin became a more serious competitor of the Viol. The formation of the select band of violins, already mentioned, gave the *coup-de-grâce* to the Treble and Tenor Viols, at any rate. The increasing number of the violinists required for the royal music and that of the nobility, offered a new incentive to musicians to take up the newer instrument. With artists like Davis Mell to imitate and teachers like John Banister (the Elder) to learn from, a school of violinists arose in England that compared very favourably with the Viol-players of two or three generations earlier. The Bass-Viol alone persisted in public favour, and it was a full century more before the Gamba could be said to have become antiquated. Samuel Pepys gives a few pieces of interesting information in his *Diary* concerning the Bass-Viol of his time. In 1663 he went to his Viol-maker in Bishopsgate Street, London : " his name is Wise, who is a pretty fellow at it." He paid three pounds for his instrument,— " besides the carving which I paid this day 10s. for to the carvers." The diarist also makes frequent mention of ladies playing the Gamba. On February 19, 1663/4, Mrs. Jaggard played " . . . but so well as I did not think any woman in England could and but few Maisters." The Bass-Viol was also

used in the Chapel Royal, and at the concerts of Thomas Britton, the musical coalman, the Gamba was extensively used.

Although it is not intended to make of this work one of biography, it is necessary to mention two men who played a very important part in the later history of the Bass-Viol. Each was representative of a certain class of composer and performer : the one appealing to the serious musician, and the other—though himself a great musician—to the more popular taste : one of them Christopher Simpson, and the other John Jenkins. The former by his sound musicianship and amazing technique said what was probably the last word in the development of viol-music. He published a good deal of educational music, the chief being his *Compendium* (1665, 1667, and seven later editions, the last appearing near the end of the Eighteenth Century), and his *Division-Violist* (first edition, 1659), a purely technical work on the Viol and its handling in Divisions. Jenkins was typical of the “ old-fashioned school,” and though not so profoundly learned as Simpson, secured the affectionate regard of all his contemporaries by his geniality, originality, and charm.

The Bass-Viol, the last of a great and noble race, died none too easily. Thomas Mace, in the last quarter of the Seventeenth Century, did his utmost to defend the older instrument against the “ scolding violins,” but it was too late. A few good players still remained, and a post was open for a violist in the Chapel Royal until the middle of the Eighteenth Century ; but the glory had departed, and the place of the Gamba was taken by the bass of the violin family.

VIOL DE GAMBOYS. v. VIOLS.

VIOLET, VIOLLETT : Undoubtedly derived from the Italian *Violetta*, a Small Viol. Although the meaning of the term is quite clear, it is not always easy to know exactly what instrument is referred to when the word was used in the Seventeenth Century. In its earliest uses this diminutive of *Viola* was certainly applied to a high-pitched treble-viol ; later it named the small French violins, possibly also the Kits. It is to be found occasionally as a designation for the Viola d'Amore, but this last-named instrument was far too little used here to require special treatment at this place. Why he should have

done so is not clear, but Leopold Mozart referred to the *Viola d'Amour* as the English Violet.

VIRGINAL: A keyboard instrument in a rectangular case, popular, roughly speaking, from about 1500 to 1700. The defects in the methods of tone-production in the Clavichord (*q.v.*) caused a different system of string-vibration to be developed; and undoubtedly taking the plectrum-plucked Psaltery as a model, the experimenters of the early Fifteenth Century replaced the tangents of the Clavichord with small quill points so mounted that they twanged the strings that were stretched above them. These quills were inserted into strips of wood known as Jacks, which in their turn stood perpendicularly at the end of the balanced keys. On the latter being depressed, the Jack was raised carrying the quill with it, until the plectrum was forced past the string, which was thus set in vibration. In the descent of the Jack a small hinged and sprung portion at its head turned aside to allow the quill to return without again twanging the string; and a piece of cloth at the top of the Jack damped the tone as soon as the key reached its position of rest. This method of producing vibration in the keyboard-instrument family was employed in several of its members which differed from the Virginal chiefly in size, shape, and efficiency. Crow-quills were the commonest plectra used, though strips of hard leather, whalebone, or metal were used at different periods. The compass of the Virginal also varied at different times, and one or two typical specimens will be referred to later. In the Seventeenth Century a second, smaller, Virginal was added to the larger one, and placed on the top of the case, as was sometimes done in the case of the Clavichord. This auxiliary instrument was tuned an octave higher than the other and was used together with it, thus most probably explaining the expression "a pair of Virginals." Later the added octave strings were placed in the case under the ordinary strings. These latter, again profiting by the development of the Clavichord, were often bichord or trichord. In the Harpsichord, of course, the octave strings were a permanent feature. One specimen of double Virginal known to the writer had a compass of four octaves on each of the two keyboards, ranging from the second C below middle C to the second octave above. The

auxiliary keyboard, which was detachable, operated strings tuned an octave higher.

It would be interesting, from an antiquarian point of view, if it could be definitely proved that the inscriptions on the walls of the Leckingfield (Yorkshire) Manor-house dated from the reign of Henry VII. If this were decided—though there is no good reason for doubting it even now—then we possess in England the first reference to the Virginal. The verse in question reads :

A slac stryng in a Virginall soundithe not a right,
It doth abide no wrestinge it is so loose and light ;
The sound-borde crasede, forsith the instrumente,
Throw misgovernance, to make notes which was not his intent.

Henry VIII himself played on the Virginal, besides employing professional performers. *Egerton MS.* 2604 (British Museum) records payment to “a Virginal player” (c. 1525), the musician probably being John Heywood, or Haywood, who appears in the State Papers for 1520, first as a singer, and later as virginalist. He was still active under Mary Tudor when he, Antony Chaunter, and Robert Bowman are entered together as “Players on the Virginals” with a salary of £92 11s. 8d., presumably between them. In the book containing Henry the Eighth’s Privy Purse Expenses (N. H. Nicholas, 1827) is the entry for April, 1530 : “Item the vj daye paied to William Lewes for ii payer of Virginalls in one coffer with iiij stoppes, brought to Grenewiche iiil*l*. And for ij Virginalls in one coffer brought to the More iiil*l*. And for a little payer of Virginalls brought to the More xxs.” There can be no doubt that the word Virginal had by now become very loosely applied to other instruments with keyboards. The fact that these entries refer to “pairs” of Virginals need not, as we have seen, prove that anything but Virginals were meant ; but the “iiij stoppes” are more difficult to explain away. We can only suppose that some such device as was used in the later Harpsichords was employed in these instruments. A warrant in the Lord Chamberlain’s Records of April 10, 1558, is very interesting reading, for it deals with the handing over of “as much grene velvett as will suffice for the covering of one pair of Virginals and as much grene satten as shall serve to lyne the same, with passamayne lace of silver for the garnishing and

edginge of the same. And that ye paie unto the said John Grene as well for two cases of tymber covered with lether and lyned, th' one being for the aforesaid Virgynalls."

During the reign of Elizabeth the Virginal probably enjoyed its greatest vogue in England. The Queen herself—and, indeed, every lady of education—played on the instrument, and several contemporary pieces of evidence point to the fact that excellence in performance was keenly sought after. Elizabeth, in an interview with Sir James Melville, the envoy from Scotland in 1564, was anxious to know if Mary Stuart "or sche, played best. In that I gaif hir the prayse." But the Scot's private opinion was that Elizabeth played passably for a queen, but that she performed only when she "was solitary to shun melancholy." The Virginal supposed to have been Queen Elizabeth's was an Italian instrument of about 1570. It contained fifty Jacks and quills, and had a range of four octaves and a semitone, from B to C. When in use at its own period, this Virginal had the lowest string tuned down to G (a common procedure in those days). The instrument is now in the Victoria and Albert Museum. In the case of a German Virginal of c. 1600 (also in the same collection) the compass was three octaves and a tone (from G to A), the highest G-sharp being omitted—another common practice.

The State Papers of Elizabeth's reign contain many interesting references showing that the instrument was a regular feature in the official music-making. The Lord Chamberlain's accounts for Michaelmas, 1582, for example, authorise a warrant for giving crimson velvet for covering and lining the queen's keyboard instruments, and orders payment for covering four pairs of Regals and Virginals with velvet and embellishing them with silver and gold lacquer. In 1593 entries of a like nature are to be found. In that year a list "of all in the offices in England with their fees" is given, and includes "Players on the virginalles 3, fee to every of them, £50." In 1595/6 the payment is ordered for "fourteen yards of carnation velvet and eight yards of wrought velvet black and ash colour, employed and spent in covering of our Virginals, and for twelve yards of grene velvet to cover a greate instrument, all being garnished with lace of gold and silver and silke riben and sewing silke to them" (Lord Chamberlain's Records, Vol. 797).

At the turn of the century the Virginal was a frequent piece of furniture in the barber's establishment, and "barber's virginal" was synonymous with whatever was common property, a distinction which it shared with the Cittern (*q.v.*).

If the word Virginal was loosely applied during the reign of Henry VIII, it was still more so during those of the Stuart kings. It is, I think, beyond doubt that many of the instruments alluded to in this era were Spinets or Harpsichords, though England seemed to cling affectionately to the older names. At the same time there were such instruments as true Virginals still in use, side by side with the Harpsichord; for as late as the reign of Charles II (1663) we find the two instruments named together in an entry in the Lord Chamberlain's Records. In 1664 Captain Cooke, Master of the Children of the Chapel Royal, received £78 "for teaching of the children of the Chappell . . . and for strings for violins, lutes, and virginals. . . ." In 1665/6 Giles Tomkins was engaged as "musician in ordinary to his Majesty for the Virginalls in the place of Richard Deering, deceased." Another familiar name appears in the entry for January 7, 1667/8, when Christopher Preston was appointed musician for the Virginal "and private musique without fee in the place of Dr. Christopher Gibbons, to come in ordinary with fee after the decease of the said Dr. Gibbons. . . ." The latter celebrated musician received £46 per annum as virginalist, and made Preston wait until 1676 for his post. John Blow was appointed as a performer on the Virginal in 1668/9, while Henry Purcell was given the post of keeper of the king's instruments in 1683/4—his charges including Virginals. It will be seen that some of the most famous names in Seventeenth-century English music are to be found connected with this instrument. Before leaving the official records we must note that in 1696/7 (William and Mary) Dr. John Blow is mentioned again as a virginalist, and in 1699 as one of the "tuners of the regalls, organs, virginalls, etc."

In the Seventeenth Century the Virginal no doubt occupied the position, in the domestic life of England, of the pianoforte of to-day. At the same time it must not be forgotten that it could be far more easily dispensed with in those days than could the pianoforte at the present day. The practice of accompanying the voice with the lute had not yet died out, and the popularity of the viols was still great. Towards the

end of the century, when lutes and viols had gone the way of the "good old times," the instruments of the violin family were employed in other directions, leaving the keyboard instruments as the means of accompaniment. At the period of the Great Fire of London there must have been a Virginal or similar instrument in almost every house. Pepys, describing the conflagration in his *Diary*, writes under date September 2, 1666: "... River full of lighters and boats taking in goods. . . . and only I observed that hardly one lighter or boat in three that had the goods of a house in, but there was a pair of virginalls in it " (see also SPINET, HARPSICHORD, JACK, and WREST).

VOLTE: An ancient dance-form that originated as a variety of the Galliard (*q.v.*) and became very popular in England. So great a favourite did this dance become in the days of Elizabeth that the Queen herself fell a victim to its attractions and danced it frequently. Mary Stuart was also a lover of the form, but, although she showed surprising agility in its performance, she "did not dance so high as her royal cousin of England" (Melville). The "height" of her dancing referred to the fact that in this successor of the Galliard the cavalier turned his partner (whence the name) and assisted her to leap high in the air; and the excellence of the dancer was gauged by the height of the leap. Such wild springing, of course, made of the Volte a butt for the censure of moralists, and a vigorous campaign was waged against it both in Germany and France. Sermons were preached and pamphlets written condemning the form, and the Volte did not survive very long on the Continent. Whether its early abandonment there was caused by the outcry of the puritans or by the too exacting nature of its steps, cannot be determined with certainty. The feature which caused the condemnation of the Volte on the Continent remained one of its chief characteristics in the merry England of the last of the Tudors. Shakespeare speaks of it in *Henry V* (III, 5).

They bid us to the English dancing schools,
And teach lavoltas high and swift corantos.

Robert Greene's play, *The Honorable History of Friar Bacon and Friar Bungay* (first acted in 1591), contains the lines:

Like Thetis shalt thou wanton on the waves,
And draw the dolphins to thy lovely eyes.
To dance lavoltas in the purple streams.

Ben Jonson has it that "Ixion is turned dancer and leads lavaltoes"—a line which shows that the dance lived up to its name (*i.e.* turning dance). These quotations, too, show the different forms that the name had in England; its curious appearance being accounted for by the fact that the French definite article was retained as part of the name.

The popularity of the Volte continued in England until Stuart times, for we are told that James I and his queen were excellent in these "feats of capering." But although the dance may have survived later, there is not much music for it to be found in the works of the later Stuart writers. The examples which have made us familiar with this form in England are nearly all to be found in the Elizabethan books, and after the middle of James the First's reign the Volte was of rare occurrence in native music. The Fitzwilliam Virginal Book contains it (William Byrd); the works of Thomas Morley also include the "lavalto"; and seven specimens may be seen in Robert Dowland's *Varietie of Lute Lessons* (1610). Remembering the frequent use made of the word by the writers of the period, the comparative paucity of Voltes in the musical publications may occasion some surprise. But it may be that the dance did not absolutely need special music, and that it could be executed to Galliard-music of sufficient spirit, just as the Canary could have been danced to Jig-tunes.

Arbeau (*Orchésographie*, 1588) would be the best authority on the Volte in its original form, and he states that its measure and rhythm were identical with those of the Galliard, and that it was very much favoured by the Provençals. Mersenne's *Harmonie Universelle*, 1636, contains specimens of the dance as it was written in France, and Besard's *Thesaurus Harmonicus*, published in Cologne (1603), give no fewer than thirty-four examples. In Germany it was mentioned by Praetorius in 1612, and Fuhrmann's *Testudo Gallo-Germanica* (1615) has eleven Voltes.

It will be seen that even the German publications containing the form were influenced by French fashions, and there can be no doubt that the dance came to England also direct from France.

WAIT, WAYTE, or WAYGHTE: An instrument dating from the Middle Ages and used by the watchmen who waited at the

gates of castles and cities. It no doubt derived its name from that of the watchman himself (*v.* WAITS) and it is mentioned very early in the State Papers. The Wait was a Shalm (*q.v.*) : either that instrument itself or some slight variation in pitch, size, or (and) tone-quality. The term was used quite late, and even in the Chapel Royal a place was found for the instrument it designated ; the Cheque-Book of that institution describing Dr. John Wilson as a “ Musician for the Waytes ” in 1641. Rimbault is in error when he says that the name was never used in the singular number. It is so used, for in *Egerton MS.* 2604 (British Museum) “ a waite ” is mentioned, as also in a Statute of the Thirteenth Century. The players upon this primitive oboe were often called Waitmen.

WAITS : Originally the watchmen who kept the gates of a city or castle, and who announced the hour of the night on a pipe of the Shalm type. The name is to be derived from the same source as “ Watch ” (Middle English, *Waitan* ; Anglo-Saxon, *Wacan* ; *cf.* German, *Wacht*), and an early meaning applied to the verb “ to wait ” was “ to watch.” These night-watchmen date from very early times—certainly from the Thirteenth Century. During the reign of Edward IV (1461/83) there was “ A Wayte that nightely from Mychelmas to Shreve Thorsdaye, pipe the watche within this Courte fowere tymes ; in the somer nightes iii tymes, and makete Bon Gayte at every chamber, doore, and office. . . . ”

Although in the Middle Ages only playing some sort of signal on their pipes, the Waits later on became more ambitious musically, and performed all the popular melodies of their own period. In the Fifteenth and still more so in the Sixteenth Century, they were looked upon as proficient and well-organised musicians, having become, in effect, municipal bandsmen. They drew their salaries from the towns’ coffers, and assisted musically at all civic gatherings. They were never to be confounded with the itinerant begging musicians, and to prevent all risk of losing the respect that the dignity of their calling merited, the Waits were early formed into conservative guilds. Apprenticeship was common, and no one was admitted into their profession without acquitting himself well in very searching tests.

It will not be necessary to make long quotations from the

records dealing with the Waits and their duties. A few representative entries will be sufficient to show that they were an accepted feature in the social life of the cities. In the Privy Purse Expenses of Henry VIII are noted two payments to the "Waytes at Caunterbury" (1532) in reward for playing during the King's progress through the Cathedral city. When Edward VI passed through the City of London, on one occasion, the Waits were stationed at St. Peter's Church in Cheapside (where now the plane-tree flourishes). At about the same period there are references to the Waits doing duty for the Mayor and Sheriffs. In the reign of Elizabeth there is an entry respecting the retirement of one Jeffrey Foster, a City Wait, and the relinquishment of his chain of office. When the Queen traversed Cheapside in 1558 she was greeted by "the Waytes of the Citie which did give a pleasant noyse with their instruments as the Queen's Majesty did pass by" (and in reference to this use of the word Noise, see the article NOISE OF MUSIC). It must be clear from these documents (relating to the activities of the Court of Common Council) that the Waits enjoyed a certain status of which they were very proud. One entry in particular shows that they were actually employed as are many military bands to-day: "1642. Ordered that the City Waits shall cease to play at the Royal Exchange on the Sundays as heretofore hath been accustomed, but shall perform the said service every holiday hereafter at and for the time accustomed"—the civil disorders of that year probably causing the curtailment. As late as 1802 the City Waits numbered eight.

There are likewise many indications that the Waits assisted in Church services and processions, as choristers as well as in the capacity of instrumentalists. The *Diary* of the London citizen Machyn (printed by the Camden Society) contains many references to such employment. For example, when speaking of the Parish Clerks' procession on May 27, 1555, he says: ". . . ther was a goodly Masse be hard, . . . and the whettes playing round Chepe and so to Ledynhall"; and already in 1554, "the 25th day of Juin anodur Masse kept at the Grey-frers for the sextons of London and after precessyons with the whetes plahyng, and clarkes syngyng thrug Chepe-syd. . . ."

Naturally, the Waits of the City of London were kept in

such state as was in keeping with the dignity and magnificence of the first city in the kingdom. They were richly liveried and their "Chains of Office" were wrought of silver. So highly esteemed were the Waits at the end of Elizabeth's reign that Thomas Morley, dedicating his *Consort Lessons* to the Lord Mayor, says: ". . . as the ancient custom hath been to retain excellent and expert musicians to adorn your Honour's famous feasts and solemn meetings, to these your Lordship's Waits I recommend the same to your servants' careful and skilful handling." It is highly probable, however, that by the Sixteenth Century the Waits had entirely ceased to be what they originally were—*i.e.* night-watchmen who piped the hour—and had become, as was the custom all over the continent of Europe, the town band. What applies to the Waits of London can be repeated, *mutatis mutandis*, in the case of other towns and cities. The period during which the Waits really flourished was from the beginning of the Sixteenth to the end of the Seventeenth Century. In some towns they lingered on in reduced numbers and limited use, until the police took their place as watchmen, and military bands fulfilled their musical function.

At the time during which the Waits performed as organised bodies of musicians they were part of the life of the city, and the allusions in contemporary literature to their music show how great a part they played in the entertainment of our ancestors. Whetstone's translated play of *Promos and Cassandra* (used by Shakespeare in *Measure for Measure*) mentions them in 1578: "Erect a stage that the Waits in sight may stand." From a play of James Shirley it appears that the Waits could be hired for private merrymakings: ". . . keep our Wedding at my own house at Croydon. We will have the City Waits down with us" (*v. also WAIT*).

WHIFFLER: The player on a kind of pipe (Whiffle), who led the way in a procession as an usher. The instrument probably received its name from the puff of wind, or whiff, required to produce its music, and the pipe named its player. The fact that the Whiffler led a procession soon extended the meaning of the term, and it became applied to any herald who preceded a notability, whether he actually played on the Whiffle or not. Shakespeare uses the word in the Chorus to *Act V* of *Henry V*

in a metaphorical sense : “. . . the deep-mouthed sea, Which like a mighty whiffler 'fore the king, Seems to prepare his way.” In one of Bishop Hales's sermons we meet with it again when he says : “. . . if there do but an earthly prince come over, what pressing there is to see him ! So as there is need of ushers and whiffers, to stave off the multitude.” In the *Diary* of Henry Machyn (Camden Society) we read of a procession in the City of London in which there were twenty-eight “wyfflers in velvet cotes and chaynes of gold with white staves in their hands.” The Whiffler was an indispensable figure in that essentially English diversion, the Morris Dance (*q.v.*).

WHITTLE : A colloquial term for the Tabor-pipe (*q.v.*). Tabor and Pipe were often called “Whittle and Dub,” but whence Whittle is to be derived is not clear. The only suggestion I can offer is that it was connected in the mind of the Sixteenth-century merrymaker with the small pipe known as the Whiffle (*v.* WHIFFLER).

WREST : To wrest, when used in connection with music, meant to tune the strings, particularly of the keyboard instruments ; the verb having been evolved from the mechanical action of the tuning-key on the pins or pegs which held the strings. The Middle English *Wresten*, from the Anglo-Saxon *Wraestan*, signified “to turn or twist forcibly,” and this perfectly described the movement used in tuning. At the turn of the Fifteenth Century we read an interesting reference to the word :

The Clavicorde hath a tunely kynde,
As the wyre is wrested hye or lowe.

Any instrument mystunyd shall hurt a trew song,
Yet blame not the Clavycorde the wrester doth wrong.

Here we find the noun which was derived from the verb. Another reference of about the same era reads :

Who pleythe on the harp he should play trew ;
Who syngeth a song, let his voice be tunable ;
Who wrestythe the clavychorde, mystuning eschew.

The satirical Skelton, in his *Colin Clout*, shows that the word was used in connection with the harp as well as the keyboard instruments :

My penne now will I sharpe,
And wrest up my harpe,
With sharpe twynkyng trebelles.

Shakespeare has a figurative use for the word in *Troilus and Cressida* (III, 3) :

. . . but this Antenor,
I know, is such a wrest in their affairs,
That their negotiations all must slack,
Wanting his manage. . . .

The employment of the word "slack" in a breath with "wrest" explains the force of the metaphor.

Although To Wrest and Wrester have given place to the more modern though not more happy, To Tune and Tuner, the word has not entirely fallen into disuse ; it survives in the language of the present-day pianoforte manufacturer, who still speaks of the Wrest-plank and Wrest-pins.

PRINTED IN THE UNITED STATES OF AMERICA

CONSTITUTION OF THE UNITED STATES

The Constitution originally consisted of a Preamble and seven Articles, and in that form was ratified by a convention of the States, Sept. 17, 1787. The Government under the Constitution was declared in effect on the first Wednesday in March, 1789.

THE CONSTITUTION

PREAMBLE

We, the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

ARTICLE I

Section 1—(Legislative powers: in whom vested.)

All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

Section 2—(House of Representatives, how and by whom chosen. Qualifications of a Representative. Representatives and direct taxes, how apportioned. Enumeration. Va-

4 CONSTITUTION OF THE UNITED STATES

cancies to be filled. Power of choosing officers, and of impeachment.)

1. The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

2. No person shall be a Representative who shall not have attained to the age of twenty-five years and been several years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State in which he shall be chosen.

3. Representatives and direct taxes shall be apportioned among the several States which may be included within this Union according to their respective numbers, which shall be determined by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three-fifths of all other persons. The actual enumeration shall be made within three years after the first meeting of the Congress of the United States, and within every subsequent term of ten years, in such manner as they shall by law direct. The number of Representatives shall not exceed one for every thirty thousand, but each State shall have at least one Representative; and until such enumeration shall be made, the State of New Hampshire

shall be entitled to choose 3; Massachusetts, 8; Rhode Island and Providence Plantations, 1; Connecticut, 5; New York, 6; New Jersey, 4; Pennsylvania 8; Delaware, 1; Maryland, 6; Virginia, 10; North Carolina, 5; South Carolina, 5, and Georgia 3.*

4. When vacancies happen in the representation from any State, the Executive Authority thereof shall issue writs of election to fill such vacancies.

5. The House of Representatives shall choose their Speaker and other officers, and shall have the sole power of impeachment.

Section 3.—(Senators, how and by whom chosen. How classified. State Executive, when to make temporary appointments, in case, etc., Qualifications of a Senator. President of the Senate, his right to vote. President pro tem., and other officers of the Senate, how chosen. Power to try impeachments. When President is tried. Chief Justice to preside. Sentence.)

1. The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six years; and each Senator shall have one vote.

2. Immediately after they shall be assembled in consequence of the first election, they shall be divided as equally as may be into three classes. The seats of the Senators of the first

*See Article XIV., Amendments.

6 CONSTITUTION OF THE UNITED STATES

class shall be vacated at the expiration of the second year, of the second class at the expiration of the fourth year, and of the third class at the expiration of the sixth year, so that one-third may be chosen every second year; and if vacancies happen by resignation, or otherwise, during the recess of the Legislature of any State, the Executive thereof may make temporary appointment until the next meeting of the Legislature, which shall then fill such vacancies.

3. No person shall be a Senator who shall not have attained to the age of thirty years, and been nine years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State for which he shall be chosen.

4. The Vice-President of the United States shall be President of the Senate, but shall have no vote unless they be equally divided.

5. The Senate shall choose their other officers, and also a President pro tempore, in the absence of the Vice-President, or when he shall exercise the office of President of the United States.

6. The Senate shall have the sole power to try all impeachments. When sitting for that purpose, they shall be on oath or affirmation. When the President of the United States is tried, the Chief Justice shall preside: and no

person shall be convicted without the concurrence of two-thirds of the members present.

7. Judgment of cases of impeachment shall not extend further than to removal from office, and disqualification to hold and enjoy any office of honor, trust, or profit under the United States; but the party convicted shall nevertheless be liable and subject to indictment, trial, judgment, and punishment, according to law.

Section 4—(Times, etc., of holding elections, how prescribed. One Session in each year.)

1. The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to places of choosing Senators.

2. The Congress shall assemble at least once in every year, and such meeting shall be on the first Monday in December, unless they shall by law appoint a different day.

Section 5—(Membership, Quorum, Adjournments, Rules. Power to punish or expel. Journal. Time of adjournments, how limited, etc.)

1. Each House shall be the judge of the elections, returns, and qualifications of its own members, and a majority of each shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized to compel the attendance of

8 CONSTITUTION OF THE UNITED STATES

absent members in such manner and under such penalties as each House may provide.

2. Each House may determine the rules of its proceedings, punish its members for disorderly behavior, and with the concurrence of two-thirds expel a member.

3. Each House shall keep a journal of its proceedings, and from time to time publish the same, excepting such parts as may in their judgment require secrecy; and the yeas and nays of the members of either House on any question shall, at the desire of one-fifth of those present, be entered on the journal.

4. Neither House, during the session of Congress, shall, without the consent of the other, adjourn for more than three days, nor to any other place than that in which the two Houses shall be sitting.

Section 6—(Compensation Privileges. Disqualification in certain cases.)

1. The Senators and Representatives shall receive a compensation for their services, to be ascertained by law, and paid out of the Treasury of the United States. They shall in all cases, except treason, felony, and breach of the peace, be privileged from arrest during their attendance at the session of their respective Houses, and in going to and returning from the same; and for any speech or debate in either House they shall not be questioned in any other place.

2. No Senator or Representative shall, during the time for which he was elected, be appointed to any civil office under the authority of the United States which shall have been created, or the emoluments whereof shall have been increased during such time: and no person holding any office under the United States shall be a member of either House during his continuance in office.

Section 7—(House to originate all revenue bills. Veto. Bill may be passed by two-thirds of each House, notwithstanding, etc. Bill, not returned in ten days, to become a law. Provisions as to orders, concurrent resolutions, etc.)

1. All bills for raising revenue shall originate in the House of Representatives, but the Senate may propose or concur with amendments, as on other bills.

2. Every bill which shall have passed the House of Representatives and the Senate shall, before it becomes a law, be presented to the President of the United States; if he approve, he shall sign it, but if not, he shall return it, with his objections, to that House in which it shall have originated, who shall enter the objections at large on their journal, and proceed to reconsider it. If after such reconsideration two-thirds of that House shall agree to pass the bill, it shall be sent, together with the objections, to the other House, by which it shall like-

10 CONSTITUTION OF THE UNITED STATES

wise be reconsidered; and if approved by two-thirds of that House it shall become a law. But in all such cases the votes of both Houses shall be determined by yeas and nays, and the names of the persons voting for and against the bill shall be entered on the journal of each House respectively. If any bill shall not be returned by the President within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law in like manner as if he had signed it, unless the Congress by their adjournment prevent its return; in which case it shall not be a law.

3. Every order, resolution, or vote to which the concurrence of the Senate and House of Representatives may be necessary (except on a question of adjournment) shall be presented to the President of the United States; and before the same shall take effect shall be approved by him, or being disapproved by him, shall be re-passed by two-thirds of the Senate and the House of Representatives, according to the rules and limitations prescribed in the case of a bill.

Section 8—(Powers of Congress.)

1. The Congress shall have power :

To lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties imposts, and excises shall be uniform throughout the United States.

CONSTITUTION OF THE UNITED STATES 11

2. To borrow money on the credit of the United States.

3. To regulate commerce with foreign nations, and among the several States, and with the Indian tribes.

4. To establish an uniform rule of naturalization and uniform laws on the subject of bankruptcies throughout the United States.

5. To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures.

6. To provide for the punishment of counterfeiting the securities and current coin of the United States.

7. To establish post-offices and post-roads.

8. To promote the progress of science and useful arts by securing for limited times to authors and inventors the exclusive rights to their respective writings and discoveries.

9. To constitute tribunals inferior to the Supreme Court.

10. To define and punish piracies and felonies committed on the high seas, and offenses against the law of nations.

11. To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water.

12. To raise and support armies, but no appropriation of money to that use shall be for a longer term than two years.

13. To provide and maintain a navy.

12 CONSTITUTION OF THE UNITED STATES

14. To make rules for the government and regulation of the land and naval forces.

15. To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions.

16. To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States respectively the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress.

17. To exercise exclusive legislation in all cases whatsoever over such district (not exceeding ten miles square) as may, by cession of particular States and the acceptance of Congress, become the seat of Government of the United States, and to exercise like authority over all places purchased by the consent of the Legislature of the State in which the same shall be, for the erection of forts, magazines, arsenals, drydocks, and other needful buildings.

18. To make all laws which shall be necessary and proper for carrying into execution the foregoing powers and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

Section 9—(Provision as to migration or importation of certain persons. Habeas Corpus. Bills of attainder. etc. Taxes. how apportioned.

CONSTITUTION OF THE UNITED STATES 13

No export duty. No commercial preference. Money, how drawn from treasury, etc. No titular nobility. Officers not to receive presents, etc.)

1. The migration or importation of such persons as any of the States now existing shall think proper to admit shall not be prohibited by the Congress prior to the year one thousand eight hundred and eight, but a tax or duty may be imposed on such importation, not exceeding ten dollars for each person.

2. The privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

3. No bill of attainder or ex post facto law shall be passed.

4. No capitation or other direct tax shall be laid, unless in proportion to the census or enumeration hereinbefore directed to be taken.

5. No tax or duty shall be laid on articles exported from any State.

6. No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another, nor shall vessels bound to or from one State be obliged to enter, clear, or pay duties in another

7. No money shall be drawn from the Treasury but in consequence of appropriations made by law; and a regular statement and account of

14 CONSTITUTION OF THE UNITED STATES

the receipts and expenditures of all public money shall be published from time to time.

8. No title of nobility shall be granted by the United States. And no person holding any office of profit or trust under them shall, without the consent of the Congress, accept of any present, emolument, office, or title of any kind whatever from any king, prince, or foreign state.

Section 10—(States prohibited from the exercise of certain powers.)

1. No State shall enter into any treaty, alliance, or confederation, grant letters of marque and reprisal, coin money, emit bills of credit, make anything but gold and silver coin a tender of payment of debts, pass any bill of attainder, ex post facto law, or law impairing the obligation of contracts, or grant any title of nobility.

2. No State shall, without the consent of the Congress, lay any impost or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws, and the net produce of all duties and imposts, laid by any State on imports or exports shall be for the use of the Treasury of the United States; and all such laws shall be subject to the revision and control of the Congress.

3. No State shall, without the consent of Congress, lay any duty of tonnage, keep troops or ships of war in time of peace, enter into agreement or compact with another State, or

CONSTITUTION OF THE UNITED STATES 15

with a foreign power, or engage in war, unless actually invaded, or in such imminent danger as will not admit of delay.

ARTICLE II

Section 1—(President; his term of office. Electors of President; number and how appointed. Electors to vote on same day. Qualification of President. On whom his duties devolve in case of his removal, death, etc. President's compensation. His oath of office.)

1. The Executive power shall be vested in a President of the United States of America. He shall hold his office during the term of four years, and, together with the Vice-President, chosen for the same term, be elected as follows:

2. Each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative or person holding an office of trust or profit under the United States shall be appointed an elector.

3. The electors shall meet in their respective States and vote by ballot for two persons, of whom one at least shall not be an inhabitant of the same State with themselves. And they shall make a list of all the persons voted for, and of, the number of votes for each, which list they shall sign and certify and transmit, sealed, to the seat of the Government of the United

16 CONSTITUTION OF THE UNITED STATES

States, directed to the President of the Senate. The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted. The person having the greatest number of votes shall be the President, if such number be a majority of the whole number of electors appointed, and if there be more than one who have such a majority, and have an equal number of votes, then the House of Representatives shall immediately choose by ballot one of them for President; and if no person have a majority, then from the five highest on the list the said House shall in like manner choose the President. But in choosing the President, the vote shall be taken by States, the representation from each State having one vote. A quorum, for this purpose, shall consist of a member or members from two-thirds of the States; and a majority of all the States shall be necessary to a choice. In every case, after the choice of the President, the person having the greatest number of votes of the electors shall be the Vice-President. But if there should remain two or more who have equal vote, the Senate shall choose from them by ballot the Vice-President.*

4. The Congress may determine the time of choosing the electors and the day on which

*This clause is superseded by Article XII., Amendments.

they shall give their votes, which day shall be the same throughout the United States.

5. No person except a natural born citizen, or a citizen of the United States at the time of the adoption of this Constitution, shall be eligible to the office of President; neither shall any person be eligible to that office who shall not have attained to the age of thirty-five years and been fourteen years a resident within the United States.

6. In the case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice-President, and the Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice-President, declaring what officer shall then act as President, and such officer shall act accordingly until the disability be removed or a President shall be elected.

7. The President shall, at stated times, receive for his service a compensation which shall neither be increased nor diminished during the period for which he shall have been elected, and he shall not receive within that period any other emolument from the United States, or any of them.

8. Before he enter on the execution of his office he shall take the following oath or affirmation:

18 CONSTITUTION OF THE UNITED STATES

"I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States."

Section 2—(President to be Commander-in-Chief. He may require opinions of Cabinet Officers, etc., may pardon. Treaty-making power. Nomination of certain officers. When President may fill vacancies.)

1. The President shall be Commander-in-Chief of the Army and Navy of the United States, and of the militia of the several States when called into the actual service of the United States; he may require the opinion, in writing, of the principal officer in each of the executive departments upon any subject relating to the duties of their respective offices, and he shall have power to grant reprieves and pardons for offences against the United States except in cases of impeachment.

2. He shall have power, by and with the advice and consent of the Senate to make treaties, provided two-thirds of the Senators present concur; and he shall nominate and by and with the advice and consent of the Senate shall appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments are not herein otherwise provided for, and which shall be established by law;

but the Congress may by law vest the appointment of such inferior officers as they think proper in the President alone, in the courts of law, or in the heads of departments.

3. The President shall have power to fill up all vacancies that may happen during the recess of the Senate by granting commissions, which shall expire at the end of their next session.

Section 3—(President shall communicate to Congress. He may convene and adjourn Congress, in case of disagreement, etc. Shall receive ambassadors, execute laws, and commission officers.)

He shall from time to time give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient; he may, on extraordinary occasions, convene both Houses, or either of them, and in case of disagreement between them with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States.

Section 4—(All civil offices forfeited for certain crimes.)

The President, Vice-President, and all civil officers of the United States shall be removed from office on impeachment for and conviction

20 CONSTITUTION OF THE UNITED STATES

of treason, bribery or other high crimes and misdemeanors.

ARTICLE III

Section 1—(Judicial powers. Tenure. Compensation.)

The judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish. The judges, both of the Supreme and inferior courts, shall hold their offices during good behavior, and shall at stated times receive for their services compensation which shall not be diminished during their continuance in office.

Section 2—(Judicial power; to what cases it extends. Original jurisdiction of Supreme Court. Appellate. Trial by jury, etc. Trial, where.)

1. The judicial power shall extend to all cases in law and equity arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority; to all cases affecting ambassadors, other public ministers and consuls; to all cases of admiralty and maritime jurisdiction; to controversies to which the United States shall be a party; to controversies between two or more States, between a State and citizens of another State, between citizens of different States, between citizens of the same State claiming lands under grants of different

CONSTITUTION OF THE UNITED STATES 21

States, and between a State, or the citizens thereof, and foreign states, citizens, or subjects.

2. In all cases affecting ambassadors, other public ministers, and consuls, and those in which a State shall be party, the Supreme Court shall have original jurisdiction. In all the other cases before mentioned the Supreme Court shall have appellate jurisdiction both as to law and fact, with such exceptions and under such regulations as the Congress shall make.

3. The trial of all crimes, except in cases of impeachment, shall be by jury, and such trial shall be held in the State where the said crimes shall have been committed; but when not committed within any State the trial shall be at such place or places as the Congress may by law have directed.

Section 3—(Treason defined. Proof of. Punishment of.)

1. Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

2. The Congress shall have power to declare the punishment of treason, but no attainder of treason shall work corruption of blood or

22 CONSTITUTION OF THE UNITED STATES

forfeiture except during the life of the person attained.

ARTICLE IV

Section 1—(Each State to give credit to the public acts, etc., of every other State.)

Full faith and credit shall be given in each State to the public acts, records, and judicial proceedings of every other State. And the Congress may by general laws prescribe the manner in which such acts, records, and proceedings shall be proved, and the effect thereof.

Section 2—(Privileges of citizens of each State. Fugitives from justice to be delivered up. Persons held to service having escaped, to be delivered up.)

1. The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.

2. A person charged in any State with treason, felony, or other crime, who shall flee from justice, and be found in another State, shall, on demand of the Executive authority of the State from which he fled, be delivered up, to be removed to the State having jurisdiction of the crime.

3. No person held to service or labor in one State, under the laws thereof, escaping into another shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on

claim of the party to whom such service or labor may be due.

Section 3—(Admission of new States. Power of Congress over territory and other property.)

1. New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the jurisdiction of any other State, nor any State be formed by the junction of two or more States, or parts of States, without the consent of the Legislatures of the States concerned, as well as of the Congress.

2. The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States, or of any particular State.

Section 4—(Republican form of government guaranteed. Each State to be protected.)

The United States shall guarantee to every State in this Union a Republican form of government, and shall protect each of them against invasion, and, on application of the Legislature, or of the executive (when the Legislature cannot be convened), against domestic violence.

ARTICLE V

(Constitution; how amended. Proviso.)

The Congress, whenever two-thirds of both

24 CONSTITUTION OF THE UNITED STATES

Houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the Legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the Legislatures of three-fourths of the several States, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress; provided that no amendment which may be made prior to the year one thousand eight hundred and eight shall in any manner affect the first and fourth clauses in the Ninth Section of the First Article; and that no State, without its consent, shall be deprived of its equal suffrage in the Senate.

ARTICLE VI

(Certain debts, etc., declared valid. Supremacy of Constitution, treaties, and laws of the United States. Oath to support Constitution, by whom taken. No religious test.)

1. All debts contracted and engagements entered into before the adoption of this Constitution shall be as valid against the United States under this Constitution as under the Confederation.

2. This Constitution and the laws of the United States which shall be made in pursuance thereof and all treaties made, or which

shall be made, under the authority of the United States, shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding.

3. The Senators and Representatives before mentioned, and the members of the several State Legislatures, and all executive and judicial officers, both of the United States and of the several States, shall be bound by oath or affirmation to support this Constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States.

ARTICLE VII

(What ratification shall establish Constitution.)

The ratification of the Conventions of nine States shall be sufficient for the establishment of this Constitution between the States so ratifying the same.

AMENDMENTS TO THE CONSTITUTION OF THE UNITED STATES

Opposition in and out of Congress to the Constitution, in that it was not sufficiently explicit as to individual and State rights, led to an agreement to submit to the people immediately after the adoption of the Constitution a number of safeguarding amendments.

26 CONSTITUTION OF THE UNITED STATES

And so it was that the First Congress, at its first session, at the City of New York, Sept. 25, 1789, adopted and submitted to the States twelve proposed amendments—A Bill of Rights, as it was then and ever since has been popularly called. Ten of these amendments (now commonly known as one to ten inclusive, but in reality three to twelve inclusive) were ratified by the States as follows: New Jersey, Nov. 20, 1789; Maryland, Dec. 19, 1789; North Carolina, Dec. 22, 1789; South Carolina, Jan. 19, 1790; New Hampshire, Jan. 25, 1790; Delaware, Jan. 28, 1790; Pennsylvania, March 10, 1790; New York, March 27, 1790; Rhode Island, June 15, 1790; Vermont, Nov. 3, 1791; Virginia, Dec. 15, 1791. No ratification by Connecticut, Georgia or Massachusetts is on record. These original ten ratified amendments appear in order below as Articles I to X inclusive.

The two of the original proposed amendments which were not ratified by the necessary number of States related, the first to apportionment of Representatives; the second to compensation of members of Congress.

TITLES OF NOBILITY

Congress, May 1, 1810, proposed to the States the following Amendment to the Constitution:

“If any citizen of the United States shall accept, claim, receive, or retain any title of nobility or honor, or shall, without the consent

CONSTITUTION OF THE UNITED STATES 27

of Congress, accept and retain any present, pension, office, or emolument of any kind whatever, from any emperor, king, prince, or foreign power, such person shall cease to be a citizen of the United States and shall be incapable of holding any office of trust or profit under them or either of them."

It was ratified by Maryland, Dec. 25, 1810; Kentucky, Jan. 31, 1811; Ohio, Jan. 31, 1811; Delaware, Feb. 2, 1811; Pennsylvania, Feb. 6, 1811; New Jersey, Feb. 13, 1811; Vermont, Oct. 24, 1811; Tennessee, Nov. 21, 1811; Georgia, Dec. 13, 1811; North Carolina, Dec. 23, 1811; Massachusetts, Feb. 27, 1812; New Hampshire, Dec. 10, 1812.

Rejected by New York (Senate), March 12, 1811; Connecticut, May session, 1813; South Carolina, approved by Senate Nov. 28, 1811, reported unfavorably in House and not further considered Dec. 7, 1813; Rhode Island, Sept. 15, 1814.

The amendment failed, not having sufficient ratifications.

AMENDMENT TO PROHIBIT THE CONSTITUTION FROM ABOLISHING OR INTERFERING WITH SLAVERY.

(The Corwin Amendment.)

Congress, March 2, 1861, proposed to the States the following Amendment to the Constitution.

28 CONSTITUTION OF THE UNITED STATES

“No amendment shall be made to the Constitution which will authorize or give to Congress the power to abolish or interfere, within any State, with the domestic institutions thereof, including that of persons held to labor or service by the laws of said State.”

Ratified by Ohio, March 13, 1861; Maryland, Jan. 10, 1862; Illinois (convention), Feb. 14, 1862. The amendment failed, for lack of a sufficient number of ratifications.

THE TEN ORIGINAL AMENDMENTS

(They were declared in force December 15, 1791.)

ARTICLE I

Religious Establishment Prohibited, Freedom of Speech, of the Press, and Right to Petition.

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble and to petition the Government for a redress of grievances.

ARTICLE II

Right to Keep and Bear Arms.

A well-regulated militia being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed.

ARTICLE III

*No Soldier to Be Quartered in Any House,
Unless, Etc.*

No soldier shall, in time of peace, be quartered in any house without the consent of the owner, nor in time of war but in a manner to be prescribed by law.

ARTICLE IV

Right of Search and Seizure Regulated.

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

ARTICLE V

*Provisions Concerning Prosecution, Trial and
Punishment,—Private Property Not to Be
Taken for Public Use, Without
Compensation.*

No person shall be held to answer for a capital or other infamous crime unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the militia, when in actual service, in time of war or public danger; nor shall

30 CONSTITUTION OF THE UNITED STATES

any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use without just compensation.

ARTICLE VI

Right to Speedy Trial, Witnesses, Etc.

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.

ARTICLE VII

Right of Trial By Jury.

In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise re-examined in any court of the United States than according to the rules of the common law.

ARTICLE VIII

Excessive Bail or Fines and Cruel Punishments Prohibited.

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

ARTICLE IX

Rule of Construction of Constitution.

The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

ARTICLE X

Rights of States Under Constitution.

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

The following amendment was proposed to the Legislatures of the several States by the Third Congress on the 5th of March, 1794, and was declared to have been ratified in a message from the President to Congress, dated Jan. 8, 1798.

ARTICLE XI

Judicial Powers Construed.

The judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States, by citizens of another

State, or by citizens or subjects of any foreign state.

The following amendment was proposed to the Legislatures of the several States by the Eighth Congress on the 12th of December, 1803, and was declared to have been ratified in a proclamation by the Secretary of State, dated September 25, 1804. It was ratified by all the States except Connecticut, Delaware, Massachusetts, and New Hampshire.

ARTICLE XII

Manner of Choosing President and Vice-President.

The Electors shall meet in their respective States, and vote by ballot for President and Vice-President, one of whom at least shall not be an inhabitant of the same State with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President; and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which list they shall sign and certify, and transmit, sealed, to the seat of the Government of the United States, directed to the President of the Senate; the President of the Senate shall, in the presence of the Senate and House of Representatives,

open all the certificates and the votes shall then be counted; the person having the greatest number of votes for President shall be the President, if such number be a majority of the whole number of Electors appointed; and if no person have such majority, then from the persons having the highest number, not exceeding three, on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by States, the representation from each State having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the States, and a majority of all the States shall be necessary to a choice. And if the House of Representatives shall not choose a President, whenever the right of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President. The person having the greatest number of votes as Vice-President shall be the Vice-President if such number be a majority of the whole number of Electors appointed, and if no person have a majority, then from the two highest numbers on the list the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a

majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

The following amendment was proposed to the Legislatures of the several States by the Thirty-eighth Congress on the 1st of February, 1865, and was declared to have been ratified in a proclamation by the Secretary of State dated December 18, 1865. It was rejected by Delaware and Kentucky; was conditionally ratified by Alabama and Mississippi; and Texas took no action.

ARTICLE XIII

Slavery Abolished.

1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

2. Congress shall have power to enforce this article by appropriate legislation.

The following, popularly known as the Reconstruction Amendment, was proposed to the Legislature of the several States by the Thirty-ninth Congress on the 16th of June, 1866, and was declared to have been ratified in a procla-

mation by the Secretary of State, dated July 28, 1868. The amendment got the support of 23 Northern States; it was rejected by Delaware, Kentucky, Maryland, and 10 Southern States. California took no action. Subsequently it was ratified by the 10 Southern States.

ARTICLE XIV

Citizenship Rights Not to Be Abridged.

1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

Apportionment of Representatives in Congress.

2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of Electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of

36 CONSTITUTION OF THE UNITED STATES

the Legislature thereof, is denied to any of the male members of such State, being of twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

Power of Congress to Remove Disabilities of United States Officials for Rebellion.

3. No person shall be a Senator or Representative in Congress, or Elector of President and Vice-President or holding any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State Legislature or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid and comfort to the enemies thereof. But Congress may, by a vote of two-thirds of each House, remove such disability.

What Public Debts Are Valid.

4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and

bounties for services in suppressing insurrection and rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations, and claims shall be held illegal and void.

5. The Congress shall have power to enforce by appropriate legislation the provisions of this article.

The following amendment was proposed to the Legislatures of the several States by the Fortieth Congress on the 27th of February, 1869, and was declared to have been ratified in a proclamation by the Secretary of State, dated March 30, 1870. It was not acted on by Tennessee; it was rejected by California, Delaware, Kentucky, Maryland, and Oregon; ratified by the remaining 30 States. New York rescinded its ratification January 5, 1870. New Jersey rejected it in 1870, but ratified it in 1871.

ARTICLE XV

Equal Rights for White and Colored Citizens.

1. The right of the citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

38 CONSTITUTION OF THE UNITED STATES

2. The Congress shall have power to enforce the provisions of this article by appropriate legislation.

The following amendment was proposed to the Legislatures of the several States by the Sixty-first Congress on the 12th day of July, 1909, and was declared to have been ratified in a proclamation by the Secretary of State, dated February 25, 1913. The income tax amendment was ratified by all the States except Connecticut, Florida, Pennsylvania, Rhode Island, Utah, and Virginia.

ARTICLE XVI

Income Taxes Authorized.

The Congress shall have power to lay and collect taxes on incomes, from whatever sources derived, without apportionment among the several States, and without regard to any census or enumeration.

The following amendment was proposed to the Legislatures of the several States by the Sixty-second Congress on the 16th day of May, 1912, and was declared to have been ratified in a proclamation by the Secretary of State, dated May 31, 1913. It got the vote of all the States except Alabama, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, Rhode Island, South Carolina, Utah, and Virginia.

ARTICLE XVII

*United States Senators to Be Elected by Direct
Popular Vote.*

1. The Senate of the United States shall be composed of two Senators from each State, elected by the people thereof, for six years; and each Senator shall have one vote. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislatures.

*Vacancies in Senatorships, When Governor
May Fill by Appointment.*

2. When vacancies happen in the representation of any State in the Senate, the executive authority of such State shall issue writs of election to fill such vacancies: Provided, That the Legislature of any State may empower the Executive thereof to make temporary appointment until the people fill the vacancies by election as the Legislature may direct.

3. This amendment shall not be so construed as to affect the election or term of any Senator chosen before it becomes valid as part of the Constitution.

The following amendment was proposed to the Legislatures of the several States by the Sixty-fifth Congress, December 18, 1917; and on January 29, 1919, the United States Secretary of State proclaimed its adoption by 36 States,

40 CONSTITUTION OF THE UNITED STATES

and declared it in effect on January 16, 1920.

Enforcement of the National Prohibition Act was in effect at 12 P. M., January 16, 1920, except as to certain sections of Title II, wherein other dates were specified.

Early in 1920, the validity of the Eighteenth Amendment was upheld by the Supreme Court of the United States, in suits to void, brought by the States of Rhode Island and New Jersey, and by various brewers and distillers.

ARTICLE XVIII

Liquor Prohibition Amendment.

1. After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.

2. The Congress and the several States shall have concurrent power to enforce this article by appropriate legislation.

3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the Legislatures of the several States as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

The following amendment was proposed to

CONSTITUTION OF THE UNITED STATES 41

the Legislatures of the several States by the Sixty-fifth Congress, having been adopted by the House of Representatives, May 21, 1919, and by the Senate, June 4, 1919. On August 26, 1920, the United States Secretary of State proclaimed it in effect, having been adopted (June 10, 1919-August 18, 1920), by three-quarters of the States. The Tennessee House, August 31, rescinded its ratification, 47 to 24.

ARTICLE XIX

Giving Nation-Wide Suffrage to Women.

1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

2. Congress shall have power, by appropriate legislation, to enforce the provisions of this article.

DECLARATION OF INDEPENDENCE

(Unanimously adopted, July 4, 1776; signed by
54 delegates, August 2, 1776)

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness. That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed, That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments

long established should not be changed for light and transient causes; and accordingly all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Depotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security. Such has been the patient sufferance of these Colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute Tyranny over these States. To prove this, let Facts be submitted to a candid world.

He has refused his Assent to Laws, the most wholesome and necessary for the public good.

He has forbidden his Governors to pass Laws of immediate and pressing importance, unless suspended in their operation till his Assent should be obtained; and when so suspended, he has utterly neglected to attend to them.

He has refused to pass other Laws for the accommodation of large districts of people, unless those people would relinquish the right

44 DECLARATION OF INDEPENDENCE

of Representation in the Legislature, a right inestimable to them and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public Records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved Representative Houses repeatedly, for opposing with manly firmness his invasions on the rights of the people.

He has refused for a long time, after such dissolutions, to cause others to be elected; whereby the Legislative powers, incapable of Annihilation, have returned to the People at large for their exercise; the State remaining in the meantime exposed to all the dangers of invasion from without, and convulsions within.

He has endeavoured to prevent the population of these States; for that purpose obstructing the Laws for Naturalization of Foreigners; refusing to pass others to encourage their migration hither, and raising the conditions of new Appropriations of Lands.

He has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary powers.

He has made Judges dependent on his Will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of New Offices, and sent hither swarms of Officers to harass our people, and eat out their substance.

He has kept among us, in times of peace, Standing Armies, without the Consent of our legislature.

He has affected to render the Military independent of and superior to the Civil power.

He has combined with others to subject us to a jurisdiction foreign to our constitution and unacknowledged by our laws; giving his Assent to their Acts of pretending Legislation: For quartering large bodies of armed troops among us: For protecting them by a mock Trial from punishment for any Murders which they should commit on the Inhabitants of these States: For cutting off our Trade with all parts of the world: For imposing Taxes on us without our Consent: For depriving us in many cases of the benefits of Trial by Jury: For transporting us beyond Seas to be tried for pretended offenses: For abolishing the free System of English Laws in a neighboring Province, establishing therein an Arbitrary government, and enlarging its Boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these Colonies: For taking away our Charters, abolishing our most valuable Laws and altering fundamentally the Forms of our Governments: For suspending our own Legislatures,

and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated Government here by declaring us out of his Protection and waging War against us.

He has plundered our seas, ravaged our Coasts, burnt our towns, and destroyed the lives of our people.

He is at this time transporting large Armies of foreign Mercenaries to complete the works of death, desolation and tyranny, already begun with circumstances of Cruelty and perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the Head of a civilized nation.

He has constrained our fellow Citizens taken Captive on the high Seas to bear Arms against their Country, to become the executioners of their friends and Brethren, or to fall themselves by their Hands.

He has excited domestic insurrections amongst us, and has endeavored to bring on the inhabitants of our frontiers, the merciless Indian Savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes and conditions. In every stage of these Oppressions We have Petitioned for Redress in the most humble terms. Our repeated Petitions have been answered by repeated injury. A Prince, whose character is thus marked by every act which may define a Tyrant, is unfit

to be the ruler of a free people. Nor have We been wanting in attentions to our British brethren. We have warned them from time to time of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity, which denounces our Separation, and hold them, as we hold the rest of mankind, Enemies in War, in Peace Friends.

We therefore, the Representatives of the United States of America, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by authority of the good People of these Colonies, solemnly *publish and declare*, That these United Colonies are, and of Right ought to be *free and independent States*; that they are Absolved from all Allegiance to the British Crown, and that all political connection between them and the State of Great Britain is and ought to be totally dissolved; and that as *free and independent States*, they have full Power to levy War, conclude Peace,

48 DECLARATION OF INDEPENDENCE

contract Alliances, establish Commerce, and to do all other Acts and Things which *independent States* may of right do. And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our Lives, our Fortunes, and our sacred Honor.

THE MONROE DOCTRINE

The Secretary of State of the United States, Charles E. Hughes, in an address delivered before the American Bar Association at Minneapolis, Minn., August 30, 1923, restated the genesis and scope of the Monroe Doctrine as it stands today, one hundred years after its promulgation. The Secretary's main points were:

The Monroe Doctrine had its dramatic setting as a striking and carefully formulated announcement, but it was in no sense a departure or something novel or strange engrafted upon American policy. The people of the United States had watched with deep sympathy the long struggle of our Southern neighbors for independence. The Republic of Colombia was recognized in 1822, the Government of Buenos Ayres and the States of Mexico and Chile, early in 1823. Deeply interested as we were in the development of republican institutions, the United States did not hesitate because of the political form of government and was the first to recognize the independent Empire of Brazil in May, 1824, and this was followed by the recognition of the Federation of Central American States in August of the same year.

Meanwhile, the Holy Alliance formed by the sovereigns of Austria, Russia, and Prussia had sought to enforce the divine right of kings

against the progress of liberal principles. Joined by France, they undertook "to put an end to the system of representative government" and after France had proceeded accordingly to restore the rule of Ferdinand VII in Spain, it was proposed to direct their efforts to the overthrowing of the new governments erected out of the old colonies of Spain in the Western Hemisphere. This was the situation 100 years ago—in August, 1823—when George Canning, British Foreign Secretary, wrote his celebrated letter to Richard Rush, American Minister in London, suggesting a joint declaration, in substance, that the recovery of the colonies by Spain was hopeless; that neither Great Britain nor the United States was aiming at the possession of any portion of these colonies; and that they could not see with indifference any portion of them transferred to any other power. Great Britain, however, had not at that time recognized the new States in Spanish America, and this made a point of distinction. Correspondence followed between Presidents Monroe and Jefferson and Madison, whose advice he sought. It was after mature deliberation by the President and his Cabinet, which contained not only John Quincy Adams, Secretary of State, and John C. Calhoun and William Wirt, that the American position was formally stated. It was deemed advisable to make a separate declaration of policy and this

was formulated in President Monroe's message of December 2, 1823.

The doctrine is set forth in two paragraphs of this message. The first of these had a genesis distinct from the situation of the former colonies of Spain. It grew out of the question of Russian claims on the northwest coast of North America. The Russian Emperor had issued a ukase in 1821 prohibiting citizens of other nations from navigating and fishing within 100 Italian miles of the northwest coast of North America from Bering Straits to the fifty-first parallel of north latitude. Protest had followed. In July, 1823, Secretary Adams informed the Russian Minister that the United States "should contest the right of Russia to any territorial establishment on this continent, and that we should assume distinctly the principle that the American continents are no longer subjects for any new European colonial establishments." It was in connection with this pretension of Russia that President Monroe, after adverting to the proposal of arranging the respective rights and interests on the northwest coast by amicable negotiations, declared in his message:

"In the discussions to which this interest has given rise, and in the arrangements by which they may terminate, the occasion has been judged proper for asserting as a principle, in which the rights and interests of the United

States are involved, that the American continents, by the free and independent condition which they have assumed and maintained are henceforth not to be considered as subjects for future colonization by any European powers."

The other paragraph of President Monroe's message bore upon the situation of our neighbors to the south, as follows:

"In the wars of the European powers in matters relating to themselves we have never taken any part, nor does it comport with our policy so to do. It is only when our rights are involved or seriously menaced that we resent injuries or make preparation for our defense. With the movements in this hemisphere we are, of necessity, more intimately connected, and by causes which must be obvious to all enlightened and impartial observers. The political system of the allied powers is essentially different in this respect from that of America. * * *

"We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered and shall not interfere. But with the governments who have declared their independence and have maintained it and whose inde-

pendence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny, by any European power, in any other light than as the manifestation of an unfriendly disposition toward the United States."

Properly understood, it is opposed (1) to any non-American action encroaching upon the political independence of American States under any guise and (2) to the acquisition in any manner of the control of additional territory in this hemisphere by any non-American power.

The Monroe Doctrine is not a legislative pronouncement; it has been approved by action of Congress, but it does not rest upon any Congressional sanction. It has had the implied indorsement of the treaty-making power in the reservations to the two Hague conventions of 1899 and 1907, but it is not defined by treaty and does not draw its force from any international agreement. It is not like a constitutional provision deriving its authority from the fact that it is a part of the organic law transcending and limiting executive and legislative power. It is not a part of international law, maintained by the consent of the civilized powers and alterable only at their will. It is a policy declared by the Executive of the United States and repeated in one form or another by Presidents and

Secretaries of State in the conduct of our foreign relations. Its significance lies in the fact that in its essentials, as set forth by President Monroe and as forcibly and repeatedly asserted by our responsible statemen, it has been for 100 years, and continues to be, an integral part of our national thought and purpose, expressing a profound conviction which even the upheaval caused by the Great War, and our participation in that struggle upon European soil, has not uprooted or fundamentally changed.

The Monroe Doctrine is not a policy of aggression; it is a policy of self-defense. It was asserted at a time when the danger of foreign aggression in this hemisphere was very real, when the new American States had not yet established a firm basis of independent national life, and we were menaced by threats of old world powers directed against republican institutions. It still remains an assertion of the principle of national security.

As the policy embodied in the Monroe Doctrine is distinctively the policy of the United States, the Government of the United States reserves to itself its definition, interpretation and application. This Government has welcomed the recognition by other Governments of the fact and soundness of this policy and of the appropriateness of its application from time to time.

But the United States has not been disposed

to enter into engagements which would have the effect of submitting to any other power or to any concert of powers the determination either of the occasions upon which the principles of the Monroe Doctrine shall be invoked or of the measures that shall be taken in giving it effect. As President Wilson observed: "The Monroe Doctrine was proclaimed by the United States on her own authority. It always has been maintained and always will be maintained upon her own responsibility."

This implies neither suspicion nor estrangement. It simply means that the United States is asserting a separate national right of self-defense, and that in the exercise of this right it must have an unhampered discretion.

The policy of the Monroe Doctrine does not infringe upon the independence and sovereignty of other American States. Misconception upon this point is the only disturbing influence in our relations with Latin American States. The declaration of our purpose to oppose what is inimical to our safety does not imply an attempt to establish a protectorate any more than a similar assertion by any one of the great southern republics of opposition to conduct on the part of any of the others endangering its security would aim at the establishment of a protectorate.

We utterly disclaim as unwarranted the observations which occasionally have been made in-

plying a claim on our part to superintend the affairs of our sister republics, to assert an overlordship, to consider the spread of our authority beyond our own domain as the aim of our policy and to make our power the test of right in this hemisphere.

Such assertions do not express our national purpose; they belie our sincere friendship; they are false to the fundamental principles of our institutions and of our foreign policy which has sought to reflect with rare exceptions, the ideals of liberty; they menace us by stimulating a distrust which has no real foundation. They find no sanction whatever in the Monroe Doctrine. There is room in this hemisphere without danger of collision, for the complete recognition of that doctrine and the independent sovereignty of the Latin-American republics.

We have grown rich and powerful, but we have not outgrown the necessity, in justice to ourselves and without injustice to others, of safeguarding our future peace and security. By building the Panama Canal we have not only established a new and convenient highway of commerce, but we have created exigencies and new conditions of strategy and defense. It is for us to protect that highway.

It may also be necessary for us at some time to build another canal between the Atlantic and the Pacific Oceans and to protect that. I believe that the sentiment of the American people

is practically unanimous that in the interest of our national safety we could not yield to any foreign power the control of the Panama Canal or the approaches to it, or the obtaining of any position which would interfere with our right of protection or would menace the freedom of our communications.

So far as the region of the Caribbean Sea is concerned it may be said that if we had no Monroe Doctrine we should have to create one.

* * * The United States has rights and obligations which that doctrine does not define. And in the unsettled condition of certain countries in the region of the Caribbean it has been necessary to assert these rights and obligations as well as the limited principles of the Monroe Doctrine. * * *

The disturbed conditions and revolutionary tendencies in some of the Central American republics have given great solicitude to the Government of the United States, and its efforts have been directed to the promotion of tranquillity and stability. This is in the interest of the maintenance of the unimpaired integrity and sovereignty of these republics.

It is apparent that the Monroe Doctrine does not stand in the way of Pan-American co-operation; rather it affords the necessary foundation for that co-operation in the independence and security of American States. * * *

The Monroe Doctrine is not an obstacle to a

wider international co-operation, beyond the limits of Pan-American aims and interests, whenever that co-operation is congenial to American institutions.

With the passing of 100 years it remains a cherished policy, inimical to no just interest and deemed to be vitally related to our own safety and to the peaceful progress of the peoples of this hemisphere.

PROSTITUTION IN THE ANCIENT WORLD

The problems of sex are ever with us. The more complex our civilization becomes, the more difficult are certain sexual questions. Especially as the years of education and apprenticeship in the art of earning a living tend to grow longer, and to reach out far beyond the age of puberty, marriage ceases for many to be in any sense an answer to the sexual problems. Thus, even if man were essentially a monogamous animal, the occasion for prostitution would still arise.

It is instructive as to the nature of present conditions to see what the situation has been in the past. Probably it is best to begin with a definition of prostitution. It is the "common lewdness of a woman, especially for hire," according to Webster's Collegiate Dictionary. "Lewdness" of course implies moral condemnation. If we wish to be scientifically accurate, we must try to leave out such terms as in themselves pass a judgment. Although the courtesan is now held in common contempt, and this has usually been so in the past, yet there are cases in which prostitution becomes a religious duty.

There have been various efforts by legislators and others to define prostitution. It is not merely illicit sexual intercourse. The concubine is not a prostitute; neither is the adulterous wife who has a single lover.

Dr. Iwan Bloch's somewhat complex defini-

tion amounts to this, that the prostitute is a person, male or female, who sells himself or herself for sexual purposes to a great number of persons, and with little or no choice among them. "Seldom without payment," he says, but I think the payment is a necessary characteristic. A wealthy woman who became a prostitute would ask for pay, because this is almost part of the sexual act. This is brought out very well by Schnitzler in his novelette, "Casanova's Homecoming."

Bloch's definition varies in at least one important matter from that of most of his predecessors. Very seldom has the term been made to include males. However, there now exist and there have existed from time immemorial two classes of men who have permitted the sexual use of their bodies for hire. These are homosexuals and the men who for one reason or another are paid by women to have sexual relations with them. There are reasons why these men should be considered in any serious study of prostitution.

Especially because sexual relations between men did not appear vicious and immoral, but natural and even beautiful, to the ancient Greeks and to other antique races, this question of definition becomes of some importance in an exposition of prostitution as it existed in the ancient world. For practical purposes I will accept Iwan Bloch's definition, although I am not entirely convinced as to the scientific validity of thus grouping males and females together.

As Bloch himself says, all prostitutes tend to approach a certain type. The two sorts of

male professional exploiters of sex differ widely from each other; and neither sort, except in certain minor matters, tends to approach the type of the female prostitute. However, as we have no accepted terms for these men, we must continue to call them prostitutes.

PROSTITUTION AMONG THE PRIMITIVE RACES

Among scientific investigators of sexual problems, there is a sharp split over the question whether prostitution and other departures from normal and approved marital relations are forms of degeneracy or reversions to the primitive type. In other words, was primitive man promiscuous? Did he practice perversions, or only normal coition? Is morality stricter among savage or among civilized races?

Let us consider our brothers in the animal world. Most mammals, if they enter into "marriages" at all, do not keep them up long. They do not tend to remain faithful to a single mate. As we know, the males of many species have no interest in their off-spring. In some cases they show a hostility to their young, going so far as to eat them when they are not driven off by the female.

Among the anthropoid apes, says Dr. August Forel, there exists genuine monogamous marriage, accompanied by family life. The male protects his mate and the young ones.

According to Westermarck, this is also true of primitive man. Everywhere, he says, there is the unit built around parents and children.

However, most anthropologists, disagreeing with him, say that sexual promiscuity prevails in savage society.

The facts are pretty well established, and the difference is chiefly one of definition. In order to say that marriage is the rule with early man, Westermarck makes that institution include polygyny (or the state of having a plurality of wives), polyandry (or the state of having at the same time several husbands), and monogamous marital relations of only temporary duration.

Of polygamy in the broader sense (including both polygyny and polyandry) we may say that it undoubtedly is marriage, but yet something very different from our typical, monogamous sort. When the question is one of temporary marriage, we may well ask just how short the relations may last and still come within the category. Even the very liberal government of the Soviets has found it necessary to set a limit to the number of times any individual might be divorced and remarried in any one year. A marriage which lasts ten years is clearly something very different from sexual promiscuity. Can there be a marriage for a month, or a week, or a single night?

Primitive man knows nothing of that refinement of civilization, the divorce court. On occasions he enters into marriage quite unceremoniously. However, if he stays with the same woman for a number of years, guarding their home and their offspring, undoubtedly he is as much married as though he had previously had to do with licenses, banns, ministers' fees, and the throwing of old shoes.

Perhaps we may make this distinction: if the male remains faithful to the female after she has borne him a child, takes care of it, and remains to beget other progeny on the same woman, we may consider him married. If he deserts her before the child is born, or at this time, he is but a lusty bachelor.

It is extremely probable that marriage sprang up early in the life of primitive man. So long as the sexual impulse remained confined to the rutting period, or special time of desire, there was little incitive to married life. For some reason or reasons not perfectly clear to us now, the love life of prehistoric man gradually became perennial instead of periodic. Virey's suggestion is that the sexual life expanded when men came into possession of more food than was sufficient barely to support life. In the same way, he says, our domesticated animals become perennial lovers when we take care of their alimentary needs.

A more constant libido and a developed brain, these two things brought about the institution of marriage. It occurs to me that the increased influence of the female, as the warlike prowess of the male comes to be less significant, may have something to do with the development of marriage. The marriage relation surely works out to the advantage of the female sex more than to that of the male.

When the rut came, in the early days of man, it came at once to the whole tribe. All the males battled with one another for the desirable females. When the next rut took place, the fight began all over again. Under such

conditions, of course there could be no real marriage.

Probably, then, prostitution is to be regarded as a relic or as a symbolical reminiscence of ancient promiscuity. It is a dark shadow out of the past falling now upon family life, as Lewis H. Morgan says.

The family arose when love had lost something of its periodic limits, and when man developed such occupations as required the co-operative labors of a group. To the farmer, his wife is still an economic asset. The number *one* was not universally held in mystical reverence; therefore these marriages were not necessarily entered into between a single man and a single woman. One man might be married to a number of women, or one woman to a number of men, or a group of men might have several wives in common.

Morality generally arises out of certain considerations of safety and convenience. Among some African tribes it is highly moral to kill most female children shortly after birth. This is because they would for some years be impediments in battle and in the search for new hunting grounds. Naturally no monogamous marriage is possible under such a condition as this. Either promiscuity or polyandry must prevail.

Among some of the tribes practicing polyandry, it is customary for a number of brothers to have one wife. The first child she bears is attributed to the oldest brother, the next to the second, and so on. In general, the child of a polyandrous marriage inherits the property

of its mother, and concerns itself little with its father.

All sorts of sexual customs have been found among primitive races. In some sections of the world it is good form to lend your wife for a night or two to the friend or even to the stranger who is visiting you. Among some tribes, promiscuity prevails until marriage. In some places the lord or chief has the right to spend the first night with every newly-married woman in his dominions. Up to the French Revolution, certain feudal lords in Europe received taxes or dues which were substitutes for this "right of the first night." Many of these customs and conditions appear to contradict Westermarck's opinion that the earliest primitive men were essentially monogamous.

Did prostitution exist in primitive society? Certainly not if promiscuity prevailed. Prostitution is a by-product of marriage. Whenever normal woman had sexual relations with a large number of men, there could not exist such a thing as a prostitute class.

However, among such savages as observe the marriage tie, prostitution exists, and in many cases there are even brothels. Where the bachelors of a tribe live together in a communal hall, as is the case in some parts of the world, this house is often provided with one or two women. Widows, abandoned wives, and slaves captured in war most commonly make up the prostitutes among savages. Ploss-Bartels cites some cases, though, in Africa and elsewhere, of women who are given up to prostitution by their husbands.

Herodotus says of certain Thracian tribes:

"They sell their children to traders. On their maidens they keep no watch, but leave them altogether free; while on the conduct of their wives they keep a most strict watch. Brides are purchased of their parents for large sums of money."

In other words, the husbands, having paid well for their women, kept them strictly for themselves. They did not, however, inquire too closely as to what had previously taken place.

When Herodotus visited Lydia, he found that the magnificent tomb of King Alyattes had been erected at the expense of the various tradesmen and professional men of Sardis. It "had at the top five stone pillars which remained to my day" (the Fifth Century before the Christian era) "with inscriptions cut on them showing how much of the work was done by each class of workpeople. It appeared on measurement that the portion of the courtesans was the largest. The daughters of the common people in Lydia, one and all, pursue this traffic, wishing to secure money for their dowries. They continue the practice until they marry; and are accustomed to make the wedding contracts themselves."

What Herodotus says in another place is illuminating as to the growth of the feeling that the sexual relation is somehow unclean: "The Egyptians first made it a point of honor to have no converse with women in the sacred places, and not to enter them without washing, after such converse. Almost all nations except the Greeks and the Egyptians act differently, regarding man as in this matter under

no other law than the brutes. Many animals, they say, and various kinds of birds, may be seen to couple in the temples and sacred precincts, which would certainly not happen if the gods were displeased at it."

Not only in the manner of birds and animals have men and women cohabited in the temples, that is, without paying any attention to the supposed sacredness of the place, but also with the idea that the sexual act was one of religious devotion.

The intimate connection between religion and the sexual libido is of course not a matter of primitive society alone. Every once in a while our sensational Sunday magazines tell of some "prophet" who has organized a group of women into a society for worshipping according to new and strange rites. Polygamy was an important item among the dogmas of Mormonism. To violate the seraglio is a religious desecration among the followers of Mohammed. How important a rôle celibacy has played and still plays in Christianity! The nun who enters a convent and assumes the final vows is said to "marry Christ." This same connection between sex and religion is shown in the importance of the rite of circumcision among the Jews.

To quote again from Herodotus: "The Babylonians have one most shameful custom. Every woman born in the country must once in her life go and sit down in the precinct of Aphrodite, and there consort with a stranger. Many of the wealthier sorts, who are too proud to mix with the others, drive in covered carriages to the precinct, followed by a goodly

train of attendants, and there take their station. But the larger number seat themselves within the holy enclosure with wreaths of string about their heads; and here is always a great crowd, some coming and others going; lines of cords mark out paths in all directions among the women, and the strangers pass along them to make their choice. A woman who has once taken her seat is not allowed to return home till one of the strangers throws a silver coin into her lap, and takes her with him beyond the holy ground. When he throws the coin he says these words, 'The goddess Mylitta prosper thee.' (Aphrodite is called Mylitta by the Assyrians.) The silver coin may be of any size; it cannot be refused, for that is forbidden by the law, since once thrown it is sacred. The woman goes with the first man who throws her money, and rejects no one. When she has gone with him, and so satisfied the goddess, she returns home, and from that time forth no gift, however great, will prevail with her. Such of the women as are tall and beautiful are soon released, but others who are ugly have to stay a long time before they can fulfil the law. Some have waited three or four years in the precinct. A custom very much like this is found also in certain parts of the Island of Cyprus."

Similar customs have existed in many different places. Among some of the inhabitants of Asia (in India, for example) it is a religious duty for a maiden to go to a priest for her defloration. In my edition for this series of the "Kama Sutra," which is a Hindu manual of love, I have pointed out how sexology is con-

sidered a part of religion, or at least very closely mingled with it.

The Nautches of India are prostitutes connected with a temple of religion. Until recently three Nautches and other courtesans formed about the only educated class among the women of India. The religious prostitutes of India have always been famous for their erotic dances.

Of all the gods of antiquity, very few were ascetic. Many religious holidays were celebrated with sexual orgies. Dionysus and his Roman counterpart, Bacchus, may be named as gods especially favorable to libidinous lust. They were primarily the gods of wine; but Priapus, whom Dinosus begot on Aphrodite, goddess of love, was the Greek phallic god, the deity of fruitfulness and the generative power.

Because the phenomena of sex appear shameful or even sinful to us, we find it hard to appreciate how the ancients felt about these things. Why does not sex appear to us as natural and as open a thing as eating and drinking? The social psychologists are not unanimous in their answers to this question. Probably it is because primitive man, being constantly exposed to attacks from wild beasts and from his fellow-men, found it best to withdraw during the act of coition into a secluded place. Then the very fact that the sexual act was performed privately came to identify it with shameful things. The ascetic teachings of Christianity, themselves largely arising from the primitive sense of modesty and shame, have also contributed to our conception of sex as a dirty and sinful thing.

It is very difficult for us to understand the point of view of the tribes among which promiscuity is prescribed as a religious duty. We have our own peculiar superstitions, but we do not agree with the inhabitants of Java and New Guinea who hold that performing the sexual act in a field is absolutely necessary if the soil is to be fertile during the following year. We do not assign the first night of a woman's married life to a priest or a king, or yet to a stone or metal phallus, but we do make her defloration by her husband almost a religious rite.

The non-Hebraic races of Palestine were addicted to sexual orgies in the name of religion, as many passages in the Bible make clear. At times numbers of Jewish maidens went over to the worship of the nature divinities. Many of the outbursts of Jeremiah and the other prophets were directed against this practice.

Although, as we have seen, Herodotus felt that sexual relations were unclean, yet in many parts of Greece there were organizations of holy prostitutes. Flora, the Roman goddess of flowers and spring, was according to legend originally a prostitute. Her annual festival, the Floralia, which was celebrated for a week at the end of April and the beginning of May, was a time of great merriment and voluptuousness. We are told that during this holiday the Roman prostitutes used publicly to remove their clothing and to execute lively and lascivious dances.

There have been various theories as to how religious prostitution arose. Perhaps it was in some way a substitution for a state of unbridled

sexual freedom. However, the fact that generation and birth are the great mysteries of life is no doubt sufficient explanation.

PROSTITUTION AMONG THE GREEKS

We may date the beginning of organized prostitution in Europe, religious prostitution aside, in the time of the great Athenian legislator Solon. He was a great reformer, and his object in establishing brothels was to reduce promiscuity, not to increase it.

The laws of Solon permitted a man to kill anybody he found cohabiting with his wife. The rape of an unmarried woman, however, was punished by a fine, and the seduction of any unmarried woman except a harlot, by a lesser fine. The fine for a rape amounted to about the value of a hundred sheep, and for that of a seduction, to about the value of twenty sheep. Solon forbade men to sell their sisters and daughters except in cases of unchastity.

His laws regulated many rather intimate matters. One of them provided that an heiress whose husband proved impotent might choose one of his relatives to provide her with an heir to her estate. The husband of an heiress had to cohabit with her at least three times a month.

Some of Solon's other laws might be more acceptable to husbands of today. A woman was not allowed to travel with more than three dresses, for instance. She was not to travel at night except in a wagon with a light

carried before it. When a man put certain provisions into his will because of his wife's solicitations, these were held invalid.

Dr. Iwan Bloch, whose large work on prostitution has for its object the demonstration that it is an unnecessary evil, calls Solon the first fallacious defender of governmental regulation. His fallacy, according to the views of men who favor the abolition of the brothel, consists in his opinion that legalized prostitution preserves the sanctity of the home and preserves the chastity of citizens' wives and daughters. This is of course the idea which lies behind every defense of the "red light district" by respectable and law-abiding men and women.

The paternalism of the state was carried much further by the ancient Greeks than it is with us. That is perfectly clear to any careful reader of Plato's "Republic" or of Aristotle's ethical and political works. There was nothing radically new about Solon's prescriptions of how certain matters within the family should be carried out.

Solon was by no means a feminist. He accepted without question the double standard of sexual morality. His whole system bound the wife to her husband, but permitted him full freedom of intercourse so long as he interfered with no other citizen's wife or daughter.

The prostitute class under Solon's system was not recruited from volunteers. It was made up of slaves, most of whom were foreigners. The prostitutes were maintained in brothels by the state. According to Nikander,

Solon gave the profits derived from the brothels to the priests of the temple of Aphrodite Pandemus. Probably he felt that prostitution was in some way still a religious matter.

However, he did not feel that this religion made the harlots themselves sacred. They were miserable prisoners of war who stood **naked** before the brothels to entice the **passers-by**. They were not permitted to choose, but had to find acceptable any male who presented the extremely low fee set by law.

Probably all women were held in little esteem at this time. Wives had one duty to perform, the bearing of legitimate children and heirs. Yet, as we have seen, Solon safeguarded the rights of such married women as had property of their own. Plutarch, however, when he came to report these provisions of Solon's laws, found them very strange. In general, the married woman was expected to remain at home and take care of the household and her children. She married early and she was seldom educated even in the arts necessary to a good housewife. She never dreamed of discussing literature or philosophy or politics with her husband.

The respectable wife of classical Greek times had probably less education than that of the average dweller in a Turkish seraglio. She was aloof from the world, too. She had not seen much of her husband before marriage. Love was not considered necessary between the bride and the groom.

Women were not admitted to the theatre, to the Olympic games, or to other public and semi-public gatherings. This prohibition was

customarily removed only in the case of prostitutes. The female sex was considered decidedly inferior to the male. In Homeric times women had been comparatively well off, although they were subject to violent abduction, marriage or concubinage by capture, and to all the vicissitudes which befall the female sex in unsettled periods. The beauty of a Helen might launch a thousand ships, and her lesser and perhaps luckier sisters were their husbands' advisers and honored comforters.

Neither in preclassical or heroic Greece nor in classical times was it considered a light matter to have sexual intercourse with the wife or the unmarried female relative of another. The aggrieved person was usually permitted to take any revenge he could, not excluding death. The state, too, often set up various penalties designed to check adultery and fornication with women of the free class.

These dishonorable penalties turned men away from the chaste women and sent them to the slaves in the public brothels. There was no feeling of shame about relations with the public women. They were provided by the civic zeal of great statesmen. Furthermore, there was less to fear in visiting a prostitute than there is to-day. So long as the harlots were all slaves maintained by the state, there was little danger that they might be in league with thieves for the despoilment of their patrons. Of especial importance is the fact that there existed practically no fear of the venereal diseases.

Syphilis does not seem to have occurred in

Europe until after Columbus discovered America. It was pretty surely brought to Spain from Hayti at that time.

Gonorrhea and chancroids appear to have existed in classical Europe, but yet the nature of the diseases, and especially the manner of their transmission, appear hardly to have been understood. It happens that gonorrhea is in some ways a more dangerous disease than even syphilis; but ignorance was bliss, and the fear of infection was something that ordinarily did not occur.

Prostitution was a means by which the despised slave class served to protect the chastity of free men's wives. Slavery was a very important factor in the social and economic life of antiquity. An Athenian census of the Fourth Century before Christ gave the following figures for the population of the city: free citizens, 21,000; resident foreigners, 10,000; slaves, 400,000. Under such conditions there was naturally a tremendous social gulf between the slaves and their masters. Later, in Rome, emancipation became common, but in Greece the freeing of slaves was quite rare.

We can understand, then, that few free women entered the ranks of the prostitutes. It was possible, however, for a citizen's daughter to be captured by pirates or taken prisoner in a war. She might even be sold into slavery by her father. In this way and from the children of slaves the brothels were filled.

It was considered a sign of weakness among the old Greeks to fall in love with any woman. The prostitute existed for man's pleasure, the concubine to take care of his needs and his

home, the wife to bear him legitimate children. The elder Cato called the wife a necessary evil, and this was also the Greek view.

Love was a disease, a mild form of madness. "Not in Homer nor in Hesiod nor in Aeschylus is there a love scene," says Dr. Bloch. Yet, when in the sixth book of the "Iliad," Hector bids farewell to his wife Andromache, surely genuine love is shown on both sides. In general, the position of woman in Homeric times was higher than it afterwards became.

Romantic love had existed in early Greece. We have but to name Sappho to make that plain. When we name her, though, in this connection, we are immediately reminded that this love might be homosexual. Of that anon.

In the "Antigone" of Sophocles, Creon calls his son Haemon "foul spotted heart—a woman's follower" when the young man pleads for the life of his beloved. Haemon, however, perhaps having a touch of madness in him, slays himself at Antigone's side.

If we wish to understand why romantic love in general was of little importance to the Greeks, we must first of all remember that sex was open, unconcealed, unashamed. We are so very far from their point of view that even a novelist who talks much about the importance of phallic worship (Mr. D. H. Lawrence) becomes indignant about having to remove his clothing for a physician's examination. To the Greeks nakedness was no sin. The athletes at the Olympic games did not wear shirts and drawers. Statues and paintings in the nude stood everywhere, and no one smirked at the sight. This very openness no doubt hindered

the spiritualization of love. Love was a religious thing, but so were eating and drinking. They still are, in the Holy Communion—and many Christians still consider marriage a sacrament.

To individualize love was against the whole philosophical trend of classical Greece. The tendency was to look toward the perfection of the state, without regard to the improvement of any unit except as it contributed to the development of the whole. Any reader of the "Republic" should immediately perceive this fact. Plato's ideal state, in which perfect justice was to prevail, was to be ruled by the philosophers without regard to their own happiness. They would at once abolish the family and establish the community of wives and children.

"Our object in the construction of our state," according to Plato's Socrates, "is not to make any one class preëminently happy, but to make the whole state as happy as it can be." All that matters, according to this view, is divine symmetry. It is not utilitarianism (which seeks the greatest good of the greatest number) any more than it is individualism.

According to most Greek thinkers, organized prostitution performed a service for the state. It was not an instrument of licentiousness, but a means of satisfying the natural wants of men.

"In the temperate man," says Aristotle, "the concupiscent element ought to live in harmony with reason, since nobleness is the object of them both, and the temperate man desires what

is right, and desires it in the right way and at the right time, that is, according to the law of reason."

The idea that life should be a glorious orgy was accepted neither by the Greek philosophers nor the Greek populace. Aristotle's Golden Middle was the expression of a common ideal. Excess (or *hybris*) was the one great sin in the old Hellenic world. It was supposed to tempt the gods to send sorrow to the offending individual.

However, the Greek conception of moderation as applied to sexual matters was very far from Christian asceticism. There was no feeling, in antique and heathen times, that flesh was inherently sinful. Among some of the barbarian neighbors of the Greeks, this idea was evidently coming in. The Lydians, for instance, thought it shameful to strip off their clothing in order to participate in athletic games.

As we know, the Greeks erected statues in honor of their beautiful men and women. We are rather contemptuous of male beauty today. If we wish to be polite, we say "handsome," not "beautiful," of a man. Perhaps this is partly due to our different way of looking at homosexuality.

If we must worship something, it might as well be Beauty as any other idol we can set up. Certainly beauty is not an attribute of the female alone. Schopenhauer, in a well-known passage, argues that the female form is less comely than that of the male.

We moderns are obsessed, more or less con-

sciously, by the idea that the object of the sexual act is the reproduction of the race. This idea, taught by some religions, has taken a firm hold on the unconscious mind of almost all of us. Even though we generally practice birth control, we have a violent prejudice against such forms of sexual intercourse as can not lead to generation.

Our most enlightened men tend to regard the practice of these as symptoms of mental illness or moral decay. The Greeks, however, regarded all forms of sexual enjoyment, even those which appear to us corrupt and perverse, as perfectly natural.

Dr. Bloch points out that satyriasis and nymphomania, that is to say, supernormal sexual feeling and desire in the male and the female, are represented in the Greek medical books as common diseases. This he attributes, at least in part, to the warm climate of the Hellenic peninsula. However, I think that sexual hyperesthesia was little if at all commoner among the Greeks than it is with us. The absence of prudery made people discuss the thing more freely, that is all. Our very physicians are ready to join in the work of draping statues with skirts and trousers. A woman Doctor of Medicine recently wrote to the editor of one of our staidest and most solid old monthlies, complaining that the fiction dealt with sexual problems which she found sufficiently discussed in her medical journals. What the Greek physicians called by their proper names, our own doctors label "hysteria" or "neurasthenia."

In antique times, prostitution was not con-

fined to the large cities. Brothels were to be found in little villages. The inhabitant of a small town did not find it necessary to employ the fiction of a business trip in order that he might lose his identity among the unknown crowds of Athens or Corinth. If he wished to enter the local brothel, he would not lose his reputation as an honorable citizen because he fulfilled his natural desires.

Nevertheless prostitutes were especially active among foreigners and other strangers, in the sea-ports, centers of trade, and religious centers. They followed the armies on their expeditions. They flocked to the universities. They were numerous at religious festivals, at pilgrimages, at fairs, at all places where men gathered in great numbers.

Some of the religious celebrations were especially dedicated to the prostitutes, as we have seen in the case of the Floralia at Rome. There were many such holidays in Greece as well, among which perhaps the most famous was the celebration of the harlots at Corinth in honor of laughter-loving Aphrodite.

Although most of the Greek courtesans were slaves, yet there were gradations among them. From the hetærae, many of whom were really concubines living for a period with one man, and therefore really not prostitutes at all, down to the lowest wenches, there were all sorts of subdivisions.

Many of the slaves had been maidens or young wives of a good family, and had suddenly found themselves prostitutes after a pirate's surprise attack or the defeat of their

city or tribe in war. Perhaps they had already been trained in music and the dance. Else, if they were attractive and apparently capable of being taught, they might have lessons in the brothel.

A woman who could dance and sing or play a musical instrument was worth much more in the slave market than one who was merely a female animal of the human species. Although most of the Greeks didn't want their wives to be educated, they attached a special value to courtesans who could talk of learned things.

The prostitutes who stood at the entrance to the brothels were of the lowest and least valuable class. In a time when the sense of modesty was quite different from ours, it was possible for the prostitutes not only to entice men on the streets and in other public places, but also to go through the sexual acts in the more secluded streets and corners.

Among the higher types of the courtesan, we may name those capable of playing skilfully upon the various musical instruments then in use. These, to ther with singers, dancers, reciters, and readers, were much in demand at banquets. The formal feast among the Greeks was always a "stag party." Such women as were there came to entertain and amuse and give pleasure. Wives were invariably left at home.

The dances of the slave-women were chiefly of an openly erotic nature. Almost all dancing, ancient or modern, is more or less indicative or symbolical of the act of coition. In times when nakedness was no sin, this was plain

enough. Today the dance hall is still often a brothel, or the recruiting-ground for the brothel.

With the dance was associated then, as now, certain forms of theatrical representations. Vestiges still remain of the belief that the theatre is no place for an honorable woman. Among the Greeks, a woman who appeared on the stage was thereby clearly identified as a harlot.

In the regular comedy and tragedy of classical times, as in the early English theatre, men took all parts, representing alike male and female. There was no attempt at realism. The Attic theatre was romantic, idealized. The actors wore masks to make themselves appear divine or heroic, and they wore shoes that were designed to add to their apparent height.

The one form of the drama in which women took part was the mime, a sort of realistic burlesque or travesty. Imagine the burlesque show of today (or its aristocratic sister, the revue) removed from all fear of police interference and from all need to cater to the "high class family trade," and you have a fairly accurate conception of what the ancient Greek mimes were like. Openly lascivious dances were the rule. Of course the women who, naked or dressed in the half-concealment that is still more provocative, went through these symbolical gyrations, were ready to cap the climax after the performance.

The mime and the ancient equivalent of our cabaret merged into each other. The music and the dances of the mime tended to be more important than the words. This although some

talented poets were among the writers of the mimes. In Byzantine days, the theatre which presented mimes came to be identified even in name with the brothel.

Perhaps this identification of the ancient burlesque theatre with sexual things is part of the reason why Puritans tend to frown altogether upon the theatre. The tradition lingers, and even now the Methodist Church is gradually being won over to the view that the theatre is not necessarily and inherently vicious.

All forms of pleasure tend to be thought of and engaged in together. Although an excess of alcohol makes impotent, a moderate quantity, especially when taken with a generous meal, stimulates sexual desire. With the subtler sides of sex, flowers and delicate shades of perfume are associated. The serving-women and the young women who sold fruits and flowers in the market-places of old Greece were mostly courtesans.

Our word *bagnio*, which etymologically signifies a bath, means nothing more to us now than a brothel. The connection between public bathing and prostitution thus indicated has especially been developed in the Orient. However, we find traces of it in European antiquity, although it became much more significant in Europe in the later Middle Ages and in the Renaissance. The massagist or other bath attendant was often expected to perform sexual acts. The public baths were especially important for homosexual prostitution.

The brothels of Athens and other Greek

cities tended to be grouped around the baths. They were also located in the neighborhood of the other places of amusement and recreation. "Other places," I say, because the bath was considered much more than merely a place to remove dirt from one's body. It ranked with the theatres, the circus, and other resorts which supplied entertainment. Around these and around the temples were established the principal houses of prostitution. The cheaper brothels were often located in the outskirts and suburbs of large cities.

In Shakespeare's day, somewhat similarly, the theatres, the bear-baiting pits, and the brothels formed a group on the Bankside, near Southwark, outside the limits of London.

The brothel in Greece was not only open and unashamed. It was in the nature of a public building and usually, during the classical period, was owned and operated by the state. In any case, it was strictly regulated by public officials.

Some of the brothels served also as hotels, and in most of them food and drink were offered for sale. Outside these brothels, many of the prostitutes of a higher type occupied small apartments or furnished rooms of their own.

The better-class courtesans were called *hetæraë*. The chief characteristic of this class was that the members became remarkably individualized. A *hetæraë* might become famous in the whole antique world, not only for beauty, but also for wit and culture.

Herodotus tells how Rhodopis, a famous

courtesan, was redeemed from slavery by Charaxus, the brother of the poetess Sappho, but continued to pursue her trade in Egypt. It was said that she became immensely wealthy, and rumor had it that one of the pyramids was built at her expense.

Plutarch, in his life of Pericles, relates the common report that he plunged Athens into war with the Samians in order to please the hetæra Aspasia. "She is said to have reserved her favors for the most powerful personages of Greece, in imitation of Thargelia, an Ionian lady of ancient times, of great beauty, ability, and attractions, who had many lovers among the Greeks, and brought them all over to the Persian interest, by which means the seeds of the Persian faction were sown in many cities of Greece, as they were all men of great influence and position.

"Now, some writers say that Pericles valued Aspasia only for her wisdom and political ability. Indeed Socrates and his friends used to frequent her society; and those who listened to her discourse used to bring their wives with them, that they too might profit by it, although her profession was far from being honorable or decent, for she kept courtesans in her house. But Pericles seems to have been enamored more of Aspasia's person than of her intellect." Plutarch goes on to tell how Pericles sent his wife away and lived with Aspasia, "of whom he was passionately fond. He is said never to have gone in or out of the house during the day without kissing her."

Plutarch lived five centuries later than

Aspasia, and he reports hearsay and legend. We can be pretty sure that no wives were brought to Aspasia to learn wisdom from her.

In the first volume of his work on prostitution, Iwan Bloch devotes a number of pages to a list of the famous courtesans and concubines of antiquity. There is Archippe, to whom the dramatist Sophocles left his fortune. There are the two famous courtesans named Lais. There is Leontion, beloved of Epicurus and his disciples, herself a writer and philosopher. There is Phryne, well known through all Greece for her beauty, whose golden statue stood in Delphi. There is Thais of Athens, who became the mistress of Alexander the Great and then sat on the throne with Ptolemæus I of Egypt. The mother of this first Ptolemy, incidentally, had been the mistress of Alexander's father, Philip of Macedon.

Apelles, the most celebrated of Greek painters (contemporary with Alexander the Great, that is, of the Fourth Century before the Christian era) did not disdain to paint courtesans. For his most admired picture, "Venus Rising Out of the Sea", Phryne served as model, plunging naked into the sea on the occasion of a feast to the sea-god Poseidon. She is also said to have served as model to Praxiteles for the famous Cnidian Aphrodite.

The sense of shame developed rather late in Greece. The Greek vases of the Fifth Century before Christ, many of which portray brothel scenes, were considered respectable enough to be placed in an honorable citizen's home.

However, we find Aristotle in his "Politics" seeking the prohibition of the display of lascivious pictures. These were to be found not only in brothels but also in the private houses of the wealthy. No doubt Aristotle felt that these pictures would encourage sexual excess, drawing men away from the Golden Middle.

The opinion was advanced, even among the Greeks, that to refrain from sexual intercourse was pleasing to the gods and philosophically desirable. The physicians argued about the value of coition to the men and women who participated in it. There were some who felt that it was more healthful for the individual to refrain from it. Thus, although the ancient world generally left the sexual life free and untrammelled, there were all sorts of tendencies in the opposite direction.

The Greeks were a temperate people. They mixed their wine with water and ate sparingly of simple foods. There were, however, gluttonous individuals and toppers; and there were times and places where rich voluptuousness prevailed.

Were the prostitutes of ancient Hellas like their modern successors, so far as personal characteristics are concerned? Dr. Bloch believes that the old Greek and Roman courtesans were like the typical modern prostitute, as Lombroso has described her. Among the attributes of the courtesans of all times and places are said to be piety, superstition, deceitfulness, jealousy, and shamelessness. Except perhaps for the last, a cynical philosopher might suggest that these traits apply to all women.

What Bloch has forgotten, I think, in applying these universal attributes of the prostitute to the harlots of antiquity, is the fact that most of the women went into the brothels absolutely against their own will. Once in the brothel, they learned the tricks of the profession and conformed somewhat to the prostitute type. However, under other circumstances they might have lived happily in monogamous marriage. Lombroso's theory, which Bloch, to be sure, does not fully accept, is that the modern prostitute is such because of her inborn nature rather than because of the circumstances to which she is exposed.

Many of the minor details descriptive of the Greek courtesan apply also to the harlot of present-day Europe and America. The prostitutes of Greece and Rome put rouge upon their faces, and occasionally the respectable women followed them in this practice. Courtesans walked then as they walk now, with a lascivious twisting of the hips. Clothing was simpler among the Greeks than it is with us. Yet the hetærae found occasion to introduce new fashions.

The cosmetic art was evidently developed to quite as great a degree as it is with us. The art of making old or ugly prostitutes look like their more fortunate sisters was very closely studied. Our surgeons, to be sure, in taking up methods of beautification, are likely to leave Greek methods far behind. The old Hellenes could build up a nose or a chin out of clay, but not out of flesh and blood.

False teeth were known to the courtesans of ancient times, although they were of a primi-

tive sort. Very likely these were constructed of wax or some similar substance, and were intended for ornament, not for use. Various sorts of dentifrices were known to antiquity, chiefly being used to beautify the teeth of prostitutes.

Dyeing the hair, supplying false hair, removing hair from the body, all these were practiced by the old Greek courtesans. The cosmetics of the ancient world, so far as we can now tell, were in no way inferior to those of today. Then, as now, red and white were to be had for the purchasing.

The prostitutes and those who profited by their earnings learned early in antiquity what every modern woman knows, the seductive power of the *decolleté* and of half-concealment in general. The human imagination is powerful; that is why the nude is infinitely less "dangerous" than the partly draped. That is also the reason, by the way, why professional searchers for vice become angriest about works of art which they do not understand.

In general, then, the prostitute of ancient Greece was a great deal like her successors in Europe and America. Whatever differences are to be found are to be explained in terms of economic and possibly of philosophical changes. There is no need to enter here into the question of just how far philosophy depends on economic life. In any case, modern men do not look at the universe in exactly the same way as the ancients did.

We have no reason to believe that human nature or, to be specific, the sexual impulse, has

in any way changed in the last five thousand years or so. This in spite of the numerous revival meetings, revelations, prophecies, and judicial executions of this period.

More than that, the machinery and appointments of the brothel remain pretty much the same. The courtesan of today smokes a good many cigarettes and drinks as much whiskey as she can conveniently get. The prostitute of ancient Greece was also a drinker of alcoholic beverages. She had no tobacco, but she was addicted to various other drugs. The courtesan of India chews betel nuts and offers a supply to all callers.

Anatole France, in his novel "Thais", describes delightfully and with acute insight the life of a beautiful and very popular hetæra. His heroine lives not in classical Greece but in Egypt, when the great cities of that land are under a Hellenic civilization. There is a story here, a powerful story of how a certain devout monk exerts a remarkable influence over a courtesan and is himself influenced by her. The modern popularization of this theme is to be found in the drama "Rain", adapted from Maugham's "Miss Sadie Thompson."

I refer here to Anatole France's novel not for the stylistic beauty which it undoubtedly possesses, or even for its psychological profundity, but for the vivid picture it presents of the aristocratic prostitute of antiquity. The hetæra lives for us again in her splendid house, surrounded by rich furniture and draperies, waited on by many slaves, dining in magnificent luxury, looking calmly down upon the

world of fashionable and brilliant young men at her feet.

We see also the prostitute swayed by the superstitions of her time, converted to Christianity, at last acclaimed as a saint. There is no exaggeration in Anatole France's account. Such things as he describes did actually occur.

It is said—and of course there is a good deal of truth in this saying—that in our own days harlots have swayed kingdoms, caused the downfall of monarchies, occasioned and decided problems of state. Always blue blood has voluntarily turned red in response to the red blood of beauty. To be sure, it is nearly impossible coldly to analyze the sexual problems of today. At every instant we are treading on somebody's toes, offending against one propriety or another, violating some taboo. Especially in America, where prostitution, although common enough, is generally illicit, it is difficult for the scientific investigator to assemble and publish his data.

In classical days, a man might go out and boldly purchase a season-ticket to the brothel. Perhaps he did not assume the self-righteous air of a man who has just subscribed for a box at the opera. As I have already mentioned, there were sexual reformers among the Greeks and Romans. At all times the brothel had its vigorous opponents.

In actual practice, though, almost the whole nubile male population patronized the harlot's house. It was easily accessible, the fees were cheap, and attendance, according to the consensus of opinion, was not shameful. Compared

with the situation in classical times, attendance at the modern houses of prostitution in London or Paris or Amsterdam is quite light. There are a number of reasons why this is so. First, the cost has gone up to a considerable extent. There is also a new sense of shame or sexual modesty (prudery, in its extreme manifestations) which has to some extent curbed natural instincts. Most important of all, no doubt, is the fear of syphilis which has spread since Columbus discovered the Americas.

In Solon's time the equivalent of a few cents purchased the services of an ordinary prostitute. The courtesans who were much sought after set a high price on themselves. Occasionally there was haggling over a price.

Procurers or panders existed, of course. These intermediaries between the courtesan and her patrons might be state officers or owners of the prostituted slaves or agents of the free prostitutes. In some cases they were relatives. A mother might deliver over her daughter or a husband, his wife.

Most often in antiquity the prostitutes were handled by people who thought of them as goods which should bring a profit to the purchaser. They were sold with other slaves in the market-place. No consideration for their feelings was manifested in the transaction. Prospective customers examined them carefully. Speculators sometimes rented a woman to a pander or to one who desired a mistress.

The prostitute was supposed to satisfy all the demands of the libido. In ancient literature there are references to sadists and

masochists, and to the special arrangements made for them in brothels. Almost all the desires which now appear to us to be perversions or symptoms of sexual psychopathia were considered reasonable and natural by the ancients. So long as no excess was practiced, indulgence in almost any pleasure was considered proper. Homosexuality, notably, was open and important. It held such an important place in the life of the ancients that I am devoting a section at the end of this book to homosexual prostitution.

Many books which would now be considered dangerously pornographical circulated freely among the ancients. For instance, there were many treatises on the "figures of Venus", the various ways of carrying out coition. Our medical authorities on sex say that the proper exercise of the function is not instinctively acquired by men. (See, for instance, Malchow, "The Sexual Life", St. Louis, 1923. Page 126.) However, even in works intended for physicians, there is seldom any discussion of the right way or the right ways. The Greeks had many gods, but we worship one whom they did not know—Ignorance.

Scientifically, to be sure, they were inferior to us. However, if they knew something, they did not conceal it because it was supposedly offensive to religion. What good is it to the citizens of a free and democratic country to have scientific discoveries made, if they are carefully to be hidden from all students, on the ground that they contradict what is stated in certain holy books?

The most sacred of all our writings is the unpublished volume containing the sayings of that estimable lady, Mrs. Grundy. The strange thing is that the moralists, when they become too moral, help to destroy their own morality. Especially in the matter of sex, many ignorant preachers and lecturers have driven the more susceptible of their hearers to mental illness or to unhealthful excess. The Greeks, although they actually knew less than we, made better use of their knowledge.

It is sometimes surprising to find out the gaps in their science. Thus, it is pretty sure that both gonorrhea and chancroids were common diseases in ancient times. Yet the Greek and Roman physicians seem not in the least to have suspected that these diseases were transmitted in the act of coition. They knew that certain diseases were contagious. In fact, they cautioned men against having relations with women who were afflicted with eczema, leprosy, or certain other easily-recognized illnesses.

Among the Hebrews, the bath after coition was a religious requirement; originally, no doubt, hygienic considerations prompted the law. Among other antique races this practice was fairly general. As we have seen, the bath and the brothel were often adjoining places and occasionally the same place. The Greeks anointed themselves with oil before any physical exercise. This fact probably often prevented a venereal infection.

The ancients were, for their own sake, careful about the physical cleanliness of the prostitute. For her mental and moral cleanliness

they concerned themselves little. She was a useful object, a religious object, for at least this reason, that she insured the sanctity of the home. A splendid harlot might be given luxuries, but it would be as though a champion race-horse were given an expensive stall. Except in the case of the few hetæræ who aroused romantic love, the prostitutes were hardly considered to be persons.

The regulation of prostitution by the police as it prevails today in many European cities, according to Iwan Bloch, is a system of inscribing the courtesans on a slave list. In some cases the harlots have been exposed almost without restriction to the tyrannies of certain officials. There are pictured such conditions in Hugo's "Les Misérables".

In one form or another the slavery of prostitutes has existed uninterruptedly from ancient times to our own. We all know what "white slavery" means. The Italian padrones in New York formerly held young girls in subjection under conditions pretty much resembling those of antique slavery, except that the legal justification did not exist. I see no reason to agree with Dr. Bloch that modern "white slavery" is an outgrowth or result of ancient conditions. For one matter, the problem of recruiting the slaves has become an altogether different one.

So long as brothels exist, there will probably be some sort of slavery. There will be some sort of domination of the weak will by the strong will. Always the lone prostitute has had her bully or "protector", the man on whom she

has lavishly poured her affections and her booty.

In Greece the prostitute's bully was the state, which took her earnings or a share in them. There was a whole class of Collectors of the Prostitutes' Revenue. The courtesan who did not belong to the state paid a monthly tax which amounted to her usual fee for her favors.

If the sexual phenomena of today are somewhat different from those of yesterday and if the conditions of tomorrow appear likely to be different from those of today, this is due most of all to the gradual decline of the double standard of sexual morality. This dual set of rules of conduct, accepted without question by the Greeks and Romans of classical times, is coming more and more to be questioned. So long as women are climbing firmly to a position of equality with (possibly of superiority to) men, we can be sure that the old measuring rods will go.

In addition to the double standard just mentioned, classical prostitution rested on the distinction between those who needed to work and those who were too noble and too proud to do any manual or certain kinds of mental labor. Thus there was normally a deep gulf, a deeper gulf even than exists with us, between a man's wife and the harlots of whom he was fond. Yet men were known to marry prostitutes, even in Greece. More frequently they took them to themselves as concubines or mistresses.

Despite the shameful position of the prostitute, she played in ancient India, Greece, and

Rome a greater rôle than the legitimate wife. Whereas the wife had to stay at home and supervise the cooking and the care of the young children, the courtesan conversed freely with many men. If she was intelligent, she might have it in her power to sway the destinies of a state. At any rate, she was permitted a wide range of interests. If she had the desire and the ability to join in philosophical discussions, she was welcome to do so! She could be praised by all, toasted by all, greeted by all men with honors and with gifts. A good wife, by way of contrast, was one who herself remained silent and about whom nothing good and nothing bad was ever said.

Any reader of this booklet who is familiar with many comedies of the Elizabethan age will recall that the favorite setting is a brothel or a boisterous tavern. This setting was borrowed, along with a number of other things, from the Latin comedy; and this, in turn, from the Greek. The ancients were not shocked, as the New York authorities have been in the case of "The God of Vengeance," to see a brothel on the stage. The hetæra was the heroine of many a Greek comedy. The mimes have already been mentioned, in which the parts of harlots were taken, realistically enough, by the harlots themselves.

A great deal about the prostitutes of Greece in the time of the Roman empire is to be learned from the satirical dialogues of Lucian and the imaginary letters of his contemporary Alciphron. Both the great and the little writers of antiquity discussed sex freely, and many of the literary works were frankly intended

to be aphrodisiac. This purpose is referred to in ancient medical works.

The same thing was true in all the branches on ancient art. Phallic symbols exist today in great numbers, but only the initiated recognize them as such. In ancient times, when the symbols were still more numerous, everyone knew what they meant.

Many great artists worked at paintings and decorations intended for the walls of a brothel. Artistic representations of the nude, which were many, did not usually have any erotic significance.

It has happened since classical times that a painter or a sculptor has used as model for a sacred work of art a woman herself not saintly. A good many of the Greek statutes of Aphrodite were modelled after well-known courtesans. Since the goddess of love had no need to look ascetic, there was nothing strange about this. The gods and goddesses of Homer and the Greek dramatists were not aloof from humanity, and they were themselves quite susceptible to the normal passions of mankind.

PROSTITUTION IN ROME

The civilization of the Roman world was largely founded upon that of Greece. Most of the things said about prostitution in the Hellenic peninsula apply also to the Italian, as well as to the empire which spread out from Rome. The system of slavery continued, although the conditions became somewhat different. The dual standard of sexual morality

remained. However, it was upon a Roman world that the teachings of Jesus of Nazareth burst forth, although the first disciples were Hebrews to whom education meant largely the language and culture of the Greeks. The growth of Christianity meant a change in ethics, a vastly different way of looking at the universe. Moreover, the development of Christianity was contemporaneous with many economic and political changes. All these things together marked the end of the ancient and the beginning of the medieval world. For practical purposes, most historians say that the Middle Ages began with the fall of the western Roman Empire.

From primitive times the Romans inherited the worship of the phallus. From the Greeks and from the Orientals they learned to worship a goddess of love. The Roman Venus had in general the same characteristics as the Greek Aphrodite. It has been conjectured that the word Venus was derived from *Benot*, the Hebrew for "daughters" or "girls," and that in this etymology a connection is shown between the "maidens' huts" of the Orientals and religious prostitution. Many passages in the Bible show that the daughters of Israel, when they ran after strange gods, indulged in strange orgies also.

The brothel in Rome, as it had been in Greece, was open to all who possessed the necessary small fee. In the days of the Empire, almost every tavern was a house of prostitution.

When Horace upbraided his steward for despising a country life (see the fourteenth let-

ter in the first book of his Epistles) this is what he wrote:

"We two do not admire the same things. What you regard as desert and inhospitable wilds, I call delightful places, and I dislike what you consider pleasant. I see that the brothel and the greasy taverns raise your inclination for the city: and this because my little spot will sooner yield frankincense and pepper than grapes; nor is there a tavern here to supply you with wines, nor a minstrel harlot, to whose thrumming you may dance."

The Roman prostitutes were usually slaves taken in the wars, and the dancers and singers of Syria were well known by the banks of the Tiber. All nations were represented among the public woman, and they came from all classes of society and all degrees of cultural life.

Food and drink and music and perfumes aroused the sexual desires of men in the voluptuous cabarets of the time. There were two sanctuaries in Rome erected to Pudicitia, but this goddess of modesty was not so well worshipped as Venus. Upon the very altars of Pudicitia sexual orgies took place.

During the period of the empire, the bathing of men and women together was introduced into Rome. The public baths came to have the reputation of being brothels. The satirical poet Martial waxed indignant when the prostitutes were permitted to attend the baths. Special permission had to be given to them because they did not of course possess the ordinary rights of citizens.

The male attendants at the baths sometimes engaged in hetero-sexual prostitution. Homosexual acts also took place in the *bag-nios*.

In Rome, as previously in Greece, the brothel was considered an aid to the purity of family life. Adultery was the greatest of sins: the cuckolded husband might put his guilty wife to death and take what revenge he pleased on the man he found with her. Under the later emperors, there was a death penalty inflicted by the state for adultery.

A great military victory would throw hundreds or thousands of young female slaves upon the market. However, the Roman armies provided a demand for prostitutes as well as a supply of them. The Roman soldier might be kept in a foreign garrison for many years. He was not permitted to marry; and in any case, no Roman citizen could legally marry a foreigner. Therefore the soldier turned for the satisfaction of his sexual desires either to a concubine or to prostitutes. The Dutch soldiers who today make up the garrisons of the Netherlands East Indies are similarly permitted to take dusky native girls to themselves as concubines.

In Rome the circus, the theatres, the religious assemblies and all public gatherings served prostitution. Everywhere the courtesans showed themselves freely.

Horace, comparing the attractions of married women with those of the prostitutes (in the *Satires*, Book I, No. 2) says, "A man can see nothing but the face of a matron. The other throws no obstacles in your way;

through the silken vest you can discern her almost as well as if she was naked; you can see her form, and observe that she has neither a bad leg nor disagreeable foot."

On any of the busy streets of Rome prostitutes might be found seeking patrons. The city numbered perhaps a million and a half inhabitants at the height of its ancient prosperity, or about its present population. It was busy, crowded with citizens, free foreigners, and slaves. There were certain sections where the courtesans were especially numerous, but nothing in the nature of a "red light" or segregated district. Harlots were as numerous in the neighborhood of the temples as anywhere. Many of the cheaper prostitutes, however, were to be found in certain outlying neighborhoods.

The brothels opened in the afternoon and they remained open all night. Prostitutes took part in the night life at the cabarets, as well as in banquets at private houses.

Voluptuous music played a greater part in antiquity than it does today. Men went to the music schools to pick out prostitutes. Wine, woman, and song: indeed it is a time-honored combination.

Imperial Rome was the seat of much luxury and of many excesses. Whether this fact contributed to the downfall of the empire, as Bossuet, Montesquieu, and many other historians have maintained, I will not venture to say. Probably there are sufficient other reasons to explain the fall of Rome.

"The plebeians of Rome," according to Montesquieu, "did not hate even the worst of the

emperors. As soon as they had lost the empire and had ceased to occupy themselves with war, the Romans had become the vilest of nations; they considered commerce and the arts as things suitable only for slaves; the free wheat which they received made them neglect agriculture; they had become accustomed to games and spectacles. Caligula, Nero, Commodus and Caracalla were mourned for their very madness, because they loved furiously what the citizens loved, and they contributed to their pleasures as much as was in their power, even with their own bodies; they poured out for them the riches of the empire; and though the rich families were ruined, the poor thoughtlessly enjoyed themselves, finding their safety in their low rank."

Perhaps there were times when a majority of the citizens of imperial Rome lived on the government doles, with little independent income and less inclination to do manual labor. Prostitutes, however, were cheap. In old Rome a great population was crowded together, for there were no means of rapid transit to draw the people into outlying sections. Poor but proud citizens wanted to live in the city, even though the less exciting life in the country was considerably cheaper. In Robert Browning's poem "Up at a Villa—Down in the City" we see how a modern Italian "person of quality" feels about living on a farm. Alas, prices are high in the city, and he must needs stay away from the fifeing and drumming and gossiping. No processions pass his door, there are no quack doctors standing around the corner to give pills, draw blood, and extract teeth.

We must imagine the harlot of old Italy walking slowly down the crowded streets, rubbing elbows with beggars and peddlers and thieves and slaves and idle citizens. All was brilliantly colored, noisy. All was open and unashamed.

Sometimes the daughter of a respectable but impoverished citizen living in a provincial town, hearing the splendors of Rome or of some other city larger than her own, ran away from home and slowly drifted into a life of prostitution. Free harlots were more common in Rome than they had been in classical Greece.

The Roman prostitutes of the higher class were mostly freed slaves or the daughters of such. Many of the famous harlots were Asiatic women. Some of them had been enslaved, others came willingly to Rome and other cities of the empire to pursue their trade. As we have seen in the case of the hetæræ in Greece, a number of courtesans became historical figures. In Horace we find a large number of names. Cynara and Lalage, Lydia and Phyllis, they are all familiar to us.

However, we can not always pin these names down to definite persons. They were often what the French call *noms de guerre* or war-names, that is, pleasant-sounding pseudonyms adopted for professional purposes. As we call many dogs Rover or Prince, the ancients called many prostitutes Lalage, from the Greek word for prattling or talking baby-fashion.

It is to be noted that many courtesans were accomplished in more than baby talk. There

were splendid musicians among them, and even poets. To these women opportunities not dreamed of by honorable wives and maidens were extended. A woman of the prostitute class, moreover, was valued all the more by her lovers if she had a reputation as a wit or an artist.

We moderns have a prejudice against the bluestocking. We are especially inclined to think of her as being epicene. Here classical opinion offers a marked contrast with ours. Just those women given over to delight were the ones who developed their literary and artistic powers. There is no good reason why this should be otherwise, since the whole artistic impulse appears to have arisen out of the sexual libido.

Perhaps in a half-conscious striving for this spiritual freedom, many married women of Rome secretly gave themselves up to prostitution. The wives of emperors sold themselves to all comers in the brothel. The name of Messalina, wife of the emperor Claudius, is especially notorious in this connection. She was at last put to death, in the forty-eighth year of the Christian era, because she publicly married a handsome Roman youth while her husband was busy elsewhere.

Juvenal tells us of this empress that she had a cell or compartment reserved regularly for her in a house of prostitution. Each night she came, disguised in a blonde wig and taking the name of Lycisca. Messalina was pretty surely mentally ill, and close to the border line of insanity.

It is noteworthy that the Roman poets of the imperial period called the brothel a shameful and dirty place. This is a change from the attitude of Solon and the Greeks of his time.

The Roman brothels were usually divided into windowless cells leading off from a corridor. Male and female prostitutes were often found in the same lupanar. In the principal hall a number of prostitutes might be ranged, from among whom the visitor was permitted to take his choice. There might be young girls in the line as well as middle-aged women, long experienced in the ways of shame.

Of course the famous courtesans of antiquity needed neither to occupy brothel cells nor to go hunting in the streets. Appointments were made with a servant, and the fee was arranged in advance.

At the entrances to some lupanars signs were posted, giving a list of the inmates, with sometimes an account of the specialties of each and the fees charged. The lowest charge seems to have been the equivalent of only a few cents of our money. The highest charge was as much as some sex-intoxicated and wealthy patrician could afford to pay, or a little more.

Then, as is still the case, frequent visitors were accustomed to bring presents as well as the regular charge. The well-known courtesans received valuable jewelry and other costly articles. This custom (I speak by the authority of the Sunday magazines and the periodicals devoted to sophisticated but not vulgar fiction) still prevails.

In the Roman comedies we find many de-

tails as to the sale of prostituted slaves and as to their leasing for specified periods. The contracts between speculators and panders were often considered in the law-courts. As to the greater prevalence of sexual abnormalities in antiquity, we may attribute this in part to the fact that the mass of the prostitutes were slaves, who had willy-nilly to do as they were bidden. Iwan Bloch says that the brothel is today the great teacher of perversities. However, the courtesan is now usually at least to a degree mistress of her own actions.

"And then he asked of her a monstrous thing.

The strumpet blanched and, rising from the couch,
Spat in His face."

Thus George Sylvester Viereck depicts a modern situation in "The Pilgrim" ("The Three Sphinxes and Other Poems," LITTLE BLUE BOOK number 579). Indeed the present-day harlot is likely enough to be something of a Puritan. A member of the sisterhood who wrote her confessions not very long ago, proudly stated that she had never committed the one unpardonable sin. She had never presumed to alter the face God had given her with rouge or powder.

As we have seen, the ancients did not frown upon perversions. The sadistic emperors of Rome did much to encourage the joy in cruelty among their subjects. Blood flowed freely from the wounds of gladiators, and gentle Roman ladies turned their thumbs down to sig-

nify that they desired death and not mercy. The lesser degrees of sadism and masochism were satisfied in the brothels. The great epidemic of masochism which took place in the Roman Empire is described in histories of the early Christian church. I refer, of course, to the martyrs.

In my edition for The Little Blue Books of "The Kama Sutra," a Hindu love manual, I have spoken of the importance which the Hindus attached to pain in their erotology. In this present booklet I have no room to discuss conditions outside Greece and Rome. Of course, prostitution was important in many other countries in ancient times.

The Greek tax on free courtesans has already been mentioned. Beginning in the reign of Alexander Severus, in the third Christian century, this tax was introduced into the Roman Empire. The proceeds were devoted to popular amusements, to the circus and to the theater. Thus the women of pleasure were taxed to provide more pleasure for the voluptuous populace.

The free prostitutes of antiquity stood under the control of certain magistrates, usually those who exercised the general supervision of morals. The Roman *Ædiles*, who made regulations for the courtesans, were also in charge of the sanitation of the city, the baths and the markets.

In Rome the prostitutes had to wear a distinctive costume. This was as rich and as brilliantly dyed as the harlot could afford. Respectable matrons more simple clothes, espe-

cially in the republican days. The dark toga was the special mark of the harlot.

A passage in Horace to which I have already referred speaks of the long flowing gown of the married woman, which did not permit her feet to be seen. The harlot wore comparatively little clothing. It would have been considered highly presumptuous for her to wear the palla or cloak of the matron. In the time of the empire, these differences in dress became obscured.

Prostitutes had to receive licenses from the *Ædiles* when they began to ply their trade, and their names were enrolled in a register. Police registration of courtesans is still required in many European cities.

We find several of the imperial laws directed against the prostitution of a wife by her husband. Other laws we find attempting to keep free Roman women, or at least those of noble descent, from prostitution. The Emperor Tacitus attempted to abolish all brothels in the city of Rome, but found the accomplishment impossible. This was in the third Christian century. Theodosius the Great and Valentinian I, in the next century, absolutely forbade prostitution within the limits of the Roman Empire.

Justinian, Roman Emperor of the East in the Sixth Century, famous for the legal compilations drawn up in his reign, continued the work of attempting to extirpate prostitution. For a reason which we shall see later, this fact is especially curious.

These legal attacks upon the courtesans all

took place in Christian times, after the downfall of the antique, pagan spirit. Yet the Middle Ages pretty generally accepted prostitution as a necessary evil.

Among the pagan Romans the feeling that prostitution was dirty and dishonorable had already penetrated. Even though a harlot was free, she had not the rights of a woman of the citizen class. Her word was not taken in a court of law. She could not sue for debts arising in the exercise of her trade.

In imperial Rome men came gradually over to the view that it wasn't entirely a matter-of-fact and honorable thing to enter a lupanar. Persons of good family and established position did not want to be recognized in the act of walking into a brothel. They covered their heads, and came in only after dark.

This was a change from the opinion of Greece and of Republican Rome that prostitution, because it protected the sacred institution of marriage from adultery, was therefore praiseworthy.

The praise had hardly been extended to include the prostitutes themselves. Under Augustus a law was enacted forbidding the marriage of citizens with prostitutes and former prostitutes. Men of senatorial rank were forbidden to marry even a maiden descended from a prostitute. However, a courtesan might be taken into a senator's house to live there as his concubine.

In a few cases there were marriages between prostitutes and persons of high rank. The marriage of Thais to Ptolemy of Egypt has

already been mentioned. The Emperor, Justinian married Theodora, who had been from childhood an actress in the mimes and a prostituted slave. We are told that she had been proficient in her work, and had taught the other girls in the brothel the tricks of the trade. Theodora worked with her husband in the attempt to abolish prostitution. Before Justinian married her, he had repealed Constantine's law which forbade a person of senatorial rank to marry an actress in the mimes. Theodora was made empress regnant, and she took an important part in the business of government. She seems to have made Justinian a good and respectable wife.

Many of the details of the sexual life of antiquity are preserved for us in Ovid's poem, "The Art of Love." When the poet was banished from Rome, the profligacy of his book was alleged as the reason. It has been supposed, however, that the real reason was his intrigue with Julia, the emperor's granddaughter.

Ovid's book deals only with sexual relations outside the tie of marriage. It is a manual of instructions for having pleasant dealings with courtesans, supplemented by hints to the prostitutes on how to make their profession profitable and agreeable to themselves.

Martial, Juvenal, Catullus, Tibullus and Petronius are some of the other Latin writers from whose works we may learn much about the sexual morals and practices of the Romans.

The theory has been advanced that in his

"Satyricon" Petronius meant to satirize the Emperor Nero. There is a passage in the book where two men invade a ceremony sacred to women. This was reminiscent of the act of Publius Clodius, a notorious enemy to Cicero, who profaned the mysteries of the Good Goddess. Because, it is said, he had fallen in love with Caesar's wife, he disguised himself in woman's attire and entered Caesar's house, where the ceremonies were being held. For this serious offense Clodius was put on trial, and he escaped only by bribing the jurors. How very modern some of these stories seem!

For such a mysterious orgy as this, see "The Bacchantes" of Euripides, in Gilbert Murray's translation or in the version by Alexander Harvey (Little Blue Book number 418). On page 10 of this edition, where the thyrsus is designated as "lively and vivacious," Mr. Harvey adds a note to the effect that "the thyrsus was called wanton or insolent because of the liberties the Bacchantes took with their wands." This does not quite hit the mark. The thyrsus, a staff entwined with ivy, was a phallic symbol. It betokened the male regenerative organ. Reason enough for it to be called "wanton," quite aside from its use in the mysteries.

Petronius says plainly that the women whom his two male characters happen to come upon are carrying phallic symbols. We are told that the ceremonies are carried on in the temple of Priapus, a sexual god. •

The "Satyricon" is especially valuable for what it tells us of homosexuality. It is chiefly to this which Mr. J. M. Mitchell refers in the

introduction to his version of Petronius (one of the "Broadway Translations" published by Dutton).

"It is a great misfortune," he says, "that the *Satyricon* should contain so much that is alien to modern taste. One passage has been omitted altogether, and a number of other passages has, as in Mr. Heseltine's version in the Loeb Series, been left in the original Latin. In many other cases, where the sense allowed, the translation represents the original in a modified form. Such devices, unsatisfactory though they be, cannot reasonably be avoided, and it is hoped that the result will be excused on the score of public decency."

Public decency is the censor which restricts unexpurgated books to them that can afford limited editions and, in certain cases, to them who can read the books in the original language. Since the "*Satyricon*" is fragmentary as we have it, it is almost meaningless when it is cut up still more by the censors. Especially obnoxious is the use without warning of euphuisms which pervert the sense of the original.

In a poem, "*The Civil War*," which is recited in the well-known banquet scene of the "*Satyricon*," the Oriental practice of castrating slaves, which had been imported into Greece and Rome, is violently attacked. The Oriental eunuchs were used to guard the seraglio; the Papal choirs have employed eunuchs in order to secure mature male soprano voices. In the European ancient world, they were used in homosexual prostitution.

We have seen how in the later days of the Roman Empire abolitionists of the brothel arose. All sorts of opinions were expressed about the public utility of prostitution. It was sometimes a religious performance, sometimes a necessary evil, sometimes and unnecessary evil which ought promptly to be suppressed.

It is not the purpose of this little book to point morals. Almost any desired lesson could be tacked on to a statement of the facts of prostitution in the classical world. About the only thing it is safe to say is that no matter how much superstitions change, no matter how much the will to believe may fasten itself upon new objects, no matter how much economic and social conditions may vary, human nature remains pretty much the same.

This fact, which at first sight seems to contradict the evolutionary doctrines, appears upon further consideration to explain and strengthen them. No wonder, when changes are so gradual, that we fail to see the transformation of one species into another. Surely the sexual impulses of men have been pretty much the same for thousands of years. It is interesting to note how romantic love, which is largely a matter of convention, can be a very different thing to two races, each being mentally and physically very similar to the other.

Shelley considered himself the disciple of Plato. How very differently, though, the two men thought of love! This in spite of the fact that the English poet could use the Athenian philosopher's very phrases.

HOMOSEXUAL PROSTITUTION IN THE ANCIENT WORLD

My last topic in this little book is one on which antique public opinion and the modern view are far apart. Consequently the subject is a delicate one.

I will assume (what is not rare) total ignorance on this subject in the minds of my readers. There are persons who are attracted to individuals of the same sex in the manner in which ordinary normal people are drawn to those of the opposite sex. These homosexuals are sexually repulsed by individuals of the opposite gender, as heterosexuals are sexually repulsed by those of the same sex. The homosexual man is drawn to males, the homosexual woman is attracted by females. Homosexuality, so far as we can tell, has existed since the dawn of history.

Krafft-Ebing was at first of the opinion that homosexuals were to be considered degenerate products of civilization, but he later found reason to modify his view. The homosexuals form a bridge between the typically male and the typically female. It is to be understood, then, that they are not merely criminals drawn on by some inexplicable curiosity to explore strange fields of vice.

Iwan Bloch distinguishes between true homosexuality and what he calls pseudohomosexuality. The true homosexual, he says, may deviate from psychic normality only in this one respect. There is no doubt that many men of

genius have been born with homosexual tendencies. Among them are to be named Oscar Wilde, Walt Whitman, the Russian composer Tschaikowsky, and numerous others.

Whether homosexuality be a sign of mental illness or not there is no good reason why it should be punished by law. Probably the proportion of congenital homosexuals in the general population is about one in a hundred.

The homosexuals in classical Greece were much more numerous than this proportion would indicate. Furthermore, many of them were clearly bisexual, attracted in love by both their own and the opposite sex. This indicates pseudohomosexuality, a condition which is not innate but acquired.

The love of a man for a boy, or pederasty, came to Greece from the Orient. No doubt it was spread by natural homosexuals to heterosexual individuals. Especially because the psychic life of women was hardly recognized, romantic love came in Greece to be centered on the boy.

Homosexual prostitution has had religious importance. Among the Romans homosexuality between women (tribady) was considered a sacrifice to Pudicitia, goddess of modesty, and to the Bona Dea or Good Goddess, sister of Faunus the goat-footed. It was a homosexual orgy to which Publius Clodius was a witness in Caesar's house. Sappho, the Greek poetess, is the most famous of the women known to have practiced tribady.

Boy and men prostitutes used cosmetics and perfumes, sang and played erotic music, exe-

cuted erotic dances, much in the same fashion as the female prostitutes. So far as prostitution goes, homosexuality among the ancients meant relations between males. Female homosexuality was carried on either in the religious orgies or privately at home.

The greatest men of Greece practiced pederasty. How many of them were natural homosexuals, how many congenitally heterosexual, it is impossible to say, especially because there are all sorts of conditions in between the two poles, and no man is altogether free from bisexuality.

Plato's "Lysis" speaks plainly of the love of a man for a boy. This love, although it had its ideal side, was based on physical relations. Indeed the Romans omitted to sublimate pederasty, and to them only the sensual side mattered.

Just how important homosexual prostitution was in antiquity is a question that must be answered from an incomplete record. We have no contemporary account of prostitution that is complete and detailed. However, it is certain that at least in certain times and places the hiring out of men for the sexual satisfaction of other men was as important as the traffic in women.

The idea that homosexuality was honorable does not appear to have prevailed in Solon's time, although two centuries later Socrates found nothing ill in it. Only the prostitution of one's body did he condemn, and not relations between friends.

After Plato's time, homosexual prostitution

became general, and the idea that friendship and love should enter into the relationship was gradually abandoned. The male prostitutes, like the female, were generally slaves.

Several of the Roman emperors, among whom Heliogabalus is especially to be noted, were favorable to the homosexually prostituted youths. Great prices were paid for handsome young slaves.

The male prostitutes were recognizable on the street by the paint on their faces, by the garb they wore, and by special gestures the significance of which was generally understood. In general they imitated as closely as possible the women who followed the same trade.

In some cases a male companion was retained for a long period, and there might even be a "marriage" ceremony to signalize the beginning of a relationship. Nero and Heliogabalus both went through such ceremonies.

Some male prostitutes offered themselves both to men and to women, or to women exclusively. Many a Roman matron, in the luxurious imperial days, paid for the favors of a gladiator or an actor or some other handsome slave.

A good deal of antique art was devoted to homosexual love. There are very few indications that it was found disgusting or even shameful. In this one matter we have gone very far from the classical ideal.

PREFACE

The Devil's Dictionary was begun in a weekly paper in 1881, and was continued in a desultory way and at long intervals until 1906. In that year a large part of it was published in covers with the title *The Cynic's Word Book*, a name which the author had not the power to reject nor the happiness to approve. To quote the publishers of the present work:

"This more reverent title had previously been forced upon him by the religious scruples of the last newspaper in which a part of the work had appeared, with the natural consequence that when it came out in covers the country already had been flooded by its imitators with a score of 'cynic' books—*The Cynic's This*, *The Cynic's That*, and *The Cynic's t'Other*. Most of these books were merely stupid, though some of them added the distinction of silliness. Among them, they brought the word 'cynic' into disfavor so deep that any book bearing it was discredited in advance of publication."

Meantime, too, some of the enterprising humorists of the country had helped themselves to such parts of the work as served their needs, and many of its definitions, anecdotes, phrases and so forth, had become more or less current in popular speech. This explanation is made, not with any pride of priority in trifles, but in simple denial of possible charges of plagiarism, which is no trifle. In merely resuming his own the author hopes to be held guiltless by those to whom the work is addressed—enlightened souls who prefer dry wines to sweet, sense to sentiment, wit to humor and clean English to slang.

A conspicuous, and it is hoped not unpleasing, feature of the book is its abundant illustrative quotations from eminent poets, chief of whom is that learned and ingenious cleric, Father Gassalasca Jape. S. J., whose lines bear his initials. To Father Jape's kindly encouragement and assistance the author of the prose text is greatly indebted.

AMBROSE BIERCE.

THE DEVIL'S DICTIONARY

A

ABNORMAL, *adj.* Not conforming to standard. In matters of thought and conduct, to be independent is to be abnormal, to be abnormal is to be detested. Wherefore the lexicographer adviseth a striving toward a straiter resemblance to the Average Man than he hath to himself. Whoso attaineth thereto shall have peace, the prospect of death and the hope of Hell.

ABSOLUTE, *adj.* Independent, irresponsible. An absolute monarchy is one in which the sovereign does as he pleases so long as he pleases the assassins. Not many absolute monarchies are left, most of them having been replaced by limited monarchies, where the sovereign's power for evil (and for good) is greatly curtailed, and by republics, which are governed by chance.

ABSTAINER, *n.* A weak person who yields to the temptation of denying himself a pleasure. A total abstainer is one who abstains from everything but abstention, and especially from inactivity in the affairs of others.

ABSURDITY, *n.* A statement or belief manifestly inconsistent with one's own opinion.

ACADEME, *n.* An ancient school where morality and philosophy were taught.

ACADEMY, *n.* (from *academe*). A modern school where football is taught.

ACHIEVEMENT, *n.* The death of endeavor and the birth of disgust.

ACQUAINTANCE, *n.* A person whom we know well enough to borrow from, but not well

enough to lend to. A degree of friendship called slight when its object is poor or obscure, and intimate when he is rich or famous.

ADAMANT, *n.* A mineral frequently found beneath a corset. Soluble in sollicitate of gold.

ADHERENT, *n.* A follower who has not yet obtained all that he expects to get.

ADMIRATION, *n.* Our polite recognition of another's resemblance to ourselves.

AIM, *n.* The task we set our wishes to.

"Cheer up! Have you no aim in life?"

She tenderly inquired.

"An aim? Well, no, I haven't, wife;

The fact is—I have fired."

—G. J.

ALLIANCE, *n.* In international politics, the union of two thieves who have their hands so deeply inserted in each other's pocket that they cannot separately plunder a third.

APOLOGIZE, *v. i.* To lay the foundation for a future offense.

APPETITE, *n.* An instinct thoughtfully implanted by Providence as a solution to the labor question.

APPLAUSE, *n.* The echo of a platitude.

ARDOR, *n.* The quality that distinguishes love without knowledge.

ARISTOCRACY, *n.* Government by the best men. (In this sense the word is obsolete; so is that kind of government.) Fellows that wear downy hats and clean shirts—guilty of education and suspected of bank accounts.

ARTLESSNESS, *n.* A certain engaging quality to which women attain by long study and severe practice upon the admiring male, who

is pleased to fancy it resembles the candid simplicity of his young.

ASPERSE, *v. t.* Maliciously to ascribe to another vicious actions which one has not had the temptation and opportunity to commit.

B

BACK, *n.* That part of your friend which it is your privilege to contemplate in your adversity.

BACKBITE, *v. t.* To speak of a man as you find him when he can't find you.

BAIT, *n.* A preparation that renders the hook more palatable. The best kind is beauty.

BAROMETER, *n.* An ingenious instrument which indicates what kind of weather we are having.

BELLADONNA, *n.* In Italian a beautiful lady; in English a deadly poison. A striking example of the essential identity of the two tongues.

BIGOT, *n.* One who is obstinately and zealously attached to an opinion that you do not entertain.

BIRTH, *n.* The first and direst of all disasters. As to the nature of it there appears to be no uniformity. Castor and Pollux were born from the egg. Pallas came out of a skull. Galatea was once a block of stone. Peresilis, who wrote in the tenth century, avers that he grew up out of the ground where a priest had spilled holy water. It is known that Arimaxus was derived from a hole in the earth, made by a stroke of lightning. Leucomodon was the son of a cavern in Mount *Ætna*, and I have myself seen a man come out of a wine cellar.

BORE, *n.* A person who talks when you wish him to listen.

BOUNDARY, *n.* In political geography, an imaginary line between two nations, separating the imaginary rights of one from the imaginary rights of the other.

BRAIN, *n.* An apparatus with which we think that we think. That which distinguishes the man who is content to *be* something from the man who wishes to *do* something. A man of great wealth, or one who has been pitchforked into high station, has commonly such a headful of brain that his neighbors cannot keep their hats on. In our civilization, and under our republican form of government, brain is so highly honored that it is rewarded by exemption from the cares of office.

C

CALAMITY, *n.* A more than commonly plain and unmistakable reminder that the affairs of this life are not of our own ordering. Calamities are of two kinds: misfortune to ourselves, and good fortune to others.

CANONICALS, *n.* The motley worn by Jesters of the Court of Heaven.

CAPITAL, *n.* The seat of misgovernment. That which provides fire, the pot, the dinner, the table and the knife and fork for the anarchist; the part of the repast that he himself supplies is the disgrace before meat. *Capital Punishment*, a penalty regarding the justice and expediency of which many worthy persons—including all the assassins—entertain grave misgivings.

CAT, *n.* A soft, indestructible automaton provided by nature to be kicked when things go wrong in the domestic circle.

CHILDHOOD, *n.* The period of human life intermediate between the idiocy of infancy and the folly of youth—two removes from the sin of manhood and three from the remorse of age.

CHRISTIAN, *n.* One who believes that the New Testament is a divinely inspired book admirably suited to the spiritual needs of his neighbor. One who follows the teachings of Christ in so far as they are not inconsistent with a life of sin.

I dreamed I stood upon a hill, and, lo!
 The godly multitudes walked to and fro
 Beneath, in Sabbath garments fitly clad,
 With pious mien, appropriately sad,
 While all the church bells made a solemn din—
 A fire-alarm to those who lived in sin.
 Then saw I gazing thoughtfully below,
 With tranquil face, upon that holy show
 A tall, spare figure in a robe of white,
 Whose eyes diffused a melancholy light.
 "God keep you, stranger," I exclaimed. "You are
 No doubt (your habit shows it) from afar;
 And yet I entertain the hope that you,
 Like these good people, are a Christian too."
 He raised his eyes and with a look so stern
 It made me with a thousand blushes burn
 Replied—his manner with disdain was spiced:
 "What! I a Christian? No, indeed! I'm Christ."
 —G. J.

CIRCUS, *n.* A place where horses, ponies and elephants are permitted to see men, women and children acting the fool.

CLAIRVOYANT, *n.* A person, commonly a woman, who has the power of seeing that which is invisible to her patron—namely, that he is a blockhead.

CLERGYMAN, n. A man who undertakes the management of our spiritual affairs as a method of bettering his temporal one.

CLOCK, n. A machine of great moral value to man, allaying his concern for the future by reminding him what a lot of time remains to him.

CONGRATULATIONS, n. The civility of envy.

CONNOISSEUR, n. A specialist who knows everything about something and nothing about anything else.

An old wine-bibber having been smashed in a railway collision, some wine was poured upon his lips to revive him. "Pauillac, 1873," he murmured, and died.

CONSERVATIVE, n. A statesman who is enamored of existing evils, as distinguished from the Liberal, who wishes to replace them with others.

CONSULT, v. t. To seek another's approval of a course already decided on.

CONTEMPT, n. The feeling of a prudent man for an enemy who is too formidable safely to be opposed.

CORPORATION, n. An ingenious device for obtaining individual profit without individual responsibility.

COWARD, n. One who in a perilous emergency thinks with his legs.

CUPID, n. The so-called god of love. This bastard creation of a barbarous fancy was no doubt inflicted upon mythology for the sins of its deities. Of all unbeautiful and inappropriate conceptions this is the most reasonless and offensive. The notion of symbolizing sexual love by a semi-sexless babe, and comparing the

pains of passion to the wounds of an arrow—of introducing this pudgy homunculus into art grossly to materialize the subtle spirit and suggestion of the work—this is eminently worthy of the age that, giving it birth, laid it on the doorstep of posterity.

CURIOSITY. *n.* An objectionable quality of the female mind. The desire to know whether or not a woman is cursed with curiosity is one of the most active and insatiable passions of the masculine soul.

D

DAMN. *v.* A word formerly much used by the Paphlagonians, the meaning of which is lost. By the learned Dr. Dolabelly Gak it is believed to have been a term of satisfaction, implying the highest possible degree of mental tranquillity. Professor Groke, on the contrary, thinks it expressed an emotion of tumultuous delight, because it so frequently occurs in combination with the word *jod* or *god*, meaning "joy." It would be with great diffidence that I should advance an opinion conflicting with that of either of these formidable authorities.

DANCE. *v. i.* To leap about to the sound of tittering music, preferably with arms about your neighbor's wife or daughter. There are many kinds of dances, but all those requiring the participation of the two sexes have two characteristics in common: they are conspicuously innocent, and warmly loved by the vicious.

DAY. *n.* A period of twenty-four hours, mostly misspent. This period is divided into two parts, the day proper and the night, or day im-

proper—the former devoted to sins of business, the latter consecrated to the other sort. These two kinds of social activity overlap.

DECALOGUE, *n.* A series of commandments, ten in number—just enough to permit an intelligent selection for observance, but not enough to embarrass the choice. Following is the revised edition of the Decalogue, calculated for this meridian.

Thou shalt no God but me adore:
'Twere too expensive to have more.

No images nor idols make
For Robert Ingersoll to break.

Take not God's name in vain; select
A time when it will have effect.

Work not on Sabbath days at all,
But go to see the teams play ball.

Honor thy parents. That creates
For life insurance lower rates.

Kill not, abet not those who kill;
Thou shalt not pay thy butcher's bill.

Kiss not thy neighbor's wife, unless
Thine own thy neighbor doth caress.

Don't steal; thou'lt never thus compete
Successfully in business. Cheat.

Bear not false witness—that is low—
But "hear 'tis rumored so and so."

Covet thou naught that thou hast not
By hook or crook, or somehow, got.
—G. J.

DELUSION, *n.* The father of a most respectable family, comprising Enthusiasm, Affection, Self-denial, Faith, Hope, Charity and many other goodly sons and daughters.

All hail, Delusion! Were it not for thee
The world turned topsy-turvy we should see;
For Vice, respectable with cleanly fancies,
Would fly abandoned Virtue's gross advances.
—*Mumfrey Mappel.*

DESTINY, n. A tyrant's authority for crime and a fool's excuse for failure.

DIARY, n. A daily record of that part of one's life, which he can relate to himself without blushing.

DICTIONARY, n. A malevolent literary device for cramping the growth of a language and making it hard and inelastic. This dictionary, however, is a most useful work.

DIPLOMACY, n. The patriotic art of lying for one's country.

DISCUSSION, n. A method of confirming others in their errors.

DISOBEDIENCE, n. The silver lining to the cloud of servitude.

DISTANCE, n. The only thing that the rich are willing for the poor to call theirs, and keep.

DIVINATION, n. The art of nosing out the occult. Divination is of as many kinds as there are fruit-bearing varieties of the flowering dunces and the early fools.

DOG, n. A kind of additional or subsidiary Deity designed to catch the overflow and surplus of the world's worship. This Divine Being in some of his smaller and silkier incarnations takes, in the affection of Woman, the place to which there is no human male aspirant. The Dog is a survival—an anachronism. He toils not, neither does he spin, yet Solomon in all his glory never lay upon a door-mat all day long, sun-soaked and fly-fed and fat, while his

master worked for the means wherewith to purchase an idle wag of the Solomonic tall, seasoned with a look of tolerant recognition.

E

ECCENTRICITY, *n.* A method of distinction so cheap that fools employ it to accentuate their incapacity.

EDIBLE, *adj.* Good to eat, and wholesome to digest, as a worm to a toad, a toad to a snake, a snake to a pig, a pig to a man, and a man to a worm.

EDUCATION, *n.* That which discloses to the wise and disguises from the foolish their lack of understanding.

EFFECT, *n.* The second of two phenomena which always occur together in the same order. The first, called a Cause, is said to generate the other—which is no more sensible than it would be for one who has never seen a dog except in pursuit of a rabbit to declare the rabbit the cause of the dog.

EGOTIST, *n.* A person of low taste, more interested in himself than in me.

ELOQUENCE *n.* The art of orally persuading fools that white is the color that it appears to be. It includes the gift of making any color appear white.

EMBALM, *v. t.* To cheat vegetation by locking up the gases upon which it feeds. By embalming their dead and thereby deranging the natural balance between animal and vegetable life, the Egyptians made their once fertile and populous country barren and incapable of supporting more than a meager crew. The modern

metallic burial casket is a step in the same direction, and many a dead man who ought now to be ornamenting his neighbor's lawn as a tree, or enriching his table as a bunch of radishes, is doomed to a long inutility. We shall get him after awhile if we are spared, but in the meantime the violet and rose are languishing for a nibble at his *glutoeus maximus*.

ENVELOPE, *n.* The coffin of a document; the scabbard of a bill; the husk of a remittance; the bed-gown of a love-letter.

ERUDITION, *n.* Dust shaken out of a book into an empty skull.

EVANGELIST, *n.* A bearer of good tidings, particularly (in a religious sense) such as assure us of our own salvation and the damnation of our neighbors.

EXCESS, *n.* In morals, an indulgence that enforces by appropriate penalties the law of moderation.

EXECUTIVE, *n.* An officer of the Government, whose duty it is to enforce the wishes of the legislative power until such time as the judicial department shall be pleased to pronounce them invalid and of no effect.

EXILE, *n.* One who serves his country by residing abroad, yet is not an ambassador.

An English sea-captain, being asked if he had read "The Exile of Erin," replied: "No, sir; but I should like to anchor on it." Years afterward, when he had been hanged as a pirate after a career of unparalleled atrocities, the following memorandum was found in the ship's log that he had kept at the time of his reply:

"Aug. 3d, 1842. Made a joke on the ex-Isle of Erin. Coldly received. War with the whole world!"

EXPERIENCE, n. The wisdom that enables us to recognize as an undesirable old acquaintance the folly that we have already embraced.

EXTINCTION, n. The raw material out of which theology created the future state.

F

FAITH, n. Belief without evidence in what is told by one who speaks without knowledge, of things without parallel.

FASHION, n. A despot whom the wise ridicule and obey.

FELON, n. A person of greater enterprise than discretion, who in embracing an opportunity has formed an unfortunate attachment.

FEMALE, n. One of the opposing, or unfair, sex.

FIB, n. A lie that has not cut its teeth. An habitual liar's nearest approach to truth: the perigee of his eccentric orbit.

FICKLENESS, n. The iterated satiety of an enterprising affection.

FIDDLE, n. An instrument to tickle human ears by friction of a horse's tail on the entrails of a cat.

FIDELITY, n. A virtue peculiar to those who are about to be betrayed.

FINANCE, n. The art or science of managing revenues and resources for the best advantage of the manager. The pronunciation of this word with the *i* long and the accent on the first syllable is one of America's most precious discoveries and possessions.

FLAG, n. A colored rag borne above troops and hoisted on forts and ships. It appears to

serve the same purpose as certain signs that one sees on vacant lots in London—"Rubbish may be shot here."

FLESH, *n.* The Second Person of the secular Trinity.

FOLLY, *n.* That "gift and faculty divine" whose creative and controlling energy inspires Man's mind, guides his actions and adorns his life.

FOOL, *n.* A person who pervades the domain of intellectual speculation and diffuses himself through the channels of moral activity. He is omnific, omniform, omnipercipient, omniscient, omnipotent. He it was who invented letters, printing, the railroad, the steamboat, the telegraph, the platitude and the circle of the sciences. He created patriotism and taught the nations war—founded theology, philosophy, law, medicine and Chicago. He established monarchical and republican government. He is from everlasting to everlasting—such as creation's dawn beheld he fooleth now. In the morning of time he sang upon primitive hills, and in the noonday of existence headed the procession of being. His grandmotherly hand has warmly tucked-in the set sun of civilization, and in the twilight he prepares Man's evening meal of milk-and-morality and turns down the covers of the universal grave. And after the rest of us shall have retired for the night of eternal oblivion he will sit up to write a history of human civilization.

FORK, *n.* An instrument used chiefly for the purpose of putting dead animals into the mouth. Formerly the knife was employed for

this purpose, and by many worthy persons is still thought to have many advantages over the other tool, which, however, they do not altogether reject, but use to assist in charging the knife. The immunity of these persons from swift and awful death is one of the most striking proofs of God's mercy to those that hate Him.

FREEDOM, *n.* Exemption from the stress of authority in a beggarly half dozen of restraint's infinite multitude of methods. A political condition that every nation supposes itself to enjoy in virtual monopoly. Liberty. The distinction between freedom and liberty is not accurately known; naturalists have never been able to find a living specimen of either.

FREEMASONS, *n.* An order with secret rites, grotesque ceremonies and fantastic costumes, which, originating in the reign of Charles II, among working artisans of London, has been joined successively by the dead of past centuries in unbroken retrogression until now it embraces all the generations of man on the hither side of Adam and is drumming up distinguished recruits among the pre-Creational inhabitants of Chaos and the Formless Void. The order was founded at different times by Charlemagne, Julius Cæsar, Cyrus, Solomon, Zoroaster, Confucius, Thothmes, and Buddha. Its emblems and symbols have been found in the Catacombs of Paris and Rome, on the stones of the Parthenon and the Chinese Great Wall, among the temples of Karnak and Palmyra and in the Egyptian Pyramids—always by a Freemason.

FROG, *n.* A reptile with edible legs. The frog is a diligent songster, having a good voice but no ear.

FUNERAL, *n.* A pageant whereby we attest our respect for the dead by enriching the undertaker, and strengthen our grief by an expenditure that deepens our groans and doubles our tears.

FUTURE, *n.* That period of time in which our affairs prosper, our friends are true and our happiness is assured.

G

GALLOWS, *n.* A stage for the performance of miracle plays, in which the leading actor is translated to heaven. In this country the gallows is chiefly remarkable for the number of persons who escape it.

GEOLOGY, *n.* The science of the earth's crust—to which, doubtless, will be added that of its interior whenever a man shall come up garrulous out of a well. The geological formations of the globe already noted are catalogued thus: The Primary, or lower one, consists of rocks, bones of mired mules, gas-pipes, miners' tools, antique statues minus the nose, Spanish doubloons and ancestors. The Secondary is largely made up of red worms and moles. The Tertiary comprises railway tracks, patent pavements, grass, snakes, mouldy boots, beer bottles, tomato cans, intoxicated citizens, garbage, anarchists, snap-dogs and fools.

GHOST, *n.* The outward and visible sign of an inward fear.

Accounting for the uncommon behavior of ghosts, Heine mentions somebody's ingenious

theory to the effect that they are as much afraid of us as we of them. Not quite, if I may judge from such tables of comparative speed as I am able to compile from memories of my own experience.

There is one insuperable obstacle to a belief in ghosts. A ghost never comes naked: he appears either in a winding-sheet or "in his habit as he lived." To believe in him, then, is to believe that not only have the dead the power to make themselves visible after there is nothing left of them, but that the same power inheres in textile fabrics. Supposing the products of the loom to have this ability, what object would they have in exercising it? And why does not the apparition of a suit of clothes sometimes walk abroad without a ghost in it? These be riddles of significance. They reach away down and get a convulsive grasp on the very tap-root of this flourishing faith.

GLUTTON, *n.* A person who escapes the evils of moderation by committing dyspepsia.

GRAMMAR, *n.* A system of pitfalls thoughtfully prepared for the feet of the self-made man, along the path by which he advances to distinction.

GRAVE, *n.* A place in which the dead are laid to await the coming of the medical student.

GRAVITATION, *n.* The tendency of all bodies to approach one another with a strength proportioned to the quantity of matter they contain—the quantity of matter they contain being ascertained by the strength of their tendency to approach one another. This is a lovely and

edifying illustration of how science, having made A the proof of B, makes B the proof of A.

GUILLOTINE, *n.* A machine which makes a Frenchman shrug his shoulders with good reason.

H

HALO, *n.* Properly, a luminous ring encircling an astronomical body, but not infrequently confounded with "aureola," or "nimbus," a somewhat similar phenomenon worn as a head-dress by divinities and saints. The halo is a purely optical illusion, produced by moisture in the air, in the manner of a rainbow; but the aureola is conferred as a sign of superior sanctity, in the same way as a bishop's mitre, or the Pope's tiara. In the painting of the Nativity, by Szedgkin, a pious artist of Pesth, not only do the Virgin and the Child wear the nimbus, but an ass nibbling hay from the sacred manger is similarly decorated and, to his lasting honor be it said, appears to bear his unaccustomed dignity with a truly saintly grace.

HAND, *n.* A singular instrument worn at the end of the human arm and commonly thrust into somebody's pocket.

HANDKERCHIEF, *n.* A small square of silk or linen, used in various ignoble offices about the face and especially serviceable at funerals to conceal the lack of tears. The handkerchief is of recent invention; our ancestors knew nothing of it and intrusted its duties to the sleeve. Shakespeare's introducing it into the play of "Othello" is an anachronism: Desdemona dried her nose with her skirt, as Dr. Mary Walker

and other reformers have done with their coat-tails in our own day—an evidence that revolutions sometimes go backward.

HEATHEN, n. A benighted creature who has the folly to worship something that he can see and feel.

HEAVEN, n. A place where the wicked cease from troubling you with talk of their personal affairs, and the good listen with attention while you expound your own.

HELPMATE, n. A wife, or bitter half.

"Now, why is yer wife called a helpmate, Pat?"

Says the priest. "Since the time o' yer wooin' She's niver assisted in what ye were at—

For it's naught ye are ever doin'."

"That's true of yer Riverence," Patrick replies, And no sign of contrition evinces;

"But, bedad, it's a fact which the word implies, For she helps to mate the expinses!"

—*Marley Wottel.*

HEMP, n. A plant from whose fibrous bark is made an article of neckwear which is frequently put on after public speaking in the open and prevents the wearer from taking cold.

HERS, pron. His.

HISTORY, n. An account mostly false, of events mostly unimportant, which are brought about by rulers mostly knaves, and soldiers mostly fools.

HOMICIDE, n. The slaying of one human being by another. There are four kinds of homicide: felonious, excusable, justifiable and praise-worthy, but it makes no great difference to the person slain whether he fell by one kind or another—the classification is for the advantage of the lawyers.

HOSPITALITY, n. The virtue which induces us to feed and lodge certain persons who are not in need of food and lodging.

HOSTILITY, n. A peculiarly sharp and specially applied sense of the earth's overpopulation. Hostility is classed as active and passive; as (respectively) the feeling of a woman for her female friends, and that which she entertains for all the rest of her sex.

HOUSE, n. A hollow edifice erected for the habitation of man, rat, mouse, beetle, cockroach, fly, mosquito, flea, bacillus and microbe. *House of Correction*, a place of reward for political and personal service, and for the detention of offenders and appropriations. *House of God*, a building with a steeple and a mortgage on it. *House-dog*, a pestilent beast kept on domestic premises to insult persons passing by and appal the hardy visitor. *House-maid*, a youngerly person of the opposing sex employed to be variously disagreeable and ingeniously unclean in the station in which it has pleased God to place her.

HUMORIST, n. A plague that would have softened down the hoar austerity of Pharaoh's heart and persuaded him to dismiss Israel with his best wishes, cat-quick.

HYPOCRITE, n. One who, professing virtues that he does not respect, secures the advantage of seeming to be what he despises.

I

I is the first letter of the alphabet, the first word of the language, the first thought of the mind, the first object of affection. In grammar

it is a pronoun of the first person and singular number. Its plural is said to be *We*, but how there can be more than one myself is doubtless clearer to the grammarians than it is to the author of this incomparable dictionary. Conception of two myselfs is difficult, but fine. The frank yet graceful use of "*I*" distinguishes a good writer from a bad; the latter carries it with the manner of a thief trying to cloak his loot.

ICONOCLAST, *n.* A breaker of idols, the worshipers whereof are imperfectly gratified by the performance, and most strenuously protest that he unbuildeth but doth not reedify, that he pulleth down but pileth not up. For the poor things would have other idols in place of those he thwacketh upon the mazzard and dispeleth. But the iconoclast saith: "Ye shall have none at all, for ye need them not; and if the rebuilder fooleth round hereabout, behold I will depress the head of him and sit thereon till he squawk it."

IDIOT, *n.* A member of a large and powerful tribe whose influence in human affairs has always been dominant and controlling. The Idiot's activity is not confined to any special field of thought or action, but "pervades and regulates the whole." He has the last word in everything; his decision is unappealable. He sets the fashions of opinion and taste, dictates the limitations of speech and circumscribes conduct with a dead-line.

IDLENESS, *n.* A model farm where the devil experiments with seeds of new sins and promotes the growth of staple vices.

ILLUSTRIOUS, *adj.* Suitably placed for the shafts of malice, envy and detraction.

IMAGINATION, *n.* A warehouse of facts, with poet and liar in joint ownership.

IMMIGRANT, *n.* An unenlightened person who thinks one country better than another.

IMMODEST, *adj.* Having a strong sense of one's own merit, coupled with a feeble conception of worth in others.

IMMORAL, *adj.* Inexpedient. Whatever in the long run and with regard to the greater number of instances men find to be generally inexpedient comes to be considered wrong, wicked, immoral. If man's notions of right and wrong have any other basis than this of expediency; if they originated, or could have originated, in any other way; if actions have in themselves a moral character apart from, and nowise dependent on, their consequences—then all philosophy is a lie and reason a disorder of the mind.

IMMORTALITY, *n.*

A toy which people cry for,
And on their knees apply for,
Dispute, contend and lie for,
And if allowed
Would be right proud
Eternally to die for.

—G. J.

IMPROVIDENCE, *n.* Provision for the needs of today from the revenues of tomorrow.

IMPUNITY, *n.* Wealth.

INDISCRETION, *n.* The guilt of woman.

INFANCY, *n.* The period of our lives when, according to Wordsworth, "Heaven lies about

us." The world begins lying about us pretty soon afterward.

INFIDEL, *n.* In New York, one who does not believe in the Christian religion; in Constantinople, one who does. A kind of scoundrel imperfectly reverent of, and niggardly contributory to, divines, ecclesiastics, popes, parsons, canons, monks, mollahs, voodoos, presbyters, hierophants, prelates, obeah-men, abbés, nuns, missionaries, exhorters, deacons, friars, hadjis, high-priests, muezzins, brahmins, medicine-men, confessors, eminences, elders, primates, prebendaries, pilgrims, prophets, imatums, beneficiaries, clerks, vicars-choral, archbishops, bishops, abbots, priors, preachers, padres, abbesses, caloyers, palmers, curates, patriarchs, bonezs, santons, beadsmen, canonesses, residentiaries, diocesans, deans, subdeans, rural deans, abdals, charm-sellers, archdeacons, hierarchs, class-leaders, incumbents, capitulars, sheiks, talapoins, postulants, scribes, gooroos, precentors, beadles, fakirs, sextons, reverences, revivalists, cenobites, perpetual curates, chaplains, mudjoes, readers, novices, vicars, pastors, rabbis, ulemas, lamas, sacristans, vergers, dervishes, lectors, church wardens, cardinals, prioresses, suffragans, acolytes, rectors, curés, sophis, mutifs and pumpums.

INSURRECTION, *n.* An unsuccessful revolution. Disaffection's failure to substitute misrule for bad government.

INTENTION, *n.* The mind's sense of the prevalence of one set of influences over another set; an effect whose cause is the imminence, imme-

diate or remote, of the performance of an involuntary act.

INTERPRETER, *n.* One who enables two persons of different languages to understand each other by repeating to each what it would have been to the interpreter's advantage for the other to have said.

INTIMACY, *n.* A relation into which fools are providentially drawn for their mutual destruction.

IRRELIGION, *n.* The principal one of the great faiths of the world.

J

J is a consonant in English, but some nations use it as a vowel—than which nothing could be more absurd. Its original form, which has been but slightly modified, was that of the tail of a subdued dog, and it was not a letter but a character, standing for a Latin verb, *jacere*, "to throw," because when a stone is thrown at a dog the dog's tail assumes that shape. This is the origin of the letter, as expounded by the renowned Dr. Jocolpus Bumer, of the University of Belgrade, who established his conclusion on the subject in a work of three quarto volumes and committed suicide on being reminded that the j in the Roman alphabet had originally no curl.

JEALOUS, *adj.* Unduly concerned about the preservation of that which can be lost only if not worth keeping.

K

KILL, *v. t.* To create a vacancy without nominating a successor.

KINDNESS, n. A brief preface to ten volumes of exaction.

KING, n. A male person commonly known in America as a "crowned head," although he never wears a crown and has usually no head to speak of.

KISS, n. A word invented by the poets as a rhyme for "bliss." It is supposed to signify, in a general way, some kind of rite or ceremony appertaining to a good understanding; but the manner of its performance is unknown to this lexicographer.

KORAN, n. A book which the Mohammedans foolishly believe to have been written by divine inspiration, but which Christians know to be a wicked imposture, contradictory to the Holy Scriptures.

L

LABOR, n. One of the processes by which A acquires property for B.

LAUGHTER, n. An interior convulsion, producing a distortion of the features and accompanied by inarticulate noises. It is infectious and, though intermittent, incurable. Liability to attacks of laughter is one of the characteristics distinguishing man from the animals—these being not only inaccessible to the provocation of his example, but impregnable to the microbes having original jurisdiction in bestowal of the disease. Whether laughter could be imparted to animals by inoculation from the human patient is a question that has not been answered by experimentation. Dr. Meir Witchell holds that the infectious character of laughter is due to instantaneous fermentation

of *sputa* diffused in a spray. From this peculiarity he names the disorder *Convulsio spargens*.

LEARNING, *n.* The kind of ignorance distinguishing the studious.

LECTURER, *n.* One with his hand in your pocket, his tongue in your ear and his faith in your patience.

LIBERTY, *n.* One of Imagination's most precious possessions.

The rising People, hot and out of breath,
Roared round the palace: "Liberty or death!"
"If death will do," the King said, "let me reign;
You'll have, I'm sure, no reason to complain."

—*Martha Braymance.*

LIFE, *n.* A spiritual pickle preserving the body from decay. We live in daily apprehension of its loss; yet when lost it is not missed. The question, "Is life worth living?" has been much discussed; particularly by those who think it is not, many of whom have written at great length in support of their view and by careful observance of the laws of health enjoyed for long terms of years the honors of successful controversy.

LIMB, *n.* The branch of a tree or the leg of an American woman.

LOVE, *n.* A temporary insanity curable by marriage or by removal of the patient from the influences under which he incurred the disorder. This disease, like *caries* and many other ailments, is prevalent only among civilized races living under artificial conditions; barbarous nations breathing pure air and eating simple food enjoy immunity from its rav-

ages. It is sometimes fatal, but more frequently to the physician than to the patient.

M

MAD, *adj.* Affected with a high degree of intellectual independence; not conforming to standards of thought, speech and action derived by the conformants from study of themselves; at odds with the majority; in short, unusual. It is noteworthy that persons are pronounced mad by officials destitute of evidence that themselves are sane. For illustration, this present (and illustrious) lexicographer is no firmer in the faith of his own sanity than is any inmate of any madhouse in the land; yet for aught he knows to the contrary, instead of the lofty occupation that seems to him to be engaging his powers he may really be beating his hands against the window bars of an asylum and declaring himself Noah Webster, to the innocent delight of many thoughtless spectators.

MAGIC, *n.* An art of converting superstition into coin. There are other arts serving the same high purpose, but the discreet lexicographer does not name them.

MAGNIFICENT, *adj.* Having a grandeur or splendor superior to that to which the spectator is accustomed, as the ears of an ass to a rabbit, or the glory of a glowworm to a maggot.

MAGNITUDE, *n.* Size. Magnitude being purely relative, nothing is large and nothing small. If everything in the universe were increased in bulk one thousand diameters nothing would be any larger than it was before, but if one thing remained unchanged all the others would

be larger than they had been. To an understanding familiar with the relativity of magnitude and distance the spaces and masses of the astronomer would be no more impressive than those of the microscopist. For anything we know to the contrary, the visible universe may be a small part of an atom, with its component ions, floating in the life-fluid (luminiferous ether) of some animal. Possibly the wee creatures peopling the corpuscles of our own blood are overcome with the proper emotion when contemplating the unthinkable distance from one of these to another.

MAIDEN, *n.* A young person of the unfair sex addicted to clewless conduct and views that madden to crime. The genus has a wide geographical distribution, being found wherever sought and deplored wherever found. The maiden is not altogether unpleasing to the eye, nor (without her piano and her views) insupportable to the ear, though in respect to comeliness distinctly inferior to the rainbow, and, with regard to the part of her that is audible, beaten out of the field by the canary—which, also, is more portable.

MALE, *n.* A member of the unconsidered, or negligible sex. The male of the human race is commonly known (to the female) as Mere Man. The genus has two varieties: good providers and bad providers.

MAN, *n.* An animal so lost in rapturous contemplation of what he thinks he is as to overlook what he indubitably ought to be. His chief occupation is extermination of other animals and his own species, which, however, mul-

tiplies with such insistent rapidity as to infest the whole habitable earth and Canada.

MARRIAGE, *n.* The state or condition of a community consisting of a master, a mistress and two slaves, making in all, two.

MARTYR, *n.* One who moves along the line of least reluctance to a desired death.

MATERIAL, *adj.* Having an actual existence, as distinguished from an imaginary one. Important.

MAUSOLEUM, *n.* The final and funniest folly of the rich.

MAYONNAISE, *n.* One of the sauces which serve the French in place of a state religion.

ME, *pro.* The objectionable case of I. The personal pronoun in English has three cases, the dominative, the objectionable and the oppressive. Each is all three.

MEANDER, *n.* To proceed sinuously and aimlessly. The word is the ancient name of a river about one hundred and fifty miles south of Troy, which turned and twisted in the effort to get out of hearing when the Greeks and Trojans boasted of their prowess.

MEDAL, *n.* A small metal disk given as a reward for virtues, attainments or services more or less authentic.

MEDICINE, *n.* A stone flung down the Bowery to kill a dog in Broadway.

MIND, *n.* A mysterious form of matter secreted by the brain. Its chief activity consists in the endeavor to ascertain its own nature, the futility of the attempt being due to the fact that it has nothing but itself to know itself with. From the Latin *mens*, a fact un-

known to that honest shoe-seller, who, observing that his learned competitor over the way had displayed the motto "*Mens conscia recti*," emblazoned his own shop front with the words "Men's, women's and children's conscia recti."

MINISTER, *n.* An agent of a higher power with a lower responsibility. In diplomacy an officer sent into a foreign country as the visible embodiment of his sovereign's hostility. His principal qualification is a degree of plausible inveracity next below that of an ambassador.

MIRACLE, *n.* An act or event out of the order of nature and unaccountable, as beating a normal hand of four kings and an ace with four aces and a king.

MONARCH, *n.* A person engaged in reigning. Formerly the monarch ruled, as the derivation of the word attests, and as many subjects have had occasion to learn. In Russia and the Orient the monarch has still a considerable influence in public affairs and in the disposition of the human head, but in western Europe political administration is mostly entrusted to his ministers, he being somewhat preoccupied with reflections relating to the status of his own head.

MONARCHIAL GOVERNMENT, *n.* Government.

MONDAY, *n.* In Christian countries, the day after the baseball game.

MONEY, *n.* A blessing that is of no advantage to us excepting when we part with it. An evidence of culture and a passport to polite society. Supportable property.

MONUMENT, *n.* A structure intended to commemorate something which either needs no

commemoration or cannot be commemorated. The monument custom has its *reductiones ad absurdum* in monuments "to the unknown dead"—that is to say, monuments to perpetuate the memory of those who have left no memory.

MORAL, *adj.* Conforming to a local and mutable standard of right. Having the quality of general expediency.

MULTITUDE, *n.* A crowd; the source of political wisdom and virtue. In a republic, the object of the statesman's adoration. "In a multitude of counselors there is wisdom," saith the proverb. If many men of equal individual wisdom are wiser than any one of them, it must be that they acquire the excess of wisdom by the mere act of getting together. Whence comes it? Obviously from nowhere—as well say that a range of mountains is higher than the single mountains composing it. A multitude is as wise as its wisest member if it obey him; if not, it is no wiser than its most foolish.

MYTHOLOGY, *n.* The body of a primitive people's belief concerning its origin, early history, heroes, deities and so forth, as distinguished from the true accounts which it invents later.

N

NEGRO, *n.* The *pièce de résistance* in the American political problem. Representing him by the letter *n*, the Republicans began to build their equation thus: "Let $n = \text{the white man.}$ " This, however, appears to give an unsatisfactory solution.

NEIGHBOR, *n.* One whom we are commanded

to love as ourselves, and who does all he knows how to make us disobedient.

NOVEL, *n.* A short story padded. A species of composition bearing the same relation to literature that the panorama bears to art. As it is too long to be read at a sitting the impressions made by its successive parts are successively effaced, as in the panorama. Unity, totality of effect, is impossible; for besides the few pages last read all that is carried in mind is the mere plot of what has gone before. To the romance the novel is what photography is to painting. Its distinguishing principle, probability, corresponds to the literal actuality of the photograph and puts it distinctly into the category of reporting; whereas the free wing of the romancer enables him to mount to such altitudes of imagination as he may be fitted to attain; and the first three essentials of the literary art are imagination, imagination and imagination. The art of writing novels, such as it was, is long dead everywhere except in Russia, where it is new. Peace to its ashes—some of which have a large sale.

NOVEMBER, *n.* The eleventh twelfth of a weariness.

O

OATH, *n.* In law, a solemn appeal to the Deity, made binding upon the conscience by a penalty for perjury.

OBLIVION, *n.* The state or condition in which the wicked cease from struggling and the dreary are at rest. Fame's eternal dumping ground. Cold storage for high hopes. A place where ambitious authors meet their works without

pride and their betters without envy. A dormitory without an alarm clock.

OCEAN, *n.* A body of water occupying about two-thirds of a world made for man—who has no gills.

OLD, *adj.* In that stage of usefulness which is not inconsistent with general inefficiency, as an *old man*. Discredited by lapse of time and offensive to the popular taste, as an *old book*.

OLYMPIAN, *adj.* Relating to a mountain in Thessaly, once inhabited by gods, now a repository of yellowing newspapers, beer bottles and mutilated sardine cans, attesting the presence of the tourist and his appetite.

OMEN, *n.* A sign that something will happen if nothing happens.

OPPORTUNITY, *n.* A favorable occasion for grasping a disappointment.

OPTIMISM, *n.* The doctrine, or belief, that everything is beautiful, including what is ugly, everything good, especially the bad, and everything right that is wrong. It is held with greatest tenacity by those most accustomed to the mischance of falling into adversity, and is most acceptably expounded with the grin that apes a smile. Being a blind faith, it is inaccessible to the light of disproof—an intellectual disorder, yielding to no treatment but death. It is hereditary, but fortunately not contagious.

OPTIMIST, *n.* A proponent of the doctrine that black is white.

A pessimist applied to God for relief.

"Ah, you wish me to restore your hope and cheerfulness," said God.

"No," replied the petitioner, "I wish you to create something that would justify them."

"The world is all created," said God, "but you have overlooked something—the mortality of the optimist."

ORTHODOX, n. An ox wearing the popular religious yoke.

OTHERWISE, adv. No better.

OUTCOME, n. A particular type of disappointment. By the kind of intelligence that sees in an exception a proof of the rule the wisdom of an act is judged by the outcome, the result. This is immortal nonsense; the wisdom of an act is to be judged by the light that the doer had when he performed it.

P

PALACE, n. A fine and costly residence, particularly that of a great official. The residence of a high dignitary of the Christian Church is called a palace; that of the Founder of his religion was known as a field, or wayside. There is progress.

PALMISTRY, n. The 947th method (according to Mimbleshaw's classification) of obtaining money by false pretenses. It consists in "reading character" in the wrinkles made by closing the hand. The pretense is not altogether false; character can really be read very accurately in this way, for the wrinkles in every hand submitted plainly spell the word "dupe." The imposture consists in not reading it aloud.

PANTALOONS, n. A nether habiliment of the adult civilized male. The garment is tubular and unprovided with hinges at the points of flexion. Supposed to have been invented by a

humorist. Called "trousers" by the enlightened and "pants" by the unworthy.

PANTHEISM, *n.* The doctrine that everything is God, in contradistinction to the doctrine that God is everything.

PANTOMIME, *n.* A play in which the story is told without violence to the language. The least disagreeable form of dramatic action.

PARDON, *v.* To remit a penalty and restore to a life of crime. To add to the lure of crime the temptation of ingratitude.

PASSPORT, *n.* A document treacherously inflicted upon a citizen going abroad, exposing him as an alien and pointing him out for special reprobation and outrage.

PAST, *n.* That part of Eternity with some small fraction of which we have a slight and regrettable acquaintance. A moving line called the Present parts it from an imaginary period known as the Future. These two grand divisions of Eternity, of which the one is continually effacing the other, are entirely unlike. The one is dark with sorrow and disappointment, the other bright with prosperity and joy. The Past is the region of sobs, the Future is the realm of song. In the one crouches Memory, clad in sackcloth and ashes, mumbling penitential prayer; in the sunshine of the other Hope flies with a free wing, beckoning to temples of success and bowers of ease. Yet the Past is the Future of yesterday, the Future is the Past of tomorrow. They are one—the knowledge and the dream.

PATIENCE, *n.* A minor form of despair, disguised as a virtue.

PATRIOT, *n.* One to whom the interests of a part seem superior to those of the whole. The dupe of statesmen and the tool of conquerors.

PATRIOTISM, *n.* Combustible rubbish ready to the torch of anyone ambitious to illuminate his name.

In Dr. Johnson's famous dictionary patriotism is defined as the last resort of a scoundrel. With all due respect to an enlightened but inferior lexicographer I beg to submit that it is the first.

PEACE, *n.* In international affairs, a period of cheating between two periods of fighting.

PEDIGREE, *n.* The known part of the route from an arboreal ancestor with a swim bladder to an urban descendant with a cigarette.

PERFECTION, *n.* An imaginary state or quality distinguished from the actual by an element known as excellence; an attribute of the critic.

The editor of an English magazine having received a letter pointing out the erroneous nature of his views and style, and signed "Perfection," promptly wrote at the foot of the letter: "I don't agree with you," and mailed it to Matthew Arnold.

PESSIMISM, *n.* A philosophy forced upon the convictions of the observer by the disheartening prevalence of the optimist with his scarecrow hope and his unsightly smile.

PHILISTINE, *n.* One whose mind is the creature of its environment, following the fashion in thought, feeling and sentiment. He is sometimes learned, frequently prosperous, commonly clean and always solemn.

PHILOSOPHY, *n.* A route of many roads leading from nowhere to nothing.

PHRENOLOGY, *n.* The science of picking the

pocket through the scalp. It consists in locating and exploiting the organ that one is a dupe with.

PHYSICIAN, n. One upon whom we set our hopes when ill and our dogs when well.

PHYSIOGNOMY, n. The art of determining the character of another by the resemblances and differences between his face and our own, which is the standard of excellence.

"There is no art," says Shakespeare, foolish man.

"To read the mind's construction in the face."

The physiognomists his portrait scan,

And say: "How little wisdom here we trace!

He knew his face disclosed his mind and heart,
So, in his own defense, denied our art."

—*Lavatar Shunk.*

PIANO, n. A parlor utensil for subduing the impenitent visitor. It is operated by depressing the keys of the machine and the spirits of the audience.

PICTURE, n. A representation in two dimensions of something wearisome in three.

PIE, n. An advance agent of the reaper whose name is Indigestion.

Cold pie was highly esteemed by the remains.—
The Rev. Dr. Mucker, in a Funeral Sermon Over a British Nobleman.

Cold pie is a detestable

American comestible.

That's why I'm done—or undone—

So far from that dear London.

—*From the Headstone of a British Nobleman, in Kalamazoo.*

PIETY, n. Reverence for the Supreme Being, based upon His supposed resemblance to man.

The pig is taught by sermons and epistles
To think the God of Swine has snout and bristles.
—*Judibras.*

FIG, n. An animal (*Porcus omnivorus*) closely allied to the human race by the splendor and vivacity of its appetite, which, however, is inferior in scope, for it sticks at pig.

PIRACY, n. Commerce without its folly-swaddles, just as God made it.

PITIFUL, adj. The state of an enemy or opponent after an imaginary encounter with oneself.

PLAGARIZE, v. To take the thought or style of another writer whom one has never, never read.

PLAN, v. t. To bother about the best method of accomplishing an accidental result.

PLATITUDE, n. The fundamental element and special glory of popular literature. A thought that snores in words that smoke. The wisdom of a million fools in the diction of a dullard. A fossil sentiment in artificial rock. A moral without the fable. All that is mortal of a departed truth. A demi-tasse of milk-and-morality. The Pope's-nose of a featherless peacock. A jelly-fish withering on the shore of the sea of thought. The cackle surviving the egg. A desiccated epigram.

PLATONIC, adj. Pertaining to the philosophy of Socrates. Platonic Love is a fool's name for the affection between a disability and a frost.

PLAUDITS, n. Coins with which the populace pays those who tickle and devour it.

PLOW, n. An implement that cries aloud for hands accustomed to the pen.

PLUNDER, v. To take the property of another without observing the decent and customary reticences of theft. To effect a change of ownership with the candid concomitance of a brass band. To wrest the wealth of A from B and leave C lamenting a vanished opportunity.

POCKET, n. The cradle of motive and the grave of conscience. In woman this organ is lacking; so she acts without motive, and her conscience, denied burial, remains ever alive, confessing the sins of others.

POLICE, n. An armed force for protection and participation.

POLITENESS, n. The most acceptable hypocrisy.

POLITICS, n. A strife of interests masquerading as a contest of principles. The conduct of public affairs for private advantage.

POLITICIAN, n. An eel in the fundamental mud upon which the superstructure of organized society is reared. When he wriggles he mistakes the agitation of his tail for the trembling of the edifice. As compared with the statesman, he suffers the disadvantage of being alive.

POLYGAMY, n. A house of atonement, or expiatory chapel, fitted with several stools of repentance, as distinguished from monogamy, which has but one.

POSTERITY, n. An appellate court which reverses the judgment of a popular author's contemporaries, the appellant being his obscure competitor.

POVERTY, n. A file provided for the teeth of the rats of reform. The number of plans for

its abolition equals that of the reformers who suffer from it, plus that of the philosophers who know nothing about it. Its victims are distinguished by possession of all the virtues and by their faith in leaders seeking to conduct them into a prosperity where they believe these to be unknown.

PRAY, *v.* To ask that the laws of the universe be annulled in behalf of a single petitioner confessedly unworthy.

PREDESTINATION, *n.* The doctrine that all things occur according to program. This doctrine should not be confused with that of foreordination, which means that all things are programmed, but does not affirm their occurrence, that being only an implication from other doctrines by which this is entailed. The difference is great enough to have deluged Christendom with ink, to say nothing of the gore. With the distinction of the two doctrines kept well in mind, and a reverent belief in both, one may hope to escape perdition if spared.

PREFERENCE, *n.* A sentiment, or frame of mind, induced by the erroneous belief that one thing is better than another.

An ancient philosopher, expounding his conviction that life is no better than death, was asked by a disciple why, then, he did not die. "Because," he replied, "death is no better than life."

It is longer. ◀

PREJUDICE, *n.* A vagrant opinion without visible means of support.

PRELATE, *n.* A church officer having a superior degree of holiness and a fat preferment.

One of Heaven's aristocracy. A gentleman of God.

PREROGATIVE, *n.* A sovereign's right to do wrong.

PRESBYTERIAN, *n.* One who holds the conviction that the governing authorities of the Church should be called presbyters.

PRESCRIPTION, *n.* A physician's guess at what will best prolong the situation with least harm to the patient.

PRESENT, *n.* That part of eternity dividing the domain of disappointment from the realm of hope.

PRESENTABLE, *adj.* Hideously appareled after the manner of the time and place.

In Boorioboola-Gha a man is presentable on occasions of ceremony if he have his abdomen painted a bright blue and wear a cow's tail; in New York he may, if it please him, omit the paint, but after sunset he must wear two tails made of the wool of a sheep and dyed black.

PREVARICATOR, *n.* A liar in the caterpillar state.

PRICE, *n.* Value, plus a reasonable sum for the wear and tear of conscience in demanding it.

PRISON, *n.* A place of punishments and rewards. The poet assures us that—

Stone walls do not a prison make,
but a combination of the stone wall, the political parasite and the moral instructor is no garden of sweets.

PROJECTILE, *n.* The final arbiter in international disputes. Formerly these disputes were settled by physical contact of the disputants, with such simple arguments as the rudimentary

logic of the times could supply—the sword, the spear, and so forth. With the growth of prudence in military affairs the projectile came more and more into favor, and is now held in high esteem by the most courageous. Its capital defect is that it requires personal attendance at the point of propulsion.

PROOF, *n.* Evidence having a shade more of plausibility than of unlikelihood. The testimony of two credible witnesses as opposed to that of only one.

PROOFREADER, *n.* A malefactor who atones for making your writing nonsense by permitting the compositor to make it unintelligible.

PROPERTY, *n.* Any material thing, having no particular value, that may be held by A against the cupidity of B. Whatever gratifies the passion for possession in one and disappoints it in all others. The object of man's brief rapacity and long indifference.

PROVIDENTIAL, *adj.* Unexpectedly and conspicuously beneficial to the person describing it.

PUBLISH, *v.* In literary affairs, to become the fundamental element in a cone of critics.

PUSH, *n.* One of the two things mainly conducive to success, especially in politics. The other is Pull.

Q

QUEEN, *n.* A woman by whom the realm is ruled when there is a king, and through whom it is ruled when there is not.

QUILL, *n.* An implement of torture yielded by a goose and commonly wielded by an ass.

This use of the quill is now obsolete, but its modern equivalent, the steel pen, is wielded by the same everlasting Presence.

QUORUM, *n.* A sufficient number of members of a deliberative body to have their own way and their own way of having it. In the United States Senate a quorum consists of the chairman of the Committee on Finance and a messenger from the White House; in the House of Representatives, of the Speaker and the devil.

QUOTIENT, *n.* A number showing how many times a sum of money belonging to one person is contained in the pocket of another—usually about as many times as it can be got there.

R

RABBLE, *n.* In a republic, those who exercise a supreme authority tempered by fraudulent elections. The rabble is like the sacred Sîmurgh, of Arabian fable—omnipotent on condition that it do nothing. (The word is Aristocratese, and has no exact equivalent in our tongue, but means, as nearly as may be, "soaring swine.")

RADICALISM, *n.* The conservatism of tomorrow injected into the affairs of today.

RATIONAL, *adj.* Devoid of all delusions save those of observation, experience and reflection.

RAILROAD, *n.* The chief of many mechanical devices enabling us to get away from where we are to where we are no better off. For this purpose the railroad is held in the highest favor by the optimist, for it permits him to make the transit with great expedition.

READING, *n.* The general body of what one

reads. In our country it consists, as a rule, of Indiana novels, short stories in "dialect" and humor in slang.

We know by one's reading
His learning and breeding;
But what draws his laughter
We know his Hereafter.
Read nothing, laugh never—
The 'Sphinx was less clever!

—*Jupiter Muke.*

REALISM, *n.* The art of depicting nature as is seen by toads. The charm suffusing a landscape painted by a mole, or a story written by a measuring-worm.

REALITY, *n.* The dream of a mad philosopher. That which would remain in the cupel if one should assay a phantom. The nucleus of a vacuum.

REAR, *n.* In American military matters, that exposed part of the army that is nearest to Congress.

REASON, *v. i.* To weigh probabilities in the scales of desire.

REASONABLE, *adj.* Accessible to the infection of our own opinions. Hospitable to persuasion dissuasion and evasion.

REBEL, *n.* A proponent of a new misrule who has failed to establish it.

RECONCILIATION, *n.* A suspension of hostilities. An armed truce for the purpose of digging up the dead.

RECONSIDER, *v.* To seek a justification for a decision already made.

RECTOR, *n.* In the Church of England, the Third Person of the parochial Trinity, the Curate and the Vicar being the other two.

REDEMPTION, *n.* Deliverance of sinners from

the penalty of their sin, through their murder of the deity against whom they sinned. The doctrine of Redemption is the fundamental mystery of our holy religion, and whoso believeth in it shall not perish, but have everlasting life in which to try to understand it.

REFERENDUM, *n.* A law for submission of proposed legislation to a popular vote to learn the nonsensus of public opinion.

REFLECTION, *n.* An action of the mind whereby we obtain a clearer view of our relation to the things of yesterday and are able to avoid the perils that we shall not again encounter. .

REFORM, *n.* A thing that mostly satisfies reformers opposed to reformation.

REFUSAL, *n.* Denial of something desired; as an elderly maiden's hand in marriage, to a rich and handsome suitor; a valuable franchise to a rich corporation, by an alderman; absolution to an impenitent king, by a priest, and so forth. Refusals are graded in a descending scale of finality thus: the refusal absolute, the refusal conditional, the refusal tentative and the refusal feminine. The last is called by some casuists the refusal assentive.

RELIGION, *n.* A daughter of Hope and Fear, explaining to Ignorance the nature of the Unknowable.

"What is your religion, my son?" inquired the Archbishop of Rheims.

"Pardon, monseigneur," replied Rochebriant; "I am ashamed of it."

"Then why do you not become an atheist?"

"Impossible! I should be ashamed of atheism."

"In that case, monsieur, you should join the Protestants."

RELIQUARY, *n.* A receptacle for such sacred objects as pieces of the true cross, short-ribs of saints, the ears of Balaam's ass, the lung of the cock that called Peter to repentance and so forth. Reliquaries are commonly of metal, and provided with a lock to prevent the contents from coming out and performing miracles at unseasonable times. A feather from the wing of the Angel of the Annunciation once escaped during a sermon in Saint Peter's and so tickled the noses of the congregation that they awoke and sneezed with great vehemence three times each. It is related in the "Gesta Sanctorum" that a sacristan in the Canterbury cathedral surprised the head of Saint Dennis in the library. Reprimanded by its stern custodian, it explained that it was seeking a body of doctrine. This unseemly levity so enraged the diocesan that the offender was publicly anathematized, thrown into the Stour and replaced by another head of Saint Dennis, brought from Rome.

REPRESENTATIVE, *n.* In national politics, a member of the Lower House in this world, and without discernible hope of promotion in the next.

REPUBLIC, *n.* A nation in which, the thing governing and the thing governed being the same, there is only a permitted authority to enforce an optional obedience. In a republic the foundation of public order is the ever lessening habit of submission inherited from ancestors who, being truly governed, submitted because they had to. There are as many kinds of republics as there are gradations between the

despotism whence they came and the anarchy whither they lead.

RESOLUTE, *adj.* Obstinate in a course that we approve.

RESPECTABILITY, *n.* The offspring of a *liaison* between a bald head and a bank account.

RESPONSIBILITY, *n.* A detachable burden easily shifted to the shoulders of God, Fate, Fortune, Luck or one's neighbor. In the days of astrology it was customary to unload it upon a star.

REVELATION, *n.* A famous book in which St. John the Divine concealed all that he knew. The revealing is done by the commentators, who know nothing.

REVERENCE, *n.* The spiritual attitude of a man to a god and a dog to a man.

REVOLUTION, *n.* In politics, an abrupt change in the form of misgovernment. Specifically, in American history, the substitution of the rule of an Administration for that of a Ministry, whereby the welfare and happiness of the people were advanced a full half-inch. Revolutions are usually accompanied by a considerable effusion of blood, but are accounted worth it—this appraisement being made by beneficiaries whose blood had not the mischance to be shed. The French revolution is of incalculable value to the Socialist of today; when he pulls the string actuating its bones its gestures are inexpressibly terrifying to gory tyrants suspected of fomenting law and order.

RICH, *adj.* Holding in trust and subject to an accounting the property of the indolent, the incompetent, the unthrifty, the envious and the

luckless. That is the view that prevails in the underworld, where the Brotherhood of Man finds its most logical development and candid advocacy. To denizens of the midworld the word means good and wise.

RICHES, n.

A gift from Heaven signifying, "This is my beloved son, in whom I am well-pleased."—*John D. Rockefeller.*

The reward of toil and virtue.—*J. P. Morgan.*

The savings of many in the hands of one.—*Eugene Debs.*

To these excellent definitions the inspired lexicographer feels that he can add nothing of value.

RIGHT, n. Legitimate authority to be, to do or to have; as the right to be a king, the right to do one's neighbor, the right to have measles, and the like. The first of these rights was once universally believed to be derived directly from the will of God; and this is still sometimes affirmed in *partibus infidelium* outside the enlightened realms of Democracy.

RIGHTEOUSNESS, n. A sturdy virtue that was once found among the Pantidoodles inhabiting the lower part of the peninsula of Oque. Some feeble attempts were made by returned missionaries to introduce it into several European countries, but it appears to have been imperfectly expounded.

RITE, n. A religious or semi-religious ceremony fixed by law, precept or custom, with the essential oil of sincerity carefully squeezed out of it.

RITUALISM, n. A Dutch Garden of God where He may walk in rectilinear freedom, keeping off the grass.

ROAD, *n.* A strip of land along which one may pass from where it is too tiresome to be to where it is futile to go.

ROBBER, *n.* A candid man of affairs.

It is related of Voltaire that one night he and some traveling companions lodged at a wayside inn. The surroundings were suggestive, and after supper they agreed to tell robber stories in turn. When Voltaire's turn came he said: "Once there was a Farmer-General of the Revenues." Saying nothing more, he was encouraged to continue. "That," he said, "is the story."

ROMANCE, *n.* Fiction that owes no allegiance to the God of Things as They Are. In the novel the writer's thought is tethered to probability, as a domestic horse to the hitching-post, but in romance it ranges at will over the entire region of the imagination—free, lawless, immune to bit and rein. Your novelist is a poor creature, as Carlyle might say—a mere reporter. He may invent his characters and plot, but he must not imagine anything taking place that might not occur, albeit his entire narrative is candidly a lie. Why he imposes this hard condition on himself, and "drags at each remove a lengthening chain" of his own forging he can explain in ten thick volumes without illuminating by so much as a candle's ray the black profound of his own ignorance of the matter. There are great novels, for great writers have "laid waste their powers" to write them, but it remains true that far and away the most fascinating fiction that we have is "The Thousand and One Nights."

RUBBISH, *n.* Worthless matter, such as the religions, philosophies, literatures, arts and

sciences of the tribes infesting the regions lying due south from Boreaplas.

RUIN, *v.* To destroy. Specifically, to destroy a maid's belief in the virtue of maids.

RUMOR, *n.* A favorite weapon of the assassins of character.

S

SABBATH, *n.* A weekly festival having its origin in the fact that God made the world in six days and was arrested on the seventh. Among the Jews observance of the day was enforced by a Commandment of which this is the Christian version: "Remember the seventh day to make thy neighbor keep it wholly." To the Creator it seemed fit and expedient that the Sabbath should be the last day of the week, but the Early Fathers of the Church held other views. So great is the sanctity of the day that even where the Lord holds a doubtful and precarious jurisdiction over those who go down to (and down into) the sea it is reverently recognized, as is manifest in the following deep-water version of the Fourth Commandment:

Six days shalt thou labor and do all thou art able, And on the seventh holystone the deck and scrape the cable.

Decks are no longer holystoned, but the cable still supplies the captain with opportunity to attest a pious respect for the divine ordinance.

SACRAMENT, *n.* A solemn religious ceremony to which several degrees of authority and significance are attached. Rome has seven sacraments, but the Protestant churches, being less prosperous, feel that they can afford only two.

and these of inferior sanctity. Some of the smaller sects have no sacraments at all—for which mean economy they will indubitably be damned.

SACRED, *adj.* Dedicated to some religious purpose; having a divine character; inspiring solemn thoughts or emotions; as, the Dalai Lama of Thibet; the Moogum of M'bwango; the temple of Apes in Ceylon; the Cow in India; the Crocodile, the Cat and the Onion of ancient Egypt; the Mufti of Moosh; the hair of the dog that bit Noah, etc.

All things are either sacred or profane.

The former to ecclesiasts bring gain;

The latter to the devil appertain.

—*Dumbo Omohundro.*

SAINT, *n.* A dead sinner revised and edited.

The Duchess of Orleans relates that the irreverent old calumniator, Marshal Villeroi, who in his youth had known St. Francis de Sales, said, on hearing him called saint: "I am delighted to hear that Monsieur de Sales is a saint. He was fond of saying indelicate things, and used to cheat at cards. In other respects he was a perfect gentleman, though a fool."

SATAN, *n.* One of the Creator's lamentable mistakes, repented in sashcloth and ashes.

Being instated as an archangel, Satan made himself multifariously objectionable and was finally expelled from Heaven. Halfway in his descent he paused, bent his head in thought a moment and at last went back. "There is one favor that I should like to ask," said he.

"Name it."

"Man, I understand, is about to be created. He will need laws."

"What, wretch! you his appointed adversary,

charged from the dawn of eternity with hatred of his soul—you ask for the right to make his laws?"

"Pardon; what I have to ask is that he be permitted to make them himself."

It was so ordered.

SAW, n. A trite popular saying, or proverb. (Figurative and colloquial.) So called because it makes its way into a wooden head.

SCRAP-BOOK, n. A book that is commonly edited by a fool. Many persons of some small distinction compile scrap-books containing whatever they happen to read about themselves or employ others to collect.

SCRIPTURES, n. The sacred books of our holy religion, as distinguished from the false and profane writings on which all other faiths are based.

SOUL, n. A spiritual entity concerning which there hath been brave disputation. Plato held that those souls which in a previous state of existence (antedating Athens) had obtained the clearest glimpses of eternal truth entered into the bodies of persons who became philosophers. Plato was himself a philosopher. The souls that had least contemplated divine truth animated the bodies of usurpers and despots. Dionysius I, who had threatened to decapitate the broad-browed philosopher, was a usurper and despot. Plato, doubtless, was not the first to construct a system of philosophy that could be quoted against his enemies; certainly he was not the last.

"Concerning the nature of the soul," saith the renowned author of *Diversiones Sanctorum*, "there hath been hardly more argument than that of its place in the body. Mine own be-

lief is that the soul hath her seat in the abdomen—in which faith we may discern and interpret a truth hitherto unintelligible, namely that the glutton is of all men most devout. He is said in the Scripture to ‘make a god of his belly’—why, then, should he not be pious, having ever his Deity with him to freshen his faith? Who so well as he can know the might and majesty that he shrines? Truly and soberly, the soul and the stomach are one Divine Entity; and such was the belief of Promasius, who nevertheless erred in denying it immortality. He had observed that its visible and material substance failed and decayed with the rest of the body after death, but of its immaterial essence he knew nothing. This is what we call the Appetite, and it survives the wreck and reek of mortality, to be rewarded or punished in another world, according to what it hath demanded in the flesh. The Appetite whose coarse clamoring was for the unwholesome viands of the general market and the public refectory shall be cast into eternal famine, whilst that which firmly though civilly insisted on ortolans, caviar, terrapin, anchovies, *pâtés de foie gras* and all such Christian comestibles shall flesh its spiritual tooth in the souls of them forever and ever, and wreak its divine thirst upon the immortal parts of the rarest and richest wines ever quaffed here below. Such is my religious faith, though I grieve to confess that neither His Holiness the Pope nor His Grace the Archbishop of Canterbury (whom I equally and profoundly revere) will assent to its dissemination.”

SUCCESS, *n.* The one unpardonable sin against one's fellows.

SUFFRAGE, *n.* Expression of opinion by means of a ballot. The right of suffrage (which is held to be both a privilege and a duty) means, as commonly interpreted, the right to vote for the man of another man's choice, and is highly prized. Refusal to do so has the bad name of "incivism." The incivilian, however, cannot be properly arraigned for his crime, for there is no legitimate accuser. If the accuser is himself guilty he has no standing in the court of opinion; if not, he profits by the crime, for A's abstention from voting gives greater weight to the vote of B. By female suffrage is meant the right of a woman to vote as some man tells her to. It is based on female responsibility, which is somewhat limited. The woman most eager to jump out of her petticoat to assert her rights is first to jump back into it when threatened with a switching for misusing them.

T

TABLE D' HÔTE, *n.* A caterer's thrifty concession to the universal passion for irresponsibility.

TALK, *v. t.* To commit an indiscretion without temptation, from an impulse without purpose.

TARIFF, *n.* A scale of taxes on imports, designed to protect the domestic producer against the greed of his consumer.

TELEPHONE, *n.* An invention of the devil which abrogates some of the advantages of making a disagreeable person keep his distance.

TELESCOPE, *n.* A device having a relation to the eye similar to that of the telephone to the ear, enabling distant objects to plague us with a multitude of needless details. Luckily it is unprovided with a bell summoning us to the sacrifice.

THEOSOPHY, *n.* An ancient faith having all the certitude of religion and all the mystery of science. The modern Theosophist holds, with the Buddhists, that we live an incalculable number of times on this earth, in as many several bodies, because one life is not long enough for our complete spiritual development; that is, a single lifetime does not suffice for us to become as wise and good as we choose to wish to become. To be absolutely wise and good—that is perfection; and the Theosophist is so keen-sighted as to have observed that everything desirous of improvement eventually attains perfection. Less competent observers are disposed to except cats, which seem neither wiser nor better than they were last year. The greatest and fattest of recent Theosophists was the late Madame Blavatsky, who had no cat.

TRINITY, *n.* In the multiplex theism of certain Christian churches, three entirely distinct deities consistent with only one. Subordinate deities of the polytheistic faith, such as devils and angels, are not dowered with the power of combination, and must urge individually their claims to adoration and propitiation. The Trinity is one of the most sublime mysteries of our holy religion. In rejecting it because it is incomprehensible, Unitarians betray their

inadequate sense of theological fundamentals. In religion we believe only what we do not understand, except in the instance of an intelligible doctrine that contradicts an incomprehensible one. In that case we believe the former as a part of the latter.

TRUTH, *n.* An ingenious compound of desirability and appearance. Discovery of truth is the sole purpose of philosophy, which is the most ancient occupation of the human mind and has a fair prospect of existing with increasing activity to the end of time.

TRUST, *n.* In American politics, a large corporation composed in greater part of thrifty working men, widows of small means, orphans in the care of guardians and the courts, with many similar malefactors and public enemies.

TYPE, *n.* Pestilent bits of metal suspected of destroying civilization and enlightenment, despite their obvious agency in this incomparable dictionary.

UBIQUITY, *n.* The gift of power of being in all places at one time, but not in all places at all times, which is omnipresence, an attribute of God and the luminiferous ether only. This important distinction between ubiquity and omnipresence was not clear to the medieval Church and there was much bloodshed about it. Certain Lutherans, who affirmed the presence everywhere of Christ's body were known as Ubiquitarians. For this error they were doubtless damned, for Christ's body is present only in the eucharist, though that sacrament may be performed in more than one place simultaneously. In recent times ubiquity

has not always been understood—not even by Sir Boyle Roche, for example, who held that a man cannot be in two places at once unless he is a bird.

UGLINESS, *n.* A gift of the gods to certain women, entailing virtue without humility.

UN-AMERICAN, *adj.* Wicked, intolerable, heathenish.

UNCTION, *n.* An oiling, or greasing. The rite of extreme unction consists in touching with oil consecrated by a bishop several parts of the body of one engaged in dying.

UNDERSTANDING, *n.* A cerebral secretion that enables one having it to know a house from a horse by the roof on the house. Its nature and laws have been exhaustively expounded by Locke, who rode a house, and Kant, who lived in a horse.

UNITARIAN, *n.* One who denies the divinity of a Trinitarian.

UNIVERSALIST, *n.* One who foregoes the advantage of a Hell for persons of another faith.

URBANITY, *n.* The kind of civility that urban observers ascribe to dwellers in all cities but New York. Its commonest expression is heard in the words, "I beg your pardon," and it is not inconsistent with disregard of the rights of others.

USAGE, *n.* The First Person of the literary Trinity, the Second and Third being Custom and Conventionality. Imbued with a decent reverence for this Holy Triad an industrious writer may hope to produce books that will live as long as the fashion.

UXORIOUSNESS, *n.* A perverted affection that has strayed to one's own wife.

V

VALOR, n. A soldierly compound of vanity, duty and the gambler's hope.

VANITY, n. The tribute of a fool to the worth of the nearest ass.

VIRTUES, n. pl. Certain abstentions.

VOTE, n. The instrument and symbol of a freeman's power to make a fool of himself and a wreck of his country.

W

WALL STREET, n. A symbol of sin for every devil to rebuke. That Wall Street is a den of thieves is a belief that serves every unsuccessful thief in place of a hope in Heaven.

WAR, n. A by-product of the arts of peace. The most menacing political condition is a period of international amity. The student of history who has not been taught to expect the unexpected may justly boast himself inaccessible to the light. "In time of peace prepare for war" has a deeper meaning than is commonly discerned; it means, not merely that all things earthly have an end—that change is the one immutable and eternal law—but that the soil of peace is thickly sown with seeds of war and singularly suited to their germination and growth. It was when Kubla Khan had decreed his "stately pleasure dome"—when, that is to say, there were peace and fat feasting in Xanadu—that he

heard from far
Ancestral voices prophesying war.

One of the greatest of poets, Coleridge was one of the wisest of men, and it was not for nothing that he read us this parable. Let us

have a little less of "hands across the sea," and a little more of that elemental distrust that is the security of nations. War loves to come like a thief in the night; professions of eternal amity provide the night.

WEAKNESSES, *n. pl.* Certain primal powers of Tyrant Woman wherewith she holds dominion over the male of her species, binding him to the service of her will and paralyzing his rebellious energies.

WEATHER, *n.* The climate of an hour. A permanent topic of conversation among persons whom it does not interest, but who have inherited the tendency to chatter about it from naked arboreal ancestors whom it keenly concerned. The setting up of official weather bureaus and their maintenance in mendacity prove that even governments are accessible to suasion by the rude forefathers of the jungle.

WEDDING, *n.* A ceremony at which two persons undertake to become one, one undertakes to become nothing, and nothing undertakes to become supportable.

WINE, *n.* Fermented grape-juice known to the Women's Christian Union as "liquor," sometimes as "rum." Wine, madam, is God's next best gift to man.

WIT, *n.* The salt with which the American humorist spoils his intellectual cookery by leaving it out.

WOMAN, *n.* An animal usually living in the vicinity of Man, and having a rudimentary susceptibility to domestication. It is credited by many of the elder zoölogists with a certain vestigial docility acquired in a former state

of seclusion, but naturalists of the postsusanan-
thony period, having no knowledge of the seclu-
sion, deny the virtue and declare that such as
creation's dawn beheld, it roareth now. The
species is the most widely distributed of all
beasts of prey, infesting all habitable parts of
the globe, from Greenland's spicy mountains to
India's moral strand. The popular name
(wolfman) is incorrect, for the creature is of
the cat kind. The woman is lithe and graceful
in its movements, especially the American va-
riety (*Felis pugnans*), is omnivorous and can
be taught not to talk.—*Balthasar Pober*.

WORSHIP, *n.* Homo Creator's testimony to
the sound construction and fine finish of Deus
Creatus. A popular form of abjection, having
an element of pride.

X

X in our alphabet being a needless letter has
an added invincibility to the attacks of the
spelling reformers, and like them, will doubt-
less last as long as the language. X is the
sacred symbol of ten dollars, and in such words
as Xmas, Xn, etc., stands for Christ, not, as is
popularly supposed, because it represents a
cross, but because the corresponding letter in
the Greek alphabet is the initial of his name.
If it represented a cross it would stand for St.
Andrew who "testified" upon one of that shape.
In the algebra of psychology *x* stands for
Woman's mind. Words beginning with X are
Grecian and will not be defined in this stand-
ard English dictionary.

Y

YANKEE, n. In Europe, an American. In the Northern States of our Union, a New Englander. In the Southern States the word is unknown.

YEAR, n. A period of three hundred and sixty-five disappointments.

YESTERDAY, n. The infancy of youth, the youth of manhood, the entire past of age.

YOKE, n. An implement, madam, to whose Latin name, *jugum*, we owe one of the most illuminating words in our language—a word that defines the matrimonial situation with precision, point and poignancy. A thousand apologies for withholding it.

YOUTH, n. The Period of Possibility, when Archimedes finds a fulcrum, Cassandra has a following and seven cities compete for the honor of endowing a living Homer.

Z

ZEAL, n. A certain nervous disorder afflicting the young and inexperienced. A passion that goeth before a sprawl.

ZEUS, n. The chief of Grecian gods, adored by the Romans as Jupiter and by the modern Americans as God, Gold, Mob and Dog. Some explorers who have touched upon the shores of America, and one who professes to have penetrated a considerable distance into the interior, have thought that these four names stand for as many distinct deities, but in his monumental work on Surviving Faiths, Frumpp insists that the natives are monotheists, each having no other god than himself, whom he worships under many sacred names.

WHY I AM NOT A CHRISTIAN

An Examination of the God-Idea and Christianity.

[The lecture that is here reproduced was delivered at the Battersea Town Hall under the auspices of the South London Branch of the National Secular Society, England. It should be added that the editor is willing to share full responsibility with the Hon. Bertrand Russell in that he is in accord with the political and other opinions expressed.]

As your Chairman has told you, the subject about which I am going to speak to you to-night is "Why I Am Not a Christian." Perhaps it would be as well, first of all, to try to make out what one means by the word "Christian." It is used in these days in a very loose sense by a great many people. Some people mean no more by it than a person who attempts to live a good life. In that sense I suppose there would be Christians in all sects and creeds; but I do not think that that is the proper sense of the word, if only because it would imply that all the people who are not Christians—all the Buddhists, Confucians, Mohammedans, and so on—are not trying to live a good life. I do not mean by a Christian any person who tries to live decently according to his lights. I think that you must have a certain amount of definite belief before you

have a right to call yourself a Christian. The word does not have quite such a full-blooded meaning now as it had in the times of St. Augustine and St. Thomas Aquinas. In those days, if a man said that he was a Christian it was known what he meant. You accepted a whole collection of creeds which were set out with great precision, and every single syllable of those creeds you believed with the whole strength of your convictions.

WHAT IS A CHRISTIAN?

Nowadays it is not quite that. We have to be a little more vague in our meaning of Christianity. I think, however, that there are two different items which are quite essential to anybody calling himself a Christian. The first is one of a dogmatic nature—namely, that you must believe in God and immortality. If you do not believe in those two things, I do not think that you can properly call yourself a Christian. Then, further than that, as the name implies, you must have some kind of belief about Christ. The Mohammedans, for instance, also believe in God and in immortality, and yet they would not call themselves Christians. I think you must have at the very lowest the belief that Christ was, if not divine, at least the best and wisest of men. If you are not going to believe that much about Christ, I do not think that you have any right to call yourself a Christian. Of course there is another sense which you find in *Whitaker's Almanack* and in geography books, where the population of the world is said to be divided into Christians,

Mohammedans, Buddhists, fetish worshippers, and so on; and in that sense we are all Christians. The geography books count us all in, but that is a purely geographical sense, which I suppose we can ignore. Therefore I take it that when I tell you why I am not a Christian I have to tell you two different things: first, why I do not believe in God and in immortality; and, secondly, why I do not think that Christ was the best and wisest of men, although I grant him a very high degree of moral goodness.

But for the successful efforts of unbelievers in the past, I could not take so elastic a definition of Christianity as that. As I said before, in olden days it had a much more full-blooded sense. For instance, it included the belief in hell. Belief in eternal hell fire was an essential item of Christian belief until pretty recent times. In this country, as you know, it ceased to be an essential item because of a decision of the Privy Council, and from that decision the Archbishop of Canterbury and the Archbishop of York dissented; but in this country our religion is settled by Act of Parliament, and therefore the Privy Council was able to override their Graces, and hell was no longer necessary to a Christian. Consequently I shall not insist that a Christian must believe in hell.

THE EXISTENCE OF GOD

To come to this question of the existence of God, it is a large and serious question, and if I were to attempt to deal with it in any adequate manner I should have to keep you here

until Kingdom Come, so that you will have to excuse me if I deal with it in a somewhat summary fashion. You know, of course, that the Catholic Church has laid it down as a dogma that the existence of God can be proved by the unaided reason. That is a somewhat curious dogma, but it is one of their dogmas. They had to introduce it because at one time the Freethinkers adopted the habit of saying that there were such and such arguments which mere reason might urge against the existence of God, but of course they knew as a matter of faith that God did exist. The arguments and the reasons were set out at great length, and the Catholic Church felt that they must stop it. Therefore they laid it down that the existence of God can be proved by the unaided reason, and they had to set up what they considered were arguments to prove it. There are, of course, a number of them, but I shall take only a few.

THE FIRST CAUSE ARGUMENT

Perhaps the simplest and easiest to understand is the argument of the First Cause. It is maintained that everything we see in this world has a cause, and as you go back in the chain of causes further and further you must come to a First Cause, and to that First Cause you give the name of God. That argument, I suppose, does not carry very much weight nowadays, because, in the first place, cause is not quite what it used to be. The philosophers and the men of science have got going on cause, and it has not anything like the vitality that

it used to have; but, apart from that, you can see that the argument that there must be a First Cause is one that cannot have any validity. I may say that when I was a young man, and was debating these questions very seriously in my mind, I for a long time accepted the argument of the First Cause, until one day, at the age of eighteen, I read John Stuart Mill's Autobiography, and I there found this sentence: "My father taught me that the question, Who made me? cannot be answered, since it immediately suggests the further question, Who made God?" That very simple sentence showed me, as I still think, the fallacy in the argument of the First Cause. If everything must have a cause, then God must have a cause. If there can be anything without a cause, it may just as well be the world as God, so that there cannot be any validity in that argument. It is exactly of the same nature as the Hindu's view, that the world rested upon an elephant and the elephant rested upon a tortoise; and when they said, "How about the tortoise?" the Indian said, "Suppose we change the subject." The argument is really no better than that. There is no reason why the world could not have come into being without a cause; nor, on the other hand, is there any reason why it should not have always existed. There is no reason to suppose that the world had a beginning at all. The idea that things must have a beginning is really due to the poverty of our imagination. Therefore, perhaps, I need not waste any more time upon the argument about the First Cause.

THE NATURAL LAW ARGUMENT

Then there is a very common argument from natural law. That was a favorite argument all through the eighteenth century, especially under the influence of Sir Isaac Newton and his cosmogony. People observed the planets going round the sun according to the law of gravitation, and they thought that God had given a behest to these planets to move in that particular fashion, and that was why they did so. That was, of course, a convenient and simple explanation that saved them the trouble of looking any further for explanations of the law of gravitation. Nowadays we explain the law of gravitation in a somewhat complicated fashion that Einstein has introduced. I do not propose to give you a lecture on the law of gravitation, as interpreted by Einstein, because that again would take some time; at any rate, you no longer have the sort of natural law that you had in the Newtonian system, where, for some reason that nobody could understand, nature behaved in a uniform fashion. We now find that a great many things we thought were natural laws are really human conventions. You know that even in the remotest depths of stellar space there are still three feet to a yard. That is, no doubt, a very remarkable fact, but you would hardly call it a law of nature. And a great many things that have been regarded as laws of nature are of that kind. On the other hand, where you can get down to any knowledge of what atoms actually do, you will find that they are much less subject to law

than people thought, and that the laws at which you arrive are statistical averages of just the sort that would emerge from chance. There is, as we all know, a law that if you throw dice you will get double sixes only about once in thirty-six times, and we do not regard that as evidence that the fall of the dice is regulated by design; on the contrary, if the double sixes came every time we should think that there was design. The laws of nature are of that sort as regards a great many of them. They are statistical averages such as would emerge from the laws of chance; and that makes this whole business of natural law much less impressive than it formerly was. Quite apart from that, which represents the momentary state of science that may change tomorrow, the whole idea that natural laws imply a law-giver is due to a confusion between natural and human laws. Human laws are behests commanding you to behave in a certain way, in which way you may choose to behave, or you may choose not to behave; but natural laws are a description of how things do in fact behave, and, being a mere description of what they in fact do, you cannot argue that there must be somebody who told them to do that, because even supposing that there were you are then faced with the question, Why did God issue just those natural laws and no others? If you say that he did it simply from his own good pleasure, and without any reason, you then find that there is something which is not subject to law, and so your train of natural law is interrupted. If you say, as more ortho-

dox theologians do, that in all the laws which God issues he had a reason for giving those laws rather than others—the reason, of course, being to create the best universe, although you would never think it to look at it—if there was a reason for the laws which God gave, then God himself was subject to law, and therefore you do not get any advantage by introducing God as an intermediary. You have really a law outside and anterior to the divine edicts, and God does not serve your purpose, because he is not the ultimate law-giver. In short, this whole argument about natural law no longer has anything like the strength that it used to have. I am traveling on in time in my review of the arguments. The arguments that are used for the existence of God change their character as time goes on. They were at first hard intellectual arguments embodying certain quite definite fallacies. As we come to modern times they become less respectable intellectually and more and more affected by a kind of moralizing vagueness.

THE ARGUMENT FROM DESIGN

The next step in this process brings us to the argument from design. You all know the argument from design: everything in the world is made just so that we can manage to live in the world, and if the world was ever so little different we could not manage to live in it. That is the argument from design. It sometimes takes rather a curious form; for instance, it is argued that rabbits have white tails in order to be easy to shoot. I do not know how

rabbits would view that application. It is an easy argument to parody. You all know Voltaire's remark, that obviously the nose was designed to be such as to fit spectacles. That sort of parody has turned out to be not nearly so wide of the mark as it might have seemed in the eighteenth century, because since the time of Darwin we understand much better why living creatures are adapted to their environment. It is not that their environment was made to be suitable to them, but that they grew to be suitable to it, and that is the basis of adaptation. There is no evidence of design about it.

When you come to look into this argument from design, it is a most astonishing thing that people can believe that this world, with all the things that are in it, with all its defects, should be the best that omnipotence and omniscience has been able to produce in millions of years. I really cannot believe it. Do you think that, if you were granted omnipotence and omniscience and millions of years in which to perfect your world, you could produce nothing better than the Ku Klux Klan, the Fascisti, and Mr. Winston Churchill? Really I am not much impressed with the people who say: "Look at me: I am such a splendid product that there must have been design in the universe." I am not very much impressed by the splendor of those people. Therefore I think that this argument of design is really a very poor argument indeed. Moreover, if you accept the ordinary laws of science, you have to suppose that human life and life in general on

this planet will die out in due course: it is merely a flash in the pan; it is a stage in the decay of the solar system; at a certain stage of decay you get the sort of conditions of temperature and so forth which are suitable to protoplasm, and there is life for a short time in the life of the whole solar system. You see in the moon the sort of thing to which the earth is tending—something dead, cold, and lifeless.

I am told that that sort of view is depressing, and people will sometimes tell you that if they believed that they would not be able to go on living. Do not believe it; it is all nonsense. Nobody really worries much about what is going to happen millions of years hence. Even if they think they are worrying much about that, they are really deceiving themselves. They are worried about something much more mundane, or it may merely be a bad digestion; but nobody is really seriously rendered unhappy by the thought of something that is going to happen to this world millions and millions of years hence. Therefore, although it is of course a gloomy view to suppose that life will die out—at least I suppose we may say so, although sometimes when I contemplate the things that people do with their lives I think it is almost a consolation—it is not such as to render life miserable. It merely makes you turn your attention to other things.

THE MORAL ARGUMENTS FOR DEITY

Now we reach one stage further in what I shall call the intellectual descent that the

Theists have made in their argumentations, and we come to what are called the moral arguments for the existence of God. You all know, of course, that there used to be in the old days three intellectual arguments for the existence of God, all of which were disposed of by Immanuel Kant in the *Critique of Pure Reason*; but no sooner had he disposed of those arguments than he invented a new one, a moral argument, and that quite convinced him. He was like many people: in intellectual matters he was skeptical, but in moral matters he believed implicitly in the maxims that he had imbibed at his mother's knee. That illustrates what the psycho-analysts so much emphasize—the immensely stronger hold upon us that our very early associations have than those of later times.

Kant, as I say, invented a new moral argument for the existence of God, and that in varying forms was extremely popular during the nineteenth century. It has all sorts of forms. One form is to say that there would be no right or wrong unless God existed. I am not for the moment concerned with whether there is a difference between right and wrong, or whether there is not: that is another question. The point I am concerned with is that, if you are quite sure there is a difference between right and wrong, you are then in this situation: Is that difference due to God's fiat or is it not? If it is due to God's fiat, then for God himself there is no difference between right and wrong, and it is no longer a significant statement to say that God

is good. If you are going to say, as theologians do, that God is good, you must then say that right and wrong have some meaning which is independent of God's fiat, because God's fiats are good and not bad independently of the mere fact that he made them. If you are going to say that, you will then have to say that it is not only through God that right and wrong came into being, but that they are in their essence logically anterior to God. You could, of course, if you liked, say that there was a superior deity who gave orders to the God who made this world, or could take up the line that some of the agnostics took up—a line which I often thought was a very plausible one—that as a matter of fact this world that we know was made by the devil at a moment when God was not looking. There is a good deal to be said for that, and I am not concerned to refute it.

THE ARGUMENT FOR THE REMEDYING OF INJUSTICE

Then there is another very curious form of moral argument, which is this: they say that the existence of God is required in order to bring justice into the world. In the part of this universe that we know there is great injustice, and often the good suffer, and often the wicked prosper, and one hardly knows which of those is the more annoying; but if you are going to have justice in the universe as a whole you have to suppose a future life to redress the balance of life here on earth,

and so they say that there must be a God, and there must be heaven and hell in order that in the long run there may be justice. That is a very curious argument. If you looked at the matter from a scientific point of view, you would say: "After all, I know only this world. I do not know about the rest of the universe, but so far as one can argue at all on probabilities one would say that probably this world is a fair sample, and if there is injustice here the odds are that there is injustice elsewhere also." Supposing you got a crate of oranges that you opened, and you found all the top layer of oranges bad, you would not argue: "The underneath ones must be good, so as to redress the balance." You would say: "Probably the whole lot is a bad consignment;" and that is really what a scientific person would argue about the universe. He would say: "Here we find in this world a great deal of injustice, and so far as that goes that is a reason for supposing that justice does not rule in the world; and therefore so far as it goes it affords a moral argument against deity and not in favor of one." Of course I know that the sort of intellectual arguments that I have been talking to you about are not what really moves people. What really moves people to believe in God is not any intellectual argument at all. Most people believe in God because they have been taught from early infancy to do it, and that is the main reason.

Then I think that the next most powerful reason is the wish for safety, a sort of feeling that there is a big brother who will look after

you. That plays a very profound part in influencing people's desire for a belief in God.

THE CHARACTER OF CHRIST

I now want to say a few words upon a topic which I often think is not quite sufficiently dealt with by Rationalists, and that is the question whether Christ was the best and the wisest of men. It is generally taken for granted that we should all agree that that was so. I do not myself. I think that there are a good many points upon which I agree with Christ a great deal more than the professing Christians do. I do not know that I could go with Him all the way, but I could go with Him much further than most professing Christians can. You will remember that He said: "Resist not evil, but whosoever shall smite thee on thy right cheek, turn to him the other also." That is not a new precept or a new principle. It was used by Lao-Tse and Buddha some 500 or 600 years before Christ, but it is not a principle which as a matter of fact Christians accept. I have no doubt that the present Prime Minister, for instance, is a most sincere Christian, but I should not advise any of you to go and smite him on one cheek. I think you might find that he thought this text was intended in a figurative sense.

Then there is another point which I consider is excellent. You will remember that Christ said: "Judge not lest ye be judged." That principle I do not think you would find was popular in the law courts of Christian countries. I have known in my time quite a number of Judges who were very earnest Christians, and

they none of them felt that they were acting contrary to Christian principles in what they did. Then Christ says: "Give to him that asketh of thee, and from him that would borrow of thee turn not thou away." That is a very good principle. Your Chairman has reminded you that we are not here to talk politics, but I cannot help observing that the last general election was fought on the question of how desirable it was to turn away from him that would borrow of thee, so that one must assume that the Liberals and Conservatives of this country are composed of people who do not agree with the teaching of Christ, because they certainly did very emphatically turn away on that occasion.

Then there is one other maxim of Christ which I think has a great deal in it, but I do not find that it is very popular among some of our Christian friends. He says: "If thou wilt be perfect, go and sell that which thou hast, and give to the poor." That is a very excellent maxim, but, as I say, it is not much practiced. All these, I think, are good maxims, although they are a little difficult to live up to. I do not profess to live up to them myself; but then, after all, I am not by way of doing so, and it is not quite the same thing as for a Christian.

DEFECTS IN CHRIST'S TEACHING

Having granted the excellence of these maxims, I come to certain points in which I do not believe that one can grant either the superlative wisdom or the superlative goodness of Christ as depicted in the Gospels; and here I

may say that one is not concerned with the historical question. Historically it is quite doubtful whether Christ ever existed at all, and if He did we do not know anything about Him, so that I am not concerned with the historical question, which is a very difficult one. I am concerned with Christ as He appears in the Gospels, taking the Gospel narrative as it stands, and there one does find some things that do not seem to be very wise. For one thing. He certainly thought that His second coming would occur in clouds of glory before the death of all the people who were living at that time. There are a great many texts that prove that. He says, for instance: "Ye shall not have gone over the cities of Israel till the Son of Man be come." Then He says: "There are some standing here which shall not taste death till the Son of Man comes into His kingdom"; and there are a lot of places where it is quite clear that He believed that His second coming would happen during the lifetime of many then living. That was the belief of His earlier followers, and it was the basis of a good deal of His moral teaching. When He said, "Take no thought for the morrow," and things of that sort, it was very largely because He thought that the second coming was going to be very soon, and that all ordinary mundane affairs did not count. I have, as a matter of fact, known some Christians who did believe that the second coming was imminent. I knew a parson who frightened his congregation terribly by telling them that the second coming was very imminent indeed, but they were much consoled when

they found that he was planting trees in his garden. The early Christians did really believe it, and they did abstain from such things as planting trees in their gardens, because they did accept from Christ the belief that the second coming was imminent. In that respect clearly He was not so wise as some other people have been, and he was certainly not superlatively wise.

THE MORAL PROBLEM

Then you come to moral questions. There is one very serious defect to my mind in Christ's moral character, and that is that He believed in hell. I do not myself feel that any person who is really profoundly humane can believe in everlasting punishment. Christ certainly as depicted in the Gospels did believe in everlasting punishment, and one does find repeatedly a vindictive fury against those people who would not listen to His preaching—an attitude which is not uncommon with preachers, but which does somewhat detract from superlative excellence. You do not, for instance, find that attitude in Socrates. You find him quite bland and urbane towards the people who would not listen to him; and it is, to my mind, far more worthy of a sage to take that line than to take the line of indignation. You probably all remember the sort of things that Socrates was saying when he was dying, and the sort of things that he generally did say to people who did not agree with him.

You will find that in the Gospels Christ said: "Ye serpents, ye generation of vipers, how can ye escape the damnation of hell." That was

said to people who did not like His preaching. It is not really to my mind quite the best tone, and there are a great many of these things about hell. There is, of course, the familiar text about the sin against the Holy Ghost: "Whosoever speaketh against the Holy Ghost it shall not be forgiven him neither in this world nor in the world to come." That text has caused an unspeakable amount of misery in the world, for all sorts of people have imagined that they have committed the sin against the Holy Ghost, and thought that it would not be forgiven them either in this world or in the world to come. I really do not think that a person with a proper degree of kindness in his nature would have put fears and terrors of that sort into the world.

Then Christ says: "The Son of Man shall send forth His angels, and they shall gather out of His kingdom all things that offend, and them which do iniquity, and shall cast them into a furnace of fire; there shall be wailing and gnashing of teeth"; and He goes on about the wailing and gnashing of teeth. It comes in one verse after another, and it is quite manifest to the reader that there is a certain pleasure in contemplating wailing and gnashing of teeth, or else it would not occur so often. Then you all, of course, remember about the sheep and the goats; how at the second coming He is going to divide the sheep from the goats, and He is going to say to the goats: "Depart from me, ye cursed, into everlasting fire." He continues: "And these shall go away into everlasting fire." Then He says again: "If thy

hand offend thee, cut it off; it is better for thee to enter into life maimed, than having two hands to go into hell, into the fire that never shall be quenched; where the worm dieth not and the fire is not quenched." He repeats that again and again also. I must say that I think all this doctrine, that hell-fire is a punishment for sin, is a doctrine of cruelty. It is a doctrine that put cruelty into the world and gave the world generations of cruel torture; and the Christ of the Gospels, if you could take Him as His chroniclers represent Him, would certainly have to be considered partly responsible for that.

There are other things of less importance. There is the instance of the Gadarene swine, where it certainly was not very kind to the pigs to put the devils into them and make them rush down the hill to the sea. You must remember that He was omnipotent, and He could have made the devils simply go away; but He chooses to send them into the pigs. Then there is the curious story of the fig-tree, which always rather puzzled me. You remember what happened about the fig-tree. "He was hungry; and seeing a fig-tree afar off having leaves, He came if haply He might find anything thereon; and when He came to it He found nothing but leaves, for the time of figs was not yet. And Jesus answered and said unto it: 'No man eat fruit of thee hereafter for ever' and Peter saith unto Him: 'Master, behold the fig-tree which thou cursedst is withered away.'" That is a very curious story, because it was not the right time of year for

figs, and you really could not blame the tree. I cannot myself feel that either in the matter of wisdom or in the matter of virtue Christ stands quite as high as some other people known to History. I think I should put Buddha and Socrates above Him in those respects.

THE EMOTIONAL FACTOR

As I said before, I do not think that the real reason why people accept religion has anything to do with argumentation. They accept religion on emotional grounds. One is often told that it is a very wrong thing to attack religion, because religion makes men virtuous. So I am told; I have not noticed it. You know, of course, the parody of that argument in Samuel Butler's book, *Erewhon Revisited*. You will remember that in *Erewhon* there is a certain Higgs who arrives in a remote country, and after spending some time there he escapes from that country in a balloon. Twenty years later he comes back to that country and finds a new religion, in which he is worshiped under the name of the "Sun Child"; and it is said that he ascended into heaven. He finds that the Feast of the Ascension is about to be celebrated, and he hears Professors Hanky and Panky say to each other that they never set eyes on the man Higgs, and they hope they never will; but they are the high priests of the religion of the Sun Child. He is very indignant, and he comes up to them, and he says: "I am going to expose all this humbug and tell the people of Erewhon that it was only I, the man Higgs, and

I went up in a balloon." He was told: "You must not do that, because all the morals of this country are bound round this myth, and if they once know that you did not ascend into heaven they will all become wicked"; and so he is persuaded of that, and he goes quietly away.

That is the idea—that we should all be wicked if we did not hold to the Christian religion. It seems to me that the people who have held to it have been for the most part extremely wicked. You find this curious fact, that the more intense has been the religion of any period and the more profound has been the dogmatic belief, the greater has been the cruelty and the worse has been the state of affairs. In the so-called ages of faith, when men really did believe the Christian religion in all its completeness, there was the Inquisition, with its tortures; there were millions of unfortunate women burnt as witches; and there was every kind of cruelty practiced upon all sorts of people in the name of religion.

You find as you look around the world that every single bit of progress in humane feeling, every improvement in the criminal law, every step towards the diminution of war, every step towards better treatment of the colored races, or every mitigation of slavery, every moral progress that there has been in the world, has been consistently opposed by the organized churches of the world. I say quite deliberately that the Christian religion, as organized in its churches, has been and still is the principal enemy of moral progress in the world.

HOW THE CHURCHES HAVE RETARDED
PROGRESS

You may think that I am going too far when I say that that is still so. I do not think that I am. Take one fact. You will bear with me if I mention it. It is not a pleasant fact, but the churches compel one to mention facts that are not pleasant. Supposing that in this world that we live in today an inexperienced girl is married to a syphilitic man, in that case the Catholic church says: "This is an indissoluble sacrament. You must stay together for life," and no steps of any sort must be taken by that woman to prevent herself from giving birth to syphilitic children. That is what the Catholic church says. I say that that is fiendish cruelty, and nobody whose natural sympathies have not been warped by dogma, or whose moral nature was not absolutely dead to all sense of suffering, could maintain that it is right and proper that that state of things should continue.

That is only an example. There are a great many ways in which at the present moment the church, by its insistence upon what it chooses to call morality, inflicts upon all sorts of people undeserved and unnecessary suffering. And of course, as we know, it is in its major part an opponent still of progress and of improvement in all the ways that diminish suffering in the world, because it has chosen to label as morality a certain narrow set of rules of conduct which have nothing to do with human happiness; and when you say that this or that ought to be done because it would make for human happiness, they think that has nothing to do

with the matter at all. "What has human happiness to do with morals? The object of morals is not to make people happy."

FEAR THE FOUNDATION OF RELIGION

Religion is based, I think, primarily and mainly upon fear. It is partly the terror of the unknown, and partly, as I have said, the wish to feel that you have a kind of elder brother who will stand by you in all your troubles and disputes. Fear is the basis of the whole thing—fear of the mysterious, fear of defeat, fear of death. Fear is the parent of cruelty, and therefore it is no wonder if cruelty and religion have gone hand-in-hand. It is because fear is at the basis of those two things. In this world we can now begin a little to understand things, and a little to master them by the help of science, which has forced its way step by step against the Christian religion, against the churches, and against the opposition of all the old precepts. Science can help us to get over this craven fear in which mankind has lived for so many generations. Science can teach us, and I think our own hearts can teach us, no longer to look round for imaginary supports, no longer to invent allies in the sky, but rather to look to our own efforts here below to make this world a fit place to live in, instead of the sort of place that the churches in all these centuries have made it.

WHAT WE MUST DO

We want to stand upon our own feet and look fair and square at the world—its good facts, its bad facts, its beauties, and its ugliness; see the

world as it is, and be not afraid of it. Conquer the world by intelligence, and not merely by being slavishly subdued by the terror that comes from it. The whole conception of God is a conception derived from the ancient Oriental despotisms. It is a conception quite unworthy of free men. When you hear people in church debasing themselves and saying that they are miserable sinners, and all the rest of it, it seems contemptible and not worthy of self-respecting human beings. We ought to stand up and look the world frankly in the face. We ought to make the best we can of the world, and if it is not so good as we wish, after all it will still be better than what these others have made of it in all these ages. A good world needs knowledge, kindness, and courage; it does not need a regretful hankering after the past, or a fettering of the free intelligence by the words uttered long ago by ignorant men. It needs a fearless outlook and a free intelligence. It needs hope for the future, not looking back all the time towards a past that is dead, which we trust will be far surpassed by the future that our intelligence can create.

WHY I AM A RATIONALIST

THE RATIONAL HABIT OF MIND IS A RARE ONE

I am, in this age when there are a great many appeals to unreason, an unrepentant Rationalist. I have been a Rationalist ever since I can remember, and I do not propose to cease to be so whatever appeals to unreason may be made. We have listened to a speech, by which I think we were all much moved, about the pioneers in the past who have done what they could to promote the cause of freedom of thought. I suppose it is for me to speak about the great need of continuing this work in our own day, and about how much there is that remains for all who sympathize with its objects to accomplish. We are not yet, and I suppose men and women never will be, completely rational. Perhaps, if we were, we should not have all the pleasures that we have at present; but I think complete rationality is so distant a prospect that we need not be much alarmed by it, and the nearest approach that we are likely to get is sure to be all to the good. I certainly find that there is a very great deal of irrationality still about in the world.

While Professor Graham Wallas was speaking about the bequests that have been made to the Rationalist Press Association I was thinking: What is its creed, what is its dogma, and what is going to be the, so to speak, doctrine that these benefactions are going to be devoted to propagating? You have, of course, to be a little

careful, when you find yourself landed with endowments and benefactions, lest you should become another endowed church. (*Laughter.*) As far as I can see, the view to which we are committed, one which I have stated on a former occasion, is that we ought not to believe, and we ought not to try to cause others to believe, any proposition for which there is no evidence whatever. That seems a modest proposition, and if you can stick to that you will be fairly sure that you are not going to become a sort of ossified endowed church. We ought not to commit ourselves to dogmatic negations any more than to dogmatic affirmations; we ought merely to say that there are a great many propositions about which men and women feel pretty certain, but, concerning which they have no right to feel certain, and it is our business as Rationalists to try to make them see that those things are not certain. I am told that that is a very wicked position to maintain. I have here a book recently published which I commend to your attention. You may or may not know that some little time ago, under the auspices of the National Secular Society, I delivered a lecture on "Why I am Not a Christian." Now, it appears that I did not know why it is that I am not a Christian; and here is a book which will tell you why I am not—by Mr. H. G. Wood, who is a somewhat eminent member of the Society of Friends, a body for which I have the greatest respect. His book is called *Why Mr. Bertrand Russell is Not a Christian*. It seems that the reasons are not those which I thought they were. He says in one

sentence: "The main reason why he is not a Christian is that he simply does not know what religion is." One might say that Mr. Wood is not an Agnostic because he does not know what Agnosticism is. After all, I had all the benefits of a Christian education, and he did not have the benefits of an Agnostic education; so that possibly the argument might be considered two-edged. Nevertheless, I commend the book to your attention, and you will then know why it is that I am not a Christian.

There is a very large amount of Rationalist work required in the world. I think the battle is quite as fierce as ever it was. Take, for example America. America is a very important country. What America thinks today the rest of the world will be forced to think tomorrow, and therefore what America thinks is important. There are some hopeful features about America. I was recently on a boat going to America, and a minister of religion on the boat invited me to speak to his congregation about my views on religion. I said: "Yours must be a very broad-minded congregation"; and this minister of religion, somewhat to my surprise, replied: "Oh, of course, I do not believe in God." I met other ministers of religion in America who took the same line. That, I must say, somewhat surprised me; but they are, I am afraid, rather a small minority, and the great bulk of Americans are still extremely theological. Moreover, we have to face the very serious position due to the growth of the Roman Catholic Church in America, because, as far as I can see, the Roman Catholic Church

is likely to dominate America in another fifty or a hundred years by the sheer increase of numbers, and not by rational propaganda. That is a very grave matter, and a matter which I think will affect the whole of the civilized world very much. Of course, you know that already in Boston, which was once the home of advanced Protestantism, the Roman Catholics rule the whole place; and there is a censorship upon literature more severe than in any other part of America. I expect you know that in America men are still sent to prison for Atheism, not only in Fundamentalist States, but even in States of the East, and altogether there is in that part of the world an enormous need of propaganda on these matters. It is very important to all of us, because the Americans tend more and more to rule the world, and we shall find ourselves in a very difficult position unless we can more or less liberalize them—a mission, I may say, in which I have done what I can, and my wife has also.

We have to realize that the attitude of Rationalism, which I defined as that of not believing a proposition or causing others to believe it unless there is at least some reason for supposing it to be true, is by no means widespread. Take the matter of education, concerning which Professor Graham Wallas spoke. In most countries of the world a great many extremely dubious propositions are taught to the young with great emphasis, and the young grow up accepting those extremely dubious propositions. If by any chance you attempt, as my wife and I are attempting at this moment,

to bring up a small number of young people free from superstition, you find yourself in a very difficult situation. You find, of course, that the public money which goes to education will not be given to any education that involves no element of superstition; you find that support is extremely difficult to obtain; you find that altogether it is thought that, whatever grown men and women may be allowed to think, the young, at any rate, ought to believe a whole lot of absurdities, and that it is quite impossible for the young to attain the necessary minimum of virtues unless you produce an extremely large number of very bad arguments in favor of that virtue—arguments which, of course, they will see through as soon as they get a little older; but it is thought that what they do then when they see through them does not so much matter. I cannot quite take that view. I think that any virtue that you may believe in should be one that you can support from the very first without appealing to anything that you do not yourself believe. Education will have to be quite enormously transformed if that view is accepted. I believe that it is at present illegal in every country of the world except Russia to teach children in the kind of way which skilled medical practitioners would consider the best for their mental health. That is one point upon which irrational convictions as generally held interfere, and there are a number of ways in which it is at present impossible to educate rationally without coming up against the authorities. The authorities are organized upon a basis of certain irrational dogmas, and those dogmas are not all of them theological.

Some are theological, and some are of other sorts; but the rational habit of mind is a very rare one.

I think that we ought to do all that we can to bring before the world the importance of the attitude that we are not going to believe a thing unless there is some reason to think that it is true. I know that that is thought to be very shocking. It is supposed that there are a lot of things that you ought to believe because good people believe them, and not because there is any reason for them. I do not take that view. I think anything that is worth believing must have some positive ground in its favor.

There are always new grounds being alleged in favor of irrationality; perpetually new things come up. Take, for example, the kind of use that has been made by some people of psycho-analysis. If you read the works of the founder of psycho-analysis, you find an entirely rationalist attitude; but if you listen to some of the minor disciples you will imagine that this doctrine has swept away the idea that opinions can be based upon reason at all. That, of course, is not the truth of it. You will always find a number of clever people engaged in perversions of anything that comes up—engaged in saying that the latest results of science prove that the people who always opposed science are after all in the right. That is where there is always humbug. Anybody who tells you that the latest results of science prove something, he himself not being a scientist, you may be pretty sure is talking nonsense.

THE ART OF COURTSHIP

WHY ONE MUST WOO

The Origin of Wooing.—The normal man must woo the woman who attracts him, because of an instinct planted deep in his nature, which had its origin far down in the scale of life. The modern civilized woman must woo, because this obligation has been laid upon her by man's rearrangement of society, dating from the savage hour when he ended the era of woman-rule, the matriarchate, and took the leadership himself.

The first separate male appears at about the stage of the barnacle in the scale of animal life. The female barnacle, a shellfish attached permanently to a rock, pier, or the hull of a ship, gives birth to from two to seven little male consorts, or husbands, whom she keeps in little openings in her shell, like pockets. From among these pocket-husbands she picks out the one she pleases to mate with her; usually selecting the largest (for all are much smaller than herself), and, where sizes are equal, the one that she feels drawn to emotionally. From this emotion gradually emerges the esthetic sense, or sense of the beautiful. Thus the first male did not have to do any wooing: he was picked, like the apple that one day made Eden vanish away.

As we rise higher in the scale of animal life, say among the spiders and insects like the grotesquely horrible praying mantis, the male

has to woo: and a bloody and savage mate he must go after! The female, still larger than her male, sits back and waits for the audacious mate to approach. He feels one impelling biological purpose: to mate with her, and make sure that offspring will come. Nature has implanted this overpowering instinct in him. In the female, are two appetites; a fainter desire to mate, and ordinary hunger. Her male must satisfy both, in his wooing. As he approaches her, the Theda Bara among insects grasps the male and eats, first his head, then a leg or two, and a part of his body. When the edge has been taken off her appetite, she rests. At this time what is left of the male completes the mating. When her hunger returns again, the female finishes her devouring of the male.

The male bee, who outflies the other males in the lofty nuptial flight of the queen bee, mates with her in thin high air far above the earth; and dies at the moment of mating, his husk of a body falling, like Lucifer out of heaven, to the earth far below. There are other cases where mating spells death for the male: but Nature is kinder in most matings, and the male survives. When we reach the birds and the mammals, the wooing is a gorgeous thing. For the male bird or beast, as a slow result of female selection based upon her esthetic or beauty-loving sense, has developed into a far more gorgeous creature than his mate. The bright glitter of the peacock, the gorgeous flame of the male tanager and cardinal bird, the glow of gay tropical bird

males, the lion's mane, the rooster's comb and feather display, the stag's branching antlers, the humble billygoat's beard, the man's beard, all have developed to stimulate the jaded eye of the female. The mating songs, from the bird carols to the whooping crane's strange howls, with bill opened to the sky, neck stiff as a ramrod, and wings pumping out the weird noises, and from the tomcat's cater-wauling to the corner quartette's strange agonies over "Sweet Adeline"—all have developed to stimulate the bored ear of the female. At mating time, the male is often a ridiculous sight, with his stiff formal dances and prancings before the female, even among the animals. He must woo: that is what he was made for. The female was not made primarily to woo: her task is to live, and to transmit life to the generations after her. The male, originally, was merely an incident in her life.

Thus the normal boy and young man came to the wooing period with a tremendous inward urge, that gives them no release until they have wooed and won. The female matures earlier in the human race; and girls pass through a year or two of excessive curiosity and interest in the male sex, when their boy friends of the same age are ordinarily entirely cold to all female charms. The hidden hour comes when boy alters to man. His voice changes and lowers, in that ridiculous kaleidoscope of sound that is humorously called "the goslings." A tiny fuzz appears on male lips, cheeks, and chin: the young man is as proud

of the first hair of his incipient mustache as if he were entitled to credit for it. His body alters, and the mating impulse sweeps over him. No matter how much he has scoffed at mere girls before, they suddenly fill the whole horizon. Just as the animals strut to attract attention, so boys and young men during this transition and shortly afterwards will do anything to gain the gaze of even a passing girl. They talk in loud tones on the street, they jostle a passing girl, they cut up absurd capers—all to gain the first look from a woman's eyes. Then this bubbling simmers down, and they set out on the long chase of the female, which may occupy much of their lives thereafter.

If the boy or young man continues uninterested in girls, this is a bad sign. It may be bashfulness: we will take up that symptom and its cure later. It may indicate some inner twist, which makes him prefer his own company, or that of members of his own sex, to female company. This is, spiritually at least, a sort of perversion; it is a sterile attitude, contrary to the wide purposes of nature. In normal cases, he can no more avoid wooing than he can avoid feeling hungry and going after food. For that is what he is on earth for, from a physical point of view.

Reasons Against Wooing.—Lord Bacon, that prosy old cynic whom misguided persons have sought to identify as the author of the plays attributed to Shakespeare, says in his *Essays*: "A wife and children are impediments to great enterprises, either of virtue or mischief."

There is the smoke of truth here, but it points to a fire very different from the one the sardonic old politician intended. Great enterprises gain much of their impetus, from the male's desire to stand well in the female's eyes. Another angle on the matter might be worded, that the energy which is implanted in man for wooing purposes may be deflected into enterprises, such as piratical and military careers, adventure trips and explorations. But more often than not, the spur that sends the man into building a house, or tilling a field, into slicing mountains apart to wed great oceans, discovering a pole or a hidden hinterland civilization, into achievement of any distinguished kind, is the desire to gain merit in the eyes of some specific woman, or of women in general. A great thinker has said that civilization is a sublimation, or expression in another form, of the primitive love desire. A man, because of his short height, or some physical diseases or disability, is rebuffed in youth by a woman: to provide against a repetition of the rebuff, he becomes a financial figure in Wall Street, or a conqueror of the world; or, at least, he tries to achieve this. Thus the spur of feminine approval is what goads the horse, man, to enterprises of virtue and mischief.

Of course, wooing does not necessarily involve marriage, or the man's assumption of responsibility for the children. Many men remain closer to the primitive, and are satisfied to enjoy the woman, often at great cost to her, and thereafter to abandon her with what

children she may have as a result of the union. Such men lose the finer fruits of mating, the long comradeship of a compatible woman that makes life a complete enjoyment, rather than a fragmentary one. The fact that a man has accepted a wife and children may tone down his spirit of adventure: from absurd masculine displays, "playing to the galleries" of mankind, his energy is altered to proper continuing courtship of his wife, and the making of a home for her and the children. To that extent Bacon is right: "great," in the sense of flashy and foolhardy, enterprises "of virtue or mischief" are replaced by ordinary sensible human living. But there is no loss to the man, rather a gain.

Again, the fact of acquiring a wife and children, if the man is well mated, acts as his chief spur to steady achievement in whatever is his role in human life. The unmated man is a wild, reckless creature, taking any kind of absurd risk, sinking a year's earnings in one night's play at the gambling table, going on roaring drinking parties, regarding women as his prey rather than as possible companions. The well-mated man is a social unit, or a part of one, at least. The wanderlust is drained away in the humbler yet loftier task of building his own world toward his dreams, rather than skylarking over the world in the vain hope that somewhere he will find the world of his dreams already built for him.

There are dangers in mating, grave dangers: the divorce records of the country indicate many of them. The chief one is where

the man, at an early age, contracts a marriage with a woman who is a fit mate for him then, but lacks the capacity for growth along with him. This applies in many cases where the man makes a success thereafter in any line. When he was a ten-dollar-a-week man, he married a ten-dollar-a-week woman; when he became a ten thousand dollar a year man, the woman remained a ten-dollar-a-week woman, and became a distinct and draining load upon his back, and a deterrent to his continued success and happiness. Boswell, Johnson's biographer, may have had this type in mind when he wrote:

Whilst courting, and in honeymoon,
With Kate's allurements smitten,
I loved her late, I loved her soon,
And called her dearest kitten.

But now my kitten's grown a cat,
And cross, like other wives.
Alas! alas! my honest Matt,
I fear she has nine lives.

In "How to Love" (Little Blue Book No. 98), problems of this nature were taken up and discussed: the only remedy being, where a marriage becomes loveless, to terminate the marriage, for the benefit of the man, the woman, and the children concerned. From the woman's standpoint, the chief danger in mating is that she will get a man lacking her sensitiveness, and unable to grow into an appreciation of it. She finds herself mated for life to a cruder, coarser, and incompatible male; and, when love dies, and cruelty and infidelity take its place, only the remedy indicated above

will serve. There are all these dangers: but they call rather for a wiser courtship, than for an abolition of wooing and mating.

Lastly, a man or woman is incomplete without courtship and mating. Those who say that a man or woman can become a perfected, rounded human being without human love, are deceivers, spreading a mental poison. The man or woman who goes too long without the practice of love contracts a case of ingrowing love, as painful and morbid as an ingrowing toenail. All the immense love energy stagnates and foulds into a diseased nature, hateful, spiteful, gossipy, perverted and warped from real humanness. There can be no ultimate reason against mating. The task is to woo well and mate wisely.

Wooing by Women.—Today, contrary to the custom in the sub-human world and among the earliest savage men, woman must woo as well as man. The reason lies in man's alteration of the standards of society. The female animal is not as competent as her mate in the hunt and the kill, and in coping with life. Men have rendered women incompetent by thousands of years of hothouse sheltering and by servile toil for many more. The woman today realizes, —we speak of the less intelligent woman now— that her task in life is to obtain a husband, as a permanent meal ticket, and as provider of home, clothing, and all the rest of the tremendous trifles of civilization. Such a mis-taught girl goes after a man as a fisherman goes after a brook trout, and more frequently than is good for the man lands the poor

fish, and has him hooked thoroughly thereafter. Such a woman has been taught that marriage should be based, not upon love, but upon a man's ability to care financially for the woman. Life's highest crown is a satisfying human love. This she has not aimed for, and this she does not get. When she aims low, she scores low; and, if the man is wise, he will dump her and leave her high and dry, when it is too late for her to go after the finer goal.

But even the wise woman today realizes that the whole social arrangement of mating between the sexes is overcast with absurd taboos and restrictions; and that, if she is to mate happily, she must regain part of woman's lost privilege of choice. There is nothing "unladylike" in her doing the choosing, in her unostentatious wooing, and, if necessary, in her proposing marriage herself. We will take up woman as a wooer later.

What Wooing Consists Of.—From the standpoint of either sex, wooing superficially consists of only one thing: conquest of the woman or man pursued, the gaining of the ultimate favor, if the woman be pursued, with or without marriage, and the gaining of marriage, if the man is the pursued. If wooing is regarded in this light, it is possible that the pursuit is always limited, if not erroneous. For the matter of conquest is not the ultimate one in wooing and mating. The proper purpose of wooing is to choose and win the right mate.

The matter of choosing brings up the second and far more important element of wooing, which might be described as education in the

opposite sex. Society today makes no adequate provision for practical laboratory education in the characteristics of the opposite sex: a wiser civilization will supply ample facilities for this indispensable part of human education. The man comes to adolescence without any knowledge of woman, beyond his slight information concerning his mother and his sisters, if he has any, and casual contacts with other girls and women. The girl comes to adolescence as ill-informed. Yet soon thereafter man and girl are called upon to enter, without preliminary training, the game or gamble of securing a life mate, who will lift them up or drag them down thereafter, in all of their efforts. Socially this is a crime. The only thing that can partially supply the lack of information, today, is the wooing period. For, after marriage, it is difficult to end the relationship; and, before marriage, if the parties learn they are ill-suited, intelligent men and women still have a dignified chance to break off the unwise mating before it solidifies into the chains of marriage. Keep in mind, then, that the wooing period is primarily a time for learning about the other sex, and its traits and eccentricities. The young man or woman in love should study the subject, from books and from living teachers, as amply as possible: and should observe other men and women, unmarried and married, with eyes as clear as he or she can make them. If the wooing is regarded as an education in love, and especially in the person wooed, its value will be doubled.

II

WHOM TO WOO

Physical Mates.—The lowest form of mating is that on the exclusively physical plane. Yet this is perhaps the most important aspect of all. If lovers are not physically pleasing and satisfactory to each other, all the financial and other inducements are worthless.

The first problem concerns the respective ages of the parties. Should they be of the same ages? If not, which should be older? On this point, Shakespeare says:

Let still the woman take
An elder than herself; so wears she to him,
So sways she level in her husband's heart.
For, boy, however we do praise ourselves,
Our fancies are more giddy and inform,
More longing, wavering, sooner lost and won,
Than woman's are.

The woman matures earlier; so the younger woman is the normal equivalent, especially physically, of the man a few years older. This is all right for the time of the mating: but thereafter the man overcomes the woman's lead, and soon surpasses her; and when, at her change of life, she has largely finished her physical function of love-making, the man is still equipped as a wooer and lover. On the other side of the same question, the same poet wrote:

Crabbed Age and Youth
Cannot live together:
Youth is full of pleasance,
Age is full of care;

Youth like summer morn,
Age like winter weather,
Youth like summer brave,
Age like winter bare:
Youth is full of sport,
Age's breath is short,
Youth is nimble, Age is lame;
Youth is hot and bold,
Age is weak and cold,
Youth is wild, and Age is tame:—
Age, I do abhor thee,
Youth, I do adore thee;
O! my Love, my Love is young!
Age, I do defy thee—
O sweet shepherd, hie thee,
For methinks thou stay'st too long.

This is worth quoting in full to drive home, in the concentrated phrasing of a master, the extreme differences between youth and age. When an elderly well-to-do man marries a young and lovely girl, as often happens, this may apply; and when a young man marries a woman old enough to be his mother, this may also apply.

And yet, each one's problems of the choice of a mate is an individual problem: no general rules may be laid down. The man's first vague ideal of the woman he wishes to love is made to imitate largely, in normal cases, his mother; the girl's, her father. If this first ideal impression persists with great strength thereafter, youth will be happy only with age. If, in the more normal case, youth desires youth finally, then the invaluable courtship period should have taught this lesson: the young man or woman turns from the intended older mate, and the evil is corrected before it is too late. The person fully experienced in love will have experimented in courtship with

people of various ages, to find where the ideal lies. Too much experimentation, of course, rubs off something of the bloom, but if enlightenment follows this rubbing off of the bloom, the thing is worthwhile.

As to dispositions, again no general rule can be laid down. Biological science says those are most happily mated whose dispositions are opposite. Similarly, biological science says that blonde should mate with brunette, and tall with short: it making no difference to science whether the man is the tall or short one, or the woman the short or tall one. Biological science is true in generalities, and does not pretend to solve individual cases and preferences. The only recommendation is, try the one you are first attracted to; and, if the period of courtship indicates a mistake has been made, and that incompatibility comes from opposite temperaments, or from the same temperaments, try elsewhere.

When should one woo and marry? Are early or late marriages advisable? Here society's present financial arrangement comes in. Unless the man or woman is wealthy already—and few are—the man cannot afford to support a wife, in professional or white-collared business life, until he is from 25 to 30. Marriage on a very small income may work out successfully; in the majority of cases, it does not. The girl who marries at eighteen has hardly had time to know her own mind yet: there are arguments for waiting until she is 22 to 25, or even older. If the man or woman matures slowly, this is reason for later mating.

The danger in late matings is that the man and woman have grown more fixed and rigid in minor matters: more crotchety, more old-maidish or old-mannish. The young are more adaptable. All of these things must be weighed. In general, courtship should begin soon after adolescence, and the mating should be entered upon as soon as the young man and young woman feel that they are completely unhappy unless living together.

Health is an important matter. Some states require a health certificate from both man and woman; and this is a wise precaution. The man or woman venereally infected should not be permitted to marry, until medical science gives a clean bill of health. If a man marries a sickly and ailing woman, who will become an invalid, he is bound down to an excessive and unpleasing load for life. On the other hand, marriage may end the woman's invalidism, which may have been assumed subconsciously as a protection against being overworked at home, or which may be a case of physical warping caused by non-expression of the love energy. If the woman marries an invalid man, unless she wishes to support him for life, more unhappiness will follow. Samuel Butler, in *Erewhon*, calls disease a crime; and crime, a mere disease, to be cured by doctors. For ill health, punishment should follow. This attitude, revolutionary in a high degree, is in the main sound. Except in rare cases, only the physically sound should mate. During the courtship, this should be gone into carefully.

From the physical standpoint, a man should

woo that woman or those women who attract him physically. The wooing period will indicate whether any one woman is congenial and increasingly desirable. No one but a congenial woman who is increasingly desirable should be permanently mated with. The girl should be guided by the same principle of choice.

Mental Mates.—The former conception was that the man was supposed to be the intellectual one, by training, and by contact with the broadening influences of his work, and of the world of men; and that the woman should be an intellectual weakling, tending toward imbecility. In the Oriental world, with its harems and harem favorites, this is at times the situation achieved. Such a method deprives love and mating of its chief glory: the intellectual companionship of congenial spirits.

Woman is no longer forbidden an education. Elementary education is generally hers, required by law; she may have a college training, or its equivalent; and, in general, in life thereafter, if left with time on her hands at home, she is more literate, in the world of books and ideas, than the man; although she may have had less personal contact with large groups of minds, such as a man encounters in his business and social connections. The balance, for the ideal mating, should swing closer. A woman is the gainer by practical experience at working, so that she may realize from the standpoint of the earner the value of a dollar, and not measure it merely from the standpoint of the spender.

A man once locked his business cares up

when the left the office, and never brought them home; or, if he brought them home, brought them merely as complaints, unintelligible to his wife. The ideal mating is where the man and woman are equally interested and intelligent in the business welfare, and are, in effect, partners, as they must be in results. This state can rarely be entirely reached. But if, during the courtship, the girl turns out to be a chatter-tongued and scatter-brained little fool, this is a danger signal to the man, to get out while the getting is good. The girl who raves over the movies, dances like a feather, and thinks like one, is not likely to be a fit mate or mother to the man's children. The man who turns out to be merely a would-be sheik, with no ideas above professional baseball or spending all he has made in a week in one night, is hardly to be chosen as a permanent mate. Unless such a pair woo and win each other: which makes two other people happy, who might have won these lemons and been unhappy thereafter. Courtship is the great testing time, to see whether the two concerned are congenial mentally, and whether they apparently have similar capacities of mental growth.

Social Mates.—Should a girl marry only a man well able to support her? Should a man marry only a girl who is well off financially? These questions would be absurd, if current standards of society did not let them largely dictate many of the most unhappy marriages among us. One should marry for love, primarily and almost entirely. The purpose of

mating is to increase one's happiness: love cannot be bought, and the thing called bought love cannot increase happiness. Love in poverty has a harder row to hoe than love in comparative opulence: but love in poverty is immeasurably better than sham love in opulence, which grows soon enough to hatred in opulence. Let physical attractiveness, plus mental congeniality, be the touchstones during the wooing period. The money will somehow come to those who are not utterly spiritual weaklings, and who present a loving and united front to the world. They may never be well off: but they will win more of the goal of mating and life, which is happiness, than well-to-do haters of their mates.

The matter of social position is similar. The chance of happiness in marriage today is not great when all advantages are in favor of the mating parties. When to this is added a distinct difference in social standing, this makes the problem harder of solution. Let this fact, when ascertained, put you on your guard. But, at the same time, it is only one fact among many to be weighed; and, if the physical and mental attractions are strong enough, they should outweigh any inequality in rearing and background.

Of all errors achieved in mating, perhaps marrying to reform a man is the worst. If a man cannot overcome his pet vices during the courting period, when he is free to fight the battle out within himself, it is almost a sure bet he will not alter after marriage. Even if he temporarily ends the faults or vices during

the courting, he may slump later. Reforming a man (or a girl either) is a tremendous gamble. If you choose to gamble with your life, and enjoy the risk, that is an excellent reason for going ahead with it. But the more normal human beings will leave reformation to the person concerned, and marry for other and sounder reasons.

Special Problems.—Should a man be married who has sowed his wild oats? Or should a girl insist upon the man's coming to the mating pure? Should a girl be married who has sowed her wild oats? Or should a man insist upon her coming to the mating pure?

The average answer is that the man is the gainer by the sowing of wild oats; and that the girl is ruined by the practice. Needless to say, this angle of judgment is all wrong. If the sowing of wild oats consists in mere amorous experience with other women, or in this coupled with drinking, even to the point of moderate drunkenness, and gambling on a scale not too large, the man is not injured for marriage by these. Nor is the girl injured in the slightest. The object of life is to achieve happiness. The chief method of gaining this is by experiencing the world. Love experience is no more harmful (unless pregnancy results) than experience in sampling different food menus. If disease has come, that is a matter for the doctors to pass upon, and the discussion of health above covers it. If the girl has had an illegitimate child, society's ban is so strong that the case is altered somewhat. This is a factor to be weighed by both parties: it

does not of necessity make the girl any the less fit as a mate, than the man would be if he had had an illegitimate child by another woman.

In general, the man is better off for having sowed some wild oats before marriage: he is less liable to plow a field of post-marital wild oats. The same is true, although in a slightly less degree, of the girl. The only difference is caused by the weight of social standards upon the two sexes today.

Should a bashful man or woman woo or be wooed? Bashfulness is in no wise discreditable; it is in general a nervous trait which may be remedied. It comes in general from a want of self-confidence. In general, the bashful continue plugging away in humble self-effacement; and, at times, suddenly burst forth with an achievement far ahead of that of the brassiest individual, self-confident from birth. The cure for bashfulness is contact with crowds, which brings sooner or later the realization that you are not inferior in the slightest to the run of humanity, and are superior to many of your associates. Something of the Coué method—repeating to yourself, without intentional compulsion, "I am important, I believe in myself," might help. Luckily for the bashful, they ordinarily attract the opposite temperament. If the husband of the bashful woman does not make fun of her peculiarity, but sympathetically brings her out, and if the wife of the bashful man does the same, the effort becomes more than twice as successful. In general, the bashful make mates as satis-

factory, or more satisfactory, than the self-confident.

Is love at first sight a possibility? Of course, and a frequent one. The normal man falls in love, at first sight, with every attractive woman he sees. If this is an error, take it as a confession. Many a woman falls in love at first sight with a man who satisfies her ideal, hitherto unrealized. If both feel the emotion simultaneously, we have the perfect case. The subsequent wooing will indicate whether this is enduring love, or an illusion.

Should a man or woman woo several persons at once? In general, especially in the earlier stages of the wooing, this is an advantage. If you wish to buy a jewel, you are wise if you examine several, before making your final choice. The same applies to wooing for a mate. We say at once, because successive wooing permits choice really only of some subsequent love object; whereas the first may be, after all, the most suited. Wooing should be done in honesty; so the element of deception of the parties concerned should not ordinarily be used. This is not because it is ethically wrong, but because, if found out, unpleasant consequences may ensue. But, in general, the wider the choice, the more satisfactory the mating that follows. People who marry the first woman or man they are infatuated with are seldom well mated. Since trial wooings are socially accepted, they should be taken advantage of.

We can now proceed to the technique of wooing.

III

HOW A MAN WOOS

Whom to Woo.—The first thing to emphasize is that you are wooing the girl, and not her father, her mother, her aunts, or her family in general. Since the objects of the wooing are (1) to learn whether the girl is congenial, and (2) to persuade her that you are congenial, and should be accepted, you will find that the second object is achieved best by making yourself attractive to her. In cases where she cares for the opinion of her mother, or father, or family, it is the part of wisdom to court, within reason, the family as well. But the main thing is to woo the girl.

The girl must be willing to be wooed, sooner or later, or you had best cease your efforts. In normal cases, she will not object from the start. If she objects, because she is interested in someone else, or thinks she does not care to be made love to or to marry, or because she thinks there is some personal reason why you are distasteful, your first task is to continue courteously in your suit, until you test out whether or not you can remove this preliminary bar. If she is interested in some one else, this becomes the old conflict between males for the female's favor: and you will use the methods indicated hereafter. If she professes to be entirely uninterested in love and mating, unless she is abnormal fundamentally this is easy to overcome. Lay aside your obvious wooing, interest yourself in whatever she is interested in, and

qualify as a friend and companion in her own interests. She will soon, if she is normal, recognize the great value of your companionship, and from this love should speedily grow.

If the objection is that she finds some trait in the man that is distasteful to her, this dislike must be overcome. Perhaps the objection is to some mannerism of the man's, some error of speech, or some habit which may be altered by him. In such cases, if he desires to win the girl's favor, he must either change the trait, or convince her that she does not really object to it. Of course, her very objection may be an education to the young man, both as to her nature, and as to how others look upon his actions. If, for objection, she objects to his friendship with a certain man, or to his going to baseball games, he may, after studying out the matter, decide that the girl is too narrow in her ideas to be his desired mate. He should, of course, first try to educate her attitude toward an acceptance of his trait; but, if he fails, the world is full of girls, and he may find much more happiness elsewhere. Suppose her objection is to some error of speech that the man constantly commits. In this case, his task is to correct it, not only to please the girl, but because her objection has given him an insight into how other people regard the mistake which he may have always heard made and made himself, without exciting comment.

Six months ago, a girl whom I know met a young man, of good family, fairly well-to-do, fairly educated (a couple of college degrees, I think), and a man who had traveled rather ex-

tensively in Europe and South America. He played a good hand of bridge, was interested in the same artistic things that the girl was, and was smitten with her from the first. After playing around with him for a couple of months, she refused to see him thereafter, except in a large party; and absolutely refused to let him court her further. The reason can be gathered from this typical specimen of his conversation. "I was at the club, see? A lot of the fellows were there, see? And we decided to shoot a little bridge, see? On the very first hand, see? I had four honors in diamonds, and I bid two diamonds, see?" Tactfully the girl had pointed out that the constantly reiterated "see" just was not done by literate people. The man could not or would not change it: and yet that small irksome trait was what cost him the girl he wanted.

In more usual cases, however, the girl is willing to be wooed from the start. Then your task is easier.

Object and Methods of Wooing.—The object of wooing, in addition to its value as education in the opposite sex, is to win the regard of the other person, if you continue to desire her, and to win her consent to the mating. What is the practical method of doing this? The easy and only wholly satisfactory way is to make yourself attractive to the girl, so that you become indispensable to her happiness, her enjoyment of any experience, and her contented living.

Let it be repeated, that the man must stand high in the girl's eyes, to give the mating a chance for success. If the girl takes a man as

a last chance, because she fears she can get no other suitor, the chance for happiness is lessened: if at any time later she meets a more attractive man who persuades her that he would have proposed, if she had waited, regret and dissatisfaction may set in, and the whole love and marriage relationship may be curdled. When a man singles out a girl for his attention, he cannot avoid transplanting the situation back to the old savage days, when the male preened and strutted before the female, anxious for her approval. What are some of the obvious ways to win her approval, which at times are neglected so disastrously that the man's chances end at once?

Notice the man's difficult task: to look at himself with the girl's eyes, and furnish her with an increasingly attractive picture of himself. Some genius uttered the brilliant half truth that love is blind. Luckily for all of us, this is largely true. But a girl's parents and relatives, friends, and rival suitors, will obligingly lend their eyes as glasses to her: and the man may expect to find what faults he has magnified almost out of recognition. What, then, from the girls' standpoint, will she look for in the man?

First of all, girls are by nature neater than men. Girls will allow much latitude to a man for carelessness in attire. But the man who neglects such simple toilet matters as the care of his nails, and presents himself with a black rim under them; who lets his shirts and collars remain in service till they are sooty; whose shoes are unnecessarily unpolished, on occa-

sions when she may expect to be judged by other eyes from the standpoint of her escort,—such a neglectful man may as well know that any one of these things may damn him more in the eyes of the girl than if he had committed murder.

Secondly, a girl will judge the man by how she thinks he will look in the eyes of her friends and associates. If the man is slightly ungrammatical, and so are she and her friends, this makes no difference. But, if she has more booklearning than he, and if her friends are critical in this regard, and regard themselves as at all highbrowish, the man must make it his job to grow up to her literate standards. "I don't like that there show," "them sort of pictures," "moving pitchers," "I ought to of went," and all the rest of the verbal atrocities that the ungrammatical blunder into, must be corrected. Winning and keeping a girl's regard must be regarded as seriously as getting ahead in business. Wooing thus includes a course in self-improvement, along every line. It will do no harm to obtain a book of handy helps in grammar, in etiquette, and the like. Don't eat peas with your knife, or wear a red tie with a dinner jacket: unless the girl prefers it. In that case, the advice is the reverse: study the proper mistakes to make. Later on, you can gradually lead the girl toward improving herself. Make yourself attractive in every way in the eyes of the girl, and of the relatives or friends on whose judgment she relies.

The moral qualities go along with this. The normal girl will prefer a man who stands well

in mens' eyes: that is, who has the reputation of a he-man, equipped with at least an average amount of human courage. As a matter of fact, if the last sentence were truer, it would be better for girls. A large number of them, unfortunately, prefer instead the man whom women like, and men dislike: the parlor lizard type, the afternoon tea snake specimen, the namby-pamby woman-pleaser who never makes a success of anything in life except wooing women. There is a thrill, beyond doubt, in being wooed and kissed by such a man: there is much unhappiness in a continuing relationship with him.

Having made yourself attractive, the next thing is to make yourself important and indispensable in the girl's eyes. If the girl is sensible, a display of sensible ideas on matters of life will aid; if she is frivolous minded, a display of a frivolous, spendthrift nature is more shrewd. Do the things she expects of you: date her up as often as she desires—it may take all of your shrewdness to ascertain the fact, too. Take her, not essentially where you want to, but where she wants to go. If you adore boxing matches, and she prefers Coney Island and art museums, postpone the boxing matches and take in the others. If you like good music, and she cares only for the movies and baseball, first make up your mind whether you want to continue to woo her; and, if you do, especially at first, take her where she wants to go, and only slowly and tactfully sprinkle in with the cinema thrills and the paid athletics a small dose of Brahms and Beethoven. Do what she

expects of you: and always do a little more. That is, do the unexpected thoughtful little things. Find out her favorite foods, chewing gums, cigarettes, people, amusements; and go out of your way to provide her with these. If you like chewy chocolates, and she detests candy and adores pickles, do not provide her with an elegant two pound box of chewy chocolates. Don't be like the married man who presents his timid old-fashioned wife with a box of cigars for Christmas, and then smokes them himself. Be more courteous and thoughtful to her in public that she has a right to expect. This advice is sound, unless the girl is of the rare clinging vine type who wants a man to bang her around in alleged he-man style. If that is what she wants, give her all the banging she can stand. Make your motto, "We Strive to Please"—and do more than strive.

You will want, and she will expect, some physical love from the start. Among different strata of society, customs as to kissing and caressing differ. Never give the girl less than she expects. After you have found out that she likes to be kissed, you will disappoint her permanently if you give her the sort of kiss you would give dear old Aunt Tabby, aged ninety-eight in the shade. Yet remember to think of her wishes primarily: don't give her the sort of kisses you want first, but the kind that she wants. Your artistry will come in subtly leading her to want things that you want. And, once a woman is generally satisfied with a wooer, and wants his approval, she moves swiftly to the place where she wants to

please her lover in every way. Then the desires coincide: and the man can read his own wishes, and know them for the girl's as well.

Problems of Wooing.—The man should find out what he wants from the girl—whether a mere flirtation, a temporary mating, or a permanent one: and adapt his technique to gaining his goal. For instance, in the question of letters. He should do his best to satisfy a girl's craving for love letters, if separations occur. In all probability, he cannot satisfy her desires here: what she really wants is his presence, and a thousand-page letter does not give the thrill of that. Ordinarily it is not the best tactics to spill over endlessly in a love letter: a chatty, companionable letter, with artistically worded love phrases that hint a vast withheld reservoir of love, is better as a rule than pages of sugary sentimentality. Except at the very first, when all rules of sanity are laid aside. And yet, recall that, if you desire subsequently to retire from the courtship, love letters may be very embarrassing. Try to phrase your letters so that they mean everything to the girl, and nothing to the outside world, which may have the pleasure of reading them in newspaper columns featuring a breach of promise case. It is well to keep this possibility in mind from the start. Don't store up trouble for yourself in this fashion. Be cryptic and allusive, leaving more than half for the girl to read between the lines. It may save you trouble in the long run.

As for wooing and proposing by proxy, even the most bashful person had just as well learn

that it is suicidal. The proxy brings a message to the girl that should come from the beloved man: insensibly her emotion goes out to the bearer of the message. Captain Miles Standish sent John Alden to woo Priscilla for him, and the maiden wisely said, "Why don't you speak for yourself, John?" King Edgar's trusted courier wrote the king that the maiden he desired to wed was ugly and wholly unattractive: and then proceeded to marry her himself for her beauty, for which the king later lopped off the man's head. Wooing by proxy is much worse than not wooing at all.

As for quarrels, the more experienced wooer will have few or none of them. Beginners in love will insensibly drift into them. Now quarrels have no place in most real loves: they are a sign of some concealed dislike or aversion, which may take a more virulent and costly form after the wooing has been made irrevocable, or comparatively so, by marriage. If the quarrel can be easily patched up, well and good; but if quarrels constantly come, it is a bad omen. The only exception is where both man and girl enjoy a quarrel more than peace, and mate in order to have a mate to quarrel with for life. This is abnormal; and, if you are a normal man or girl, understand that quarrels, especially if they are usually over trifles, are a good warning to break off the courtship and look elsewhere.

The Proposal, and After.—No sensible girl today wants the man to propose to her father, or her parents, before he proposes to her. After all, he is not marrying the father, or the par-

ents; he is marrying the girl. The father or parents are consulted after the plans are made, for ratification and aid: the goal is the mutual consent of the lovers. Again, customs as to the seriousness with which proposals are regarded differ strikingly in certain localities and at certain seasons. In the South, from which I came, a girl is proposed to almost as easily as she is asked for a dance; she becomes engaged as casually as she accepts a drink of water, and breaks it off whenever the mood strikes her. During college days and the girl's early debutante days, she may be "engaged" to several or half a dozen men at a time. In the North, the custom is ordinarily different. Again, there are seasonal variations: young couples who meet at a summering place may become engaged for their mutual pleasure during the summer, with no intention of ever seeing each other when they return to their regular homes in the autumn. All of these things must be taken into account.

Don't study a book of etiquette as to how to propose. The more stilted and formal a proposal is, the easier it is for the girl to laugh at the ridiculousness of the situation. Real lovers know, without the words having been said, that their equivalent in deeds has been achieved. Even a slang proposal, "Well, honey, shall we hit it off together?" may be far more effective than "May I have the honor of making you my wife?" Be natural in this, unless you have ascertained that the girl desires the frills. In that case, give her what she desires. The acceptance may be given with a kiss, or with

mere words. More usually, the girl will ask time to consider the matter. If she means yes by this, proceed to make that clear to her. If not, keep after her until you win the acceptance, or her friendly refusal.

It is not hard to read from a girl's refusal whether she means a real objection, or merely a delay. If you really desire her, she will be flattered by your continuing to woo her, and to make yourself more and more attractive in her eyes. In any case, if she is worthy at all, she will word her rejection so as never to wound the man unnecessarily. If the parties are suitable as mates, a rejection alters soon enough to an acceptance.

Courtship After Marriage.—*How to Love* (Little Blue Book No. 98) takes up the problem of how to act after the mate has been won. It may be briefly summarized here thus: the real lover, man or woman, continues the courtship as long as the mating lasts. All that has been said about making oneself attractive in the eyes of the other, applies with especial force to this wooing after marriage. Do your best to make a success of the mating; if your efforts fail, and a separation or divorce is necessary, you can never reproach yourself afterwards with the accusation that you did not try your best.

As for courtship of other women after marriage, or a woman's courtship of other men after marriage, both of these are known; and, in our present organization of society, are natural. The man who is by nature promiscuous, or the woman who has the same nature, for

his or her happiness will be as faithful as possible. If love comes toward another woman or man, the lover will come to it with more artistry and more experience than in the earlier attempts; and the technique of wooing should be correspondingly improved.

IV

HOW A WOMAN WOOS

Fancy Flitations.—Most textbooks on wooing and courtship devote their space allotted to woman's wooing to such absurd devices as flirtation by parasol, fan, glove, handkerchief, dining table signals, window flirtation, and flower flirtation. The number of people who read such silly books is limited; the number among these who remember what they have read is far smaller; and perhaps no men are included in the latter number. Thus no man will understand what your signals mean. A few of the choice instructions given are as follows:

Parasol Flirtations

Carrying it elevated in left hand—Desiring acquaintance.

Carrying it closed in left hand—Meet on the first crossing.

Carrying it closed in right hand by the side—Follow me.

Closing it up—I want to speak to you, love.

Swinging to and fro on the handle, on right side—I am married.

With handle to lips—Kiss me.

The trouble is, all women must carry their parasols somehow, and in more than nine cases out of ten, they have no faintest dream of these so-called signals. If you ignore them, and they are intended, you insult the lady; if you act on them—as, for instance, stepping up and kissing a stranger who has nervously brought the handle of her parasol to her lips—you are liable to be fined \$750 in Pennsylvania, \$2,500 in New

York State, and the vast sum of \$1.15 in New Jersey. This whole procedure is a bit too dumb even for Rotary Club members and old maid school teachers, the two classes who seem to know least about life.

Now for the fan:

Fan Flirtations

Drawing across the forehead—We are watched.
Fanning fast—I am engaged.
Open and shut—You are cruel.
Dropping—We will be friends.

It fills space in the books, but don't try to follow it, unless you wish to get the most unpleasant surprise of your career.

We learn that a girl who drops both gloves means thereby "I love you"; that the right hand with the naked thumb exposed means "Kiss me," and so interminably on. So anything done with the handkerchief is supposed to mean some tender message. There are 21 tender messages conveyed with napkin, knife, fork, spoon, and cup; there are 40 tender signals conveyed by finger signals through a window, perhaps the dumbest being:

Closing hand to the eye, *a la* telescope—I would see you.

Or take the elaborate language of flowers. If a man sends a girl white roses, quite a possible gift if they are the most attractive things in the florist's shop, his message, also is, "I am too young to marry yet"! If he presents her with tansy, one of the loveliest of the daisy family, his message is "I declare war against

you." The books omit a few of the more useful flowers and vegetables, so we add them here as a supplement, urging that they be tried out at least. Send your girl one of the following (or send it to your man), with the meaning indicated:

Chrysanthemum—I prefer Norma Talmadge to kissing at Coney Island.

Cauliflower—My sister is married to a retired butcher with a cork leg.

Onion—You will weep if you don't marry me.

Japanese Persimmon—Kiss me, my lips are ripe.

Apple—I'll be your Eve, if you care, Adam.

Wild Leek—Please 'phone the plumber for mother.

Having carefully memorized this list, proceed to forget it, and go ahead and woo naturally without it.

Judging Men.—In general, men have a fairly easy time in judging the girls they go with. For, common opinion to the contrary notwithstanding, a man is more secretive and shrewder in hiding his faults than a woman. A girl who is sparing in her use of paint and cosmetics ordinarily is sensible and fit to be a mate. A girl who over-rouges and over-paints is one of two things: either typically "fast" or an imitator of her favorite movie heroine. Either may make a good mate. In either case, the progress of the wooing will soon teach the man whether the girl has any conception of happy mating, or is only a parasite who wants to be decked in fine feathers and princessed through life, with the man paying the bills.

When a girl comes to judge a man, her task is harder. The man who is liked by other men is, in most cases, to be preferred to the man

who is despised by men, and adored by vapid women. There is a class of women who are mere men-hunters, ranging from the out-and-out gold-digger, who sells her charms as shrewdly as she can for outright gifts amounting to support—and who may remain, in the eyes of society, a “good girl” in spite of it—to the girl who protests vehemently that she despises the gold-digger, yet spends all her energies in securing men to take her to dinner and the theater, and to give her gifts sufficient for her support, or at least sufficient to give her the luxuries she would not otherwise get. These parasitic or sponging women are to be avoided, except by the man who wants them frankly, being willing to pay the price for the temporary stimulus of their company.

There is a far larger class of men who prey on women. These men are the vestiges of the social system that is already dying—the system of the double standard of morals for men and women, by which a man was allowed to sow as extensive a crop of wild oats as he could, with social sanction; and by which the woman who strayed a trifle from the narrow path of rectitude was thereafter regarded as a “fallen woman,” and any man’s legitimate prey. To such men, women are the goal of man’s predatory instincts. It was a man’s imperative to seek out innocent girls, and seduce as many of them as possible, taking no thought for their welfare, and caring only to shield himself. The girl who resisted the seductions (and she was equipped for resistance only with an intense and abiding ignorance of all things concerning

sex life) was qualified to be a man's wife; the other, the girl who was deceived by glib promises and a suave exterior into a surrender of her body, and the girl who was willing to experiment with love, were henceforth regarded as fallen women, and were disqualified as permanent mates. Such men exist today: the general class of traveling salesman, not quite fairly, is taken as an example of such men of prey. Needless to say, the girl's task is to ascertain at once if her would-be suitor belongs to this class. If he does, she must decide whether or not she wishes to play with such unworthy fire. It is a safe gamble that, if she gets him to the point of marrying, with any intention of reforming him, she will fail in the last undertaking by a tremendous margin. If she wants the experience of being seduced, she may go ahead and undergo it, for the man will be found willing. And modern standards of judgment hold that the girl who has sowed her wild oats is no more "fallen" than the man who has sowed his wild oats. Society is only slowly accepting this point of view; but as more and more women become wage-earners, as managers and owners of businesses, as office workers and store workers, they are reaching the point where they can buy their will of the world, and insist that their wild oats be judged no more harshly than a man's. The girl supported by others, as the girl living at home, cannot afford to run such risks. Furthermore, even the working girl has to face blackmail from the seducer, the possible loss of her job, and the unpleasantnesses and expense of bearing an illegitimate child. But

if she understands matters of sex, and desires to go ahead, that is her business.

The more normal girl will regard such a man as the vestigial anachronism that he is, and will promptly give him his walking papers. She will confine her acceptance of courtship, and her wooing itself, to a man with more intelligence and a more modern outlook upon life.

Should a girl woo, when she is convinced that the man is worthy to be her mate? There is no reason in the world why she should not. Her object is to make herself attractive to the man: and this usually involves preserving a certain amount of dignity. Thus her wooing should, as a rule, be less obtrusive and more subtle than a man's. But, once having decided that she desires a man for a mate, she should use every method of proving herself his invaluable companion—a campaign that the man should use in a similar situation. A little tactful questioning on her part will soon discover where the man's ideals lie. If he really wants a home-maker, and she is willing to give this rather subservient role a trial, she can emphasize her domestic capabilities, cook him tasty dishes if there is an opportunity, embroider his handkerchiefs, and otherwise show that she fits into the role of his desired mate. If he wants an intellectual companion primarily, she can indicate that she qualifies in this respect.

In general, there is a prejudice against a woman's taking the aggressive in the actual wooing, and the final proposing. This prejudice is dissolving. Wooing and mating should be matters of mutual choice: and if, for in-

stance, the man is the more backward and bashful of the two, it is the duty of the girl to aid him over the difficult spot, even to the extent of doing the proposing. Just so she preserves the role of being pleasing and attractive, there is no limit to what she may ethically do.

This altering standard carries with it a change in the man's attitude. There was once a so-called chivalrous attitude, which would prevent a man's refusing a woman, in such a situation. Now such chivalry is based upon a false assumption, and tends to produce lifelong unhappiness, rather than happiness. After the preliminaries have been finished, the course of the courtship and the mating should be marked by as high a degree of honesty and sincerity as is possible. Insincere chivalry is a wrecker of happiness. If the man does not want to marry the girl, it is his duty to say so, just as sincerely as a girl would refuse, if the roles were reversed. He will, of course, phrase his rejection finally, but at the same time so tactfully that the girl will not feel insulted. In such cases, a good way is to refuse on the ground that the man regards himself as unworthy: a courteous insincerity which both will understand, if the man makes it clear that his decision upon this ground is final.

"Nice" Girl or Human Being?—The old-fashioned training of girls developed them into "nice" girls, with Victorian prejudices, ignorant of everything essential to life. The pendulum has swung to the other extreme: the modern generation of petters and neckers, who have the forefront of today's picture, are the very

reverse of this. There are still enough girls today, who have much of the old so-called "niceness," and hardly tend at all to the petting type. Many of them retain this finicky and meticulous niceness, because they are assured, by their dumb elders, that this makes them more attractive in the eyes of men.

It does not. Unless you desire your man to continue to divide womankind into two classes—"nice" women like his wife, to whom he may not tell a clever risque story, whom he will love physically only in a "nice way"; and the other type of women, to whom he probably will turn sooner or later, and thereafter increasingly, for the solid human comfort of utter physical mating—unless you wish your husband to share his physical love with less worthy and more human women, you had best get over your "niceness" as soon as possible, and graduate into the class of human beings.

Here is a typical problem. A young friend of mine was tremendously intrigued by an attractive young girl. He told her censored versions of some of his favorite stories, such as the story of the negro preacher who announced to his congregation: "Breddren an' sistren, I aim to take my text, dis mawnin', from de text 'De widder's mite.'" As he paused impressively, a deacon in the front row rose. "Brudder, dere's only one thing wrong wid dat text: Dey do!" This is a delightfully clever story, with a subtle and inoffensive double meaning. The girl put on her "nicest" expression, and said, with finicky distaste in her face, "How revolting!"

When she had made the same response to all

efforts on his part to interest her in matters which men regard as almost too mild for a laugh, and which other girls of his acquaintance were highly amused at, he came to the wise conclusion that this was not the girl for him. He had no intention of being saddled for life with a girl whose attitude was "How revolting!" He ceased to pay attentions to her, and soon found a much more admirable girl, with whom he is at present happily married. The "How revolting!" girl still thinks that her conduct was right; that the man has lowered himself; and will continue to delude herself so until she wastes into a vinegary old-maidhood.

If a girl has had a normal rearing, she will not make the mistake of thinking that the Puritans were right: that bodies end at the neck and at the shoe-tops, with nothing between, and that ordinary human matters, especially those touching the tabooed facts of life, are never to be mentioned intimately between men and women. No matter what the taboo before mating, after mating the happy lovers speak with utter frankness to each other. A certain amount of coarseness, in its place, is a splendid release for energy that would otherwise fester and warp, and lead the lovers to seek satisfaction outside of the mating relationship. And, since this will come after mating in well-mated couples, even before the mating an increasing frankness will mark the intercourse of an intelligent young man and young woman.

There is one other thing to be remembered by the girl, both as wooer and as wooed. Court-

ship is an education in the opposite sex, and in love: and this education should not be superficial. It is a common statement of doctors that engaged people as a rule know each other physically before the marriage. I will take this up in the next chapter.

V

CONDUCT DURING THE ENGAGEMENT

Conduct in Public.—An engagement is a pledge, mutually given by two people, that their courtship is to terminate in mating or marriage. This is both a private and a public matter. Personal reasons may make it necessary to keep this secret, at least for a time. It is preferable, from many standpoints, that it be announced as soon as possible. Intimate friends, at least, should be let in on the secret. Whenever possible, it should be made public. For it affects other people, and their conduct toward the engaged couple, as well as the two themselves.

An engagement, luckily for men and women, is not irrevocable: I will take up the breaking of engagements later. But it should not be entered upon too casually. This is especially true when, for instance, two men woo one girl. If one man persuades her to decide in his favor and against the other man, he should weigh more carefully than usual his proposal. For, if he gets her to surrender something tangible—the courtship of the other man—for his own courtship, it is less fair to her thereafter to break the engagement. She has actually surrendered something; it may be impossible for her subsequently to accept the attentions of the other man, who will not renew an offer once rejected. A breakage in such cases should only be urged by the man, when the happiness of both clearly demands it.

The matter of an engagement ring comes up, as the conventional way of announcing to the world that the girl is engaged. There is a decided feeling today against wedding rings, originating as symbols of servitude; and this extends, among some girls, to a dislike of engagement rings as well. For all their jeweled state, they represent a subjection, a surrender of freedom to the other party. The sting of the subjection is lessened, if both man and woman wear wedding rings, and both wear engagement rings. Yet there are men who are not willing to wear rings: and, if the girl objects, it may be better for neither to wear them. As to choice of ring, the girl is wisest who makes sure that the young man does not exceed his legitimate income for spending, in purchasing her a ring. The object should not be to secure a ring slightly larger than any worn by her girl friends; it should be to wear an attractive token of an inner affection. There is no sense in going into love blindly, even at this stage: it is the girl's duty to find out what her fiancée's financial prospects are, and for him to find out hers. Since they propose to share financial life together, there is no sense in even starting this blindly.

- As to the ring, it is true that it symbolizes a loss of freedom. But it is also true that this loss of freedom is an actual thing. Parties to an engagement must of necessity surrender much, when they decide to proceed with a courtship into a mating or marriage. Before the proposal is given and accepted, the man and the girl as well have the whole world of

women and men to choose from: the proposal and its acceptance definitely mark a surrender of all the other possibilities, in favor of this one. When you scan a menu of desserts, you can elect pie, ice cream, pudding, or many another choice. The choice of one, as a rule, must mean the surrender of the right to choose any of the others. This is, as a rule, as true of lovers as it is of desserts. Since, then, the loss of freedom is actual, there is no great extrinsic objection to the custom of the wearing of rings by both.

The compensations for the loss of freedom should overbalance the surrender. A man cannot forever balance in his mind the rival possibilities of settling in Florida, California, Chicago, New York, or some village: he must sooner or later make up his mind, choose one, and do his best to make his life a success there. It is so with love. The engaged couple have given up the rest of the world as potential mates: and they step at once, and increasingly, into the pleasure-garden of mated human love. A mere choice of all the women in the world is not to be compared with the actual embrace of the one among these that you desire. Only the man or woman with an insatiable physical wanderlust will prefer the wandering to the arrival at the goal of love.

Mating does not mean slavery to the other party: it means, as a rule, exclusive physical love with one person, but constant human intercourse with many more. There is not even the slightest ethical offense in a girl's acceptance of attentions from other men, which stop

short of the erotic. She can go to dances, plays, meals, with them; and a man can do the same with other girls. Life after mating will be monotonous enough, in most cases: if the engaged couple dance exclusively with each other, the monotony may commence so soon that it will frighten the pair off from ultimate marriage. As a rule, other people incline to leave an engaged couple alone anyhow: it will be up to the man and girl to encourage reasonable attentions from others.

This is theoretically sound: but the element of human jealousy must be taken into account. If either of the parties is excessively jealous, since the lover's desire is to remain attractive in the eyes of the other lover, there must be some compromise. Jealousy partakes of the nature of a malignant disease: rooted in a normal desire to possess the loved one, it may degenerate into an insanity that wrecks all happiness. If the jealousy of the other party is increasingly extreme, our advice is to end the relationship. If the decision is to continue it, compromises will have to come in: and the girl or man will retain the right to go with other people, only to the extent that the jealous one can be persuaded to permit. This calls for all the tact and sympathy in the world.

In Private.—The conduct of engaged people in private must keep in mind the purpose of the engagement. This is the great testing period of compatibility and mutual adaptability. If both parties are not adaptable, a heavier burden is laid upon the one who is. If the

burden of adjusting oneself to the whims, caprices, and crotchets of the other is too great, there is still the chance to terminate the engagement. And, if neither party is adaptable, there seems no other happy way out of the situation.

The chief problem confronting the engaged girl is to what extent she will experiment physically with love. As stated, many doctors say that most engaged couples, before marriage, have experienced love fully. This is not an indictment, but a statement of a fact. There are strong arguments in its favor. If a man and woman are not physically pleasing to one another, the happiness of the marriage is doomed from the start. If, for instance, one of the mates is sexually frigid, and one passionate, it is almost impossible for them to satisfy each other: and the constant temptation will be present to try to find satisfaction outside of the mating relationship, a temptation that is often yielded to, at times to the wreckage of the relationship. There is no way for people to know the physical nature of the other, without physical experimentation.

The danger in the procedure is that the man may turn out to be a predatory male, who becomes engaged to girl after girl for the mere pleasure of temporary enjoyment of her. This is a danger that the girl must run; and, if she has made it her task to study the man's nature carefully, she should know by now whether or not her intended mate is to be trusted. There are many women who believe that, if a man is once given the ultimate favor,

he at once regards the girl as cheapened in his eyes. The consensus of intelligent opinion seems to be to the very other extreme: that that many a girl has wrecked her chances for happiness, by refusing to grant the ultimate favor. Only an abnormal man will habitually regard a woman who yields to him as cheapened. As the time for the final mating draws near, and the mutual desires rise toward their crest, he may regard it as utterly unreasonable for the girl to withhold longer. The man is usually the aggressor in such cases; and, if the woman is the aggressor, she will have the same opinion of the man.

Yet, since there are risks on both sides of the matter, it remains a subject on which the wise will give no advice, but will leave it to the two concerned to work out their solution as wisely as they can, with the facts spread out before them.

It is a matter concerning the private relations of the engaged couple, when the attentions of outsiders pass the stage of the non-erotic, and approach the erotic. Whether a man should be engaged to two or more girls, and a woman to two or more men, at the same time, affects the parties concerned too intimately to be regarded as a matter of outsiders. Theoretically, there is much to be said on both sides. A real engagement—a definite pledge to marry—cannot coexist with an engagement to an outsider. The laws do not permit polygamy in this country. Yet what are we to say of a provisional engagement, where the parties merely assure each other that they think they

will marry each other, yet at the same time offer themselves to the world as engaged? If such is the agreement, there is less objection to concurrent engagements. From the standpoint of education in sex, there is something to be said for the idea. Common sense would favor it, yet human nature runs counter to common sense too often to let us stop here. It is better, perhaps, to let the concurrent courtships take place before the formal engagement; and then let the choice, for the time being at least, be an exclusive choice. If either party is attracted outside, to the extent of believing that more happiness lies in the love of another, the engagement may be broken, and the other relationship commenced and tested.

Termination of Engagements.—Should an engagement be short, or long? What is the proper length, for the happiness of the parties involved?

We have scriptural authority for the engagement lasting fourteen years: the story of Jacob can be stretched into this interpretation. Jacob, who loved Rachel, agreed with her father to serve seven years for her. Frankly, we have yet to meet the woman who is worth such a sacrifice; and, in this case, at the end of the seven years Jacob, tricked by his prospective father-in-law, found himself married to the elder sister Leah, instead of to his beloved. Accordingly, he put in another seven years serving for Rachel, and, fourteen years after his engagement started, was wed to her.

Especially in old-fashioned country districts, long engagements are often known, and laughed

at. There is the story of the countryman who courted a schoolmate for years—until, in fact, both had drifted from youth toward the end of middle age.

“Why don’t you marry Sarah?” he was asked.

“Marry her!” in surprise and dismay. “Why, if I got married, where in tarnation could I go to spend my evenings?”

Long engagements are not wise. If the two are separated by distance—if, for instance, the young man goes to the city to make his financial way, so that marriage is possible—there is strong chance that either he or she will find a more suitable mate. In such cases, if the original engagement is carried out, happiness is almost inevitable; and the breaking of the engagement may bring unhappiness to at least one of the parties concerned. If the girl and man remain in the same city, they gradually grow old, apart from each other. Their little tricks and idiosyncrasies, which living together could have smoothed out, become permanent—hardened into unbendable things. They come to regard each other as matters of course, without the exquisite physical thrill which love should mean. They have, in brief, all of the discomfort and monotony of marriage without any of its joys.

Too brief engagements are at times more dangerous. This is especially true where the man and girl have not known each other before. If they have been raised side by side, there is small danger of being mated to a person who will turn out, on closer acquaintance, to be everything unworthy. The wisest thing

is to let the engagement last a month or longer, and then, if the mating is desired, take the plunge even on a moderate income, than risk the danger of letting the engagement become a tedious habit.

The normal termination of an engagement is marriage. Any book of etiquette will tell you the formal ways to accept the mad gamble of marriage, with all of the frills of such service, receptions, honeymoons, and the like. The honeymoon, it may be pointed out, or the period in which the deluded man and woman try to live on love alone, is one of the most cruel inventions ever made by man. Its almost invariable result (unless it be merely a brief trip, or a trip which the parties desired to take anyhow) is to send them back to the city thoroughly bored and disgusted with each other, and avid to interest themselves, perhaps unduly, in parties outside the mated relationship. For those who do not like the antique pomp of the marriage in church, there is always the simpler ceremony of being married by a justice of the peace, mayor, or alderman.

And there is, luckily for men and women, another termination possible, and that is to break the engagement. This should not be done without grave reason—but far more frequently than the actual breakings of engagements, such a reason exists. The problem simply is, which is better: to act wisely and terminate an unwise mating, which would result in unhappiness, at the cost of some slight temporary unhappiness; or to enter upon a lifetime of unhappiness, or at best a long stretch

of it, breakable only by the costly and elaborate method of separation or divorce, which may require the assumption by one party or the other of a guilt not actually earned. Where the case is so clear, there should be no hesitation: the engagement should be terminated, the man accepting the blame out of a chivalrous insincerity socially understood, and the parties parting, if possible, as friends. If the matter is still uncertain, better a postponement than a marriage, which may be repented soon enough. Only a mating which will bring increasing happiness is wise, for that is the object of life, and of its playtime, courtship.

VI.

FAMOUS COURTSHIPS

Courting by Poetry.—One of the invariable effects of the love emotion is to inspire, in the amorous breast, the delusion that the man or woman who is in love can write poetry. Most people can feel poetry, but writing it is another story. Yet, whenever any celebrated case of breach of promise comes up, we have the poetic effusions of him and her published in the papers, for the delectation of the multitude. There is good propaganda in courting the lady of your heart, or in replying to the man of your heart, in the words of Shelley or some other great lover—but your own words may not be as efficacious. Countless poetic first volumes (and later ones, too), however, are filled up with the overflow at wooing time, and occasionally such books are books which the world would not willingly spare.

A favorite record of courtship by rhyme is *Lilies of the Valley*, by Percival W. Wells, of Wantagh, New York. Could any woman resist strains like this:

Life's just begun! the flowing tide
Of love has stirred it into motion.
Farewell to bachelorhood's calm pride,
And welcome, love's intense emotion!

Faulty as the rhyme may be, the sentiment is flawless. Again,

Put thy hand in mine, and kiss me tenderly,
Beautiful Lillian, fashioned so slenderly;
Place a kiss upon my lips with thy dear lips so soft,
And do not stop with one, but kiss me oft.

How magically the "soft" evokes its rhyming mate, "oft." "Soft," which at times is applied to brains, here refers to the lips. But for the magic of rhyme, could we have had the picture of "Lilian" in the last two words of this masterly confession?

I love thee, O I love thee, Lily ; stay
Beside thy Percival and with sweet kisses say
That thou wilt always love him. Dearer than day
Art thou to me, O Lily—wanton fay !

Yet a poet out of the Village Milton class, say Shakespeare, might be a safer guide in your own Muse flights. Shakespeare's plays are saturated with gorgeous examples of courtship. Othello's magical wooing of Desdemona is one type. Here the simple warrior and conqueror used no method but the plain unadorned story of his deeds of daring. The maiden's heart capitulated to his indirect siege at the first attack. A different love is Romeo's, saturated with poetry:

Alack, there lies more peril in this eye
Than twenty of their swords ; look thou but sweet,
And I am proof against their enmity . . .
Sleep dwell upon thine eyes, peace in thy breast !
Would I were sleep and peace, so sweet to rest !

Then there is the caveman-wooing of Catherine the shrew by Petruchio the roistering gallant—the most amusing courtship in Shakespeare, with the possible exception of his bluff English king, who knows no French, and his wooing of the spirited French princess, who knows no English. But love speaks a language of its own and even this bar did not keep the royal

lovers from understanding each other. There is the simple, childlike wooing of Ferdinand and Miranda in *The Tempest*, and there is the passionate wooing—by the woman this time—of Adonis by Venus:

“Vouchsafe, thou, wonder, to alight thy steed,

And rein his proud head to the saddle-bow;

If thou wilt deign this favor, for thy meed

A thousand honey secrets shalt thou know:

Here come and sit, where never serpent hisses,

And being set, I'll smother thee with kisses.

“Art thou ashamed to kiss! Then wink again,

And I will wink; so shall the day seem night;

Love keeps his revels where there are but twain;

Be bold to play, our sport is not in sight:

These blue-vein'd violets whereon we lean

Never can blab, nor know not what we mean. . . .”

And having felt the sweetness of the spoil,

With blindfold fury she begins to forage;

Her face doth reek and smoke, her blood doth boil,

And careless lust stirs up a desperate courage;

Planting oblivion, beating reason back,

Forgetting shames' pure blush and honor's wrack.

Timid maids and men may well be reassured by this tempest of passion on the part of love's queen, and by the whole gallery of Shakespeare's great lovers.

Great Lovers.—The world has its long roll of great lovers, whose names are sweet on the tongues of the generations that come after them. The Bible, in the *Song of Solomon*, has one of the greatest series of love lyrics in all literature. David loved his Bath-Sheba as a king loves; and Solomon was at least efficient, with his seven hundred wives, princesses, and three hundred concubines. Helen of Sparta eloped with Paris of Troy, and lighted the con-

flagration that burned the topless towers of Troy to the ground, and embroiled the world in the Trojan War and inspired the first two Greek epics. Dante saw the girl Beatrice passing him on the street and as a result, he worshipped her thereafter from a distance, and lifted her in imagination, in his *Divine Comedy*, to the high throne of heaven. Don Juan was the great predatory lover, putting on a new love as easily as he slipped on a new garment. Bluebeard (or Gilles de Rais) was the blood-thirsty lover; Cleopatra was the world's queen, with Pompey, Caesar, and Antony successively at her feet. In more modern times, Casanova was the gentlest great lover of all time, with a roll of loves as long as Solomon's, and far more varied. Great secular popes, like Alexander VI, the Borgia, were great in love; many of the Roman emperors were chiefly distinguished in the lists of Cupid. Caesar himself was nicknamed "the husband of all women." Such men and women have made the history of love. Read their love stories, as aids in your own suits.

Among the poets, we have had many great lovers. Shelley spent his life in a high idealistic pursuit of the ideal woman, pouring out his deathless lyrics to some Harriet or Mary or Jane or Emilia who captured his fancy for the moment. Byron loved all over Europe, Keats burned out his young life in a wild adoration of Fanny Brawne, as in this sonnet:

I cry you mercy—pity—love!—ay, love!

Merciful love that tantalizes not,

One-thoughted, never-wandering, guileless love,

Unmask'd, and being seen—without a blot!

O! let me have thee whole,—all—all—be mine!
That shape, that fairness, that sweet minor zest
Of love, your kiss,—those hands, those eyes divine,
That warm, white, lucent, million-pleasured breast—
Yourself—your soul—in pity give me all,
Withhold no atom's atom or I die,
Or living on, perhaps, your wretched thrall,
Forget, in the midst of idle misery,
Life's purposes,—the palate of my mind
Losing its gust, and my ambition blind!

Burns was a magnificent voice of love, who enriched man with many of his choicest love-songs. Poe not only was a great lover, but used the same poems successively with a number of desired women. Edna St. Vincent Millay, among modern poets, has a charming cleverness in her love songs; and, indeed, modern poetry is full of excellent love material. One of the most effective modern love sonnets is the dramatic *Pirate Song*, from "Leaf Buds Turning Rose," by the author of *The Eagle Sonnets*:

Ahoy, there, you slim craft with the virgin ensign!
Heave to—we are boarding! You're a fancy prey
To tread the slippery plank, or do your dancing
On air, over the wind-bedevelled spray.
Low in the water—you'll be rotten with treasure!
Ay, there'll be hot blood foul'in' your clean decks
When we shall tread you in our lordly pleasure
Then scuttle you with all the plundered wrecks.
Yet you're a rakish craft How would you
like it
To make one more of the buccaneering tell,
To raise the Jolly Roger, and not strike it
In the face of all the punishing fleets of hell?
By God, we'll take you, then! Fair or foul
weather,
Two of the black gentry, off together!

An amusing love story in rhyme is *The Lang Coortin'*, by Lewis Carroll, best known for *Alice*

in Wonderland. The lover for years wooed the lady, saying no word of his love. She used his gold rings as a chain for her doggie; stuffed the dog's pillow with his repeated locks of hair; and when he sent love letters from a far country, with the postage still due on them, she had the postman take them all away. For thirty years he had kept up this courtship: and now at last he has come to propose. But the lady tells him, that, since he has lived so satisfactorily for thirty years, he can wait a bit longer yet. He repents, as he leaves her:

"O, if I find another lady,"
He said with sighs and tears,
"I am sure my courtin' shall not be
Another thirty years;

"For if I find a lady gay
Exactly to my taste,
I'll pop the question, aye or nay,
In twenty years, at most!"

There is a real lesson for lovers here. Do not postpone your proposal until your grandchildren are old enough to laugh at your tardiness.

The first lovers were Adam and Eve, according to the Genesis story; and Milton, in his largely unread *Paradise Lost*, has told their love in resounding lines. The most recent lovers assumably include you who are reading this book. Love is an art, as courtship and wooing is an art: and your task is to perfect yourself in the art. You should make your wooing serve the double function of winning the mate you desire at the moment, and at the same time serve as an education to you in the loved one, and the opposite sex in general.

Both the educational function, and the task of winning the desired one, call for your highest abilities: and these abilities will be sharpened and increased by a knowledge of man's lore upon love, and the ups and downs of the great lovers of the past. So saturate yourself, during the loving period, with the literature of love: read carefully the love stories of the world's great lovers, and constantly increase your technique as wooer, in the beginning of the courtship, in the actual engagement, and in the most perilous of all periods—that period after the marriage has commenced.

There is a third purpose, which hardly needs mention, and that is, the pleasure that you yourself have in wooing. Pleasure consists in the satisfying of an appetite—not in the satisfaction of it; when the appetite is satisfied, your feeling becomes negative. The chase is the fun; the gaining of the goal is a mere sense of accomplishment, far below the joy of the running. Man has not only the appetite to enjoy love, but the added appetite for the chase: and woman, daughter of man, has this delight too, and an implanted pleasure in her part of the wooing. Her part is, in general, more passive than man's: she gets her thrill from seeing the male or males cavorting before her, in the endeavor to gain her approval. Yet, at times, when the worthy male is backward or bashful, or young and inexperienced, she will assume the aggressive, and be a very Venus in action. As a matter of fact, no matter who does the actual wooing and proposing, it is today, largely, woman who rules the field. How else ex-

plain her elaborate and seductive dressing, to win man's approval? Her concealment of this, and display of that charm, her alluring perfume, her flattering pretense that the man is the wisest being in the universe, her continuing attentions to him in a thousand subtle little ways? These collectively weave a net which even the wariest male fish may not often escape. Go to your wooing, men, with all the courage you can: it is hardly the time to reflect that you are being summoned to the slaughter, as the spider nets her prey, as the spider nets her mate. It is pleasant to be a victim of love: and some men found it a pleasure to be such a victim constantly.

And when you have made yourself an artist in wooing, both in theory and practice, do not be stingy with your lore, but pass it on to other men and women, who lack it. For only the great in love are great in life, and great in joy.

HOMO-SEXUAL LIFE

CHAPTER I.

COMPLEXITY OF SEX.

It has been stated that a person normally goes through three stages in the course of his sexual development—which are represented by the following dominant characteristics, in the order given: *Autosexuality*, *Homosexuality*, and *Heterosexuality*.

Each is normal at a certain stage of life. Circumstances, hereditary or environmental, or a combination of both (there is a vast amount of controversy about this phase of the subject), may halt the course of development at either the first or second stage, so that the final evolution of sexual life may never be realized.

This refers to the psychological and emotional aspects of sexual development, rather than the purely physical, as it is the former that sustains the shocks in the difficult process of the individual's social adjustment.

While there is a great deal of theoretical abstraction in such a broad survey of the sexual life, nevertheless, there are enough concrete facts at hand to make the conclusions as accurate and serviceable as any that are to be obtained within the realm of actual clinical practice. The sexual urge is by no means a simple, direct manifestation, but consists of many partial and often conflicting impulses, with ramifications that extend into every channel and byway of life.

AUTO-SEXUALITY, as the term implies, means that an individual's sexual interest is turned upon himself. This condition is normal to infants. It also is more pronounced in primitive and savage tribes, and has its analogy, in more practical form, in the lower order of the animal and vegetable world in those species whose individuals are self-sufficient sexually.

These types, which are capable of reproducing their kind without depending for fertilization upon another individual of the same species, are called *hermaphrodites*. This latter term, in its real sense, means combining the sexual organs of the two sexes.

There are some human beings — *variants* — who possess hermaphrodite characteristics, usually combining the more or less completely developed organs of one sex with the rudimentary organs of the opposite sex.

These hermaphrodite characters are not without their significance—namely, the innate bisexuality of man. While in the normal person, the attributes of one sex are dominant, there are always present in latent form some evidences of the opposite sex. This is no new discovery. In fact the concept of bisexuality is very ancient. Traces of it are to be found in Chinese mythology. The classical Greek mind seems to have had a particular interest in speculating about it. The mythical personification of bisexuality in the Hermaphroditos, the narrative of Aristophanes in the Platonic dialogue, and at a later period the suggestion of a Gnostic sect (Theophites) that primitive man was a "man-woman," are all based on this pre-

sentiment. The first divinities were always bisexual, being either women with a penis or men with a female breast.

WHAT BIOLOGY TEACHES US.

Lower down in the biological scale—in fact, at the very bottom—we find the *amoeba*, which represents an auto-sexual, or more accurately, a mono-sexual, form. It has all the potentialities for reproduction within itself. By the process of division, first of its nucleus, and then its whole self, it becomes two new individuals.

A little further up the evolutionary path, we find the *paramoecium*. At one stage of its career it will divide its nucleus first, and then itself (an autosexual act) similar to the *amoeba*. At another stage it will engage in an elementary sexual act by coming ventrally together with another *paramoecium*, exchange one-half of its nucleus for half the nucleus of the other *paramoecium*, through the mouth, and this process is followed by other nuclear changes, and finally each *paramoecium* divides itself into two new entities.

There is no apparent difference between these primitive little animals. They have no male and female organs, but it is a plausible assumption that the nuclei of each one contains a "male" and "female" portion—something unknown but necessary to procreation. In this instance we have the beginning of bisexuality; but autosexuality is still an essential factor in reproduction.

Somewhat higher up the scale we come across the *hydra*, a multicellular animal. Here, also, autosexuality plays a prominent role. The

hydra can, without the aid of another, "bud off" a new living *hydra*. Bisexuality is evidenced, however, in the presence of male and female cells which form in the single *hydra*. These unite with one another to produce a new individual in true bisexual manner. In a sense this creature is a combination of the autosexual, bisexual and hermaphrodite.

Another step up the evolutionary ladder we find the earthworm. Each worm has the organs of the two sexes—the equivalent of testes and ovaries,—properly developed, but each worm needs another worm to induce fertilization. In this instance, we have true hermaphroditism, and bisexuality is definitely established. However, as the two worms are of the same sex—each being male as well as female—they are in that way homosexual, as well, being attracted by worms of similar constitution.

As life grows more complex and we ascend the biological scale, the sexual processes also become more ramified, until in the higher forms of life we find the sexual nature of the individuals of the different genera and species sharply differentiated.

But even in the highest form of life, there are the vestigial organs and characters of the opposite sex, so that while the normal human being has a definite sexual category, it is just as truly apparent that no individual is wholly of one sexual character. The most masculine man is not one hundred per cent masculine, nor is the most feminine woman one hundred per cent feminine. The proof of this will be shown as we proceed in our discussion.

The physical bisexual characters—those of

the opposite sex being present in rudimentary form—are readily observable. In the male, there are the vestigial breasts and nipples, and other rudimentary features less prominent; and sometimes a general feminine contour of body is noticeable in the male.

The most feminine of women have a growth of colorless hair, called the “lanugo,” corresponding to the male beard. If the woman has a larger proportion of masculine chemistry in her make-up, this hirsute growth may be quite prominent; and in some cases very pronounced, as in the instance of the bearded ladies who exhibit themselves in shows and circuses. Women with a more or less definite masculine cast of figure, movement, manner and voice are commonplace;—as is the opposite phenomenon—effeminate men.

The psychological phases of bisexuality parallel the physical. We might even go farther and state they are more in evidence than the physical, as they are subject to modification by environmental influences to a degree far exceeding the physical.

As was observed in the opening paragraph of this chapter, the individual may suffer a retardation or fixation at any stage of the sexual development, which holds him back into another and more primitive psychical and emotional level, which he has chronologically outgrown.

All infants and small children are autosexual, and evidence a sexual interest in their bodies. Sometimes this is true in only a slight, almost casual, degree; other times it is pronounced, and becomes a problem. There is often a ten-

dency toward automatic masturbation, or other forms of so-called sexual precocity, which may unduly alarm parents. However, it is well for parents to know that these manifestations are not abnormal—unless grossly over-emphasized—but are merely indicative of the passing stage of autosexuality. They will in due course be outgrown and replaced by other manifestations of sexual interest, unless unwise methods of repression are used.

HOMOSEXUALITY means a state in which one is sexually attracted toward members of the same sex. This is normally a primitive characteristic of childhood, which prevails up to the time of adolescence, but which may persist in adult life. Some degree of it does normally hold over in every adult, but it remains in the background of the unconscious, and is sublimated along social lines.

Young boys and young girls usually have little interest in the opposite sex—in fact, are frequently quite scornful of them. On the other hand, they form strong friendships with members of their own sex, and, as is well known, when their sexual interests have not been successfully sublimated, engage in mutual sexual practices and masturbation.

Before the full development of the genital organs, the sexual tendencies are predominantly homosexual, although the influence of the preceding stage (autosexuality) is still considerably in evidence, and there is also present the germ of the succeeding stage of heterosexuality (erotic desires toward members of the opposite sex). If the youth has been reared in a healthy, constructive environment, condu-

cive to proper sublimation of his primitive sexual tendencies, and particularly if his libido is not excessive, he may scarcely be conscious of his homosexual impulses. On the other hand, if he is endowed with an unusually strong hereditary sexual constitution, or if the repression and sublimation have been faulty in his upbringing, the homosexual tendencies may reflect themselves in various ways in his conscious attitudes.

It should be borne in mind that there is no abrupt line of demarcation between these stages of development. They overlap, and some of each of them, even the most primitive and infantile, are carried over in the unconscious mind throughout adult life. In the normal, well-adjusted adult, there are still extant rudiments of the previous stages of the emotional and affective life, just as the body contains vestiges of the bisexual organism, from which it evolved in the early weeks of intrauterine life.

The predominant homosexual element or primitive emotional character asserts itself in various typical forms that are apparent to those informed upon the subject. In this connection, Bousfield states: "Cruelty on the part of boys at school (bullying) is nearly always a sexual manifestation which, like homosexuality, should be only a passing phase, which is later repressed into the unconscious. The monks who denied themselves sexual intercourse, but found pleasure in flogging themselves or others, form an example of the way that sexual energy, when denied its normal course, finds a more primitive outlet. A schoolmaster with repressed and unconscious homosexuality will often be

noted for his flogging proclivities, and so forth. Children, more especially boys, are observed to have an instinct of cruelty; for example, they pull the wings off flies. The sport of the chase or of fishing serves to gratify the instinct in adults."

Prominent in the classification of adolescent homosexual attraction are the school-friendships of girls, which are known variously as "crushes," "flames," and "raves." Elaborate romances are sometimes bound up in these attachments, with their love at first-sight, courtship, love letters, jealousy, and other manifestations of erotic affection. Havelock Ellis states that while these alliances are sometimes sexual, they are often not so—but are full of "psychic erethism."

CHAPTER II.

THEORIES ABOUT HOMO-SEXUALITY.

Some of the greatest sexologists and psychiatrists of modern times have concerned themselves with the causative factors of homosexuality. So much new material relating to unconscious mental activities has been uncovered in recent years, that many of the older authorities, whose opinions have long carried much weight, are now considered obsolete, at least in respect to homosexual problems.

Krafft-Ebing, for instance, a widely quoted authority, and still a factor through his works in influencing both the profession and laymen, originally conceived homosexuality as the result of a hereditary transmission. This contention has never been fully corroborated by the observations of later investigators.

To this extent only is homosexuality an inherited trait beyond fear of any contradiction: Everybody inherits homosexual *tendencies*.

As we observed in the previous chapter, every child is homosexual in disposition. Therefore, heredity *per se* does not give us the key to the problem, except possibly in those instances where the hereditary constitution furnishes certain predisposing factors to homosexuality. And this predisposition may be overcome, wholly or in part, in a healthy, constructive environment; or it may be cultivated in the opposite kind of environment.

From this standpoint, heredity may furnish a favorable soil—for almost anything. The crop that is harvested depends upon the seeds that are sown, and the care that is given, or the injuries that are sustained, through environment. Consider for a moment how fertile a breeding ground for the homosexual disposition is the homelife presided over by certain types of nervous and psychopathic parents!

Even more in error is Krafft-Ebing in associating homosexuality with the early habit of masturbation. This is largely confusion of cause and effect. Perhaps all homosexuals are found to have masturbated in childhood—ergo, masturbation is a sign of homosexuality! This explanation, of course, leaves entirely out of consideration the innumerable persons who have masturbated in childhood and have become normal heterosexual adults.

"Nothing is more likely," states Krafft-Ebing, "than masturbation so to disturb and occasionally thwart all noble emotions at the source as they arise spontaneously out of the sexual feeling. The habit robs the nascent feeling of charm and beauty, leaving behind only the husk of grossly animal craving for sexual gratification. An individual, so thwarted, attains the age of maturity lacking the esthetic, ideal, pure and undefiled longing which leads to the other sex. At the same time, the heat of sensuous passion cools off while the inclination toward the other sex is significantly weakened. Thus, deficiency embraces the morals, the ethics, the phantasy and the disposition of the youthful masturbator as well as his emotional

and instinctive life, and holds true of both sexes, occasionally reducing to zero the yearning after the opposite sex, so that in the end masturbation is preferred to every other form of gratification."

Dr. Stekel has answered this statement very effectively in the following words (from "*Bi-Sexual Love*," translated by James Van Teslaar, M.D.): "This contention is altogether wrong. I have never seen so many and such pronounced idealists as among masturbators. Young artists, poets and musicians in particular often show, I have found, a strong tendency to masturbation, and this agrees with the pronounced bisexuality of all artists, which has been particularly pointed out by Fliess. The youths of this type are often so delicate and sensitive that they see in the sexual act only animal brutality and hide their own sexuality from the whole world. Among masturbators we find the champions of truth, the over-moralistic preachers, the ethical reformers and dreamers."

If Krafft-Ebing's theory of masturbation being an index of homosexuality were true, it might well be set forth as a demonstrable fact, in the hope that this knowledge would be a stepping-stone to constructive results in our understanding of the sexual life. However, in addition to being a fallacious conception, it has the further discredit of probably having wrought great damage to masturbating youths in giving them a false and hopeless impression of their actual situation. If a youth in his effort to overcome masturbation, believes himself, in addition, to be a predestined victim of

homosexuality—especially with the prevailing social stigma which that condition carries—the injurious effect may quite conceivably be disastrous.

Magnus Hirschfeld, one of the greatest of contemporary authorities on the sex question in all its phases, is convinced that homosexuality is a normal state, and that genuine homosexuality is always an inborn condition. His views may be summed up in the statement that there is a genuine inborn homosexuality which must not be considered a morbidity. Furthermore, it should not be confused either with bisexuality or with pseudo-sexuality.

Those who look upon homosexuality from the psycho-pathological viewpoint are in agreement to this extent—that the homosexual condition is not a product of degeneration in the ordinary sense, but, rather, a neurosis.

Stekel states emphatically, "*I have never yet found a homosexual who was not a neurotic.*"

The relationship of neurosis and homosexuality is set forth by the same authority as follows:

(a) Pronounced physical and mental stigmata of degeneration are relatively rare among homosexual men and women; at any rate such signs are not more frequent in proportion to the total number of homosexuals than among the heterosexuals of both sexes.

(b) On the other hand, we find frequently and not merely as a result of homosexuality, *a greater instability of the nervous system* (frequently shown in the periodic character of endogenous temperamental instability.)

(c) The family of the homosexual often contains a larger number of nervous persons and such as deviate from the normal sexual type.

This latter observation, of course, tends to give homosexuality an hereditary aspect, which is Hirschfeld's opinion. But, when analyzed, this may mean that a nervous or neurotic disposition is inherited, which, under certain environmental conditions (the negative attitude of parents, the dominant mother, etc.) leads to a homosexual goal.

Dr. Iwan Bloch, who has world-wide standing as a sexologist, gives the following interesting opinion:

1. The so-called "undifferentiated" stage of the sexual instinct is often eliminated when the instinct becomes directed toward a definite particular sex among heterosexuals or homosexuals before the advent of puberty. Homosexuality shows a definite, clear direction of the sexual instinct towards the same sex long before puberty.

2. A comprehensive theory of homosexuality must also explain the extreme cases, particularly male homosexuality coupled with complete virility.

3. Sexual parts and genital glands cannot determine homosexuality in those possessing typical normal male genitalia and testicles; neither can the brain itself be the determining factor in genuine homosexuality, because homosexuality cannot be rooted out by the strongest conscious and unconscious heterosexual influences brought to bear upon thought and phan-

tasy,—the condition developing in spite of such influences.

4. Since as a predisposition (not as sexual instinct) homosexuality appears long before puberty and before the actual functioning of the respective genital glands, it suggests that in homosexuals some physiologic action pertaining to "sexuality," but not necessarily related to the functioning of the genital glands, undergoes some subtle change as the result of which the sexual instinct is turned from its goal.

5. The condition suggests chemical changes, alteration in the chemistry of sexual tension, the latter being fairly independent of the activity of the sexual glands proper, as is shown by the fact that it may be preserved among eunuchs and others who undergo castration.

Krafft-Ebing, Hirschfeld and Bloch, as well as many other investigators and writers, have failed to appreciate the psychological factors involved in homosexuality. Every young individual unconsciously patterns its conduct, especially in the matter of its attitudes toward persons of the opposite sex, after some one in the home environment. When the boy, for instance, is raised under conditions which cause him to pattern his actions after the mother-model, to *feel* himself woman-like, he will unconsciously and automatically imitate feminine ways and adopt woman's attitudes, in the sexual sphere as well as otherwise.

To illustrate this point, if a boy is brought up by a widowed mother, let us say, in a home environment in which there is no male pres-

ent, the young boy, impelled to imitate some one in order to establish a standard of conduct, copies his mother's attitude of physical indifference to women and physical interest in men (if she is a normally constituted woman). If the mother, or other feminine guardian, should be homosexually disposed, i.e., showing a physical interest in women and a physical indifference to men, then, by the same token, the boy would tend to develop a sexual interest in women, and become a normal heterosexual man.

Every young boy's ambition, normally, is to be like his father; later, it may be to excel the father—but this identification, under the circumstances, is present. Now, the absence of a father in the house, or the presence of a father of weak character, who suffers in comparison with the mother, tends to force the youth to make his ego-ideal identification with the mother, with results that are not conducive to normality in the sexual life.

Under the latter condition, the youth associates the mother with sex domination and personal power—it is a woman-dominated world. Consequently there is also present the attitude, either of wishing to be a woman and rule, or of fleeing from woman when she clashes with his will to power as man.

Anyone who knows the dynamic influence that mental processes, particularly the unconscious ones, have over the physical organism and its far-reaching manifestations, will recognize at once the possibilities that are bound up in this situation.

We see this same principle every day, and

in fact apply it (in the opposite manner to obtain the opposite results), when we inculcate manly ideas in the minds of our boys and encourage them to conduct themselves in a manly way, in order to develop in them the attributes of manliness. With girls, we foster the womanly ideal and encourage them in the direction of proper feminine conduct to promote the accredited qualities of womanhood.

We also see evidenced at times the wish to remain a child, and to retain the privileges and attentions of childhood, which apply to neurotic persons. This notably interferes with their development and progress toward adulthood.

Stekel tells us that when a boy acts like a girl, it does not necessarily mean that he has that kind of a *predisposition*. It may only signify his identification with his mother or with a sister, whom he unconsciously accepts as a model to pattern his conduct after.

It is the conviction of Sadger that permanent homosexuality is established through some significant incident which leads to the repression of the mother in her role as helper and teacher. Among such incidents may be death, sudden financial reverses, and consequent neurosis, making sanatorium treatment necessary, inconsiderate persecution of the boy on account of masturbation, and similar psychic shocks. Sadger's conclusions may be summed up as follows:

(a) The urning is a victim of withdrawal from the mother (the first caretaker or nurse, respectively), in whom he is himself seriously

disappointed. He represses the mother by identifying himself completely with her.

(b) The path to homosexuality leads through narcissism—that is, love of self, as one was, or as one may ideally be.

(c) The sexual ideal of the invert includes not only traits of former female and male sexual objectives, but also features of one's own beloved self.

(d) Being brought up in surroundings exclusively feminine—the father does not count in such circumstances—fosters homosexuality in the male as well as in the female, for reasons that are not sufficiently clear as yet. Moreover, the urning is usually an only child.

(e) Finally, inversion may be fostered by a sort of "latter-day obedience" to the mother's commands. I have observed not rarely that mothers warn their children against harmless, though warm and friendly contact with the other sex, as something unpermissible and bad and that the teaching thus instilled may unfortunately increase the disposition towards one's own sex through later obedience.

As Stekel has well stated, in commenting upon Sadger's conclusions, the first of these is false, because the homosexual is not a victim of withdrawal from the mother, but rather of a fixation upon her. Further, one does not repress a person when one identifies one's self. Identification is direct love; differentiation means repression. Where homosexuals (male) identify themselves with the mother—as many of them do—there may also be present a repression of the father-ideal.

Alfred Adler, whose conception of the neurosis is based on the hypothesis of "*the male protest*," also associates homosexuality with this principle. In his opinion, all reactions and protective constructions or fixations of the neurotic are based on the wish to be "*a complete being*," as he sees it. Homosexuality exemplifies this protest in a singular form. The homosexual's ambition is (in its unconscious implications): *I want to be a woman!* This, according to Adler, is a *male protest under the use of female means*. He maintains that the homosexual attempts by this means to enhance his strength of personality. The latter turns away from woman because he fears his inferiority. He fears the sexual partner. Fear, shame, hate and disgust are the inhibitions which drive the homosexual away from the opposite sex.

Adler mentions that the over-valuation of the homosexual partner serves also to raise the neurotic invert in his own estimation. Thus, in neuroses, homosexuality, even when carried into practice, is always found to be a symbol by means of which it is sought to place the individual's own superiority beyond question. This mechanism is similar to that of a religious psychosis, in which the fancied nearness to God has the significance of an elevation. In a sense, the religious fanatic identifies himself with God, just as the non-religious psychopath may identify himself with Napoleon, Caesar, Alexander the Great, or some other character in history whose personality completely dominated its environment.

Syphilophobia (fear of syphilis) is one of the forms which the fear of women is especially likely to take. The attitude of such phobists is usually as follows: They fear that they will not be able to play a dominating part in regard to women because of some feeling of inferiority, for which they have all sorts of imaginary foundations, at times without conscious motivation. In this manner, following the increasing trend to belittle woman, they arrive at suspicious trains of thought which are to secure them against sexual relations. Sometimes a woman is a riddle, sometimes a criminal person, or a shallow spend-thrift, always thinking of adornment and similar vanities, and sexually insatiable.

The suspicions constantly arise that woman is a crafty and cunning being, bent on evil. This conception is universal and is found in all periods of history. As Adler states, "They emerge in the most sublime and lowest creations of art, have a place in the thoughts and efforts of the wisest, and create in man and in society a constant predisposition which develops suspicious and cautious traits, in order always to keep in touch with the enemy and to be in good time for the defense against knavish attacks. It is an error to think that it is only the man who harbors distrust of the sexual partner. The same trait is found also in the woman, often less distinct in character, when fictions of her own strength put a check to the doubt of her own value, but flashing up most strongly when the feeling of degradation becomes overpowering."

The detraction of woman, which recurs so constantly in Jewish, Christian and Moham-medan religious writings and usages, undoubtedly has this psychological impulse, behind it. The medieval disputes as to whether woman had a soul, or, indeed, whether she was really a human being at all; the hideous persecution and burning of women as witches and vampires, which was participated in by church, state and populace,—all of these practices had behind them in some degree a neurotic fear of woman as the sexual partner. Man feared his inferiority, and he compensated for that fear by subjecting, and often eliminating, the object of his phobia. By this irrational gesture, he symbolically raised himself to a position of greater security.

Karl Heinrich Ulrichs (1825-1895), a brilliant and learned man and able legal official of Hanover, Germany, for many years expounded and defended homosexual love. He was himself an invert, and made many attempts to secure a revision of the legal position of the sexual invert in Germany.

Ulrichs formulated an elaborate classification of human types, with an interesting nomenclature, which despite its elaborateness has been found serviceable.

Among males, he classifies the normal man as the "Dioning," and the invert as the "Urning."* Urnings are subdivided into several groups. First, those who are thoroughly manly in appearance and mental habit and

*From *Uranos*, heaven; his idea being that the Uranian love was of a higher order than the normal attachment.

character ("Mannlings") and who tend to love softer and younger specimens of their own sex; second, those who are effeminate in appearance and cast of mind ("Weiblings"), who love rougher and older men; third, those who are of medium type ("Zwischen Urnings") and love young men.

Then there are "Urano-Dionings," who have the capacity of love in both directions, that is, for women and for men. These are generally of a manly type.

Besides these there are some sub-species, such as the "Uraniaster," who is a normal man who has acquired the urning habit; and the "Virilized Urning," who is an Urning who has gotten the normal habit, although, according to Ulrichs' classification, this is not really natural to him.

A better conception of the whole arrangement may be obtained from the following table:

The Human Male	{	(a) Normal Man or Dioning—called Uraniaster when he acquires Urning tendencies.
		(b) Urning { 1. Mannling. 2. Zwischen-Urning. 3. Weibling. 4. Also called Virilized Urning when he acquires the normal habit
		(c) Urano-dioing.

Edward Carpenter states that if we add to this a corresponding table for the female, we shall have an idea of the complication of Ulrichs' system! Yet, complex as it is, and

whatever criticisms we may make upon it, we must allow that it does not exceed the complexity of the real facts of Nature.

As we observe from the foregoing, there are many and conflicting ideas regarding homosexuality, but I believe no concept of this phenomenon is so satisfactory as that based on psychoanalytical data, as developed from the teachings of Freud.

Taking into consideration the findings of all the analysts, it seems to me that Stekel's conception of the problem, summarized as follows, is pre-eminently the most logical and valid:

"All persons originally are bisexual in their predisposition. There is no exception to this rule. Normal persons show a distinct bisexual period up to the age of puberty. The heterosexual then represses his homosexuality. He also sublimates a portion of his homosexual cravings in friendship, nationalism, social endeavors, gatherings, etc. If this sublimation fails him he becomes neurotic, since no person overcomes completely his homosexual tendencies. Everyone carries within himself the predisposition to neurosis. The stronger the repression, the stronger is also the neurotic reaction which may be powerful enough in its extreme form to lead to paranoia. If the heterosexuality is repressed, homosexuality comes to the forefront. In the case of the homosexual, the repressed and incompletely conquered heterosexuality furnishes the disposition toward neurosis. The more thoroughly his heterosexuality is sublimated the more completely the homosexual presents the picture of a normal healthy person. He then resem-

bles the normal heterosexual. But like the normal heterosexual individual, even the 'male hero' type displays a permanent latent disposition to neurosis.

"The process of sublimation is more difficult in the case of the normal homosexual than in the case of the normal heterosexual. That is why this type is extremely rare and why a thorough analysis always discloses typical neurotic reactions. The neurotic reactions of expression are anxiety, fear, shame, disgust and hatred. The heterosexual is inspired with disgust at any homosexual act. That proves his affectively determined negative attitude. For disgust is but the obverse of attraction. The homosexual manifests the same feeling of disgust for woman, showing him to be a neurotic. (Or else he hates woman). For the normal homosexual—if there be such a type—would be indifferent towards woman. These generalizations already show that the healthy person must act as a bisexual being."

My only criticism of Stekel's ideas is to call attention to the fact that, being a medical psychologist, his whole experience has been practically with those types whose neurotic tendencies have been emphasized. There are and have been a great many inverts who have not only enjoyed average mental and physical health—but have been versatile and productive in their accomplishments. Chapter V is devoted to the achievements of the better types of inverts. Many have been brilliantly endowed, have attained outstanding success in the arts and sciences, and even in the military field, as well as in other spheres of activity.

CHAPTER III.

HOMO-SEXUALITY IN HISTORY.

It has been mentioned on another page that the problem of bisexuality, in a more or less general manner, has engaged the attention of observers for ages. The specific phenomenon of homo-sexuality has been even more closely studied, dramatized, romanced about, and even idealized.

No less a luminary and distant character than Plato expressed himself in the following words regarding the subject under discussion (quoted from Plato's *Banquet*, chapters VIII and IX): "There is no Aphrodites without an Eros. But there are two goddesses. The older Aphrodites came into existence without a mother; being the daughter of Zeus and Diana and is called Pandemos. The Eros of the former must, therefore, be Uranos, that of the latter Pandemos. With the love of Eros Pandemos the ordinary human beings love; Eros Uranos did not choose a female, but a male; this is the love for boys. Whoever is inspired with this love turns to the male sex."

Herodotus, the Greek historian, who seemed possessed of omnipresence, because he appeared to have been everywhere and seen everything in the known world of his time, described definite characteristics indicative of homo-sexuality. Thus, writing of the Scythians, he referred to a "peculiar disease," the symptoms of which

were these: That certain of the men became effeminate in character, put on female garments, did the work of women, and even became effeminate in appearance.

In attempting an explanation of this abnormality of the Scythians, Herodotus fell back on the myth that the goddess Venus, angered by the plundering of the temple at Ascalon by the Scythians, had made *women* of these plunderers and their posterity.

Herodotus also made the curious remark, with respect to these effeminate Scythians, whom he called *Enarees* or *Androgyni*, "that they were endowed by Venus with the power of divination," and were consulted by the King of the Scythians when the latter was ill.

Hippocrates, the "Father of Medicine," having no faith in supernatural causes of disease, ascribed the cause to impotence. He attributed it, however incorrectly, as due to the custom of the Scythians to have themselves bled behind the ears in order to cure an affliction brought about by excessive horse-back riding. It was his theory that these veins were of great importance in the preservation of the sexual powers, and that when they were severed, impotence followed.

The Scythians so afflicted, however, believing their impotence due to divine punishment and beyond human aid, donned the garb of females and lived as women among women.

It is thought that fear of excess population on the part of the early Greeks was one factor in turning their erotic interests from women to young men. As the so-called Greek states of

that period consisted principally of cities with very limited capacity for sustenance, the problem of feeding the population was one of some concern. Aristotle, on this account, advised the men to shun their wives and to indulge in boy-love. Even before him, Socrates had already hailed pederasty as a mark of superior culture.

Diotima revealed to Socrates a new spiritual principle in erotic life—the principle which guides man beyond the pleasures of the senses and, through love, leads him to the divine. “The slave of his senses runs after women; but he who loves with his soul and strives to win immortality through virtue and wisdom, seeks a great and beautiful soul that he may surrender himself to it completely.” This looks innocent enough on the surface, but as it was the opinion of the Greeks that a beautiful soul was to be found only in the body of a man, the implications are clear.

Dr. Beatrice M. Hinkle (*The Re-Creating of the Individual*) remarks that “The symbol of this human ideal achievement for the Greek was the psychic hermaphrodite, the blend of feminine and masculine attributes in a male form and its immortalization was attained in Greek art. The homosexuality flourished as the natural accompaniment of man’s love for himself—that is, of his own sex—was an incidental result which does not affect the real significance of the Greek achievement, nor alter the greatness of their ideal aim, the creation of the highest human values under the conception of ideal love, and the effort at its achievement in the world of reality. . . The ‘great and beau-

tiful soul' could only be found in the male form—women belonged to the animal sphere and could contribute only to the sensual pleasure of man."

As the women were neglected by the men, the former tended to engage in erotic practices among members of their own sex. In the island of Lesbos, the women were especially given to indulging in the love of their own sex—from which historic precedent we get the term *Lesbian Love*.

Sappho, the *Lesbian Nightingale*, who lived about 600 B. C. was the principal representative and has remained the classical oracle of this form of erotic expression. In her Ode to Venus, she sings fervently of her passions:

"Thou who rulest all, upon flowers enthroned,
Daughter of Zeus, born of foam, thou artful one,
Hark to my call.

Not in anguish and bitter suffering, O goddess,
Let me perish!—"

The Hellenic conception of beauty was quite invariably realized in the male form, with a characteristic touch of bisexuality—almost a modified hermaphroditism. The sculpture of the period, and of subsequent periods, whenever it has been influenced by the Greeks, shows this tendency. Both Apollo and Dionysus are represented with male and female attributes. The female figures approach the masculine in the cast of their features as well as in their bodily proportions.

As the growing boy comes nearest to combining the male and female lines, the blending of these in sculpture realized the ideal of classical Greek art.

A striking example of the combining of the male and female attributes is seen in the Apollo in the temple at Delphi—one of the foremost seats of prophesy and divination in the old world. Apollo, who presided at this shrine, was a queer blend of masculine and feminine characters. He was frequently represented as being very feminine in form, particularly in the more archaic statues.

Apollo was the patron of song and music. He was, too, a representative divinity of the Uranian love, being the special god of the Dorian Greeks, who seem to have been responsible for establishing the custom of invert love in that country. It was said of Apollo that to expiate his pollution by the blood of the Python, whom he slew, he became the slave and devoted favorite of Admetus.

Muller described a Dorian religious festival, in which a boy, taking the part of Apollo, "probably imitated the manner in which the god, as herdsman and slave of Alcestis, submitted to the most degrading service."

The opinion is expressed by Dr. Iwan Bloch in his great work, *"Die Prostitution"* that homosexuality, on account of its strange and inexplicable character, was accounted by primitive people as something divine and miraculous. To the homosexual man or woman were therefore attributed supernatural powers. In this respect, the homosexual had characteristics in common with the primitive gods, which probably accounts for the ancients venerating their inverts.

Bloch says on this score: "This riddle, which despite all our efforts, present-day science has

not yet satisfactorily solved, must to the primitive intelligence have appeared even more inexplicable than to us; and a man born with the inclination toward his own sex must have been regarded as something extraordinary, as one of those strange freaks of Nature which among Primitives are so easily accounted divine marvels and honored as such. The by no means scanty supply of ethnological facts on this subject which we possess confirms the above view, and shows in what odor of sanctity homosexual individuals have often stood among Nature-folk—for which reason they frequently played an important part in religious rituals and festivals."

It was the theory of Adolf Bastian, a German authority, that the priests among early peoples, as representatives of the bisexual principle in Nature, encouraged homosexual rites in the temples on the same footing as heterosexual rites.

"The men," stated Bastian, "prayed to the active powers of Nature, and the women, in privacy and retirement, to the feminine powers—while the priests, who had to satisfy the demands of both parties, learned the idea of sex changes from the Moon, and served the masculine gods in masculine attire, and the goddesses in feminine garments, or set up images of a bearded-Venus and of a Hercules as spinning at the wheel."

Practically all the ancient deities, at one time or another, seem to have been invested with bisexual characters. Even Venus or Aphrodite was sometimes worshipped in the dual form. Frazer in his *Adonis*, etc., states that in Cyprus

there was a bearded and masculine image of Venus in female attire, and that according to Philochorus, the deity thus represented was the moon. Sacrifices were offered to him or her by men clad as women, and by women clad as men.

This bearded female deity is sometimes also referred to as Aphroditus, or as Venus Mylitta. While the worship of bearded goddesses was practiced principally in Cyprus and Syria, Egypt also had a representation of a bearded Isis, with the infant Horus in her lap.

In the Orphic hymns, we find the following bisexual features and powers attributed to the deities:

"Zeus was the first of all, Zeus last, the lord of the lightning;

Zeus was the head, the middle, from him all things were created;

Zeus was Man, and again Zeus was the Virgin Eternal."

In another passage, Adonis is addressed thus: "Hear me, who pray to thee, hear me, O many-named and best of deities,

Thou, with thy gracious hair . . . both maiden and youth, Adonis."

Boy-love is believed to have been introduced in Hellas by the Dorians, as in the pre-Doric period (Homer, for instance), the custom of homosexual practice had as yet no roots as an institution.

In Greece, boy-love was the privilege of the elect only, being permitted to the free citizen, the knight. Slaves were forbidden to indulge in the practice, often under penalty of death. Strict rules were formulated for the regulation

of the practice, which in time took on the aspect of a social institution, fostered and approved by the state.

In Sparta the lovers were held to a strict accounting for their "companions" who became attached to them from their twelfth year; so that they, and not their young companions, were punished for any shameful act on the part of the latter.

The choice of boy-lovers in Crete took the form of bridal theft. The lover advised the boy's family of his intention of stealing the boy. If the family did not like the "match," it tried to avoid the capture of the youth; but on the other hand if the alliance was considered a desirable one, the "romance" was encouraged. The higher the lover's social position the greater was the honor felt by the boy and the family. Afterwards, the chosen one was sent home bearing gifts.

So established was the practice upon the rock of social convention that it was considered a shame for a boy to possess no knightly lover. It was a great honor, on the other hand, for a youth to be coveted by numerous lovers. Repelling a wooing knight was considered ignominious—a blot on one's honor.

In Crete, Thebes and Thera, these unions enjoyed religious sanction. The engagement of the lovers, or at least their physical attachment, was accorded the protection of some god or hero. In Thebes, upon the holy promontory near the City, some 50 to 70 meters from the temple of Apollo Karneies and on the sacred site dedicated to Zeus, there is a chiselled inscription, which bears these words: "On this

holy place, under the protection of Zeus, Krion has consummated his union with the son of Bathykles and proclaiming it proudly to the world dedicates to it this imperishable memorial. And many Thereans with him, and after him, have united themselves with their boys on this same holy spot."

Referring to Rome in the time of the emperors, during which time lewdness and debauchery assumed forms that could only have been inspired by moral insanity, Bebel states that men and women vied with each other in immorality. The number of public brothels increased rapidly, and besides "Greek love" (Pederasty) was practiced more and more by the men. As an indication of the extent of homosexual indulgence, at one time the number of male prostitutes in Rome was greater than the number of female prostitutes.

Later, when the pendulum swung the other way, repressive measures were taken to stamp out the practice of homosexuality. Both Constantine and Theodosius enacted legislation against sexual inversion, even going to the extent of committing the offenders to "avenging flames." These statutes, however, were not rigidly enforced, and modern opinion on the question may be said to have come from Justinian's enactments.

HOMO-SEXUALITY AMONG PRIMITIVE PEOPLE.

Among primitive tribes, religious rites and ceremonies in association with homosexual acts have long been observed. Dr. W. A. Hammond

reports that the Pueblo Indians of New Mexico cultivate so-called "mujerados," of which one is required in every tribe of this group. They plays an important role in the Spring religious festivals—which, from the modern viewpoint, are really orgies—in which pederasty figures prominently. These Saturnalia naturally were guarded with the greatest secrecy from the observation of outsiders.

To cultivate a *mujerado*, a very powerful man is chosen, and he is induced to masturbate excessively and ride horseback constantly. This combination of activities gradually produces an irritable weakness of the genital organs, resulting in great loss of semen. Paralytic impotence follows this condition of chronic irritability, and finally atrophy of the testicles and penis sets in. This condition is accompanied by characteristic physical changes; the beard falls out, the voice looses its depth and volume and physical strength and energy decrease. The disposition and inclinations become feminine. Thenceforth, the *mujerado* loses his position in society as a man. He adopts feminine customs and manners, and associates quite exclusively with women. Notwithstanding his effeminization, he is for religious reasons, held in honor. It is probable that at other times of the year than during the festival occasions, he is used by the chiefs for pederasty.

Hammond was privileged to examine two *mujerados*. One, then thirty-five years of age, had undergone his metamorphosis seven years previously, when he was fully masculine and

potent. Gradually atrophy of the testicles and penis came about, and concurrently he lost his potency and the power of erection. At the time of examination he differed in no way in dress or manner from the women with whom he associated. In contrast to the degeneration of his genital organs, he had developed large breasts like a pregnant women, and claimed that he had nursed several children whose mothers had died. The other *mujerado*, who was then thirty-six years of age, had been effeminate for ten years. He presented the same general peculiarities as the one already referred to, but with less development of the mammary glands. Like the first, his voice was high-pitched and thin, and the body plump.

The relation of excessive horse-back riding to underdevelopment of the male genitals has been noted by many authorities. The Apaches and Navajos, who spend practically all their waking hours on horse-back are remarkable for small genitals and mild libido and vitality. Kraproth and Chotomski record that even at the present time impotence is very prevalent among the Tartars, which was attributed to riding on unsaddled horses.

Westermarck, in his monumental work, *The Origin and Development of the Moral Ideas*, remarks, in describing the Koriaks: "Krasheninikoff makes mention of the *Ke'yev*, that is men occupying the position of concubines, and he compared them with the Kamchadale (a Behring's Strait Tribe) *Koe'kcuc*, as he calls them, that is men transformed into women. Every *Koe'kcuc* is regarded as a magician and

interpreter of dreams. . . . The *Koe'kcuc* wore women's clothes, did women's work, and were in the position of wives or concubines."

Elsewhere, Westermarck says: "There is no indication that the North American aborigines attached any opprobrium to men who had intercourse with those members of their own sex who had assumed the dress and habits of women. In Kadiak such a companion was, on the contrary, regarded as a great acquisition; and the effeminate men, far from being despised were held in repute by the people, most of them being wizards."

In the South Sea Islands, in 1796-98, Captain James Wilson found men there who were dressed like women and enjoyed certain honors. He expressed surprise that "even their women do not despise these fellows, but form friendships with them." Another traveler in these islands, William Ellis, a missionary, reported that the natives not only enjoyed the sanction of the priests, but even became the direct examples of their divinities.

China and Japan, as well as Malaysia, offer many examples of Buddhist priests, or *Bonzes*, who have boys attached to the service of the temples. It is the duty of each priest to educate a novice to follow him in the ceremonies, and it is known that the relations between the two are often intimate physically. As long ago as 1549, Francis Xavier, then traveling in Japan, refers to this. He states that the *Bonzes* admitted the nature of their relations with the youths, but asserted it was no sin. They said, however, that intercourse with women was for

them a deadly sin, and even punishable with death. The homosexual relation, on the other hand, was not only harmless, but even commendable. It appears that in all the Buddhist sects in Japan, except the *Shinto*, celibacy is enforced upon priests, but homosexual relations are not discouraged.

In Hindu mythology, *Brahm* is often represented as two-sexed. Originally he was the sole Being. But, "delighting not to be alone he wished for the existence of another, and at once he became such, as male and female embraced (united). He caused this his one self to fall in twain."

A Russian traveler by the name of Dawydow writing about 1800, reported that among the Konyagas of Alaska, in the island of Kadiak, there were here men with tatooed chins, who work only as women, who live with the woman-kind, and like the latter, have husbands, and not infrequently even two. These inverters were called *Achnutschiks*. They were held in the highest regard in the community, and were generally considered wizards. The native who possessed an *Achnutschik*, instead of a female wife, was envied. When the parents regarded their son as effeminate in appearance or bearing they often dedicated him in early childhood to the vocation of an *Achnutschik*. In case parents were disappointed with a son when a daughter was desired, they sometimes made their new-born son an *Achnutschik*.

Referring to the Pelew Islanders, Frazer (*Adonis, Attis and Osiris*) attributed the adoption by the priests of female attire to the fact

that it often happens that a goddess chooses a man not a woman, for her minister and inspired mouthpiece. When this occurred, the favored man thenceforth was regarded and treated as a woman. He remarked that this pretended change of sex under the inspiration of a female spirit perhaps explains a custom widely spread among savages, in accordance with which some men dress as women and act as women throughout life.

The association of supernatural, or at least super-normal, powers with these invert is quite extensive, as we have already noticed. Still speaking of the Pelew Islanders, Frazer states: "These unsexed creatures often, perhaps generally, profess the arts of sorcery and healing; they communicate with spirits and are regarded sometimes with awe and sometimes with contempt, as beings of a higher or lower order than common folk. Often they are dedicated or trained to their vocation from childhood. Effeminate sorcerers or priests of this sort are found among the Sea Dyaks of Borneo, the Burgis of South Celebes, the Patagonians of South America. . . . In Madagascar we hear of effeminate men who wore female attire and acted as women, thinking thereby to do God service. In the Kingdom of Congo, there was a sacrificial priest who commonly dressed as a woman and gloried in the title of Grandmother."

HOMO-SEXUALITY AND GENIUS.

The list of individuals, famous in art and letters, of homosexual disposition, either active

or latent, is an imposing one. The Greek philosophers, playwrights and poets of the classic age have placed themselves on record as devotees of invertism. Some of them have been quoted on previous pages.

Among the men of genius and leadership accredited with being outright homosexuals or having a strong bisexual character, are Alexander the Great, Julius Caesar, Michael Angelo, Leonardi da Vinci, William of Orange, Charles XII of Sweden, William Rufus, James I, Frederick the Great of Prussia, Ludwig II of Bavaria, Edward II, Nietzsche, Oscar Wilde, etc.

The Uranian temperament has also been attributed to Marlowe, Shakespeare, Walt Whitman, Tennyson, Chopin, and other great poets and musicians.

Charles G. Leland (*The Alternate Sex*) states that "Great geniuses, men like Goethe, Shakespeare, Shelley, Byron, Darwin, all had the feminine soul very strongly developed in them. . . . As we are continually meeting in cities women who are one-quarter, or one-eighth, or so on, *male*, so there are in the Inner Self similar half-breeds, all adapting themselves to circumstances with perfect ease. The Greeks recognized that such a being could exist in nature, and so beautified and idealized it as Sappho."

Weininger remarked that Sappho was only the forerunner of a long line of famous women who were either homosexually or bisexually endowed. Among them may be mentioned Queen Christine of Sweden, Catherine II of Russia,

Madame Blavatsky, George Sand, Rosa Bonheur, and others.

Pronounced bisexuality in woman is indicated by a strong masculine cast in the constitutional make-up, which is often observed in women who have achieved outstanding success in various fields of activity. Often they never marry.

In man, pronounced bisexuality is evidenced by a large endowment of femininity. There are, however, homosexual types of both sexes who do not give outward evidence of the characteristics of the opposite sex. In these instances, the homosexual state is almost entirely psychic, and would not seem to be constitutionally or organically conditioned.

Among the modern artist-writers and poets who have done great service in interpreting and reconstructing Greek life and ideals—Carpenter cites men like Winkelmann, Goethe, Addington Symonds, Walter Pater, as having a marked strain of this temperament. And this, he adds, has been a service of great value, one which the world would ill have afforded to lose.

CHAPTER IV.

THE HOMO-SEXUAL NEUROSES.

Freud was the first to make clear that the so-called "perversions" and "inversions," which appear in certain adult types in striking forms, belong to the normal sexual life of the young child. They are also seen in veiled forms in many cases of nervous illness.

We have already given some consideration to the analogy between certain forms of sexuality and the narcissism of childhood—having shown that the former trait is a fixation (at least there is a preponderance of psychological evidence to this effect) of the emotional erotic development at a primitive level.

It should be emphasized, as it has been in the preceding pages, that inversion is by no means synonymous with degeneracy. It will, of course, be conceded that there are degenerate homosexuals, just as there are degenerate heterosexuals.

Barring the neurotic disposition, however, inversion is found among persons who otherwise show no marked deviation from the normal.

Not only may a homosexual be a person of normal capability, but he may possess outstanding intellectual qualities and be distinguished by high cultural attainments.

The eminence achieved by a number of inverts has already been referred to; as also have been the prevalence of general homo-

sexual practices among the people of ancient nations at the heights of their culture. Among the latter, as we have seen, inversion becomes an institution endowed with important functions.

From the standpoint of anatomical development and the libido, there are frequently found in the inverted a diminution of the sexual impulse, and a slight stunting of the generative organs. However, this is not preponderately the rule, so it must be recognized that inversion and somatic hermaphroditism (bodily bisexual characters) are quite independent of each other.

Freud has demonstrated how neurosis is definitely connected with some phase of the sexual instinct—often the suppression of its normal manifestations. In addition to that, he has shown that the symptoms of neurosis only too frequently represent the converted expression of impulses which in a broader sense may be designated as *perverse*, if they could manifest themselves directly in phantasies and acts without deviating from consciousness. The inference, therefore, is that the symptoms are partially formed at the cost of abnormal sexuality. "The neurosis is, so to say, the negative of the perversion."

Psychoanalysis has brought to light the fact that the well-known fancies of perverts which under favorable conditions are changed into contrivances, the delusional fears of paranoiacs which are in a hostile manner projected on others, and the unconscious fancies of hysterics, agree as to content often in the minutest details.

This illustrates that the unconscious mental processes of all persons have much that is held in common, based upon biological promptings that are the common property of mankind. The varied ways in which they manifest themselves are due to the different trends of disposition, mental aptitude, environmental influences, etc.

According to the psychoanalytic hypothesis, the sexual impulse of the psychoneurotic shows all the aberrations of morbid sexual life. This principle may be summarized as follows (after Freud):

(a) In all the neurotics without exception there is evident feelings of *inversion in the unconscious psychic life, fixation of libido on persons of the same sex*. It is impossible, without a deep and searching discussion, adequately to appreciate the significance of this factor for the formation of the picture of the disease; but it may be safely asserted that the unconscious propensity to inversion is never wanting and is particularly of immense service in explaining male hysteria.

(b) All the inclinations to anatomical transgression can be demonstrated in psychoneurotics in the unconscious and as symptom-creators. Of special frequency and intensity are those which impart to the mouth and the mucous membrane of the anus the role of genitals.

(c) The partial desires which usually appear in contrasting pairs, play a very prominent role among the symptom-creators in psychoneuroses. They are known as carriers of new sexual aims, such as peeping mania, exhibitionism and the actively and passively formed impulses of cruelty. The contribution of the last is indis-

pensable for the understanding of the morbid nature of the symptoms; it almost regularly controls some portion of the social behavior of the patient. The transformation of love into hatred, of tenderness into hostility, which is character of paranoics, takes place by means of the union of cruelty with the libido.

The significance of the erogenous zones in relation to inversion is important. Moll's concept, which divides the sexual impulse into the impulse of contrectation and detumescence, is useful in this field. (Contrectation signifies a desire to touch the skin; detumescence the subsidence of the state of physical sexual preparedness.)

"In the perversions, which claim sexual significance for the oral cavity and the anal opening," as Freud remarks, "the part played by the erogenous zone is quite evident. It behaves in every way like a part of the sexual apparatus. In hysteria, these parts of the body, as well as the tracts of mucous membrane proceeding from them, become the seat of new sensations and innervating changes in a manner similar to the genitals when under the excitement of normal sexual processes."

HOMO-SEXUAL PANIC.

Dr. Edward J. Kempf refers to the pressure of uncontrollable perverse cravings as "*acute homosexual panic*," which is frequently observed whenever men or women are grouped alone for prolonged periods, as in army camps, aboard ships, on exploring expeditions, in prisons, asylums, and schools.

The acute panic of the personality is due to the perverse sexual cravings which threaten to overcome the ego, and disestablish the individual's self-control. At the same time, the affections for winning social esteem are pushed into an eccentric adjustment. The weakness of the ego may be attributed to fatigue, debilitating illness, loss of the love object, homesickness, misfortunes, imposition on the part of a superior, or erotic companions. As the individual shows his eccentricities and irritability, he is often teased and tormented by his fellows. With this there comes a loss of social influence, which develops a sense of inferiority, or strengthens the feeling of inferiority that already exists.

The attempt to overcome the fear of inferiority spurs the subject on to intense compensating efforts which, however, because of their eccentric character, further increases the antagonism. Thus we have a vicious circle in the realm of the emotions and affective nature, which gradually becomes a persecution. The erotic individual, under these circumstances, as the perverse sexual impulses tend to force him into further danger, becomes panic-stricken.

The preverse craving causes delusions about, and hallucinations of, situations, objects and people which tend to gratify the craving. Still, Kempf says "The pressure of the perverse craving occurs despite the social honor and social future of the individual. Horrified, he is swept off his feet into a hell of hallucinated temptations and demons of distractions."

With regard to the physiological reactions

of fear to painful contact stimuli, this authority states they are quite like the fear reactions to horrible, painful hallucinated stimuli. The mechanism of the terrifying dream, for instance, like the hallucination, is first an effective disturbance due to the repressed autonomic tensions becoming released by the relaxation of self-control (as in sleep). During sleep indigestible food will cause increased effort on the part of the stomach and intestines. This produces consciousness of unpleasant sensory images which may coalesce into a horrible perception, like black dots forming a picture. This horrible image, in turn, causes the fear reaction. "The next stage would be to compensate by awaking, by flight or counter-attack. *When the erotic, hallucination is felt to be an external reality, and no defense is found, panic ensues.*"

The panic may be more or less serious, lasting from a few hours to several months. The disturbances to the physical processes and the bodily economy as a whole, attending such dissociations of personality, may be very serious. All these ill results, under the given circumstances, are traceable to *fear*.

The definite physiological effects of this uncontrolled emotion—fear—are increased blood-pressure and pulse-rate, increase of adrenin and thyroid secretions, increase of blood sugar and decrease of the digestive and assimilative properties of the stomach and intestines; also decrease of heterosexual potency, and pronounced increase of trial and error movements of the skeletal apparatus—hence, restlessness, irritability, insomnia, etc.

On the other hand, the acute dissociation of the personality, in both sexes, may become chronic and run a protracted course, varying from several weeks to many years. Final recovery may ensue, or (1) the condition may become permanent without further deterioration, or (2) the condition may pursue a course of progressive deterioration depending upon the negative nature of the transference and adjustment to the erotic pressure.

A frequent accompaniment is the development of a vigorous, persistent counter-attack of hatred, which becomes directed against the social conventions. Its animus is aimed particularly against those to whom social obligations bind the subject (as parents, mate, offspring, employer, etc.) because they are repressing influences. The climax of this is a loss of social adaptation.

Kempf believes that the tendency to homosexuality in males has a dual determination. Not only are homosexual associations attractive, but there is an insurmountable affective (fear) resistance to heterosexual potency which becomes aroused by the amorous approach of the female. Through some affective mechanism, she, like the "serpent-headed Meduza, freezes his soul. Her sexuality horrifies instead of fascinates."

Anxiety and depression may develop quickly after a heterosexual failure in this type of male. Such reactions may be characterized by suicidal impulses due apparently to an irresistible regression to the mother. The subject feels that she cannot give him up, and he, being helpless to free himself, in order to become de-

voted to another woman, finds life is not worth living.

In summarizing his conception of this disorder, Kempf considers the acute homosexual panic a distinct stage in the psychosis. He maintains it may be diagnosed as readily as paresis by certain cardinal conditions: (1) *panic* and the autonomic reactions which accompany grave fear; (2) the defensive compensation against the compulsion to seek or submit to assault; (3) the symbols used by the erotic affect and the disturbances of sensation it causes.

The latter are complained of as visions, voices, electric injections, "dopy" feelings, "poison" and "filth" in the food, seductive and hypnotic influences, irresistible trance states, crucifixion, etc. It is necessary to estimate the significance of the systems in a neutral environment and the significance of the various symbols used.

As previously stated, the condition of acute homosexual panic is chiefly manifested in men and women who are grouped for prolonged periods away from members of the opposite sex—and is considerably different in its symptoms from the inverted sexuality which, for whatever reasons, develops in the man or woman living in a more normal environment.

With regard to the prospect for overcoming the disorder, Kempf states that the prognosis of homosexual panic in a soldier or sailor is usually favorable for that episode, but the future of that individual is most insecure unless he obtains insight and a fortunate sexual adjustment.

In a series of several hundred cases which have been recognized in a period of half a dozen years, most of the cases recovered. The occurrence of panic, later, among men who secretly re-enlisted in some branch of the government's service and were returned to the hospital, as well as the return several years later of men who had profoundly deteriorated after having been discharged as social recoveries, shows that the recurrence of panic results from inability to control the tendency to become perverse, that is, biologically abnormal. "This abortive tendency seems eventually to become dominant and incurable."

A NEURO-(PSYCHO-) PATHIC STATE.

Krafft-Ebing, already referred to, has described the peculiar sexual feeling of the invert as a functional sign of degeneration, and as a partial manifestation of a neuro-(psycho-) pathic state, in most cases (he believed) hereditary. He has catalogued the following characteristics as signs of this disorder:

1. The sexual life of individuals thus organized manifests itself, as a rule, abnormally early, and thereafter with abnormal power. Not infrequently still other perverse manifestations are presented besides the abnormal method of sexual satisfaction, which in itself is conditioned by the peculiar sexual feeling.

2. The psychical love manifest in these men is, for the most part, exaggerated and exalted in the same way as their sexual instinct is manifested in consciousness, with a strange and even compelling force.

3. By the side of the functional signs of degeneration attending antipathic sexual feeling are found other functional, and in many cases anatomical, evidences of degeneration.

4. Neurosis (hysteria, neurasthenia, epileptoid states, etc.) co-exist. Almost invariably the existence of temporary or lasting neurasthenia may be proved. As a rule, this is constitutional, having its root in congenital conditions. It is awakened and maintained by masturbation or enforced abstinence.

(We have already considered the fallacious reasoning of ascribing homosexuality to masturbation. W. J. F.)

5. In the majority of cases, psychical anomalies (brilliant endowment in art, especially music, poetry, etc., by the side of bad intellectual powers or original eccentricity) are present, which may extend to pronounced conditions of mental degeneration (imbecility, moral insanity). In many instances, either temporary or permanent insanity of a degenerative character (pathological emotional states, periodical insanity, paranoia, etc.) makes its appearance.

6. In almost all cases where an examination of the physical and mental peculiarities of the ancestors and blood relations has been possible, neurosis, psychosis, degenerative signs, etc., have been found in the families.

It is Krafft-Ebing's view that the study of antipathic sexual feeling points directly to anomalies of the cerebral organization of the afflicted individuals. "The very fact that in these cases, with few exceptions, the sexual

glands are found quite normal, anatomically and functionally, seems to favor this assumption."

Of all the old school psychiatrists of standing, it seems Krafft-Ebing's ideas are the most marked by superficial generalizations and rash guesses to account for unknown factors. In contrast to the concept of homosexuality as purely a neuro-(psycho-)pathic state, or "degenerative taint," we will consider in the next chapter the attitude of Edward Carpenter on this subject. Carpenter is distinguished by his calm reasoning powers and far-sighted vision, and while he perhaps shows a partiality to the urning that is beyond the casual student, his views must be considered in any fair and impartial study of the subject.

CHAPTER V.

SUPERIOR TRAITS OF INVERTS.

Edward Carpenter, in his thoughtful treatise on homosexuals—whom he calls the *Intermediate Sex*—justly maintains that it is impossible, by a sweeping gesture to dismiss these types as *good* or *bad*, simply because they are *different*.

The subtleties and complexities of nature cannot be dispatched in this off-hand manner.

As he expresses it, "the great probability is that, as in any other class of human beings, there will be among these too, good and bad, high and low, worthy and unworthy—some perhaps exhibiting through their double temperament a rare and beautiful flower of humanity, others a perverse and tangled ruin."

It is Carpenter's opinion that the defect of the male Uranian, or Urning, is not sensuality—but rather sentimentality. The lower, more ordinary types of Urning are often extremely sentimental; the superior type strangely, almost incredibly emotional; but neither *as a rule* (though, of course, there must be exceptions) are so sensual as the average normal man.

"The immense capacity of emotional love represents, of course, a great driving force. Whether in the individual or in society, love is eminently creative. It is their great genius for attachment which gives to the best Uranian

types their penetrating influence and activity, and which often makes them beloved and accepted far and wide even by those who know nothing of their inner mind.

"How many so-called philanthropists of the best kind (we need not mention names) have been inspired by the Uranian temperament, the world will probably never know. And in all walks of life, the great number and influence of folk of this disposition, and the distinguished place they already occupy, is only realized by those who are more or less behind the scenes. It is probable also that it is this genius for emotional love which gives to the Uranians their remarkable *youthfulness*."

With these unusual qualities, amounting in their finest expressions, to extraordinary gifts—containing as they do a double measure of human values, both of the man and of the woman—Carpenter believes that these people have a special field of work as reconcilers and interpreters of the two sexes to each other.

Thus, it is probable that the superior Uranians will become in affairs of the heart, to a large extent, the teachers of future society; and if so, their influence will tend to the realization and expression of an attachment less exclusively sensual than the average of today, and to the diffusion of this in all directions.

To call people of such temperament "morbid," according to this authority, is of no use. Such a term, in fact, is absurdly inapplicable to many, who are among the most amiable and worthy members of society. Certainly, it brings no solution to the problem in question,

and "only amounts to marking down for disparagement a fellow creature who has already considerable difficulties to contend with."

It is a great mistake, he argues, to suppose that their attachments are necessarily sexual, or connected with sexual acts. On the contrary, they are often purely emotional in their character; and to confuse Uranians, as is often done, with libertines having no law but curiosity in self-indulgence is to do them a great wrong.

It is undoubtedly true that their special temperament may sometimes cause them difficulty in regard to their sexual relations. But then, all types have more or less difficulty in making sexual adjustments—so while the homosexual has some special problems to meet in this respect—the heterosexual also has his problems which not infrequently lead to dire results.

The difficulties in both cases, of course, are due in no small degree to the obstacles put in the way by others, through lack of understanding. This is both a social and individual problem.

With respect to the personal idiosyncrasies of the urnings, the male tends to be of a rather gentle, emotional disposition, with defects, if such exist, in the direction of subtlety, evasiveness, timidity, vanity, etc. The female, on the other hand, is just the opposite, being active, fiery, bold and bluntly truthful, with defects running to brusqueness and coarseness.

The mind of the male urning (characteristic of its feminine bias) is generally intuitive and instinctive in its perceptions, with more or less artistic feeling. In extreme types, we find excessive sentimentality, an individual mincing

in gait and manners, something of a chatter-box, with a tendency to be skilful with the needle and in woman's work, sometimes taking pleasure in dressing in women's clothes.

In the case of the female, we note the opposite characteristics. Her mind is more logical, scientific and precise than usual with the normal woman. So marked are these general characteristics, observes Carpenter, that sometimes by means of them (thought not an infallible guide) the nature of the boy or girl can be detected in childhood, before full development has taken place. The importance of being able to do this is readily apparent, if an understanding and sympathetic attitude is brought to bear on the matter.

As Dr. Moll, the well known German authority, has pointed out, the extreme characteristics do not by any means show themselves in all urnings. Though one may find this or that indication in a great many cases, yet it cannot be denied that a very large percentage of the males, perhaps by far the majority of them, do not exhibit pronounced effeminacy.

Considering the more "normal" type of Uranian male, it is not unusual to find a man who, while possessing thoroughly masculine powers of mind and physique, combines with them the more emotional soul nature of the woman. Sometimes this is present in a notable degree.

Such men are often muscular and well built, and not noticeably different in external structure and bodily carriage from others of their own sex. Emotionally, however, they are ex-

tremely complex, sensitive, tender, sympathetic and loving—and, as has been said, “full of storm and stress, of ferment and fluctuation of the heart.”

While the logical faculty may or may not, in their case, be well developed, intuition is always strongly in evidence. Like a woman they read characters at a glance, and know, without knowing how, what is transpiring in the mental processes of others. Naturally, men of this kind have a peculiar aptitude for nursing and administering to the needs of people. A Swiss writer on this subject has expressed himself thus: “Happy, indeed, is that man who has won a real Urning for his friend—he walks on roses, without ever having to fear the thorns.” And he added: “Can there ever be a more perfect sick nurse than an Urning?”

The invert has a strongly developed artist nature, with the artist's perception and sensibility. De Joux, who writes on the whole favorably of the Uranian men and women, says of the former: “They are enthusiastic for poetry and music, are often eminently skilful in the fine arts, and are overcome with emotion and sympathy at the least occurrence. Their sensitiveness, their endless tenderness for children, their love of flowers, their great pity for beggars and crippled folk are truly womanly.” In another passage, he indicates the organic base of the artist nature in the following words: “The nerve system of many an Urning is the finest and the most complicated musical instrument in the service of the interior personality that can be imagined.”

It does not appear justified to assume that men of this kind despise women, the general belief to the contrary notwithstanding. In previous chapters, we have read the evidence of the psychiatrist, who testified to this alleged antagonistic sentiment. But after all, the psychiatrist and neurologist get the sick and pathologic cases, and rarely the better kind, so while the opinions of these specialists have great value as supplementary evidence in the consideration of homosexuality, they should not be accepted without reservation or such modification as may be necessary in the light of fuller knowledge of the subject.

Naturally, the male Urning is not inclined to fall in love with a woman, but that they are drawn near to women seems logical as it is characteristic of similar types to have much in common, such as sympathetic interests, etc. And, of course, the male Urning and the normal woman have a great deal in common in the sphere of spiritual and emotional interests and understanding.

Carpenter states in this connection, "it would seem they often feel a singular appreciation and understanding of the emotional needs and destinies of the other sex, leading in many cases to a genuine though what is called 'Platonic' friendship. There is little doubt that they are often instinctively sought after by women who, without suspecting the real cause, are conscious of a sympathetic chord in the homogenic which they miss in the normal man."

De Joux confirms this in these words: "It would be a mistake to suppose that all Urnings

must be woman haters. Quite the contrary. They are not seldom their faithfulest friends. the truest allies and most convinced defenders of women."

Havelock Ellis in Chapter VI of his "*Sexual Inversion*," also scouts the idea that the Uranian temperament is necessarily morbid, and states that the tendency should be considered an anomaly rather than a disease. He makes this interesting observation on the subject, comparing the invert to the "sport" or variation in the animal and vegetable world: "Thus in sexual inversion we have what may fairly be called a 'sport' or variation, one of those organic aberrations which we see throughout living nature in plants and in animals."

And Ellis writes, with reference to the artistic proclivities of the invert: "An examination of my cases reveals the interesting fact that thirty-two of them, or sixty-eight per cent, possess artistic aptitude in varying degrees.

"Galton found, from the investigation of nearly one thousand persons, that the general average showing artistic taste in England is only about thirty per cent. It must be said that my figures are probably below the truth, as no special point was made of investigating the matter, and also that in many cases their artistic aptitudes are of high order. With regard to the special avocations of my cases, it must, of course, be said that no occupation furnishes a safeguard against inversion. There are, however, certain occupations to which inverts are specially attracted. Acting is certainly one of the chief of these. Three of my cases belong to

the dramatic profession, and others have marked dramatic ability. Art, again, in its various forms, and music, exercise much attraction. In my experience, however, literature is the avocation to which inverts seem to feel chiefly called, and that moreover in which they may find the highest degrees of success and reputation. At least half a dozen of my cases are successful men of letters."

The Uranian, although quite invariably high strung and sensitive, is not by any means always an impractical dreamer. He is usually *a dreamer*, to be sure, but not infrequently he has the capacity to transform his dreams into actuality. He may even show extraordinary ability in the business world. While he is usually not militantly aggressive—war with its bloodshed, horrors and destruction is somewhat foreign to his temperament—there are exceptions.

Some of the mighty military commanders of history have had a strong Uranian strain—among them may be mentioned Alexander the Great, Caesar, Charles XII of Sweden, Frederick II of Prussia, etc. When the capacity for high organizing ability and power of command is present, the potent bisexual disposition vouchsafes a temperament that arouses the enthusiasm and assures the personal attachment of the troops. All of this goes a long way to making a formidable commander—and in the olden days of personal combat, it was a well-nigh invincible one.

Carpenter calculates that not less than ten per cent of the English kings—from the time

of the Norman conquest to the present day—have shown a decidedly homogenic temperament. (This authority prefers to use the term *homogenic*, from two root words, both Greek, i. e., “homos,” same, and “genoc,” sex, instead of *homosexual*.)

Three of these kings, namely, William Rufus, Edward II and James I were homosexual in a high degree—possibly enough so as to be classed as Urnings. Others, like William III, had a marked strain of the same temperament.

Of these monarchs, William Rufus and William III, were in their different ways men of great courage and personal force. James I was not a creditable character—and while the term degenerate might be applicable to him—it would be equally fitting to several others of the royal line.

It is also apparent that one of England's greatest queens, Elizabeth, had a highly developed homosexual disposition, enough to bring out in no uncertain manner those characteristics that are usually associated with the masculine gender. She was inordinately resourceful, independent, assertive—and showed no particular erotic leanings toward the opposite sex.

Referring to the common belief that a male who experiences love for his own sex must be despicable, degraded, depraved, vicious, and incapable of humane or generous sentiments, J. Addington Symonds (*A Problem of Modern Ethics*) remarks that “If Greek history did not contradict this supposition, a little patient

enquiry into contemporary manners would suffice to remove it."

De Joux, who has already been quoted on the subject, expresses the finer sensibilities of the superior type of Urning, and his consciousness of the same, in the following words: "It is true that we are often inferior to normal men in force of will, worldly wisdom, and sense of duty; but on the other hand, in depth and delicacy of feeling and every virtue of the heart, we are far superior. We cannot *love* women, but we lament with them, and help them on the hearth and by the cradle, in need and loneliness, as their most unselfish friends. . . . We do not despise women because they are weak, for we are much clearer-sighted, much less prejudiced than the so-called lords of creation, much nobler, more helpful, and just minded than they. . . . Anyhow, if either of the sexes has cause to withhold its respect in any degree from the other—which has the most cause? Say what you will of them, the second and third sexes—women and Urnings—are ever so much better than the brutal egotistical men, who today are plunged in grossest materialism; for, with whatever corruption, both the former are still of purer heart, easier kindled towards whatever is good, and more capable of genuine enthusiasm and love of their fellows than the latter."

In a sense, then, we may say that the so-called Intermediate Sex is older and nearer to nature than the differentiated male and female sexes. It may be considered a modern hold-over, or vestige, of the bisexual character

typical of primitive beings and organisms. But when found in the *genus homo*—when not debauched by a vicious environment or distorted by an unfavorable heredity—it may, as we have seen, reach the highest stage of human fruition.

SANITY IN SEX.

By WILLIAM J. FIELDING

An illuminating exposition of the sex question from the standpoint of vital individual, social and economic problems. Discusses Fig-Leaf Morality, Birth Control, Psycho-Analysis, Sex Hygiene, Sex Knowledge for Parents, Children and from the intimate side of Marriage, and many other phases of sexual phenomena, from an original and thought-provoking angle. It is replete with concrete illustrations of individual and social tragedies of the most striking character, and notable examples of official hypocrisy and prudery that are nothing short of criminal. In this respect the book is a mine of facts and information for all students of social and economic conditions. But it is more than critical of the short-comings of society; it is helpful and constructive to the individual. The volume is highly endorsed by many European and American authorities, including Havelock Ellis, Margaret Sanger, Dr. Maud Thompson, Dr. Lee Alexander Stone, August Claessens, etc.

Handsomely bound in cloth, 333 pages. An indispensable volume for those interested in the vital urge of sex.

ON BEING IDLE.

Now, this is a subject on which I flatter myself I really am *au fait*. The gentleman who, when I was young, bathed me at wisdom's font for nine guineas a term—no extras—used to say he never knew a boy who could do less work in more time; and I remember my poor grandmother once incidentally observing, in the course of an instruction upon the use of the Prayer-book, that it was highly improbable that I should ever do much that I ought not to do, but that she felt convinced beyond a doubt that I should leave undone pretty well everything that I ought to do.

I am afraid I have somewhat belied half the dear old lady's prophecy. Heaven help me! I have done a good many things that I ought not to have done, in spite of my laziness. But I have fully confirmed the accuracy of her judgment so far as neglecting much that I ought not to have neglected is concerned. Idling always has been my strong point. I take no credit to myself in the matter—it is a gift. Few possess it. There are plenty of lazy people and plenty of slow-coaches, but a genuine idler is a rarity. He is not a man who slouches about with his hands in his pockets. On the contrary, his most startling characteristic is that he is always intensely busy.

It is impossible to enjoy idling thoroughly unless one has plenty of work to do. There is no fun in doing nothing when you have nothing to do. Wasting time is merely an occupation then, and a most exhausting one. Idle-

ness, like kisses, to be sweet must be stolen.

Many years ago, when I was a young man, I was taken very ill—I never could see myself that much was the matter with me, except that I had a beastly cold. But I suppose it was something very serious, for the doctor said that I ought to have come to him a month before, and that if it (whatever it was) had gone on for another week he would not have answered for the consequences. It is an extraordinary thing, but I never knew a doctor called into any case yet but what it transpired that another day's delay would have rendered cure hopeless. Our medical guide, philosopher, and friend is like the hero in a melodrama—he always comes upon the scene just, and only just, in the nick of time. It is Providence, that is what it is.

Well, as I was saying, I was very ill and was ordered to Buxton for a month, with strict injunctions to do nothing whatever all the while that I was there. "Rest is what you require," said the doctor, "perfect rest."

It seemed a delightful prospect. "This man evidently understands my complaint," said I, and I pictured to myself a glorious time—a four weeks' *dolce far niente* with a dash of illness in it. Not too much illness, but just illness enough—just sufficient to give it the flavor of suffering and make it poetical. I should get up late, sip chocolate, and have my breakfast in slippers and a dressing-gown. I should lie out in the garden in a hammock and read sentimental novels with a melancholy ending, until the books should fall from my

listless hand, and I should recline there, dreamily gazing into the deep blue of the firmament, watching the fleecy clouds floating like white-sailed ships across its depths, and listening to the joyous song of the birds and the low rustling of the trees. Or, on becoming too weak to go out of doors, I should sit propped up with pillows at the open window of the ground-floor front, and look wasted and interesting, so that all the pretty girls would sigh as they passed by.

And twice a day I should go down in a Bath chair to the Colonnade to drink the waters. Oh, those waters! I knew nothing about them then, and was rather taken with the idea. "Drinking the waters" sounded fashionable and Queen Annified, and I thought I should like them. But, ugh! after the first three or four mornings. Sam Weller's description of them as "having a taste of warm flat-irons" conveys only a faint idea of their hideous nauseousness. If anything could make a sick man get well quickly, it would be the knowledge that he must drink a glassful of them every day until he was recovered. I drank them neat for six consecutive days, and they nearly killed me; but after then I adopted the plan of taking a stiff glass of brandy-and-water immediately on the top of them, and found much relief hereby. I have been informed since, by various eminent medical gentlemen, that the alcohol must have entirely counteracted the effects of the chalybeate properties contained in the water. I am glad I was lucky enough to hit upon the right thing.

But "drinking the waters" was only a small portion of the torture I experienced during that memorable month—a month which was, without exception, the most miserable I have ever spent. During the best part of it I religiously followed the doctor's mandate and did nothing whatever, except moon about the house and garden and go out for two hours a day in a Bath chair. That did break the monotony to a certain extent. There is more excitement about Bath-chairing—especially if you are not used to the exhilarating exercise—than might appear to the casual observer. A sense of danger, such as a mere outsider might not understand, is ever present to the mind of the occupant. He feels convinced every minute that the whole concern is going over, a conviction which becomes especially lively whenever a ditch or a stretch of newly macadamized road comes in sight. Every vehicle that passes he expects is going to run into him; and he never finds himself ascending or descending a hill without immediately beginning to speculate upon his chances, supposing—as seems extremely probable—that the weak-kneed controller of his destiny should let go.

But even this diversion failed to enliven after awhile, and the *ennui* became perfectly unbearable. I felt my mind giving way under it. It is not a strong mind, and I thought it would be unwise to tax it too far. So somewhere about the twentieth morning I got up early, had a good breakfast, and walked straight off to Hayfield, at the foot of the Kinder Scout—a pleasant, busy little town, reached through

a lovely valley; and with two sweetly pretty women in it. At least they were sweetly pretty then; one passed me on the bridge and, I think, smiled; and the other was standing at an open door, making an unremunerative investment of kisses upon a red-faced baby. But it is years ago, and I dare say they have both grown stout and snappish since that time. Coming back, I saw an old man breaking stones, and it roused such strong longing in me to use my arms that I offered him a drink to let me take his place. He was a kindly old man and he humored me. I went for those stones with the accumulated energy of three weeks, and did more in half an hour than he had done all day. But it did not make him jealous.

Having taken the plunge, I went further and further into dissipation, going out for a long walk every morning and listening to the band in the pavilion every evening. But the days still passed slowly notwithstanding, and I was heartily glad when the last one came and I was being whirled away from gouty, consumptive Buxton to London with its stern work and life. I looked out of the carriage as we rushed through Hendon in the evening. The lurid glare overhanging the mighty city seemed to warm my heart, and when, later on, my cab rattled out of 'St. Pancras' station, the old familiar roar that came swelling up around me sounded the sweetest music I had heard for many a long day.

I certainly did not enjoy that month's idling. I like idling when I ought not to be idling; not when it is the only thing I have to do. That

is my pig-headed nature. The time when I like best to stand with my back to the fire, calculating how much I owe, is when my desk is heaped highest with letters that must be answered by the next post. When I like to dawdle longest over my dinner is when I have a heavy evening's work before me. And if, for some urgent reason, I ought to be up particularly early in the morning, it is then, more than at any other time, that I love to lie an extra half-hour in bed.

Ah! how delicious it is to turn over and go to sleep again: "just for five minutes." Is there any human being, I wonder, besides the hero of a Sunday-school "tale for boys," who ever gets up willingly? There are some men to whom getting up at the proper time is an utter impossibility. If eight o'clock happens to be the time that they should turn out, then they lie till half-past. If circumstances change and half-past eight becomes early enough for them, then it is nine before they can rise. They are like the statesman of whom it was said that he was always punctually half an hour late. They try all manner of schemes. They buy alarm-clocks (artful contrivances that go off at the wrong time and alarm the wrong people). They tell Sarah Jane to knock at the door and call them, and Sarah Jane does knock at the door and does call them, and they grunt back "awri" and then go comfortably to sleep again. I knew one man who would actually get out and have a cold bath; and even that was of no use, for afterward he would jump into bed again to warm himself.

I think myself that I could keep out of bed all right if I once got out. It is the wrenching away of the head from the pillow that I find so hard, and no amount of over-night determination makes it easier. I say to myself, after having wasted the whole evening, I'll get up early to-morrow morning;" and I am thoroughly resolved to do so—then. In the morning, however, I feel less enthusiastic about the idea, and reflect that it would have been much better if I had stopped up last night. And then there is the trouble of dressing, and the more one thinks about that the more one wants to put it off.

It is a strange thing this bed, this mimic grave, where we stretch our tired limbs and sink away so quietly into the silence and rest. "O bed, O bed, delicious bed, that heaven on earth to the weary head," as sang poor Hood, you are a kind old nurse to us fretful boys and girls. Clever and foolish, naughty and good, you take us all in your motherly lap and hush our wayward crying. The strong man full of care—the sick man full of pain—the little maiden sobbing for her faithless lover—like children we lay our aching heads on your white bosom, and you gently soothe us off to by-by.

'Our trouble is sore indeed when you turn away and will not comfort us. How long the dawn seems coming when we cannot sleep! Oh! those hideous nights when we toss and turn in fever and pain, when we lie, like living men among the dead, staring out into the dark hours that drift so slowly between us and the light. And oh! those still more hideous nights when

we sit by another in pain, when the low fire startles us every now and then with a falling cinder, and the tick of the clock seems a hammer beating out the life that we are watching.

But enough of beds and bedrooms. I have kept to them too long, even for an idle fellow. Let us come out and have a smoke. That wastes time just as well and does not look so bad. Tobacco has been a blessing to us idlers. What the civil-service clerks before Sir Walter's time found to occupy their minds with it is hard to imagine. I attribute the quarrelsome nature of the Middle Ages young men entirely to the want of the soothing weed. They had no work to do and could not smoke, and the consequence was they were forever fighting and rowing. If, by any extraordinary chance, there was no war going, then they got up a deadly family feud with the next-door neighbor, and if, in spite of this, they still had a few spare moments on their hands, they occupied them with discussions as to whose sweetheart was the best looking, the arguments employed on both sides being battle-axes, clubs, etc. Questions of taste were soon decided in those days. When a twelfth-century youth fell in love he did not take three paces backward, gaze into her eyes, and tell her she was too beautiful to live. He said he would s'ep outside and see about it. And if, when he got out, he met a man and broke his head—the other man's head, I mean—then that proved that his—the first fellow's—girl was a pretty girl. But if the other fellow broke his head—

not his own, you know, but the other fellow's—the other fellow to the second fellow, that is, because of course the other fellow would only be the other fellow to him, not the first fellow who—well, if he broke his head, then *his* girl—not the other fellow's, but the fellow who *was* the— Look here, if A broke B's head, then A's girl was a pretty girl; but if B broke A's head, then A's girl wasn't a pretty girl, but B's girl was. That was their method of conducting art criticism.

Nowadays we light a pipe and let the girls fight it out among themselves.

They do it very well. They are getting to do all our work. They are doctors, and barristers, and artists. They manage theatres, and promote swindles, and edit newspapers. I am looking forward to the time when we men shall have nothing to do but lie in bed till twelve, read two novels a day, have nice little five-o'clock teas all to ourselves, and tax our brains with nothing more trying than discussions upon the latest patterns in trousers and arguments as to what Mr. Jones' coat was made of and whether it fitted him. It is a glorious prospect—for idle fellows.

ON BEING IN LOVE.

You've been in love, of course! If not you've got it to come. Love is like the measles; we all have to go through it. Also like the measles, we take it only once. One never need be afraid of catching it a second time. The man who has had it can go into the most dangerous places and play the most foolhardy

tricks with perfect safety. He can picnic in shady woods, ramble through leafy aisles, and linger on mossy seats to watch the sunset. He fears a quiet country-house no more than he would his own club. He can join a family party to go down the Rhine. He can, to see the last of a friend, venture into the very jaws of the marriage ceremony itself. He can keep his head through the whirl of a ravishing waltz, and rest afterward in a dark conservatory, catching nothing more lasting than a cold. He can brave a moonlight walk adown sweet-scented lanes or a twilight pull among the somber rushes. He can get over a stile without danger, scramble through a tangled hedge without being caught, come down a slippery path without falling. He can look into sunny eyes and not be dazzled. He listens to the siren voices, yet sails on with un veered helm. He clasps white hands in his, but no electric "Lulu"-like force holds him bound in their dainty pressure.

No, we never sicken with love twice. Cupid spends no second arrow on the same heart. Love's handmaids are our life-long friends. Respect, and admiration, and affection, our doors may always be left open for, but their great celestial master, in his royal progress, pays but one visit and departs. We like, we cherish, we are very, very fond of—but we never love again. A man's heart is a firework that once in its time flashes heavenward. Meteor-like, it blazes for a moment and lights with it's glory the whole world beneath. Then the night of our sordid commonplace life closes

in around it, and the burned-out case, falling back to earth, lies useless and uncared for, slowly smoldering into ashes. Once, breaking loose from our prison bonds, we dare, as mighty old Prometheus dared, to scale the Olympian mount and snatch from Phoebus' chariot the fire of the gods. Happy those who, hastening down again ere it dies out, can kindle their earthly altars at its flame. Love is too pure a light to burn long among the noisome gases that we breathe, but before it is choked out we may use it as a torch to ignite the cozy fire of affection.

And, after all, that warming glow is more suited to our cold little back parlor of a world than is the burning spirit love. Love should be the vestal fire of some mighty temple—some vast dim fane whose organ music is the rolling of the spheres. Affection will burn cheerily when the white flame of love is flickered out. Affection is a fire that can be fed from day to day and be piled up ever higher as the wintry years draw nigh. Old men and women can sit by it with their thin hands clasped, the little children can nestle down in front, the friend and neighbor has his welcome corner by its side, and even shaggy Fido and sleek Titty can toast their noses at the bars.

Let us heap the coals of kindness upon that fire. Throw on your pleasant words, your gentle pressures of the hand, your thoughtful and unselfish deeds. Fan it with good-humor, patience, and forbearance. You can let the wind blow and the rain fall unheeded then, for your hearth will be warm and bright, and the

faces round it will make sunshine in spite of the clouds without.

I am afraid, dear Edwin and Angelina, you expect too much from love. You think there is enough of your little hearts to feed this fierce, devouring passion for all your long lives. Ah, young folk! don't rely too much upon that unsteady flicker. It will dwindle and dwindle as the months roll on, and there is no replenishing the fuel. You will watch it die out in anger and disappointment. To each it will seem that it is the other who is growing colder. Edwin sees with bitterness that Angelina no longer runs to the gate to meet him, all smiles and blushes; and when he has a cough now she doesn't begin to cry and, putting her arms round his neck, say that she cannot live without him. The most she will probably do is to suggest a lozenge, and even that in a tone implying that it is the noise more than anything else she is anxious to get rid of.

Poor little Angelina, too, sheds silent tears, for Edwin has given up carrying her old handkerchief in the inside pocket of his waistcoat.

Both are astonished at the falling off in the other one, but neither sees their own change. If they did they would not suffer as they do. They would look for the cause in the right quarter—in the littleness of poor human nature—join hands over their common failing, and start building their house anew on a more earthly and enduring foundation. But we are so blind to our own shortcomings, so wide awake to those of others. Everything that happens to us is always the other person's fault. Angelina

would have gone on loving Edwin forever and ever and ever if only Edwin had not grown so strange and different. Edwin would have adored Angelina through eternity if Angelina had only remained the same as when he first adored her.

It is a cheerless hour for you both when the lamp of love has gone out and the fire of affection is not yet lit, and you have to grope about in the cold, raw dawn of life to kindle it. God grant it catches light before the day is too far spent. Many sit shivering by the dead coals till night comes.

But, there, of what use is it to preach? Who that feels the rush of young love through his veins can think it will ever flow feeble and slow! To the boy of twenty it seems impossible that he will not love as wildly at sixty as he does then. He cannot call to mind any middle-aged or elderly gentleman of his acquaintance who is known to exhibit symptoms of frantic attachment, but that does not interfere in his belief in himself. His love will never fail, whoever else's may. Nobody ever loved as he loves, and so, of course, the rest of the world's experience can be no guide in his case. Alas! alas! ere thirty he has joined the ranks of the sneerers. It is not his fault. Our passions, both the good and bad, cease with our blushes. We do not hate, nor grieve, nor joy, nor despair in our thirties like we did in our teens. Disappointment does not suggest suicide, and we quaff success without intoxication.

We take all things in a minor key as we

grow older. There are few majestic passages in the later acts of life's opera. Ambition takes a less ambitious aim. Honor becomes more reasonable and conveniently adapts itself to circumstances. And love—love dies. "Irreverence for the dreams of youth" soon creeps like a killing frost upon our hearts. The tender shoots and the expanding flowers are nipped and withered, and of a vine that yearned to stretch its tendrils round the world there is left but a sapless stump.

My fair friends will deem this rank heresy, I know. So far from a man's not loving after he has passed boyhood, it is not till there is a good deal of gray in his hair that they think his protestations at all worthy of attention. Young ladies take their notions of our sex from the novels written by their own, and compared with the monstrosities that masquerade for men in the pages of that nightmare literature, Pythagoras' plucked bird and Frankenstein's demon were fair average specimens of humanity.

In these so-called books, the chief lover, or Greek god, as he is admiringly referred to—by the way, they do not say which "Greek god" it is that the gentleman bears such a striking likeness to; it might be hump-backed Vulcan, or double-faced Janus, or even driveling Silenus, the god of abstruse mysteries. He resembles the whole family of them, however, in being a blackguard, and perhaps this is what is meant. To even the little manliness his classical prototypes possessed, though, he can lay no claim whatever, being a listless effeminate noodle, on

the shady side of forty. But oh! the depth and strength of this elderly party's emotion for some bread-and-butter school-girl! Hide your heads, ye young Romeos and Leanders! this *blase* old beau loves with an hysterical fervor that requires four adjectives to every noun to properly describe.

It is well, dear ladies, for us old sinners that you study only books. Did you read mankind, you would know that the lad's shy stammering tells a truer tale than our bold eloquence. A boy's love comes from a full heart; a man's is more often the result of a full stomach. Indeed, a man's sluggish current may not be called love, compared with the rushing fountain that wells up when a boy's heart is struck with the heavenly rod. If you would taste love, drink of the pure stream that youth pours out at your feet. Do not wait till it has become a muddy river before you stoop to catch its waves.

Or is it that you like its bitter flavor—that the clear, limpid water is insipid to your palate and that the pollution of its after-course gives it a relish to your lips? Must we believe those who tell us that a hand foul with the filth of a shameful life is the only one a young girl cares to be caressed by?

That is the teaching that is bawled out day by day from between those yellow covers. Do they ever pause to think, I wonder, those devil's lady-helps, what mischief they are doing crawling about God's garden, and telling childish Eves and silly Adams that sin is sweet and that decency is ridiculous and vulgar? How

many an innocent girl do they not degrade into an evil-minded woman? To how many a weak lad do they not point out the dirty by-path as the shortest cut to a maiden's heart? It is not as if they wrote of life as it really is. Speak truth, and right will take care of itself. But their pictures are coarse daubs painted from the sickly fancies of their own diseased imagination.

We want to think of women not—as their own sex would show them—as Loreleis luring us to destruction, but as good angels beckoning us upward. They have more power for good or evil than they dream of. It is just at the very age when a man's character is forming that he tumbles into love, and then the lass he loves has the making or marring of him. Unconsciously he molds himself to what she would have him, good or bad. I am sorry to have to be ungallant enough to say that I do not think they always use their influence for the best. Too often the female world is bounded hard and fast within the limits of the commonplace. Their ideal hero is a prince of littleness, and to become that many a powerful mind, enchanted by love, is "lost to life and use and name and fame."

And yet, women, you could make us so much better if you only would. It rests with you, more than with all the preachers, to roll this world a little nearer heaven. Chivalry is not dead: it only sleeps for want of work to do. It is you who must wake it to noble deeds. You must be worthy of knightly worship.

You must be higher than ourselves. It was

for Una that the Red Cross Knight did war. For no painted, miming court dame could the dragon have been slain. Oh, ladies fair, be fair in mind and soul as well as face, so that brave knights may win glory in your service! Oh, woman throw off your disguising cloaks of selfishness, effrontery, and affectation! Stand forth once more a queen in your royal robe of simple purity. A thousand swords, now rusting in ignoble sloth, shall leap from their scabbards to do battle for your honor against wrong. A thousand Sir Rolands shall lay lance in rest, and Fear, Avarice, Pleasure, and Ambition shall go down in the dust before your colors.

What noble deeds were we not ripe for in the days when we loved? What noble lives could we not have lived for her sake? Our love was a religion we could have died for. It was no more human creature like ourselves that we adored. It was a queen that we paid homage to, a goddess that we worshiped.

And how madly we did worship! And how sweet it was to worship! Ah, lad, cherish love's young dream while it lasts! You will know too soon how truly little Tom Moore sang when he said that there was nothing half so sweet in life. Even when it brings misery it is a wild, romantic misery, all unlike the dull, worldly pain of after-sorrows. When you have lost her—when the light is gone out from your life and the world stretches before you a long, dark horror, even then a half-enchantment mingles with your despair.

And who would not risk its terrors to gain

its raptures? Ah, what raptures they were! The mere recollection thrills you. How delicious it was to tell her that you loved her, that you lived for her, that you would die for her! How you did rave, to be sure, what floods of extravagant nonsense you poured forth, and oh, how cruel it was of her to pretend not to believe you! In what awe you stood of her. How miserable you were when you had offended her! And yet, how pleasant to be bullied by her and to sue for pardon without having the slightest notion of what your fault was! How dark the world was when she snubbed you, as she often did, the little rogue, just to see you look wretched; how sunny when she smiled! How jealous you were of every one about her! How you hated every man she shook hands with, every woman she kissed—the maid that did her hair, the boy that cleaned her shoes, the dog she nursed—though you had to be respectful to the last-named! How you looked forward to seeing her, how stupid you were when you did see her, staring at her without saying a word! How impossible it was for you to go out at any time of the day or night without finding yourself eventually opposite her windows! You hadn't pluck enough to go in, but you hung about the corner and gazed at the outside. Oh, if the house had only caught fire—it was insured, so it wouldn't have mattered—and you could have rushed in and saved her at the risk of your life, and have been terribly burned and injured! Anything to serve her. Even in little things that was so sweet. How you would watch her, spaniel-like,

to anticipate her slightest wish! How proud you were to do her bidding! How delightful it was to be ordered about by her! To devote your whole life to her and to never think of yourself seemed such a simple thing. You would go without a holiday to lay a humble offering at her shrine, and felt more than repaid if she only deigned to accept it. How precious to you was everything that she had hallowed by her touch—her little glove, the ribbon she had worn, the rose that had nestled in her hair and whose withered leaves still mark the poems you never care to look at now.

And oh, how beautiful she was, how wondrous beautiful! It was as some angel entering the room, and all else became plain and earthly. She was too sacred to be touched. It seemed almost presumption to gaze at her. You would as soon have thought of kissing her as of singing comic songs in a cathedral. It was desecration enough to kneel and timidly raise the gracious little hand to your lips.

Ah, those foolish days, those foolish days when we were unselfish and pure-minded; those foolish days when our simple hearts were full of truth, and faith, and reverence! Ah, those foolish days of noble longings and of noble strivings! And oh, these wise, clever days when we know that money is the only prize worth striving for, when we believe in nothing else but meanness and lies, when we care for no living creature but ourselves!

ON BEING IN THE BLUES.

I can enjoy feeling melancholy, and there

is a good deal of satisfaction about being thoroughly miserable; but nobody likes a flt of the blues. Nevertheless, everybody has them; notwithstanding which, nobody can tell why. There is no accounting for them. You are just as likely to have one on the day after you have come into a large fortune as on the day after you have left your new silk umbrella in the train. Its effect upon you is somewhat similar to what would probably be produced by a combined attack of toothache, indigestion, and cold in the head. You become stupid, restless, and irritable; rude to strangers and dangerous toward your friends; clumsy, maudlin, and quarrelsome; a nuisance to yourself and everybody about you.

While it is on you can do nothing and think of nothing, though feeling at the time bound to do something. You can't sit still, so put on your hat and go for a walk; but before you get to the corner of the street you wish you hadn't come out and you turn back. You open a book and try to read, but you find Shakespeare trite and commonplace, Dickens is dull and prosy, Thackeray a bore, and Carlyle too sentimental. You throw the book aside and call the author names. Then you "shoo" the cat out of the room and kick the door to after her. You think you will write your letters, but after sticking at "Dearest Auntie: I find I have five minutes to spare, and so hasten to write to you," for a quarter of an hour, without being able to think of another sentence, you tumble the paper into the desk, fling the wet pen down upon the table-cloth, and start up

with the resolution of going to see the Thompsons. While pulling on your gloves, however, it occurs to you that the Thompsons are idiots; that they never have supper; and that you will be expected to jump the baby. You curse the Thompsons and decide not to go.

By this time you feel completely crushed. You bury your face in your hands and think you would like to die and go to heaven. You picture to yourself your own sick-bed, with all your friends and relations standing round you weeping. You bless them all, especially the young and pretty ones. They will value you when you are gone, so you say to yourself, and learn too late what they have lost; and you bitterly contrast their presumed regard for you then with their decided want of veneration now.

These reflections make you feel a little more cheerful, but only for a brief period; for the next moment you think what a fool you must be to imagine for an instant that anybody would be sorry at anything that might happen to you. Who would care two straws (whatever precise amount of care two straws may represent) whether you are blown up, or hung up, or married, or drowned? Nobody cares for you. You never have been properly appreciated, never met with your due deserts in any one particular. You review the whole of your past life, and it is painfully apparent that you have been ill-used from your cradle.

Half an hour's indulgence in these considerations works you up into a state of savage fury against everybody and everything, especially

yourself, whom anatomical reasons alone prevent your kicking. Bed-time at last comes, to save you from doing something rash, and you spring upstairs, throw off your clothes, leaving them strewn all over the room, blow out the candle, and jump into bed as if you had backed yourself for a heavy wager to do the whole thing against time. There you toss and tumble about for a couple of hours or so, varying the monotony by occasionally jerking the clothes off and getting out and putting them on again. At length you drop into an uneasy and fitful slumber, have had dreams, and wake up late the next morning.

At least, this is all we poor single men can do under the circumstances. Married men bully their wives, grumble at the dinner, and insist on the children's going to bed. All of which, creating as it does, a good deal of disturbance in the house, must be a great relief to the feelings of a man in the blues, rows being the only form of amusement in which he can take any interest.

The symptoms of the infirmity are much the same in every case, but the affliction itself is variously termed. The poet says that "a feeling of sadness comes o'er me." 'Arry refers to the heavings of his wayward heart by confiding to Jimmie that he has "got the blooming hump." Your sister doesn't know what is the matter with her tonight. She feels out of sorts altogether and hopes nothing is going to happen. The every-day young man is "so awful glad to meet you, old fellow," for he does "feel so jolly miserable this evening." As for my-

self, I generally say that "I have a strange, unsettled feeling tonight" and "think I'll go out."

By the way, it never does come except in the evening. In the sun-time, when the world is bounding forward full of life, we cannot stay to sigh and sulk. The roar of the working day drowns the voices of the elfin sprites that are ever singing their low-toned *miserere* in our ears. In the day we are angry, disappointed, or indignant, but never "in the blues" and never melancholy. When things go wrong at ten o'clock in the morning we—or rather you—swear and knock the furniture about! but if the misfortune comes at ten p. m., we read poetry or sit in the dark and think what a hollow world this is.

But, as a rule, it is not trouble that makes us melancholy. The actuality is too stern a thing for sentiment. We linger to weep over a picture, but from the original we should quickly turn our eyes away. There is no pathos in real misery: no luxury in real grief. We do not toy with sharp swords nor hug a gnawing fox to our breast for choice. When a man or woman loves to brood over a sorrow and takes care to keep it green in their memory, you may be sure it is no longer a pain to them. However they may have suffered from it at first, the recollection has become by then a pleasure. Many dear old ladies who daily look at tiny shoes lying in lavender-scented drawers, and weep as they think of the tiny feet whose toddling march is done, and sweet-faced young ones who place each night beneath their pillow

some lock that once curled on a boyish head that the salt waves have kissed to death, will call me a nasty cynical brute and say 'I'm talking nonsense; but I believe, nevertheless, that if they will ask themselves truthfully whether they find it unpleasant to dwell thus on their sorrow, they will be compelled to answer "No." Tears are as sweet as laughter to some natures. The proverbial Englishman, we know from old chronicler Froissart, takes his pleasure sadly, and the Englishwoman goes a step further and takes her pleasures in sadness itself.

I am not sneering. I would not for a moment sneer at anything that helps to keep hearts tender in this hard old world. We men are cold and common-sensed enough for all; we would not have women the same. No, no, ladies dear, be always sentimental and soft-hearted, as you are—be the soothing butter to our coarse dry bread. Besides, sentiment is to women what fun is to us. They do not care for our humor, surely it would be unfair to deny them their grief. And who shall say that their mode of enjoyment is not as sensible as ours? Why assume that a doubled-up body, a contorted, purple face, and a gaping mouth, emitting a series of ear-splitting shrieks points to a state of more intelligent happiness than a pensive face reposing upon a little white hand, and a pair of gentle tear-dimmed eyes looking back through Time's dark avenue upon a fading past?

I am glad when I see Regret walked with as a friend—glad because I know the saltiness has

been washed from out the tears, and that the sting must have been plucked from the beautiful face of Sorrow ere we dare press her pale lips to ours. Time has laid his healing hand upon the wound when we can look back upon the pain we once fainted under and no bitterness or despair rises in our hearts. The burden is no longer heavy when we have for our past troubles only the same sweet mingling of pleasure and pity that we feel when old knight-hearted Colonel Newcome answers "*adsum*" to the great roll-call, or when Tom and Maggie Tulliver, clasping hands through the mists that have divided them, go down, locked in each other's arms, beneath the swollen waters of the Floss.

Talking of poor Tom and Maggie Tulliver brings to my mind a saying of George Eliot's in connection with this subject of melancholy. She speaks somewhere of the "sadness of a summer's evening." How wonderfully true—like everything that came from that wonderful pen—the observation is! Who has not felt the sorrowful enchantment of those lingering sunsets? The world belongs to Melancholy then, a thoughtful deep-eyed maiden who loves not the glare of day. It is not till "light thickens and the crow wings to the rocky wood" that she steals forth from her groves. Her palace is in twilight land. It is there she meets us, At her shadowy gate she takes our hand in hers and walks beside us through her mystic realm. We see no form, but seem to hear the rustling of her wings.

Even in the toiling hum-drum city her spirit

comes to us. There is a somber presence in each long, dull street; and the dark river creeps ghost-like under the black arches, as if bearing some hidden secret beneath its muddy waves.

In the silent country, when the trees and hedges loom dim and blurred against the rising night, and the bat's wing flutters in our face, and the landrail's cry sounds drearily across the fields, the spell sinks deeper still into our hearts. We seem in that hour to be standing by some unseen death-bed, and in the swaying of the elms we hear the sigh of the dying day.

A solemn sadness reigns. A great peace is around us. In its light our cares of the working day grow small and trivial, and bread and cheese—ay, and even kisses—do not seem the only things worth striving for. Thoughts we cannot speak but only listen to flood in upon us, and standing in the stillness under earth's darkening dome, we feel that we are greater than our petty lives. Hung round with those dusky curtains, the world is no longer a mere dingy workshop, but a stately temple wherein man may worship, and where at times in the dimness his groping hands touch God's.

ON BEING HARD UP.

It is a most remarkable thing. I sat down with the full intention of writing something clever and original; but for the life of me I can't think of anything clever and original—at least, not at this moment. The only thing I can think about now is being hard up. I suppose having my hands in my pockets has

made me think about this. I always do sit with my hands in my pockets except when I am in the company of my sisters, my cousins, or my aunts; and they kick up such a shindy—I should say expostulate so eloquently upon the subject—that I have to give in and take them out—my hands I mean. The chorus to their objections is that it is not gentlemanly. I am hanged if I can see why. I could understand its not being considered gentlemanly to put your hands in other people's pockets (especially by the other people), but how, O ye sticklers for what looks this and what looks that, can putting his hands in his own pockets make a man less gentle? Perhaps you are right, though. Now I come to think of it, I have heard some people grumble most savagely when doing it. But they were mostly old gentlemen. We young fellows, as a rule, are never quite at ease unless we have our hands in our pockets. We are awkward and shift. We are like what a music-hall Lion Comique would be without his opera-hat, if such a thing can be imagined. But let us put our hands in our trousers pockets, and let there be some small change in the right-hand one and a bunch of keys in the left, and we will face a female post-office clerk.

It is a little difficult to know what to do with your hands, even in your pockets, when there is nothing else there. Years ago, when my whole capital would occasionally come down to "what in town the people call a bob," I would recklessly spend a penny of it, merely for the sake of having the change, all in cop-

pers, to jingle. You don't feel nearly so hard up with eleven pence in your pocket as you do with a shilling. Had I been "La-di-da," that impecunious youth about whom we superior folk are so sarcastic, I would have changed my penny for two ha-pennies.

I can speak with authority on the subject of being hard up. I have been a provincial actor. If further evidence be required, which I do not think likely, I can add that I have been a "gentleman connected with the press." I have lived on 15 shilling a week. I have lived a week on 10, owing the other 5; and I have lived for a fortnight on a great-coat.

It is wonderful what an insight into domestic economy being really hard up gives me. If you want to find out the value of money, live on 15 shillings a week and see how much you can put by for clothes and recreation. You will find out that it is worth while to wait for the farthing change, that it is worth while to walk a mile to save a penny, that a glass of beer is a luxury to be indulged in only at rare intervals, and that a collar can be worn for four days.

Try it just before you get married. It will be excellent practice. Let your son and heir try it before sending him to college. He won't grumble at a hundred a year pocket-money then. There are some people to whom it would do a world of good. There is that delicate blossom who can't drink any claret under ninety-four, and who would as soon think of dining off cat's meat as off plain roast mutton. You do come across these poor wretches now and

then, though, to the credit of humanity, they are principally confined to that fearful and wonderful society known only to lady novelists. I never heard of one of these creatures discussing a *menu* card but I feel a mad desire to drag him off to the bar of some common east-end public-house and cram a sixpenny dinner down his throat—beef-steak pudding, fourpence; potatoes, a penny; half a pint of porter, a penny. The recollection of it (and the mingled fragrance of beer, tobacco, and roast pork generally leaves a vivid impression) might induce him to turn up his nose a little less frequently in the future at everything that is put before him. Then there is that generous party, the cadger's delight, who is so free with his small change, but who never thinks of paying his debts. It might teach even him a little common sense. "I always give the waiter a shilling. One can't give the fellow less, you know," explained a young government clerk with whom I was lunching the other day in Regent Street. I agreed with him as to the utter impossibility of making it elevenpence ha'penny, but at the same time I resolved to one day decoy him to an eating-house I remembered near Covent Garden, where the waiter, for the better discharge of his duties, goes about in his shirt-sleeves—and very dirty sleeves they are, too, when it gets near the end of the month. I know that waiter. If my friend gives him anything beyond a penny, the man will insist on shaking hands with him then and there as a mark of his esteem; of that I feel sure.

There have been a good many funny things said and written about hardupishness, but the reality is not funny, for all that. It is not funny to have to haggle over pennies. It isn't funny to be thought mean and stingy. It isn't funny to be shabby and to be ashamed of your address. No, there is nothing at all funny in poverty—to the poor. It is hell upon earth to a sensitive man; and many a brave gentleman who would have faced the labors of Hercules has had his heart broken by its petty miseries.

It is not the actual discomforts themselves that are hard to bear. Who would mind roughing it a bit if that were all it meant? What cared Robinson Crusoe for a patch on his trousers? Did he wear trousers? I forget; or did he go about as he does in the pantomimes? What did it matter to him if his toes did stick out of his boots? and what if his umbrella was a cotton one, so long as it kept the rain off? His shabbiness did not trouble him; there was none of his friends round about to sneer him.

Being poor is a mere trifle. It is being known to be poor that is the sting. It is not cold that makes a man without a great-coat hurry along so quickly. It is not all shame at telling lies—which he knows will not be believed—that makes him turn so red when he informs you that he considers great-coats unhealthy and never carries an umbrella on principle. It is easy enough to say that poverty is no crime. No; if it were men wouldn't be ashamed of it. It's a blunder, though, and is punished as such. A poor man is despised the whole world over; despised as much by a Chris-

tian as by a lord, as much by a demagogue as by a footman, and not all the copy-book maxims ever set for ink stained youth will make him respected. Appearances are everything, so far as human opinion goes, and the man who will walk down Piccadilly arm in arm with the most notorious scamp in London, provided he is a well-dressed one, will slink up a back street to say a couple of words to a seedy-looking gentleman. And the seedy-looking gentleman knows this—no one better—and will go a mile round to avoid meeting an acquaintance. Those that knew him in his prosperity need never trouble themselves to look the other way. He is a thousand times more anxious that they should not see him than they can be; and as to their assistance, there is nothing he dreads more than the offer of it. All he wants is to be forgotten; and in this respect he is generally fortunate enough to get what he wants.

One becomes used to being hard up, as one becomes used to everything else, by the help of that wonderful old homeopathic doctor, Time. You can tell at a glance the difference between the old hand and the novice; between the case-hardened man who has been used to shift and struggle for years and the poor devil of a beginner striving to hide his misery, and in a constant agony of fear lest he should be found out. Nothing shows this difference more clearly than the way in which each will pawn his watch. As the poet says somewhere: "True ease in pawning comes from art, not chance." The one goes into his "uncle's" with as much composure as he would into his tailor's

—very likely with more. The assistant is even civil and attends to him at once, to the great indignation of the lady in the next box, who, however, sarcastically observes that she don't mind being kept waiting "if it is a regular customer." Why, from the pleasant and business-like manner in which the transaction is carried out, it might be a large purchase in the three per cents. Yet what a piece of work a man makes of his first "pop." A boy popping his first question is confidence itself compared with him. He hangs about outside the shop until he has succeeded in attracting the attention of all the loafers in the neighborhood and has aroused strong suspicions in the mind of the policeman on the beat. At last, after a careful examination of the contents of the windows, made for the purpose of impressing the by-standers with the notion that he is going into purchase a diamond bracelet or some such trifle, he enters, trying to do so with a careless swagger, and giving himself really the air of a member of the swell mob. When inside he speaks in so low a voice as to be perfectly inaudible, and has to say it all over again. When, in the course of his rambling conversation about a "friend" of his, the word "lend" is reached, he is promptly told to go up the court on the right and take the first door round the corner. He comes out of the shop with a face that you could easily light a cigarette at, and firmly under the impression that the whole population of the district is watching him. When he does get to the right place he has forgotten his name and address and is

in a general condition of hopeless imbecility. Asked in a severe tone how he came by "this," he stammers and contradicts himself, and it is only a miracle if he does not confess to having stolen it that very day. He is thereupon informed that they don't want anything to do with his sort, and that he had better get out of this as quickly as possible, which he does, recollecting nothing more until he finds himself three miles off, without the slightest knowledge how he got there.

By the way, how awkward it is, though, having to depend on public-houses and churches for the time. The former are generally too fast and the latter too slow. Besides which, your efforts to get a glimpse of the public-house clock from the outside are attended with great difficulties. If you gently push the swing-door ajar and peer in you draw upon yourself the contemptuous looks of the barmaid, who at once puts you down in the same category with area sneaks and cadgers. You also create a certain amount of agitation among the married portion of the customers. You don't see the clock because it is behind the door; and in trying to withdraw quietly you jam your head. The only other method is to jump up and down outside the window. After this latter proceeding, however, if you do not bring out a banjo and commence to sing, the youthful inhabitants of the neighborhood, who have gathered round in expectation, become disappointed.

I should like to know, too, by what mysterious law of nature it is that before you have

left your watch "to be repaired" half an hour, some one is sure to stop you in the street and conspicuously ask you the time. Nobody even feels the slightest curiosity on the subject when you've got it on.

Dear old ladies and gentlemen who know nothing about being hard up—and may they never, bless their gray old heads—look upon the pawn-shop as the last stage of degradation; but those who know it better (and my readers have, no doubt, noticed this themselves) are often surprised, like the little boy who dreamed he went to heaven, at meeting so many people there that they never expected to see. For my part, I think it a much more independent course than borrowing from friends, and I always try to impress this upon those of my acquaintance who incline toward "wanting a couple of pounds till the day after to-morrow." But they won't all see it. One of them once remarked that he objected to the principle of the thing. I fancy if he had said it was the interest that he objected to he would have been nearer the truth: twenty-five per cent. certainly does come heavy.

There are degrees in being hard up. We are all hard up, more or less—most of us more. Some are hard up for a thousand pounds; some for a shilling. Just at this moment I am hard up myself for a fiver. I only want it for a day or two. I should be certain of paying it back within a week at the outside, and if any lady or gentleman among my readers would kindly lend it me, I should be very much obliged indeed. They could send it to me under cover

to Messrs. Field & Tuer, only, in such case, please let the envelope be carefully sealed. I would give you my I.O.U. as security.

ON VANITY AND VANITIES.

All is vanity and everybody's vain. Women are terribly vain. So are men—more so, if possible. So are children, particularly children. One of them at this very moment is hammering upon my legs. She wants to know what I think of her new shoes. Candidly I don't think much of them. They lack symmetry and curve and possess an indescribable appearance of lumpiness (I believe, too, they've put them on the wrong feet). But I don't say this. It is not criticism, but flattery that she wants; and I gush over them with what I feel to myself to be degrading effusiveness. Nothing else would satisfy this self-opinionated cherub. I tried the conscientious-friend dodge with her on one occasion, but it was not a success. She had requested my judgment upon her general conduct and behavior, the exact case submitted being, "Wot oo tink of me? Oo peased wi me?" and I had thought it a good opportunity to make a few salutary remarks upon her late moral career, and said: "No, I am not pleased with you." I recalled to her mind the events of that very morning, and I put it to her how she, as a Christian child, could expect a wise and good uncle to be satisfied with the carryings on of an infant who that very day had roused the whole house at five a. m.; had upset a water-jug and tumbled downstairs after it at seven; had endeavored to put the cat in the

bath at eight; and sat on her own father's hat at nine thirty-five.

What did she do? Was she grateful to me for my plain speaking? Did she ponder upon my words and determine to profit by them and to lead from that hour a better and nobler life!

No! she howled.

That done, she became abusive. She said:

"Oo naughty—oo naughty, bad unkie—oo bad man—me tell MAR."

And she did, too.

Since then, when my views have been called for I have kept my real sentiments to myself like, preferring to express unbounded admiration of this young person's actions, irrespective of their actual merits. And she nods her head approvingly and trots off to advertise my opinion to the rest of the household. She appears to employ it as a sort of testimonial for mercenary purposes, for I subsequently hear distant sounds of "Unkie says me dood dirl—me dot to have two bikkies [biscuits]."

There she goes, now, gazing rapturously at her own toes and murmuring "pittie"—two-foot-ten of conceit and vanity, to say nothing of other wickednesses.

They are all alike. I remember sitting in a garden one sunny afternoon in the suburbs of London. Suddenly I heard a shrill treble voice calling from a top-story window to some unseen being, presumably in one of the other gardens, "Gamma, me dood boy, me wery dood boy, gamma; me dot on Bob's knickiebockies."

Why, even animals are vain. I saw a great Newfoundland dog the other day sitting in

front of a mirror at the entrance to a shop in Regent's Circus and examining himself with an amount of smug satisfaction that I have never seen equaled elsewhere outside a vestry meeting.

I was at a farm-house once when some high holiday was being celebrated. I don't remember what the occasion was, but it was something festive, a May Day or Quarter Day, or something of that sort, and they put a garland of flowers round the head of one of the cows. Well, that absurd quadruped went about all day as perky as a school-girl in a new frock; and when they took the wreath off she became quite sulky, and they had to put it on again before she would stand still to be milked. This is not a Percy anecdote. It is plain, sober truth.

As for cats, they nearly equal human beings for vanity. I have known a cat get up and walk out of the room on a remark derogatory to her species being made by a visitor, while a neatly turned compliment will set them purring for an hour.

I do like cats. They are so unconsciously amusing. There is such a comic dignity about them, such a "How dare you!" "Go away, don't touch me" sort of air. Now, there is nothing haughty about a dog. They are "Hail, fellow, well met" with every Tom, Dick and Harry that they come across. When I meet a dog of my acquaintance I slap his head, call him opprobrious epithets, and roll him over on his back; and there he lies, gaping at me, and doesn't mind it a bit.

Fancy carrying on like that with a cat! Why, she would never speak to you again as long as you lived. No, when you want to win the approbation of a cat you must mind what you are about and work your way carefully. If you don't know the cat, you had best begin by saying, "Poor pussy." After which add "did 'ums" in a tone of soothing sympathy. You don't know what you mean any more than the cat does, but the sentiment seems to imply a proper spirit on your part, and generally touches her feelings to such an extent that if you are of good manners and passable appearance she will stick her back up and rub her nose against you. Matters having reached this stage, you may chuck her under the chin and tickle the side of her head, and the intelligent creature will then stick her claws into your legs; and all is friendship and affection, as so sweetly expressed in the beautiful lines—

"I love little pussy, her coat is so warm,
And if I don't tease her she'll do me no harm;
So I'll stroke her, and pat her, and feed her
with food,

And pussy will love me because I am good."

The last two lines of the stanza give us a pretty true insight into pussy's notions of human goodness. It is evident that in her opinion goodness consists of stroking her, and patting her, and feeding her with food. I fear this narrow-minded view of virtue, though, is not confined to pussies. We are all inclined to adopt a similar standard of merit in our estimate of other people. A good man is a man who is good to us, and a bad man is a man who doesn't do what we want him to. The

truth is, we each of us have an inborn conviction that the whole world, with everybody in it, was created as a sort of necessary appendage to ourselves. Our fellow men and women were made to admire us and to minister to our various requirements. You and I, dear reader, are each the center of the universe in our respective opinions. You, as I understand it, were brought into being by a considerate Providence in order that you might read and pay me for what I write; while I, in your opinion, am an article sent into the world to write something for you to read. The stars—as we term the myriad other worlds that are rushing down beside us through the eternal silence—were put into the heavens to make the sky look interesting for us at night; and the moon with its dark mysteries and ever-hidden face is an arrangement for us to flirt under.

I fear we are most of us like Mrs. Poyser's bantam cock, who fancied the sun got up every morning to hear him crow. "'Tis vanity that makes the world go round." I don't believe any man ever existed without vanity, and if he did he would be an extremely uncomfortable person to have anything to do with. He would, of course, be a very good man, and we should respect him very much. He would be a very admirable man—a man to be put under a glass case and shown round as a specimen—a man to be stuck upon a pedestal and copied, like a school exercise—a man to be revered, but not a man to be loved, not a human brother whose hand we should care to grip. Angels may be very excellent sort of folk in their way,

but we, poor mortals, in our present state, would probably find them precious slow company. Even mere good people are rather depressing. It is in our faults and failings, not in our virtues, that we touch one another and find sympathy. We differ widely enough in our nobler qualities. It is in our follies that we are at one. Some of us are pious, some of us are generous. Some few of us are honest, comparatively speaking; and some, fewer still, may possibly be truthful. But in vanity and kindred weaknesses we can all join hands. Vanity is one of those touches of nature that make the whole world kin. From the Indian hunter, proud of his belt of scalps, to the European general, swelling beneath his row of stars and medals; from the Chinese, gleeful at the length of his pigtail, to the "professional beauty," suffering tortures in order that her waist may resemble a peg-top; from the draggled-tailed little Polly Stiggins, strutting through Seven Dials with a tattered parasol over her head, to the princess sweeping through a drawing-room with a train of four yards long; from 'Arry, winning by vulgar chaff the loud laughter of his pals, to the statesman whose ears are tickled by the cheers that greet his high-sounding periods; from the dark-skinned African, bartering his rare oils and ivory for a few glass beads to hang about his neck, to the Christian maiden selling her white body for a score of tiny stones and an empty title to tack before her name—all march, and fight, and bleed, and die beneath its tawdry flag.

Ay, ay, vanity is truly the motive-power that

moves humanity, and it is flattery that greases the wheels. If you want to win affection and respect in this world, you must flatter people. Flatter high and low, and rich and poor, and silly and wise. You will get on famously. Praise this man's virtues and that man's vices. Compliment everybody upon everything, and especially upon what they haven't got. Admire guys for their beauty, fools for their wit, and boors for their breeding. Your discernment and intelligence will be extolled to the skies.

Every one can be got over by flattery. The belted earl—"belted earl" is the correct phrase, I believe. I don't know what it means, unless it be an earl that wears a belt instead of braces. Some men do. I don't like it myself. You have to keep the thing so tight for it to be of any use, and that is uncomfortable. Anyhow, whatever particular kind of an earl a belted earl may be, he is, I assert, get-overable by flattery; just as every other human being is, from a duchess to a cat's-meat man, from a plowboy to a poet—and the poet far easier than the plowboy, for butter sinks better into wheaten bread than into oaten cakes.

As for love, flattery is its very life-blood. Fill a person with love for themselves, and what runs over will be your share, says a certain witty and truthful Frenchman whose name I can't for the life of me remember. (Confound it! I never can remember names when I want to.) Tell a girl she is an angel, only more angelic than an angel; that she is a goddess, only more graceful, queenly, and heavenly than

the average goddess; that she is more fairy-like than Titania, more beautiful than Venus, more enchanting than Parthenope; more adorable, lovely, radiant, in short, than any other woman that ever did live, does live, or could live, and you will make a very favorable impression upon her trusting little heart. Sweet innocent! she will believe every word you say. It is so easy to deceive a woman—in this way.

Dear little souls, they hate flattery, so they tell you; and when you say, "Ah, darling, it isn't flattery in your case, it's plain, sober truth; you really are, without exaggeration, the most beautiful, the most good, the most charming, the most divine, the most perfect human creature that ever trod this earth," they will smile a quiet, approving smile, and, leaning against your manly shoulder, murmur that you are a dear good fellow after all.

By Jove! fancy a man trying to make love on strictly truthful principles, determining never to utter a word of mere compliment or hyperbole, but to scrupulously confine himself to exact fact! Fancy his gazing rapturously into his mistress' eyes and whispering softly to her that she wasn't, on the whole, bad-looking, as girls went! Fancy his holding up her little hand and assuring her that it was of a light drab color shot with red; and telling her as he pressed her to his heart that her nose, for a turned-up one, seemed rather pretty; and that her eyes appeared to him, as far as he could judge, to be quite up to the average standard of such things!

A nice chance he would stand against the

man who would tell her that her face was like a fresh blush rose; that her hair was a wandering sunbeam imprisoned by her smiles, and her eyes like two evening stars.

There are various ways of flattering, and, of course, you must adapt your style to your subject. Some people like it laid on with a trowel, and this requires very little art. With sensible persons, however, it needs to be done very delicately, and more by suggestion than actual words. A good many like it wrapped up in the form of an insult, as—"Oh, you are a perfect fool, you are. You would give your last sixpence to the first hungry-looking beggar you met;" while others will swallow it only when administered through the medium of a third person, so that if C wishes to get at an A of this sort, he must confide to A's particular friend B that he thinks A a splendid fellow, and beg him, B, not to mention it, especially to A. Be careful that B is a reliable man, though, otherwise he won't.

Those fine, sturdy John Bulls who "hate flattery, sir," "Never let anybody get over me by flattery," etc., etc., are very simply managed. Flatter them upon their absence of vanity, and you can do what you like with them.

After all, vanity is as much a virtue as a vice. It is easy to recite copy-book maxims against its sinfulness, but it is a passion that can move us to good as well as to evil. Ambition is only vanity ennobled. We want to win praise and admiration—or fame as we prefer to name it—and so we write great books, and paint grand pictures, and sing sweet songs;

and toil with willing hands in study, loom, and laboratory.

We wish to become rich men, not in order to enjoy ease and comfort—all that any one man can taste of those may be purchased anywhere for £200 per annum—but that our houses may be bigger and more gaudily furnished than our neighbors'; that our horses and servants may be more numerous; that we may dress our wives and daughters in absurd but expensive clothes; and that we may give costly dinners of which we ourselves individually do not eat a shilling's worth. And to do this we aid the world's work with clear and busy brain, spreading commerce among its peoples, carrying civilization to its remotest corners.

Do not let us abuse vanity, therefore. Rather let us use it. Honor itself is but the highest form of vanity. The instinct is not confined solely to Beau Brummels and Dolly Vardens. There is the vanity of the peacock and the vanity of the eagle. Snobs are vain. But so, too, are heroes. Come, oh! my young brother bucks, let us be vain together. Let us join hands and help each other to increase our vanity. Let us be vain, not of our trousers and hair, but of brave hearts and working hands, of truth, of purity, of nobility. Let us be too vain to stoop to aught that is mean or base, too vain for petty selfishness and little-minded envy, too vain to say an unkind word or do an unkind act. Let us be vain of being single-hearted, upright gentlemen in the midst of a world of knaves. Let us pride ourselves upon thinking high thoughts, achieving great deeds, living good lives.

ON GETTING ON IN THE WORLD.

Not exactly the sort of thing for an idle fellow to think about, is it? But outsiders, you know, often see most of the game; and sitting in my arbor by the wayside, smoking my hookah of contentment and eating the sweet lotus-leaves of indolence, I can look out musingly upon the whirling throng that rolls and tumbles past me on the great highroad of life.

Never-ending is the wild procession. Day and night you can hear the quick tramp of the myriad feet—some running, some walking, some halting and lame; but all hastening, all eager in the feverish race, all straining life and limb and heart and soul to reach the ever-receding horizon of success.

Mark them as they surge along—men and women, old and young, gentle and simple, fair and foul, rich and poor, merry and sad—all hurrying, bustling, scrambling. The strong pushing aside the weak, the cunning creeping past the foolish; those behind elbowing those before; those in front kicking, as they run, at those behind. Look close and see the flitting show. Here is an old man panting for breath, and there a timid maiden driven by a hard and sharp-faced matron; here is a studious youth, reading "How to Get On in the World" and letting everybody pass him as he stumbles along with his eyes on his book; here is a bored-looking man, with a fashionably dressed woman jogging his elbow; here a boy gazing wistfully back at the sunny village that he never again will see; here, with a firm and easy step,

strides a broad-shouldered man; and here, with stealthy tread, a thin-faced, stooping fellow dodges and shuffles upon his way; here, with gaze fixed always on the ground, an artful rogue carefully works his way from side to side of the road and thinks he is going forward; and here a youth with a noble face stands, hesitating as he looks from the distant goal to the mud beneath his feet.

And now into sight comes a fair girl, with her dainty face growing more wrinkled at every step, and now a care-worn man, and now a hopeful lad.

A mosley throng—a motley throng! Prince and beggar, sinner and saint, butcher and baker and candlestick maker, tinkers and tailors, and plowboys and sailors—all jostling along together. Here the counsel in his wig and gown, and here the old Jew clothes-man under his dingy tiara; here the soldier in his scarlet, and here the undertaker's mute in streaming hat-band and worn cotton gloves; here the musty scholar fumbling his faded leaves, and here the scented actor dangling his showy seals. Here the glib politician crying his legislative panaceas, and here the peripatetic Cheap-Jack holding aloft his quack cures for human ills. Here the sleek capitalist and there the sinewy laborer; here the man of science and here the shoe-black; here the poet and here the water-rate collector; here the cabinet minister and there the ballet dancer. Here a red-nosed publican shouting the praises of his vats and there a temperance lecturer at £50 a night; here a judge and there a swindler; here a priest and

there a gambler. Here a jeweled duchess, smiling and gracious; here a thin lodging-house keeper, irritable with cooking; and here a wabbling, strutting thing, tawdry in paint and finery.

Cheek by cheek they struggle onward. Screaming, cursing, and praying, laughing, singing, and moaning, they rush past side by side. Their speed never slackens, the race never ends. There is no wayside rest for them, no halt by cooling fountains, no pause beneath green shades. On, on, on—on through the heat and the crowd and the dust—on, or they will be trampled down and lost—on, with throbbing brain and tottering limbs—on, till the heart grows sick, and the eyes grow blurred, and a gurgling sound tells those behind they may close up another space.

And yet, in spite of the killing pace and the stony track, who but the sluggard or the dolt can hold aloof from the course? Who—like the belated traveler that stands watching fairy revels till he snatches and drains the goblin cup and springs into the whirling circle—can view the mad tumult and not be drawn into its midst? Not I for one. I confess to the wayside arbor, the pipe of contentment, and the lotus-leaves being altogether unsuitable metaphors. They sounde' very nice and philosophical, but I'm afraid I am not the sort of person to sit in arbors smoking pipes when there is any fun going on outside. I think I more resemble the Irishman who, seeing a crowd collecting, sent his little girl out to ask

if there was going to be a row—" 'Cos, if so, father would like to be in it."

I love the fierce strife. I like to watch it. I like to hear of people getting on in it—battling their way bravely and fairly—that is, not slipping through by luck or trickery. It stirs one's old Saxon fighting blood like the tales of "knights who fought 'gainst fearful odds" that thrilled us in our school-boy days.

And fighting the battle of life is fighting against fearful odds, too. There are giants and dragons in this nineteenth century, and the golden casket that they guard is not so easy to win as it appears in the story-books. There, Algernon takes one long, last look at the ancestral hall, dashes the tear-drop from his eye, and goes off—to return in three years' time, rolling in riches. The authors do not tell us "how it's done," which is a pity, for it would surely prove exciting.

But then not one novelist in a thousand ever does tell us the real story of their hero. They linger for a dozen pages over a tea-party, but sum up a life's history with "he had become one of our merchant princes," or "he was now a great artist, with the world at his feet." Why, there is more real life in one of Gilbert's patter-songs than in half the biographical novels ever written. He relates to us all the various steps by which his office-boy rose to be the "ruler of the queen's navee," and explains to us how the briefless barrister managed to become a great and good judge, "ready to try this breach of promise of marriage." It is in

the petty details, not in the great results, that the interest of existence lies.

What we really want is a novel showing us all the hidden under-current of an ambitious man's career—his struggles, and failures, and hopes, his disappointments and victories. It would be an immense success. I am sure the wooing of Fortune would prove quite as interesting a tale as the wooing of any flesh-and-blood maiden, though, by the way, it would read extremely similar; for Fortune is, indeed, as the ancients painted her, very like a woman not quite so unreasonable and inconsistent, but nearly so—and the pursuit is much the same in one case as in the other. Ben Johnson's couplet—

"Court a mistress, she denies you;
Let her alone, she will court you"—

puts them both in a nutshell. A woman never thoroughly cares for her lover until he has ceased to care for her; and it is not until you have snapped your fingers in Fortune's face and turned on your heel that she begins to smile upon you.

But by that time you do not much care whether she smiles or frowns. Why could she not have smiled when her smiles would have filled you with ecstasy? Everything comes too late in this world.

Good people say that it is quite right and proper that it should be so, and that it proves ambition is wicked.

Bosh! Good people are altogether wrong. (They always are, in my opinion. We never agree on any single point.) What would the

world do without ambitious people, I should like to know? Why, it would be as flabby as a Norfolk dumpling. Ambitious people are the leaven which raises it into wholesome bread. Without ambitious people the world would never get up. They are busybodies who are about early in the morning, hammering, shouting, and rattling the fire-irons, and rendering it generally impossible for the rest of the house to remain in bed.

Wrong to be ambitious, forsooth! The men wrong who, with bent back and sweating brow, cut the smooth road over which humanity marches forward from generation to generation! Men wrong for using the talents that their Master has intrusted to them—for toiling while others play!

Of course they are seeking their reward. Man is not given that god-like unselfishness that thinks only of others' good. But in working for themselves they are working for us all. We are so bound together that no man can labor for himself alone. Each blow he strikes in his own behalf helps to mold the universe. The stream in struggling onward turns the mill-wheel; the coral insect, fashioning its tiny cell, joins continents to one another; and the ambitious man, building a pedestal for himself, leaves a monument to posterity. Alexander and Caesar fought for their own ends, but in doing so they put a belt of civilization half round the earth. Stephenson, to win a fortune, invented the steam-engine; and Shakespeare wrote his plays in order to keep a com-

fortable home for Mrs. Shakespeare and the little Shakespeares.

Contented, unambitious people are all very well in their way. They form a neat, useful background for great portraits to be painted against, and they make a respectable, if not particularly intelligent, audience for the active spirits of the age to play before. I have not a word to say against contented people so long as they keep quiet. But do not, for goodness' sake, let them go strutting about, as they are so fond of doing, crying out that they are the true models for the whole species. Why, they are the deadheads, the drones in the great hive, the street crowds that lounge about, gaping at those who are working.

And let them not imagine, either—as they are also fond of doing—that they are very wise and philosophical and that it is a very artful thing to be contented. It may be true that “a contented mind is happy anywhere,” but so is a Jerusalem pony, and the consequence is that both are put anywhere and are treated anyhow. “Oh, you need not bother about him,” is what is said; “he is very contented as he is, and it would be a pity to disturb him.” And so your contented party is passed over and the discontented man gets his place.

If you are foolish enough to be contented, don't show it, but grumble with the rest; and if you can do with a little, ask for a great deal. Because if you don't you won't get any. In this world it is necessary to adopt the principle pursued by the plaintiff in an action for damages, and to demand ten times more than

you are ready to accept. If you can feel satisfied with a hundred, begin by insisting on a thousand; if you start by suggesting a hundred you will only get ten.

It was not following this simple plan that poor Jean Jacques Rousseau came to such grief. He fixed the summit of his earthly bliss at living in an orchard with an amiable woman and a cow, and he never attained even that. He did get as far as the orchard, but the woman was not amiable, and she brought her mother with her, and there was no cow. Now, if he had made up his mind for a large country estate, a houseful of angels, and a cattle-show, he might have lived to possess his kitchen garden and one head of live-stock, and even possibly have come across that "rara-avis"—a really amiable woman.

What a terribly dull affair, too, life must be for contented people! How heavy the time must hang upon their hands, and what on earth do they occupy their thoughts with, supposing that they have any? Reading the paper and smoking seems to be the intellectual food of the majority of them, to which the more energetic add playing the flute and talking about the affairs of the next-door neighbor.

They never knew the excitement of expectation nor the stern delight of accomplished effort, such as stir the pulse of the man who has objects, and hopes, and plans. To the ambitious man life is a brilliant game—a game that calls forth all his tact and energy and nerve—a game to be won, in the long run, by the quick eye and the steady hand, and yet having

sufficient chance about its working out to give it all the glorious zest of uncertainty. He exults in it as the strong swimmer in the heaving billows, as the athlete in the wrestle, the soldier in the battle.

And if he be defeated he wins the grim joy of fighting; if he lose the race, he, at least, has had a run. Better to work and fail than to sleep one's life away.

So, walk up, walk up, walk up. Walk up, ladies and gentlemen! Walk up, boys and girls! Show your skill and try your strength; brave your luck and prove your pluck. Walk up! The show is never closed and the game is always going. The only genuine sport in all the fair, gentlemen—highly respectable and strictly moral—patronized by the nobility, clergy, and gentry. Established in the year one, gentlemen, and been flourishing ever since—walk up! Walk up, ladies and gentlemen, and take a hand. There are prizes for all and all can play. There is gold for the man and fame for the boy; rank for the maiden and pleasure for the fool. So walk up, ladies and gentlemen, walk up!—all prizes and no blanks; for some few win, and as to the rest, why—

“The rapture of pursuing
Is the prize the vanquished gain.”

ON THE WEATHER.

Things do go so contrary-like with me. I wanted to hit upon an especially novel, out-of-the-way subject for one of these articles. “I will write one paper about something alto-

gether new," I said to myself; "something that nobody else has ever written or talked about before; and then I can have it all my own way." And I went about for days, trying to think of something of this kind; and I couldn't. And Mrs. Cutting, our charwoman, came yesterday—I don't mind mentioning her name, because I know she will not see this book. She would not look at such a frivolous publication. She never reads anything but the Bible and *Lloyd's Weekly News*. All other literature she considers unnecessary and sinful.

She said: "Lor', sir, you do look worried."

I said: "Mrs. Cutting, I am trying to think of a subject the discussion of which will come upon the world in the nature of a startler—some subject upon which no previous human being has ever said a word—some subject that will attract by its novelty, invigorate by its surprising freshness."

She laughed and said I was a funny gentleman.

That's my luck again. When I make serious observations people chuckle! when I attempt a joke nobody sees it. I had a beautiful one last week. I thought it so good, and I worked it up and brought it in artfully at a dinner-party. I forget how exactly, but we had been talking about the attitude of Shakespeare toward the Reformation, and I said something and immediately added, "Ah, that reminds me; such a funny thing happened the other day in Whitechapel." "Oh," said they, "what was that?" "Oh, 'twas awfully funny," I replied,

beginning to giggle myself; "it will make you roar;" and I told it them.

There was dead silence when I finished—it was one of those long jokes, too—and then, at last, somebody said: "And that was the joke?"

I assured them that it was, and they were very polite and took my word for it. All but one old gentleman at the other end of the table, who wanted to know which was the joke—what he said to her or what she said to him; and we argued it out.

Some people are too much the other way. I knew a fellow once whose natural tendency to laugh at everything was so strong that if you wanted to talk seriously to him, you had to explain before-hand that what you were going to say would not be amusing. Unless you got him to clearly understand this, he would go off into fits of merriment over every word you uttered. I have known him on being asked the time stop short in the middle of the road, slap his leg, and burst into a roar of laughter. One never dared say anything really funny to that man. A good joke would have killed him on the spot.

In the present instance I vehemently repudiated the accusation of frivolity, and pressed Mrs. Cutting for practical ideas. She then became thoughtful and hazarded "samplers;" saying that she never heard them spoken much of now, but that they used to be all the rage when she was a girl.

I declined samplers and begged her to think again. She pondered a long while, with a teatray in her hands, and at last suggested the

weather, which she was sure had been most trying of late.

And ever since that idiotic suggestion I have been unable to get the weather out of my thoughts or anything else in.

It certainly is most wretched weather. At all events it is so now at the time I am writing, and if it isn't particularly unpleasant when I come to be read it soon will be.

It always is wretched weather according to us. The weather is like the government—always in the wrong. In summer-time we say it is stifling; in winter that it is killing; in spring and autumn we find fault with it for being neither one thing nor the other and wish it would make up its mind. If it is fine we say the country is being ruined for want of rain; if it does rain we pray for fine weather. If December passes without snow, we indignantly demand to know what has become of our good old-fashioned winters, and talk as if we had been cheated out of something, we had bought and paid for; and when it does snow, our language is a disgrace to a Christian nation. We shall never be content until each man makes his own weather and keeps it to himself.

If that cannot be arranged, we would rather do without it altogether.

Yet I think it is only to us in cities that all weather is so unwelcome. In her own home, the country, Nature is sweet in all her moods. What can be more beautiful than the snow, falling big with mystery in silent softness, decking the fields and trees with white as if

for a fairy wedding! And how delightful is a walk when the frozen ground rings beneath our swinging tread—when our blood tingles in the rare keen air, and the sheep-dogs' distant bark and children's laughter peals faintly clear like Alpine bells across the open hills! And then skating! scudding with wings of steel across the swaying ice, making whirring music as we fly. And oh, how dainty is spring—Nature at sweet eighteen! When the little hopeful leaves peep out so fresh and green, so pure and bright, like young lives pushing shyly out into the bustling world; when the fruit-tree blossoms, pink and white, like village maidens in their Sunday frocks, hide each white-washed cottage in a cloud of fragile splendor; and the cuckoo's note upon the breeze is wafted through the woods! And summer, with its deep dark green and drowsy hum—when the rain-drops whisper solemn secrets to the listening leaves and the twilight lingers in the lanes! And autumn! ah, how sadly fair, with its golden glow and the dying grandeur of its tinted woods—its blood-red sunsets and its ghostly evening mists, with its busy murmur of reapers, and its laden orchards, and the calling of the gleaners, and the festivals of praise!

The very rain, and sleet, and hail seem only Nature's useful servants when found doing their simple duties in the country; and the East Wind himself is nothing worse than a boisterous friend when we meet him between the hedge-rows.

But in the city where the painted stucco blisters under the smoky sun, and the sooty rain

brings slush and mud, and the snow lies piled in dirty heaps, and the chill blasts whistle down dingy streets and shriek round flaring gas lit corners, no face of Nature charms. Weather in towns is like a skylark in a counting-house—out of place and in the way. Towns ought to be covered in, warmed by hot-water pipes, and lighted by electricity. The weather is a country lass, and does not appear to advantage in town. We liked well enough to flirt with her in the hay-field, but she does not seem so fascinating when we meet her in Pall Mall. There is too much of her there. The frank, free laugh and hearty voice that sounded so pleasant in the dairy jars against the artificiality of town-bred life, and her ways become exceedingly trying.

Just lately she has been favoring us with almost incessant rain for about three weeks; and I am a demned damp, moist, unpleasant body, as Mr. Mantalini puts it.

Our next-door neighbor comes out in the back garden every now and then and says it's doing the country a world of good—not his coming out into the back garden, but the weather. He doesn't understand anything about it, but ever since he started a cucumber-frame last summer he has regarded himself in the light of an agriculturist, and talks in this absurd way with the idea of impressing the rest of the terrace with the notion that he is a retired farmer. I can only hope that for this once he is correct, and that the weather really is doing good to something, because it is doing me a considerable amount of damage. It is spoiling

both my clothes and my temper. The latter I can afford, as I have a good supply of it, but it wounds me to the quick to see my dear old hats and trousers sinking, prematurely worn and aged, beneath the cold world's blasts and snows.

There is my new spring suit, too. A beautiful suit it was, and now it is hanging up so bespattered with mud I can't bear to look at it.

That was Jim's fault, that was. I should never have gone out in it that night if it had not been for him. I was just trying it on when he came in. He threw up his arms with a wild yell the moment he caught sight of it, and exclaimed that he had "got 'em again!"

I said: "Does it fit all right behind?"

"Spiffin, old man," he replied. And then he wanted to know if I was coming out.

I said "no" at first, but he overruled me. He said that a man with a suit like that had no right to stop indoors. "Every citizen," said he, "owes a duty to the public. Each one should contribute to the general happiness as far as lies in his power. Come out and give the girls a treat."

Jim is slangy. I don't know where he picks it up. It certainly is not from me.

I said: "Do you think it will really please 'em?"

He said it would be like a day in the country to them.

That decided me. It was a lovely evening and I went.

When I got home I undressed and rubbed

myself down with whisky, put my feet in hot water and a mustard plaster on my chest, had a basin of gruel and a glass of hot brandy-and-water, tallowed my nose, and went to bed.

These prompt and vigorous measures, aided by a naturally strong constitution, were the means of preserving my life; but as for the suit; Well, there, it isn't a suit; it's a splash board.

And I did fancy that suit, too. But that's just the way. I never do get particularly fond of anything in this world but what something dreadful happens to it. I had a tame rat when I was a boy, and I loved that animal as only a boy would love an old water-rat; and one day it fell into a large dish of gooseberry-fool that was standing to cool in the kitchen, and nobody knew what had become of the poor creature until the second helping.

I do hate wet weather in town. At least, it is not so much the wet as the mud that I object to. Somehow or other I seem to possess an irresistible, alluring power over mud. I have only to show myself in the street on a muddy day to be half-smothered by it. It all comes of being so attractive, as the old lady said when she was struck by lightning. Other people can go out on dirty days and walk about for hours without getting a speck upon themselves; while if I go across the road I come back a perfect disgrace to be seen (as in my boyish days my poor dear mother used often to tell me). If there was only one dab of mud to be found, I am convinced I should carry it off from all competitors.

I wish I could return the affection, but I fear that I never shall be able to. I have a hororr of what they call the "London particular." I feel miserable and muggy all through a dirty day, and it is quite a relief to pull one's clothes off and get into bed, out of the way of it all. Everything goes wrong in wet weather. I don't know how it is, but there always seem to me to be more people, and dogs, and perambulators, and cabs, and carts about in wet weather than at any other time, and they all get in your way more, and everybody is so disagreeable—except myself—and it does make me so wild. And then, too, somehow I always find myself carrying more things in wet weather than in dry; and when you have a bag, and three parcels, and a newspaper, and it suddenly comes on to rain, you can't open your umbrella.

Which reminds me of another phase of the weather that I can't bear, and that is April weather (so called because it always comes in May). Poets think it very nice. As it does not know its own mind five minutes together, they liken it to a woman; and it is supposed to be very charming on that account. I don't appreciate it, myself. Such lightning-change business may be all very agreeable in a girl. It is no doubt highly delightful to have to do with a person who grins one moment about nothing at all, and snivels the next for precisely the same cause, and who then giggles, and then sulks, and who is rude, and affectionate, and bad-tempered, and jolly, and boisterous, and silent, and passionate, and cold, and stand-

offish, and flopping, all in one minute (mind, I don't say this. It is those poets. And they are supposed to be connoisseurs of this sort of thing); but in the weather the disadvantages of the system are more apparent. A woman's tears do not make one wet, but the rain does; and her coldness does not lay the foundations of asthma and rheumatism, as the east wind is apt to. I can prepare for and put up with a regularly bad day, but these ha'porth-of-all-sorts kind of days do not suit me. It aggravates me to see a bright blue sky above me when I am walking along wet through, and there is something so exasperating about the way the sun comes out smiling after a drenching shower; and seems to say: "Lord love you, you don't mean to say you're wet? Well, I am surprised. Why, it was only my fun."

They don't give you time to open or shut your umbrella in an English April, especially if it is an "automaton" one—the umbrella, I mean, not the April.

I bought an "automaton" once in April, and I did have a time with it! I wanted an umbrella, and I went into a shop in the Strand and told them so, and they said:

"Yes, sir. What sort of an umbrella would you like?"

I said I should like one that would keep the rain off, and that would not allow itself to be left behind in a railway carriage.

"Try an 'automaton'?" said the shopman.

"What's an 'automaton'?" said I.

"Oh, it's a beautiful arrangement," replied

the man, with a touch of enthusiasm. "It opens and shuts itself."

I bought one and found that he was quite correct. It did open and shut itself. I had no control over it whatever. When it began to rain, which it did that season every alternate five minutes, I used to try and get the machine to open, but it would not budge; and then I used to stand and struggle with the wretched thing, shake it, and swear at it, while the rain poured down in torrents. Then the moment the rain ceased the absurd thing would go up suddenly with a jerk and would not come down again; and I had to walk about under a bright blue sky, with an umbrella over my head, wishing that it would come on to rain again, so that it might not seem that I was insane.

When it did shut it did so unexpectedly and knocked one's hat off.

I don't know why it should be so, but it is an undeniable fact that there is nothing makes a man look so supremely ridiculous as losing his hat. The feeling of helpless misery that shoots down one's back on suddenly becoming aware that one's head is bare is among the most bitter ills that flesh is heir to. And then there is the wild chase after it, accompanied by an excitable small dog, who thinks it is a game, and in the course of which you are certain to upset three or four innocent children—to say nothing of their mothers—butt a fat old gentleman onto the top of a perambulator, and carom off a ladies' seminary into the arms of a wet sweep. After this, the idiotic hilarity of the spectators and the disreputable appearance of

the hat when recovered appear but of minor importance.

Altogether, what between March winds, April showers, and the entire absence of May flowers, spring is not a success in cities. It is all very well in the country, as I have said, but in towns whose population is anything over ten thousand it most certainly ought to be abolished. In the world's grim workshops it is like the children—out of place. Neither shows to advantage amid the dust and din. It seems so sad to see the little dirt-grimed brats trying to play in the noisy courts and muddy streets. Poor little uncared-for, unwanted human atoms, they are not children. Children are bright-eyed, chubby, and shy. These are dingy, screeching elves, their tiny faces seared and withered, their baby laughter cracked and hoarse.

The spring of life and the spring of the year were alike meant to be cradled in the green lap of nature. To us in the town spring brings but its cold winds and drizzling rains. We must seek it among the leafless woods and the brambly lanes, on the heathy moors and the great still hills, if we want to feel its joyous breath and hear its silent voices. There is a glorious freshness in the spring there. The scurrying clouds, the open bleakness, the rushing wind, and the clear bright air thrill one with vague energies and hopes. Life, like the landscape around us, seems bigger, and wider, and freer—a rainbow road leading to unknown ends. Through the silvery rents that bar the sky we seem to catch a glimpse of the great

hope and grandeur that lies around this little throbbing world, and a breath of its scent is wafted us on the wings of the wild March wind.

Strange thoughts we do not understand are stirring in our hearts. Voices are calling us to some great effort, to some mighty work. But we do not comprehend their meaning yet, and the hidden echoes within us that would reply are struggling, inarticulate and dumb.

We stretch our hands like children to the light, seeking to grasp we know not what. Our thoughts, like the boys' thoughts in the Danish song, are very long, long thoughts, and very vague; we cannot see their end.

It must be so. All thoughts that peer outside this narrow world cannot be else than dim and shapeless. The thoughts that we can clearly grasp are very little thoughts—that two and two make four—that when we are hungry it is pleasant to eat—that honesty is the best policy; all greater thoughts are undefined and vast to our poor childish brains. We see but dimly through the mists that roll around our time-girt isle of life, and only hear the distant surging of the great sea beyond.

ON CATS AND DOGS.

What I've suffered from them this morning no tongue can tell. It began with Gustavus Adolphus. Gustavus Adolphus (they call him "Gusty" downstairs for short) is a very good sort of dog when he is in the middle of a large field or on a fairly extensive common, but I won't have him indoors. He means well, but

this house is not his size. He stretches himself, and over go two chairs and a what-not. He wags his tail, and the room looks as if a devastating army had marched through it. He breathes, and it puts the fire out.

At dinner time he creeps in under the table, lies there for awhile, and then gets up suddenly; the first intimation we have of his movements being given by the table, which appears animated by a desire to turn somersaults. We all clutch at it frantically and endeavor to maintain it in a horizontal position; whereupon his struggles, he being under the impression that some wicked conspiracy is being hatched against him, become fearful, and the final picture presented is generally that of an overturned table and a smashed-up dinner sandwiched between two sprawling layers of infuriated men and women.

He came in this morning in his usual style, which he appears to have founded on that of an American cyclone, and the first thing he did was to sweep my coffee-cup off the table with his tail, sending the contents full into the middle of my waistcoat.

I rose from my chair hurriedly, and remarking "——," approached him at a rapid rate. He preceded me in the direction of the door. At the door he met Eliza coming in with eggs. Eliza observed "Ugh!" and sat down on the floor, the eggs took up different positions about the carpet, where they spread themselves out, and Gustavus Adolphus left the room. I called after him, strongly advising him to go straight down stairs and not let me see him again for

the next hour or so; and he, seeming to agree with me, dodged the coal-scoop and went, while I returned, dried myself, and finished breakfast. I made sure that he had gone into the yard, but when I looked into the passage ten minutes later he was sitting at the top of the stairs. I ordered him down at once, but he only barked and jumped about, so I went to see what was the matter.

It was Tittums. She was sitting on the top stair but one and wouldn't let him pass.

Tittums is our kitten. She is about the size of a penny roll. Her back was up and she was swearing like a medical student.

She does swear fearfully. I do a little that way myself sometimes, but I am a mere amateur compared with her. To tell you the truth—mind, this is strictly between ourselves, please; I shouldn't like your wife to know I said it—the women folk don't understand these things; but between you and me, you know, I think it does a man good to swear. Swearing is the safety-valve through which the bad temper that might otherwise do serious internal injury to his mental mechanism escapes in harmless vapping. When a man has said: "Bless you, my dear, sweet sir. What the sun, moon, and stars made you so careless (if I may be permitted the expression) as to allow your light and delicate foot to descend upon my corn with so much force? Is it that you are physically incapable of comprehending the direction in which you are proceeding? you nice, clever young man—you!" or words to that effect, he feels better. Swearing has the same

soothing effect upon our angry passions that smashing the furniture or slamming the doors is so well known to exercise; added to which it is much cheaper. Swearing clears a man out like a pen'orth of gunpowder does the wash-house chimney. An occasional explosion is good for both. I rather distrust a man who never swears, or savagely nicks the foot-stool, or pokes the fire with unnecessary violence. Without some outlet, the anger caused by the ever-occurring troubles of life is apt to rankle and fester within. The petty annoyance, instead of being thrown from us, sits down beside us and becomes a sorrow, and the little offense is brooded over till, in the hot-bed of rumination, it grows into a great injury, under whose poisonous shadow springs up hatred and revenge.

Swearing relieves the feelings—that is what swearing does. I explained this to my aunt on one occasion, but it didn't answer with her. She said I had no business to have such feelings.

That is what I told Tittums. I told her she ought to be ashamed of herself, brought up in a Christian family as she was, too. I don't so much mind hearing an old cat swear, but I can't bear to see a mere kitten give way to it. It seems sad in one so young.

I put Tittums in my pocket and returned to my desk. I forgot her for the moment, and when I looked I found that she had squirmed out of my pocket on to the table and was trying to swallow the pen; then she put her leg into the ink-pot and upset it; then she licked

her leg; then she swore again—at me this time.

I put her down on the floor, and there Tim began rowing with her. I do wish Tim would mind his own business. It was no concern of his what she had been doing. Besides, he is not a saint himself. He is only a two-year-old fox-terrier, and he interferes with everything and gives himself the airs of a gray-headed Scotch collie.

Tittums' mother has come in and Tim has got his nose scratched, for which I am remarkably glad. I have put them all three out in the passage, where they are fighting at the present moment. I'm in a mess with the ink and in a thundering bad temper; and if anything more in the cat or dog line comes fooling around me this morning, it had better bring its own funeral contractor with it.

Yet, in general, I like cats and dogs very much indeed. What jolly chaps they are! They are much superior to human beings as companions. They do not quarrel or argue with you. They never talk about themselves, but listen to you while you talk about yourself, and keep up an appearance of being interested in the conversation. They never make stupid remarks. They never observe to Miss Brown across a dinner table that they always understood she was very sweet on Mr. Jones (who has just married Miss Robinson). They never mistake your wife's cousin for her husband and fancy that you are the father-in-law. And they never ask a young author with fourteen tragedies, sixteen comedies, seven farces, and a cou-

ple of burlesques in his desk why he doesn't write a play.

They never say unkind things. They never tell us of our faults, "merely for our own good." They do not at inconvenient moments mildly remind us of our past follies and mistakes. They do not say, "Oh, yes, a lot of use you are if you are ever really wanted"—sarcastic like. They never inform us, like our *inamoratas* sometimes do, that we are not nearly so nice as we used to be. We are always the same to them.

They are always glad to see us. They are with us in all our humors. They are merry when we are glad, sober when we feel solemn, and sad when we are sorrowful.

"Halloo! happy and want a lark? Right you are; I'm your man. Here I am, frisking round you, leaping, barking, pirouetting, ready for any amount of fun and mischief. Look at my eyes if you doubt me. What shall it be? A romp in the drawing-room and never mind the furniture, or a scamper in the fresh, cool air, a scud across the fields and down the hill, and won't we let old Gaffer Goggles' geese know what time o' day it is, neither! Whoop! come along."

Or you'd like to be quiet and think. Very well. Pussy can sit on the arm of the chair and purr, and Montmorency will curl himself up on the rug and blink at the fire, yet keeping one eye on you the while, in case you are seized with any sudden desire in the direction of rats.

And when we bury our face in our hands and wish we had never been born, they don't sit up

very straight and observe that we have brought it all upon ourselves. They don't even hope it will be a warning to us. But they come up softly and shove their heads against us. If it is a cat she stands on your shoulder, rumples your hair, and says, "Lor,' I am sorry for you, old man," as plain as words can speak; and if it is a dog he looks up at you with his big, true eyes and says with them, "Well you've always got me, you know. We'll go through the world together and always stand by each other, won't we?"

He is very imprudent, a dog is. He never makes it his business to inquire whether you are in the right or in the wrong, never bothers as to whether you are going up or down upon life's ladder, never asks whether you are rich or poor, silly or wise, sinner or saint. You are his pal. That is enough for him, and come luck or misfortune, good repute or bad, honor or shame, he is going to stick to you, to comfort you, guard you, and give his life for you if need be—foolish, brainless, soulless dog!

Ah! old stanch friend, with your deep, clear eyes and bright, quick glances, that take in all one has to say before one has time to speak it, do you know you are only an animal and have no mind? Do you know that that dull-eyed, gin-sodden lout leaning against the post out there is immeasurably your intellectual superior? Do you know that every little-minded, selfish scoundrel who lives by cheating and tricking, who never did a gentle deed or said a kind word, who never had a thought that was not mean and low or a desire that was not base,

whose every action is a fraud, whose every utterance is a lie—do you know that these crawling skulks (and there are millions of them in the world), do you know they are all as much superior to you as the sun is superior to rushlight, you honorable, brave-hearted, unselfish brute? They are men, you know, and men are the greatest, and noblest, and wisest, and best beings in the whole vast eternal universe. Any man will tell you that.

Yes, poor doggie, you are very stupid, very stupid indeed, compared with us clever men, who understand all about politics and philosophy, and who know everything, in short, except what we are and where we came from and whither we are going, and what everything outside this tiny world and most things in it are.

Never mind, though, pussy and doggie, we like you both all the better for your being stupid. We all like stupid things. Men can't bear clever women, and a woman's ideal man is some one she can call a "dear old stupid." It is so pleasant to come across people more stupid than ourselves. We love them at once for being so. The world must be rather a rough place for clever people. Ordinary folk dislike them, and as for themselves, they hate each other most cordially.

But there, the clever people are such a very insignificant minority that it really doesn't much matter if they are unhappy. So long as the foolish people can be made comfortable the world, as a whole will get on tolerably well.

Cats have the credit for being more worldly

wise than dogs—of looking more after their own interests and being less blindly devoted to those of their friends. And we men and women are naturally shocked at such selfishness. Cats certainly do love a family that has a carpet in the kitchen more than a family that has not; and if there are many children about, they prefer to spend their leisure time next door. But, taken altogether, cats are libeled. Make a friend of one, and she will stick to you through thick and thin. All the cats that I have had have been most firm comrades. I had a cat once that used to follow me about everywhere, until it even got quite embarrassing, and I had to beg her, as a personal favor, not to accompany me any further down the High Street. She used to sit up for me when I was late home and meet me in the passage. It made me feel quite like a married man, except that she never asked me where I had been and then didn't believe me when I told her.

Another cat I had used to get drunk regularly every day. She would hang about for hours outside the cellar door for the purpose of sneaking in on the first opportunity and lapping up the drippings from the beer-cask. I do not mention this habit of hers in praise of the species, but merely to show how almost human some of them are. If the transmigration of souls is a fact, this animal was certainly qualifying most rapidly for a Christian, for her vanity was only second to her love of drink. Whenever she caught a particularly big rat, she would bring it up into the room where we were all sitting, lay the corpse down in the

midst of us, and wait to be praised. Lord! how the girls used to scream.

Poor rats! They seem only to exist so that cats and dogs may gain credit for killing them and chemists make a fortune by inventing specialties in poison for their destruction. And yet there is something fascinating about them. They are so cunning and strong, so terrible in their numbers, so cruel, so secret. They swarm in deserted houses, where the broken casements hang rotting to the crumbling walls and the doors swing creaking on their rusty hinges. They know the sinking ship and leave her, no one knows how or whither. They whisper to each other in their hiding-places how a doom will fall upon the hall and the great name die forgotten. They do fearful deeds in ghastly charnel-houses.

No tale of horror is complete without the rats. In stories of ghosts and murderers they scamper through the echoing rooms, and the gnawing of their teeth is heard behind the wainscot, and their gleaming eyes peer through the holes in the worm-eaten tapestry, and they scream in shrill, unearthly notes in the dead of night, while the moaning wind sweeps, sobbing, round the ruined turret towers, and passes wailing like a woman through the chambers bare and tenantless.

And dying prisoners, in their loathsome dungeons, see through the horrid gloom their small red eyes, like glittering coals, hear in the death-like silence the rush of their claw-like feet, and start up shrieking in the darkness and watch through the awful night.

I love to read tales about rats. They make my flesh creep so. I like that tale of Bishop Hatto and the rats. The wicked bishop, you know, had ever so much corn stored in his granaries and would not let the starving people touch it, but when they prayed to him for food gathered themselves together in his barn, and then shutting the doors on them, set fire to the place and burned them all to death. But next day there came thousands upon thousands of rats, sent to do judgment on him. Then Bishop Hatto fled to his strong tower that stood in the middle of the Rhine, and barred himself in and fancied he was safe. But the rats! they swam the river, they gnawed their way through the thick stone walls, and ate him alive where he sat.

"They have whetted their teeth against the stones,

And now they pick the bishop's bones;

They gnawed the flesh from every limb,

For they were sent to do judgment on him."

Oh, it's a lovely tale.

Then there is the story of the Pied Pieper of Hamelin, how first he piped the rats away and afterward, when the mayor broke faith with him, drew all the children along with him and went into the mountain. What a curious old legend that is! I wonder what it means, or has it any meaning at all? There seems something strange and deep lying hid beneath the rippling rhyme. It haunts me, that picture of the quaint, mysterious old piper piping through Hamelin's narrow streets, and the children following with dancing feet and thoughtful eager faces. The old folks try to stay them, but

the children pay no heed. They hear the weird, witched music and must follow. The games are left unfinished and the playthings drop from their careless hands. They know not whither they are hastening. The mystic music calls to them, and they follow, heedless and unasking where. It stirs and vibrates in their hearts and other sounds grow faint. So they wander through Pied Pieper Street away from Hamelin town.

I get thinking sometimes if the Pied Piper is really dead, or if he may not still be roaming up and down our streets and lanes, but playing now so softly that only the children hear him. Why do the little faces look so grave and solemn when they pause awhile from romping, and stand, deep wrapt, with straining eyes? They only shake their curly heads and dart back laughing to their playmates when we question them. But I fancy myself they have been listening to the magic music of the old Pied Piper, and perhaps with those bright eyes of theirs have even seen his odd, fantastic figure gliding unnoticed through the whirl and throng.

Even we grown-up children hear his piping now and then. But the yearning notes are very far away, and the noisy, blustering world is always bellowing so loud it drowns the dream-like melody. One day the sweet, sad strains will sound out full and clear, and then we too shall, like the little children, throw our playthings all aside and follow. The loving hands will be stretched out to stay us, and the voices we have learned to listen for will cry

to us to stop. But we shall push the bond arms gently back and pass out through the sorrowing house and through the open door. For the wild, strange music will be ringing in our hearts, and we shall know the meaning of its song by then.

I wish people could love animals without getting maudlin over them, as so many do. Women are the most hardened offenders in such respects, but even our intellectual sex often degrade pets into nuisances by absurd idolatry. There are the gushing young ladies who, having read "David Copperfield," have thereupon sought out a small, long-haired dog of nondescript breed, possessed of an irritating habit of criticising a man's trousers, and of finally commenting upon the same by a sniff indicative of contempt and disgust. They talk sweet girlish prattle to this animal (when there is any one near enough to overhear them), and they kiss its nose, and put its unwashed head up against their cheek in a most touching manner; though I have noticed that these caresses are principally performed when there are young men hanging about.

Then there are the old ladies who worship a fat poodle, scant of breath and full of fleas. I knew a couple of elderly spinsters once who had a sort of German sausage on legs which they called a dog between them. They used to wash its face with warm water every morning. It had a mutton cutlet regularly for breakfast; and on Sundays, when one of the ladies went to church, the other always stopped at home to keep the dog company.

There are many families where the whole interest of life is centered upon the dog. Cats, by the way, rarely suffer from excess of adulation. A cat possesses a very fair sense of the ridiculous, and will put her paw down kindly but firmly upon any nonsense of this kind. Dogs, however, seem to like it. They encourage their owners in the tomfoolery, and the consequence is that in the circles I am speaking of what "dear Fido" has done, does do, will do, won't do, can do, can't do, was doing, is doing, is going to do, shall do, shan't do, and is about to be going to have done is the continual theme of discussion from morning till night.

All the conversation, consisting, as it does, of the very dregs of imbecility, is addressed to this confounded animal. The family sit in a row all day long, watching him, commenting upon his actions, telling each other anecdotes about him, recalling his virtues, and remembering with tears how one day they lost him for two whole hours, on which occasion he was brought home in a most brutal manner by the butcher-boy, who had been met carrying him by the scruff of his neck with one hand, while soundly cuffing his head with the other.

After recovering from these bitter recollections, they vie with each other in bursts of admiration for the brute, until some more than usually enthusiastic member, unable any longer to control his feelings, swoops down upon it. Whereupon the others, mad with envy, the unhappy quadruped in a frenzy of affection, clutches it to his heart, and slobbers over

rise up, and seizing as much of the dog as the greed of the first one has left to them, murmur praise and devotion.

Among these people everything is done through the dog. If you want to make love to the eldest daughter, or get the old man to lend you the garden roller, or the mother to subscribe to the Society for the Suppression of Solo-Cornet Players in Theatrical Orchestras (it's a pity there isn't one, anyhow), you have to begin with the dog. You must gain its approbation before they will even listen to you, and if, as highly probable, the animal, whose frank, doggy nature has been warped by the unnatural treatment he has received, responds to your overtures of friendship by viciously snapping at you, your cause is lost forever.

"If Fido won't take to any one," the father has thoughtfully remarked beforehand, "I say that man is not to be trusted. You know, Maria, how often I have said that. Ah! he knows, bless him."

Drat him!

And to think that the surly brute was once an innocent puppy, all legs and head, full of fun and play, and burning with ambition to become a big, good dog and bark like mother.

Ah me! life sadly changes us all. The world seems a vast horrible grinding machine, into which what is fresh and bright and pure is pushed at one end, to come out old and crabbed and wrinkled at the other.

Look even at Pussy Sobersides, with her dull sleepy glance, her grave, slow walk, and dignified, prudish airs; who could ever think that

once she was the blue-eyed whirling, scampering, head-over-heels, mad little firework that we call a kitten?

What marvelous vitality a kitten has. It is really something very beautiful the way life bubbles over in the little creatures. They rush about, and mew, and spring; dance on their hind legs, embrace everything with their front ones, roll over and over, lie on their backs and kick. They don't know what to do with themselves, they are so full of life.

Can you remember, reader, when you and I felt something of the same sort of thing? Can you remember those glorious days of fresh young manhood—how, when coming home along the moonlit road, we felt too full of life for sober walking, and had to spring and skip, and wave our arms, and shout till belated farmers' wives thought—and with good reason, too—that we were mad, and kent close to the hedge, while we stood and laughed aloud to see them scuttle off so fast, and made their blood run cold with a wild parting whoop, and the tears came, we knew not why? Oh, that magnificent young *life*! that crowned us kings of the earth; that rushed through every tingling vein till we seemed to walk on air; that thrilled through our throbbing brains and told us to go forth and conquer the whole world: that welled up in our young hearts till we longed to stretch out our arms and gather all the toiling men and women and the little children to our breast and love them all—all. Ah! they were grand days, those deep, full days, when our coming life, like an unseen organ,

pealed strange, yearnful music in our ears, and our young blood cried out like a war-horse for the battle. Ah, our pulse beats slow and steady now, and our old joints are rheumatic, and we love our easy-chair and pipe and sneer at boys' enthusiasm. But oh for one brief moment of that god-like life again!

ON BEING SHY.

All great literary men are shy. I am myself though I am told it is hardly noticeable.

I am glad it is not. It used to be extremely prominent at one time, and was the cause of much misery to myself and discomfort to every one about me—my lady friends especially complained most bitterly about it.

A shy man's lot is not a happy one. The men dislike him, the women despise him, and he dislikes and despises himself. Use brings him no relief, and there is no cure for him except time; though I once came across a delicious recipe for overcoming the misfortune. It appeared among the "answers to correspondents" in a small weekly journal and ran as follows—I have never forgotten it: "Adopt an easy and pleasing manner, especially toward ladies."

Poor wretch! I can imagine the grin with which he must have read that advice. "Adopt an easy and pleasing manner, especially toward ladies," forsooth! Don't you adopt anything of the kind, my dear young shy friend. Your attempt to put on any other disposition than you own will infallibly result in your becoming ridiculously gushing and offensively familiar.

Be your own natural self, and then you will only be thought to be surly and stupid.

The shy man does have some slight revenge upon society for the torture it inflicts upon him. He is able, to a certain extent, to communicate his misery. He frightens other people as much as they frighten him. He acts like a damper upon the whole room, and the most jovial spirits become in his presence depressed and nervous.

This is a good deal brought about by misunderstanding. Many people mistake the shy man's timidity for overbearing arrogance and are awed and insulted by it. His awkwardness is resented as insolent carelessness, and when, terror-stricken at the first word addressed to him, the blood rushes to his head and the power of speech completely fails him, he is regarded as an awful example of the evil effects of giving way to passion.

But, indeed, to be misunderstood is the shy man's fate on every occasion; and whatever impression he endeavors to create, he is sure to convey its opposite. When he makes a joke, it is looked upon as a pretended relation of fact and his want of veracity much condemned. His sarcasm is accepted as his literal opinion and gains for him the reputation of being an ass, while if, on the other hand, wishing to ingratiate himself, he ventures upon a little bit of flattery, it is taken for satire and he is hated ever afterward.

These and the rest of a shy man's troubles are always very amusing to other people, and have afforded material for comic writing from

time immemorial. But if we look a little deeper we shall find there is a pathetic, one might almost say a tragic, side to the picture. A shy man means a lonely man—a man cut off from all companionship, all sociability. He moves about the world, but does not mix with it. Between him and his fellow-men there runs ever an impassable barrier—a strong, invisible wall that, trying in vain to scale, he but bruises himself against. He sees the pleasant faces and hears the pleasant voices on the other side, but he cannot stretch his hand across to grasp another hand. He stands watching the merry groups, and he longs to speak and to claim kindred with them. But they pass him by chatting gayly to one another, and he cannot stay them. He tries to reach them, but his prison walls move with him and hem him in on every side. In a busy street, in the crowded room, in the grind of work, in the whirl of pleasure, amid the many or amid the few—wherever men congregate together, wherever the music of human speech is heard and human thought is flashed from human eyes, there, shunned and solitary, the shy man, like a leper, stands apart. His soul is full of love and longing, but the world knows it not. The iron mask of shyness is riveted before his face, and the man beneath is never seen. Genial words and hearty greetings are ever rising to his lips, but they die away in unheard whispers behind the steel clamps. His heart aches for the weary brother, but his sympathy is dumb. Contempt and indignation against wrong choke up his throat, and finding no safety-valve

whence in passionate utterance they may burst forth, they only turn in again and harm him. All the hate and scorn and love of a deep nature such as the shy man is ever cursed by fester and corrupt within, instead of spending themselves abroad, and sour him into a misanthrope and cynic.

Yes, shy men, like shy women, have a bad time of it in this world, to go through which with any comfort needs the hide of a rhinoceros. Thick skin is, indeed, our moral clothes and without it we are not fit to be seen about in civilized society. A poor gasping, blushing creature, with trembling knees and twitching hands, is a painful sight to every one, and if it cannot cure itself, the sooner it goes and hangs itself the better.

The disease can be cured. For the comfort of the shy, I can assure them of that from personal experience. I do not like speaking about myself, as may have been noticed, but in the cause of humanity I on this occasion will do so, and will confess that at one time I was, as the young man in the Bab Ballad says, "the shyest of the shy," and "whenever I was introduced to any pretty maid, my knees they knocked together just as if I was afraid." Now, I would—nay, have—on this very day before yesterday I did the deed. Alone and entirely by myself (as the school-boy said in translating the "*Bellum Gallicum*") did I beard a railway refreshment-room young lady in her own lair. I rebuked her in terms of mingled bitterness and sorrow for her callousness and want of condescension. I insisted, courteously but

firmly, on being accorded that deference and attention that was the right of the traveling Briton, and at the end I looked her full in the face. Need I say more?

True, immediately after doing so I left the room with what may possibly have appeared to be precipitation and without waiting for any refreshment. But that was because I had changed my mind, not because I was frightened you understand.

One consolation that shy folk can take unto themselves is that shyness is certainly no sign of stupidity. It is easy enough for bull-headed clowns to sneer at nerves, but the highest natures are not necessarily those containing the greatest amount of moral brass. The horse is not an inferior animal to the cock-sparrow, nor the deer of the forest to the pig. Shyness simply means extreme sensibility, and has nothing whatever to do with self-consciousness or with conceit, though its relationship to both is continually insisted upon by the poll-parrot school of philosophy.

Conceit, indeed, is the quickest cure for it. When it once begins to dawn upon you that you are a good deal cleverer than anyone else in this world, bashfulness becomes shocked and leaves you. When you can look round a roomful of people and think that each one is a mere child in intellect compared with yourself, you feel no more shy of them than you would of a select company of magpies or orang-outangs.

Conceit is the finest armor that a man can wear. Upon its smooth, impenetrable surface the puny dagger-thrusts of spite and envy

glance harmlessly aside. Without that breast-plate the sword of talent cannot force its way through the battle of life, for blows have to be borne as well as dealt. I do not, of course, speak to the conceit that displays itself in an elevated nose and a falsetto voice. That is not real conceit—that is only playing at being conceited; like children play at being kings and queens and go strutting about with feathers and long trains. Genuine conceit does not make a man objectionable. On the contrary, it tends to make him genial, kind-hearted, and simple. He has no need of affectation—he is far too well satisfied with his own character; and his pride is too deep-seated to appear at all on the outside. Careless alike of praise or blame, he can afford to be truthful. Too far, in fancy, above the rest of mankind to trouble about their petty distinctions, he is equally at home with duke or costermonger. And valuing no one's standard but his own, he is never tempted to practice that miserable pretense that less self-reliant people offer up as an hourly sacrifice to the god of their neighbor's opinion.

The shy man, on the other hand, is humble—modest of his own judgment and over-anxious concerning that of others. But this in the case of a young man is surely right enough. His character is unformed. It is slowly evolving itself out of a chaos of doubt and disbelief. Before the growing insight and experience the diffidence recedes. A man rarely carries his shyness past the hobbledehoy period. Even if his own inward strength does not throw it off, the rubbings of the world generally smooth it

down. You scarcely ever meet a really shy man—except in novels or on the stage, where, by the bye, he is much admired, especially by the women.

There, in that supernatural land, he appears as a fair-haired and saint-like young man—fair hair and goodness always go together on the stage. No respectable audience would believe in one without the other. I knew an actor who mislaid his wig once and had to rush on to play the hero in his own hair, which was jet-black, and the gallery howled at all his noble sentiments under the impression that he was the villain. He—the shy young man—loves the heroine, oh so devotedly (but only in asides, for he dare not tell her of it), and he is so noble and unselfish, and speaks in such a low voice, and is so good to his mother; and the bad people in the play, they laugh at him and jeer at him, but he takes it all so gently, and in the end it transpires that he is such a clever man, though nobody knew it, and then the heroine tells him she loves him, and he is so surprised, and oh, so happy! and everybody loves him and asks him to forgive them, which he does in a few well-chosen and sarcastic words, and blesses them; and he seems to have generally such a good time of it that all the young fellows who are not shy long to be shy. But the really shy man knows better. He knows that it is not quite so pleasant in reality. He is not quite so interesting there as in the fiction. He is a little more clumsy and stupid and a little less devoted and gentle, and his hair is much darker, which,

taken altogether, considerably alters the aspect of the case.

The point where he does resemble his ideal is in his faithfulness. I am fully prepared to allow the shy young man that virtue: he is constant in his love. But the reason is not far to seek. The fact is it exhausts all his stock of courage to look one woman in the face, and it would be simply impossible for him to go through the ordeal with a second. He stands in far too much dread of the whole female sex to want to go gadding about with many of them. One is quite enough for him.

Now, it is different with the young man who is not shy. He has temptations which his bashful brother never encounters. He looks around and everywhere sees roguish eyes and laughing lips. What more natural than that amid so many roguish eyes and laughing lips he should become confused and, forgetting for the moment which particular pair of roguish eyes and laughing lips it is that he belongs to, go off making love to the wrong set. The shy man, who never looks at anything but his own boots, sees not and is not tempted. Happy shy man!

Not but what the shy man himself would much rather not be happy in that way. He longs to "go it" with the others, and curses himself every day for not being able to. He will now and again, screwing up his courage by a tremendous effort, plunge into roguishness. But it is always a terrible fiasco, and after one or two feeble flounders he crawls out again, limp and pitiable.

I say "pitiable," though I am afraid he never is pitied. There are certain misfortunes which, while inflicting a vast amount of suffering upon their victims, gain for them no sympathy. Losing an umbrella, falling in love, toothache, black eyes, and having your hat sat upon may be mentioned as a few examples, but the chief of them all is shyness. The shy man is regarded as an animate joke. His tortures are the sport of the drawing room arena and are pointed out and discussed with much gusto.

"Look," cry his tittering audience to each other; "he's blushing!"

"Just watch his legs," says one.

"Do you notice how he is sitting?" adds another: "right on the edge of the chair."

"Seems to have plenty of color," sneers a military-looking gentleman.

"Pity he's got so many hands," murmurs an elderly lady, with her own calmly folded on her lap. "They quite confuse him."

"A yard or two off his feet wouldn't be a disadvantage," chimes in the comic man, "especially as he seems so anxious to hide them."

And then another suggests that with such a voice he ought to have been a sea-captain. Some draw attention to the desperate way in which he is grasping his hat. Some comment upon his limited powers of conversation. Others remark upon the troublesome nature of his cough. And so on, until his peculiarities and the company are both thoroughly exhausted.

His friends and relations make matters still more unpleasant for the poor boy (friends and relations are privileged to be more disagree-

able than other people). Not content with making fun of him among themselves, they insist on his seeing the joke. They mimic and caricature him for his own edification. One, pretending to imitate him, goes outside and comes in again in a ludicrously nervous manner, explaining to him afterward that that is the way he—meaning the shy fellow—walks into a room; or, turning to him with “This is the way you shake hands,” proceeds to go through a comic pantomime with the rest of the room, taking hold of every one’s hand as if it were a hot plate and flabbily dropping it again. And then they ask him why he blushes, and why he stammers and why he always speaks in an almost inaudible tone, as if they thought he did it on purpose. Then one of them, sticking out his chest and strutting about the room like a pouter-pigeon, suggests quite seriously that that is the style he should adopt. The old man slaps him on the back and says: “Be bold, my boy. Don’t be afraid of any one.” The mother says, “Never do anything that you need be ashamed of, Algernon, and then you never need be ashamed of anything you do,” and, beaming mildly at him, seems surprised at the clearness of her own logic. The boys tell him that he’s “worse than a girl,” and the girls repudiate the implied slur upon their sex by indignantly exclaiming that they are sure no girl would be half as bad.

They are quite right; no girl would be. There is no such thing as a shy woman, or, at all events, I have never come across one, and until I do I shall not believe in them. I know

that the generally accepted belief is quite the reverse. All women are supposed to be like timid, startled fawns, blushing and casting down their gentle eyes when looked at and running away when spoken to; while we men are supposed to be a bold and rollicky lot, and the poor, dear little women admire us for it, but are terribly afraid of us. It is a pretty theory, but, like most generally accepted theories, mere nonsense. The girl of twelve is self-contained and as cool as the proverbial cucumber, while her brother of twenty stammers and stutters by her side. A woman will enter a concert-room late, interrupt the performance, and disturb the whole audience without moving a hair, while her husband follows her, a crushed heap of apologizing misery.

The superior nerve of women in all matters connected with love, from the casting of the first sheep's-eye down to the end of the honeymoon, is too well acknowledged to need comment. Nor is the example a fair one to cite in the present instance, the positions not being equally balanced. Love is woman's business, and in "business" we all lay aside our natural weaknesses—the shyest man I ever knew was a photographic tout.

ON BABIES.

Oh, yes, I do—I know a lot about 'em. I was one myself once, though not long—not so long as my clothes. They were very long, I recollect, and always in my way when I wanted to kick. Why do babies have such yards of unnecessary clothing? It is not a riddle. I really

want to know. I never could understand it. Is it that the parents are ashamed of the size of the child and wish to make believe that it is longer than it actually is? I asked a nurse once why it was. She said:

"Lor', sir, they always have long clothes, bless their little hearts."

And when I explained that her answer, although doing credit to her feelings, hardly disposed of my difficulty, she replied:

"Lor', sir, you wouldn't have 'em in short clothes, poor little dears?" And she said it in a tone that seemed to imply I had suggested some unmanly outrage.

Since then I have felt shy at making inquiries on the subject, and the reason—if reason there be—is still a mystery to me. But indeed, putting them in any clothes at all seems absurd to my mind. Goodness knows there is enough of dressing and undressing to be gone through in life without beginning it before we need; and one would think that people who live in bed might at all events be spared the torture. Why wake the poor little wretches up in the morning to take one lot of clothes off, fix another lot on, and put them to bed again, and then at night haul them out once more, merely to change everything back? And when all is done, what difference is there, I should like to know, between a baby's night-shirt and the thing it wears in the day-time?

Very likely, however, I am only making myself ridiculous—I often do, so I am informed—and I will therefore say no more upon this matter of clothes, except only that it would be

of great convenience if some fashion was adopted enabling you to tell a boy from a girl.

At present it is most awkward. Neither hair, dress, nor conversation afford the slightest clew, and you are left to guess. By some mysterious law of nature you invariably guess wrong, and are thereupon regarded by all the relatives and friends as a mixture of fool and knave, the enormity of alluding to a male babe as "she" being only equaled by the atrocity of referring to a female infant as "he." Which-ever sex the particular child in question happens not to belong to is considered as beneath contempt, and any mention of it is taken as a personal insult to the family.

And as you value your fair name do not attempt to get out of the difficulty by talking of "it." There are various methods by which you may achieve ignominy and shame. By murdering a large and respected family in cold blood and afterward depositing their bodies in the water companies' reservoir, you will gain much unpopularity in the neighborhood of your crime, and even robbing a church will get you cordially disliked, especially by the vicar. But if you desire to drain to the dregs the fullest cup of scorn and hatred that a fellow human creature can pour out for you, let a young mother hear you call dear baby "it."

Your best plan is to address the article as "little angel." The noun "angel" being of common gender suits the case admirably, and the epithet is sure of being favorably received. "Pet" or "beauty" are useful for variety's sake, but "angel" is the term that brings you

the greatest credit for sense and good-feeling. The word should be preceded by a short giggle and accompanied by as much smile as possible. And whatever you do, don't forget to say that the child has got its father's nose. This "fetches" the parents (if I may be allowed a vulgarism) more than anything. They will pretend to laugh at the idea at first and will say, "Oh, nonsense!" You must then get excited and insist that it is a fact. You need have no conscientious scruples on the subject, because the thing's nose really does resemble its father's—at all events quite as much as it does anything else in nature—being, as it is, a mere smudge.

Do not despise these hints, my friends. There may come a time when, with mamma on one side and grandmamma on the other, a group of admiring young ladies (not admiring you, though) behind, and a bald-headed dab of humanity in front, you will be extremely thankful for some idea of what to say. A man—an unmarried man, that is—is never seen to such disadvantage as when undergoing the ordeal of "seeing baby." A cold shudder runs down his back at the bare proposal, and the sickly smile with which he says how delighted he shall be ought surely to move even a mother's heart, unless, as I am inclined to believe, the whole proceeding is a mere device adopted by wives to discourage the visits of bachelor friends.

It is a cruel trick, though, whatever its excuse may be. The bell is rung and somebody sent to tell nurse to bring baby down.

This is the signal for all the females present to commence talking "baby," during which time you are left to your own sad thoughts and the speculations upon the practicability of suddenly recollecting an important engagement, and the likelihood of your being believed if you do. Just when you have concocted an absurdly implausible tale about a man outside, the door opens, and a tall, severe-looking woman enters, carrying what at first sight appears to be a particularly skinny bolster, with the feathers all at one end. Instinct, however, tells you that this is the baby, and you rise with a miserable attempt at appearing eager. When the first gush of feminine enthusiasm with which the object in question is received has died out, and the number of ladies talking at once has been reduced to the ordinary four or five, the circle of fluttering petticoats divides, and room is made for you to step forward. This you do with much the same air that you would walk into the dock at Bow Street, and then, feeling unutterably miserable, you stand solemnly staring at the child. There is dead silence, and you know that every one is waiting for you to speak. You try to think of something to say, but find, to your horror, that your reasoning faculties have left you. It is a moment of despair, and your evil genius, seizing the opportunity, suggests to you some of the most idiotic remarks that it is possible for a human being to perpetrate. Glancing round with an imbecile smile, you sniggeringly observe that "it hasn't got much hair, has it?" Nobody answers you

for a minute, but at last the stately nurse says with much gravity: "It is not customary for children five weeks old to have long hair." Another silence follows this, and you feel you are being given a second chance, which you avail yourself of by inquiring if it can walk yet, or what they feed it on.

By this time you have got to be regarded as not quite right in your head, and pity is the only thing felt for you. The nurse, however, is determined that, insane or not, there shall be no shirking and that you shall go through your task to the end. In the tones of a high priestess directing some religious mystery she says, holding the bundle toward you: "Take her in your arms, sir." You are too crushed to offer any resistance and so meekly accept the burden. "Put your arm more down her middle, sir," says the high-priestess, and then all step back and watch you intently as though you are going to do a trick with it.

What to do you know no more than you did what to say. It is certain something must be done, and the only thing that occurs to you is to heave the unhappy infant up and down to the accompaniment of "oopsee-daisy," or some remark of equal intelligence. "I wouldn't jig her, sir, if I were you," says the nurse; "a very little upsets her." You promptly decide not to jig her and sincerely hope that you have not gone too far already.

At this point the child itself, who has hitherto been regarding you with an expression of mingled horror and disgust, puts an end to the nonsense by beginning to yell at the top of

its voice, at which the priestess rushes forward and snatches it from you with "There! there! there! What did ums do to ums?" "How very extraordinary!" you say pleasantly. "Whatever made it go off like that?" "Oh, why, you must have done something to her!" says the mother indignantly; "the child wouldn't scream like that for nothing." It is evident they think you have been running pins into it.

The brat is calmed at last, and would no doubt remain quiet enough, only some mischievous busybody points you out again with "Who's this, baby?" and the intelligent child, recognizing you, howls louder than ever.

Whereupon some fat old lady remarks that "it's strange how children take a dislike to any one." "Oh, they know," replies another mysteriously. "It's a wonderful thing," adds a third; and then everybody looks sideways at you, convinced you are a scoundrel of the blackest dye; and they glory in the beautiful idea that your true character, unguessed by your fellow-men, has been discovered by the untaught instinct of a little child.

Babies, though, with all their crimes and errors, are not without their use—not without use, surely, when they fill an empty heart; not without use when, at their call, sunbeams of love break through care-clouded faces; not without use when their little fingers press wrinkles into smiles.

Odd little people! They are the unconscious comedians of the world's great stage. They supply the humor in life's all-too-heavy drama. Each one, a small but determined opposition

to the order of things in general, is forever doing the wrong thing at the wrong time, in the wrong place and in the wrong way. The nurse-girl who sent Jenny to see what Tommy and Totty were doing and "tell 'em they mustn't" knew infantile nature. Give an average baby a fair chance, and if it doesn't do something it oughtn't to a doctor should be called in at once.

They have a genius for doing the most ridiculous things, and they do them in a grave, stoical manner that is irresistible. The business-like air with which two of them will join hands and proceed due east at a break-neck toddle, while an excitable big sister is roaring for them to follow her in a westerly direction, is most amusing—except, perhaps, for the big sister. They walk round a soldier, staring at his legs with the greatest curiosity, and poke him to see if he is real. They stoutly maintain, against all argument and much to the discomfort of the victim, that the bashful young man at the end of the 'bus is "dadda." A crowded street-corner suggests itself to their minds as a favorable spot for the discussion of family affairs at a shrill treble. When in the middle of crossing the road they are seized with a sudden impulse to dance, and the doorstep of a busy shop is the place they always select for sitting down and taking off their shoes.

When at home they find the biggest walking-stick in the house or an umbrella—open preferred—of much assistance in getting upstairs. They discover that they love Mary Ann at the

precise moment when that faithful domestic is blackleading the stove, and nothing will relieve their feelings but to embrace her then and there. With regard to food, their favorite dishes are coke and cat's meat. They nurse pussy upside down, and they show their affection for the dog by pulling his tail.

They are a deal of trouble, and they make a place untidy and they cost a lot of money to keep; but still you would not have the house without them. It would not be home without their noisy tongues and their mischief-making hands. Would not the rooms seem silent without their pattering feet, and might not you stray apart if no prattling voices called you together?

It should be so, and yet I have sometimes thought the tiny hand seemed as a wedge, dividing. It is a bearish task to quarrel with that purest of all human affections—that perfecting touch to a woman's life—a mother's love. It is a holy love, that we coarser-fibered men can hardly understand, and I would not be deemed to lack reverence for it when I say that surely it need not swallow up all other affection. The baby need not take your whole heart, like the rich man who walled up the desert well. Is there not another thirsty traveler standing by?

In your desire to be a good mother, do not forget to be a good wife. No need for all the thought and care to be only for one. Do not, whenever poor Edwin wants you to come out, answer indignantly, "What, and leave baby!" Do not spend all your evenings upstairs. and

do not confine your conversation exclusively to whooping-cough and measles. My dear little woman, the child is not going to die every time it sneezes, the house is not bound to get burned down and the nurse run away with a soldier every time you go outside the front door; nor the cat sure to come and sit on the precious child's chest the moment you leave the bedside. You worry yourself a good deal too much about that solitary chick, and you worry everybody else too. Try and think of your other duties, and your pretty face will not be always puckered into wrinkles, and there will be cheerfulness in the parlor as well as in the nursery. Think of your big baby a little. Dance him about a bit; call him pretty names; laugh at him now and then. It is only the first baby that takes up the whole of a woman's time. Five or six do not require nearly so much attention as one. But before then the mischief has been done. A house where there seems no room for him and a wife too busy to think of him have lost their hold on that so unreasonable husband of yours, and he has learned to look elsewhere for comfort and companionship.

But there, there, there! I shall get myself the character of a baby-hater if I talk any more in this strain. And Heaven knows I am not one. Who could be, to look into the little innocent faces clustered in timid helplessness round those great gates that open down into the world?

The world—the small round world! what a vast mysterious place it must seem to baby

eyes! What a trackless continent the back garden appears! What marvelous explorations they make in the cellar under the stairs! With what awe they gaze down the long street, wondering, like us bigger babies when we gaze up at the stars, where it all ends!

And down that longest street of all—that long, dim street of life that stretches out before them—what grave, old-fashioned looks they seem to cast! What pitiful, frightened looks sometimes! I saw a little mite sitting on a doorstep in a Soho slum one night, and I shall never forget the look that the gas-lamp showed me on its wizen face—a look of dull despair, as if from the squalid court the vista of its own squalid life had risen, ghost-like, and struck its heart dead with horror.

Poor little feet, just commencing the stony journey! We old travelers, far down the road, can only pause to wave a hand to you. You come out of the dark mist, and we, looking back, see you, so tiny in the distance, standing on the brow of the hill, your arms stretched out toward us. God speed you! We would stay and take your little hands in ours, but the murmur of the great sea is in our ears and we may not linger. We must hasten down, for the shadowy ships are waiting to spread their sable sails.

ON EATING AND DRINKING.

I always was fond of eating and drinking, even as a child—especially eating, in those early days. I had an appetite then, also a digestion. I remember a dull-eyed, livid-complexioned gen-

tleman coming to dine at our house once. He watched me eating for about five minutes, quite fascinated seemingly, and then he turned to my father with—

“Does your boy ever suffer from dyspepsia?”

“I never heard him complain of anything of that kind,” replied my father. “Do you ever suffer from dyspepsia, Collywobbles?” (They called me Collywobbles, but it was not my real name.)

“No, pa,” I answered. After which I added: “What is dyspepsia, pa?”

My livid-complexioned friend regarded me with a look of mingled amazement and envy. Then in a tone of infinite pity he slowly said:

“You will know—some day.”

My poor, dear mother used to say she liked to see me eat, and it has always been a pleasant reflection to me since that I must have given her much gratification in that direction. A growing, healthy lad, taking plenty of exercise and careful to restrain himself from indulging in too much study, can generally satisfy the most exacting expectations as regards his feeding powers.

It is amusing to see boys eat when you have not got to pay for it. Their idea of a square meal is a pound and a half of roast beef with five or six good-sized potatoes (soapy ones preferred as being more substantial), plenty of greens, and four thick slices of Yorkshire pudding, followed by a couple of currant dumplings, a few green apples, a pen'orth of nuts, half a dozen jumbles, and a bottle of ginger-beer. After that they play at horses.

How they must despise us men, who require to sit quiet for a couple of hours after dining off a spoonful of clear soup and the wing of a chicken!

But the boys have not all the advantages on their side. A boy never enjoys the luxury of being satisfied. A boy never feels full. He can never stretch out his legs, put his hands behind his head, and, closing his eyes, sink into the ethereal blissfulness that encompasses the well-dined man. A dinner makes no difference whatever to a boy. To a man it is as a good fairy's potion, and after it the world appears a brighter and a better place. A man who has dined satisfactorily experiences a yearning love toward all his fellow-creatures. He strokes the cat quite gently and calls it "poor pussy," in tones full of the tenderest emotion. He sympathizes with the members of the German band outside and wonders if they are cold; and for the moment he does not even hate his wife's relations.

A good dinner brings out all the softer side of a man. Under its genial influence the gloomy and morose become jovial and chatty. Sour, starchy individuals, who all the rest of the day go about looking as if they lived on vinegar and Epsom salts, break out into wreathed smiles after dinner, and exhibit a tendency to pat small children on the head and to talk to them—vaguely—about sixpences. Serious men thaw and become mildly cheerful, and snobbish young men of the heavy-mustache type forget to make themselves objectionable.

I always feel sentimental myself after dinner.

It is the only time when I can properly appreciate love-stories. Then, when the hero clasps "her" to his heart in one last wild embrace and stifles a sob, I feel as sad as though I had dealt at whist and turned up only a deuce; and when the heroine dies in the end I weep. If I read the same tale early in the morning I should sneer at it. Digestion, or rather indigestion, has a marvelous effect upon the heart. If I want to write anything very pathetic—I mean, if I want to try to write anything very pathetic—I eat a large plateful of hot buttered muffins about an hour beforehand, and then by the time I sit down to my work a feeling of unutterable melancholy has come over me. I picture heartbroken lovers parting forever at lonely wayside stiles, while the sad twilight deepens around them, and only the tinkling of a distant sheep-bell breaks the sorrow-laden silence. Old men sit and gaze at withered flowers till their sight is dimmed by the mist of tears. Little dainty maidens wait and watch at open casements; but "he cometh not," and the heavy years roll by and the sunny gold tresses wear white and thin. The babies that they dandled have become grown men and women with podgy torments of their own, and the playmates that they laughed with are lying very silent under the waving grass. But still they wait and watch, till the dark shadows of the unknown night steal up and gather round them and the world with its childish troubles fades from their aching eyes.

I see pale corpses tossed on white-foamed waves, and death-beds stained with bitter tears.

and graves in trackless deserts. I hear the wild wailing of women, the low moaning of little children, the dry sobbing of strong men. It's all the muffins. I could not conjure up one melancholy fancy upon a mutton chop and a glass of champagne.

A full stomach is a great aid to poetry, and indeed no sentiment of any kind can stand upon an empty one. We have not time or inclination to indulge in fanciful troubles until we have got rid of our real misfortunes. We do not sigh over dead dicky-birds with the bailiff in the house, and when we do not know where on earth to get our next shilling from, we do not worry as to whether our mistress' smiles are cold, or hot, or lukewarm, or anything else about them.

Foolish people—when I say “foolish people” in this contemptuous way I mean people who entertain different opinions to mine. If there is one person I do despise more than another, it is the man who does not think exactly the same on all topics as I do—foolish people, I say, then, who have never experienced much of either, will tell you that mental distress is far more agonizing than bodily. Romantic and touching theory! so comforting to the love-sick young sprig who looks down patronizingly at some poor devil with a white starved face and thinks to himself, “Ah, how happy you are compared with me!”—so soothing to fat old gentlemen who cackle about the superiority of poverty over riches. But it is all nonsense—all cant. An aching head soon makes one forget an aching heart. A broken finger will

drive away all recollections of an empty chair. And when a man feels really hungry he does not feel anything else.

We sleek, well-fed folk can hardly realize what feeling hungry is like. We know what it is to have no appetite and not to care for the dainty victuals placed before us, but we do not understand what it means to sicken for food—to die for bread while others waste it—to gaze with famished eyes upon coarse fare steaming behind dingy windows, longing for a pen'orth of pea pudding and not having the penny to buy it—to feel that a crust would be delicious and that a bone would be a banquet.

Hunger is a luxury to us, a piquant, flavor-giving sauce. It is well worth while to get hungry and thirsty merely to discover how much gratification can be obtained from eating and drinking. If you wish to thoroughly enjoy your dinner, take a thirty-mile country walk after breakfast and don't touch anything till you get back. How your eyes will glisten at sight of the white table-cloth and steaming dishes then! With what a sigh of content you will put down the empty beer tankard and take up your knife and fork! And how comfortable you feel afterward as you push back your chair, light a cigar, and beam round upon everybody.

Make sure, however, when adopting this plan, that the good dinner is really to be had at the end, or the disappointment is trying. I remember once a friend and I—dear old Joe, it was. Ah! how we lose one another in life's mist. It must be eight years since I last saw

Joseph Taboys. How pleasant it would be to meet his jovial face again, to clasp his strong hand, and to hear his cheery laugh once more! He owes me 14 shillings, too. Well, we were on a holiday together, and one morning we had breakfast early and started for a tremendous long walk. We had ordered a duck for dinner over night. We said, "Get a big one, because we shall come home awfully hungry;" and as we were going out our landlady came up in great spirits. She said, "I have got you gentlemen a duck, if you like. If you get through that you'll do well;" and she held up a bird about the size of a door-mat. We chuckled at the sight and said we would try. We said it with self-conscious pride, like men who know their own power. Then we started.

We lost our way, of course. I always do in the country, and it does make me so wild, because it is no use asking direction of any of the people you meet. One might as well inquire of a lodging-house slavey the way to make beds as expect a country bumpkin to know the road to the next village. You have to shout the question about three times before the sound of your voice penetrates his skull. At the third time he slowly raises his head and stares blankly at you. You yell it at him then for a fourth time, and he repeats it after you. He ponders while you count a couple of hundred, after which, speaking at the rate of three words a minute, he fancies you "couldn't do better than——" Here he catches sight of another idiot coming down the road and bawls out to him the particulars requesting his ad-

vice. The two then argue the case for a quarter of an hour or so, and finally agree that you had better go straight down the lane, round to the right and cross by the third stile, and keep to the left by old Jimmy Milcher's cow-house and across the seven-acre field, and through the gate by Squire Grubbin's hay-stack, keeping the bridle-path for awhile till you come opposite the hill where the windmill used to be—but it's gone now—and round to the right, leaving Stiggin's plantation behind you; and you say "Thank you" and go away with a splitting headache, but without the faintest notion of your way, the only clear idea you have on the subject being that somewhere or other there is a stile which has to be got over; and at the next turn you come upon four stiles, all leading in different directions!

We had undergone this ordeal two or three times. We had tramped over fields. We had waded through brooks and scrambled over hedges and walls. We had had a row as to whose fault it was that we had first lost our way. We had got thoroughly disagreeable, foot-sore, and weary. But throughout it all the hope of that duck kept us up. A fairy-like vision, it floated before our tired eyes and drew us onward. The thought of it was as a trumpet-call to the fainting. We talked of it and cheered each other with our recollections of it. "Come along," we said; "the duck will be spoiled."

We felt a strong temptation, at one point, to turn into a village inn as we passed and have a cheese and a few loaves between us, but we heroically restrained ourselves; we should en-

joy the duck all the better for being famished.

We fancied we smelled it when we got into the town and did the last quarter of a mile in three minutes. We rushed upstairs, and washed ourselves, and changed our clothes, and came down, and pulled our chairs up to the table, and sat and rubbed our hands while the landlady removed the covers, when I seized the knife and fork and started to carve.

It seemed to want a lot of carving. I struggled with it for about five minutes without making the slightest impression, and then Joe, who had been eating potatoes, wanted to know if it wouldn't be better for some one to do the job that understood carving. I took no notice of his foolish remark, but attacked the bird again; and so vigorously this time that the animal left the dish and took refuge in the fender.

We soon had it out of that, though, and I was prepared to make another effort. But Joe was getting unpleasant. He said that if he had thought we were to have a game of blind hockey with the dinner he would have got a bit of bread and cheese outside.

I was too exhausted to argue. I laid down the knife and fork with dignity and took a side seat and Joe went for the wretched creature. He worked away in silence for awhile, and then he muttered "Damn the duck" and took his coat off.

We did break the thing up at length with the aid of a chisel, but it was perfectly impossible to eat it, and we had to make a dinner off the vegetables and an apple tart. We tried a mouth-

ful of the duck, but it was like eating India-rubber.

It was a wicked sin to kill that drake. But there! there's no respect for old institutions in this country.

I started this paper with the idea of writing about eating and drinking, but I seem to have confined my remarks entirely to eating as yet. Well, you see, drinking is one of those subjects with which it is inadvisable to appear too well acquainted. The days are gone by when it was considered manly to go to bed intoxicated every night, and a clear head and a firm hand no longer draw down upon their owner the reproach of effeminacy. On the contrary, in these sadly degenerate days an evil-smelling breath, a blotchy face, a reeling gait, and a husky voice are regarded as the hall marks of the cad rather than of the gentleman.

Even nowadays, though, the thirstiness of mankind is something supernatural. We are forever drinking on one excuse or another. A man never feels comfortable unless he has a glass before him. We drink before meals, and with meals, and after meals. We drink when we meet a friend, also when we part from a friend. We drink when we are talking, when we are reading, and when we are thinking. We drink one another's healths and spoil our own. We drink the queen, and the army, and the ladies, and everybody else that is drinkable; and I believe if the supply ran short we should drink our mothers-in-law.

By the way, we never eat anybody's health, always drink it. Why should we not stand up

now and then and eat a tart to somebody's success?

To me, I confess the constant necessity of drinking under which the majority of men labor is quite unaccountable. I can understand people drinking to drown care or to drive away maddening thoughts well enough. I can understand the ignorant masses loving to soak themselves in drink—oh, yes, it's very shocking that they should, of course—very shocking to us who live in cozy homes, with all the graces and pleasures of life around us, that the dwellers in damp cellars and windy attics should creep from their dens of misery into the warmth and glare of the public-house bar, and seek to float for a brief space away from their dull world upon a Lethe stream of gin.

But think, before you hold up your hands in horror at their ill-living, what "life" for these wretched creatures really means. Picture the squalid misery of their brutish existence, dragged on from year to year in the narrow, noisome room where, huddled like vermin in sewers, they welter, and sicken, and sleep; where dirt-grimed children scream and fight and sluttish, shrill-voiced women cuff, and curse, and nag; where the street outside teems with roaring filth and the house around is a bedlam of riot and stench.

Think what a sapless stick this fair flower of life must be to them, devoid of mind and soul. The horse in his stall scents the sweet hay and munches the ripe corn contentedly. The watch-dog in his kennel blinks at the grateful sun, dreams of a glorious chase over

the dewy fields, and wakes with a yelp of gladness to greet a caressing hand. But the clod-like life of these human logs never knows one ray of light. From the hour when they crawl from their comfortless bed to the hour when they lounge back into it again they never live one moment of real life. Recreation, amusement, companionship, they know not the meaning of. Joy, sorrow, laughter, tears, love, friendship, longing, despair, are idle words to them. From the day when their baby eyes first look out upon their sordid world to the day when, with an oath, they close them forever and their bones are shoveled out of sight, they never warm to one touch of human sympathy, never thrill to a single thought, never start to a single hope. In the name of the God of mercy, let them pour the maddening liquor down their throats and feel for one brief moment that they live!

Ah! we may talk sentiment as much as we like, but the stomach is the real seat of happiness in this world. The kitchen is the chief temple wherein we worship, its roaring fire is our vestal flame, and the cook is our great high-priest. He is a mighty magician and a kindly one. He soothes away all sorrow and care. He drives forth all enmity, gladdens all love. Our God is great and the cook is his prophet. Let us eat, drink, and be merry.

ON FURNISHED APARTMENTS.

"Oh, you have some rooms to let."

"Mother!"

"Well, what is it?"

"'Ere's a gentleman about the rooms."

"Ask 'im in. I'll be up in a minute."

"Will yer step inside, sir? Mother'll be up in a minute."

So you step inside, and after a minute "mother" comes slowly up the kitchen stairs, untying her apron as she comes and calling down instructions to some one below about the potatoes.

"Good-morning, sir," says "mother," with a washed-out smile. "Will you step this way, please?"

"Oh, it's hardly worth while my coming up," you say. "What sort of rooms are they, and how much?"

"Well," says the landlady, "if you'll step upstairs I'll show them to you."

So with a protesting murmur, meant to imply that any waste of time complained of hereafter must not be laid to your charge, you follow "mother" upstairs.

At the first landing you run up against a pail and a broom, whereupon "mother" expatiates upon the unreliability of servant-girls, and bawls over the balusters for Sarah to come and take them away at once. When you get outside the rooms she pauses, with her hand upon the door, to explain to you that they are rather untidy just at present, as the last lodger left only yesterday; and she also adds that this is their cleaning-day—it always is. With this understanding you enter, and both stand solemnly feasting your eyes upon the scene before you. The rooms cannot be said to appear inviting. Even "mother's" face betrays no admiration. Untenanted "furnished apartments"

viewed in the morning sunlight do not inspire cheery sensations. There is a lifeless air about them. It is a very different thing when you have settled down and are living in them. With your old familiar household goods to greet your gaze whenever you glance up, and all your little knick-knacks spread around you—with the photos of all the girls that you have loved and lost ranged upon the mantel-piece, and half a dozen disreputable-looking pipes scattered about in painfully prominent positions—with one carpet slipper peeping from beneath the coal-box and the other perched on the top of the piano—with the well-known pictures to hide the dingy walls, and these dear old friends, your books, higgledy-piggledy all over the place—with the bits of old blue china that your mother prized, and the screen she worked in those far by-gone days, when the sweet old face was laughing and young, and the white soft hair tumbled in gold-brown curls from under the coal-scuttle bonnet——

Ah, old screen, what a gorgeous personage you must have been in your young days, when the tulips and roses and lilies (all growing from one stem) were fresh in their glistening sheen! Many a summer and winter have come and gone since then, my friend, and you have played with the dancing firelight until you have grown sad and gray. Your brilliant colors are fast fading now, and the envious moths have gnawed your silken threads. You are withering away like the dead hands that wove you. Do you ever think of those dead hands? You seem so grave and thoughtful sometimes

that I almost think you do. Come, you and I and the deep-glowing embers, let us talk together. Tell me in your silent language what you remember of those young days, when you lay on my little mother's lap and her girlish fingers played with your rainbow tresses. Was there never a lad near sometimes—never a lad who would seize one of those little hands to smother it with kisses, and who would persist in holding it, thereby sadly interfering with the progress of your making? Was not your frail existence often put in jeopardy by this same clumsy, headstrong lad, who would toss you disrespectfully aside that he—not satisfied with one—might hold both hands and gaze up into the loved eyes? I can see that lad now through the haze of the flickering twilight. He is an eager, bright-eyed boy, with pinching, dandy shoes and tight-fitting smalls, snowy shirt frill and stock, and—oh! such curly hair. A wild, light-hearted boy! Can he be the great, grave gentleman upon whose stick I used to ride cross-legged, the care-worn man into whose thoughtful face I used to gaze with childish reverence and whom I used to call "father?" You say "yes," old screen; but are you quite sure? It is a serious charge you are bringing. Can it be possible? Did he have to kneel down in those wonderful smalls and pick you up and rearrange you before he was forgiven and his curly head smoothed by his mother's little hand? Ah! old screen, and did the lads and the lassies go making love fifty years ago just as they do now? Are men and women so unchanged? Did little maidens' hearts beat the

same under pearl-embroidered bodices as they do under Mother Hubbard cloaks? Have steel casques and chimney-pot hats made no difference to the brains that work beneath them? Oh, Time! great Chronos! and is this your power? Have you dried up seas and leveled mountains and left the tiny human heart-strings to defy you? Ah, yes! they were spun by a Mightier than thou, and they stretch beyond your narrow ken, for their ends are made fast in eternity. Ay, you may mow down the leaves and the blossoms, but the roots of life lie too deep for your sickle to sever. You refashion Nature's garments, but you cannot vary by a jot the throbbings of her pulse. The world rolls round obedient to your laws, but the heart of man is not of your kingdom, for in its birth-place "a thousand years are but as yesterday."

I am getting away, though, I fear, from my "furnished apartments," and I hardly know how to get back. But I have some excuse for my meanderings this time. It is a piece of old furniture that has led me astray, and fancies gather, somehow, round old furniture, like moss around old stones. One's chairs and tables get to be almost part of one's life and to seem like quiet friends. What strange tales the wooden-headed old fellows could tell did they but choose to speak! At what unsuspected comedies and tragedies have they not assisted! What bitter tears have been sobbed into that old sofa cushion! What passionate whisperings the settee must have overheard!

New furniture has no charms for me compared with old. It is the old things that we

love—the old faces, the old books, the old jokes. New furniture can make a palace, but it takes old furniture to make a home. Not merely old in itself—lodging-house furniture generally is that—but it must be old to us, old in associations and recollections. The furniture of furnished apartments, however ancient it may be in reality, is new to our eyes, and we feel as though we could never get on with it. As, too, in the case of all fresh acquaintances, whether wooden or human (and there is very little difference between the two species sometimes), everything impresses you with its worst aspect. The knobby wood-work and shiny horse-hair covering of the easy-chair suggest anything but ease. The mirror is smoky. The curtains want washing. The carpet is frayed. The table looks as if it would go over the instant anything was rested on it. The grate is cheerless, the wall-paper hideous. The ceiling appears to have had coffee spilt all over it, and the ornaments—well, they are worse than the wall-paper.

There must surely be some special and secret manufactory for the production of lodging-house ornaments. Precisely the same articles are to be found at every lodging-house all over the kingdom, and they are never seen anywhere else. There are the two—what do you call them? they stand one at each end of the mantel-piece, where they are never safe, and they are hung round with long triangular slips of glass that clank against one another and make you nervous. In the commoner class of rooms these works of art are supplemented by

a couple of pieces of china which might each be meant to represent a cow sitting upon its hind legs, or a model of the temple of Diana at Ephesus, or a dog, or anything else you like to fancy. Somewhere about the room you come across a bilious-looking object, which at first you take to be a lump of dough left about by one of the children, but which on scrutiny seems to resemble an underdone cupid. This thing the landlady calls a statue. Then there is a "sampler" worked by some idiot related to the family, a picture of the "Huguenots," two or three Scripture texts, and a highly framed and glazed certificate to the effect that the father has been vaccinated, or is an Odd Fellow, or something of that sort.

You examine these various attractions and then dismally ask what the rent is.

"That's rather a good deal," you say on hearing the figure.

"Well, to tell you the truth," answers the landlady with a sudden burst of candor, "I've always had" (mentioning a sum a good deal in excess of the first-named amount), "and before that I used to have" (a still higher figure).

What the rent of apartments must have been twenty years ago makes one shudder to think of. Every landlady makes you feel thoroughly ashamed of yourself by informing you, whenever the subject crops up, that she used to get twice as much for her rooms as you are paying. Young men lodgers of the last generation must have been of a wealthier class than they are now, or they must have ruined themselves. I should have had to live in an attic.

Curious, that in lodgings the rule of life is reversed. The higher you get up in the world the lower you come down in your lodgings. On the lodging-house ladder the poor man is at the top, the rich man underneath. You start in the attic and work your way down to the first floor.

A good many great men have lived in attics and some have died there. Attics, says the dictionary, are "places where lumber is stored," and the world has used them to store a good deal of its lumber in at one time or another. Its preachers and painters and poets, its deep-browed men who will find out things, its fire-eyed men who will tell truths that no one wants to hear—these are the lumber that the world hides away in its attics. Haydn grew up in an attic and Chatterton starved in one. Addison and Goldsmith wrote in garrets. Faraday and De Quincey knew them well. Dr. Johnson camped cheerfully in them, sleeping soundly—too soundly sometimes—upon their trundle-beds, like the sturdy old soldier of fortune that he was, inured to hardship and all careless of himself. Dickens spent his youth among them, Morland his old age—alas! a drunken, premature old age. Hans Andersen, the fairy king, dreamed his sweet fancies beneath their sloping roofs. Poor, wayward-hearted Collins leaned his head upon their crazy tables; priggish Benjamin Franklin; Savage, the wrong-headed, much troubled when he could afford any softer bed than a doorstep; young Bloomfield, "Bobby" Burns, Hogarth, Watts the engineer—the roll is endless. Ever since the

habitations of men were reared two stories high has the garret been the nursery of genius.

No one who honors the aristocracy of mind can feel ashamed of acquaintanceship with them. Their damp-stained walls are sacred to the memory of noble names. If all the wisdom of the world and all its art—all the spoils that it has won from nature, all the fire that it has snatched from heaven—were gathered together and divided into heaps, and we could point and say, for instance, these mighty truths were flashed forth in the brilliant *salon* amid the ripple of light laughter and the sparkle of bright eyes; and this deep knowledge was dug up in the quiet study, where the bust of Pallas looks serenely down on the leather-scented shelves; and this heap belongs to the crowded street; and that to the daisied field—the heap that would tower up high above the rest as a mountain above hills would be the one at which we should look up and say: this noblest pile of all—these glorious paintings and this wondrous music, these trumpet words, these solemn thoughts, these daring deeds, they were forged and fashioned amid misery and pain in the sordid squalor of the city garret. There, from their eyries, while the world heaved and throbbed below, the kings of men sent forth their eagle thoughts to wing their flight through the ages. There, where the sunlight streaming through the broken panes fell on rotting boards and crumbling walls; there, from their lofty thrones, those rag-clothed Joves have hurled their thunderbolts and shaken, before now, the earth to its foundations.

Huddle them up in your lumber-rooms, oh, world! Shut them fast in and turn the key of poverty upon them. Weld close the bars, and let them fret their hero lives away within the narrow cage. Leave them there to starve, and rot, and die. Laugh at the frenzied beatings of their hands against the door. Roll onward in your dust and noise and pass them by, forgotten.

But take care lest they turn and sting you. All do not, like the fabled phoenix, warble sweet melodies in their agony; sometimes they spit venom—venom you must breathe whether you will or no, for you cannot seal their mouths, though you may fetter their limbs. You can lock the door upon them, but they burst open their shaky lattices and call out over the house-tops so that men cannot but hear. You hounded wild Rousseau into the meanest garret of the Rue St. Jacques and jeered at his angry shrieks. But the thin, piping tones swelled a hundred years later into the sullen roar of the French Revolution, and civilization to this day is quivering to the reverberations of his voice.

As for myself, however, I like an attic. Not to live in: as residences they are inconvenient. There is too much getting up and downstairs connected with them to please me. It puts one unpleasantly in mind of the tread-mill. The form of the ceiling offers too many facilities for bumping your head and too few for shaving. And the note of the tom-cat as he sings to his love in the stilly night outside on the

tiles becomes positively distasteful when heard so near.

No, for living in give me a suit of rooms on the first floor of a Piccadilly mansion (I wish somebody would!); but for thinking in let me have an attic up ten flights of stairs in the densest quarter of the city. I have all Herr Teufelsdröckh's affection for attics. There is a sublimity about their loftiness. I love to "sit at ease and look down upon the wasps' nest beneath"; to listen to the dull murmur of the human tide ebbing and flowing ceaselessly through the narrow streets and lanes below. How small men seem, how like a swarm of ants sweltering in endless confusion on their tiny hill! How petty seems the work on which they are hurrying and skurrying! How childishly they jostle against one another and turn to snarl and scratch! They jabber and screech and curse, but their puny voices do not reach up here. They fret, and fume, and rage, and pant, and die; "but I, mein Werther, sit above it all; I am alone with the stars."

The most extraordinary attic I ever came across was one a friend and I once shared many years ago. Of all eccentrically planned things, from Bradshaw to the maze at Hampton Court, that room was the most eccentric. The architect who designed it must have been a genius, though I cannot help thinking that his talents would have been better employed in contriving puzzles than in shaping human habitations. No figure in Euclid could give any idea of that apartment. It contained seven corners, two of the walls sloped to a point, and

the window was just over the fireplace. The only possible position for the bedstead was between the door and the cupboard. To get anything out of the cupboard we had to scramble over the bed, and a large percentage of the various commodities thus obtained was absorbed by the bedclothes. Indeed, so many things were spilled and dropped upon the bed that toward night-time it had become a sort of small co-operative store. Coal was what it always had most in stock. We used to keep our coal in the bottom part of the cupboard, and when any was wanted we had to climb over the bed, fill a shovelful, and then crawl back. It was an exciting moment when we reached the middle of the bed. We would hold our breath, fix our eyes upon the shovel, and poise ourselves for the last move. The next instant we, and the coals, and the shovel, and the bed would be all mixed up together.

I've heard of the people going into raptures over beds of coal. We slept in one every night and were not in the least stuck up about it.

But our attic, unique though it was, had by no means exhausted the architect's sense of humor. The arrangement of the whole house was a marvel of originality. All the doors opened outward, so that if any one wanted to leave a room at the same moment that you were coming downstairs it was unpleasant for you. There was no ground-floor—its ground-floor belonged to a house in the next court, and the front door opened direct upon a flight of stairs leading down to the cellar. Visitors on entering the house would suddenly shoot

past the person who had answered the door to them and disappear down these stairs. Those of a nervous temperament used to imagine that it was a trap laid for them, and would shout murder as they lay on their backs at the bottom till somebody came and picked them up.

It is a long time ago now that I last saw the inside of an attic. I have tried various floors since, but I have not found that they have made much difference to me. Life tastes much the same, whether we quaff it from a golden goblet or drink it out of a stone mug. The hours come laden with the same mixture of joy and sorrow, no matter where we wait for them. A waistcoat of broadcloth or of fustian is alike to an aching heart, and we laugh no merrier on velvet cushions than we did on wooden chairs. Often have I sighed in those low-ceilinged rooms, yet disappointments have come neither less nor lighter since I quitted them. Life works upon a compensating balance, and the happiness we gain in one direction we lose in another. As our means increase, so do our desires; and we ever stand midway between the two. When we reside in an attic we enjoy a supper of fried fish and stout. When we occupy the first floor it takes an elaborate dinner at the Continental to give us the same amount of satisfaction.

PRINTED IN THE UNITED STATES OF AMERICA

A DICTIONARY OF AMERICAN SLANG

A.

A-1. First class.

absotively. Absolutely and positively.

ace. An airplane adept; an artist in any line.

acknowledge the corn. Admit responsibility for.

ad. Advertisement; hence ad club.

Adam's ale. Water.

African golf. The game of craps or dice.

Alibi Ike. One who excuses all his faults.

all in. Exhausted.

all to the good, the mustard, etc. Excellent.

almighty dollar. Money, the god of America.

also ran. A loser.

altogether, in the. Nude, naked.

ambulance-chaser. A shyster lawyer who goes after injured people to solicit their damage suits.

amuck, to run. To behave crazily.

Ananias Club, member of the. A liar; anyone who differed with Theodore Roosevelt.

angora, to get one's. To discomfit or rattle one.

anvil chorus. A chorus of knockers or depreciators.

angel. Man who finances a theatrical or other venture, usually for no angelic reason.

animated ivories or cubes. Dice.

apple sauce. Blah, tripe, nonsense, foolish talk.

4 A DICTIONARY OF AMERICAN SLANG

apple strudel. Concentrated apple sauce.
Arkansas toothpick. A sheath or bowie knife.
ass. A fool.
atta boy, atta girl. That's the boy; that's the girl.
attic. Empty part of a house; hence head, upper story.
automat. A nickel-in-the-slot restaurant.
awfully. Very much.

B.

Babbitt. Typical mediocre-brained middle class American, realtor or otherwise.
baby, baby doll. One's sweetheart.
back-scratcher. One who praises you for your praise of him, her or it.
bad egg, bad penny, etc. A good-for-naught.
bad, go to the. Attend Sunday movies, dance, or otherwise offend the Rotary Methodist god.
bad, to the. Having suffered loss.
baggage smasher. Hotel porter who handles trunks.
bag, to hold the. To be left responsible while others escape.
bald-headed row. Front row at a girlie leg show.
balled up, all. Confused.
bamboozle. Obtain by trickery.
ball, to play. Go ahead.
bang the ivories. Play the piano.
bang-up. First rate.
barber shop chord. Male quartette harmony; barbarous music.
barge. Walk along.

Barleycorn, John. Spirit of alcohol, exiled by Volstead.

barn-stormer. Strolling player.

Barnumize. To advertise in high-falutin' language.

battle royal. Indiscriminate boxing match of three or more.

batty, bats in the belfry. Crazy.

beak, beagle. Nose.

beans, not to know. To know nothing.

bean-eater. Bostonian.

bear, she's a. She's a wow, a wonder.

bear. One who speculated for a fall in stocks; opposite of bull.

beat. In journalism, precedence in news; a scoop.

beat it. Clear away; vamoose; depart.

beat around the bush. To dodge the issue.

beats the devil, the Dutch. Beats everything.

beau, beau-lover. Suitor, lover.

bedbug. An amorous or uxorious person.

bee in one's bonnet. To be obsessed with an idea.

beer, small. Anything unimportant.

believe me. Expletive, "This is true."

bellyache. Complain all the time.

belly-bumper, -buster, or -whopper. Small hand sled used for coasting, lying on one's stomach.

bellywash. Soft drink, soda water, etc.

benzine buggy. Automobile.

bet, you. Absolutely. Also *bet your boots, last dollar.*

better half. What a man calls his wife in her presence.

biff. A blow.

- big burg, big town.* A city.
big drink. The Mississippi; any ocean.
big head, to have a. To be conceited.
big mouth. A noisy, bragging person.
big stiff, big cheese. Anyone who disagrees with you.
big pond or puddle. The Atlantic Ocean.
bilge. Bunk, blah, flapdoodle, nonsense.
bird. A young girl; anything attractive.
birthday suit. Nature's garb; nudity.
bit. United States money equivalent to 12½c.
bite the dust. Be slain.
Black Hand. A Spanish, Italian or Sicilian secret society of criminals.
Black Maria. The calaboose, police wagon to take criminals to jail or station house.
blah. Bunk, nonsense, spreadeagle talk.
blarney. Wheedling flattery; pretty talk.
blazes, like. Violently, impetuously (from flames of hell).
blazes, go to. Go to hell.
bleed, to. To victimize, extort money from.
blimp. Any non-rigid balloon.
blind tiger, blind pig. Illegal liquor retailery.
blink, on the. On the fritz; no good.
bloated aristocrat, bloated bondholder. Wealthy person.
blockhead. Dunce, fool.
bloody shirt, to wave the. To stir up political strife.
blow. To boast or brag.
blow one's own horn. To praise oneself.
blow in. Come in unexpectedly.

spliced, to be or get. To get married.

splurge. Display; sensation; fuss.

spoils. Political patronage. Hence, spoilsman.

spondulix. Money.

sponge. Drunkard, hard drinker; to act as parasite.

spoof. A deception, swindle, hoax.

spoon. To flirt with, bill and coo. Hence spoony, to get spoons on.

sport. A cheap flashy person.

sport, a good. One who'll do what the party does; a woman operating under blue-sky laws.

spout. To talk voluminously; to emit blah.

spout, up the. Everything in a bad way.

spread. A meal, an elaborate meal.

spread-eagle-ism. Bombastic praise of this country.

- spunk*. Courage, mettle, guts.
- squab*. A fat short person; a woman; a youngster.
- square deal*. Honest dealing; what people promise to do.
- square*. Satisfactory, honest.
- square meal*. A complete repast.
- squatter*. One who settles on land without right.
- squeak*. A hairbreadth; the least margin.
- squeal*. To betray a plot or accomplice; to inform.
- squeeze*. To compel to pay tribute to; to extort.
- squirm*. To escape by awkward evasion.
- squirt*. A brainless conceited person.
- stag*. A man without a woman at a dance.
- stager, an old*. An old egg, person of long experience.
- stall*. To evade in talk; to postpone a debt; stick in mud or snow.
- star*. One who plays a leading part.
- steam-roller*. Overrunning opposition by rough-house tactics.
- steep*. Exorbitant, expensive.
- step out*. To go out all dressed up.
- step on the gas*. Speed it.
- step off*. To get married.
- stew*. Mental disturbance. Hence stewed, stewed to the gills. Drunk.
- stick, a poor*. An unsatisfactory sweetie, a flat tire.
- sticks, in the*. In the backwoods.
- stiff*. A corpse; hence, big stiff, one you dislike.

stink. A disagreeable exposure.

stinker. A rotter, a disliked person.

stool-pigeon. A planted informer; a gambling-den decoy.

stork. A long-legged bird, purveying all human babies in the United States. The cabbage and rose bush methods have become slightly obscene; the biological is verboten. The stork, Santa Claus, and Yahweh live in St. George Washington's cherry tree.

stovepipe hat. High silk hat.

straddle. To pose on both sides of a question.

straight goods. The undiluted truth.

strap-hanger. Passengers permitted by public service corporations to exercise their clinging muscles instead of their sedentary anatomy.

strawberry blonde. Carrot-top; red haired woman.

stuck on, to be. To be fond of.

stuck up. Conceited, vain.

sucker. One easily imposed upon.

sugar. Flattering words; money, as in "a sugar-coated papa."

swag. Stolen goods, loot.

sweeten the pot. To enlarge one's holdings.

sweet on, to be. To be fond of.

sweetie, sweetums, sweet stuff. One beloved or favored.

sweet tooth. A liking for sweets.

swim, in the. In company with; in the current of popular fashions.

swing. To manage successfully.

swipe. To steal, especially a cheap article.

T.

table, to go to the. To partake of the Christian communion; formerly of bread and wine, since the Volstead act of Uneeda Biscuits or Zuzus, and Canada Dry, Cherryola, Coca-Cola, or Cherry Smash.

tacky. Neglected, shabby, unkempt.

taffy. Sweet words, blarney, flattery.

take on. Get excited or hysteric over.

take the air. Go about one's business.

take the cake. Win, as at a cakewalk.

take it from me. Believe me.

take a shine to. Take a liking to.

take after. Resemble.

taken in, to be. To be deceived.

take off. To imitate or mimic.

talent, tle. Persons in a profession.

talk big. To boast.

talk turkey. To talk business.

tall timber, the. The sticks; the backwoods.

tank. Heavy drinker, sponge.

tanktown. One horse burg, jerkwater town.

tart. A daughter of joy, a harlot, girl on the turf.

T. B. Consumption, tuberculosis.

teach one's grandmother to suck eggs. To lecture one's elders.

tea-fight. Tea-party, muffin-worry.

tear. Boisterous spree; "on a tear."

tenderfoot. A greenhorn. Easterner, in the West.

tenderloin. Choicest section of a city, in which theatres, gambling dens, etc., are located.

ten strike. A complete victory.

thing, the. The proper or fashionable thing.

think, I don't. Negatives what precedes:
"You're a gentleman, I don't think!"

third degree. Illegal police method of extorting lies, faked confessions, etc., by thuggery

tickled to death, to be. To be highly pleased

tie, can you tie that? Can you equal that.

tight. Close, stingy; drunk

tile loose, to have a. To be crazy.

tincan tourist, tincanner, Tin Can Town or City.

Ford tourists, living in a flivver there and here.

tin Lizzie, tin lizard, tincan, flivver, henry. A Ford.

toad-eater. Fawning parasite, sycophant, lick-spittle.

toddle. A dance; to depart, as "toddle along."

Tom, Dick, and Harry. Any of a crowd; people at large.

toodle-dy-oo, toodle-oo. Goodbye.

tophole. The acme of perfection.

toss or toss up. An even chance.

tote, tote a gun, tote fair. To carry.

touch. To borrow.

trail, to hit the. To be converted by a vulgar evangelist.

train with. To go with a person.

trap. Mouth.

tripe. Blah, flapdoodle, nonsense.

trot along. Depart.

trottery. Dance hall where shimmy, etc., is danced.

tumble to. To understand.

tum-tum, tuh-tuh. The stomach.

twaddle, twattle. Idle chatter, piffle, pibble-pabble.

23. Beat it.

U.

uncle. A pawnbroker; Uncle Sam.

up and doing. Energetic, go-getting.

unwritten law. Illegal custom allowing a man to bump off his wife's pal, or a woman to poke off her hubby's Lady Charitable.

Upper Crust. The so-called aristocratic class.

upper story. Vacant part of a house; the brain.

upstage. Snotty, snobbish.

up the flue, flume, or spout. Gone flooey; ruined.

V.

V or V spot. A five dollar bill.

vacuum. Entire void, especially mental.

vamoose. To leave pronto or quickly.

vamp, vampire. Seductress, a Theda.

virgin. A girl with a Presbyterian reputation; somewhat out of date.

W.

wad, wad of dough. Money collectively.

wages of sin. The price paid for breaking a divine or moral law; usually affluence, public esteem, success, and a marble mausoleum; unless the infraction has been picayune.

walkover. An easy or unopposed success.

walking delegate. Business agent of a labor union; the representative of capital rides.

warm. Heated with passion; as, warm member, warm baby.

watch your step. Watch out.

weaker sex or vessel. Used by men to describe women.

weak end. The brain.

weak sister. A pepleless dame.

wet. Favoring alcohol and against prohibition.

wet blanket. A spoilsport.

whangdoodle. A mythical creature, akin to the gymnascutus, legs shorter on one side than the other, to let him feed on a hillside; nonsense.

what's what. The real or genuine thing.

white-collar slave. The class of clerks, as opposed to class-conscious labor.

white mule, white lightning. Greased lightning, mountain dew, or corn; illegal liquor.

whopper-jawed. Crazy.

wicked. Skilled; as, shake a wicked leg or limb.

wiff. The wife, the missus, the better two-thirds.

willies, the. The jimjams, blues, feeling of dislike.

wild to. Anxious or crazy to.

wiseacre. A know-it-all.

wobbly. Member of the I. W. W., the Industrial Workers of the World.

wow. A knockout, great success.

wrinkle. A smart dodge, a new trick.

write-up. Laudatory story for the press.

wrong box, wrong pew, in the. In a false predicament or wrong place.

Y.

Y. The Y. M. C. A., Y. W. C. A., Y. M. H. A., etc.

yap. To make noise; a hick, countryman.

yegg, yeggman. A traveling safe-blower.

yellow. Cowardly; sensational, as yellow journalism.

Z.

zero. A dud, an absolute blank mentally.

zip. Speed. Hence, zippy.

BASEBALL SLANG

A.

asleep at a bag. Base-runner caught off a base
average, batting average. Percentage of base hits.
at bat. The side on the offensive.

B.

backstop. The catcher; the wooden backstop.
back up. To field behind a teammate.
bag. A base, 1st, 2nd, or 3rd.
balk. An incompleated delivery by the pitcher.
ball. A throw outside of the plate.
bang out a ball. Hit a pitched ball.
base hit. A hit permitting batter to reach first.
battery. Pitcher and catcher.
batting eye. Ability to hit.
beat out a hit. Outrun a throw to the base.
bean-ball. Ball pitched toward batter's head.
bean, to. To hit batter with a pitched ball.
boot a ball, to. To make an error.
bunt. A ball hit softly toward the infield.
busher. One from the bush league.

C.

casey, to do a. To fan out, to fail to make a hit.
catch off a base, catch napping. To be put out
 while loafing carelessly near a base.
charley horse. Sore muscles.
circuit. The four bases.
coach. To direct play from the sidelines.
connect, to. To hit the ball.
cop, to. To win a prize or game.
cover a base. To play close to base.
crack, to. To hit a ball.
cuddle the bag, to. To hug a base.
curve. A pitched ball that curves.
cut a base. To fail to touch a base.

D.

dauber is down. To be dejected.
delivery. A pitcher's method of throwing.
diamond. The whole baseball field; the infield.
die on base. To be on base when side is retired.
divvy. A share.
drive. A hard-hit ball.
drop, a. A pitched ball that curves downward.
dugout. The players' bench.

E.

error. A muff or kick.

F.

fan, to. To strike out.

fan. A rooter, enthusiast.

fadeaway. A ball deceptively slow.

feed 'em. To pitch to the batter.

farm out. To be sent to the minors.

fence, over the. Knocked out of the ball grounds.

first, the. The 1st inning. So 2nd, 3rd, 4th, etc.

field, to. To handle a batted ball.

fielder. An outfielder.

fill the bases, to. To occupy all bases.

first-bouncer. A ball on the first bounce.

fly ball. A ball knocked high.

fly out, to. To be put out by a caught high ball.

forced run. A run made by pitcher's passing a man with 3 on bases.

foul. A ball outside the 1st or 3rd base lines.

foul out. To be put out by a caught foul.

foul line. The 1st or 3rd base sideline.

foul tip. A glancing foul.

free pass to first. Four balls pitched to batter.

fungo. A ball batted up for practice.

G.

goose egg. Blank score.

grass-cutter. A grounder.

gum the game. To spoil the game.

hit and run. A play where, the moment the pitcher throws, base-runners run.

homer. A home-run, a circuit clout, a babe ruth.

home, home plate. The 4th base.

horsehide. The baseball.

hurl, to. To pitch.

hurler. Pitcher.

hug a base. To stay close to a base.

I.

in. A pitched ball that curves in.

infield. Part of the diamond bounded by the bases.

infielder. One of the basemen or the shortstop.

initial sack. First base.

innings. Division of baseball game.

inshoot. A pitched ball curving in.

J.

jaw the umpire. To scold back at the umpire.

jump ball. A pitched ball that hops upward.

K.

King of Swat. Babe Ruth.
kiss a ball. Connect for a hit.

L.

lay on it, to. To hit a ball hard.
lay one down, lay one down dead. To hit a bunt.
lean on the ball. To hit hard.
left on bases. To be on bases when a side is retired.
let a ball pass. To fail to strike at a pitched ball.
lines. Sidelines.
lob. Knock up an easy fly ball.

M.

make the circuit. Round the bases.
major league. One of the two larger leagues.
minor league. Any other league.
mound, pitcher's. Pitcher's stance.

N.

nail. To hit.
national pastime. Baseball.

O.

off a base, to play. To play some distance from a base.
out, to be. To fail to make a base safely.
out. A pitched ball curving out.
outshoot. A pitched ball shooting out.
outfield. The diamond beyond the three bases.
outfielder. Player stationed beyond the bases.

P.

pass, to. To give a batter four balls.
pat the ball. To hit, or hit lightly.
peg a man. To throw out a man on any base.
pigtail. To retrieve balls for the catcher.
pilfer a bag. To steal a base.
pinch hitter. One sent in to bat for another.
pill. The ball.
plate. The fourth base, home.
play safe on the bags. Not to take chances on a base.
poop out. To fly out.
pop up a fly. To knock an easy fly ball.
pop out. To be caught out on a fly.
put it over. To pitch over plate.

R.

recciver. The catcher.
receiving station. The catcher's position.
run it out. To attempt to beat a throw to first.

S.

sack. Any base, 1st, 2nd, 3rd.

sacrifice. A bunt to advance runner at expense of batter.

scorcher. A fast ground ball.

shag. To field batted balls for another.

short. Shortstop.

sidewheeler. Left-handed pitcher.

sidelines. Lines outside 1st and 3rd bases.

silo league. Bush league, sorghum belt league.

single. A one-base hit.

sizzler. A fast hit ball.

skyscraper. A high batted ball.

slam. To hit ball hard.

slide for bases. To hurl one's self toward a base.

sling. To pitch. Hence, slinger.

slugger. A hard hitter.

sock it on the nose. Hit it out hard.

southpaw. Sidewheeler, left-handed pitcher.

spit ball, spitter. A ball wet with saliva by pitcher.

spit ball artist. A pitcher using saliva.

sphere, spheroid. The baseball.

squeeze play. To lay down a bunt with runner on third.

steal a base. To advance a base without a hit ball advancing runner.

strike out. To retire batter with three strikes.

strike. A ball thrown over the plate.

sunfield. The right field.

swat. To hit out a ball.

T.

tag. To touch out a runner.

Texas leaguer. Ball hit safely between infield and outfield.

two-bagger. A hit ball giving runner two bases.

three-bagger. A hit ball giving runner three bases.

U.

umps. The umpire.

W.

walk a batter. To give a batter four balls.

warm up. To practice before entering game.

whiff. To fan, strike out.

wide one. A ball wide of the plate.

wind up, pitcher's. Pitcher's preliminary delivery

wing. The pitcher's arm; an arm.

winter league. Winter gossip about baseball.

THE MISANTHROPE

ACT I.

SCENE I.

Philinte. What is the matter? What troubles you, Alceste?

Alceste (seated). Leave me, I beg of you.

Philinte. But still, tell me, what whim—

Alceste. Leave me, I say; take yourself out of sight.

Philinte. But at least you might listen to a man without being angry.

Alceste. I choose to be angry, and I do not choose to listen.

Philinte. I cannot understand you when your temper is hot; and though we are friends, I—

Alceste. Friends! I your friend? Strike my name off your list. Till now I have professed to be your friend; but after what I have just seen of you, I tell you bluntly I am no longer. I will hold no place in a corrupted heart.

Philinte. Then, am I guilty in your eyes, Alceste?

Alceste. You ought to die of shame; such conduct cannot be excused; all men of honor must feel humiliated by it. I see you overwhelming a stranger with attentions; testifying the utmost ardor for him; making protestations, offers of service, vows; and when I ask you afterward who he is, you can hardly tell me the man's name! Your ardor for him sinks the moment

that you leave him, and you inform me he is nothing to you. Good God! it is a shameful thing, base, infamous, thus to degrade your soul by treachery; if I, through some misfortune, had done as much I would go hang myself in sheer remorse.

Philinte. I cannot see, for my part, that mine's a hanging case; so I make bold to appeal against your sentence and beg you not to hang me, if it please you.

Alceste. Jestings is most unseemly.

Philinte. Seriously, then, what would you have me do?

Alceste. I would have you be sincere, and, as a man of honor, say no word that is not from your heart.

Philinte. But when a man comes up to you and salutes you joyfully, surely you must pay him in the self-same coin, make some response to his civilities, return him offer for offer and vow for vow.

Alceste. No,—I cannot endure that abject custom which the majority of your worldly friends affect. I hate nothing so much as the bowing and scraping of those great makers of protestations, those affable givers of trumpery kisses, those obliging praters of empty words, who strive to outdo each other with civilities, and treat an honest man and a scoundrel with the same air and manner. What advantage is it to you if a man courts you, swears friendship, faith, zeal, honor, tenderness, makes you some fulsome compliment, and then turns round to the first rascal whom he meets, and does the same? No, no, a well-conditioned soul wants no esteem so prostituted; the finest hospitalities are valueless when we find ourselves rated with the crowd. Esteem is based on pref-

erence; to esteem the whole world alike is to feel no esteem for any one. And because you addict yourself to these vices of the time, *morbleu!* you are not of my kind. I refuse the vast complaisance of a heart that sees no shades of merit; I choose that mine shall be distinguished, and—to cut the matter short—the friend of the whole human race is not to my liking.

Philinte. But so long as we live in social life, we must pay the outward civilities that custom demands.

Alceste. No, I tell you, no; we ought to chastise, pitilessly, this shameful interchange of make-believe friendship. I want a man to be a man, and let the bottom of his heart be seen in all he says, and in all he does. Let it be himself who speaks,—not masking his real feelings behind false compliments.

Philinte. There are many situations in which plain frankness would become ridiculous, and is not permissible; and sometimes—if it please your lofty honor—it may be well to hide what is in our hearts. Would it be fitting, would it be decent to tell all men what we think of them? And if there be any one whom we dislike or think unpleasant ought we to let him know it?

Alceste. Yes. *Philinte.* What! would you tell old Emilie that 't is unbecoming at her age to play the pretty girl; or that the paint she wears shocks every one?

Alceste. Undoubtedly. *Philinte.* Would you tell Dorilas that he is tiresome; that there is not an ear at court he does not weary with tales of his own bravery and the glory of his race?

Alceste. I should. *Philinte.* You are joking.

Alceste. I am not joking. In future I will spare none. My eyes are too offended. Court and society both show me nought but things that stir my bile. When I see men living together as they do a black spleen seizes me, a bitter grief. Everywhere I find base flattery, injustice, self-interest, treachery, deceit. I cannot bear it longer; I am enraged; and my intention is to tell the truth henceforth, to all the human race.

Philinte. Your philosophic wrath is somewhat savage; I laugh at that black spleen I see has gripped you. You and I are like the brothers in the "School for Husbands," brought up as one, and yet—

Alceste. Good God! give up those dull comparisons.

Philinte. Give up yourself this churlish virulence. Your teachings cannot change the world. Since frankness charms you, I will tell you bluntly this disease of yours is laughed at everywhere you go. Such wrath against the ways of the world makes you ridiculous in the eyes of many."

Alceste. So much the better; good heavens! so much the better; that is what I want; to me 't is the best of signs and a great satisfaction. Men have become so odious to me that I'd be grieved indeed to be well thought of by them.

Philinte. Then you attribute nought but evil to human nature?

Alceste. I do; I hate it with a dreadful hatred.

Philinte. All poor mortals, then, without exception, are included in this deep aversion? Surely there may be, in our present age—

Alceste. No, it is universal; I hate all men; some because they are wicked and evil-doers;

others because they fawn upon the wicked, and dare not show that vigorous hatred which virtuous souls should feel to vice. From such compliance comes immunity for the bare-faced villain whom I now am suing. Behind his mask the knave is seen, wherever he is known, for what he is; the rolling of his eye, his bated voice, impose on none but those who do not live here. All others know about the sneaking fellow, fit only to be shunned, has by the foulest actions foisted himself upon society, where his career, by their connivance clothed in splendor, makes merit groan and virtue blush. No cries of "shame" can make his miserable honor hear them. Call him a knave, a scoundrel, a damned villain, all the world agrees, and no man contradicts you; *but*—he is welcomed everywhere; wherever he may worm himself he's greeted; men smile upon him; and if there's a canvass to be made, a place to be intrigued for, you will see him get the better of honest men. Great God! it is to me a mortal wound to see how vice is thus condoned and trafficked with. At times the impulse seizes me to flee to a desert and renounce my kind.

Philinte. Good heavens! why take the customs of our time so hard; why be so little merciful to human nature? Examine it less sternly, and see its failures with some gentleness. In social life we need a pliant virtue; severe integrity is often blamable; sound reason shuns extremes, and teaches wisdom with sobriety. The rigid virtue of the olden time jars with our age and with our modern customs. We must yield somewhat to our time, and not reluctantly. It is a folly, second to no other, to meddle with the world and try to

mend it. I see, as you do, fifty things a day which might be better, or take other courses. At every step I'm tempted to break forth, like you, but no one sees me do it. I take men gently just for what they are; I've trained my soul to tolerate what they do. At court and in society I think my phlegm, Alceste, is, to the full, as philosophic as your bile.

Alceste. But that phlegm, Philinte, which reasons well, is it incapable of indignation? Suppose, perchance, a friend betrayed you, or frauds were planned to steal your property, or wicked rumors spread to injure you,—could you endure all that and not be angry?

Philinte. Yes. I regard those evils, that your soul resents, as vices consequent to human nature; my soul is not more shocked by seeing men unjust, dishonest, selfish, than by the sight of vultures hungering after carnage, or thieving monkeys or infuriate wolves.

Alceste. I'll see myself betrayed, hacked into pieces, robbed, before I'll— Good God! why talk? such reasoning is sheer sophistry.

Philinte. Faith! I advise you to keep silence; don't rage against your kind so much, and give more care to the lawsuit which you have upon your hands.

Alceste. I shall give none; that I'm determined on.

Philinte. Then who do you expect will plead your case?

Alceste. Plead it? why, reason, my good right, and equity.

Philinte. Do you mean you will not go to see a single judge?

Alceste. Not one. My cause is neither doubtful nor unjust.

Philinte. Agreed; but underhand intrigues are most disastrous, and—

Alceste. No; I'm resolved to take no steps. Either I am wrong, or I am right.

Philinte. Don't trust to that.

Alceste. I shall not stir a finger.

Philinte. Your enemy is strong, and may, by making a cabal, bear off—

Alceste. I care nought for that.

Philinte. Then you are wrong.

Alceste. So be it. I wish to see him win the case.

Philinte. But—

Alceste. I shall have pleasure if I lose my suit.

Philinte. But surely—

Alceste. I shall see in court if men will have the effrontery—will be wicked, scoundrelly, perverse enough—to do me injustice openly before the world.

Philinte. Oh, what a man!

Alceste. I would gladly lose my cause, did it cost me half my fortune, to prove that fact.

Philinte. The world would laugh at you in bitter earnest if it could hear you talk in this way.

Alceste. So much the worse for him who laughs.

Philinte. But this integrity you ask from every one, this honest and straightforward dealing in which you hug yourself, do you find it here in her you love? It does surprise me that having quarrelled with the human race so bitterly, you have been caught, in spite of much you might indeed think odious, but that which charms the eye. But what surprises me still more, is the strange choice to which your heart is pledged. Eliante, sincere and truthful, has

a liking for you; Arsinoe, the prude, looks softly at you with a melting eye; and yet your soul rejects their love and makes itself a toy for Selimene, whose coquetry and treacherous wit symbol the morals of the present day. How comes it that, hating as you do our social foibles, you can endure the ways of that fair lady? Does all you hate cease to be evil in so sweet a form? or—do you choose excuse it?

Alceste. No; the love I feel for that young widow in no way blinds me to her great defects. I am, in spite of the passion she inspires in me, the first to see them and the first to blame. But with it all, in spite, too, of my will, she has—I own my weakness—the art of pleasing me. In vain I see her faults; in vain I blame her; in spite of all, she makes me love her. Her grace, her charm, are stronger than all else. Doubtless, my love will purge her soul of worldly vices in the course of time.

Philinte. If you do that you will have done great things. Then you think she loves you?

Alceste. Yes, by heaven! I could not love her did she not love me.

Philinte. But if her love for you is so apparent why do you fret yourself about your rivals?

Alceste. Because a heart which deeply loves needs that the object of that love be all its own; and I have come here now to tell her, as to that, all that my passion urges me to say.

Philinte. For my part, if 't were granted me to form a wish, her cousin Eliante would have my longings. Eliante's heart, which cares for yours, is steadfast and sincere; had your choice fallen there it would have been in keeping with your needs.

Alceste. True; my reason daily tells me so; but 't is not reason that rules love.

Philinte. I greatly fear your passion and your hopes may—

SCENE II.

ORONTE, PHILINTE, ALCESTE.

Oronte, to Alceste. They told me below that Celimene and Eliante had gone out shopping; but as they also said that you were here, I have come up to tell you from an honest heart how great an admiration I've conceived for you, and that I long have had an ardent wish to be among your friends. Yes, my heart revels in doing justice to great merit; and I eagerly desire some bond of friendship to unite us. A warm friend of my quality is not, I think, to be rejected. [*During Oronte's harangue Alceste is dreamy and seems not to notice he is being spoken to. He does not come out of his reverie till Oronte says:*] It is to you, if you please, that my words are addressed.

Alceste. To me, monsieur?

Oronte. To you. Do you find them displeasing?

Alceste. Not at all. But my surprise is great, for I did not expect the honor I receive.

Oronte. You need feel no surprise at the esteem in which I hold you, since that of the whole universe is yours.

Alceste. Monsieur—

Oronte. The State has no reward that is not far beneath the dazzling merit all men see in you.

Alceste. Monsieur—

Oronte. Yes; for my part, I hold you preferable to all I see that is most eminent.

Alceste. Monsieur—

Oronte. May the heavens crush me if my words are false. To prove my feelings, suffer me to embrace you with an open heart—asking, as I do so, a place in your regard. Give me your hand, if it please you. You promise me, do you not, your friendship?

Alceste. Monsieur—

Oronte. What! you refuse?

Alceste. Monsieur, the honor you propose to me is great. But friendship asks more mystery; and it is, assuredly, a profanation of that name to seek to use it upon all occasions. Such union is born of knowledge and of choice; we should know each other better before we bind ourselves; for each might have such dispositions that both would soon repent of our rash bargain.

Oronte. Ah! there indeed you speak with judgment, and my esteem for you is all the greater. Let us leave time to knot these gentle bonds. Meantime, I place myself at your disposal. If you have any overtures to make at court, command me; for it is known I have some favor with the king; he listens to me; and, upon my word, in every way he treats me most considerately. In short, I am yours, to use as you may wish; and, as your mind is known to be so brilliant, I have come—in order to begin the tie between us—to read to you a sonnet I have lately written, and ask you if 't were well to offer it to the public.

Alceste. Monsieur, I am most unfit to settle such a question. I beg you to excuse me.

Oronte. Excuse you! why?

Alceste. I have the defect of being more sincere than persons wish.

Oronte. But that is what I want. I should have reason to complain if, trusting to your

sincerity to speak without disguise, you should deceive me.

Alceste. If that is how you take it, monsieur, I am willing.

Oronte. *Sonnet*— It is a sonnet, monsieur. *To Hope*—in fact, to a lady who has granted some hope to my passion. *To Hope*— The lines are not grand, pompous poesy, but simple verses, tender, sweet and languishing.

Alceste. We shall see, monsieur.

Oronte. *To Hope*— I know not whether the style will seem to you sufficiently clear and easy, and whether my choice of words will satisfy you.

Alceste. We shall see, monsieur.

Oronte. I ought, perhaps, to tell you that I was only a quarter of an hour in writing them.

Alceste. Go on, monsieur; the time has nothing to do with it.

Oronte, reading.

'T is true that hope doth comfort bring,
And it rocks a time our sorrow;
But, Phillis, 't is a sadder thing
If we leave not on the morrow.

Philinte. I am charmed already with the little poem.

Alceste (*low to Philinte*). What! have you the face to call that fine?

Oronte, reading.

Your complaisance methinks is lost;
You ought to keep your favors low,
And not yourself put to such cost,
If hope is all you deign bestow.

Philinte. Ah! with what gallantry that phrase is turned.

Alceste (*low to Philinte*). Good heavens! vile flatterer, you are praising nonsense.

Oronte, reading.

If hope eternally delayed,
Quenches my ardor thus betrayed,
Death can alone my succor be.

Your smiles can nothing then repair,
Fair Phillis, it is all despair
When we must hope eternally.

Philinte. The cadence of that last line is charming, amorous, admirable.

Alceste (*aside*). Damn his cadence! The devil! 't is poisonous; I would the words might choke him.

Philinte. I have never heard verses better turned.

Alceste (*aside*). Good God!

Oronte (*to Philinte*). You flatter me; perhaps you think—

Philinte. I never flatter.

Alceste (*aside*). Ah, traitor! what are you doing now?

Oronte (*to Alceste*). But you? Remember the terms of our treaty; speak to me, I entreat you in all sincerity.

Alceste. Monsieur, this matter is always delicate. We like to be flattered on our wit and wisdom. I said one day to a man whose name I will not mention, on hearing certain verses he had written, that it behooved a gallant man to restrain the lust of scribbling which seizes on us all, and put a curb upon his passion for notoriety through such amusements; and I also told him that by his eagerness to show his work to others he laid himself open to the jeers of malice.

Oronte. Do you mean by that to tell me I am wrong in wishing——

Alceste. I do not say so. I warned him that cold criticism crushed; that for this weak-

ness men were much decried; that they might have a hundred noble qualities, but the world would judge them only by their foibles.

Oronte. You think, that, that my sonnet is amiss?

Alceste. I do not say so. I showed him, to stop his writing, how, in our day, this lust of scribbling has spoiled most worthy men.

Oronte. Do I write badly, and resemble them?

Alceste. I do not say so. Finally I said: "What pressing need have you to make these rhymes? What devil drives you into print? If the issue of a wretched book is ever pardonable it is when some poor luckless fellow has written it for bread. Believe me, resist your temptations; deprive the public of your labors. Don't sacrifice—no matter who may urge it—the name you bear at court as a most worthy man to take from grasping printers the repute of a ridiculous and miserable author." That is what I endeavored to make him understand.

Oronte. This is all very well, and I think I understand you. But may I not know what there is in my sonnet—

Alceste. Frankly, it is good for nothing but to put in the fire. You have modelled yourself on the worst examples. None of your expressions are natural. "Rocks a time"—what is that? "We leave not on the morrow"—who leave? "And not yourself put to such test"—what a phrase! And what may this mean: "Phillis, it is all despair when we must hope eternally?" This figurative style, of which our present writers are so proud, is out of keeping with sincerity and sound writing. 'Tis a mere trick of words, pure affectation. That is not the way in which nature speaks. The shocking

taste of the present century alarms me; coarse as our fathers were, their taste was better. As for me, I care far less for the finest things of the day than for this old song I'll now repeat to you:—

“If the king had given to me
 His great town, his *belle Paris*,
 Would I but leave my sweet, my dear,
 My dear I love so well;
 I should say to the King Henri,
 Take back, take back your *belle Paris*,
 I love my love,
 O gay!
 I love my love too well.”

The rhyme is not rich, and the style is old-fashioned; but do you not see how much better it is than all that affectation at which good sense groans? That's what the heart says when it really loves [*To Philinte, who is laughing.*] Yes, you may scoff; but in spite of your *beaux esprits*, I think more of that song than of all the flowery pomposity and false brilliancy which they cry up.

Orcnte. For my part, I insist that my verses are good.

Alceste. You have your reasons for thinking so, and you must allow me to have my reasons, which decline to submit to yours.

Oronte. 'Tis sufficient for me to know that others think well of them.

Alceste. Others have the art of feigning; I have not.

Oronte. Did nature allot you a monopoly of brains?

Alceste. Should I have more if I praised your verses?

Oronte. I can do very well without your approval.

Alceste. You must, if you please, do without it.

Oronte. I would like to see you compose, in your style, a sonnet on that subject.

Alceste. I might, by ill luck, make sonnets as bad; but I should take good care that no one ever saw them.

Oronte. You speak very curtly; and all this assumption——

Alceste. Go, seek elsewhere the incense that you want.

Oronte. Be pleased, my little monsieur, to lower your tone.

Alceste. Faith! my grand monsieur, I speak as I choose.

Philinte (*placing himself between them*). Messieurs, hey! messieurs; this is going too far. Let the matter drop, I beg of you.

Oronte. Yes, I am wrong, I own it, and I leave the house. I am your valet, monsieur, and with all my heart.

Alceste. And I your humble servant.

ACT II.

SCENE II.

ALCESTE, CELIMENE.

Alceste. Madame, will you allow me to speak frankly? I am not contented with your ways of action; they stir such bitterness within my breast I feel 't were better we should break apart. Yes, to speak otherwise would be deceiving you. Sooner or later, inevitably, the break must come. Were I to pledge you to the contrary a thousand times, I should be unable to keep my promise.

Celimenè. Is it to quarrel with me that you have wished to bring me home?

Alceste. Quarrel, no. But your disposition is, madame, to give to each new-comer access to your soul; you allow too many lovers to beset you, and my heart cannot adapt itself to that.

Celimenè. Then, do you hold me guilty because men love me? How can I help it if they think me lovable? And when they take such pleasant pains to see me, am I to take a stick and drive them forth?

Alceste. No, it is not a stick you need, madame, but a heart less facile and less tender to their wishes. I know your charms attend you wheresoe'er you go; but your welcome holds in bonds the admirers whom your eyes attract; its sweetness, offered to all who pay you homage, completes the work your charms began. The smiling hope you grant them fastens their assiduities upon you; but if you made your kindness less inclusive this mob of lovers would be put to flight. Tell me, at least, why Clitandre has the luck to please you? On what foundation of worth or splendid virtue do you base the regard with which you honor him? Is it the inordinate length of his little-finger nail that wins him the esteem you are seen to give him? Have you succumbed, with all the fashionable world, to the dazzling merit of that blond periwig? Are the fine ruffles at his knees the reasons that you like him? those knots of ribbon, have they charmed you? Is it the allurements of his mighty breeches which wins your soul to making him your slave? Or his manner of laughing, his falsetto voice, have they discovered the secret power of touching you?

Celimene. How unjustly you take umbrage at Clitandre! You know the reason why I treat him kindly; he has promised to interest all his friends in this lawsuit I have upon my hands.

Alceste. Lose your suit bravely, madame, and curry no favor with a rival I dislike.

Celimene. But you are growing jealous of the universe!

Alceste. Because you welcome the whole universe too well.

Celimene. That very thing should soothe your nettled soul; my favors, as you see, are shed on all; if one alone received them you would have far more cause to take offence.

Alceste. But I whom you reproach for too much jealousy, what favors have I more than they, if I may ask?

Celimene. The happiness of knowing you are loved.

Alceste. How can my tortured heart believe it?

Celimene. I think that having taken pains to tell you so, such an admission ought to satisfy you.

Alceste. But what assurance have I that you are not, even now, saying the same to others?

Celimene. Certainly, for a lover, your gallant speeches are too pretty; you treat me with such graceful courtesy! Well, to remove that anxious question from your mind, I here unsay all that I said; make yourself easy; nothing can now deceive you but yourself.

Alceste. Good God! why must I love you? If I could snatch my heart out of your hands I would bless heaven for such rare luck! I do not deny that I have striven with all my strength to tear this terrible attachment from

my soul; but every effort fails; it must be for my sins I love you so!

Celimene. Your passion for me is indeed unequalled!

Alceste. Yes, in that I can defy the world. My love is not to be conceived of; and no one, madame, has ever loved as I do.

Celimene. Your method of doing so is truly novel; it seems you love a woman that you may quarrel with her; your ardor blazes forth in angry words; and sure no love was ever yet so scolding.

Alceste. It rests with you to make that anger pass. For God's sake, madame, let us cut short these bickerings, speak heart to heart and put a stop—

SCENE II.

CELIMENE, ALCESTE, BASQUE.

Celimene. What is it?

Basque. Acaste is here.

Celimene. Well, show him up.

SCENE III.

CELIMENE, ALCESTE.

Alceste. What! am I never to have you to myself? Why are you so ready to receive the world? Can you not endure for a single moment of your day to deny yourself to visitors?

Celimene. Do you wish him to quarrel with me?

Alceste. You show him a deference that I do not like.

Celimene. He is a man who would never forgive me if he saw that I considered him intrusive.

Alceste. Is that a reason for disturbing yourself?

Celimene. Heavens, yes! good-will is of value among our fellows. He belongs to a set who, I scarcely know why, have acquired at court a right to be heard. They manage to obtain an entrance everywhere; and though, 't is true, they may not serve us, they are able to do us a vast deal of harm. Therefore, no matter what support one has elsewhere, we ought never to quarrel with such babbling persons.

Alceste. In short, whatever happens and whoever comes, you find good reasons to see all the world; and these precautions about your lawsuit——

SCENE IV.

ALCESTE, CELIMENE, BASQUE.

Basque. Clitandre is also here, madame.

Alceste. Precisely! (*Moves as if to go.*)

Celimene. Where are you going?

Alceste. To leave you.

Celimene. Very good, go; leave the house; you may do as you choose.

SCENE V.

ELIANTE, PHILINTE, ACASTE, CLITANDRE, CELIMENE,
BASQUE.

Eliante to Celimene. The two marquises are coming up. Has anyone announced them?

Celimene. Yes. (*To Basque*) Place chairs for all. (*To Alceste*) What! you did not go?

Alceste. No; for I wish, madame, to make you speak your mind, either for them or else for me.

Celimene. Hush, be silent.

Alceste. Today you shall explain yourself.

Celimene. You have lost your senses.

Alceste. Not at all. You shall declare yourself——

Clitandre. Ah! madame, I am just from the Louvre, where Cleonte, at the levee, was supremely absurd. Has he no friend who would with charitable advice enlighten him as to his manners?

Celimene. He is indeed a bungler in society; he makes himself conspicuous wherever he may be; and when one sees him after a slight interval he seems to be more ridiculous than ever.

Acaste. Talk of ridiculous people! i' faith, I've just been undergoing one of the most tiresome,—Damon, the moralizer, who, if you'll believe me, kept me one whole hour out of my chair, standing in the hot sun.

Celimene. Yes he 's a wonderful talker, who has the art of telling you nothing in a great harangue. There 's never any point to what he says; 't is only noise to which we listen.

Eliante, to Philinte. This beginning is cheerful; the conversation is starting at good speed against our neighbors.

Clitandre. But there 's Timante, madame; he is rather a good fellow.

Celimene. Ah! he 's a man of mystery from head to foot; he flings you, as he passes, a haggard glance, because, without a thing to do, he is always busy. His speeches are too full of flourishes; he pesters one to death by dint of mannerism. He always has some secret to whisper in one's ear, breaking up a conversation,—and the secret is invariably nothing. Out of the mérest trifle he makes a mystery; and even his good-byes, he whispers them.

Acaste. And Geralde, madame?

Celimene. Oh! that wearisome chatterer! when will he cease to play the *grand seigneur*? He mingles only with the shining lights, and quotes his dukes, his princes and princesses. The quality infatuates him; and all his talk is now of horses, equipages, dogs. He calls the personages of highest rank by their first names; the plain word "monsieur" is forgotten by him.

Clitandre. They say he is on the closest terms with the Bleise.

Celimene. That poor stupid woman! oh, what dry intercourse! I suffer martyrdom when she comes to see me; I perspire with the effort to find something to say; the obtuseness of her expression kills the words on my lips. In vain I assault her stupid silence with all the common-places I can call to my assistance,—fine weather, rain, heat, cold. But those are topics that are soon exhausted, and then her visit, always intolerable, drags its fearful length along. In vain I look to see what time it is; I yawn a score of times; she does not budge more than a log of wood.

Acaste. What do you think of Adraste?

Celimene. Ah! what excessive pride! He is a man puffed up with admiration of himself. His sense of his deserts is never satisfied at court, and so he rails against the court, and proceedings daily. There's never an office, post, or privilege given but what he thinks he's treated with injustice.

Clitandre. But that young Cleon, at whose house all our best people now are visiting; what do you say of him?

Celimene. Why, that he makes his cook his merit, and that the world visits his dinners and not him.

Eliante. But he takes care that all the choicest things are served there.

Celimene. Yes; but I wish he would not serve himself; his silly person is a horrid dish which spoils, to my taste, all the feasts he gives.

Philinte. The world at any rate thinks highly of his uncle, Damis; what do you say of him, madame?

Celimene. He is a friend of mine.

Philinte. I think him an honest man, and he looks a wise one.

Celimene. Yes, but he pretends to too much mind; it irritates me. He is always straining; in what he says you see him in travail to produce *bons mots*. Since he took it into his head to be so clever, nothing pleases his taste, he is too fastidious. He sees defects in everything that's written; he thinks a wit should never praise; he counts it learned to find fault; fools only can admire his laugh. By approving nothing in the works of the day, he fancies he exalts himself above his fellows. Even in conversation he finds something to reprove; the topics are so low he will not condescend to them. He stands, arms folded, and, from the pinnacle of his mind, looks down in pity upon what we say.

Acaste. God bless me! that's his veritable portrait.

Clitandre, to Celimene. For painting people to the life, you are incomparable.

Alceste. On, on, set on each other, my good friends at court! Spare none, let each man have his turn. And yet, if one of them appears in sight you haste to meet him, give him your hand, offer him flattering kisses, and swear by all the oaths to be his servant.

Clitandre. Why find fault with us? If what was said displeases you, address your reproaches to madame.

Alceste. No, by heaven! it is to you I make them; your compliant laughter incites her wit to these ill-natured speeches. Her satire feeds upon the wicked incense of your flattery; and if she did not see herself applauded her heart would be less prone to ridicule. 'Tis thus that flatterers are guilty of the vices which corrupt society.

Philinte. But why do you take such interest in the persons thus condemned, since you yourself would blame in them the selfsame faults.

Celimene. Is it not monsieur's nature to contradict? Why expect him to agree with the general voice, or to refrain from exhibiting, wherever he may be, the cavilling spirit he received from heaven? The opinion of others is never agreeable to him. He sets up his own, believing he would be thought a common man if it were seen to agree with that of the world. The pleasure of contradicting has such charms for his soul that he sometimes, and not seldom, takes arms against himself, and wages war upon his own real feelings when he hears them uttered by the lips of others.

Alceste. The laugh is on your side, madame, and there's nothing to be said. You can wing your shafts of satire on me as you please.

Philinte. But is it not true that your mind antagonizes whatever is said, and is unable, from a bitterness you avow yourself, to endure that others should either blame or praise?

Alceste. Yes; for the reason that men are never right. My bitterness is just; I find them, wherever they may be, offensive flatterers or rash censors.

Celimene. But——

Alceste. No, madame, no; if I die for it, I must say that you find pleasure in things I cannot bear; and these friends here do wrong to foster in your soul this great indulgence of defects that injure it.

Clitandre. For myself I shall say nothing; but as for madame, I must openly declare that I have hitherto believed her faultless.

Acaste. I see the graces and the attractions that heaven has granted her; but her defects have never, I must say, struck my eye.

Alceste. They all strike mine; and far from overlooking them, I take pains, as she well knows, to bring them to her knowledge. The more we love our friends, the less we flatter them; it is by excusing nothing that pure love shows itself. For my part, I would banish those unworthy lovers who slavishly submit to all my sentiments, and by their weak compliance swing incense to my follies.

Celimene. In short, if hearts should look at things in your way, they must, in order to love truly, renounce all sweetness, and find the crown of perfect love in heaping insults on the object of it.

Eliaute. Love, as a rule, is little ruled by laws. All lovers, as we know, boast of their choice. True passion does not see that which is blamable; the one beloved is always lovable. Defects love thinks perfections, and gives them pleasant names. The pallid one is comparable to the jasmine in her whiteness; the swarthy skin becomes a rich brunette; thinness gives freedom of motion and a slender waist; the portly dame is full of majesty; she who neglects her person and takes no pains to charm is called a careless beauty; the giantess becomes a goddess; the dwarf, an epitome of all heaven's marvels; the haughty spirit deserves a crown;

the tricky mind has wit; the fool is kind; the chatterer, good-humored; the silent one maintains her virtuous modesty. 'Tis thus a lover whose passion is supreme loves even the defects of her he worships.

Alceste. And I maintain, yes I——

Celimene. Come, let us end this talk, and take a turn or two about the gallery. What! are you going, gentlemen?

Clitandre and Acaste. Oh, no madame.

Alceste. The fear of their departure weighs on your soul. Gentlemen, leave when you please; but I warn you, I shall not go till you are gone.

Acaste. Unless my presence importunes madame, I can stay here all day, for nothing calls me hence.

Clitandre. As for me, provided I return for the king's *coucher*, I have no other matters to attend to.

Celimene, to Alceste. You are joking, I am sure.

Alceste. No, not in any sense. We shall see now if it is I of whom you are anxious to be rid.

SCENE VI.

ALCESTE, CELIMENE, ELIANTE, ACASTE, CLITANDRE,
PHILINTE, BASQUE.

Basque to Alceste. Monsieur, a man is below who wishes to see you, he says, on business which cannot be delayed.

Alceste. Tell him I know of no such urgent business.

Basque. He wears a jacket with great pleated basques, and gold upon it.

Celimene, to Alceste. Go, see who it is; or else, have him shown up.

SCENE VII.

ALCESTE, CELIMENE, ELIANTE, ACASTE, CLITANDRE,
PHILINTE, A SOLDIER OF THE MARSHALS' GUARD.

Alceste, advancing to meet him. Come in, monsieur. What do you want with me?

Soldier. Monsieur, I have two words to say to you.

Alceste. You can speak out; I am prepared to hear you.

Soldier. The Marshals, whom I serve, monsieur, bid you come to them at once.¹

Alceste. Me? bid me, monsieur?

Soldier. Yes, you.

Alceste. Buy why?

Philinte, to Alceste. Because of that ridiculous affair between yourself and Oronte.

Celimene, to Philinte. What affair?

Philinte. Oronte and he had words about some verses he would not admire; and the Marshals wish to nip the matter in the bud.

Alceste. I will not have the base compliance—

Philinte. But you must obey the order; come, let us go.

Alceste. What sort of terms do they desire to make between us? Will the Marshals order me to think the verses that caused our quarrel good? I shall not unsay what I have said,—I think them bad.

Philinte. But a gentler tone——

Alceste. I shall not yield one inch; the lines are execrable.

¹ The court of the Marshals of France took cognizance of quarrels and affairs of honor among gentlemen.

Celimene. Come, come, make haste and go where you are summoned.

Alceste. I go, madame; but I shall soon return to settle, in this room, the matter we have been discussing.

END OF ACT SECOND.

ACT III.

SCENE I.

CLITANDRE, ACASTE.

Clitandre. I observe, my dear marquis, that your soul is contented; all things make you cheerful, and nothing frets. Now, tell me in good faith, do you really believe, without self-deception, that you have any sound reason for being so happy?

Acaste. *Parbleu!* I don't see, when I look myself over, any ground whatever for discontent. I have property, I am young, I belong to a house which has certain good reasons to call itself noble; and I think, through the rank to which my blood entitles me, there are very few stations in life that I cannot fill. As to courage, of which, of course, we ought to think first, I know, without vanity, that I am not lacking there; I have been seen by the world to carry on an affair in a sufficiently vigorous and dashing manner. As for wit, there's no question but what I have that, and with it enough good taste to judge without study, and to talk about everything. At the theatre, of which I am truly an idolator, I can wear a wise face, decide the fortunes of a play, and lead the applause at all the fine speeches which merit hurrahs. I'm sufficiently active; I've a good air and good looks, above all fine teeth, and my figure is slim. As to my style of dressing, I think, without vanity.

that any one would be foolish to rival me there. My position in the world is as good as can be; the fair sex adore me; I stand well with the king; and, therefore, my dear marquis, I see, on all sides, every reason to be satisfied with myself.

Clitandre. Yet. But finding everywhere so many easy conquests, why do you persist in offering useless homage here?

Acaste. Useless? *Parbleu!* I'm not of a kind nor of a temper to stand cold treatment from any beauty. 'Tis only common minds and ill-bred persons who burn persistently for frigid dames, or languish at their feet, endure their rigor, seek help from tears and sighs, and strive, by the painstaking of a long-drawn suit, to win the smiles their lack of merit forfeits. Men of my presence, marquis, are not made to love on credit and pay all the costs. However choice may be the lady's favors, I think, thank God, my value equals hers; and to do honor to a heart like mine is sure no reason it should cost her nothing. To put the thing on equitable grounds, she must at least meet my advance half-way.

Clitandre. So you think, marquis, you stand well with Celimene?

Acaste. Marquis, I have some ground to think so.

Clitandre. Take my advice; get rid of that idea; it is an error. You flatter yourself, my friend, you blind yourself—

Acaste. Quite true; I flatter and I blind myself.

Clitandre. Why call your happiness so perfect, then?

Acaste. I flatter myself.

Clitandre. On what do you found your hopes?

Acaste. I blind myself.

Clitandre. Then you have proofs to give you certainty?

Acaste. I tell you, I deceive myself.

Clitandre. Can it be that Celimene has made you secret promises?

Acaste. No, she rebuffs me.

Clitandre. Oh! cease this jesting, and let me know what hopes you really have.

Acaste. I am the luckless, you the lucky one. She has so deep an aversion to me that one of these days I'll surely hang myself.

Clitandre. *Ah ca!* marquis, are you willing to settle our fates by agreeing that, if either of us can show some certain sign of having won her heart, the other shall make way for the fortunate lover and relieve him of a rival?

Acaste. *Parbleu!* I like that sort of talk, and will, with all my heart, agree to it. But hush, here she comes.

SCENE II.

CELIMENE, ACASTE, CLITANDRE.

Celimene. What! still here?

Clitandre. Love stayed our feet.

Celimene. I have just heard a carriage entering the courtyard. Do you know whose it is?

Clitandre. No.

SCENE III.

CELIMENE, ACASTE, CLITANDRE.

Basque. Arsinoe, madame, is coming up to see you.

Celimene. What can that woman want with me?

Basque. Eliante is below, and is talking with her.

Celimene. Something is in her mind, or why should she come here?

Acaste. She is thought to be a most consummate prude, and in the ardor of her zeal—

Climene. Yes, yes, pure cant! At heart she's of the world; and all her efforts aim at hooking on to others—in which, however, she has small success. She cannot see without an envious eye a woman followed by a train of suitors; and her sour virtue, overlooked by all, is ever grumbling that the age is blind. She tries to cover with a veil of prudery the frightful solitude in which she lives; and, to save the honor of her scanty charms, she attributes sin to powers that they have not. And yet a lover would be most pleasant to my lady. She even shows some tenderness for *Alceste*; the attentions that he pays to me offend her; she tries to make it seem that I have stolen them; and her jealous spite, which she can scarce conceal, is felt in underhanded ways on every side. I have never seen anything, I think, so foolish; and with it all she is impertinent to the last degree. Therefore—

SCENE IV.

ARSINOE, CELIMENE, CLITANDRE, ACASTE.

Celimene. Ah! what fortunate fate brings me this visit? Madame, in all sincerity, I was beginning to feel most anxious for your welfare.

Arsinoe. I have come, madame, to offer you some advice, which I feel I owe to you.

Celimene. Ah! how good of you, and how glad I am to see you!

Clitandre and Acaste go out laughing.

SCENE V.

ARSINOE, CELIMENE.

Arsinoe. The departure of those gentlemen is timely.

Celimene. Shall we sit down?

Arsinoe. It is not necessary. Madame, friendship should, above all, be shown in things that most affect our fellows; and as there are none more vitally important than those of honor and decorum, I have come to prove the friendship my heart feels for you by offering counsel which concerns your honor. Yesterday I visited some friends, of sterling virtue. There the conversation turned on you; unfortunately, your conduct and its notoriety were not approved. The crowd of men you suffer to approach you, your coquetry, and the rumors it excites, received more consure and far harsher blame than I could wish. You will readily conceive the course I took. I said all that I could in your defence; excused you, firmly, as to your intentions, offering to vouch for your good soul. But—as you know—there are things in life that cannot be excused, however much we wish to do so, and I found myself, at last, constrained to admit that your manner of living does certainly seem wrong, and has—to the world—an injurious appearance; also that mischievous tales are being told of it, and that your conduct might, if you were only willing, give far less ground for condemnation. Not that I think your virtue really injured—God forbid that I should think so! But the world believes in the mere shadow of sin; and it is not enough to satisfy our conscience only. Madame, I think your mind too reasonable to take amiss this useful counsel, or to attribute it to other motives than the hearty zeal which binds me to your interests.

Celimene. Madame, I have many thanks to render you; such counsel can but gratify me; and, far from taking it amiss, I wish to recognize the favor you have done me by instantly returning it with other counsel which concerns your honor. As you have shown yourself so heartily my friend by telling me the rumors people spread about me, I wish to follow, in my turn, so kind an example by telling you what people say of you. The other day, at a house where I was visiting, I met some persons of high character, who, speaking of a soul's true kindness, turned their remarks, madame, on you. Unfortunately, your prudery and your bursts of pious zeal were not regarded by them as a good example. This affection of a grave demeanor; your endless talks of virtue and of honor; your frowns and outcries at the shadow of indecency which one ambiguous word can cast upon yourself; the pitying glances you bestow on others; your frequent lectures, your sour censure of things that in themselves are pure and innocent,—all this, if I may speak to you quite frankly, madame, was blamed with one consent. What is the good, they said, of all this modesty, this virtuous exterior, if it belies the rest? 'Tis true she says her prayers with rigid punctuality, but then she beats her servants and she does not pay them; in pious places she displays her zeal, but she paints her face in order to seem handsome; she covers up the nakedness of pictures, but has a liking for realities. As for me, madame, I took up firmly your defence with each and all; assuring them that what they said was slanderous. But their views clashed with mine; and their conclusion was that you would do well to meddle less with others' actions and look more closely to your own. They said we ought to look at home a good long time before we think of judging other

people; that an exemplary life alone gives weight to our correction of the lives of others; moreover, that in any case, 't is better to remit that duty to those whom heaven has selected for it. Madame, I think you are too reasonable to take amiss this useful counsel, or to attribute it to other motives than the hearty zeal which binds me to your interests.

Arsinoe. I know that in reproving we subject ourselves to much; but I did not expect this sharp retort, madame; and I see plainly, by its very bitterness, that my sincere advice has cut you to the heart.

Celimene. Quite the contrary, madame; and if the world were wise these mutual counsels would be made the custom. Given in good faith, they would dispel the utter blindness each has for himself. It rests with you to carry on this faithful office with your past zeal. Let us take pains to tell ourselves, between ourselves, just what you hear of me, and I of you.

Arsinoe. Ah, madame, I shall hear nought of you; it is of me the most reproving things are said.

Celimene. Madame, I think that all things may be praised and blamed; and each award is just, according to age or fancy. There is a season for coquettish gallantry; there is another, still more suitable, for prudery. 'Tis wise, from policy, to choose that style when time has deadened the glow of youth; it serves to cover a mortifying downfall. I don't deny that some day I may follow on your traces, for age brings everything. But it is still too early, madame, as everybody knows, to be a prude at twenty.

Arsinoe. You plume yourself on very slight advantages, and ring your age with wonderful effect! But an advantage that you share with many is not so much to boast of, after all. I

know not why your temper drives you, madame, thus to provoke me in so strange a way.

Celimene. And I, madame, I really know not why you constantly declaim against me everywhere. Must I be punished for your disappointments? Is it my fault that no one courts you? What can I do if men will love me, and will persist in offering vows your heart may wish to take away from me? The field is open to you. I do not hinder any of your charms from winning lovers.

Arsinoe. Alas! and do you really think the number of your lovers, of which you seem so vain, can trouble others; or that we do not find it easy to appraise the price at which you gain them? Do you think to persuade us—who see how things are going—that your good qualities alone attract your followers; or that they burn for you with honest love, and court you solely for your virtue? The world is not a dupe; it is not blind by such vain pretences. Many a woman fitted to inspire the tenderest sentiments does not have lovers; from that the argument is plain: their hearts cannot be won without great effort, for none may woo us for our beauty only, but all must buy the right of courting us. Therefore you need not swell with pride for such poor sparkles of a trivial victory. Correct the self-conceit of your attractions, and cease to treat us superciliously. If our eyes envied the conquests you obtain, methinks we all could do as you do,—cease to conduct ourselves with self-respect, and let you see that others can have suitors when they please.

Celimene. Then have them, madame; let me see it done; with this rare secret make the effort to please, and——

Arsinoe. Madame, let us end this conference; it irritates too much your soul and mine.

I should already have taken leave of you, were I not forced to wait here for my carriage.

Celimene. Pray stay as long as suits you, madame; nothing need hasten your departure. But, not to weary you with my presence, I'll give you better company; and monsieur here, whom chance has brought so opportunely, shall fill my place and entertain you better.

SCENE VI.

ALCESTE, CELIMENE, ARSINOE.

Celimene. Alceste, I have a letter I must write; it cannot be delayed without some blame to me. Stay with madame; she will have the kindness, I am sure, to excuse my incivility.

SCENE VII.

ALCESTE, ARSINOE.

Arsinoe. You see she wishes me to entertain you until my carriage comes; and her civility could provide me with nothing more truly charming than this interview. Persons of lofty merit draw forth the esteem and love of every one; and yours, undoubtedly, has secret charms which lead my heart to enter all your interests. I wish the court, with more propitious eyes, would do full justice to your claims. You have much cause for indignation. I am angry almost daily to see that nothing has been done for you.

Alceste. For me, madame? On what pretensions should I base a claim? What service to the State have I been known to render? What have I done, if you please, so brilliant in itself that I have cause to grumble because the court does nothing in return for it?

Arsinoe. It is not every one on whom our court casts a propitious eye who has done good

service to the State. Opportunity is needed as well as power. The great deserts that all men see in you ought——

Alceste. For heaven's sake, madame, say nothing of my deserts. Why do you wish the court to trouble itself about them? Its cares would be too many and its hands too full if it unearthed the merits of everybody.

Arsinoe. A dazzling merit will unearth itself; and yours is thought extreme on every side. I must tell you now that yesterday, in two distinguished houses, you were much praised by persons of great weight.

Alceste. Hey! madame, 't is nowadays the fashion to laud every one. That is the way by which the present century levels everything. All are of equal merit; it is no longer an honor to be praised. Why! praises are stuffed down your throat, flung at your head; and there's my valet's name in the gazette!

Arsinoe. For my part, I have wished you to obtain some place at court in which to show your merit to the world. If only you consented, we would intrigue a little, and, to oblige you, start a few machines. I myself have men in hand whom I could use, and they would make the way quite smooth for you.

Alceste. Madame, what would you have me do at court? The disposition that I feel with in me requires rather that I keep away from it. Heaven did not make me, when it gave me breath, with a soul congenial to the courtly atmosphere. I am conscious that I do not possess the necessary virtues to succeed there and do my duty. Frankness and sincerity are my chief talents; and he who does not have the gift of hiding what he thinks, had better make short stay in courtly regions. Outside the court, of course we cannot have the strong support or the titles of honor it gives nowadays.

But, in losing those advantages, we are spared the vexations trifling of silly persons; we need not suffer merciless rebuffs, nor be compelled to praise the verse of Monsieur Such-a-one, nor shower incense on Madame This-or-that, nor undergo the brains of seedling marquises.

Arsinoe. Then we will drop, since you desire it, this matter of the court; but my heart is forced to pity you in your love; and, if I may disclose my thoughts upon it, I wish with all my soul 't were better placed. Indeed you have deserved a gentler fate, for she who charms you is unworthy of you.

Alceste. In saying that, I beg you to remember, madame, this lady is your friend.

Arsinoe. Yes. But my conscience is too wounded to bear a moment longer the wrong she does you. The state in which I see you grieves my soul too much; I am forced to warn you she betrays your love.

Alceste. You show me thus, madame, a tender impulse; such warnings would oblige a lover.

Arsinoe. Yes, though she be my friend, she is, and I dare say it, unworthy to enthrall a good man's heart; hers has for you a counterfeited tenderness.

Alceste. It may be so, madame; we cannot see the hearts of others. But your charity might well have paused before you cast this painful thought in mine.

Arsinoe. Oh! if you do not wish to be undeceived, there is no need to tell you anything; that, indeed, is easy.

Alceste. No, it can not end so. This is a subject on which, no matter what is learned, doubts are more cruel than the worst of truths. For my part, I would rather nothing were told me unless it could be shown with certainty.

Arsinoe. That is enough. Upon this subject

you shall have full light. Yes, I will let you trust your own eyes only. Give me your hand to take me home. There I will show you positive proof of the unfaithful heart of her you love. And, if for other eyes your own could long, it may be you would find some there to comfort you.

END OF ACT THIRD.

ACT IV.

SCENE I.

ELIANTE, PHILINTE.

Philinte. No, a soul so hard to manage was never seen; no reconciliation was ever yet so troublesome to bring about. In vain they tried in every way to move him; out of his fixed opinion he would not be dragged. Never did a more fantastic quarrel, I am sure, engage the wisdom of the Marshals. "No, gentlemen," he said, "I shall not retract. On every other matter I will agree with him, but not on this. Why is he affronted? Of what does he complain? Is his fame injured because he cannot write poems? What does my opinion, which he takes so ill, signify to him? A man can be a gentleman and make bad verses. Such matters do not touch his honor, and I told him to be a gallant man in every other way; a man of quality, of courage, deserving of anything you please, but—a bad writer. I will praise, if you wish it, his way of living, of spending money, his skill on horse-back, in fencing, dancing; but as for praising his verses, I beg to be excused! When a man has not the happiness to be able to write better than that, he ought to repress, under pain of death, his desire to make rhymes." Finally, all the grace and concession to which, with great effort, his feelings were brought could only induce him to say—thinking that

he softened his style exceedingly: "Monsieur, I am sorry to be so critical, and I heartily wish, out of good-will to you, that I could have thought your sonnet better." After which an embrace was hastily brought about in order to conclude the proceedings as fast as possible.

Eliante. He certainly is very singular in his manner of acting; but, I must confess, I esteem him highly. The sincerity on which his soul so prides itself has something noble and heroic in it. 'Tis a virtue rare indeed in these days; and I wish I could see it in others as in him.

Philinte. As for me, the more I see of him the more amazed I am at this passion to which he yields his heart. With the nature it has pleased God to give him, I cannot see how it is that he loves as he does; and still less do I see why your cousin should be the woman to whom his heart inclines.

Eliante. It only shows that love is not invariably produced in hearts by harmony of disposition; and all those theories of gentle sympathy are in this case belied.

Philinte. But do you think, from what you see, that he is loved?

Eliante. That is a point it is not easy to make out. How can we judge how truly she may love him? Her heart is never really sure itself; sometimes she loves and does not know it; at other times she thinks she loves and there is nothing in it.

Philinte. I think our friend will find more grief than he imagines with your cousin. To tell the truth, if he possessed my heart, he would have turned his homage elsewhere, and by a wiser choice have shown, madame, that he profits by the kindness you have shown him.

Eliante. For myself, I stand on no punctilio, for I think that in such matters we should show good faith. I do not oppose his tenderness for

Celimene; on the contrary, my heart is interested for her, and if the thing depended upon me I should myself unite him to the one he loves. But if in such a choice (as well may happen) his love should meet some unpropitious fate, and it so chanced another's suit were crowned, I could resolve to accept his homage then; for the refusal suffered by him in such a case would cause me no repugnance.

Philinte. Neither do I oppose, madame, the kindness which your charming soul bestows upon him; and he himself can tell you, if he will, what I have taken pains to say to him about it. But if, by the marriage which he now desires, you should be unable to receive his vows, I shall then seek the transcendent favor which your soul with so much generosity now gives to him,—happy when his heart turns elsewhere, if yours, madame, falls back on mine.

Eliante. You are making merry, Philinte.

Philinte. No, madame; I am speaking now of my soul's best; and I await the occasion to offer myself openly; trusting, with all my heart, the moment soon may come.

SCENE II.

ALCESTE, ELIANTE, PHILINTE.

Alceste. Ah! avenge me, madame, for an affront which has, at last, conquered my constancy.

Eliante. What is it? What can have moved you thus?

Alceste. That which I can't cenceive of without dying. And the upheaval of all the natural world could not unhinge me more than this disaster. 'Tis done, 'tis over! My love—I cannot speak of it!

Eliante. Try to control your mind.

Alceste. Oh, just Heaven! why were such charms joined to the vices of the basest souls?

Eliante. But still, what have——

Alceste. Ah! all is ruined; I am—I am betrayed, I am destroyed. Celimene—who could believe it?—Celimene deceives me; she is unfaithful.

Eliante. Have you just grounds for that belief?

Philinte. Perhaps it is mere suspicion, lightly kindled. Your jealous mind invents, at times, chimeras.

Alceste. Ha! *morbleu!* monsieur, mind your own affairs. [*To Eliante*] I am, alas! too certain of her treachery; for here, in my pocket, written by her own hand, is a letter to Oronte which proves to my very eyes her shame and my disgrace—Oronte! whose homage I believed she fled; the one of all my rivals whom I feared the least.

Philinte. A letter easily misleads at sight, and is often not so guilty as we think it.

Alceste. Monsieur, once more, let me alone, I beg; and keep your interest for your own concerns.

Eliante. You ought to moderate your anger. And this outrage——

Alceste. Madame, it rests with you to avenge it. It is to you I have recourse to free my heart from poignant anguish. Avenge me on your cousin, your ungrateful and perfidious cousin, who basely has betrayed a faithful love. Avenge me for a wrong which you must hold in horror.

Eliante. I avenge you! how?

Alceste. Accept my heart—accept it, madame, and take the place of that unfaithful woman. In that way only can I have revenge; I wish to punish her by the honest vows, the

deep affection, the respectful suit, the assiduous service, and the fervent duty my heart henceforth will offer on your altar.

Eliante. I pity what you suffer, certainly, and I do not reject the heart you offer me; but the wrong is not, perhaps, so great as you imagine, and you may still give up these thoughts of vengeance. When we are hurt by some one who has a deep attraction we are apt to make rash plans we do not execute. We may see powerful reasons to break our chain, and yet a guilty dear one soon is innocent; and then the revenge we wish to take is easily dispelled, and we see 't is but a lovers' quarrel after all.

Alceste. No, no, madame, I assure you, no. The offence is mortal. I break my bonds, and there is no return. Nothing can change my firm intention, for I should punish myself were I to love her still. Here she is; my anger is redoubled by her presence. I will denounce her treacherous actions to her face, and so confound her. After which, freed once for all from her deceitful charm, I'll bring to you a heart at liberty.

SCENE III.

CELIMENE, ALCESTE.

Alceste, aside. Oh, heaven! can I be master of my emotions?

Celimene, aside. Heyday! (*To Alceste*) What troubles you thus? Why these sighs, these gloomy looks? Are they meant for me?

Alceste. Of all the wrongs of which the soul is capable, nothing compares with your disloyalty. Fate, devils, and the anger of high Heaven have never yet produced a thing so evil.

Celimene. Here 's sweetness truly, and I like it much.

Alceste. Do not jest; this is no time to laugh; blush rather, for there is ample reason; I have sure proofs of your betrayal. This was the meaning of my troubled soul; 'twas not in vain my love became alarmed; those frequent doubts you thought so odious were warnings of the calamity before me. In spite of all your care and cleverness in deception, my star was telling me of that I had to fear. But do not think that I will suffer the sting of such an outrage and not take vengeance. I know we have no power over desire; that love is, everywhere, born independent; no force can thrust it on the heart, and every soul is free to choose its conqueror. Therefore I should have had no reason to complain had your lips spoken truly, and refused my suit when first I pressed it. My heart would then have had no right to quarrel with its fate. But to find my love accepted with false vows—that is betrayal, that is perfidy, which cannot be too sternly punished, and I will give the reins to my resentment. Yes, yes, fear all after such infamy; I am no more myself, I am all anger! Stabbed by the mortal blow your hand has struck, my senses are no longer ruled by reason; I yield to the promptings of a just resentment, and I will not answer for what I now may do.

Celimene. But what has caused, if I may ask, this violent fit of anger? Have you lost your reason?

Alceste. Yes, yes, I have lost it! I lost it when from the sight of you I took, for my sorrow, the poison that is killing me, and when I trusted the sincerity of all those traitorous charms which so enthralled me.

Celimene. What is this treachery of which you thus complain?

Alceste. Ah! double-heart, that knows so well the art of feigning! But I have the means

at hand all ready to confound it. Cast your eyes here, and recognize your writing. This discovered letter suffices to convict you; against this witness there is no reply.

Celimene. Is this the matter that has so disturbed you?

Alceste. You do not blush to see that letter?

Celimene. And why, pray, should I blush to see it?

Alceste. What! do you add audacity to treachery? Will you disavow that note because it does not bear your seal?

Celimene. Why should I disavow a letter written by me?

Alceste. Can you see it without shame for the crime toward me of which it proves you guilty?

Celimene. You are, upon my word, a most unreasonable man.

Alceste. What! do you dare defy that ocular proof, and say that in its tenderness to Oronte there is nothing to outrage me and make you blush?

Celimene. Oronte! who says the letter was to him?

Alceste. The persons who placed it in my hands this day. But I'll agree it might be for another—if so, would my heart have less reason to complain of yours? would you be guiltless toward me?

Celimene. But if it be a woman to whom I wrote that letter, why should it wound you? where's the crime of that?

Alceste. Ha! the shift is good, the evasion admirable! I did not expect, I must admit, this trick, but it convinces me completely. How dare you have recourse to vulgar subterfuge? Do you think me blind? Go on, and let me see the crooked ways, the shifty air by which you will maintain so clear a

falsehood; I'd like to know how you can twist to suit a woman the words of that letter which is full of passion. Explain, to hide your lack of truth, the words I now will read to you—

Celimene. I do not choose it. I think you are ridiculous enough, to use your power as you do, and dare to tell me to my face all this.

Alceste. No, no; be not so angry; take some pains to justify these words of yours——

Celimene. No, I refuse to hear them; what it may please you to believe in this affair is of the smallest consequence to me.

Alceste. I beg of you, tell me the truth; I will be satisfied—if I can be—that the letter is to a woman.

Celimene. No, the letter is to Oronte; I wish it to be believed. I receive his attentions with great pleasure; I admire what he says, I value what he is. I am ready to agree to all you say. Now, do as you please, take your own course; but do not wear me out with such scenes any longer.

Alceste, aside. Heavens! was ever my fate more cruel? Was ever heart so treated? What! when a just displeasure forces me to speak, 't is I who am complained of, I who make the quarrel! My grief and my suspicions are goaded on, and I am told I may believe the worst—in which she glories! And yet my heart is still so cowardly as not to break the chain that binds me to her, or arm itself with laudable contempt for the ungrateful object it has loved too well. (*To Celimene*) Ah! you know well, perfidious woman, how to make my weakness serve your ends in spite of myself, and how to use the fatal love, born of your eyes, to carry out your purposes. Defend yourself, at least, from a crime that overwhelms me; cease this affectation of being guilty. Prove to me, if you

can, the innocence of that letter; my tenderness consents to come to your assistance—strive to seem faithful, and I, in turn, will strive to think you so.

Celimene. Oh! you are mad with all your jealous transports; you don't deserve the love I feel for you. I should like much to know what could induce me to stoop so low as to deceive you; and why, if my heart leaned another way, I should not say so with sincerity. How is it that the kind assurance I gave you of my feelings was not enough to save me from your suspicions? Has such a pledge no power against them? and is it not insulting me to listen to their voice? Because a woman's heart makes a strong effort when it owns its love; because the honor of our sex—that enemy to ardor—firmly opposes such avowals, should the lover for whose sake we overcome those obstacles, should he be the one to doubt our truth? Is he not guilty in suffering others to say these things—at least without a combat? Go! such foul suspicions deserve my anger; you are not worth the esteem in which I held you. How foolish I have been! I am vexed with my simplicity in keeping any kindness in my heart for you. I ought to turn my love elsewhere, and give you thus a subject of legitimate complaint.

Alceste. Ah! traitress, my weakness is indeed a mystery. Doubtless you are deceiving me with those soft words. What of it? I must follow my destiny; my soul is given over to your worship. I wish to see the end of this, and know what is your heart,—and whether it is black enough to still betray me.

Celimene. No, for you do not love me as I must be loved.

Alceste. Ah! my love is far beyond compare; and in its ardor to show itself for what it is

to all the world, it even forms desires against you. Yes, I would fain that no one thought you lovable; I would you were reduced to misery; that Heaven denied you everything; that you had nor rank, nor birth, nor wealth, so that my love might make some startling sacrifice to heal the injustice destiny had done you, and that my heart might have the joy and glory of seeing you hold all things through my love.

Celimene. That's a strange fashion of wishing well to me; heaven grant you may not have the chance of it. But here's your valet, seemingly excited.

SCENE IV.

CELIMENE, ALCESTE, DUBOIS.

Alceste. What is all this? and why this frightened air?

Dubois. Strange things have happened. Matters are going wrong in our affairs——

Alceste. How?

Dubois. Monsieur, we must get away at once. We must slip off silently.

Alceste. But your reason, say? Why do you use such language?

Dubois. The reason is we must be packing.

Alceste. Ha! I'll break your head assuredly if you don't answer differently.

Dubois. Monsieur, a man all black in face and clothes came to the house, and even to the kitchen; where he left a paper, scribbled in such a way that one had need to be worse than any devil to read it. It concerns, no doubt, your lawsuit, but all the fiends in hell, I think, could never make it out.

Alceste. Well, what of it? What has that paper to do, you fool, with the departure that you talked about?

Dubois. Monsieur, an hour later a gentleman who visits you came hurrying to see you in much excitement. Not finding you, he charged me, civilly (knowing with what zeal I serve you), to tell you— Stay, I wish I could recall his name.

Alceste. No matter for his name; what did he tell you?

Dubois. Well, he was one of your friends, that must suffice. He told me you were in danger of arrest, and must get off at once.

Alceste. But why? Did he not specify the reason?

Dubois. No; he asked for pen and ink and wrote a line by which you can, I think, get to the bottom of this mystery.

Alceste. Give it me, then.

Celimene. What can all this mean?

Alceste. I do not know; but I will clear it up. Come, you impertinent devil, give me the note.

Dubois (after searching long in his pocket). Faith! monsieur—I believe—I've left it on your table.

Alceste. I don't know what prevents me from—

Celimene. Do not be angry; but go at once and see what all this means.

Alceste. It seems that fate, whatever pains I take, has sworn to hinder all our interviews. But to defeat it, promise, my love, madame, that you will let me speak with you again this evening.

END OF ACT FOUR.

ACT V.

SCENE I.

ALCESTE, PHILINTE.

Alceste. My resolution is taken, I tell you.

Philinte. But, however hard the blow, must it compel you—

Alceste. Useless to say a word, useless to reason with me; nothing that you can do will turn me from my purpose. The age in which we live is too perverted; I desire to withdraw from intercourse with men. Honor, uprightness, decency and the laws were openly arrayed against my adversary; on all sides was the equity of my cause proclaimed; and on the faith of my just rights I rested tranquilly. And now behold, I am defrauded of success; justice is with me, but I lose my case! A traitor, whose scandalous history is well known to all, comes off victorious by the blackest falsehood! Those who were on my side yield to his treachery! He cuts my throat and makes them think it is right. The weight of his canting artifice—all jugglery!—has overthrown the Right and baffled Justice: he wins a verdict which has crowned a crime. And not content with the great wrong he has already done me, he is spreading everywhere a villainous book, the very reading of which is most condemnable,—a book that merits the rigor of the law; and the lying rascal has the effrontery to say I wrote it! And Oronte mutters low and tries maliciously to circulate the calumny,—he, who holds the rank of an honest man at court; to whom I have been sincere and frank; he, who came to me, with an eager ardor which I did not seek, and asked for my

opinion on his verses. And because I treated him with honesty, refusing to be false to him or truth, he helps to crush me with an imaginary crime, and now becomes my greatest enemy! Never will his soul forgive me because, forsooth! I could not say his verse was good. And all men, damn them! have become like that. These are the actions to which glory leads them! Here's the good faith, the virtuous zeal, the justice, and the honor we expect of them! No, no, it is too much to bear such suffering. I will escape this nest of villains, and since with human beings we must live like wolves, traitors! you shall not have my life among you.

Philinte. I think you are too hasty in forming that design; the harm is not so great as you would make it. The deal this man has dared impute to you has not obtained enough belief to make the authorities arrest you. That false report is dying of itself; it is an action that will injure only him who did it.

Alceste. Injure him, indeed! He does not fear the scandal of such tricks. He has the world's permission to be a scoundrel; and so far from his credit being injured by this deed you'll see him in some honored place tomorrow.

Philinte. Nevertheless 't is certain no one has given much belief to the tale his malice spreads about you. On that score you have nothing at all to fear. As for the verdict on your lawsuit, of which indeed you may complain, justice may yet be won; you can appeal against this judgment—

Alceste. No, I shall hold to it. However great the wrong that verdict does me, I will not have it quashed; it shows too plainly how the Right is wronged. I wish it to remain for all posterity,—a signal mark, a noted testimony to the wickedness of this age. 'T will

cost me twenty thousand francs, but with that sum I buy the right to curse the iniquity of human nature and to keep alive my everlasting hatred to it.

Philinte. In short—

Alceste. In short, your efforts are superfluous. What can you find to say upon this matter, monsieur? Will you have the effrontery to bid me to my face excuse the infamy of what has happened?

Philinte. No, I am one with you in what you say. In these days all things go by base intrigue and selfish interests; craft carries all before it. Men ought indeed to be made of other metal; but is their lack of probity a reason to withdraw yourself from social life? All human frailty is a means of exercising our philosophy. That is the finest work of virtue. If every one were clothed with integrity, if every heart were just, frank, kindly, the other virtues would be well-nigh useless, since their chief purpose is to make us bear with patience the injustice of our fellows. And so, a heart of honest virtue—

Alceste. I know your words are of the best, monsieur, your excellent arguments are most abundant; but you waste your time in making those fine speeches. Reason demands for my soul's good that I retire. I have not enough control over my tongue; I cannot answer for what I might be led to say; I should have twenty duels on my hands at once. Leave me, without further argument, to wait for Celimene. She must consent to my design. 'T is that which brings me here to speak with her. I am about to see whether her heart does truly love me; this coming hour will prove it to me once for all.

Philinte. Let us go up to Eliante while awaiting Celimene.

Alceste. No, my soul is full of care; do you go up, and leave me in this gloomy corner with my black misery.

Philinte. 'T is cruel company. I will find Eliante and bring her down.

SCENE II.

CELIMENE, ORONTE, ALCESTE.

Oronte. Yes, it is for you to say, madame, whether you will bind me wholly to you by these tender ties. I must have full assurance from your soul to mine; a lover cannot bear these hesitations. If the ardor of my passion has power to move you, you should not feign unwillingness to let me know it. The proof I ask of you is, plainly, no longer to admit Alceste among your suitors; to sacrifice him, madame, to my love; and banish him from your house this very day.

Celimene. But why are you so angry with him now, you whom I have often known to speak of him with favor?

Oronte. Madame, there is no need of explanations. The question is, What are your sentiments? Choose, if you please, between us; keep one or else the other; my resolution waits upon your will.

Alceste (*advancing from his corner*). Yes, monsieur is right. Madame, you must choose. In this his wishes accord with mine; the self-same passion prompts me, the same intention brings me hither. My love must have some certain proof of yours. Things cannot thus drag on another day; this is the moment to reveal your heart.

Oronte. Monsieur, if your suit succeeds, I do not mean that my importunate love shall trouble it.

Alceste. Monsieur, I shall not seek, jealous or not, to share her heart with you.

Oronte. If she prefers your love to mine—

Alceste. If she is capable of any leaning toward you—

Oronte. I swear I will no longer court her.

Alceste. I swear I will no longer see her.

Oronte. Madame, it is for you to speak without constraint.

Alceste. Madame, you can explain yourself without anxiety.

Oronte. You have but to say on whom your wishes fall.

Alceste. You have but to speak the truth and choose between us.

Oronte. What! at making such a choice you seem to be distressed!

Alceste. What! your soul hesitates and seems uncertain!

Celimene. Good heavens! this demand is most ill-timed; how little sense or reason either of you show! I know myself the preference I feel; my heart is not upon the scales, suspended doubtfully between you. Nothing could be more quickly made than the choice you ask for; but I should feel, to tell the truth, too much embarrassment in making this avowal to your face. A choice like this must seem unkind to one; it should not, therefore, openly be made in presence of both. A heart will always show its leanings plainly enough without compelling it to bare itself; some gentler means can surely be found to show a lover that his attentions are unwelcome.

Oronte. No, no, I do not fear a frank avowal, and I consent for my part—

Alceste. And I demand it. It is this very publishing I dare exact. I will not have you shirk the truth in any way. To keep on terms with all the world is what you study. But no more dallying, no more indecision now; you must explain yourself decisively; or else I take

refusal for decision, and I shall know, for my part, how to explain your silence; I shall consider said the wrong that I expect of you.

Oronte. Monsieur, I thank you for your indignation, and I say to madame, here, the same as you.

Celimene. How you annoy me with your whims! What justice is there in what you ask? Have I not told you the motive that restrains me? Here is Eliante, she shall judge this matter.

SCENE III.

ELIANTE, PHILINTE, CELIMENE, ORONTE, ALCESTE.

Celimene. Cousin, I am persecuted by these two men, whose scheme appears to have been concerted. They each demand, with equal heat, that I shall here proclaim, in presence of both, the choice my heart has made; and that, in giving this decision openly, I shall forbid one or the other from paying me attentions. Tell me if things are ever done in that way.

Eliante. Do not consult me; you may find that you appeal to the wrong person. Frankly, I am for those who speak their thoughts.

Oronte. Madame, it is in vain that you seek to evade us.

Alceste. All your evasions are ill-seconded.

Oronte. You must, you shall speak out, and end this vacillation.

Alceste. It is enough if you persist in silence.

Oronte. I ask but a single word to end the matter.

Alceste. And I shall comprehend you if you say no word.

SCENE IV.

ARSINOE, ACASTE, CLITANDRE, CELIMENE, ORONTE,
ALCESTE, ELIANTE, PHILINTE.

Acaste (to CELIMENE). Madame, we have come, Clitandre and I, to clear up, if you please without offence, a trifling matter.

Clitandre (to ORONTE and ALCESTE). Your presence, gentlemen, is very timely, for you are both concerned in this affair.

Arsinoe (to CELIMENE). It may surprise you, madame, to see me here, and I must tell you that these gentlemen have caused my coming. They came to see me to complain of something my heart cannot believe. I have too high an esteem for your real depth of soul to think you capable of so great a wrong. My eyes refused their strongest testimony; and my friendship, overlooking our small jars, has brought me to you in their company that I may see you clear yourself at once of this foul calumny.

Acaste. Madame, we wish to see, in a kindly spirit, how you will take these facts. Here is a letter written by you to Clitandre.

Clitandre. And here is a tender billet written by you to Alceste.

Acaste (to ORONTE and ALCESTE). Gentlemen, this writing is well-known to you, of course. I do not doubt that her civilities have frequently enabled you to see it. But the letter itself is worthy of being read.

(Reads.) "What a strange man you are to blame me for my gayety, and to declare that I am never so pleased as when you are not with me. Nothing was ever more unjust; and

if you do not come at once and beg my pardon for this offence, I will never in my life forgive you for it. Our tall, ungainly viscount—”

He ought to be present, and hear this.

“Our tall, ungainly viscount, the first whom you complain of, is a man who never pleased me; and since I saw him, for an hour together, spit in a pond in order to make bubbles, I have had a poor opinion of him. As for the little marquis—”

That is myself, gentlemen; I say it without vanity.

“As for the little marquis, who held my hand today for a long time, I think him the most finical of little beings; there’s nothing of him but his nobility. And as for the man of the green ribbons—”

(*To ALCESTE.*) Your turn now, monsieur.

“As for the man of the green ribbons, he amuses me at times with his bluntness and his surly grumbling; but there are moments when I think him the most irritating mortal upon earth. As for the man of sonnets—”

(*To ORONTE.*) This is to your address, monsieur.

“As for the man of sonnets, who has flung himself into poesy and wishes to be an author in defiance of everybody, I do not give myself the trouble to listen to him. His prose fatigues me even more than his verses. Therefore, do pray believe that I am not so gay and amused in your absence as you fancy, and that I think of you—more than I could wish—at the parties of pleasure to which I am dragged; it is a wonderful seasoning of all enjoyments to think of those we love.”

Clitandre. And here am I, in this billet to Acaste. Your Clitandre, of whom you speak, and who says sweet things to me, is the very

last man for whom I could feel regard. He is absurd to imagine he is loved; and you are still more absurd to fancy you are not loved. Exchange opinions; and then you will, both of you, be more nearly right. Come and see me as often as you can, and help me to bear the annoyance of being beset by him. There, madame, is the model of a noble character; you know what it is called. Enough! We shall each exhibit, wherever we go, this glorious picture of your heart.

Alcaste. I might say much to you, for the subject is a fine one; but I do not count you worthy of my anger. I will let you see that little marquises can win, for consolation, hearts that are worth far more than yours.

[*Exeunt marquises.*]

SCENE V.

CELIMENE, ELIANTE, ARSINOE, ALCESTE, ORONTE,
PHILINTE.

Oronte. Can it be that you tear me thus to pieces after all that you have written and said to me? Does your heart, adorned with such fine semblances of love, give itself, in turn, to all the human race? Go!—I have been a dupe, but I am one no longer. You have done me, madame, a service in letting me unmask you. I shall profit in the heart I thus regain, and find my vengeance in your loss. (*To ALCESTE.*) Monsieur, I offer no further hindrance to your love; you can conclude your treaty with madame. [*Exit.*]

SCENE VI.

CELIMENE, ELIANTE, ARSINOE, ALCESTE, PHILINTE.

Arsinoe. Truly this is the basest act I have ever known. I cannot keep silence, for I feel so shocked. Was ever any conduct seen like yours? I take no interest in those other men, but as for monsieur (*motioning to ALCESTE*) who rested all his happiness on you, a man like him, of honor and great merit, who cherished you with absolute idolatry, ought he—

Alceste. Allow me, madame, if you please, to manage my affairs myself. Pray do not take upon yourself superfluous cares. In vain my heart hears you take up its quarrel; it is not in a state to pay for great zeal. If by another choice I wished to avenge myself it would not be on you that choice would fall.

Arsinoe. Eh! do you imagine, monsieur, that such a thought exists, or any eagerness is felt to win you? I think your mind is far too full of vanity if it can flatter itself with that belief. Madame's rejected leavings are a merchandise one would be foolish indeed to take a fancy to. Pray undeceive yourself; carry your thoughts less high; I'm not the sort of woman you should aspire to. You would do well to keep your sighs for her; I long to see so suitable a match. [*Exit.*]

SCENE VII.

CELIMENE, ELIANTE, ALCESTE, PHILINTE.

Alceste (to CELIMENE.) Madame, I have kept silence, in spite of all that I have seen and heard. I have allowed all others to speak before me. Have I controlled myself enough, and may I now—

Celimene. Yes, say all; you have a right to complain, and to reproach me as you will. I have done wrong,—I here confess it; and my discomfited soul will seek no vain excuse to answer you. I have despised the anger of the others, but I admit my crime to you. Your indignation, without a doubt, is reasonable. I know how guilty I must seem to you,—how all things go to prove I have betrayed you. In short, you have every right to hate me. Do so; I consent.

Alceste. Ah! can I, traitress? Can I thus conquer love? However I may long to hate you, have I a heart within me to obey my will? (*To ELIANTE and PHILINTE*). See what this abject tenderness can do! I call you both to witness my great weakness. And yet, this is not all; you are about to see me carry that weakness farther, show what a folly 't is to call us wise, and prove that in all hearts there's still the man. (*To CELIMENE*). Yes, I am willing to forget your guilt; my heart is ready to excuse it and call this wrong a foible to which the vices of the times misled your youth,—*provided* you here consent to clasp hands with the purpose I have formed to separate from men and live apart in country solitudes; to which, without delay you now must follow me. In that way only can you still repair, before the eyes of all men, the wrong that you have done me. Do this, and notwithstanding the notoriety which noble hearts abhor, I still shall find it in my heart to love you.

Celimene. I! renounce the world before I am old, and bury myself with you in country solitudes?

Alceste. But if your love responds to mine what matters all the world to you? Will you not be content with me alone?

Celimene. Solitude has terrors for a heart

so young. I feel that mine has not the grandeur, nor the strength, to resolve upon a scheme of this kind. If the bestowal of my hand can satisfy your wishes I will consent to tie the knot of marriage—

Alceste. No; my soul revolts against you now; this hard refusal moves me more than all the rest. And since you cannot in so sweet a tie find all in me as I found all in you, go!—I reject you. This sore outrage frees me forever from your unworthy bonds. [*Exit Celimene.*]

SCENE VIII.

ELIANTE, ALCESTE, PHILINTE.

Alceste (to ELIANTE). Madame, your beauty is adorned with every virtue; never have I seen aught in you but strict sincerity. I have long valued you most highly. Let me continue to esteem you thus; and suffer that my heart, in all its divers troubles, should not demand the honor of your bonds. I feel myself unworthy; I begin to know that heaven did not give me life for the ties of marriage. 'T would be too base a homage to offer you the leavings of a heart not worth your own; therefore—

Eliante. You can fulfil that thought, Alceste. My hand is not so difficult to bestow, for here's your friend, who, if I asked him, would willingly accept it.

Philinte. Ah! that honor, madame, is my sole desire. To gain it, I would sacrifice both blood and life.

Alceste. And may you ever taste of true contentment, by keeping, each for each, such sentiments. As for me, betrayed on all sides, crushed by injustice, I leave a pit where vices triumph, to seek somewhere on earth a lonely spot where I am free to be a man of honor.

Philinte. Come, madame, come, let us employ all ways to thwart this scheme his heart proposes.

END OF THE MISANTHROPE.

LIFE AND LETTERS

LIFE AND LETTERS is a monthly magazine, edited by E. Haldeman-Julius. LIFE AND LETTERS presents creative thought to you in a simple, compact, inexpensive form. It takes one great personality each month—such as Plato, Goethe, Shakespeare, Nietzsche, Thoreau, Darwin—and gives a comprehensive report of the man's life and achievements. The dominating essay is usually about 15,000 words long. One year—twelve issues—only \$1.00 in U. S.; \$1.50 in Canada and Foreign. LIFE AND LETTERS, GIRARD, KANSAS.

HALDEMAN-JULIUS WEEKLY

HALDEMAN-JULIUS WEEKLY, edited by E. Haldeman-Julius, aims to bring before its readers concise reports of the world's achievements in science, literature, art, drama, politics and every other field of human endeavor. The HALDEMAN-JULIUS WEEKLY brings to its readers the best works of the world's greatest minds. Fifty-two issues—one year—only \$1 in U. S.; \$1.50 in Canada and Foreign. HALDEMAN-JULIUS WEEKLY, GIRARD, KANSAS.

KNOW THYSELF

KNOW THYSELF is a monthly magazine edited by William J. Fielding and E. Haldeman-Julius. KNOW THYSELF'S policy is to supply information along the lines of psychoanalysis, sex, science, etc. It is a valuable source of information. One year—twelve issues—\$1.50 in U. S.; \$2 in Canada and Foreign. KNOW THYSELF, GIRARD, KANSAS.

INTRODUCTION

The purpose of this book is to present, as nearly as possible in the limited space, comprehensive biographies of the leading bandits of the United States since pioneer days.

Many small-time criminals have been left out. Racketeers have been ignored, since they rarely mix banditry with their illegitimate activities. Other criminals such as counterfeiters, swindlers, blackmailers and murderers have not been included, unless such men were primarily bandits.

This history begins with the notorious bandits of the Natchez Trace, who sprang into the limelight immediately after the Revolutionary War when the boundaries of the country were pushed back.

The history of crime is also the history of the nation. Outlawry followed the border. When frontier days ended there was a change in criminality. The coming of motor cars, telephone and telegraph systems made criminal activities nation-wide. The response of law enforcement officials to this was the creation of the Federal Bureau of Investigation with its national scope.

The author wishes to thank J. Edgar Hoover, head of the Federal Bureau of Investigation, for supplying information about the modern gangs still at large, and the staffs of the Fort Smith, Arkansas, public library and the University of Arkansas library for their co-operation.

Bandits of the Natchez Trace

THE MURDEROUS HARPES

In 1797, there was a patch of the Kentucky woods known as "The Wilderness Road," a favorite haunt of bandits, murderers and other bad men. The worst of this outlaw crew were the "Terrible Harpes."

Their first crime, and virtually the only one that did not end in a murder, occurred in April, 1797, when the Harpes robbed a young preacher, William Lambuth, of his horse and his scanty supply of silver.

The Harpes were brothers, "Big Harpe"—Micajah; and Wiley—"Little Harpe." They were born in North Carolina, Micajah in 1768 and Wiley in 1770. Rumor said that there was Negro blood in the family. The father of the Harpes was a Tory in the Revolutionary War and afterward was forced to flee for his life. In 1795, the sons left North Carolina, heading West. Two sisters, Susan and Betsy Roberts, went with them. Susan, a tall, rawboned woman with dark hair and eyes, was said to be Micajah's legal wife. Her younger sister, Betsy, blue-eyed, blonde and gay, lived with both men.

They wandered into central Tennessee where they lived with the Cherokee Indians for a couple of years. They frequently dressed like Indians thereafter and were said to have learned much of their skillful woodcraft from them.

After robbing Lambuth, the Harpes went to Knoxville, then a rowdy small town at the confluence of Holston and the French Broad Rivers. For a while the Harpes posed as honest settlers. There Little Harpe married Sally Rice, daughter of a minister.

Then the Harpes were suspected of stealing horses. A posse captured them in the Cumberlands, the two men alone with the horses. The thieves made no resistance. But on the way back they suddenly plunged into the woods and escaped.

The murderous career of the Harpes then began in earnest. They were mad with a lust to kill. Big Harpe later was said to have a religious mania. He thought he had been sent by God as "a scourge of humanity," so he afterward said.

The Harpes are supposed to have killed a man named Johnson in a tavern on the Holston river. Johnson's body was found floating in the weedy ebb of the river. The killers had slit open the abdomen, removed the entrails and weighted the cavity with stones. In spite of this, the body rose to the surface.

A few days later, on the North branch of the Wilderness Road, a body was found, the remains of an old pack-peddler named Peyton. His bundle had been rifled and he had been tomahawked. Farther in the wilderness, the bodies of two men named Paca and Bates, formerly of Maryland, were found. Paca had been tomahawked, his head split open. Bates had been shot in the back. Both men were stripped of their clothing.

Next Stephen Langford fell in with some travellers and was killed and robbed in the Wilderness, a 30-mile section in Kentucky, the hiding place of the wildest of the outlaws. His body was found in the underbrush at the bottom of a ravine. He had been stripped, robbed and tomahawked. The Harpes were now accredited with five murders.

A posse began searching the Wilderness. The Harpes and their women were found and easily captured. They were put in jail at Danville to await trial. All three women were pregnant and Jailor Jim Biegler not only had to act as guard for two desperadoes but also to serve as

midwife and nurse. People came from all the surrounding settlements to look at "those terrible men, the Harpes."

Then the two men escaped, leaving the three women, now each the mother of a child, delivered under the jailor's care. Poses started in search—but on the one occasion when they actually encountered the "terrible Harpes" the searchers turned and ran! All except Colonel Trabue, an old Indian fighter, whose son was murdered by the insane, blood-crazy Harpes. The boy's body, shot, kicked and tomahawked, was found by his father.

Meanwhile the three Harpe women were tried in Danville, but, due to sentiment regarding their maternity, released. They immediately disappeared. Rewards of \$300 were offered for either of the Harpes, but no one came forward to collect.

Descriptions issued at that time read: "Micajah Harpe, alias Roberts, is about 6 feet high, of a robust make and is about 30 or 32 years of age. He has an ill-looking, downcast countenance and his hair is black and short, but comes very much down on his forehead. He is built very straight and is full-fleshed in the face. When he went away he had on a striped nankeen coat, dark blue woollen stockings, leggins of drab cloth and trousers of the same as the coat.

"Wiley Harpe, alias Roberts, is very meagre in his face, has short black hair but not quite as curly as his brother's; he looks older though really younger, and has likewise a downcast countenance. He had on a coat of the same stuff as his brother's. His stockings were dark blue woollen ones and his leggins of drab cloth."

The Harpes fled to an outlaw hide-out called Cave-in-a-Rock on the Ohio river. But their murderous cruelty caused the outlaws to drive them out when, apparently just as entertainment, they forced a man tied to a horse over a bluff to watch him crash on the rocks below. So, again, the Harpes took to the underbrush, emerging to commit a brutal murder, and then going into hiding again. They were primarily murderers, although they looted along their trail of blood, taking money, food, clothing, weapons.

Sometimes they posed as searchers, hunting the Harpes. Occasionally, Big Harpe pretended to be a minister. The men would dash out into the trail, halt and murder passersby and then join their three women and the children. So, through the Spring and Summer of 1798, they led a charmed life, while inhabitants of the Wilderness were frightened to encounter them. The fame of the Terrible Harpes was too great.

Colonel Trabue still was searching for the Harpes so he could avenge the death of his son. But he found it hard to get helpers.

Finally the Harpes overstepped themselves and aroused a murderous rage equal to their own. They stopped at the cabin of Moses Steigal the night of July 20, 1799. Steigal was gone, but Mrs. Steigal, who knew the Harpes and who had protected them previously, took them in. She put them in the loft along with Major William Love, a surveyor.

Presently the Harpes emerged from the loft. They had shot Love, apparently just because he snored.

When Steigal returned home that night, he found his cabin in flames, his baby dead and his wife dying. The Harpes had gone on, marking their pathway with two more bodies, neighbors, Gilmore and Hudgens. Steigal was aroused to murderous wrath. He organized a posse and started after the Harpes. They rode for two nights and days before they sighted their quarry.

Steigal's gun missed and his ramrod stuck in its casing. A neighbor, James Tompkins, loaned him his weapon. Oddly enough, it was loaded with powder given Tompkins by Big Harpe while Harpe was posing as a minister. Steigal fired and hit Big Harpe in the back. Little Harpe escaped.

Big Harpe was not dead, however. He was captured and began talking of his deeds. He only regretted one murder, he said, the time he

seized his child by his wife, Susan, and dashed it against a tree in the woods and threw it in the underbrush. The child had annoyed him by crying.

Steigal wanted to kill Big Harpe. He kicked the dying bandit and waved a knife in his face. Others restrained him, saying Big Harpe must be taken back for trial. Finally Steigal took his knife and slowly severed Big Harpe's head. He carried it back with him in a sack and nailed it in the fork of a tree at the crossing at Robertson's Lick. For years the place was known as Harpe's Head.

Wiley Harpe was caught five years later. The Harpe women were acquitted at their trial and later settled down and lived apparently respectable lives.

JOSEPH THOMPSON HARE

Born on a farm in Chester County, Pennsylvania, Joseph Thompson Hare soon moved to the city, where he became apprenticed to a tailor.

His love for fine clothes never deserted Hare. He was always the dandy. When he was captured, he was buying a coat lined with crimson silk. After two years in the tailoring business, he signed for a voyage around the world. A month later, he deserted his boat at New Orleans, a prosperous town full of upcountry traders and planters with their pockets full of money.

Hare became first a pickpocket, then a footpad, and then a burglar. With this success, he laid bolder plans. He knew that the boatmen bringing down grain and furs sold their loads and then made a land trip back to their homes over the famous Natchez Trace road.

He formed a gang to hold up these money-laden travellers. Just beyond Natchez in the Indian territory the gang came upon a party of travellers.

"We took 300 doubloons from one man, 74 pieces of different sizes and a large quantity of gold in bars," wrote Hare in his diary. "With the others I found 700 doubloons, and five silver dollars and 400 French guineas, and 67 pieces the value of which I could not tell until I weighed them. I got \$12,000 or \$13,000 altogether from the company, all in gold."

Members of Hare's party disguised themselves by staining their faces with berry-juices and bark, giving a weird appearance rather like Indians on the war path.

Following this robbery, Hare and his men found a hide-out in the Chikasaw country, just below the Tennessee line.

Hare kept a diary during his bandit years. He describes the hide-out as a "very good retreat and a very comfortable home, too. It was very thick and tall, and would have concealed us from the best eyes. These cane brakes are very much frequented by wild animals of all sorts, especially wildcats and are kept clear of generally. Our habitation was in a cleft rock, where one rock jutted very much over another and made a sort of a cave, that we could easily make safe from every savage that walked the wild wilderness. We had a good featherbed in our cave."

A few days later the band of bandits robbed four men. Hare's companions wanted to shoot them, saying that they were not disguised and their descriptions would be circulated. But Hare argued against it. They obtained \$7,000 in the haul.

Hare was a moody, restless man. He suffered from insomnia and following a period of sleeplessness would ride alone all day. One such solitary ride almost caused his death. He encountered a slave trader from Natchez.

"I rode up on his left side," recounts the diary, "and told him to deliver his money, for I was the devil, and would take him to hell in a second if he did not drop that gun off his shoulder, and his pistols, too, if he had any."

But the slave trader saw that Hare had not drawn his gun. He let his

gun slide from his shoulder so that the muzzle swept down as he pulled the trigger. The charge flared in Hare's face, blowing off his hat. His horse reared.

He whipped out his pistol. But, still blinded by the smoke from the other's gun, he missed. The slave trader galloped away. Two men saw the last of the encounter, but apparently regarded the whole thing as a joke.

After three months in the Wilderness, Hare and his men decided to go to Nashville to spend their loot. Here they lived well for a time and then, driving new horses and gigs, set out for Louisville, later taking passage on a flatboat and drifting down to New Orleans, a gay town in the 1790's. The bandits lost much of their money at the gaming tables. So they went back to the Natchez Trace. This time they had passports from the Spanish authorities, still in control of Louisiana, so that, if threatened by American officials, they could dash across the line.

They camped in a cave North of Natchez. "There were a great many swamps in the neighborhood," wrote Hare, "filled with alligators, very large, and that made a great noise. Sometimes they cried like a young child."

Two months of banditry, and they were back in New Orleans, living in luxurious surroundings. Hare started drinking and fighting. He whipped Bill Marshall, bully of the river-flats. Then he got into a fight with one of his own gang, a young man who made a habit of marrying girls, taking their dowries and then deserting them. Hare put thumbs down when the boy arrived with a young Spanish girl, fresh from a Baton Rouge convent. The boy eloped with the girl and \$700 belonging to Hare. Hare caught him and whipped him.

Among their other entertainments, Hare and his men sponsored a cotillion which cost them \$300. Immediately afterward they were arrested by Spanish authorities on a charge that they were American spies. They were freed, but Hare became nervous and headed back into the wilderness.

The sensitive, moody Hare now began to grow religious. As he rode North, he read to his companions from John Wesley's magazine. He preached that they should cease being bandits.

While he preached, he and his companions robbed passersby of \$10,000. At the Tennessee line the gang separated.

Hare rode on, praying and pondering over his future. In his diary he wrote, "About nine o'clock, the night I robbed the drover, as I was riding along very rapidly to get out of the reach of pursuit, I saw standing right across the road, a beautiful white horse, as white as snow; his ears stood straight forward and his figure was very beautiful. When I approached him, and got within six feet of him he disappeared in an instant, which made me stop and stay at a house near there all night."

But while pondering over his soul, Hare grew careless about the safety of his body. He had barely gone to bed, when a posse surrounded the house and captured him. He remarked that the white horse was Christ, who had come to warn him of his sins and to fear and repent.

Hare spent five years in jail, devoting most of his time to writing his Confessions and reading the Bible. But a year after his release, on March 12, 1818, the night mail coach was held up near Havre-de-Grace. The bandits obtained \$16,900 under Hare's directions. Hare's face was revealed as he held a lantern up to examine a watch.

Two days later, he was arrested in a Baltimore tailor shop while he was about to buy a coat with a crimson silk lining. He was speedily brought to trial and identified by the victims of the hold-up.

However, his attorney, Charles Mitchell, advised his client to stand mute when asked whether he was guilty or not guilty. This caused a prolonged legal discussion. Robbing the mail was a federal offence. In one of the acts of Congress it had been propounded that silence on the part of the prisoner should be interpreted as a plea of guilty. A later act made

robbing the mails a capital offence, but said nothing about the matter of silence. Mitchell argued that the provisions of the first act did not apply, and, if his client stood mute, no plea could be legally taken. Therefore, no trial could be had.

A long wrangle of several months took place. Then the court decided that silence amounted to a constructive confession and, therefore, a plea of guilty. At the same time, the prosecution ferreted out a law of the State of Maryland providing that if the prisoner stand mute the court should interpret this as a plea of not guilty.

Thus the court now had two pleas. So the trial, after four months stalling, proceeded and was completed in four days.

Hare was hanged shortly after 10 o'clock, September 10, 1818, before about 1,500 persons. He spent the hours before his death praying and reading the Bible.

SAMUEL MASON

Most criminals begin their banditry in their youth. But Samuel Mason was a law-abiding, respected citizen until he was 40 years old, when he launched into his career of outlawry by killing his son-in-law.

Mason was born in Virginia in about the year 1750. When 25 years old, he joined George Rogers Clarke's famous Long Knives and went into the wilderness with them. His Revolutionary record was a good one. He settled in Kentucky and was prominent in frontier defense.

At 40, he was a well-respected citizen, married, the father of three sons and a daughter. He had been commissioned a justice of the peace in the newly constituted State.

He is described as having been a tall man, weighing about 200 pounds, rather good looking with one peculiarity, a tooth which projected forward and usually was not covered by his lip.

Mason's daughter ran away with a man named Kuykendall, a former criminal. They eloped to Diamond Island, a black-leg haunt as evil-famed as the Cave-in-a-Rock made notorious by the Harpes. The Masons told them to come back home. A celebration was arranged.

But apparently Sam Mason had decided that Kuykendall was a dangerous son-in-law, with his pocket "devil claws," which slipped over his fingers enabling him to tear off the whole side of a man's face with one hand. Mason's sons and some companions took Kuykendall outside and he was killed in the underbrush. Mason fled with his three sons. Captain John Dunn rode to capture them. He was shot and his body left in a corn field. The Masons went into hiding at Cave-in-a-Rock. But this hide-out was no longer safe. So the gang split up and Mason led part of them to a new spot on Wolf Island in the Mississippi, a few miles from the mouth of the Ohio.

Here, according to writers at the time, "he formed a line of worthless associates from the eastern part of Virginia to New Orleans."

He drifted over into New Madrid and obtained a Spanish passport in March, 1800. Like the Hare bandits, he saw the advantage of dodging back and forth from American to Spanish territory. Then he launched out to succeed the Hare gang. Travellers banded together for safety. Mason and his gang robbed all they could encounter on the Natchez Trace.

In July, 1801, Mason and his men killed Robert McAlpin in robbing McAlpin and his companions. In spite of being a killer, Mason still maintained an attitude of honesty and used to stop mail carriers and inquire about the doings of the towns. He still wanted respectability and esteem. Few of his victims could identify him and some, it was said, did not survive.

So in the Autumn of 1801 Samuel Mason and his son, John, went to Natchez to see how they stood. Mason had a friend there, Anthony Glass, a supposedly honest merchant who really acted as a fence for the Trace bandits and, in order to stimulate that industry, also passed along to the

bandits news of rich loot coming up the Trace or of well-loaded flat-boats going down the Mississippi. For a while Mason hoped through him to gain his old respectability.

Then, one day a stranger pointed to Mason and said, "That's the man who robbed Baker," referring to the robbery of Colonel Joshua Baker, August 14, 1801, when Baker, William Baker and a man named Rogers lost their horses and \$2,300 in cash.

Mason and his son were jailed. They were tried and sentenced to 39 lashes administered in public and 12 hours in the town pillory. Mason and his son cried "Innocent, innocent" as the whip was applied.

One of the jurors who had found them guilty encountered Mason on the outskirts of town after Mason's release from the pillory. Mason threatened him with death, but finally kicked him, spat in his face and rode away.

Nothing was seen of Mason for a long time. But the killings and robberies went on. In one robbery Mason was said to have stolen the pants of a huge Kentuckian. The shirt-tailed giant led the searching posse until he found his pants, discarded by the wayside. Then his ardor died. The posse encountered Mason's men, who were prepared to fight, so the searchers immediately retreated, led by the big Kentuckian.

Mason's blood lust grew. He developed a wild audacity. After a bitter massacre, a posse was organized to search for him. The searchers came to the edge of a lonely bayou. A rifle sounded across the water. One of the hunters fell dead. A man appeared on the other side of the bayou, waved his arms and shouted, "Do ye want Mason? I'm Mason."

His organization was constantly growing. His men robbed on the river and the Trace at the same time. February 10, 1802, William C. C. Claiborne, governor of Mississippi, wrote to the Spanish Governor General of the Province of Louisiana about the need for action in regard to the robbers. The general, Manuel de Salcedo, replied irritably that they might be Americans. So no working agreement between the two authorities was arranged.

Then Colonel Baker encountered Mason again while he was flat-boating his produce down to New Orleans. He reported the robbery to Governor Claiborne, saying that a group of bandits in pirogues had boarded his boat and a battle followed. Eventually the robbers were driven off, but not before several of the men on both sides had been wounded.

The governor sent letters to captains of all military outposts asking for Mason's arrest. The letters also said that it was believed that Wiley Harpe of the famous "terrible Harpes" was a member of Mason's gang. Strange stories had circulated around Wiley Harpe. He was said to have married a girl named Bass. Then he told people that her horse had thrown her and dragged her to death. Later her grave was opened and it was found that she had been beaten to death and cruelly mutilated.

A month after the governor's letters, information was received that Mason's gang was hiding out near Rocky Springs, 40 miles North of Natchez. A hunt followed. The hide-out was found abandoned. About that time a mail carrier encountered the wife of Mason's son, Tom. She had been abandoned by the group while pregnant, had borne her child alone in the wilderness, and was stumbling along the road, carrying the child. The mail carrier assisted her to Natchez, where she revealed that the gang had gone across the river into Spanish territory. Then it was said that new headquarters had been established at the Crow's Nest on Stack Island in the Mississippi river about 50 miles north of Vicksburg.

Sought by the police of two nations, a price on his head, Mason continued to rob and murder. One of his methods was to approach travellers and ask to buy loaded rifles. When the bargain had been struck, Mason and his men would point the guns at their former owners.

A few escaped death. Others were killed, their bodies disemboweled and thrown into the river.

Finally on January 11, 1803, reports came to New Madrid, in Louisiana, that suspicious persons were at Little Prairie, 20 miles down the stream. An inquiry was started. Several men and one woman had moved into a house rented on the outskirts of the town. They seemed peaceful enough, except for their habit of maintaining an armed sentry at the door.

Don Robert McCoy, captain of the militia and Corporal Felipo Canot with a dozen of the regulars went to investigate. Mason pretended to be astounded. He said he was an honest man and he was tired of these "stinking lies" that had been travelling about him. He merely wanted to live in peace.

McCoy played up. He said he was merely examining passports and for Mason to have all his party there with their passports that evening. When he re-appeared, Mason had collected all his group. The house was surrounded, militiamen came pouring in with guns.

The captain got the names of the group, Samuel Mason and his sons, Thomas, John and Samuel, Jr.; John Taylor, Marguerite Douglas, wife of John Mason, and her three children. All were taken to New Madrid and the trial of the adults began on the morning of January 17. The trial was a curious business—testimony was taken in French, then read, translated to the deponents and signed.

Mason told a long tale of persecution. Other men's crimes had been saddled on him. He only wanted to live a peaceful existence in Spanish territory. It was all very sad. The seven thousand dollars found in his possession he had discovered in a bag hanging on a bush near a camp site in the wilderness. He was just keeping it until someone claimed it.

Taylor said that his name was really John Setton. He was an Irishman who had come to America in 1797, enrolled as a soldier and then deserted, he said. He declared he had been captured by the Masons and forced to commit their crimes. To this Mason replied that he had held Setton captive because he knew he had committed many crimes and he had been hoping to trick him into a public confession.

Setton was asked if Wiley Harpe had been a member of the gang. He paled, but denied knowing anything about Harpe.

Finally the whole affair, including the prisoners, was shipped to New Orleans by the judges. The High Court at New Orleans decided to turn it over to the American authorities. Early in March, 1803, the Masons were started by boat toward Natchez. On the way there was a storm. Mason took this opportunity to start a gun battle and gain possession of the boat.

Landsmen hastily organized boarding parties. The Mason gang fled. This occurred March 27, 1803, and for six months Mason eluded capture. In June he was seen along the Trace. In July a man appeared at Natchez to report that he had been robbed by Mason.

James Mays went in search of Mason. He returned with Setton, who promised to help the authorities find the veteran bandit. A few weeks later they returned with a ball of dried clay in the bow of their canoe. Inside was the head of Samuel Mason. They had tomahawked him, cut off his head, put it inside the blue clay to prevent putrefaction, and brought it back to claim the reward.

Then followed a startling anti-climax. A Captain Stump from Kentucky was staring at Setton. Suddenly he said, "Why that man's Wiley Harpe."

News of the bringing of Harpe's name into the trial at New Madrid had not penetrated to Natchez. Setton denied that he was the fugitive member of the Harpes. But he was put under double guard. Several boatmen identified him as Harpe the younger. Finally John Bowman of Knoxville, Tennessee, spoke up. "If he's Little Harpe, he will have a

scar under the left nipple of his breast, because I cut him there in a little difficulty we had at Knoxville."

Setton protested. But his shirt was torn off and he was revealed as Harpe.

He escaped, along with Mays, now said to be the Samuel Mays who had been connected with the murder of a man named Henry Havard. They were immediately captured and on February 8, 1804, were hanged at Gallows Field near Natchez. Mays complained bitterly on his way to the gallows, saying he had not been guilty of crimes deserving death and that he had benefited humanity by betraying and killing Mason.

The heads of both men were cut off. Harpe's head was mounted on a pole along the Trace north of town and Mays' head was put on a pole on the Trace south of town. Their bodies were put in the town cemetery, but citizens protested, and dug up their own dead and placed them in another field.

In a few years when the Trace was widened and deepened for heavy traffic, the road penetrated into the graveyard, now occupied only by Harpe and Samuel Mays. Eventually their graves joined the Trace.

JOHN A. MURREL

John A. Murrel was one of the most fantastic outlaws of an era which apparently specialized in fantasy. He rose to fame along with Haddock, who sent people into the wilderness to hunt for mythical land they had purchased, and Phillip Alston, "dressed in ruffles, broadcloth and lace," who presided over Cave-in-a-Rock, scuttled Kentucky boats and murdered their crews.

This was the time of James Ford, who acted as justice of the peace, bandit chieftain and ferryman, for years. His ferry carried the travellers, his bandits robbed them, and then he listened to the futile complaints in his court.

The king of all these "musical comedy outlaws" was John A. Murrel with his "flat, pale smile of a murderer," his genteel manners and dandified dress.

He is described by Virgil Stewart, the young man whose daring and ingenuity caused Murrel's downfall, as having been too well dressed with his superfine cloth pantaloons strapped on at both extremities of his person, his shirt fastened with tape, ribbons and gold buttons, a superfine cloth coat upon his back, a dandy silk hat with a rim three-quarters of an inch wide upon his head and calfskin boots upon his feet. He was too handsome, with his smooth, sallow cheeks, his sleek dark hair and his wide eyes always lit as if with some inner ironic meaning. He carried his head high, but those who knew him said that there was always a sinister air of evil about his carriage.

Murrel was fantastic and clever. But his very grandiose ideas and his supreme vanity caused his ruin. Murrel was born in 1804 somewhere in the middle valley of Tennessee. His father was the proprietor of a small wayside tavern. His mother was a born criminal. Like Ma Barker of the Twentieth Century, she taught her children to steal. At ten years, young John was an accomplished thief, rifling the packs of the guests at his father's inn. Finally he stole \$50 from his family and left home, going to Nashville.

There, oddly enough, he encountered a man named Harry Crenshaw whom young John had robbed in his father's inn. But Crenshaw bore no ill will. Crenshaw, himself, was a bandit. These two teamed up. Their first robbery was that of a young trader named Woods, who was struck over the head with Murrel's loaded whip, his body thrown into a ravine, and his money, amounting to about \$1,262, and his horse taken by the bandits.

Shortly after that Murrel fell ill and was nursed by an innkeeper's

daughter in Alabama. She was much impressed by his "genteel manners." Once, on impulse, he went back to see her, but she was dead.

A little while after he recovered, there were rumors of a Negro uprising in Alabama, recently joined to the United States. Murrel and Crenshaw took advantage of the excitement to waylay late strollers and rob a store, and then rode down to New Orleans. This gave Murrel the grandiose idea of starting a Negro rebellion at a later date in order to pillage the countryside.

Murrel gambled and sported away all his money in New Orleans, and had to take to the road on foot. He encountered a stranger, shot the man, took his money and horse and his fine new boots. He followed the method of hiding the body that made him infamous. He ripped open the abdomen, disembowelled the man, stuffed him with sand and sunk the body in a creek.

The killer went placidly on to Natchez where he set about studying the crime condition. The country had settled rapidly since 1803 when Hare and Harpe preyed on the wilderness travellers. Friends were necessary protection. So, he started making friends.

One of his new friends, a man named Carter, taught the young apprentice in crime another clever trick, that of pretending to be an evangelist. Then, with the community emotionally aroused, counterfeit currency could be passed, Negroes run off, stolen slaves unloaded.

Murrel and Carter made a long trip through the valley. "In all that route I only robbed 11 men, but I preached some damned fine sermons, and so scattered a lot of queer money among the pious," Murrel said later.

"There is but one safe way in this business," Murrel told Stewart, the man who caused his capture. "And that is to kill. If I could not afford to kill a man I would not rob."

Then Murrel started stealing slaves. He was a student of law and he usually persuaded the slaves to run away. Then, if the owners advertised for the slaves, Murrel simply took the Negroes into custody. If he didn't return them, he was guilty of a breach of trust, but that was a civil matter. Most of his slave transactions were conducted with Murrel in the guise of a sanctimonious preacher.

If a slave threatened to become embarrassing, that slave died. Murrel's path was paved with blood. He shot in cold calculation, and he also killed in furious rage.

Oddly enough, in all of Murrel's clever planning, crafty watching, his giant schemes like his clan with its many members, its strange oaths and its conspiracy to rouse the Negroes into rebellion, he came to grief over petty matters.

He had built up a giant organization for his slave trade and as a fence for his banditry. He had powerful friends.

Then in Nashville, in 1832, he was arrested for the theft of a skinny mare belonging to a widow in Williamson county. He was sentenced to 12 months' imprisonment, 30 lashes on his bare back at a public whipping post, to sit two hours in the pillory on three successive days, and be branded on the left thumb with the letters "H. T." (Horse Thief) in the presence of the court, and be rendered infamous.

Murrel preserved an outward calm, but the public humiliation, the confinement and the pain caused him to become mad with rage. His old ideas for the Negro rebellion sprang to life. He would capture the entire country, including the city of New Orleans. Everyone who had caused him any trouble would be horribly punished. He began making plans. Soon he had things ready. He had about 80 officers and about 300 agents. The date of the uprising was set for Christmas Day, 1835.

Again some petty—to him—incident intervened. Murrel, who was married and living in style in Tennessee, arranged for the theft of some Negroes belonging to old Parson John Henning and his wife of Jackson, Tenn. The old man complained to a bright young friend of his, Virgil Stewart, a native of Georgia, but a natural wanderer. The Hennings

had been kind to young Stewart. They suspected Murrel. They told him of their belief. Young Stewart was grateful to the Hennings for their past favors. He decided to investigate. He was unknown to Murrel and Murrel might reveal something to him.

Then followed one of the strangest man hunts in the history of crime.

Stewart set out on January 25, 1834, on his mission. A ferryman pointed out the dandified Murrel to him. They rode along together. Stewart posed as Adam Hues, a wanderer, seeking a stolen horse. He expressed himself as being sympathetic with rogues. He flattered Murrel. Soon Murrel began to talk.

At first he kept secret his own identity with the list of crimes he revealed. Finally, however, he told Stewart that he was the man of mystery whose cleverness he had related and asked Stewart to join him. Stewart went with him to Arkansas. On the way Murrel kept up a constant stream of talk. He told of the Underground Railway for sending stolen slaves to be sold in the West, which he and Crenshaw had organized, and which had failed. But the new conspiracy was bigger and better. The true meaning of the rebellion was known only to the leaders. Some of the men implicated were genuinely interested in freeing slaves. Murrel had had some communications with northern abolitionists.

The first class of the clan was called the Grand Council. The second class was composed of the strikers, who did the tedious work. All over the territory the clan's agents were at work rousing the Negroes to rebellion. The Negro members were sworn to secrecy in a long ceremony, calculated to frighten them into silence.

On the way, Stewart wrote down in a little blank book what he could remember of Murrel's conversation. Dates he scratched on his saddle when Murrel was not looking. Once he stopped and confided part of his blood-chilling knowledge to an innkeeper named Jonathan Champeon and borrowed a pistol from Champeon.

Murrel led Stewart to a swamp near Chickasaw Bend. There they followed a dim trail through cane brakes and swamp willows to a lakeside hut where sat several armed guards. They saluted Murrel and the strange pilgrimage went on. Presently they came to a long low building built among the cottonwoods. It was the headquarters of Murrel's clan. It was built like an Indian council-house with one big room and several small council chambers.

Here Stewart, who had kept up his attitude of fawning admiration for Murrel, was introduced to the others and made a member of the clan. He received the two degrees in signs, which belonged to the two classes. First he received the sign of the striker, a wave of the hand with the wrist oddly bent. Then he received the sign of the Grand Counsellor, a handshake with the fingers closed against the palm.

After his initiation, a drinking party started. Murrel began his boasting again. He told of the theft of Parson Henning's Negroes and was angry at trouble the old man had started. He threatened to have him beaten.

Stewart was about at the breaking point. He made an excuse to get across the river. He wanted to see a girl at Irvin's, he said. Irvin was a plantation owner with whom they had stayed on their way to headquarters.

Stewart told Irvin his story and arranged to have a guard concealed about the house when Murrel came to deliver some slaves he had agreed to sell to the plantation men. Then, the next day, Stewart departed with Murrel, riding with him as far as Wesley. Stewart left him there, pretending he had to go to Yalo Busha. When Stewart left, Murrel wrote for him the names of a hundred clansmen he might meet on his way South.

But officials were impatient to catch Murrel. Three days later, when Murrel rode into his Tennessee plantation he was surrounded by a dozen armed men and taken to jail at Jackson.

Stewart had asked that the arrest be delayed until Murrel could be

caught, with the stolen property in his possession. But others overruled him. Murrel was arrested and there was no proof but Stewart's story.

Word travelled through underground channels to the clansmen. The headquarters were deserted. No stolen Negroes were sent to Irvin's. A boatload of stolen slaves, which had been sent to the Yazoo market, disappeared.

Murrel lay quietly in jail, making plans for his defense. His wife visited him daily and finally smuggled in some saws. Murrel escaped, was taken out of the State and into Alabama, concealed in a wagon-load of grain.

But he was recognized in a tavern near Muscle Shoals and brought back to Jackson. Trial was set for July of 1834.

Meanwhile the clansmen were worried. Word was sent out that Stewart's character must be maligned, doubt cast on his story and then he must be killed. Stewart's life was attempted, but by luck and cleverness he managed to escape. Murrel's friends tried to paint him as a worthless wanderer who had betrayed Murrel for the sake of a reward for the return of slaves.

Murrel's attorney, Milton Brown, who later introduced into Congress the bill for the annexation of Texas, sought to destroy Stewart's evidence by cross examination. But Stewart clung doggedly to his story and produced the blank book in which he had laboriously and in secret jotted down Murrel's vain babblings of his deeds. Murrel's list of the clansmen was also read amid cheers and boos. This was a surprise to the defense and Murrel's distinguished friends immediately deserted him.

Half an hour after the case had been turned over to the jury, John A. Murrel was found guilty of Negro stealing and of selling stolen Negroes. He was sentenced to serve a period of 10 years at hard labor, in the state penitentiary at Nashville. A few days later he was sent to Nashville under heavy guard.

His friends continued to plot for the Negro uprising. Finally, a plantation owner heard two Negroes discussing it. An investigation was started and most of the leaders in the conspiracy were hanged.

Bandits of the Far West

ROBIN HOODS OF ELDORADO

A history of American bandits should not be written without some mention of Joaquin Murieta and his band of Californians, in spite of the fact that they were never really regarded as Americans, but contemptuously termed "Mexicans" or foreigners by the Americans after the conquest of California.

Too, there were many persons who called them patriots rather than bandits. Murieta was frequently termed a Robin Hood of Eldorado. Even American historians at the time of the activities of the group admit that the Californians had much provocation to cause them to become outlaws.

In writing about Murieta it is almost impossible to separate fact from myth. It was the custom of American bandits to blame the "Mexicans" for all their deeds. And Murieta became even, in his time, an almost legendary figure.

Many of the California bandits were disbanded soldiers from Castro's army, which attempted to resist the so-called Bear Flag rebellion in California in the 1840's and also fought against the American forces. After the occupation of California by American forces, the landed classes were placed in legal position of being squatters on land which they had sometimes held for generations.

And, after the gold rush in 1849, a general spirit of recklessness prevailed in the state. Horace E. Scudder, writing in the *Nineteenth Century* says: "The steamer *Alta* of June 15, 1852, reports that a 'Mexican,' at Jackson, having been accused, without any evidence of which an intelligible account can be given, of being the murderer of two Frenchmen who had been slain in their tents near there, was brought before a drunken justice of the peace, and was by him committed to prison; and that the crowd thereupon, without giving him a fair chance to be heard further in his own defense, took him from jail and hanged him, after a desperate struggle, in the presence of his pleading mother and sisters."

Mrs. L. A. C. Clapp, whose letters about the mining country were published in *Ewer's Pioneer* in San Francisco between 1854 and 1855 under the name of Dame Shirley, writes: "In April, a Mexican at Indian Bar asked an American for some money due the former. The American promptly stabbed his creditor; but again nothing was done. The Mexicans were, in fact, now too numerous for comfort at Indian Bar, since Rich Bar had just expelled all foreigners who therefore now came to this place."

All native Californians of Spanish blood appear to have been regarded as "Mexicans" and "foreigners."

Mrs. Clapp writes that "The people of the Spanish race, many of whom are highly educated gentlemen, are disposed to base an ill opinion of our whole nation on the actions of the rougher men. They think that it is the grand characteristic of Columbia's children to be prejudiced, opinionated, selfish, avaricious and unjust. It is vain to tell them that such are not specimens of American gentlemen." She blames gamblers and rowdies for most of the actions against Spaniards. "The rest of the people are afraid of these daring, unprincipled persons, and when they commit the most glaring injustice against the Spaniards, it is generally passed unnoticed."

Scudder tells of several examples of "Mexicans" who robbed the gold miners. But not until Murieta rose to fame did there seem to be any united action.

According to the popular version, Murieta was an aristocratic native Californian of Spanish blood. His brother was blamed for the robbery of a stage coach—by the very persons who committed the crime—and hanged. Murieta swore vengeance.

He gathered about him a large group of men who wanted to avenge the treatment of themselves and their countrymen. They rode from one end of California to another, looting the intruders. They had a hide-out in the Sierra Nevada mountains where they kept their women and children.

Murieta's avowed purpose was to try to help his countrymen. When he heard of a Spanish landowner whose wealth had been taken from him, he attempted to get back part of this by force, return it to the former owner and help him to leave the country for Mexico.

How many robberies Murieta's band committed cannot be definitely determined. No doubt he was blamed for many crimes he did not commit. Probably many of them were never known.

Finally, after years of apparently leading a charmed life, protected by his own countrymen, fleeing in times of danger to his mountain hide-out, Murieta prepared to move his band to Mexico and safety.

On the eve of his departure, however, an armed force attacked the hide-out. Murieta and many of his men were killed.

Other early California bandits were Vasquez and Soto, who shared Murieta's reputation as Robin Hoods. Solomon Pico and his followers centered their activities around Monterey. A company of Rangers captured them April 18, 1851. Pico was released on bail and fled to Mexico.

John Irving of Texas raided Los Angeles county in May of 1851, striking terror in all hearts. One of his most daring deeds was the killing of 11 men on a ferry crossing the Colorado. Irving finally met his end at the hands of Juan Antonio an Indian chief of the Cohuillo tribe, and an alcade of the district. There was a fight at Irving's mountain stronghold and Irving was killed.

In 1857, Pancho Daniell, Juan Flores and Lucian Tapa headed a gang around Los Angeles. After the brutal murder of a sheriff, 100 men pursued the bandits into the mountains. Fifty-two members of the band were captured and 11 hanged.

BLACK BART

Black Bart, whose real name was Charles E. Boles, was a gentleman bandit who preyed on California stage coaches.

In seven years, beginning in 1877, he held up 28 stage coaches. He was always masked, worked alone, and left no clues. He never killed—bluffing his victims with an unloaded shotgun. At the twenty-eighth robbery his perfect technique failed. He dropped a handkerchief bearing a laundry mark.

The laundry mark was traced to a distinguished looking man named Charles E. Bolton, who also sometimes passed as Spaulding and whose real name was Boles.

Boles was an elegantly dressed, bejewelled man. He stood about five feet, eight inches in height, very straight with broad shoulders. His eyes were deep sunken and of a keen blue. His high cheek bones and handsome gray mustache and imperial beard added to his impressive appearance.

At first, Boles denied the robbery, saying that his handkerchief must have been stolen from him. But his hand had been wounded in the crime and the mark of the injury still remained.

Eventually he confessed and returned the \$4,800 loot from the last robbery. He was sentenced to seven years in prison. Officials said he

was the mildest mannered and most gentle bandit that ever held up a stage.

ROAD AGENTS OF THE WEST

Frontiers usually have their own brand of reckless outlawry, and when to the unsettled conditions of a pioneer country is added the excitement of a gold rush, the logical result is the unparalleled brutal violence of the northwest in the days from 1850 to 1865.

The name of Henry Plummer, gambler and master organizer of frontier crime, is woven into the annals of robbery and murder through the northwest and into California and Virginia City, Nevada. Plummer undoubtedly was one of the most extraordinary outlaws ever to figure in the American scene. Born in Connecticut, he was only 27 years old when he was hanged. He had mixed a life of brutal crime with a romance with a young girl who was entirely ignorant of his true means of livelihood and believed for months after his death that he had fallen a victim to a conspiracy.

During part of his career Plummer appeared as a gambler and carefully hid his leadership of a ruthless band of road agents, or roadsters as they were also called. Later he served as sheriff, using his office to further his criminal purposes.

At the time the vigilantes put an end to the activities of Plummer and his band by resorting to "rope justice," the organization of the group, according to a confession of one of the members was: Henry Plummer, chief of the band; Bill Bunton, stool pigeon and second in command; George Brown, secretary; Cyrus Skinner, fence, spy, and roadster; George Shears, horse-thief and roadster; Frank Parish, horse-thief and roadster; Hayes Lyons, telegraph man and roadster; Bill Hunter, telegraph man and roadster; Ned Ray, council-room keeper at Bannack City; George Ives, Stephen Marshland, Dutch John Wagner, Alex Carter, Whiskey Bill Graves, Johnny Cooper, Buck Stinson, Mexican Frank, Bob Zachary, Boone Helm, Clubfoot George Lane, Billy Terwiliger and Gad Moore, roadsters.

These men were bound by oath to be true to each other and to do such duties as came within the meaning of their separate positions in the gang. The penalty of disobedience was death. If any member revealed any of the secrets or purposes of the group, he was to be shot down at sight. The same fate was ordered for any outsiders who talked about the gang or arrested any of the members. The object of the group was to plunder as much as possible and if murder was necessary, it was to be committed. The password of the band was "Innocent." The bandits wore their neckties fastened with a sailor's knot as an identification mark.

Plummer was hanged January 10, 1864, and most of the members of his band met the same fate about that time.

Plummer first appeared in the northwest in the spring of 1861, at Lewiston, then capital of Idaho Territory. It was the nearest accessible point by water to the recently discovered gold placers at Elk City, Oro Fino, Florence and Warren Creek. Soon he became the acknowledged leader of the professional gamblers who flocked into the town to prey upon the miners. Plummer was a man of gentlemanly bearing and dignified actions. He was accompanied by a woman who pretended to be his wife. But within a fortnight he had abandoned her, and she revealed that she had run away from her husband and three children to accompany Plummer.

Among Plummer's associates at Lewiston were Jack Cleveland, Cherokee Bob and Bill Bunton. Cleveland had come to Idaho with Plummer and knew of some of his past misdeeds in California. He used this knowledge to force Plummer to allow him a prominent part in his band.

Cherokee Bob was a native of Georgia and a quarter-blood Indian.

Before coming to Lewiston, he was said to have killed two or three soldiers at Walla Walla. Bunton was a murderer and notorious horse and cattle thief. He had killed a man at a ball near Walla Walla but was acquitted at his trial for lack of evidence.

By the summer of 1862, Plummer's band at Lewiston was well organized. He had two points of rendezvous called "shebangs." One was between Alpwai and Pataha creeks, on the road from Lewiston to Walla Walla, about 25 miles from the former, and the other at the foot of Craig's Mountain, between Lewiston and Oro Fino, at a point where the main road was intersected by a trail for pack animals. There were several smaller stations nearer to Walla Walla and Lewiston, which were occupied only as occasion might require. Close communication was maintained between these hide-outs. Plummer secretly directed the affairs of the bandits at these strategic points and meanwhile managed to ward off suspicion from himself by his gambling activities, which also allowed him to know when and where loot might be obtained.

The two roads upon which the "shebangs" were located were the only thoroughfares in the country. They were followed by persons going to and returning from interior mining camps and coming in and out of the country. The number of murders and robberies committed by the Plummer bandits can never be known. Mysterious disappearances were a weekly occurrence.

Then some members of Plummer's gang got into trouble through the shooting of Patrick Ford, a saloonkeeper who had threatened the bandits and exposed them. Most of them fled to Florence, Idaho. Its isolated location, distance from the seat of government, mountain surroundings and lack of law enforcement, made it an excellent base for criminal operations.

Cherokee Bob and Cyrus Skinner ran saloons there and these places were headquarters for about 20 to 30 desperadoes. Charlie Harper was first seen in connection with Plummer's gang at Florence.

Harper had arrived in Walla Walla in the fall of 1861. He was a young man of 25, described as being of medium size, erect carriage, clear but florid complexion and heavy red hair. He immediately began robbing and looting and became well-known as a dangerous man.

However, Harper soon fled when he was named as being head of a group which had robbed a pack train belonging to Joseph and John Berry. Three of Harper's companions, Bill Peoples, Dave English and Nels Scott, were hanged for the crime.

New gold discoveries were being reported. Plummer and Charley Reeves and a bandit named Ridgely went from Florence to Elk City. But at Elk City, Plummer met old acquaintances from California. Fearful lest he be returned there to face criminal charges, he suddenly departed for Deer Lodge. But that town was not prosperous, so, with Jack Cleveland, he left for Fort Benton, intending to go to Missouri by the first boat.

Sixty miles from Benton, their horses became weary and Plummer and Cleveland stopped to rest at the ranch of a Mr. Vail. There Henry Plummer fell in love with Vail's young sister-in-law, Eliza Bryan. He married her and early in the winter of 1862-63, he and his wife and Cleveland went to Bannack. It may be that he intended to reform. Possibly he might have. But he had quarrelled with Cleveland and Cleveland had insisted on going with him to Bannack. A feud sprang up between the two.

After many attempts to provoke Cleveland into a quarrel so he could be openly killed, Plummer finally shot and fatally wounded him. He was tried but acquitted on the ground of self defense. Witnesses testified that Cleveland had frequently threatened to kill him.

However, Plummer was still nervous. A man named Jack Crawford had taken care of Cleveland while he lay dying. Plummer was afraid that Cleveland might have revealed his underground connection with the road agents then pillaging the country. He tried to quarrel with

Crawford so he might shoot him and pretend self defense. But Crawford wounded Plummer in the right arm and then fled. Even in a town where killing was a commonplace occurrence, Plummer's actions aroused suspicion.

No evidence had yet connected Plummer with numerous robberies. While he was recovering from his wounded arm a Mr. and Mrs. Davenport were robbed by a gallant bandit who styled himself the Robber of the Glen. The doctor saw that Plummer had apparently been taking violent exercise at the time of the robbery but he remained silent, in fear of his life.

After his recovery from his wound, Plummer managed to be elected sheriff. He declared loudly that any gun play on his part had always been in self defense. He was elected and immediately appeared to reform.

"I confess," he is quoted as saying, "that the bad associations which I formed in California and Nevada have adhered to me ever since. I was forced in sheer self defense, on different occasions, to kill five men and, of course was undeservedly denounced as a desperado and a murderer. This is not true, and now that I am married and have something to live for, and hold an official position, I will show you that I can be a good man among good men. There is a new life before me, and I want you to believe that I am not unfitted to fill it with credit to myself, and benefit to the community."

But Plummer continued to be mysteriously absent at night. And the robberies and killings kept on. Then gold was discovered at Alder Gulch in May of 1863. The town of Virginia City sprang up. The road agents followed the miners. Prominent among them were Cyrus Skinner, Jack Gallagher, Buck Stinson and Ned Ray, the last three serving under Plummer as deputy sheriffs. Stinson, Hayes Lyon and Charley Forbes are said to have planned to rob three men carrying out gold. But Dillingham, another deputy sheriff, warned the intended victims. Dillingham was assassinated in Virginia City after threats against his life had been made by Lyons. A miners' court was organized on the spot where Dillingham died. A Dr. Steele, president of the gulch, was appointed judge. Charles Forbes, Lyons and Stinson were tried. While the accused men were being held prisoners, Lyons summoned a guard and told him that "Henry Plummer told me to shoot him."

Forbes, styled a prince of cutthroats, was acquitted. Afterward he boasted of the murder. Stinson and Lyons were sentenced to hang, but on their way to the scaffold, pleaded with the crowd for their freedom. An election was held and while the dispute as to whether to hang the prisoners was going on, someone mounted the two convicted men on a horse and turned them loose. Justice was extremely informal in those days with many convicted men winning their freedom by dramatic references to mothers, wives, sweethearts, and their innocence. Too, threatening a jury while the trial was going on was no novelty.

George Ives, Bob Zachary and William (Whiskey Bill) Graves were now members of Plummer's band. The fantastic quality of these early road agents can be shown by a direct quotation from N. P. Langford's book, "Vigilante Days and Ways." Speaking of a plan to rob a stage coach, Mr. Langford writes: "Ives, who had been joined by Bob Zachary and Whiskey Bill made a detour and passed the coach unperceived. The three gentlemanly solicitors of the road trotted slowly on toward Bannack. They were in complete disguise, each one incased in a blanket of green and blue. Whiskey Bill wore a silk hat, at that time, perhaps, the only one in the Territory.

"His sleeves were rolled above his elbows, and his face concealed behind a black silk handkerchief, through the eyelets his ferret eyes shone like a couple of stars in partial eclipse. The gray horse he bestrode was enveloped in a blanket so completely that only his head, legs and tail were visible. The horses of his associates were similarly overspread.

Ives was masked in a piece of gray blanket, and Zachary with a remnant of hickory shirting."

Plummer's band used a system of spies to determine whether the victims of stage coach and other robberies recognized the road agents. If the robbed men were so indiscreet as to talk they did not live long. It is estimated that Plummer's gang killed 102 persons. Sometimes road agents even warned victims that they were going to be robbed.

But the bandits became too reckless. It was George Ives' custom, for instance, to mount his horse, and, pistol in hand, ride into a store or saloon, toss his buckskin purse upon the counter and request the proprietor or clerk to put one or more ounces of gold dust in it "as a loan." The clerk dared not refuse. While the gold was being weighed, Ives would amuse himself by firing his revolver at the lamps.

Ives finally was sentenced to hang for a murder. To the amazement of everyone the sentence actually was carried out. The jurors had been threatened, the usual appeals made, but still Ives was hanged. This was the beginning of the end. The spirit of the country was changing. The time was ripe for the vigilantes. Also the reckless bravado of the bandits was somewhat marred. They all expected that Plummer, their chief, would demand custody of Ives and release him officially as sheriff. But he was busy with his own safety.

Ives, seen in the light of history, was a moral monster, taking life recklessly. He was born of respectable parents at Ives Grove, Racine County, Wisconsin, and his youth appears to have been harmless. He went to California as a miner in 1857. Then he was employed as a government mule herder at Walla Walla in Washington Territory where he began stealing mules. His deception was not discovered until he left. After that he was a gambler and a rowdy in mining settlements on Salmon River.

He was only 27 years old when he was hanged. He is said to have presented a pleasing appearance. Nearly six feet tall, he had lively blue eyes, a light complexion and always was neatly shaven.

George Hilderman was tried as being an accomplice of Ives in the murder of a man named Tiebalt. But he was banished when he pleaded for his life and swore that he had been only an unwilling helper.

Soon Erastus (Red) Yager was arrested for the murder and robbery of a popular Elk City merchant named Lloyd Magruder. He was sentenced to hang and on the eve of his hanging he decided to talk and gave the vigilantes information about Plummer and his band.

Then a man called Dutch John Wagner was arrested on a charge of attacking the pack train of a Mr. Moody. He made a full confession of his guilt and corroborated Red's statements. Plummer attempted to get John into his custody but Neil Howie, who had arrested John, refused to relinquish him. However, he soon escaped.

The vigilante organization was now nearly completed. Every man on the list of Plummer's road agents was marked down for trial. Plummer, ignorant of the confessions, was quietly preparing to depart.

But before he escaped, four vigilantes arrived at Bannack from Virginia City, with news and asked the co-operation of the Bannack citizens in the execution of Plummer, Stinson and Ray. A hurried meeting was held. Stinson and Ray were arrested without any opposition. Plummer was captured at his cabin. The three were taken immediately to a rough gallows, erected the previous season by Plummer in his official capacity as sheriff. On the way Stinson and Ray kept up a stream of profanity. But Plummer begged for his life, then tried to argue his innocence. Finally he declared that he was too wicked to die. He promised to leave the country if his life was spared. But the vigilantes were determined.

Stinson and Ray were hanged first. When Stinson was being hoisted he said, "I'll confess."

"We've done enough already, twice over, to send us to hell," Plummer remarked.

The vigilantes guarded the bodies until they were sure the three men were dead. Then friends of the criminals attended to the burials.

Dutch John was recaptured and executed. His hands had been frozen while he was fleeing from vigilantes. When he heard his sentence, he asked to dictate a letter to his mother. Dissatisfied with the results, he removed the bandages from his sore hands, wrote the letter himself, calmly replaced the bandages and then went to his death.

While these executions were taking place in Bannack, the Virginia City vigilantes were still busy. Alder Gulch had been the favorite stronghold of the Plummer gang since gold was discovered there. Most of the predatory expeditions had started from that rich mining center.

January 13, 1864, three days after Plummer's execution, the vigilantes surrounded Virginia City during the night. Five hundred armed men picketed the town while an executive committee deliberated on evidences of guilt of the bandits.

In the morning the armed pickets were revealed. The city was like an army camp. Hundreds of men marched through the snow on the mountain sides. Messengers were sent to vigilantes in other towns to help in the trial. Parties went out to arrest Boone Helm, Jack Gallagher, Frank Parish, George Lane, Hayes Lyons and Bill Hunter. Hunter had escaped in the night by crawling through a drainage ditch, but the others were captured.

Helm was a notorious character. He was said to have confessed to cannibalism on more than one occasion. He had a long record of robberies and brutal murders. He denied any guilt at first and then admitted to killing a man in Missouri and another man in California.

The examinations were brief. The facts were well known. All the men were sentenced to death. Each prisoner had his arms tied. Then an armed vigilante walked at each side of each prisoner. A large body of armed vigilantes formed around the prisoners in a hollow square, four abreast on each side, and a column in front and rear. A few men with pistols scattered through the crowd to guard against any rescue attempts.

The procession then marched slowly to the scaffold. Some of the condemned men begged for help. Boone Helm treated the proceedings with reckless levity.

At the scaffold, the men were ranged in a row. Gallagher asked for whiskey and it was given to him. He then cursed the vigilantes. In a few minutes all five of the men were dead.

Steve Marshland was the next of Plummer's gang to be captured. He was found suffering from frozen feet and a chest wound he had received while attacking Moody's pack train. He, too, begged for his liberty, promising to leave the country. But the days of easy mercy were over. The vigilantes were resolved to put down crime as ruthlessly as the criminals had once dominated the town. So Marshland was hanged. Bill Bunton was then captured and hanged.

After that in rapid succession Cyrus Skinner, Bob Zachary, George Shears were caught and hanged. Whiskey Bill Graves was caught in Bitter Root Valley and executed. Johnny Cooper was soon added to the list of late members of Plummer's band.

Bill Hunter had escaped thus far but he was trailed to Gallatin valley and captured by six armed men. He was executed almost immediately. His death marked the gory end of Plummer's band. By violence they lived, and by violence they died.

Plummer's band is supposed to have been responsible for the death of 102 persons. How many robberies were committed by these ruthless bandits and how much property destroyed for their amusement no one could estimate. They were typical of their era and with their passing, there came into being a more law-abiding time.

DAVID OPDYKE'S GANG

Following the stamping out of Henry Plummer's band of desperadoes, David Opdyke rose to brief notoriety as leader of a group of road agents.

Opdyke was said to have been the most patrician of the roughs of Idaho. It was claimed that he was the degenerate scion of a family which boasted some of the leading citizens of New York among its members. He was born near Cayuga Lake, New York, in 1830, and was about 36 years old when his career was forcibly ended.

In 1855, he first appeared in California where he was employed for two years as a driver for the California Stage company. Then, in 1858, he sailed to British Columbia, but returned the same year to California. He spent two unprofitable years in Yuba County and two more in Virginia City, Nevada.

In 1862, he heard of the gold rush near Florence and Warren, Idaho, and in the autumn of that year went to Boise county, where he worked a valuable claim on the Ophir. In 1864, having accumulated about \$1,500, he went to Boise City and established a livery stable, which was later pointed out to visitors as having been the rendezvous of one of the most reckless bands of robbers and road agents in the mountains.

Opdyke and his associates were soon suspected of aiding in the circulation of spurious gold dust, then an extensive business among the rowdies of the northwest. His stable was the meeting place of suspicious characters from Boise, Owyhee and Alturas counties. Soon this group was suspected of many robberies in the country, but no direct evidence could be found against them.

In the fall of 1864, the gang was suspected of robbing a prospector named Parks of several hundred dollars and a valise, which was supposed to contain gold dust but merely had quartz specimens. Parks was fatally wounded in the robbery.

Then in 1865 came the robbery of five coach passengers in Port Neuf Canyon. The passengers were murdered and then robbed.

Soon after this crime, Montana authorities received information that a man named Hank Buckner, an escaped murderer, was in Boise City, Idaho. Governor Green Clay Smith sent Neil Howie to Idaho with a requisition from Governor Lyon for the delivery of Buckner to Montana authorities. Buckner was hidden by the Opdyke gang, of which he was a member. He was arrested, however, but before he could be taken to Montana, he was released on a writ of habeas corpus and disappeared.

Meanwhile the Opdyke gang was gaining political power. In March, 1865, Opdyke was elected sheriff through its influence. Under pretense of official duty he tried to break up a group of 30 vigilantes, who were conducting a warfare on horse thieves and manufacturers of spurious gold dust. He planned to arrest and shoot the vigilantes. However, they were warned and his coup spoiled.

Soon after that, Opdyke was charged with releasing a criminal in his custody and also with embezzling \$1,100. He paid the sum and resigned his office, swearing vengeance on the members of the grand jury which had indicted him. The situation around Boise City grew steadily worse. Members of Opdyke's gang killed an unarmed man named Reuben Raymond, who had interfered with their plans for gaining possession of some horses. This murder roused the citizens to great excitement. A night patrol was organized. The vigilantes sprang to life. Opdyke became alarmed and fled from the town with John Dixon, a confederate. The vigilantes pursued him and on April 12, 1865, caught and hanged him. His companion, Dixon, was hanged on the same night.

BILLY THE KID

Slender, high-voiced, light-haired, rather effeminate in appearance,

William Antrim, sometimes called Billy Bonny and more frequently Billy the Kid, one of the worst desperadoes of the southwest, does not properly belong in a history of bandits. So he will be mentioned but briefly. He was a killer, who rustled cattle and went in for petty thievery as a sideline.

Billy the Kid was 21 when he died, and was accredited with 21 murders. Born in New York, he soon went to Silver City, New Mexico. At 15 he quarrelled with his stepfather and became a waiter in a Silver City hotel. Soon, however, he was put in jail for stealing. He escaped and became a blacksmith's apprentice. Then he grew angry and shot the blacksmith.

After that he was a fighting cowboy for John Chisholm, Lincoln county cattleman, who was warring with Major L. G. Murphy over the supremacy of the Pecos Valley. Soon he quarrelled with Chisholm and began associating with the cattle rustlers. Presently he was leader of a crew. Meanwhile he killed as many of Chisholm's men as he could. Two other victims were a sheriff and his deputy. Pat Garrett was elected sheriff to capture Billy the Kid. With a posse of 25 men, he arrested Billy and several companions. Billy was sentenced to hang. But two weeks before the date of his intended death, he shot two deputies and escaped.

By July, 1881, Billy had been free two months and killed five men, three of them simply because they worked for his old enemy, Chisholm.

Then Sheriff Garrett heard Billy was hiding near Fort Sumner. The outlaw was trapped and killed at the home of Peter Maxwell.

The Border Outlaws

THE JAMESES AND THE YOUNGERS

Probably more ink has been spilled recording the exploits of Jesse and Frank James than any other bandits, either modern or old-time.

In the first place, the James boys, Frank and Jesse, are said to have established a world's record of 16 years of keeping out of the law's clutches. Then Jesse was shot by a traitor in the camp, and Frank finally surrendered of his own free will.

Too, the Jameses were suspected, possibly wrongly, of participating in the first bank robbery ever recorded in the United States, that of the bank at Liberty, Missouri, in February of 1866.

The James boys originated in a peculiar atmosphere, when lawlessness held less stigma than nowadays. They rode with Quantrill and his guerillas when that band of killers and looters scoured the countryside. After the Civil War, they were still regarded with suspicion by federal men in power in Missouri. Thus arose the opinion of many of their friends that the James boys were driven into a lawless life. They lived at a time when there was blood on the moon and desperation in the air.

There are many persons who claim that the Jameses were fine persons and that anything they did was justified. There were others, chiefly Easterners, who painted them as ruthless murderers, fiends in human form. They fell victim to pulp writers who fattened on the sales of hair-raising tales of border bandits. No deed was too wild to be attributed to the Jameses or their companions, the Younger boys.

The father of Jesse Woodson and Alexander Franklin James, was a Kentuckian, the Rev. Robert James. Their mother was the former Miss Zerelda Cole of Kentucky. Robert James met and fell in love with Miss Cole when he was attending an academy at Georgetown, Kentucky. They were soon married, although the girl was only 17.

Frank, the oldest of the boys, was born January 10, 1843. Jesse was younger, being born in Missouri, September 5, 1847. Both were native Missourians.

When Frank James was about 11 years old and Jesse was about seven years old, the border trouble broke out. For about seven years before the actual beginning of the Civil War there had been considerable friction between Missouri and Kansas. From about 1854 to 1861 western Missouri and eastern Kansas were virtually in a state of war. Kansas was peopled by Northerners, who were abolitionist in sympathy. Missouri was settled by Southerners who were slave-holders.

Free-Soil Kansans dashed across the state line into Missouri and carried off slaves. Missourian slave-holders went over into Kansas and voted in the elections, trying to make Kansas into a slave state. The Border Ruffians of Missouri sprang into being and fought with the Kansas Jayhawkers and Red Legs. When John Brown made his one-man effort to free the slaves, border warfare was already under way.

Naturally the rougher element took advantage of this disturbed condition. Kansans came into Missouri and stole slaves, and sold them back for ransom. Missourians went into Kansas and killed natives there for theft of slaves. Horses, chickens, cattle also were stolen.

The little James boys played that they were defeating the Kansas Jayhawkers under General Jim Lane. Border Missourians bore a fanatical hatred for General Lane and Jim Brown. These childish mock battles

undoubtedly aided in forming the character of the children living along the line who later joined Quantrill's guerillas.

By this time, seeking his fortune in the gold rush, the Rev. Robert James had gone to California, sickened and died. His widow married again, divorced her second husband because he was not good to "the boys," then married Dr. Reuben Samuel, whose loyalty to his tempestuous step-sons never wavered.

When the Civil War finally broke out, Frank James, then 18, enlisted under one of the lieutenants of Sterling Price, commander of the Missouri State Guards, Southern sympathizers. Frank was a tall, slim, nervous youth, already an expert marksman.

He fought in the fierce battle of Wilson Creek near Springfield, Missouri, August 10, 1861, when the Union General Nathaniel Lyon was killed combatting General Price and General Ben McCulloch of the regular Confederate forces. This was the second important clash of arms in the war.

A few months after the battle of Wilson Creek, Frank James went home to visit his family. Local federal militia arrested him and locked him in the Liberty, Missouri, jail. There he took an oath of loyalty to the Union. Apparently this was a mere gesture, for when he was released he remained a Southern sympathizer and later joined the daredevils led by William Clark Quantrill, renegade guerilla chieftain.

Quantrill was a bloodthirsty, excitement-loving man who apparently seized upon the Civil War as an excellent opportunity to run wild along the border. Some historians treat him as a hero, others as a wholesale murderer.

Jesse stayed at home during this time, working on the farm and helping his mother. Then one June day, in 1863, he got into trouble. Federal militia visited the farm and told Dr. Samuel that he and his family had been too vocal in their sympathy for the South. They were also accused of protecting "that cutthroat Quantrill."

To teach him a lesson, the militiamen hanged Dr. Samuel. His wife, who had followed the men, dashed forward as soon as they left, cut down her husband and saved his life.

Meanwhile, the 15-year-old Jesse was plowing corn. The federals found him and began whipping him with a knotted rope. Jesse ran toward the house, blinking his blue eyes nervously, a habit he had all his life. He was crying from physical pain and humiliation. His mother wept at the sight of his back, welts, and dripping blood.

Jesse tried to join Quantrill's gang, but those fierce men laughed at the slim blue-eyed stripling. So he returned home.

A few days later the "regulators," as some of the militiamen termed themselves, reappeared at the James' home. This time they intended to kill Jesse and his step-father. They had heard that Jesse had been in communication with Quantrill. But Dr. Samuel and Jesse were away from home. So the men arrested Mrs. Samuel and her 12-year-old daughter, Susie James. They were put in jail at St. Joseph, Missouri, and kept there for several weeks on a charge of being disloyal to the Union.

Two little Samuels were permitted to join their mother in the jail. They were Sallie Samuel, three, and Johnnie, who was only 14 months old.

This outrage determined Jesse to join Quantrill's men. With Jim Cummins, a neighbor boy, he managed to join one of the Quantrill divisions under George Todd and Bill Anderson. Anderson, known as Bloody Bill, said that Jesse was "for a boy of 16, the best fighter in the command."

Jesse also made friends with George Shepherd, another leader in the Quantrill band. When Quantrill took part of his band to Kentucky along at the last of his career, Jesse went with Shepherd to Texas.

Then he came back to Missouri to surrender and was wounded by a

federal soldier. Frank had accompanied Quantrill to Kentucky and soon he, too, returned to the farm.

Much the same history could be recorded for the future companions of the James boys, the Younger brothers. Apologists for the Younger boys give the same alibi that they were driven and forced into their life of outlawry.

Thomas Coleman Younger, known as Cole Younger, was the most prominent of the four Youngers. He was born on a fine farm a few miles from Lees Summit, Missouri, and the old place is now the Jackson County Poor Farm. Cole was born January 15, 1844, one year after Frank James, his close companion in most of his exploits. He was a member of a big family.

Col. Henry W. Younger, his father, was a prosperous farmer and owned a livery business at Harrisonville, Missouri. On July 20, 1862, he was murdered and robbed by a band of pillaging federal soldiers commanded by Captain Walley. Friends of the Younger boys argue that this act drove the boys to being guerillas. But, as a matter of fact, Cole Younger was already connected with Quantrill at the time. Later his brother, James, joined the group. The other outlaw Youngers were John and Bob.

The mother of the Younger outlaws was a daughter of the Hon. Richard M. Fristoe of Jackson county, who had been in the Missouri legislature and who had served on the bench. The Fristoes were one of the first families in Missouri and the Youngers also were prominent people. Mrs. Younger, a refined, aristocratic woman, died in 1870, after two years of semi-invalidism said to have been caused by the mental strain of seeing the property left by her murdered husband swept away by the strife and later hearing that two of her sons had become desperate bandits.

Cole Younger stayed with Quantrill until Quantrill went to Kentucky. James Younger went with the bandit chieftain, but Cole joined the regular Confederate forces and became a captain. Tales of his exploits, including the time he was alleged to have shot 15 men with one bullet by lining them in a row, were greatly exaggerated. He had a picturesque quality that caught the public imagination and caused him to become, even during his lifetime, a legendary figure.

A cousin of Younger's told the writer that "Cole was driven to bank robbing. He was blamed for it anyhow and folks wouldn't let him lead a decent life. He had to make a living somehow."

Apparently the boys meant to settle down. For a while they worked on the farm. There was still talk about the wild James boys who had been with Quantrill.

Then, on St. Valentine's day, in 1866, a new era opened. War-torn Missouri hoped for peace. But the reckless gentlemen who had ridden with Quantrill did not like peace and quiet. They had grown accustomed to snatching horses and food and clothing as they went, with no authority but their six-shooters. Things were ripe for the opening of the border bandits' period of history.

A dozen men, mounted on fine horses, rode into the small town of Liberty, in Clay county, home of the Jameses. They went into the bank, occupied by Greenup Bird, the cashier, and his son, William Bird, bookkeeper, robbed it of \$72,000 in cash and bonds, locked the Birds in the bank vault, and started to escape.

But the vault catch failed to hold. The elder Bird escaped and thrust his head out the window to give the alarm. Already citizens had become curious and were gathering. When the alarm sounded, men began running to and fro on the streets. The Rebel guerilla yell was shouted by one of the bandits. They began shooting. A young student known as Jolly Wymore was shot and killed. The bandits galloped out of town, shooting, and shouting the terrifying guerilla cry.

Citizens accused various members of Quantrill's guerillas of being members of the bandit gang. Jesse James was named among them, but it is said that Jesse was at home recovering from a wound through the chest received when he surrendered to federal officials.

Cole Younger was also suspected, but he was not arrested. Most of the suspected men hid out. Two were arrested but released. Some persons believed that Arch Clements, one of Bill Anderson's men under Quantrill, was the leader. Clements was killed December, 1866, when he went to Lexington to surrender to military authorities, hoping to receive a parole.

Eight months later, a second bank robbery occurred. In October of 1866, five men rode into Lexington, Missouri, and stopped at the banking house of Alexander Mitchell & Co. The bank was deserted except for Cashier J. L. Thomas, since it was the noon hour.

Two of the five men walked slowly toward the bank. The watching cashier went behind the counter. One of the two strangers presented a 50 dollar bond.

"Can you change this for me, please, sir?" he asked. "I reckon I can," said the cashier.

He opened the cash drawer and was fumbling for change when he looked up to see four big revolvers pointed at his head. Two more men had appeared in the doorway.

"Give us all the money you have in the bank," commanded the man who had asked for change. "Do it quietly and you won't be hurt; but if you don't, you'll get your head blown off."

Thomas obeyed orders. The robber tossed the loot into a wheat sack. "Don't give an alarm—if you do you'll be too dead to know it," he added.

The two men backed to the door, keeping their guns pointed at the cashier. The two men at the door backed away, putting their guns into their pockets. Then they walked swiftly, but quietly to their horses. The fifth man had stayed there. All five quickly rode out of town.

As soon as the horsemen had disappeared, Cashier Thomas spread the alarm. About \$2,000 had been taken, he said.

Within an hour a posse had been organized. But no trace of the five men was found. Public meetings were held in Lexington to discuss what should be done. The names of the James boys were mentioned. But presently the excitement died down.

Four months later the gang struck again. This time they directed their efforts toward the private bank of Judge McLain at Savannah, Missouri. At noon, on March 2, 1867, five horsemen rode into town and hitched their horses near the bank. Judge McLain and his son saw them and, remembering the Lexington affair, where four of the five men entered, Judge McLain did not wait to be told to hand over the money. He seized a pistol and began firing. The four men drew guns and returned his fire. Judge McLain fell, shot through his breast.

Meanwhile his son had dashed into the street, giving the alarm. The robbers fled from the bank and sped away with their fifth companion. None of the bandits were injured, but they had not obtained a cent from the McLain bank.

Again a posse failed to find any trace of the bandits. Again the James boys were suspected. So were Samuel Pope and William (Bud) McDaniels. The two latter men were arrested, but released when they presented alibis. Judge McLain recovered from his wound and became a local hero.

No definite connection between these first robberies and the James boys has ever been proved. Sympathizers with the James boys say that the false blame finally drove them to a lawless life.

Thus far only one life had been lost, that of Jolly Wymore in the Liberty bank robbery. But the gory era was beginning.

Three months following the fiasco at Savannah, 14 men invaded the

town of Richmond, Missouri, in Ray County, close to the home of the James boys. They rode into town shouting the guerilla cry. Six of the men halted at the Hughes & Mason bank, the doors of which had been closed and locked when the shouts were heard.

The six broke into the bank and looted it of about \$4,000, which they put into the Missouri grain sack, soon to be famous. Then they joined their companions outside.

Meanwhile citizens had gathered, prepared to give fight. Mayor Shaw started firing briskly. The guerillas punctured him with four bullets. He fell dead.

In the nearby county jail were several prisoners, said to have been confined because of their Southern sympathies. The guerillas attempted to liberate them, killing B. G. Griffin, the jailor, and his son, a lad of 15.

The 14 bandits then galloped out of town. Poses were immediately organized. A fund was subscribed to capture the robbers. Warrants were issued for eight men alleged to have taken part in the robbery.

Those named were John White, James White, Isaac Flannery, Andrew McGuire, Payne Jones, Richard Burns, Thomas Little and Allan H. Parmer. Most of them had been former Quantrillions. Little and Burns were hanged, but the others managed to escape. The Jameses and Cole Younger were suspected, but presented alibis, while keeping discreetly under cover.

So far no positive proof of outlaw activities of the Jameses had been produced. They were suspected, but that was all. Presently, however, they were to be forced out into the open.

The bank in Russellville, Kentucky, was robbed by six men, one of whom, giving the name of Colburn, had been in the bank previously trying to change notes. Cashier Nimrod Long was wounded when a bullet grazed his scalp and then beaten over the head with a clubbed pistol. He managed to free himself and dodged through a hail of bullets as he fled down the street.

Colburn, said to have been Cole Younger, obtained about \$14,000 from the safe vault. It was dumped into the now famous Missouri grain sack. Then the robbers unhitched and mounted their horses, shielded by the gunfire of their companions on the outside. A citizen named Owens was seriously wounded. None of the robbers were hurt.

Yankee Bligh, a Louisville detective, took up the search for the robbers when a posse had failed. He trailed the gang to the Kentucky home of George Shepherd, a former Quantrillian. Shepherd was convicted and sentenced to three years in prison, but he never revealed the names of his associates.

It was said that the robbery was planned to get enough money to send Jesse James on a sea voyage. He was still suffering from his lung wound. It is a fact that shortly after that he did take a voyage around to California where he met his brother, Frank, and that they stayed for some time with an uncle who was a doctor.

It was several months before the Jameses returned to Missouri. And when they did their names were definitely linked for the first time with the new wave of crime.

On December 7, 1869, more than 20 months after the Russellville, Kentucky, raid, three men rode into Gallatin, Mo. Two of them dismounted and entered the bank. The third remained with the horses as look-out.

One man handed a hundred dollar bill to Captain John W. Sheets and asked for change. Captain Sheets picked up the bill and started to open the cash drawer when the other outlaw thrust a Colt navy pistol toward him, and demanded that he give him the keys to the inner doors of the safe. The outer door already stood open. The bandit held Sheets captive while the accomplice took about \$700 from the safe and cash drawer.

One of the men stared at Sheets for a moment and then suddenly shot him dead, according to a young man named McDowell, who had been making a deposit in the bank.

Two or three persons had tried to enter the bank on business, but the guard outside had driven them off. The alarm had been given and armed men were gathering on the street. The look-out called to his companions to hurry. They rushed for their horses. The man carrying the money and the look-out dashed off. But the murderer of Sheets had bad luck. His spirited horse plunged and snorted. The rider had one foot in the stirrup and was dragged several yards. He managed to release himself and the horse trotted away. One of the bandit's companions looked back, saw the plight of the dismounted man and hurried to his rescue.

The double-laden animal started after the third companion. Citizens were firing at the fleeing bandits, but none of their bullets took effect. However, a mounted posse was formed, confident that the posse men could overtake the heavily burdened horse.

However, a mile from town, the fugitives encountered a farmer named Daniel Smoot and robbed him of his horse. Then they dashed on, gaining headway. Near Kidder, Missouri, they forced a preacher they encountered to guide them around the town. One of the men said to him, "I'm Bill Anderson's brother. I've just killed S. P. Cox—if I'm not mistaken in the man I shot. Cox killed my brother and now I've killed Cox for vengeance. Been after him for five years. Goodbye parson."

Jesse James had been under Anderson's command in Quantrill's guerillas. And Sheets was supposed to resemble Cox. Sheets' murder and Jesse's subsequent enigmatic explanation seems to have been just another of Jesse's impulsive actions. In the excitement of the robbery Jesse apparently was suddenly struck by Sheet's resemblance to Cox and decided to avenge the death of his old comrade.

For Jesse James was definitely linked with the robbery. His horse was captured and identified. Jesse and Frank circulated alibis, as usual and so did Cole Younger, who was said to have been the look-out. Younger was a big man, weighing about 200 pounds, and could easily be recognized by his distinguished appearance. Jesse was a slender stripling of a man, rarely weighing more than 150 pounds, even when in good condition. Frank was slightly taller and a little heavier.

The murder of Sheets crystalized the public opinion that something should be done about those "wild young James boys." Captain John S. Thomason, former sheriff of Clay County, led the Gallatin men out to the Samuel farm where the James boys lived. Captain Thomason was mounted on a fine saddle horse of which he was very proud.

The James boys saw the posse arriving and rode to meet them. There was a brief shouted conversation. Thomason demanded that the Jameses go to Liberty with them for questioning.

"We don't want to go to Liberty—and we don't intend to go," announced one of the Jameses.

"But you've got to come along," insisted the captain.

This bit of dialogue would be considered high comedy if inserted in the chronicles of Twentieth Century banditry. However, in that fantastic era it seemed perfectly natural.

"Not until we're good and ready," retorted the Jameses.

Both sides started firing but apparently neither really intended to hit the other for no wounds were received. The Jameses admired Captain Thomason, who had served with distinction on the Confederate side. But Jesse James shot Thomason's horse through the head. The animal dropped dead and Thomason slid off uninjured. By this time the skirmish had taken both groups out of sight of the James home. Frank and Jesse disappeared in the woods and the pursuers straggled back. Captain

Thomason went straight to the Samuel's farm house. He walked to the stable and borrowed a horse.

"Your son, Jesse, has killed mine," he told Mrs. Samuel.

"Well, captain," said Mrs. Samuel, "I reckon you're in great luck, at that, for Jesse must have killed your horse to keep from killing you."

"Maybe so," said the indignant captain. "But I'll see that he pays me for my horse some way. Those boys of yours, Mrs. Samuel, are getting entirely too wild."

This amazing incident had an even more astonishing sequel, according to the story of one old-timer. This man said that one of the James boys encountered Thomason's son years later and paid him \$125 for the horse.

Following the tragedy at Gallatin, the first appearance of what was now beginning to be called the James-Younger gang was June 3, 1871, when they went to Corydon, Iowa, to rob the Ocobock Bros. bank. Public opinion had it that the band included Cole Younger, James Younger, Frank James, Jesse James, Clell Miller, James White and James Koughman.

The day selected coincided with an outdoor political meeting and thus the bank was deserted except for the cashier. The bandits gagged and tied him—something new in bank robbery—and robbed the bank of \$40,000!

As they started to escape, Jesse James could not resist a joke. He halted his horse on the outskirts of the meeting where H. Clay Dean, northern Missouri lawyer and orator, was speaking.

"Mr. Dean, I rise to a point of order, sir," said Jesse.

"What is it, friend and fellow citizen?" inquired the orator. "If anything of paramount importance, I yield to the gentleman on horseback."

"Well," said Jesse James, "I reckon it's important enough. The fact is, Mr. Dean, some fellows have been over to the bank and tied up the cashier. If you all aren't too busy you might ride over and untie him. I've got to be going."

Clell Miller later was arrested for this robbery but was acquitted. The Jameses and the Youngers presented alibis, naming persons in their home county who could testify to their presence in Missouri when the Iowa bank was robbed.

On April 29, 1872, five men robbed the Deposit Bank at Columbia, Kentucky. They followed the James-Younger strategy of splitting the party with two men coming from one direction and three from another. Cashier R. A. C. Martin refused to give up the keys to the safe and was shot dead. The robbers rode away with only about \$200 from the cash drawer.

Cole and Jim Younger and the Jameses were suspected in this robbery. The identity of the fifth man was not guessed.

The next exploit of the gang was the robbery of the gate at the Fair Grounds in Kansas City, Missouri, September 23, 1872, when a tin box containing almost \$10,000 was seized. Jesse James was believed to be the man who grabbed the box. Stories about this robbery are conflicting. One version has James announcing his identity and ordering the box handed to him.

Two new recruits now joined the gang, Robert Younger, 20, and Bill Stiles, known as Bill Chadwell. Frank James and Jim Younger were said to have gone out to Cheyenne, Wyoming. In their absence, the others rode down to Saint Genevieve, Missouri, where the St. Genevieve Savings Association ordinarily had about \$100,000 in cash on hand. But the bank was in the process of liquidation and the robbers got only about \$4,000, mostly in silver coin, which was heavy.

The bandits are said to have dropped it several times and once enlisted a stolid Dutchman to help catch a horse and pick up the coins.

About this time it apparently occurred to the bandits that if banks

could be robbed, trains might be looted also. Just as Jesse and Frank James were suspected of the first bank robbery in the United States, so they are accused of the first train robbery.

There was to be a big gold shipment on the Chicago, Rock Island and Pacific railway in the third week of July, 1873. So the Jameses and the Youngers are said to have started for Iowa to look into the matter.

On July 21, 1873, the band rode a few miles west of Adair, Iowa, where a curve presented excellent opportunity for wrecking a train. They unspiked a rail from the track, leaving the loosened rail in place by tying a long rope around it. The end of the rope was held by a couple of bandits, lying concealed in the shrubbery and grass several yards from the tracks.

At 8:30 o'clock at night Engineer John Rafferty saw a rail move suddenly to the outside of the track. He reversed the engine, but the distance was too short. The huge locomotive plunged off the track and turned over, crushing the engineer to death.

Two outlaws boarded the express car and forced the messenger to open the safe. But it contained only about \$3,000. The \$75,000 shipment of gold was due 12 hours later. Several hundred dollars and some jewelry was obtained from the passengers.

News of this novel crime was published all over the nation and in Europe. A new era in crime had been opened.

January 15, 1874, the group held up the Hot Springs, Arkansas, stage on the road between Malvern and Hot Springs. It was one of those big old-time Concord coaches and thus made a picturesque contrast with the train robbery.

The bandits hid in the brush about five miles east of Hot Springs. When the coach lumbered along, bearing 14 passengers, Frank James emerged and commanded the driver to halt. The passengers were lined up and searched.

According to the story, one of the passengers had a Southern accent.

"Were you in the Confederate army?" inquired a big handsome highwayman. "I was," replied the passenger.

"Name your regiment, company and colonel."

The passenger obeyed.

"So was I in the Confederate army," said the robber. "I served under General Jo Shelby of Missouri." He handed the passenger's watch and wallet back. "We never rob Southerners," he said.

This story was widely circulated by friends of the Jameses and the Youngers, who said that the outlaws were simply avenging the South by their robberies. However, they did frequently rob Southerners. Most of the activities were in Missouri, which had been chiefly Southern in sympathy.

The Pinkerton detectives had been hired to capture the Jameses and the Youngers. Thus far they had little success. But in 1874 the tide was beginning to turn. The James-Younger gang had just robbed the Iron Mountain railroad. Jesse James, as usual, could not resist a joke. When the bandits had completed their haul, obtaining about \$5,000, one of the outlaws handed a train crew man a sheet of paper on which was written, all ready for newspaper publication, this brief account of the robbery:

"The most daring robbery on record—the southbound train on the Iron Mountain Railroad was stopped here this evening by five heavily armed men and robbed of — dollars. The robbers arrived at the station a few minutes before the arrival of the train and arrested the station agent and put him under guard, then threw the train on the switch. The robbers were all large men, none of them under six feet tall. They were all masked, and started in a southerly direction after they had robbed the train. They were all mounted on fine blooded horses. There is a hell of an excitement in this part of the country."

The robber reported was accurate enough in describing the excitement. Detectives and possemen combed the underbrush all around Gads-hill, where the robbery took place. The Pinkerton detectives knew that

the Youngers had relatives in St. Clair County, Missouri, near Monegaw Springs. Detectives Allen and Wright of the Pinkerton force hurried there. At Osceola, Mo., they enlisted the aid of Edwin B. Daniels, a former sheriff of the county. He guided them to Monegaw Springs where they posed as cattle buyers. March 16, 1874, John and James Younger, concealed in the upper story of a farmhouse, listened to the detectives asking for directions to some of their friends. Then the Youngers followed the Pinkerton men.

John Younger cocked both barrels of his shotgun and ordered the detectives to halt. Daniels and Allen were riding in the rear and Wright some distance ahead. Wright drew rein, turned in his saddle and aimed his pistol at the Youngers. Then he put spurs to his horse and dashed away. The Youngers ordered him to halt. One of them fired, shooting Wright's hat from his head.

Meanwhile Allen and Daniels pretended to drop their weapons in the road but Allen had another one in his hip pocket. Jim Younger got off his horse and picked up the guns.

"Damn fine pistols," he commented. "You must make us presents of these."

The Youngers questioned the men, saying that they had heard detectives were hunting for them.

Allen, believing that the Youngers intended to kill Daniels and himself, suddenly swept his revolver out and fired at John Younger. They immediately returned the fire. Allen was fatally wounded. John Younger was killed and so was Daniels. Allen lingered on for several weeks before his death and gave the account of the killings. Jim Younger escaped.

In a book of this length it would be impossible to give a detailed recital of the crimes supposedly committed by the Jameses and the Youngers. After the death of John, the remainder of the band continued to lead a charmed life. The Jameses and the Youngers appeared out of nowhere and disappeared into the nowhere. Another Pinkerton man was mysteriously killed but there was no proof that the Jameses or the Youngers committed the crime.

The relatives of the outlaws were closely watched by detectives. Once an investigating party threw balls of cotton waste soaked with kerosene and turpentine and ignited into the Samuel home. When the room was illuminated by these fireballs, a bomb was thrown in. Mrs. Samuel lost an arm in the explosion and her youngest son, Archie Samuel, was killed. Newspapers called this brutal treatment the "crime of the century." Pinkerton's men were blamed for it. A revolver said to have the initials "P. G. G.," for Pinkerton's Government Guard, was supposed to have been found near the house.

Six weeks after the bombing of the Samuel home, the Hon. Jefferson Jones proposed in the state legislature that an outlaw amnesty be declared. He said that the Missourians did not regard the outlaw deeds committed by former guerillas as crimes committed under ordinary circumstances. He requested that the governor proclaim that Jesse James, Frank James, Coleman Younger, Robert Younger and James Younger and others be granted full and complete amnesty and pardon for all acts committed by them during the Civil War and invited to return to their homes there to submit quietly to proceedings instituted against them for their crimes since the war, a fair trial being guaranteed.

This unique measure was defeated, but not until Jones had assailed the Pinkertons for their alleged hand grenade activities. Sympathy then was with the Jameses. But a month after the defeat of the amnesty bill, Daniel Askew, in whose employ a Pinkerton operative had worked as a farm hand, was killed. The public suspected the Jameses of the murder and the tide of indignation rose against them.

More trains, stage coaches and banks were held up. The notoriety of the gang grew. Bud McDaniels, a member of the gang, got drunk in

Kansas City when his girl friend turned him down, was arrested and stolen jewelry found in his possession. He escaped from custody and was shot to death by officers when he refused to surrender later.

Frank James and Coleman Younger had reached the age of 32. Robert Younger, youngest of the group, had reached his twenty-third year. Both the James boys had married and become family men.

Their last brilliant coup together was the robbery of the Missouri Pacific train near Otterville, Mo., July 7, 1876. Eight men were in the band. They were Jessie and Frank James, Cole Younger, Robert Younger, McClellan Miller, William Stiles, Samuel Wells and Hobbs Kerry. Kerry confessed to his part of the job later and revealed the names of his companions. His job had been to watch the horses for his more experienced companions. He was sentenced to two years in prison.

Then came the renowned Northfield, Minn., robbery, celebrated in song.

The gang had grown accustomed to easy victory. It was decided to go farther afield. There had been too much publicity about the Otterville robbery. Jim Younger was brought back from California. It is said that he rebelled slightly. He had been leading a respectable life and he disliked the thought of returning to banditry.

Northward rode the gang, now composed of the two Jameses, the three Youngers, Clell Miller, Samuel Wells (alias Charlie Pitts), and William Stiles (alias Bill Chadwell). All of them were, as the phrase went in those days, experts in horse and revolver work.

Stiles was to guide the bandits through Minnesota. They rode splendid horses and were clad in long linen dusters which concealed the numerous revolvers each man had thrust through his belt.

Enroute the men were prepared to play the roles of well-educated men. Cole Younger liked to discuss theology. Frank James was fond of the Elizabethan drama and any literary topics. Cole Younger's favorite book was Gibbons' "Decline and Fall of the Roman Empire."

For a fortnight they rode along the highway to southern Minnesota. They had plenty of money from the Otterville robbery and they spent it freely.

Once in Minnesota the outlaws scattered, posing as cattle and horse buyers and grain dealers and real estate speculators.

Everywhere they visited banks, usually getting big bills changed while they looked around. It was decided to rob the First National Bank at Northfield, Minnesota, a prosperous institution in the midst of a rich farming country.

On September 7, 1876, the outlaws rode into Northfield in three groups. Three men were to ride into the bank and get the money. Two men were to sit on their horses opposite the bank and keep curious people away. Three men were to be posted on Bridge Square nearby as a rear guard.

At two o'clock in the afternoon Sam Wells, Bob Younger and Jesse James posted themselves on the street, nonchalantly whittling on drygoods boxes in front of a store.

Cole Younger and Clell Miller rode up the street. The three whittlers pocketed their knives and walked into the bank. Clell Miller, leaving his horse unhitched, walked to the bank and closed the door. Then he sauntered back and forth on the sidewalk, keeping his eyes on the door. Cole Younger pretended to be tightening his saddle girth.

But citizens were beginning to be suspicious. J. S. Allen tried to enter the bank and Miller ordered him to stand back. Allen, a hardware merchant, jerked loose and ran to sound the alarm. Henry Wheeler, who had heard a pistol shot inside the bank, also began shouting loud alarms. Cole Younger and Clell Miller fired over his head to frighten him to silence. But Wheeler ran for a gun and help.

Meanwhile Allen had reached his own store and began loading guns

and passing them out to citizens. A man named Elias Stacy took one and drew first blood from the bandits. He fired at Clell Miller just as Miller was mounting his horse to help Cole Younger drive Henry Wheeler away.

The gun was loaded with small birdshot. Miller was knocked from his saddle but got back at once, his head and shoulders peppered with the small shot.

Inside the bank there was trouble. The employes said that the safe had a time lock on it. They could not open it. The bandits didn't believe them. Joseph Lee Heywood, substitute cashier, was knocked down and his throat slightly cut. A. E. Bunker, teller, tried to get a derringer that was inside the bank. Bob Younger grabbed it.

The outlaws began to seize small change, overlooking about \$3,000 in paper money. Bunker, waiting until the outlaws were busy, dashed out the back door. Sam Wells fired at him but missed. He pursued him and wounded Bunker through the right shoulder. Wells returned in time to hear his comrades shouting, "Come out, boys, come out. They're killing all our men."

The three hurried out of the front door. One of the desperadoes turned and shot Heywood through the head. The acting cashier fell dead.

Outside a battle royal was raging. A horse belonging to one of the outlaws had been killed. Cole Younger had been wounded several times. Bill Stiles was killed. Then Clell Miller received his second wound and died instantly, his horse took fright and ran away. Some of the Northfield citizens were throwing stones.

The citizens had the advantage of protection. They were firing from windows and doorways. The outlaws returned the fire but without much luck. Nicholas Gustavson, a Swede, who apparently had not understood the English commands to "get in," was killed.

Bob Younger was wounded. There were now five horses for six men. Cole Younger helped his wounded brother into the saddle with him. Then they all galloped out of town, leaving their dead behind them.

Church bells were ringing the alarm and a posse was being organized as the men reached the skirts of the town. The first pursuers were mounted on horses of the slain outlaws, Miller and Stiles. These fine animals tore gladly after their comrades, bringing the searchers quickly in sight of the fugitives.

But the two pursuers were not anxious to tangle with six desperate men. So they dropped back to wait for help. The bandits stopped and borrowed a saddle, announcing themselves as deputies in pursuit of horse thieves. They also stopped and unhitched a horse from a wagon, not bothering with an explanation to the farmer driving the team. But bad luck still pursued them. Bob Younger broke the girth on his "borrowed" saddle. Again he had to be taken up behind a comrade.

Towns all over the state were notified by wire to watch for the gang. The line of pickets extended in a semi-circle for about a hundred miles. The bandits broke through the line at one place but the pickets were re-assigned. Finally, after five days of desperate lurking in the woods, half starved and their wounds without proper care, the once successful bandits were less than 50 miles from Northfield and without sufficient mounts.

It is said that the Jameses and the Youngers quarreled, the Jameses insisting that Jim Younger, who was badly wounded, be left behind so he would not delay their flight. However, the truth of the matter probably will never be known. At any rate, it appears that Frank and Jesse James fled by themselves and others stayed together. The James boys rode westward, posing as officers chasing the Jameses and Youngers.

Little is known about their activities after they left the Dakotas. They are said to have gone through western Iowa and into eastern Nebraska and then to Nashville, Tennessee, where they lived under assumed names for months.

Then it was learned in Minnesota that four of the gang had not

escaped. The chase that had centered on the Jameses turned back to Minnesota. The four survivors had been seen near the small village of Madelia. A Colonel Vought living there remembered that a man posing as a Mr. King had seemed interested in the geography of the place. Colonel Vought decided that Mr. King and Mr. Younger were one and the same and that Mr. Younger had been interested in that region as a retreat.

Presently Colonel Vought learned that four men, pretending to be on a fishing trip, had been buying food. A posse was organized and arrangements were made for what was to prove the Youngers' last stand.

The posse from Madelia soon found the footsore fugitives limping through a morass known as Hanska Slough. All were dirty and unkept. Sheriff Glispin commanded them to halt. The men kept going and the posse fired on them. The fugitives tried to hide behind a small knoll. Then they began wading across a small lake.

The horses of the posse refused to go into the water, and a bullet knocked Cole Younger's walking stick from his grasp.

The mounted men detoured and came upon the fugitives just as they were hurrying toward a herd of grazing horses. A gun battle started. The fugitives headed for a tangle of wild grapevines and willows. Here they were surrounded. The gunfire began again. Presently all four men were prone on the ground. Bob Younger crawled weakly to his feet and said, "I surrender. They're all down but me."

He dropped his gun and the officers advanced. Sam Wells was dead, his body torn by five bullets. Bob Younger had a wound in his chest in addition to the shattered elbow received at Northfield. Jim Younger's jaw was crushed and he had four other wounds. Cole Younger had been wounded 11 times. The three survivors were formally placed under arrest. They were taken to Madelia in a wagon. Newspaper photographers and reporters flocked to see the famous Missouri border bandits. Cole Younger refused to identify the three slain members or reveal who were the two men who had escaped. However, the three Youngers talked freely about themselves.

On November 9, 1876, they went on trial, charged with being accessories to the murder of Heywood, of robbing the bank, of attacking Bunker with intent to do bodily harm, and of murdering Nicholas Gustavson. Mrs. Fannie Twyman and Miss Retta Younger of Jackson County, Missouri, aunt and sister of the accused men, were in the courtroom.

All three Youngers were sentenced to life imprisonment in the Stillwater, Minnesota, prison. Robert Younger died in prison of tuberculosis 13 years later.

Immediately after the imprisonment of the Youngers, their friends and relatives started a long fight for their freedom. Much was written saying that Cole Younger had been driven to his desperate life and needed another chance. Some of the worst of the stories that had gone around about Cole Younger were denied or disproved. Many famous Missourians wrote letters in behalf of the Missouri desperado.

Nevertheless a journalistic scheme to have Cole Younger come home alive was finally started in St. Louis, two years after his release from prison. A reporter was to escort him to St. Louis. But Cole balked at the publicity. Finally, in 1903, he was granted a full pardon. In the meantime, he and his brother, Jim, had become tombstone salesmen. Jim had fallen in love with a Minnesota girl but, being an unpardoned convict, he was not allowed to marry. So in the summer of 1902 he committed suicide. His body was sent to Missouri for burial beside that of his brother Bob. Cole Younger returned to Missouri February 16, 1903. He later earned a great deal of money lecturing and retired at Lees Summit, Missouri. He died in 1916.

Following the capture of the Younger boys, the James boys disappeared for two or three years. They were blamed for one train robbery

in the northwest, but it is thought that they were not guilty. Information later revealed shows that they were living in Tennessee during most of this period. Jesse and his family adopted the name of Howard, and Frank James passed as a Mr. Woodson.

Then suddenly Jesse James sprang into the limelight in Missouri. There were three train robberies in the old style. First came one at Glendale in Jackson County, Missouri. The Chicago and Alton railroad was robbed October 7, 1879. The six men who participated were later named as Jesse James, Edward Miller, Robert Woodson Hite, William Ryan, James Andrew Liddill and Daniel Tucker Bassham. Frank James was still down in Tennessee and it was said that he tried to persuade Jesse not to go back to the outlaw life.

But apparently Frank relented. For in the next train robbery of the group he is believed certainly to have been present. This was July 15, 1881, when a passenger train on the Chicago, Rock Island and Pacific line was robbed in Daviess County, Missouri. William Westfall, conductor, and Frank McMillan, elderly workman employed by the company, were shot to death. Those in the James boys' band at this robbery were supposed to have been Jesse and Frank, Wood Hite, his younger brother, Clarence Hite, and Dick Liddill.

Third and last in this series of robberies was at the Blue Cut in Jackson County, September 7, 1881, five years after Northfield. A Chicago & Alton train was held up by Frank and Jesse James, Wood Hite, Clarence Hite, Dick Liddill and Charles Ford.

This was the last of their successful robberies. The Jesse James' country was aroused and the end was in sight. Times had changed—new blood and new ideas were coming into power.

Tucker Bassham apparently was a somewhat stupid farmer lad who had been pressed into Jesse James service on the theory that he could do a small job all right. He boasted of his \$900 share of the Glendale robbery. He got drunk and talked about how the famous Jesse James had chosen him to help. He was shortly afterward arrested by Col. Maurice Langhorne and Maj. Whig Keshlaer of the county marshal's office. He made a confession which he repudiated later, but this did not prevent him being sent to the state prison for ten years.

Then Bill Ryan got drunk and became embroiled in a fight. He was arrested and about \$1,300 in gold coin was found on his person. Will Wallace, crusading prosecutor of Jackson County, identified Jackson as one of Jesse James' gang and decided to bring him to trial. Everyone was astonished. People were firmly convinced that no Missouri jury would convict a member of the James gang.

Even if by some freak Ryan was convicted, the wiseacres said, Jesse James and his gang would rescue him from the jail.

The only witness against Ryan was Tucker Bassham, who was pardoned on the understanding that he would turn state's evidence. Friends of the guerillas crowded the courtroom. Wallace's friends told him that he was endangering his own life. Bassham asked that he flee with him out of the country.

Employees of the robbed railroads refused to testify or to identify Ryan. The railroad executives backed them up in their decision not to help. One executive said that if they helped convict one of the James group that the others would revenge themselves by holding up more trains.

But the jury convicted! Ryan was sentenced to 25 years in prison. Many threats of assassination were made against Wallace and Bassham. Bassham immediately left the country, but Wallace announced his intention of putting an end to the Missouri outlawry which had caused the state to be known as "the Robber State."

Dissension broke out in the ranks of the Jesse James gang. The new

members, the Hites, Dick Liddill and the Fords were not of the old guerilla blood. They lacked the loyalty of the old group.

Dick Liddill killed Wood Hite, surrendered and confessed. Hite had been killed in Ray County, Missouri, following a quarrel between the two. Liddill said that Hite accused him of stealing \$100 at the division of the spoils of the Blue Cut robbery. Bob Ford also fired at Hite, he said. Hite shot Liddill through the leg.

Hite's body was wrapped in an old stable blanket and buried in a shallow hole.

This fight was the beginning of the end of the James gang. In the old days there were members who disliked each other. But that did not harm their loyal spirit.

On March 29, 1882, Liddill surrendered and confessed to the killing of Hite December 4, 1881. He also talked about the rest of the gang, naming the members and describing their deeds.

Clarence Hite, Wood Hite's brother, a tubercular youth of 21, who had participated in the Winston and Blue Cut train robberies, was arrested at Adairsville, Kentucky, and brought back to Missouri. He confessed and implicated other members of the gang. He was sentenced to 25 years in the Missouri penitentiary but only served a short time before he was pardoned because he was near death. He died in Kentucky.

Dick Liddill's confession, which occurred just five days before Jesse James was shot, was said to have been partly inspired by fear that Jesse James was going to kill him and partly by the drive against outlawry started by Governor Crittenden.

April 3, 1882, was a red letter day in the history of border crime. For on that day Robert Ford shot Jesse James in the back and killed him.

The two Ford boys, Charles and Robert, were staying with the James family in St. Joseph where Jesse James was known as Mr. Howard. It is said that the Fords had been in communication with officials and were trying to obtain the \$10,000 reward offered for the capture and conviction of Jesse James. The Fords were loafing around the James' house and Jesse, who was warm, discarded his coat, vest, and guns. Then he turned his back to dust a picture. Both Ford boys drew guns but Robert was the quicker.

Jessie died almost at once in the arms of his wife, who accused the Ford boys of the murder. They tried to tell her that a gun went off accidentally. Then they went off to surrender. They were immediately charged with murder and placed in jail.

Nation-wide excitement sprang up. Newspapers all over the country termed the murder a cowardly outrage. The state officials, including Governor Crittenden, were blamed for the murder of Jesse James. It was believed that Crittenden had offered a reward for Jesse dead or alive. However, he proved that his proclamation had merely read \$5,000 for the arrest of Jesse, and \$5,000 more when he was convicted. He had understood that the Fords were to help officials capture Jesse and Frank, he said.

A huge crowd attended the funeral at Jesse James' old home in Clay County. He was buried in the yard of the Samuel home. Twenty years later his body was dug up and transferred to the family lot.

The Fords were brought to trial and convicted. They were sentenced to be hanged but two hours later were pardoned by the governor. Later, they said they only got a small share of the reward.

It is impossible out of the tangle of conflicting stories to discover just what was the truth of the murder of Jesse James. Ford is said to have told friends that he shot Jesse because he was confident that Jesse meant to kill him. Others said he did it to get the reward. Fiery editorials condemning the Fords and the state officials were printed in many places. The outlaw's death was not so much deplored, but the manner of his dying was said to be a reflection on the forces of law and order.

A song was written about "the dirty little coward that shot Mr. Howard! And they laid Jesse James in his grave."

Frank James disappeared. He did not attend his brother's funeral, although there were rumors that he was one of the pallbearers.

Then October 5, 1882, Frank James, accompanied by his old friend and long-time defender, Major John N. Edwards, editor, went to see Governor Crittenden. James surrendered his gun and cartridge belt, saying that the gun had not been out of his possession since 1861.

News of his surrender flashed all over the United States. Plans were made for his trial, which took place in the Gallatin, Missouri, opera house instead of the courtroom in order to accommodate the crowds.

The trial began August 21, 1883. Some of the most noted criminal lawyers of the state appeared for James. Dick Liddill was one of the witnesses for the state, testifying that Frank James had been a member of the gang that committed the Winston robbery. Alibis were brought forward for James. Among his witnesses was General Jo Shelby, famous Confederate.

After three and a half hours deliberation the jury found Frank James not guilty of the Winston train robbery. Then he was taken to Independence, Missouri, by Prosecutor Will Wallace, who intended to try him on a charge of participating in the Blue Cut train robbery. Soon, came a court decision that Liddill could not testify against James, because he was still an unpardoned convict. The governor refused to pardon him. So Wallace was robbed of his star witness.

Wallace dismissed the case. Frank James was now free in Missouri. A year later he was taken to Huntsville, Alabama, where he was tried on a charge of assisting in the robbery of a government paymaster, March, 1881. The jury found James not guilty.

Probably there were some old indictments still against him for earlier crimes, but they seemed to have been forgotten. Frank James was now a free man. He returned to Missouri and earned a livelihood on the stage. He died February 18, 1915, on the Samuel farm and was cremated in St. Louis. Editorials praising his reform were printed all over the nation.

So ended the James-Younger gang, most famous of the Missouri border bandits, who began and ended an era of criminal history.

BELLE STARR

Belle Starr was one of the most unique and picturesque characters in the border days when fantastic figures were encountered on every side.

She was christened Myra Belle Shirley and was born February 3, 1846, at Carthage, Missouri, the daughter of John and Eliza Shirley, hotel keepers. John Shirley, called Judge, was a well educated man who had been a justice of the peace.

Myra Belle was "raised like a lady." She learned to play the piano, to read extensively, to write well, to dance. She was an expert rider, the pet of the hotel guests, a strong willed, tempestuous, good-looking and rather spoiled girl.

When the Civil War broke out, Belle was 15 years old and a rebel sympathizer. Her brother, Ed, joined Quantrill's band of guerillas. He soon became captain. Belle served as a scout for Quantrill, telling him who secretly sympathized with the Federals, where the Yankees were, who had money or stock to be plundered. She was well known and rode everywhere without suspicion being attached to her, just a tomboyish girl in a feathered hat and gay riding habit.

However, late in 1861, the federals began to suspect her activities. In February of 1862, Belle rode to Newtonia, 35 miles from Carthage, and was arrested by the Yankee cavalry, who told her that the Yanks were going to capture her brother, Ed, then at home at Carthage.

Belle, according to the old story, swore, kicked and clawed at Major Enos of the cavalry and struck him with her riding whip. Then she sang and played rebel songs on the major's piano. Finally she was released and dashed away on her horse, yelling back that she would beat the despised Yanks to Carthage and warn her brother. She did it, too, going by a short cut. Ed had just left when the Yanks arrived and Belle met them at the door with the news of his escape.

After the Civil War, the Shirleys moved to Texas, settling on a farm a short distance from Dallas. Belle met a group of wild young cowboys. Among them was Jim Reed, who had served with Quantrill in Missouri. Belle had known him slightly then. Two days after his arrival she decided to marry him. Judge Shirley disapproved. Reed was a fugitive from justice, charged with stealing horses.

Belle rode off with Reed one day in 1866 and they were married by a justice of the peace. Two days later, Reed fled into the Indian Territory and Belle returned to her home. About four months later, Reed decided he could go back to Missouri. He abducted Belle and took her to Rich Hill, Missouri.

Judge Shirley followed and kidnapped Belle, taking her back to Texas. Jim Reed went after her again. This time there was some shooting. No one was seriously hurt, however.

Reed continued to get into difficulty at Rich Hill and had to hide out in the Indian Territory several times. Belle visited him there. Finally Jim's brother, Scott Reed, was killed by the Shannon gang of robbers. Jim killed one of the Shannons and he and Belle and their year-old daughter, Pearl, fled to Los Angeles.

There another child was born to them, a son. The Reeds returned to Texas in 1872. Judge Shirley was by this time reconciled to the marriage and bought Belle a ranch nine miles from the Shirley place. Jim Reed continued to get into trouble, being accused of stealing cattle and horses. He spent much of his time hiding out.

One of his hide-outs was the home of Ellis Starr, a Cherokee desperado, about 80 miles west of Fort Smith, Arkansas. Belle visited him there and met Tom Starr's young half-breed son, Sam. Some of the Jameses and Youngers also visited there.

In 1873, Jim Reed was identified as having been with a bunch of the Starr outlaws who robbed Watt Grayson, a Creek, of \$30,000 in tribal funds. Jim went into hiding. Belle started a livery stable in Dallas. It is said that her horses had been mostly stolen in the Territory. Dallas people, impressed by the social standing of the well-educated Shirleys, regarded Jim Reed as being a gallant ex-soldier who had been persecuted by the carpetbaggers. Belle was accepted as being a Southern lady who had to struggle for a livelihood.

Deputy Sheriff Nichols arrested Reed and jailed him. Belle threatened to kill the official. Shortly afterward, Nichols was shot dead on the street. Belle was suspected, but there was no evidence. Jim Reed was soon released.

By the summer of 1875, there were many rewards for Jim Reed, dead or alive. One day he was killed by a companion named Morris, who attempted to get the reward. But Reed had to be identified and Belle refused to do it. "This scoundrel Morris," she said, "appears to have murdered the wrong man. Whoever gets the reward for Jim Reed will have to kill Jim Reed."

Belle now had two young children, a good social position and a livery stable. Her father was dead and her mother had little money. Belle tried to make a dancer out of her young daughter, Pearl, and the child appeared on the Dallas stage. But she was not strong and Belle gave up that attempt.

Then she began taking long rides alone and it was rumored that she was consorting with outlaws. She lost caste in Dallas. In 1877, when

she was 31 years old, she got in her first real trouble. Riding with a girl named Emma Jones, she was caught in a storm near a country store. She started a campfire and it got out of control and burned down the store. Belle was jailed at Dallas on a charge of arson and malicious mischief. An elderly cattleman named Patterson gave her \$2,500 to get out of jail. Belle paid a \$10 fine for the malicious mischief and got the arson charge dismissed. Patterson's friends tried to get the \$2,500 back, but he said, "Hell, let her keep the money. I reckon she's earned it, all right." This speech ruined Belle's social standing in Dallas, although it is not believed that she actually did anything more than have dinner with Patterson several times.

Belle used Patterson's money to send her son to Jim Reed's mother in Missouri, and Pearl to friends in Arkansas, paying their board and schooling two years in advance.

In 1878, Belle was arrested for horse stealing. But, after a week in jail, she vamped the jailer and eloped with him. The jailer came back to his family a month later, saying that he had been forced to hew wood, draw water, cook, catch horses and do all the camp work at the point of a pistol.

During 1878 and 1879, Belle Starr rode with some of the wildest outlaws of Texas and Oklahoma, Jim French, Jack Spaniard, a white man called Blue Duck, all said to be murderers and some 40 other outlaws. They were cattle rustlers, horse thieves, train robbers and road agents. Some of them were leftovers from the Younger and Sam Bass gangs.

Many legends grew up about Belle Starr's rowdiness during this period. One story says she was riding on the prairie with Blue Duck one day and her hat blew off. The Blue Duck paid no attention. Belle Starr clicked her pistol. "Don't you know how to treat a lady you G-d d—d so and so?" she inquired. "Damn your greasy hide, get down and pick up that hat."

Another time the Blue Duck, who was said to have been Belle's lover, borrowed \$2,000 from her and lost it in a gambling house at Dodge City, Kansas. Belle went there with a six-shooter and collected \$7,000.

"My friend hasn't time to make change, gentlemen," she said. "If you want this money back, come down to the Territory and get it."

Blue Duck and Jack Spaniard got into trouble and Belle left them, returning to the Starr ranch in the Cherokee Nation. Here she met Sam Starr again. They went to Nebraska and spent two years. In 1880 they were married. Belle immediately secured a claim as a citizen of the Cherokee Nation, taking a thousand acres of wooded and bottom land along a river. She christened the place Younger's Bend.

There she built a good log house, bought a piano—the only one in the territory, ordered a lot of books and good clothes from St. Louis. Love of money, music, clothes and books were characteristic of Belle. At times she would hie herself away to a popular eastern watering place where she would spend money lavishly and associate with the wealth and culture of the nation.

In 1883, however, one of these eastern trips was not so successful and Belle and Sam were sentenced to a term in the Detroit House of Correction for horse stealing.

Belle took this cheerfully. "Now Pearl," she wrote her daughter, "there is a vast difference between this place and a penitentiary; you must bear that in mind and not think of mamma being shut up in a gloomy prison. It is said to be one of the finest institutions in the United States, surrounded by beautiful grounds, with fountains and everything nice. Here I can have my education renewed, and I stand greatly in need of it. Sam will have to attend school, and I think it will be the best thing that ever happened to him. And now you must not be unhappy and brood over our absence. It won't take long for the time to glide by, and as we come home we will get you, and then we will have such a nice time."

Sam got into trouble on his return and spent most of 1885 in New

Mexico, with officers hunting him for a post office robbery. Returning to the Territory, he was arrested by officials. He was out on bond, got into a quarrel over the ownership of a horse, and was shot and killed.

Belle was arrested in 1886 and tried for horse stealing, but she was acquitted. She was regarded as more of a picturesque character than a really dangerous criminal. In 1887, the famous hanging judge, Judge Isaac C. Parker, asked her to take part in a mock stage robbery at the Sebastian County Fair Grounds at Fort Smith. The judge was one of the passengers to be robbed. It is said that she tried to get the prosecuting attorney to be a passenger and meant to shoot him after she had fired blank cartridges at the others.

In 1888, Belle quarrelled with neighbors, Mr. and Mrs. Edgar Watson, who had rented part of her ranch. She accused Watson of stealing her mail. On Belle's forty-third birthday, she was returning from the trial of one of Sam's cousins for horse-stealing. Watson ambushed her near his house and shot and fatally wounded her. Thus ended the career of Belle Starr, outlaw and "Southern lady."

CHEROKEE BILL

Crawford Goldsby, alias Cherokee Bill, was in his brief career, one of the most desperate of the border outlaws. He was hanged for the killing of Ernest Melton while robbing the store of Schufelt and Son at Lenapah, 90 miles from Fort Gibson, November 8, 1894.

Among the other crimes he was charged with were the killing of a railroad agent named Richards at Nowata, and the murder of his brother-in-law, George Brown, because Brown's father gave Brown's wife, Bill's sister, a few more hogs than he had given him. He also was accused of the robbery of the Scales store at Wetempka, Creek Nation; the robbery of a train at Red Fork, Creek Nation, July 18, 1894; the robbery at Parkinson's store at Okmulgee, Creek Nation, September 14, 1894; the robbery of an express office at Choteau, October 9, 1894; the robbery of a train at Coretta, October 20, 1894; the robbery of Schufelt's store and postoffice.

After being sentenced to hang for Melton's murder and while awaiting action by the Supreme Court on the death verdict, Bill shot and killed Lawrence Keating, one of the guards.

Goldsby was born at Fort Concho, Texas, February 8, 1876, his father being a soldier in the Tenth Cavalry of the United States army. The elder Goldsby was of Mexican extraction mixed with white and Sioux Indian blood. Cherokee Bill's mother was Ellen Beck, half Negro, one-fourth Cherokee and one-fourth white.

His parents soon separated and until he was seven years old, young Crawford lived with a Negro nurse at Fort Gibson. Then he went to school at Cherokee, Kansas, for three years and then to the Catholic Indian school at Carlisle, Pennsylvania, until he was 12. His mother remarried and there was no one watching over young Crawford. At the age of 18 he was a lusty, burly fellow, who had never been disciplined.

So it was to be expected that young Goldsby got into trouble. He shot and wounded Jake Lewis, a Negro, and left him for dead, fleeing from the Cherokee Nation with Jim and Bill Cook, who afterward became noted outlaws. This was early in the spring of 1894. In July of that year, Cherokee Bill and the Cooks got Effie Crittenden to draw for them their share of the government money being paid for the Cherokee Strip. They were paid July 16. On the night of July 18, a posse composed of the sheriff, who had a Cherokee warrant for Jim Cook on a larceny charge; Sequoyah Houston, Dick Crittenden, estranged husband of Effie; Zeke Crittenden, his brother; Bill Nickel, Isaac Greece, and two men named Hicks and Bracket, surrounded the house.

A gun battle started. Houston was killed and Jim Cook wounded seven times. After Houston fell, the sheriff and four of his men fled,

leaving the Crittenden brothers, who were afraid to turn their backs to depart. So they held their antagonists at bay behind the house until darkness came.

It was following this episode that Crawford Goldsby became known as Cherokee Bill. Lou Cook, asked if she had seen Goldsby, said "No, it was Cherokee Bill."

Soon after this fight the famous Cook gang was organized, composed of Bill Cook, Cherokee Bill, Henry Munson, Curtis Dason, Chicken Gordon and later Sam (Verdigris Kid) McWilliams, Jim French and others.

Cherokee Bill and either Jim French or the Verdigris Kid were said to have committed the Schufelt robbery. Bill is said to have killed Melton because he was annoyed when he saw Melton watching him from a window across the street.

Bill was captured by Isaac Rogers and Clint Scales after much maneuvering and trying to drug him with morphine-filled whisky. Finally he was struck over the head and disarmed.

A huge crowd attended the trial, which opened in February of 1895. Cherokee Bill was found guilty and sentenced to hang. He appealed to the Supreme Court. A gun was smuggled into jail. Cherokee Bill said later that Ben Howell, believed to have been a confederate of the Doolin and Dalton gangs, smuggled two guns in to him.

July 26, 1895, Bill killed Lawrence Keating, a guard, and attempted to escape. He got out of his cell and dashed around the jail, exchanging shots with the guards. Every time he fired, Cherokee Bill would gobble like a turkey. Finally he was forced back to his cell where he fired out at random, without exposing his person. The smoke was so dense that the guards could only fire at the puffs of smoke. Finally, Henry Starr, who was also a prisoner there, persuaded Bill to give up his gun.

Cherokee Bill was then tried for the murder of Lawrence Keating. The figure 13 appeared several times in the trial. Judge Isaac C. Parker took 13 minutes to instruct the jury. The jury returned a verdict of guilty in 13 minutes. Bill was believed to have killed 13 persons and a \$1,300 reward had been offered for his capture. He was first sentenced to die on April 13, he killed Keating on July 26, twice 13. He was said to have fired 13 shots during the fight with the guards. The hours occupied by the trial were 13. The jurymen and deputy who stayed with them numbered 13. There were 13 witnesses for the prosecution.

Cherokee Bill was again sentenced to death. The verdict was appealed but the sentence was sustained. He was hanged March 17, 1896.

Bill Cook, another member of the gang, was arrested January 11, 1895, in New Mexico. Jim French was slain in the autumn of 1895 while trying to rob a store at Catoosa, Oklahoma.

THE YEAGER-BLACK GANG

Dick Yeager's gang was suspected of being connected with Bill Doolin, but no definite proof of the alliance was ever established. His chief fame, outside of his criminal exploits, rested on his reputation as the dashing Romeo of the Oklahoma outlaws.

Under his real name of Yeager and his aliases of Zip Wyatt and Wild Charlie, he made many conquests of plains beauties. A maze of legends has grown up about his amatory affairs. He is described as having been a handsome man with magnetic personality.

The Yeager-Black gang was noted for postoffice robberies and cattle and horse thefts in the northwestern part of the Cherokee Strip. In 1894, Yeager was suspected of murdering a man who protested against the theft of his horse.

This drew the attention of United States marshals, who had been busy with the Doolins and other more notorious outlaws.

Yeager's gang consisted of Ike Black and his wife Pearl, S. T. Watson and Jenny Freeman. The women were said to take an active part in the banditry.

After the murder of the horseman, a special deputy was assigned to hunt down the Yeager gang. In July, of 1895, information was received that the gang was camped in a hill hide-out near Galena. The officers went there and stayed at a nearby farmhouse, hoping that some of the male members of the gang would come there for food. They disliked the idea of a gun battle in which the women of the gang might be injured. However, when none of the gang appeared, the posse rode into the hills.

As they neared the hide-out they heard the creaking of a wagon over a stony trail. The officers hid and watched. Presently the gang appeared in the wagon. Watson was driving and the two women sat in the back, Yeager accompanying them on a stolen horse.

Black, sitting in the back of the wagon with his legs dangling over the edge, presented the best mark. Deputy Forrest Halsell fired at him. Black clutched his foot, cried out, and then jumped from the wagon and dashed into the sand hills. The other officers fired at the horses. The animals were wounded, but Watson whipped them on.

Deputy Halsell and two others stopped to find Black. The remainder of the posse pursued the wagon and Yeager. Watson and Yeager were attempting to cover their mad escape by a hail of bullets. But the weather was to interfere with the officers' plans. It was already late in the afternoon. Storm clouds were gathering. Within 20 minutes, a torrent of rain was pouring down. The rain was so heavy and darkness followed so swiftly that the fugitives escaped.

Early in the morning the posse started on Black's trail. But he had succeeded in joining his companions, who had stolen a horse to replace one fatally wounded in the fight, and the fugitives crossed the Cimarron river.

The officers followed their trail and finally discovered the bandits encamped in a deep canyon along little Gypsum creek. On the opposite side of the outlaw camp was a high, round mound. Some of the officers intended to circle around the canyon and conceal themselves behind the mound. Then the rest of the posse planned to open gunfire from the front, forcing the outlaws to flee in the direction of the hidden possemen.

But before the arrangements could be completed the presence of the officials was discovered and the outlaws fled, shooting as they retreated. The women were left behind.

Farmers joined in the hunt and they began trailing the bandits, identifying their footprints by the limping of Black's moccasined wounded foot. It was suspected that some of the assisting farmers were friends of the Yeager gang, and several times deliberately led the searchers astray. One of the local hunters strayed away from the main party and Yeager sent a bullet through his hat. Deputy Hadwinger returned the fire and later learned that his bullet had shattered the bandit's watch.

Darkness again put a stop to the search. The women were sent to the federal jail at Guthrie. Next day the search continued. Black and Yeager were surprised near Steer Hollow in Woods county and a brief gun battle was staged. The outlaws killed the horses of two of the officers and escaped still another time. Watson had apparently disappeared alone.

The posse then concentrated on Yeager and Black. Sometimes the officers were within a quarter of a mile of the fugitives. On the sixth day following the first encounter with the gang, the officers killed Black in a running fight near Canton. Yeager was also wounded. A bullet hit a scruboak tree and glanced, striking Yeager on the breastbone, where it turned under his arm and lodged almost in the middle of his back. But he still managed to keep on traveling.

Five days later officials heard of him near Enid. A posse started out

and Yeager was discovered lying flat on a bare sandy mound. When surprised he instantly reached for his guns, but he was too weak to be quick. The officers fired two shots into his abdomen.

He was taken to the federal jail at Enid where he lived for 15 days. Only his magnificent physique enabled him to endure so long. He was six feet tall and unusually strong.

Shortly afterward information came to officials that Watson had reached the southwestern part of Oklahoma, where he was traveling with a half-breed Indian named Esceness. Officials started on their trail and found them near the Clampton ranch on the Washita river about 25 miles from Anadarko. Esceness was killed in the ensuing gunfight but Watson escaped, ran several miles and finally surrendered when officers surrounded him. He was the only member of the gang to live to go to prison.

Kill Wentworth, an Oklahoma desperado, was suspected of being a member of the Yeager-Black gang but no definite connection could be proved. Shortly after the wiping out of the Yeager-Black gang, he was arrested on a charge of murder and horse thieving and taken to jail at Perry, Oklahoma.

He escaped from the flimsy structure and was reported to have fled to the Osage hills. However, he seems to have hidden in the red light district, where he got drunk and began fighting. Officers heard of the riot he was causing and went to arrest him. He shot the gun out of Deputy Halsell's hand. And then shoved a stove across the room toward the officers.

Halsell carried a knife. His gun hand useless, he grabbed the knife in his left hand and knocked Wentworth's gun aside. Then he slashed the outlaw across the stomach, virtually cutting him open. Wentworth surrendered, was taken to jail where he recovered, and was later convicted and sent to prison.

CATTLE ANNIE AND LITTLE BREECHES

Annie McDougal and Jennie Metcalf, known respectively as Cattle Annie and Little Breeches, flashed briefly into and out of the national spotlight as Oklahoma's girl bandits.

Officials searching for the Doolin gang met a heavily armed girl and questioned her. Later they suspected that she had notified the Doolin gang of the presence of the marshals and enabled them to flee to Hot Springs, Arkansas.

The girls apparently hung around the Doolin gang without ever actually becoming members of the group. They were suspected of numerous cattle and horse thefts and petty stealing. At last, after hearing many of these reports, the girls were officially branded as outlaws and search started.

The officers' delay in the matter was explained by the peculiar brand of Oklahoma chivalry which caused officials to withhold fire on a band of desperadoes if one of their women might be in the line of fire.

But Cattle Annie and Little Breeches began peddling whisky to the Osage tribe and this caused more trouble. So, Deputy Steve Burke and Deputy Bill Tilghman were sent on their trail.

Annie, the older, was about 17. Her companion was a little younger and much smaller, and dressed habitually in riding breeches and thus obtained her nickname. Both girls went heavily armed with rifles and pistols, and it was said that they were accurate markswomen.

For several weeks, the trailing deputies never quite caught up with the girls. Then one day when the officers were near Pawnee, Oklahoma, on other business, they heard that the girls were at a nearby farmhouse and investigated immediately. As the officers approached, Little Breeches ran out the back door of the house and mounted her horse. Deputy Tilghman followed.

His horse was the fastest and he rapidly overtook her. Little Breeches fired over her shoulder but the jerky gait of her horse caused the shots to go wild. Here was a new problem for the chivalrous deputy. He did not want to shoot the girl. So he shot and killed her horse. The animal tumbled into the dust, pinning the girl under her. Her gun fell to one side, out of reach. She struggled to get it, cursing and scratching. When Tilghman reached her, she was screeching like a wildcat. She threw a handful of dirt into the deputy's eyes, but he managed to disarm her, and while she continued to fight and scratch, he put her in front of his saddle and took her back to the house.

Meanwhile, Deputy Burke had sneaked up to the window. Just then Cattle Annie thrust her head out. She had a rifle in her hand and started to shoot the deputy, but he quickly seized her about the shoulders and pulled her through the window, the gun falling from her grasp. She tried to reach for one of her six-shooters, but Burke pinioned her arms. She managed to scratch his face, but otherwise no injuries were suffered.

The girls were taken to Perry, Oklahoma, where they were sentenced to the federal reformatory at Framingham, Massachusetts. They created a sensation in the east where many newspaper stories were written about the Oklahoma girl bandits. A large crowd gathered at the Framingham station to see them arrive.

Cattle Annie and Little Breeches were daughters of two poor families living in the Osage Nation. Their people were considered respectable citizens. One of the relatives of one of the girls said they were led astray by the hilarious dances in the Indian country where outlaws frequently swaggered around, boasting of their loot.

HENRY STARR

Another of the now almost legendary figures of Oklahoma outlaw days was Henry Starr. He was born at Fort Gibson, in the Indian Territory, in 1873. His father, George Starr, was a half-breed Cherokee and his mother was one-fourth Cherokee.

Henry grew up in the Cherokee Nation, and started as a cowboy at the age of 16. He was well liked. He did not use tobacco or liquor, had a friendly, intelligent gaze and a likeable appearance. His coal-black hair and black eyes made him a striking looking man.

But under his pleasant appearance was the reckless courage of a hard-riding, hard-shooting Oklahoma outlaw. And it soon enough came to the surface.

After his first robbery, a reward was posted for his capture. Deputy Sheriff Floyd Wilson met young Starr on the road, recognized him, and commanded him to surrender. They dismounted from their horses and faced each other, both with their six-shooters drawn.

"Throw up your hands or I'll kill you," Wilson is quoted as saying.

"I'll lower my gun and let you shoot. Then if I kill you it will be in self defense," Henry Starr replied.

Wilson, nervous and excited, fired. The bullet grazed Starr's head. Starr fired and killed Wilson. He rode away hurriedly. Soon he was captured and, by agreement, pleaded guilty to manslaughter before Judge Isaac C. Parker, at Fort Smith, Arkansas. Parker, who was famous in border days as a hanging judge, sentenced him to 25 years in the Ohio penitentiary, used then for federal prisoners.

Starr served five years of his sentence, was pardoned, and returned to Oklahoma. Soon afterward a prominent cattle man gave Starr a job in his St. Louis office. Starr made friends everywhere. He lived at the Planters hotel and moved in good circles. But he couldn't forget his life of crime.

Presently a bank was robbed and Starr was gone. No one could definitely connect him with the crime, but his employer remembered

that he had mentioned that particular bank as being "easy money."

Starr went to Colorado and was captured there in connection with a bank robbery. He was sentenced to 25 years in the Canon City prison. After five years, he again received a pardon and went back to Oklahoma. Again his magnetic personality won him respectable friends. And again he betrayed them.

March 27, 1915, Starr rode into the town of Stroud and held up two banks. He was captured after being wounded in the hip by a 16-year-old boy, Paul Curry. He was taken to the county jail at Chandler, Okla.

Officials there were amazed to hear him quoting classics he had studied while in prison. A federal marshal asked why, with his talents, he invariably returned to crime.

"I must have excitement," he replied. "I crave it and it preys upon me until I step out and get into devilment of some sort."

Starr was again given a 25-year sentence in prison and again he managed to be released, through the influence of prominent citizens. Within less than a year after he was released, he was shot and killed by William J. Myers, president of the People's National Bank at Harrison, Arkansas, when he attempted to rob that institution.

One of Starr's queer quirks of character caused his death. John Murrel, famous outlaw, said that he would not rob if he could not afford to kill. But Starr would not rob if he had to kill. He had repeatedly said he would shoot only in self defense. He would never, he vowed, commit a murder just to accomplish a robbery. The killing of Floyd Wilson, he said, was in self defense and therefore justified by his own code of honor. In the Harrison robbery, he had every chance to shoot his way to freedom, but met his death instead.

THE DALTON GANG

The Dalton boys were distantly related to the Younger brothers of border notoriety and their early history is somewhat similar—that of boys of "good families" suddenly turning to desperate lives of crime.

Like the Youngers and the Jameses, there is much of myth and legendry about them. One author writes that Frank Dalton was killed in a gun fight with horse thieves in Texas, in 1885. Yet in the Crittenden memoirs are letters from Frank Dalton in 1935 when he was 83 years old and living quietly in Texas writing about his early days with the Quantrill gang.

However, it is not with Frank that this book has to deal. Nor with Quantrill's bloody legion. For while Quantrill looted, he could not be called a bandit chieftain. Quantrill was motivated by a lust to kill.

There were several of the Dalton boys, sons of Louis Dalton and Adeline Younger, cousin of the Younger brothers. Louis Dalton moved from Kentucky to Jackson County, Missouri, in 1850, and married Miss Younger there. In 1860, the Daltons moved to Coffeyville, Kansas, where the younger sons were born and grew up. Oddly enough, Coffeyville was also the place where they met their doom.

There were several boys, Frank, Bob, Bill, Emmett, and Gratton. Early in 1889, Louis Dalton died. His widow induced her children to go with her to Oklahoma. For a while they were settled there peacefully. Bob and Gratton became peace officers, according to E. D. Nix, former U.S. Marshal of the Oklahoma territory. At the same time the Daltons indulged in a little horse stealing. Gratton and Emmett went to California and Bob returned to the Indian Territory with his share of the proceeds from a stolen herd of horses.

In 1891, an attempt was made to rob a Southern Pacific express train at Tulare, California. The robbery was defeated by a daring express messenger who surprised the bandits with a fusillade of shots. In the gun battle a fireman was killed. The Dalton boys were suspected and

Gratton captured. He was tried and convicted but escaped as he was being taken from the county jail to the state prison. Emmett joined him and they returned to Oklahoma. A reward of \$6,000 was offered by the Southern Pacific for their capture.

In Oklahoma they met Bob, who had already asked Bill Doolin, Dick Broadwell, Black Faced Charlie Bryant and Bill Powers to join them in an outlaw gang. Doolin, Powers and Broadwell were ex-cowpunchers. Black-Faced Charlie had drifted in from no one knew where and said little about his past. His face had been discolored by splotches of burned powder beneath his skin.

This gang made plans for a series of wholesale robberies that would outdo anything previously attempted by border bandits.

Soon they raided a colony of Missourians on Beaver creek near Orlando. Eight or nine horses were stolen. A posse was organized and followed the thieves to Twin Mounds in the Territory. Two members of the hunters, William Thompson and W. T. Starmer, were ambushed by the outlaws. Starmer was fatally wounded, but Thompson escaped.

The Daltons next appeared at Red Rock, Oklahoma, an Indian trading station in the red-clay Cherokee Strip. At nine o'clock on the night of June 1, 1892, the Daltons concealed themselves near the Santa Fe depot, conveniently located about a mile from the small town.

When the train halted the telegraph operator ran to the engine to give the engineer his orders. Dick Broadwell and Black Faced Charlie dashed into the locomotive cab and surprised the armed guard sitting on a pile of wood in the tender, eating a sandwich. The guard jumped, sprawled over the wood, and pitched to the floor at the feet of the bandits, who disarmed him.

Gratton Dalton and Bill Doolin found the express messenger and his guard playing checkers. Forcing the messengers to hold up their hands, the bandits looked around for a safe supposed to hold several thousand dollars. But only a small safe containing two or three hundred dollars was discovered.

Meanwhile Bob Dalton, Emmett Dalton and Bill Powers were robbing the passengers, herded out on the station platform. Black Faced Charlie rushed to assist them. Passing the station window, he saw the telegraph operator working the key. He apparently believed the man was sending out the alarm, for he instantly killed him.

In 15 minutes the train was on its way and the bandits had fled, disappointed with their small haul.

Soon after that Black Faced Charlie was wounded in a fight at a cowboy dance near Hennessey, Oklahoma. Deputy U.S. Marshal Ed Short arrested him while he was being treated for his wound. He started to take him to Wichita, Kansas, for safe keeping. Charlie was handcuffed and placed in the custody of an express messenger.

Charlie waited until the messenger was not watching, grabbed a six-shooter from a pigeon hole in a desk and commanded the messenger to hold up his hands. Charlie was backing toward the door of the car when Short suddenly entered. Bryant whirled and shot the deputy. Short fired back. Both men received fatal wounds.

The rest of the Dalton gang apparently went into hiding. Then in the latter part of July they dashed over in the Cherokee country near the Arkansas line and robbed the Missouri, Kansas and Texas passenger train. Several Indian police guarding the train were wounded and a physician passenger was killed.

The Daltons now got vainglorious, just as Al Spencer was to follow in their footsteps later. Spencer, a bandit in the early Twentieth Century, wanted to be more notorious than the Daltons. So he staged a train robbery and was captured. The Daltons wanted to be more infamous than the Youngers and the Jameses. So they, too, over estimated their abilities.

Bob Dalton decided that the gang should go to the Dalton home town of Coffeyville, Kansas, and rob two banks at the same time. Then, he thought, they could rest for a while on their laurels and loot. It would be a good thing to get out of the country, anyhow. Bob and Grat had been recognized in an Adair robbery and territorial officers had blood in their eyes.

On the morning of October 4, 1892, the Dalton gang composed of Bill Doolin, Bill Powers, Dick Broadwell and the three Dalton brothers, Bob, Grat and Emmett, left their Indian Territory hideout and headed for the Kansas line. Late in the afternoon they crossed the Kansas line and camped in a secluded spot.

They woke early and started for Coffeyville, expecting to reach the town shortly after the banks opened and before the streets were crowded.

Then it was discovered that Bill Doolin's horse was limping. Bob suggested that he steal a new one. Their mounts must be ready for a quick departure. Doolin said he had seen a handsome chestnut sorrel, he would go back and pick it up and then join them.

There are old timers who say that Bill Doolin deliberately delayed his return, realizing that the vanity and recklessness of young Bob Dalton had marred his judgment. It is said that Doolin tried to persuade Bob not to rob both banks and thus separate their forces. At any rate, Doolin was not present at the robbery and so he escaped the fate of the Daltons and lived to be Oklahoma's most notorious outlaw.

Bob and Emmett Dalton wore false beards. Grat had grown a shaggy set of whiskers. Broadwell and Powers were unknown in Coffeyville so they did not disguise themselves.

They waited for a few minutes at the edge of town for Doolin. But Bob was impatient and refused to tarry long. So a few minutes after nine o'clock the five men rode at a slow trot into the main street of Coffeyville, Kansas. The three Daltons, as usual, rode ahead, followed by Broadwell and Powers. They were on fine horses with heavy Mexican saddles decorated with spangles and carvings. Each had saddle pockets carrying several six shooters. Their Winchester rifles were rolled in slickers behind their saddles.

The horses were tied in an alley. Then they walked back to the main street. As they passed by a merchant, he noticed the false beards and hid in a doorway to watch.

Grat Dalton, Bill Powers and Dick Broadwell went into the Condon bank. At the same time, Bob and Emmett Dalton entered the First National bank. The watching merchant saw Grat Dalton pointing a gun at the cashier's head. Immediately he started giving the alarm. The cry, "The banks are being robbed," flew up and down the street. Men came running with six-shooters, rifles and shotguns. Within a few minutes a gun battle was going on.

The Daltons continued to get the money from the First National employes. They calmly put it into bags and started to make their escape. But as they started out the door they were met by a hail of bullets. They turned toward the rear and the alley.

Grat Dalton, Powers and Broadwell were also engaged in a fight for their lives. Powers was shot in his right arm. These three were attempting to fight their way out the front door and through the armed crowd. As Powers reached the sidewalk he was shot again and fell to the ground, dying. Grat Dalton was fatally wounded a few minutes later by City Marshal Charles T. Connelly, but managed to kill Connelly before he died.

Lucius M. Baldwin and George B. Cubine dashed to Connelly's aid and Broadwell killed both of them. Then he made a dash through the alley for his horse. A citizen followed him and shot him just as he was putting the spurs to the animal. Blood gushing from his mouth, one arm shattered, clinging to his frightened horse, he dashed out of town. His

body was found a mile or so away, the faithful horse standing by it.

Bob and Emmett, dashing out of the back door of the First National Bank, met Charles Brown. Bob shot him between the eyes. In a few minutes Bob was wounded and fell down in the alley. Emmett, now mounted, rode back and tried to pull Bob into the saddle with him. At that moment he was shot in the back. He reeled from the saddle to the ground.

Only 15 minutes after they had entered the banks, four of the Dalton gang were dead and Emmett had been captured, wounded in the right arm, the hip and his back. All the loot, 11 thousand dollars, from the First National bank and 20 thousand dollars from the Condon bank, was returned. Emmett was taken to the hospital and then to jail.

Bill Doolin, whose lame horse had caused his escape from the fate of the others, had paused on the outskirts of town, halted by some vague foreboding. Just as he was preparing to go on and join his comrades, a man on horseback approached and told him of the tragedy. He quickly fled.

Thus the Coffeyville exploit that was to have brought fame and security for the Dalton gang brought about their end.

BILL DOOLIN'S GANG

For lack of a horse, as the old saying goes, Bill Doolin lost out in the Dalton gang's last gun battle, but he saved his own life.

Hearing the news of the death and capture of his comrades, he fled to a little ranch on the Cimarron, there to make plans for the most vicious gang that ever terrorized the southwest.

Outlaws take on geographical color. In the early days in Kentucky, when there was gambling, swaggering, intense emotionalism in everything and the reckless pioneer spirit prevailing generally—the bandits had a quality which seems utterly fantastic in this mechanized age.

Today, when we label a killer "brutal" after two or three murders, it is hard to realize that immediately after the Civil War, Jesse James and Cole Younger were heroized, although they had scores of notches on their guns as the result of their alliance with the bloody guerilla, Quantrill.

Thus in Oklahoma, with its widely separated towns, railroad trains were the logical prey.

Bill Doolin was born of a "poor but honest family" in Arkansas. He was a popular youth, with a commanding, magnetic personality. When a young man he went to Oklahoma and worked as a cow hand for Oscar Halsell, but deserted him to join the Daltons.

When the Dalton gang was exterminated at Coffeyville, Kansas, in an attempt to rob two banks at once, Doolin went first to the lonely stretches of the Cimarron. Then, after a few weeks of hiding there, he moved to an old outlaw rendezvous near the edge of the Creek Nation. There he could get in touch with the men he sought for his gang.

Somewhat to his surprise, he found Bill Dalton, an older brother of the members of the Dalton gang, living with the outlaws.

Bill had never shared the crimes of his brothers. But the notoriety resulting from their exploits had caused him to resign from the state legislature of California, and to come to the old haunts of his dead brothers in the Indian Territory.

His former ambitions gone, Bill Dalton offered to join Doolin's gang. It is said that Doolin hesitated a little. There is a queer streak of vanity and jealousy among criminals, and authorities frequently are able to effect capture because of this.

Bill Doolin had been under the domination of the Daltons. He did not want the Dalton "prestige" to place Bill Dalton in command over him. But this particular Dalton did not care who received the so-called

glory. He expressed himself as willing to let Doolin be the leader.

Doolin next got in touch with George Newcomb and Bill Raidler, who had been fellow workers when he was on the Halsell ranch. Newcomb was known as "Bitter Creek" and also as "Slaughter Kid"—due to his having worked on the cattle ranges of the Slaughter family. He originally came from Fort Scott, Kansas, where his family was highly respected.

Raidler hailed from Pennsylvania and is described also as having come from an excellent family. He was well educated and was enthusiastic about the cattle industry until the ranges began to be fenced in.

Doolin's next members were Roy Daugherty, alias "Arkansas Tom," Dick West, and Ol Yountis. Daugherty, like Doolin, was born in Arkansas. His parents had been very religious and his two elder brothers had been educated for the ministry. Daugherty's mother died when he was ten years old and his father married again. This stepmother was a nagging woman who apparently made life so miserable for young Roy that he ran away to the Indian Territory at the age of 14. He worked on a ranch often visited by Doolin. Doolin virtually was a hero to the younger boy. Hearing that the outlaw was recruiting a gang at an outlaw cave in the Creek Nation, Daugherty hurried there and begged to join them.

"Little Dick" West was a homeless orphan who had drifted to Texas when just a child. He washed dishes, worked for his board with cow outfits, and usually lived from hand to mouth. Then, when he was 16, he got a job with the Three-Circles Ranch in Texas. Oscar Halsell, a big time cattleman, was driving cattle north and he hired the boy to wrangle horses for him.

He worked for Halsell until 1889 when the country was opened for settlers. West was a strange, wild youth, "tough as nails," with a habit of sleeping outdoors rolled in his blanket, even if a warm bed in a house were offered. This habit was convenient later when he joined the outlaw band. He never was surprised asleep.

Little is known about the past of Ol Yountis, except that he was an Oklahoma product. These were the original members of the notorious **Bill Doolin gang**.

As soon as the gang had been formed, in November of 1892, Doolin, Dalton, Bitter Creek Newcomb and Yountis dashed across the line to Spearville, Kansas, where they robbed a bank of several thousand dollars. The outlaws then scattered to avoid pursuit.

Ol Yountis started toward his sister's home near Orlando, Oklahoma. But he was poorly mounted and his horse finally became so exhausted Yountis had to dismount. A farmer came along, Yountis demanded that he dismount and exchange horses. The man resisted and Yountis killed him, and raced toward his sister's home.

Within a few hours the murder had been discovered and a posse organized. About that time Sheriff Beeson of Ford County, Kansas, arrived, saw the abandoned horse and guessed that the killing had been committed by one of the Spearville robbers. He went to the home of Yountis' sister. He did not see Yountis but was convinced that the outlaw was in hiding there. Beeson enlisted the aid of the United States marshal's office and, with several deputies, he returned to Orlando. The men hid themselves around the house and waited. Just at dawn, a heavily armed man emerged from the house. Deputy Heck Thomas shouted for him to throw up his hands. The outlaw replied with a burst from his rifle. His sister rushed out of the house shouting "O, Ol, run. For God's sake don't shoot him."

Yountis continued firing and finally Deputy Chris Madsen wounded him. He was captured and taken to Orlando for medical attention, but he died that night. In his money belt \$4,500 was found of the loot taken from the Spearville bank.

But Yountis' death did not halt the activities of the Doolin gang.

Presently they slipped over the line to Cimarron, Kansas, and robbed a bank of \$13,000. Then they fled to their rendezvous, a cave large enough to hide at least 25 horses and shelter from 25 to 50 men.

Three more men joined Doolin's band, Charlie Pierce, Jack (Tulsa Jack) Blake and Dan (Dynamite Dick) Clifton, all former cowboys.

The gang was quiet for two or three months. Then in August they rode into the town of Wharton (now Perry) and robbed the Santa Fe southbound night train. Doolin's masterful strategy was fully displayed at this time. In 15 minutes the gang was dashing back to the Osage Hills with several hundred dollars in money, the registered mail and the money and valuables of the passengers. The men then went back to their hide-out, confident that the newly organized United States marshal's "army," designed to wipe out Oklahoma outlawry, was too busy supervising the opening of the Cherokee Strip to be bothered with them.

Next, the Doolin gang robbed the bank at Southwest City, Missouri, of \$15,000. In a gun battle with citizens, they killed a man named Seaborn, former state auditor. Doolin was shot in a foot, but he managed to make a get-away. On their way back, they dashed through the little town of Pawnee, Oklahoma, and held up the bank there at noon, obtaining about \$10,000 in cash.

Authorities received information that Doolin's gang planned to rob a bank in Guthrie and preparations were made to meet the gang, but apparently the bandits realized that there had been a leak, for they did not appear. Instead, they dashed into Texas and news soon arrived that they had robbed a bank in the northwestern part of the state and obtained \$50,000.

Doolin's spectacular method was to dash out of hiding, commit a crime and then apparently disappear from the face of the earth.

One of Doolin's favorite hide-outs was the town of Ingalls on the edge of the Creek Nation, away from railroads and good roads. There the outlaws "owned the town." Their cave was not far from Ingalls, and when they wished to whoop off some of their loot, they rode into the town to the hotel operated by Mary Pierce. There usually were three or four ladies of doubtful virtue at the hotel and there was a saloon that waxed prosperous off the bandit's money. The outlaws were the chief support of the tiny village, so they were allowed the most liberty.

Authorities received information that the Doolin gang was spending a great deal of time at Ingalls. A posse was organized to investigate. The officers disguised themselves as hunters and camped near Ingalls, sending two scouts ahead to find out if the Doolin men were in town. After a couple of days, the scouts returned, saying that Doolin and his men had just arrived.

The posse started out in two covered wagons, the men concealed under the canvas. Shortly after noon they drew up near the settlement. The teams were stopped in a ravine and the men prepared their weapons for a siege. Some of the men were stationed to command the Trilby saloon, others so they could watch the entrances to the Pierce hotel.

Just as their arrangements were virtually complete, one of the outlaws glimpsed them. Someone started firing from the saloon. The officers returned fire and what was later known as the "battle of Ingalls" began. Firing ceased for a time in the saloon, indicating someone had been hit, and then it began from the second story of the Pierce hotel. Bill Doolin emerged, dragging the wounded Bitter Creek Newcomb, and ran across to the livery stable. As he neared the door, Doolin shouted and staggered, dropping Bitter Creek. But they both managed to crawl inside the stable on their hands and knees.

Then Bill Dalton, Red Buck and Dynamite Dick dodged out of the hotel and zigzagged to the livery stable, escaping the officers' bullets by their furious, dodging run. A hot barrage began from the stable, placing

the officers at a disadvantage. Deputy Houston was killed, and the others had to change their shelters.

Meanwhile, the Rose of Cimarron, Bitter Creek's sweetheart, had seen her lover stumble and crawl into the stable. She buckled two cartridge belts around her waist and seized a rifle. But the only exit was barred by the bombardment of the officers. So she and Mrs. Pierce knotted quilts together and in a few minutes Rose slid through a window on the sheltered side of the hotel. She ran across the street to the livery stable, and carried ammunition and a gun to her lover.

Inside the stable, Doolin was formulating plans for escape. He suggested that he and Dalton keep the officers covered while Red Buck and Dynamite Dick assisted Bitter Creek and Rose of Cimarron to ride away from the rear door of the stable.

Deputy Dick Speed sought to stop them. Doolin shot and killed him, and the other officers were unable to move to prevent the escape of the outlaws. When the others had gone, Doolin and Dalton quickly mounted their horses and dashed away at full speed. But they had only gone a quarter of a mile when they saw that Bitter Creek and Rose were not with Dynamite Dick and Red Buck. Red Buck said that they didn't have time to fool with the wounded outlaw. A shot from Doolin's gun pierced Red Buck's hat. Then the outlaw chieftain turned and dashed to rescue his comrades.

But others had seen Bitter Creek fall from his horse and Rose dismount to help him. Deputy Lafe Shadley, holding his Winchester, ran toward the two. At this moment Bill Dalton appeared. Before Shadley had time to face this new menace, the outlaw shot and killed the deputy. Doolin, Dynamite Dick and Red Buck put Bitter Creek back on his horse and Red Buck and Dalton supported him in the saddle as they raced away. The officers, being without horses, were unable to pursue.

But one more bandit had been left in the hotel. He continued to shoot from an upper window. The officers surrounded the hotel. But there was only one entrance to the upper story, a ladder. The outlaw could command that as long as he had ammunition. He must be forced out.

Deputy Jim Masterson reached inside his shirt and took out three sticks of dynamite. Mrs. Pierce, peeping from the hotel, saw the preparations and rushed out, pleading for them not to destroy her hotel.

The only bandit inside, she said, was Arkansas Tom. The officers told her if she could persuade him to surrender, they would not damage the property. She went upstairs and presently called down that Arkansas Tom would surrender. He came down the ladder, followed by Mrs. Pierce. Soon he was shackled and placed in one wagon. The bodies of the dead officers were placed in the other and the procession went toward Guthrie. Three officers had lost their lives and only one man had been captured.

Another posse was organized to pursue the outlaws, but they met with no success. Arkansas Tom was soon tried in the court of Chief Justice Frank Dale. He was sentenced to 50 years in prison. Later, he was paroled, worked for a time and then became involved in a bank robbery at Neosho, Missouri. He was convicted and sent to the Missouri prison. After serving his term, he again went to Joplin and is said to have been implicated in a bank robbery at Asbury, Missouri. He was killed when he resisted arrest by Joplin officers.

Bill Doolin and Bitter Creek Newcomb recovered from the wounds received in the Battle of Ingalls, and next were heard of at Hot Springs, Arkansas. Doolin later said that he planned to rob a bank there, but decided against it.

In January, the officials received news that a rancher living southeast of Pawnee near the Cimarron river was harboring members of the Doolin gang and assisting in their cattle thefts. Nothing had been heard of the Doolin gang for some time. Deputy Marshal Bill Tilghman decided to attempt to capture them. He walked into the ranch house, and

saw the rancher sitting before the fire, a Winchester across his lap. The walls were lined with curtained bunks. Tilghman thought he saw the tips of several rifle barrels glinting between the curtains. The rancher was openly hostile. Tilghman stood for a while, warming himself, forced himself to be nonchalant and finally left. He knew that he had discovered an outlaw hide-out but that he would need a lot of assistance to make any capture.

A large posse was formed and started back to the ranch. But Bill Dunn, the owner, informed them that the outlaws had already left. He added that Bill Doolin had kept Red Buck Weightman from killing Tilghman on the night he strolled into the outlaw den. The rancher said he had assumed his hostile manner to protect himself from being suspected of being friendly with the officers and betraying the gang.

In May, 1895, Bill Doolin led his gang to Dover in the El Reno district, and they robbed a Rock Island passenger train. A posse was immediately organized, and by sundown the searchers looked down on the outlaw camp. But the outlaw sentinels had sighted the officials. As the posse approached, the bandits opened fire. The horses of Tulsa Jack Blake and Red Buck were shot from under them, and they took refuge in a clump of timber. One of their comrades rescued Red Buck, but Tulsa Jack fell fatally wounded.

Red Buck's bloodthirstiness caused constant trouble for the gang. As they fled from their hide-out he stopped to steal a horse and shot the protesting owner, an old man. Shortly afterward, Bill Doolin divided the loot from the train robbery and ordered Red Buck out of the gang. The others separated, agreeing to meet later at a spot near Woodward, where a hiding place had been located in an abandoned ranch house.

Charlie Pierce, Bitter Creek Newcomb and Little Bill Raidler arrived there first, heard of an express shipment of \$6,500, and decided to hold up the express company office at night without waiting for the rest of the gang.

The robbery was a success, the agent was left bound and gagged, and the bandits made an easy escape. They immediately informed their comrades of the haul, the loot was split, and the Doolin gang was on the run again.

The cave hide-out in the Creek Nation had been discovered and the gang had not as yet located a new safe hiding place. After leading an apparently charmed life, they were nearing the end of their careers. The wound Bill Doolin had received in the fight at Ingalls had lodged near the base of his brain, and was causing a pressure that affected his nervous system. After the Woodward robbery, Doolin went to join his wife and baby. Dalton went to the home of relatives near Ardmore, Oklahoma.

Bitter Creek Newcomb and Little Bill Raidler spent their share in riotous living in Chicago. Little Bill bought a pair of silver plated six-shooters with ivory handles carved with the figures of angels. The guns were found when he was captured.

On their return from Chicago, Bitter Creek and Little Bill joined Dynamite Dick and Charlie Pierce at the ranch of Bee Dunn. Plans were laid to ambush them there. Several deputy marshals, headed by Deputy Bill Tilghman and Deputy Heck Thomas, enlisted Dunn's support in the preparation of a trap.

A pit was dug close to the house where the officers could hide and watch all approaches to the place. Just at dusk Bitter Creek Newcomb and Charlie Pierce arrived. But in the dark the officers could not tell whether they were followed at a distance by others of the band.

Deputy Thomas commanded the men to surrender. They fired in return. The officers shot at their moving shadows. Both men were fatally wounded. Their bodies were taken to Guthrie, Okla., and claimed by relatives.

News of the killing of the two men immediately reached the other

members of the gang. Dynamite Dick and Little Bill Raidler separated and fled. Soon afterward, several deputies were at a country store about 20 miles from Perry. A man rode up and dismounted. The officials recognized Dynamite Dick.

The outlaw attempted to draw, but the officials were too fast. Dynamite Dick was wounded in the right elbow, the fleshy part of his hip, and in his lungs. He was taken to Guthrie for medical treatment, but in a few days contracted pneumonia and died.

The "small army" of United States marshals, with their orders to shoot to kill, were now well on their way to annihilating the notorious Doolin gang. There remained only the leaders—Doolin and Dalton and three minor members, Little Bill Raidler, Little Dick West and Red Buck Waightman.

An Indian reported that Little Bill was hiding at a ranch northeast of Pawhuska in the Osage Nation. Deputy Tilghman and Deputy Thomas went out in search. On September 1, they encountered Little Bill riding up to the ranch house for supper. Tilghman waited until Little Bill had dismounted and put his horse into the corral. Then he commanded him to surrender, but Little Bill whirled, drew his guns, and fired in the direction of the officer. He missed and Tilghman fired. Little Bill fell, seriously wounded.

He was taken to Guthrie where a government physician said that he had virtually no chance to survive. But Little Bill was wiry and strong and he recovered within a short time. He was sentenced to the Ohio penitentiary for ten years. Later he married, settled down and lived a respectable life. While in the Ohio prison he had met O. Henry, the writer, and Al Jennings, the outlaw. They were inseparable friends and O. Henry's influence is said to have caused Raidler to reform.

The hunt became intensified as the officials were encouraged by success. An Indian scout reported that Bill Dalton's wife was near Ardmore. Dalton walked into a trap and was fatally wounded when he fired at Deputy Loss Hart. The body was taken to Guthrie where his mother, the former Adeline Younger, claimed it.

There remained only the leader, Bill Doolin. Mrs. Pierce, who had operated the outlaw hide-out at Ingalls, told officers that Mrs. Doolin was at Burden, Kansas, under the name of Mrs. Will Barry. Officers went there and traced her to Winfield, Kansas. There they learned she was writing to her husband at Eureka Springs, Arkansas, where he had gone to take the baths for his rheumatism.

Deputy Tilghman immediately went to Eureka Springs, arriving on the morning of December 5, 1895, where he went to the Basin hotel. He decided to go to the bathhouse to refresh himself from his all-night trip. The first person he saw as he strolled in was Bill Doolin, lying on a couch, leisurely reading a newspaper. Doolin, however, did not see the marshal. Deputy Tilghman proceeded to his booth, then whirled and confronted Doolin with his forty-five. Surprised as he was, Doolin tried to draw. A bath attendant was summoned to disarm him, but the man was so frightened at sight of the two guns strapped under Doolin's arms that he fled. Finally Tilghman said, "Doolin, you saved my life once and I don't want to kill you, but make one move and you're a dead man."

Just after that, the city marshal, warned by the bathhouse attendant, came to Tilghman's rescue and disarmed Doolin. On his word of honor that he would not attempt to escape, he was taken back to Oklahoma without being handcuffed.

At Guthrie, Okla., a crowd of 5,000 persons had assembled at the station to watch the arrival of the notorious Bill Doolin. He was put in jail where he proceeded to enthrall the jailor with tales of buried treasure. One night he promised to reveal the location of his cache and summoned the jailor close to the bars. He then snatched the jailor's gun and forced the man to release him. He dashed out into the darkness, com-

mandeered a horse and buggy, unharnessed the horse and rode away bareback.

Three or four months later it was learned that Doolin's wife and child had gone to Lawton, Okla. A watch was kept on her father's house and presently Doolin's presence there was reported. Officials arrived just in time to see them preparing to leave the country by wagon. Deputy Thomas commanded Doolin to throw up his hands. Doolin jerked his rifle to his shoulder but Thomas fired first, and Doolin fell to the ground, dying.

Hundreds of persons attended his funeral. His death marked the end of an era of Oklahoma outlawry which brought into existence the army of deputy federal marshals. Little Dick West, the sole remaining member of the gang, fled from Oklahoma not to return until the Jennings rose to fame.

THE JENNINGS BOYS

The Jennings boys were another group of outlaws peculiar to Oklahoma. It is doubtful whether at any period—other than those rowdy border days in Oklahoma—would prominent attorneys turn to crime because of courtroom arguments.

Al and Frank Jennings had been practicing law in the territory around El Reno for several years. Al was prosecuting attorney of Canadian County. The father of the two boys was county judge at Woodward and a brother, Ed Jennings, lived with him.

Ed Jennings was opposing the picturesque and fiery long-haired Temple Houston in a case at Woodward about pasture rent. The two attorneys squabbled over minor points in the testimony. Then Houston asked a witness a question. Jennings objected and an argument started. One of them shouted, "You're a liar." The two started fighting and men rushed to separate them.

That night Houston went to a saloon where Ed and Frank Jennings were playing poker. Ed started up, reaching for his gun. Houston fired and Jennings fell dead. Frank started to rise, but before he could reach for his gun, Houston shot at him, seriously wounding him. Houston pleaded self defense and was acquitted at his trial for murder.

Al Jennings left the courtroom swearing vengeance for his brother's death. For some time he and his brother, Frank, rode around the Territory threatening Houston, but they never met. Apparently they turned their hatred into less admirable channels. From attorneys they became outlaws.

Early in 1896, an attempt was made to rob the Santa Fe passenger train at Edmond, Oklahoma. The express car was battered open, but only a few hundred dollars was stolen, and the passengers were not robbed.

Officials said that Al and Frank Jennings, Pat and Morris O'Malley and Little Dick West, former member of the Doolin gang, had committed the robbery. They then headed for the southeastern part of the Territory near the Texas line. Enroute they met Deputy Marshal Sam Bartell of Oklahoma. Bartell had not heard of the train robbery at Edmond, but he recognized Al Jennings and commanded him to hold up his hands.

Al started to draw his gun, then recognized Bartell and laughed. Bartell invited them to supper at his house. They rested there and then went on their way.

Two weeks later the Jennings gang tried to hold up an M. K. and T. passenger train at Bond Switch, 25 miles south of Muskogee. They put ties on the tracks. But the engineer increased the speed of the train and scattered the obstruction safely.

Later the officials heard that the Jennings band intended to hold up a passenger train at Purcell, Oklahoma. A watch was maintained and one night five men were seen lurking behind a box car. But by the time a posse arrived the men had departed.

Discouraged, Al Jennings left Oklahoma, going to Honduras and Mexico, and then back to Oklahoma where he got his old gang together. On October 6, 1896, a gang of five members of the Jennings band held up a group of laborers working on the Rock Island tracks between Minco and Chickasha. The foreman was forced to flag down the train.

Conductor Dan Dacy ran forward to question the foreman. One of the gang captured him. Al Jennings and Little Dick West robbed the express car while Frank Jennings and one of the O'Malley brothers robbed the passengers. The safes in the express car were blown open with dynamite, and only one was forced.

Conductor Dacy recognized Al Jennings and posses were soon organized at El Reno and Chickasha to search for the outlaws. But the gang eluded them and separated. Al and Frank Jennings went to the home of a friend at El Reno, hiding there for several days before rejoining the others of the band who had been hiding in a dugout on the Cottonwood river, 15 miles southwest of Guthrie.

From the dug-out the gang wandered into the Indian Territory, riding at night and resting in secluded camps during the day. Little Dick West, disgusted with the failures of the Jennings gang as compared with the days of Bill Doolin, left the outfit.

At Cushing, Al Jennings aroused the proprietor of a small store and told him that he wanted to purchase burial clothes for a friend who had just died. The outlaws then held up the merchant, obtained new suits of clothes and about \$50.

Officials laid plans to trap the Jennings band by luring them to an old graveyard with a tale of news about a big Indian payment. November 29, Deputy Marshal Ledbetter and a posse of six, traced the bandits to the Harkless ranch in the Indian Territory near Tecumseh. The ranch was surrounded. Deputy Ledbetter told Mrs. Harkless to ask the men to surrender. If they refused, the women in the house were ordered to escape before the fighting started.

Presently Mrs. Harkless and the hired girl scampered out and hid in a nearby graveyard. The officers waited for them to get out of range. The gun battle started. In five minutes the bandits fled out the back door and through an orchard. Al Jennings fired from behind the house as he ran. A charge of buckshot from one of the officials' guns tore through the clothing of Frank Jennings but did not injure him seriously.

Only one officer saw the bandits escape. The rest kept on pouring lead in the house. When no gunfire answered they decided the outlaws were dead, and they came out of hiding. Then they learned that their prey had escaped.

A four-day chase followed and the Jennings gang finally was captured without bloodshed and taken to Muskogee to the federal jail.

At their trial, old Judge Jennings was one of the defense witnesses, testifying that his son, Al, was at home on the night he was accused of taking part in the Edmond train robbery.

Al Jennings was sentenced to five years in the Leavenworth penitentiary on a charge of assault to kill and then was given a life sentence in the federal penitentiary at Columbus, Ohio, on a charge of robbing the United States mail. Frank Jennings and the O'Malley brothers were sentenced to five years each in Leavenworth.

After five years in the Ohio prison, where he became a close friend of O. Henry, the writer, also serving a term there, Jennings' sentence was commuted. He was taken to Leavenworth and was soon released. His brother, Frank Jennings, and the O'Malleys served their terms and were released. Later they all were successful in legitimate enterprises. Al Jennings was famous as a writer, evangelist and lecturer.

Shortly after the Jennings gang was captured, Little Dick West, who had deserted them some time before, was shot and killed by officials while he was fleeing from a hide-out.

The Modern Bandits

AL SPENCER

Al Spencer began his criminal career as a cattle rustler, in the old time tradition. He was captured and sent to prison. There he met young Frank Nash, a tall, stoop-shouldered man with a big nose and an ingratiating smile.

Nash had been sent up for the alleged killing of a partner in petty thievery. He and Spencer became friends. When Spencer broke out of prison there was supposed to have been an indefinite understanding that when Nash was released he would join Spencer.

Spencer escaped from Oklahoma state prison at McAllester and fled at once to the Osage hills where he established a hide-out and gathered about him a band of desperate criminals. They began robbing Oklahoma banks.

Soon Al Spencer's name was spread in heavy black ink on the front pages of the newspapers of Oklahoma and surrounding states. Editorial writers seized on him as the successors to the former bandit kings. He was called the Phantom Terror, the King of the Osage, the Wild Rider of Oklahoma. And like many another criminal, publicity hastened his downfall.

There is a peculiar streak of vanity in most criminals. Some of them have been caught because they could not resist getting newspaper accounts of their crimes. Some have been identified because of clippings of these crimes in their wallets. Others are fond of reading detective story magazines.

Spencer was a show-off. It was he who originated the famous bank robbing wisecrack, "This ain't no director's meeting."

This occurred after Frank Nash had gotten out of prison on a "leave of absence" to attend to business. The business took him directly to Al Spencer's hide-out for a holiday celebration December 30, 1922. Nash immediately became one of Spencer's right hand men along with Earl Thayer and Grover Durrill.

The key to Spencer's weakness was shown in his wise-cracking comeback when Spencer, and his gang of seven men, were robbing a bank in Chikasha, Oklahoma. Spencer, Nash and Durrill, heavily armed, went inside the bank. Spencer commanded the employes to lie face down on the floor in the director's room. One stenographer lay down on her back, staring up at the robbers.

Spencer pointed his six-gun toward the girl. "I said for you to lay face down," he yelled. "Where the hell do you think you are; at a director's meeting?"

This story, of course, was given wide publicity. So was Spencer's toll of banks. In two years he and his gang were supposed to have looted 42 depositories.

Then Spencer's craving for fame betrayed him. Editorial writers had started comparing him with the old time outlaw kings. Spencer was a robber in the old tradition, with six-guns, horses and a hide-out in the hills where the loot was divided around a campfire. But Spencer was a bank robber, not a train looter. Newspapermen pointed out in uncomplimentary fashion that his exploits were comparatively simple compared to the deeds of the Jameses and Daltons. He and his gang simply strolled

into a bank, scooped up the money and fled before the alarm was given. Cheap stuff, shouted the newspapers, compared to big time train robbery.

So Al Spencer decided to rob a train. Frank Nash is supposed to have objected to this. Even then Nash was showing the talent for cautious generalship that later made him the focal point for gang activities throughout the middle-west. Nash was one of the few bad men who was never fooled by his own reputation for cleverness. He is said to have pointed out that times had changed since the days when the Daltons rode. Railroad companies had developed their own squads of trained investigators. They were not hampered by county and state lines. They had plenty of money behind them, too. A gang could rob a bank in one county, skip over the county line and be comparatively safe. Or the robbers could dash over a state line. The county sheriffs had inadequate funds and facilities for long and expensive man-hunts.

But Spencer was determined. The ink slingers didn't think he was as good as the Younger brothers, huh? They thought that he, the Phantom Terror, wasn't smart as the Dalton boys. He would show them. He would rob a train. He decided on the M. K. and T. train carrying money and mails.

Plans were laid for the giant coup. But the talents that had made Spencer successful in cracking banks in small towns were not sufficient for big time train robbery. The train was flagged down near Okesa, Oklahoma, not far from Spencer's hide-out in the Osage hills. The engineer and firemen were caught and forced to throw up their hands. The bandits fired six-guns. A mail clerk was injured. Still firing their guns, the bandits rode away with their loot.

Excitement mounted to white heat. This was the first Oklahoma train robbery in years. All law-enforcement bodies were rushed into co-operation against this new menace. All the new methods of pursuit were used. This time there was no single posse to be dodged or defeated in a gun battle.

Earl Thayer was arrested the day after the robbery. Police found him at his home in Oklahoma City. Grover Durrill and Curtis Kelly were found by posse men scouring the Osage hills. Another man was captured in St. Louis. He was a city bandit, out of his depth in the Oklahoma bad lands.

Spencer was trapped in Coffeyville, Kansas. Still true to the old time tradition, he elected to shoot it out. He fell dead, punctured with the bullets from the guns of a dozen officers.

Months later, Frank Nash, who had advised against the train hold-up, was captured near the Rio Grande. But he surrendered and was sentenced to 25 years in Leavenworth, Kansas, federal prison, emerging a few years later to dominate another criminal era.

FRANK (JELLY) NASH

Frank Nash is important in the annals of crime for several reasons. He was a hold over from the old era who rose to leadership in the modern day. He had an unusually long and successful career. He was an associate of most of the big shots in gangdom—Verne Miller, Harvey Bailey, Shotgun George Ziegler, Francis Keating, Tommy Holden, Charley Harmon, the Barkers and Alvin Karpis, Eddie Green, and many others. His activities were characterized by wise generalship. Frank Nash was a handy man to have along in any enterprise.

Nash's death in the massacre of the Union Station in Kansas City, Missouri, June 17, 1933, opened a new era in crime punishment. It caused the power of the Federal Bureau of Investigation—the G-men of the modern day—to be enlarged. It inaugurated the Public Enemy system.

Nash did not have the picturesque qualities of some of his contemporaries. He didn't swagger around exclusive golf courses with Harvey Bailey

and Charlie Harmon and Eddie Green. He lacked the headline nickname of Pretty Boy Floyd. He wasn't gun crazy like Baby Face Nelson. He didn't have the sinister qualities that caused Alvin Karpis to be nicknamed "Old Creepy." He was the business man criminal, quiet, unobtrusive, brainy.

Few of the gangsters who figure largely in the public prints have brains. Will Irwin quotes a Federal government report as saying that Wilbur Underhill, rated as one of the most dangerous of bank robbers, was virtually a moron. John Dillinger and Pretty Boy Floyd would also have ranked low on intelligence tests, says Mr. Irwin.

Nash read widely. When he escaped from the Leavenworth prison he took with him a set of Shakespeare "borrowed" from the prison library! He was an expert on "get-away" charts. He "cased" banks for himself. What finally caught him was the inevitable multiplicity of his crimes. He kept one step ahead of the law for years. But eventually he rested just one step too long. What killed him and prevented him from perhaps making another famous prison escape was the stupidity and hasty action of his friends.

But to go back—in 1912 there was a burglary in Hobart, Oklahoma. Three men were accused. One of them was Frank Nash, a tall, rather homely man with a big nose and thinning hair. The other two were Nollie Wartman and Guy Huber. They were important only incidentally.

Nash came from a respectable family and he had a fair education. But he drank too much and got into financial difficulties. Instead of directing his shrewdness and his planning ability into legitimate sources, he turned to crime. He was captured after two or three petty thefts. Nollie Wartman squealed. Huber and Nash were acquitted. But they were bent on revenge, another criminal failing which frequently brings unexpected results. Had Nash not decided that something should be done to punish Wartman, criminal history might have been written altogether differently. Nash might have continued as a petty thief, uneducated by more expert criminals encountered in prisons.

But Nollie Wartman was shot to death. Nash and Huber were tried for Wartman's murder and convicted.

Nash was sentenced to end his days in the McAlester, Oklahoma, penitentiary, Sept. 13, 1913. But he had no intention of spending the rest of his "natural life" within those walls. Five years later there was agitation to get him out. Nash was said to be suffering from tuberculosis. He could not get proper attention at the prison, he claimed. His sentence was shortened. Then the World War came along. Nash's tuberculosis was forgotten. Now he wanted to go serve his country. He enlisted and was given a full pardon.

It may be that officials thought that Nash's life would be given for his country on the battlefields of France. But what actually happened was that he arrived in France near the close of the war. He came back to America almost at once. Shortly afterwards he and two other bandits robbed the Corn State Bank at Corn, Oklahoma.

Nash was captured and convicted. Again he went to the McAlester prison. Again he applied for freedom. Meanwhile he had met Al Spencer, who was in prison for rustling cattle. They became good friends. Spencer escaped. But Nash was still using his brains. He undoubtedly decided it would be better to walk out and avoid the danger of being shot in a prison break.

Nash applied for a leave of absence for business reasons. If he could get out he could get a job. Nothing was said to indicate that the job would be as right hand man for Al Spencer, king of Oklahoma outlaws. The governor commuted his sentence to five years, which, with time off for good behavior, let Nash out late in December of 1922.

Immediately Nash joined Al Spencer, and for two years they robbed banks. Then came the fiasco of the robbery of the M. K. and T.

train. Nash was trailed south and captured along the Rio Grande. This time he was sent to a federal prison. Twenty-five years in Leavenworth, said the judge. And Nash was once again behind prison walls.

Then followed reunions within prison walls. In Leavenworth were Earl Thayer and Grover Durrill, Nash's old team mates on the Spencer gang. More important, since this was a federal penitentiary, Nash came into contact with big shots, the associates of the cream of criminal aristocracy. Heretofore, Nash had known local criminals. He was a small town bank robber, with no connections outside his own state.

But he was eager to learn and he encountered persons not averse to teaching him. Among them were Francis L. (Jimmy) Keating, Thomas Holden, Charlie Harmon and a man named George Kelly who was afterward to be dubbed Machine Gun Kelly.

Keating and Holden were well connected with the czars of various underworlds. They talked of hide-outs in Chicago and St. Paul and Kansas City. They talked of big hauls. And Frank Nash listened eagerly.

Then Keating and Holden escaped, supposedly with the aid of Kelly and Harmon. Nash was a trusty by now. Shortly afterward he was said to have received an invitation from his two friends to join them. He began laying plans for an escape. A friend was leaving prison. He, too, was supposed to help. Frank was on good behavior. Prison records showed that he read much, the poets especially.

Came October 19, 1930. Frank Nash had been assigned to trusty duty at the home of a deputy warden. He walked out of the warden's home that evening and did not return. This time Nash had entirely different ideas of how to use his freedom. No more lurking in the Osage hills in rough outlaw camps.

According to underworld reports, Nash is supposed to have gone next to the home of Herb and Esther Farmer, who ran a quiet little place near Joplin, Missouri, where they raised chickens and gave board and lodging to men with money but a desire for peace and quiet far from the maddening and well policed throng.

Farmer, alias Deafy Farmer, alias Snyder, alias Herb Black, had been a petty grafter around Denver, Colorado. But now he had joined that mob of accessories-after-the-fact who lived on the gleanings from big boys. He also dabbled in the liquor business and Nash is said to have joined him in trucking Osage hills moonshine to Kansas City.

At Deafy Farmer's, Nash met a young man who was to play an important part in his life and in the crime sections of newspapers, a young man just out of the Kansas state prison. His name was Fred Barker. He was simply "resting" at the Farmers, while his brother, Arthur, was in prison serving a life sentence for murder, and his good friend, Raymond Alvin Karpavicz, known as Alvin Karpis, was dodging cops, following a sentence in the Kansas state prison for safe blowing.

On one of Nash's trips to Kansas City he and Farmer encountered Charlie Harmon, just out of Leavenworth. Charlie was with his moll, Paula. The Harmons went to Joplin with Nash and Deafy. Then they all went to Hot Springs. Nash was now beginning to associate with the big timers.

Paula Harmon went back to Joplin with Frank and the Farmers. Presently arrived another man with a name to conjure with, Verne C. Miller. He brought along his wife, Vivian. Nash purchased a new car with his liquor earnings and he, Paula, and the Millers all went to St. Paul.

In St. Paul, Nash met even more big shots of crime. Eddie Green, Shotgun George Ziegler, and Harvey Bailey drifted in. Nash bought a wig for his baldish head. He had his big nose operated on. And he went in for big time stuff. This was in the summer of 1931.

Nash now was a big shot in his own right. The bank robbing industry boomed. It was known that Frank Nash was a handy man. He

could run a machine gun. He could plot a get-away chart. He could be counted upon to keep his head.

Among those who were said to have associated with him were Keating, Holden, Harvey Bailey, Eddie Green, Charlie Harmon, Bernard Phillips, George Kelly and George Ziegler. Between raids on banks, Nash acted as croupier for a roulette wheel in a night club near St. Paul.

Sometimes the gang, or portions of it, went to Chicago. They also visited the resorts in northern Minnesota and along the lake near Chicago. At Fox River Grove near Chicago, Nash, going under the name of Frank Harrison, met Frances Luce, cook at the O. P. Inn. They fell in love. Frances Luce was a slender brunette in her middle thirties. She was well educated, had been a school teacher, married a policeman, divorced him and turned to being a night club hostess to support her small daughter. They began living together. Later Nash married Frances, but she claimed that she always believed him to be a bootlegger and never knew his real name.

In the meantime, according to underworld gossip, there was some slight trouble among the bandits clustering around Nash. Charlie Harmon and Frank Weber were not efficient. Nash had ambitious plans to add his old pals, Grover Durrill and Earl Thayer of Oklahoma to his new friends.

About this time the Kraft State Bank of Menomonie, Wisconsin, was robbed of a hundred thousand dollars. A vice-president was kidnaped as a hostage. Pursuers found his body dumped out along the road. Then they discovered Weber's body. Presumably he had been injured in the gun fight between pursuers and pursued. But there were other rumors, which gained strength when the body of Charlie Harmon was found. He had been alive when he was dumped out.

Nash, Bailey, Tommy Holden, Verne Miller and Jimmy Keating were supposed to have been members of the gang. They went back to Chicago. There were now openings for two new men.

According to plans that leaked out after the prison break, the gangsters shipped guns to the prisoners in a big barrel of shoe paste. The convicts were to obtain forged passes, kidnap the warden and threaten to blow up the wall with dynamite if they were not released.

The guns arrived all right. But there was one of those usual unexpected set-backs. The warden was kidnaped, but the key to his car was left in his office. A passing car was seized and the warden taken along as a hostage. Valuable time was wasted. The car was wrecked in hasty driving. Another car was confiscated. The wounded warden was abandoned. The search gained momentum. Most of the prisoners were found in a farmhouse. Three of them, including Grover Durrill, had killed themselves rather than face capture. Earl Thayer surrendered after wandering around the countryside for three days. He was taken back to Leavenworth.

Nash, Keating and Holden, alleged leading conspirators in the plan, scattered. The spring of 1932 they were all said to have met in Hot Springs, Arkansas. This probably was their last meeting.

For in the meantime officials had not been idle. After each bank robbery there was, of course, an investigation. Bank employes would recognize photographs. Then a laborious process of checking would start. The preponderance of evidence on the part of the law was getting ready to play its part. It is this that dooms the criminal. He may escape from one crime. But he must live. He must eat. Therefore he must have places to stay. Even with the best of organizations, he cannot be constantly protected. He must have some dealings with honest citizens. And sooner or later he is tracked down and caught.

In Minneapolis some hot bonds stolen from the First American National Bank of Duluth, Minnesota, were found. Somehow agents traced this deal to golf-playing moneyed men. The Duluth job was supposed

to have been done by Nash, Keating, Holden and Harmon. Harmon was dead, but he was yet to play his part. Dead gangsters do not talk, but sometimes they leave valuable clues.

Harmon bought expensive golfing equipment from an exclusive firm in Kansas City. The salesmen there did not recognize his name, but they did his photograph. They also recognized other photographs. Furthermore, they had seen Keating and Holden recently.

Here luck played with Frank Nash. Brought up in Oklahoma in the rough and rowdy days, he had never gone in for golf. So Frank Nash was not in Kansas City. Keating, Holden and Harvey Bailey were there. Bernard Phillips saw the officers approaching and fled. Later he was punished by gangsters who apparently thought he had double-crossed his companions.

Frank Nash read of the arrest of his companions in the newspapers. He went into hiding again, he and Frances visiting Verne and Vivian Miller at Lake Geneva, Wisconsin. Then he went to New York for treatment for a broken arm received in an auto accident. In New York he went around with wealthy friends of the Millers. The Nashes took an apartment and stayed in New York for several months.

Then Nash drifted back west. Harvey Bailey didn't like it in prison. He wanted his friends to help him out. Nash took a hand in this, according to underworld reports. At any rate Wilbur Underhill, Bailey and nine other convicts escaped. Apparently to celebrate this, Frank and Frances were married in Hot Springs and went away on a honeymoon. They went to St. Paul and then back to Hot Springs, which figured largely in gangdom doings in those luxury-loving days.

But other people knew that Frank Nash liked Hot Springs. In fact, it was so well known that a federal agent was stationed there to await him. His auto license number had been obtained. The agent glimpsed it. Officers were summoned. Otto Reed, chief of police at McAlester, who knew Nash at sight, F. J. Lackey and Frank Smith, special agents, arrested Nash as he was drinking a glass of beer. Nash was handcuffed and placed in his car.

The owner of the spot where Nash was arrested, Richard Galates, later arrested in connection with harboring Nash, sentenced and released in 1937, apparently was afraid that Nash's friends would suspect him of giving information to police. At any rate a movement was at once started to release Nash. His wife was notified. Telephones began to ring. The underworld was being called upon for aid.

Meanwhile the officers had started north with their captive. Twice they were halted by state officials who had been informed that Nash had been kidnaped. The officials, scenting trouble, went to Fort Smith, Arkansas, and took a train to Kansas City, Missouri.

According to information pieced together by officials afterward in a drive on persons accused of harboring criminals, Mrs. Nash immediately called friends in Chicago. Then she took a plane to Joplin to meet the Farmers. Verne Miller was notified in Kansas City and asked to effect Nash's release.

Whether the plotters meant for this to be done through political pull or through gun play is not known. The important participants in the scheme are now dead, Miller said to have been killed by fellow criminals and Pretty Boy Floyd by officials.

There are reports that the Farmers believed that Verne Miller had powerful political connections in Kansas City and might possibly spring Nash on bond or through some legal stunt. However, whatever their intentions, it is obvious that Miller's thought was force.

Officials later traced telephone calls to Chicago asking for gunmen. It is said that a party of machine gunmen actually started for Kansas City but failed to arrive. Miller is also said to have telephoned St. Paul and tried to get in touch with the Barker-Karpis gang. But the boys were

extremely busy. They were kidnaping a St. Paul millionaire.

So Miller was forced to confine his hunt for able assistants to Kansas City. He is said to have gone to some of the local politico-underworld heads for help. Then he heard that Pretty Boy Floyd and his constant companion, Adam Richetti, had just arrived in town after the playful kidnaping of the Sheriff of Polk County, Missouri, Jack Killingsworth.

Richetti's fingerprints were found on beer bottles at Miller's home in Kansas City after the killing of Frank Nash. So apparently Floyd and Richetti went out to the Miller home to await Frank Nash's arrival.

Nash had never been connected with Floyd nor had Miller. Pretty Boy was a crude newcomer, according to these masters of crime. But it was not a time for too much discrimination. The Nash group might pick and choose who would help them rob a bank. They might toss Charlie Harmon out on a lonely road to die of wounds—which may or may not have been inflicted by pursuing officials. They might arrange prison breaks to augment their pranks. But with only a few hours at their disposal they had to take who they could get to help them to release their leader.

Had Frank Nash, with his shrewdness, his ability to plan, his cool calculation, been able to assist in his own release things might have been different. But Verne Miller was being harassed by telephone calls from Frances Nash—or Harrison as she believed herself. He got panicky.

Frank Nash was handcuffed and on a train coming to Kansas City. He had no way of communicating with his well meaning friends. So, all unknowingly, he walked to his death. The train arrived at the Union Station early in the morning of June 17, 1933. Federal agents got out and looked around. The coast seemed to be clear. The officials and their prisoner walked through the giant station. They were joined by William J. Grooms and Frank E. Hermanson, Kansas City detectives, Raymond J. Caffery, Federal Bureau of Investigation special agent, and R. E. Vetterli, special agent in charge.

They started to load Frank Nash into the car. People flowed all around them. The normal life of the station went on. The agents put their loaded shotguns in the car. Frank Nash started to get into the rear seat. But the agents were cautious. Handcuffed men had been known to use those metal manacles for other purposes, such as bashing a companion over the head, preparatory to leaping out of a slowly moving car. Nash was moved to the front seat. He sat behind the wheel until the other agents clambered inside the waiting vehicle.

Miller's car had been parked quite near the car of the special agents. The rescuers awaited Nash there. They saw him come from the station. They moved toward the police car.

"Get 'em," shouted Floyd, "Up-up-up!"

But, probably somewhat to the surprise of the would be rescuers, not one of the guarding officials obeyed. Floyd and Miller were accustomed to bank cashiers who readily thrust up their hands.

There was no time for changing plans. With guns they had meant to release Frank Nash—and with guns they did release him. But in an unexpected way.

The officers reached for their guns. Hermanson fired—once, twice!

Pretty Boy Floyd went into action. "Give it to 'em," he shouted.

There was the staccato note of guns. Caffrey, Nash, Grooms, Reed and Hermanson were instantly killed. Vetterli and Lackey were wounded. Special Agent Smith, who had taken the place first selected by Nash, was not hurt. But he was covered by the bodies of his comrades.

Someone thrust a head inside the car. "Frank's dead," he yelled. "They're all dead."

The would be rescuers left Frank Nash's bullet riddled body for the officials. Dead, the code of gangdom specified that they had no more interest. Down at Joplin, Frank Nash's wife was left to hear the news

of his death via a radio broadcast. Frank Nash's twenty-year career of crime was ended. And dying he did a service to the nation. For due to the Union Station massacre the activities of the Federal Bureau of Investigation were greatly widened.

For it is an axiom of police work that the murder of a cop must be avenged. Parole boards may be lenient. Criminal lawyers may destroy the work of months of honest investigation on the part of patient policemen. But when a policeman is killed something must be done or the moral force of police work is destroyed. Face must be preserved.

Frank Nash lived through one criminal revolution—the change from the six-gun and the crude outlaw hide-out, to the machine gun and the swanky apartment. He changed to the fast cars of modern criminals. And in dying he heralded another change—that of the widely publicized rise to power of the G-men.

VERNE C. MILLER

It is natural to go from a discussion of Frank Nash to Verne C. Miller. For it was through coming into contact with Miller that Frank Nash rose to fame. It was with Miller that Nash first went to St. Paul, then a gathering place for the aristocracy of criminals. It was Verne Miller who took Frank Nash to New York, showed him the town, and introduced him to his many influential friends there. It was Miller who caused Nash's death and with that action created his own death sentence.

For gangdom never forgave Miller's efforts to free Frank Nash. Miller had slipped and slipped badly. When he and his gunmen not only killed Nash but several detectives guarding him, G-men heat was turned on Miller. He was dangerous to his friends. He made his political and underworld friends in Kansas City angry because he had caused "heat" to be turned on the town. He had to give explanations to all his friends for his part in the Union Station massacre.

Miller's doom was sealed with that of Frank Nash. It took time—but the G-men had time.

In other circumstances, Verne Miller might have been anything. As it is, his life is interesting in its contrasts. His home was in Huron, South Dakota. He left there to be a showman. He was a parachute jumper, making the rounds of country fairs. It took nerve to leap from a balloon, his only protection a flapping umbrella of cloth above him. But Verne Miller had that kind of courage.

His physical courage also led him into wrestling and boxing. He was in the United States army for border service. Then he was a machine gunner in the World War. This training came in handy later.

On the strength of his war record, Miller became a policeman. Later he was elected sheriff. In common with many other criminals, he had that foolhardy vanity and bravado which causes first success and then destruction. Al Spencer had it when he decided to rob a train to prove that he was the equal of the old time bad men. Baby Face Nelson had it when he boasted of killing policemen. Jimmy Keating and Tommy Holden strutted around public golf courses. Pretty Boy Floyd kidnaped sheriffs in moments of bravado. Members of Dillinger's gang boasted publicly that they were criminals.

So Verne Miller thought he could get away with being a criminal while acting as sheriff. He embezzled a little more than two thousand dollars, chicken feed according to his later takes. But it sent him to prison.

When he was free, he was definitely aligned against the law. This time he went into the liquor game. He became an important person. He had connections in Chicago, Cleveland, New York, Jersey City, and important associates in Montreal.

He was an expert machine gunner—due to his World War training—

so he added bank robbery and murder to his accomplishments. He was reported to be an expert in robbing banks to cover up private irregularities. As a side line he was said to hire out as a husband killer so wives could collect insurance. All in all, Miller was an extraordinary person.

His "moll," Vivian Mathis, was a carefully dressed blonde. She was the daughter of a Minnesota dairy farmer and had a small daughter by a previous marriage.

Miller already was a criminal "big shot" when he met Frank Nash. He was said to be "wired in" with lottery and gambling interests in Montreal. He would stay there part of the time and then hurry to meet Nash, Ziegler, Harvey Bailey and others for one of their periodic bank robberies.

Miller always was carefully dressed. One of his friends was a well known New York tailor. He lived expensively. His home in Kansas City, where the Union Station massacre was planned, was in a good residential district. Wherever he went he lived at good hotels, in swanky apartments or in excellent houses.

He possessed a rather odd refinement. He disliked hearing anyone use vulgar or profane language. He would have nothing to do with such trades as kidnaping.

Just how many crimes Miller committed probably will never be known. He was a will of the wisp. Sometimes he and Vivian Mathis, his woman, would suddenly drift into Hot Springs, Arkansas. Again they would be in St. Paul. Then they would hurriedly go back east, to New York or to Jersey City where they had "connections." It is known that he was closely connected with Nash, Keating, Holden. He disliked the Barkers after they took up kidnaping. Previous to that he associated with them.

Miller was dragged into the Union Station massacre in Kansas City when Frances Nash or Harrison as she called herself, telephoned him imploring him to get her "Jelly" back. Verne had been out playing golf and a friend found him on the course. Always obliging, he immediately set to work. The results of his interference already has been told in the history of Frank Nash.

Immediately after the killing of Nash, Verne and Vi Miller fled from Kansas City. Officials examining their house found beer bottles with Adam Richetti's fingerprint on them. Since where Richetti went, Pretty Boy Floyd also could be found, this gave the clue to the identity of the killers.

But even if the Millers escaped from Kansas City officials they were far from free of the results of Miller's activities. Richard Galatas had been caught and charged with trying to release Nash. Herb and Esther Farmer were arrested on a charge of conspiracy to release a federal prisoner. First Mulloy, who had traced Miller to the golf course to answer frantic long distance telephone calls from Frances Nash, and Doc Stacci, operator of a bandit hide-out at Fox River Grove near Chicago, were arrested on the same charge. Pretty Boy Floyd and Richetti went into hiding.

Vi and Verne Miller split for added safety. Vi was tracked down to Atlantic City by a box of salt water taffy candy sent to her daughter, living with Vi's parents.

In Atlantic City the police missed Vi, then traveling under the name of Mathis. But they traced her to New York and then to Newark where she apparently met Verne for a hasty conference. The G-men heat was on. No one was anxious to harbor Miller.

Finally in Chicago police and special agents traced Vi Miller to the home of a friend, Bobby Moore. On Halloween day, 1933, Vi gave a party for her little daughter.

A red-haired, mustached man appeared. Watching men identified him as Verne Miller. The apartment was surrounded. Verne rushed out. The Moore woman ran across the street, got into Miller's car, whirled it

to the curb. Miller jumped on the runningboard, keeping up a gun battle with the officials.

Miller escaped from this trap, but the Moore woman later received a prison sentence on a charge of harboring criminals—as did Vi Miller. By this time judges were becoming hardened to the pleas of the gun molls that they didn't know their men were connected with criminal enterprises.

Miller's car was abandoned. Later it was traced to Sid Silvers, alleged liquor law violator. Silvers afterward was found stabbed to death. He was naked except for a perfectly tied four-in-hand, which covered a noose around his neck.

Word was said to have been sent along the underworld grapevine that it was unsafe to help Verne Miller. Just how he managed until the time of his death is not known. It is rumored that many of his erstwhile friends refused to loan him money.

November 26, 1933, the bodies of Eddie Fletcher and Abe Axler of Detroit were found near Pontiac, Michigan, killed by a machine gunner who had virtually perforated their bodies. They were alleged Detroit criminals. November 28, the body of Walter Tylczak, said to be a gunman and murderer, was discovered near Detroit. He had been killed by a gunman using the same perfect technique demonstrated on Axler and Fletcher.

A business man driving home on the night of November 29, 1933, saw a strange object revealed in the glare of his headlights. It lay near a culvert, almost hidden by marsh grass. He reported it to the police who lifted the cheap blankets and auto robe covering the odd lump. Underneath the coverings was a nude man. His legs were drawn tight against his torso by a new clothesline. He apparently had been garroted and his skull crushed by many hammer blows.

At the morgue the police took his fingerprints and identified the man as Verne Miller. He apparently had been killed while in a drunken sleep.

No trace of his murderer has ever been found. Underworld gossip has it that he was hired to bump off the three Detroit criminals and then killed while drunk. He was said to have started drinking heavily because of nervousness due to the persistent chase. So ended the career of Verne C. Miller, one-time criminal aristocrat.

Parachute jumper, policeman, sheriff, bank robber, murderer—so ran the tale of Verne Miller's career. At one time he was associated with another ex-policeman, tall Bernard Phillips, who got in the black book of the criminal kingdom when he escaped arrest along with Keating, Holden and Harvey Bailey at the Old Mission golf course in Kansas City, Missouri.

Miller at one time was one of the most influential of criminals. He was said to have been a friend of Johnny Lazia, now dead, but once a power among Italians in Kansas City. He lived lavishly in New York and had wealthy friends. Supposedly they did not know his true identity. But all his previous power did not help him in the end.

He furnished an excellent illustration of the Twentieth Century, high-powered criminal. No one can estimate just what his yearly income amounted to. But it must have been far into the tens of thousands. He lived in swanky districts, played golf on exclusive courses, sent his moll's daughter to dancing school and once—with several topnotch criminals of the day—attended a recital she gave. He threw lavish parties in expensive night clubs. And then his nude body was found covered by cheap blankets and a cheap auto robe!

Speaking of Miller, an ex-criminal once said to the writer, "A big shot criminal regards himself as broke when he has less than a thousand dollars in his pockets. He robs a bank and gets maybe fifty to a hundred thousand dollars. But this is split among the gang. Then a big per-

centage of it goes to the crooked money and bond shovers. More of it goes to keep a lawyer. Sometimes the gang must pay a man to finger the bank and to make a get-away chart. The criminal buys a car and if he comes out of his apartment and there is the slightest sign that anyone else has been in the auto he goes back into the hotel or apartment house and out another door and lets the car sit there. He can't risk using a hot machine.

"Buying arms costs money. The big shots don't risk stealing them. They wait until they hear an armory has been robbed and then they buy a few of the stolen guns. They like lots of weapons. A top notcher rents an apartment and pays two or three hundred dollars in advance for the first month's rent. Maybe he's just settled in when the telephone rings and someone says he'd better get out of town. Something has gone wrong and the town is hot. So he skips out. Or he may come in and there's something different about the joint. A lamp left on has been turned off. Or a door that he thought was shut is open. He just grabs his clothes and walks out."

"He can't trust banks," the ex-criminal went on. "Jake and Ralph Fleagle used banks but it was unwise, because later officials checked up on their deposits. The bandit pays off in cash. And money in the pocket is soon spent. The molls buy swell clothes. And they do lots of night clubbing. I've been to cabarets and I could see who'd made a good mark. He'd be buying drinks for everyone and throwing down big bills and letting the change lay. There'd be a little mountain of silver and he'd never touch it. Easy come, easy go. But criminals figure that there's no place to put it. If they hide it away they may not get a chance to go back and get it. So they carry it with them. And when it's gone maybe they can borrow and maybe they can't. As long as the heat isn't on them they can always raise dough from their friends and always find some place to stay. But when they're on the run, it's everybody for himself. The grapevine passes along the news that the heat has been turned on and then it's just too bad. The minute a guy starts slipping he has no friends. Next thing he's found in a ditch."

"They live by the gun and they die by the gun," he said philosophically. "Verne was a smart guy, but he wasn't any exception to the rule."

MA BARKER AND HER BOYS

Arizona Clark Barker was one of the most unique figures in all criminal history. She was the power behind the throne of the ruthless Barker-Karpis gang of bank robbers and kidnappers.

She was born in the Ozark mountains, southwest of Springfield, Missouri. For some reason she was nicknamed Kate and as Kate Barker she is known to millions of newspaper readers.

In the middle 1890's she married George Barker, a farm laborer, and they lived at Aurora, Missouri, where the four Barker boys, Herman, Lloyd, Arthur and Freddie, were born. Then they moved to Webb City, Missouri, where the elder Barker was a miner.

Mrs. Barker dragged her brood to church with her every Sunday. All her life she liked to sing church hymns. But apparently, the religious life had little influence on her sons. For presently Herman was arrested for petty theft. Ma Barker paid off the complainant and scolded Herman for getting caught. This was the original offense of the Barker gang.

By 1910 all the boys had been accused of law breaking. Herman had been charged with highway robbery, but released. Ma Barker was indignant. She moved to Tulsa, Oklahoma. But Herman left the family fold and went into crime, using several aliases. Ma Barker wrote him faithfully, showering him with love and advice.

The other boys joined a gang of juvenile roughnecks in Tulsa. Herb Farmer of Joplin, Missouri, an old playmate of the boys, went to prison

and when he came out he brought his new criminal friends to Tulsa to meet the Barkers. The Barkers began doing nicely for themselves in the robbery line.

Arthur was arrested in 1918 on the charge of stealing a government-owned car. He escaped, was captured, escaped again. In 1928 he was sent to the McAlester prison in Oklahoma for a life sentence on a charge of killing the night watchman in a hospital robbery.

Meanwhile Freddie had been arrested several times on charges ranging from vagrancy, bank robbery, burglary and assault with intent to kill. Each time he forfeited his bond, usually provided by Ma Barker. Finally he was captured and sent to the Kansas state prison at Lansing. There he met Alvin Karpis.

Lloyd was sent to prison on a charge of robbing the United States mail. He was still there when Ma Barker and Freddie were killed by federal officials.

Ma never was arrested. She always remained in the background, appearing tearfully when her sons were arrested, protesting their innocence, raising money for bonds, lawyers and to buy off, whenever possible, the prosecution.

With Arthur, Freddie and Lloyd all in prison, Ma consoled herself with Herman, who had joined with Ray Terrill in robbing banks. Terrill had devised a plan for hauling away movable bank safes in a truck, opening the safe at leisure later.

But officials caught Terrill and Barker at this stunt in a Missouri town and Herman was wounded. He escaped and went to visit Ma, who, abandoned by George Barker, was now living with an ex-bill poster named Arthur Dunlop.

Herman recovered from his wound. Then one night in 1927, a Newton, Kansas, traffic officer, J. E. Marshall, was shot and killed while hunting bandits who had robbed an ice station. Herman was accused of the shooting. The next day Herman's body was found in a weed patch near Wichita, Kansas. He was listed as a suicide, but it is thought he may have been wounded by Marshall.

Four years later Fred Barker was released from Lansing. He went to Herb Farmer's place near Joplin, Missouri, to await his mother. Meanwhile Alvin Karpis joined him there. They went on some bank robbing journeys. Then they went to a farm near Koshkonong, Missouri, where they established an elaborate hide-out with an electric bell on the gate to warn them of the approach of strangers. A road ran through the farm leading across the line to Arkansas.

Neighbors noticed that the new comers did lots of target shooting and after their departure found tin cans riddled with bullet holes. The Barkers drove around the country in big cars, took many photographs and left them at West Plains to be developed. Dunlop was there, Barker, Karpis and Ma Barker. Women came and went, one of them said to be the wife of Alvin Karpis. Paula Harmon, Fred's woman, probably was there too. The men were known as Dunn and Hamilton.

Then the gang was suspected of a store robbery. Sheriff Kelley of West Plains encountered Barker and Karpis at a garage and stopped to question them. The boys shot and killed him. They fled, leaving trunks of clothes, old letters and photographs in the hide-out. Searchers were astonished to find several dolls and Bibles. There were letters from the boys in prison and old grade cards dating back to when the young Barkers were attending southern Missouri schools.

The Barkers fled to Kansas City and were frightened away from there two months later by the arrest of Harvey Bailey, Jimmy Keating and Tommy Holden on a public golf course. Bailey had a stolen bond on his person that he had obtained when he and the Barkers and Karpis robbed a Fort Scott, Kansas, bank. The gang already was suspected of

a robbery at Flandreau, South Dakota, and of some bank robberies at Reno. On the way back from Reno the bandits were said to have robbed the First National Bank at Fairbury, Nebraska. Earl Christman, one of the gang members, was shot and fatally wounded in a gun battle with pursuers.

Next the Barkers went to South St. Paul, Minnesota, where Ma Barker rented an apartment and planned a series of robberies. Her get-away charts were said to be marvels of detail and she was an expert at casing a bank. Posing as a demure old lady, she would enter a bank, get a small bill changed, while her shrewd eyes took in the arrangements and her soft voice asked a few apparently harmless questions.

Dunlop was presently found dead near a Minnesota lake. Near him was a woman's bloodstained glove. Underworld rumors said he "got in the way."

About that time, too, the gang tried to make arrangements with an attorney to help Harvey Bailey. The bandits were not satisfied with the work of the attorney. He was told to meet them near Tulsa, Oklahoma. He did and never returned alive.

The gang went back to St. Paul. The group was growing steadily. Besides Alvin Karpis, Fred Barker and Ma there was Shotgun Ziegler, Volney Davis, Russell Gibson and Jesse Doyle. They were all busy with the \$200,000 kidnaping of Edward G. Bremer, St. Paul millionaire, when Verne Miller sought their aid to release Frank Nash, June 17, 1933.

Presently another Minnesota millionaire, Hamm the brewer, was kidnaped and \$200,000 ransom was obtained. The Barkers were in big dough. But Shotgun George Ziegler was talking too much. So on March 20, 1934, he was shot, punctured by charges from four shotguns. It is rumored that Ma Barker ordered his execution. However, evidence was found on his body and in his apartment to connect him with the Barkers.

The "G-men heat" was on and the Barkers had to split. Arthur went to Chicago with Volney Davis and Russell Gibson. Ma Barker and Fred went to Florida where Fred rented a house at Oklawaha, Florida, under the name of J. C. Blackburn. It was a big swanky place. Ma Barker liked to live luxuriously.

For two months all went well. Volney Davis and his woman visited the Barker's Florida home. Harry Campbell came, and Alvin Karpis and his woman, Dolores.

Then officials located Arthur Barker in Chicago. Sixteen heavily armed federal special agents surrounded the apartment house and with tear gas bombs drove the occupants outside. The criminals wore bullet proof vests, but the agents had new guns firing ammunition that penetrated the vests. Gibson was killed, Monty Carter and Arthur Barker, captured.

In the apartment agents found a letter with an Oklawaha postmark. Officials in Florida were notified. The big white house was located.

Early on the morning of January 16, 1935, special agents surrounded the Barker house. An inspector knocked at the door and asked Mrs. Barker and Fred to surrender.

"To hell with all of you," shouted Ma Barker. She opened fire. So did Fred.

Tear gas bombs were fired into the house, but still the Barkers stayed there, returning shot for shot. Finally Ma Barker fell dead on her own gun. Then Fred dropped dead with fourteen bullets in his body. The Barker-Karpis gang was broken up.

George Barker sent for the bodies of his wife and son and they were buried near Welch, Oklahoma, by the side of Herman Barker. Although Ma Barker had \$10,200 in bills of large denominations in her purse, her forgotten husband had to pay the funeral expenses.

Lloyd still is in Leavenworth prison and Arthur has been sentenced

to life imprisonment. How the other leader of the gang was captured is told in the story of Alvin Karpis.

ALVIN (OLD CREEPY) KARPIS

Formerly Public Enemy No. 1, Raymond Alvin Karpavicz, was unique in the annals of crime. Even among men accustomed to brutal murder, snatching of children from their families and terrorizing of hold-up victims, he inspired horror by his cold cruelty.

Karpavicz, known as Karpis, had many aliases, among them, A. Carter, Raymond Hadley, George Haller, Earl Peel, George Dunn, R. E. Hamilton and Ray Hunter.

Alvin's parents, John and Anna Karpavicz, migrated from Lithuania to London, then to New York, to Grand Rapids and to Montreal, Canada, where Alvin was born in 1909. When Alvin was two years old his father moved the family to Topeka, Kansas, where they lived for twelve years.

Neighbors of the Karpis family said that Alvin, a thin, scrawny, sickly youngster, was petted as a child. He was quiet and unobtrusive and made excellent grades at grammar school. He moved with his family to Chicago in 1923. There he became ill and the doctor said he suffered from leakage of the heart. He must rest. So Alvin was sent back to Topeka to live with a married sister.

Soon afterward there was a series of burglaries in Topeka. The loot was traced to Karpis. At the age of sixteen he was sentenced February 25, 1926, to 10 years in the state industrial reformatory at Hutchinson, Kansas, on a charge of second degree burglary. He escaped March 9, 1929. He returned to his parents and went to work in a medical supply house. A pal of his reformatory days came to see him. He began taking mysterious trips.

Then March 23, 1930, Karpis, using the name of Raymond Hadley, was arrested in Kansas City, Missouri, on a charge of auto larceny and safe blowing and released to the Kansas state reformatory.

In a month he was transferred to the Kansas state prison at Lansing, Kansas, and started out to win freedom by good behavior. In Lansing he met Fred Barker, one of Ma Barker's brood of criminals. They became friends.

When Alvin Karpis was released the Barker-Karpis gang came into existence. This group is credited with a series of bank robberies which resulted in the deaths of four policemen, a civilian and one of their own gang.

Karpis married a girl and deserted her. He was said to be "kill-crazy." Still a youth, he had the appearance of sinister age. His cheeks were drooped and jowled, his eyes frigid, penetrating and hard, his mouth a cruel, thin slit. He matched even Ma Barker in cold calculation.

The Barkers and Karpis established a hide-out near Koshkonong, Missouri, a farmhouse out in the country near the Missouri-Arkansas line. A road through the farm made it convenient to skip across the line should Missouri officials be inquisitive.

The gang prowled around the countryside at night. They took photographs which they left with a West Plains, Missouri, studio for development. They spent hours shooting holes through tin cans. Then they were suspected of robbing a West Plains store. Sheriff C. R. Kelley went to investigate. He was shot down and the gang fled.

Officials immediately went to the hide-out and searched it. Trunks were found filled with numerous snapshots of the Barkers. Ma Barker was sentimental over "her boys." There were stacks of letters they had written her when she was trying to get Arthur out of prison. Mrs. Barker was always referred to as "Darling Little Mother." There was even the grade cards of the Barker boys when they went to school in Christian County, Missouri.

There was an electric alarm on the cattle gate leading to the Karpis stronghold which rang a bell in the house. The house contained a plan for robbing the First National Bank at Thayer, Missouri, and a marked road map with circles around numerous towns having prosperous banks.

The letters proved mines of information about the gang activities and "poor dear Doc" who was in prison. The boys always wrote their mother that they were "being true to her."

A man named Dunlop, then passing as Ma Barker's husband, was in Koshkonong with the gang. Later it was reported that he was shot by the Barkers because it was feared he would talk. Karpis was known as George Dunn then and Fred Barker used the name of Hamilton.

A woman said to have been the first Mrs. Alvin Karpis arrived on the bus from Chicago a few days after the Barker-Karpis gang had fled. She gave the name of Lee Hamilton, but later said her real name was Dorothy Shuman. Apparently she was the bride Karpis deserted. She was described as having hennaed hair, too much make-up and a "hardboiled" appearance.

In the big kidnappings of the Barker-Karpis gang, Karpis took a prominent part, driving the kidnap car, and helping knock out the victim so he could be easily taken away.

Typical of the tales told of his cruelty was the incident of the slain companion in the Fairbury bank robbery. Earl Christman was wounded in a gun battle. The gang drove hastily to Kansas City and hid the wounded man in the attic of a house belonging to a friend. A hoodlum doctor was summoned. But Christman died. The gang is said to have buried the body secretly at night. Relatives of the slain man tried to find the body. But Alvin Karpis vetoed the suggestion that they reveal the secret.

"Too much heat on us now," he is supposed to have said. "The cops would find out about it and it might cause trouble."

When Jimmy Keating, Tommy Holden and Harvey Bailey were arrested on the Old Mission golf course in Kansas City, Missouri, Alvin Karpis had an apartment out on Ward Parkway in the same city. Ma Barker and Fred were there with him. Within half an hour of the arrest, someone telephoned Karpis. The Barkers and Karpis came to Kansas City shortly after the shooting of the West Plains, Missouri, sheriff two months before and they were waiting for the release of Arthur Barker from the Oklahoma prison. Hearing of the arrest, they immediately fled from Kansas City—for Harvey Bailey had in his possession, when arrested, a bond stolen by Bailey, the Barkers and Karpis in Fort Scott, Kansas.

In St. Paul, Karpis met a seventeen-year-old girl named Dolores Delaney. She had previously been the friend of Karpis. They began living together and presently fell genuinely in love.

Shortly after this there occurred the hundred thousand dollar kidnapping of William Hamm, St. Paul brewer. The young lovers fled to Chicago. It was an odd romance, even for the underworld where all love affairs are tinged with the fantastic. The seventeen-year-old girl continually saw her lover's picture in newspapers as a wanted, ruthless murderer. She could have no settled home because Ma Barker insisted that the gang keep on the move and live unobtrusively. Yet she stayed faithfully by Karpis.

Edward G. Bremer, St. Paul millionaire, was kidnapped and held for \$200,000 ransom. One of the gang members left fingerprints on a gasoline can. The Karpis-Barker group now was widely sought as bandits and kidnappers.

Alvin Karpis decided to try to disguise himself by plastic surgery. Dolores, now pregnant, nursed him after his face had been lifted and

his fingertips slashed almost to the bone. The heat was on Karpis. Dolores had to be the go-between with scattered members of the gang.

Extreme caution had to be exercised. Three of the women connected with the gang got drunk in a Cleveland hotel in September of 1934. They were arrested. Afraid of information leaking out, the gang scattered. Alvin Karpis went to Havana. Then Karpis received a tip that the federal agents had followed him to Cuba. He and Dolores dashed away to Florida.

While the Karpis couple was hiding in a secluded part of Miami, federal agents tracked down Ma Barker and Fred. They refused to surrender and both were killed. Arthur Barker already had been captured in Chicago.

Dolores was wounded in a gun fight with officials and captured in Atlantic City. Her child was born shortly afterward. She was sentenced to five years in the Milan reformatory at Milan, Michigan, on a charge of harboring criminals. The child was turned over to the elder members of the Karpis family.

Karpis meanwhile was hiding out in Ohio, where he was said to have purchased protection in one town. He fled from there to Hot Springs, Arkansas.

Funds ran low and in November, of 1935, he robbed a train at Garrettsville, Ohio. Then he fled back to Arkansas. But police had been making inquiries there. He wandered off through Texas, Mississippi and Florida.

Word came from Hot Springs that all seemed quiet. He returned to his hide-out there. But officials were still on his trail. Karpis hurried away. He went to New Orleans and indulged in his favorite sport of fishing. Federal men trailed him there. His apartment was discovered and he was arrested as he left his home. Taken to St. Paul, he was given a life imprisonment sentence and then sent to Alcatraz prison, California.

THE MACHINE GUN KELLYS

George Kelly Barnes, known to newspaper readers as Machine Gun Kelly, is an excellent type of a small fry gangster made into a big shot by publicity. Only in this case the publicity was devised by his limelight seeking wife, Kathryn Kelly.

Kathryn had been married twice, divorced once and widowed once—some say by herself—when she met Kelly, then a small time bootlegger. Kathryn was a shoplifter and bootlegger by profession, but she had higher ambitions. And when George fell for her in a big way she decided to use him as her instrument in getting to the top.

Since the story of George Kelly is chiefly the story of his wife, her career is more significant than his. Born in Mississippi, she was the daughter of a respectable father and a criminal-minded mother. Her first marriage was at the age of fifteen. After the birth of her daughter, she went home and divorced her husband. Then she drifted to Fort Worth, Texas, from Saltillo, Mississippi, and married a bootlegger named Thorne. He bought her a handsome home, but there the life of luxury Kathryn craved ended, so the two started quarreling.

Presently Charlie Thorne was found dead, apparently a suicide, with a typed note saying: "I can't live with her or without her, hence I am departing this life." Oddly enough, the rather dramatic language of this note bears a striking similarity to ransom notes later penned by the talented Kathryn.

For she was talented. Good looking, always well dressed, she played the piano well, held several good jobs before she entered crime, and possessed marked charm.

She was twenty-three when she met George Kelly in Oklahoma City. She saw possibilities in this thick-set powerful, brown-haired man. She

bought him a machine gun and started him target shooting until he could knock a row of walnuts from the top of a fence. She is even said to have presented bullets to friends, remarking that they were souvenirs of Machine Gun Kelly.

About this time, however, Kelly was captured for bootlegging and sent to Leavenworth federal prison. There he met Frank Nash, Charlie Harmon, Tommy Holden and Jimmy Keating. He even helped Keating and Holden to escape. But they were not overly impressed with him. Kathryn had not yet press agented him to fame.

While Kelly was in prison Kathryn was said to have occupied herself shoplifting and acting as locator for a burglar-gangster. Once she was found in possession of stolen property. But she pleaded innocence, saying she did not know that her friend was a thief. And she was released.

When George, his sentence reduced for good behavior, was released from prison in 1931, he and Kathryn were married. Kathryn started out to make connections for him, playing up to the wives of the men George had met in the penitentiary. She was also invaluable in other ways. She was nearby when George and some friends robbed a bank at Tupelo, Mississippi. She is said to have helped plan the robbery at Dallas, Texas, and another at Tacoma, Washington.

Kathryn was good at casing a bank and making a get-away chart. Meanwhile she was riding high, dressing expensively, driving huge cars, playing up to the criminal aristocracy. When Frank Nash was killed and Verne Miller had to go into hiding as a result of the Union Station massacre in Kansas City, Kathryn decided that it was time the Kellys were at the top.

The quickest way of getting big dough seemed to be through the snatch racket. So there was a kidnapping at South Bend, Indiana. But something went wrong. The man couldn't raise the money. He promised to do so if released, but failed to come across.

Kathryn was not discouraged. She even told a detective friend in Fort Worth that she was thinking of going into the kidnapping game.

A man named Albert Bates, a tall, middle-aged bandit, was now a member of Kelly's gang. Bates had helped in the robbery of a Colfax, Washington, bank. He was an ex-burglar, who had been given a long sentence in Nevada and then paroled. Later, he was sentenced to six months for larceny in Utah and served that. Following his Utah conviction he was sentenced to from three to five years in the Colorado penitentiary.

The Kellys and Bates decided to invite the distinguished Harvey Bailey, mint and bank robber, to help them. They went to Oklahoma City, Oklahoma, and spent a week looking over the situation.

Then one night, two men, one armed with a pistol and the other with a machine gun, walked into the home of Charles F. Urschel, oil millionaire. Mr. and Mrs. Urschel and Mr. and Mrs. Walter R. Jarrett were playing bridge. The bandits, now kidnappers, took with them both Urschel and Jarrett, but Jarrett was robbed and released about twelve miles from the city, while Urschel, bound and blindfolded, was carried on. Nine days later Urschel was released upon payment of \$200,000 ransom.

Kathryn Kelly is said to have urged that Urschel be killed. But the others in the group refused. However, they may have later regretted that generosity.

For Urschel possessed a photographic memory and he began pouring details of his capture into the ears of Federal Bureau of Investigation men, taking charge of the kidnapping under the so-called Lindbergh law.

Urschel remembered the weather, the amount of rainfall, the passing of a plane over the house at certain times each day. He managed to describe the house with amazing accuracy—so many steps from the gate

to the door, so large rooms, so many persons, a certain kind of tin cup he drank from.

This place fitted in neatly with the Texas ranch home of Mrs. R. G. Shannon, Kathryn's mother, now married to a previously law-abiding rancher.

Mr. and Mrs. Shannon were promptly arrested. Meanwhile Kathryn and George headed north, going to Omaha, then Chicago and finally to Minneapolis where they disposed of some of the ransom money. Then, spending money lavishly, they started for the east. In Cleveland they picked up a newspaper and saw that the hot money shovers in Minneapolis had been arrested. Hurriedly they started out again, going to Chicago and then to Des Moines. Kathryn still was confident, still planning bigger things.

But in Des Moines she read that her parents had been arrested. By that queer sentimental streak which often exists in the most ruthless criminals, she was fond of her mother and of her young daughter. She apparently went berserk when she read of her mother's arrest. Through the underworld she offered to trade the government her husband for the release of her parents. She wrote letters announcing their innocence and denouncing George for dragging her family into trouble.

Nothing happened. So she dashed back to Texas to confer with attorneys. She found that the government was not swapping anything for anybody.

Alarmed for herself by this time, she started on a long series of journeys, pulling one of the cleverest schemes of disguise reported in the annals of crime. Already George had bleached his hair and she was wearing a red wig. She "borrowed" a twelve-year-old girl from casual acquaintances because she would "love to take her on a trip."

She took the child to Chicago and there the Kellys posed as a devoted couple with a young daughter. Meanwhile Kathryn was still fighting for the release of her parents. She bombarded the Urschel family with letters proclaiming the innocence of herself and her family and blaming everything on George. She made him put his fingerprints on a confession which she mailed to the police.

The patiently tracing police had found the real parents of the child. Then the child was returned. Special agents met her. The Kellys had gone to Memphis. The address was found and the Kellys were arrested, taken by surprise and captured without resistance.

In jail Kathryn continued to storm. Everything was George's fault. She pretended to have appendicitis. She tried to bribe a jailor with \$15,000. She brought her young daughter into court to obtain sympathy for her. But all her tricks failed. She and George were both convicted and sentenced to life imprisonment.

Mr. and Mrs. Shannon received the same sentence as did Bates and Harvey Bailey. All had been tried by 1933. Mrs. Albert Bates had fled to California where she buried her husband's share of the loot. But she was followed and most of the money recovered.

JAKE AND RALPH FLEAGLE

Jake (Wolf) Fleagle's real name was William Harrison Fleagle and his brother was inappropriately named Ralph Emerson Fleagle. But culture played little part in their lives.

The elder Fleagles went to Kansas from Iowa half a century ago and settled in the short grass country of the western part of the state. There four boys were born. The two older ones stayed on the farm, helping till hard, baked soil.

But Jake and Ralph disliked the poverty of the shiftless family. They did not take kindly to herding cattle, killing rattlesnakes, gathering what harvest remained after droughts or floods which washed the soil into

numerous gullies. So they left the ramshackle Fleagle home in 1910, going west.

They worked as street car men in San Francisco during the strike. Then Ralph wandered east, continuing his street car work. Jake drifted up and down the Sacramento valley, following the crap games that centered around the fruit harvests. Then he came east as a train butcher working out of St. Louis.

Jake, small, active, more eager for spending money was the first of the brothers to get into trouble. He was arrested in Oklahoma on a charge of second degree robbery and sent to the state prison at McAlester for a year and a day.

After he got out of prison, Jake joined Ralph in rambling around the country. Then in the early 1920's they went back to Garden City, Kansas, to visit the folks. Thereafter they made frequent visits home. Each time they brought thousands of dollars to deposit in the local banks.

The Fleagles now were launched into their criminal careers. Jake had met crooks in the Oklahoma state prison and he used them to enlarge his acquaintance. He and Ralph inaugurated a new type of criminal organization.

Most of the gangsters stick together. In the lives of other bandits the same names keep cropping up. When Frank Nash was mentioned, the names of Keating, Verne Miller, Tommy Holden, Eddie Green and Charlie Harmon always came into the conversation. So did that of Harvey Bailey. The Barker-Karpis gang stuck together for years. The Dillinger group might separate occasionally for vacations or prison sentences but it came back together again.

The Fleagles, however, selected new men for each job, split the proceeds immediately, taking much the largest cut, and then separated from their companions. It was a highly successful method, since it prevented such a thing as a Fleagle gang from becoming well known.

The Fleagles roamed up and down the Sacramento valley during the fruit harvesting season, raiding the crap games. Big money was wagered at these sessions. The Fleagles would appear with ready guns, scoop up ten thousand dollars, pay off their assistants with a thousand dollars each, pick up new help, raid another crap game and then, when they had acquired forty or fifty thousand dollars, go back to Kansas.

In Kansas, Mrs. Fleagle told the neighbors that her sons were in the cattle business in the west. They were also making money hand over fist on the stock market, she said. Bankers were curious about these big deposits, especially when Jake lost about fifty thousand dollars gambling in Colorado and had to draw out the entire sum at one time. The sudden withdrawal almost ruined the bank. The Fleagles, however, merely said that they had gone into the cattle and horse business and had to make a huge purchase.

Apparently no one noticed that the Fleagle's profitable sales of cattle and horses always coincided with a major holdup. The Fleagles now are believed to have robbed many Kansas banks and also of having held up several California trains. But at the time no suspicion was attached to them.

Little, if any, of this money ever went to their poverty-stricken family. The brothers grew middle-aged and prosperous in crime. Ralph, the tall, lanky brother, now was white-haired. Jake's face showed signs of dissipation.

The family asked embarrassing questions. So Jake and Ralph decided not to visit them between "deals" any more. Instead they bought a "horse ranch" some distance away from home. The Kansas horse ranch, needless to say, never had a horse on it during the Fleagle ownership.

They arranged a granary so that one side could be raised to admit autos that should be hidden. The old house was a virtual arsenal. The

ranch was ideally located in a wild, almost deserted country with bad roads twisting around gullies.

To celebrate the new hide-out, the Fleagles decided to rob the First National Bank of Lamar, Colorado. For assistants they would have Howard Royston of California, and George Johnson Abshier, former bootlegger of Grand Junction, Colorado. The date of the robbery was postponed several times because the Fleagles were superstitious. If they glimpsed a black cat the robbery was off for the day.

Finally on May 23, 1928, they set out for Lamar. They left the car at the curb in front of the bank and the four men, all wearing masks, went inside. Each man was armed with a revolver or rifle. Jake and Ralph carried grain sacks in which to put the loot.

Officers and patrons of the bank were lined up. The Fleagles began scooping up money. A total of two hundred and eighteen thousand dollars was put into the bags. Then the bandits started to back out of the building.

A. N. Parrish, elderly president of the bank, jumped forward with an old forty-five, which hadn't been fired for fifteen years. He fired at Royston. The bullet broke his jaw in three places. The bandits returned the fire. Parrish was shot dead. J. N. Parrish rushed to his father's aid. He, too, was shot down. Then Everett Kessinger, assistant cashier, and E. A. Lungren, bank teller, were forced to accompany the bandits in the car.

Pursuit started immediately. The sheriff, in a fast auto, started to overtake the bandit machine. The gang shoved Kessinger halfway out of the car so that any stray bullet would hit him. When this did not stop the pursuers, the bandits stopped the car, got out, put their hostage in front of them for a shield and began to shoot at the sheriff and his companion. At last a rifle bullet tore up the hood of the officers' car, breaking the spark plugs.

Lungren was released then and left standing in the road. Kessinger was taken with the bandits. Royston wanted a doctor for his broken jaw, but the Fleagles refused to stop. The car sped on into western Kansas. At the Fleagle hide-out Kessinger was bound.

That night Jake and Ralph went to the home of Dr. W. Wineinger at Dighton, Kansas. He asked the doctor to come treat a man with a crushed foot. The doctor was said to be unwilling but finally went in his own car with Jake.

Sometime during that ride Jake left a fingerprint on the car window that was later to prove his downfall.

A day later Doctor Wineinger's absence was noticed. An airplane was used in the search and in a gullied district near Garden City searchers saw a car at the bottom of a small canyon. The plane landed and the sheriff investigated. Beneath his car was the body of Doctor Wineinger. He had been bound and blindfolded, shot in the back with a shotgun loaded with slugs and thrown into the gully. Then the car had been pushed on top of him.

Thrust into one of Wineinger's pockets was a scrawled note: "Sweet revenge from Enterprise. Oh, oh you murderers, ye Doctors."

This diverted suspicion from the Fleagles for a while. Wineinger had come from Enterprise, Ohio, and he had an enemy, a former convict and ex-preacher who hated doctors.

But when the body of Kessinger was found in a lonely shack near Liberal, Kansas, bound, blindfolded and shotgunned to death, the two murders were connected. Hugh Harper, Colorado Springs chief of police, insisted that the doctor's murder was the result of the Lamar robbery, pointing out that one of the men had been wounded.

Meanwhile officers arrested four men, Whitey Walker, an Oklahoma convict; Charles Clinton, the ex-preacher and outlaw who hated doctors; Alfred Oliver, an ex-convict, arrested in St. Louis, Floyd Jarrett, Okla-

homa bandit, captured in his native state. They were all identified as having been the bank bandits.

Meanwhile federal officials were trying to identify the single fingerprint left on Wineinger's car. A man giving the name of William Harrison Holden was arrested at Stockton, California, on suspicion of bank robbery and then released. But his fingerprints were sent to Washington to the Federal Bureau of Investigation. One of them was identical with that on the Wineinger car. They were also identified with those of Jake Fleagle, convict No. 6591, Oklahoma penitentiary, back in 1916.

Investigation began. Ralph Fleagle was traced to Kankakee, Illinois. He was caught there. Questioned, he began to talk. He named Royston as the man who had been shot in the robbery. Royston was arrested at San Andreas, California, where he had married a school teacher and had a young baby. Royston also confessed. Abshier was arrested. Then began the chase for Jake Fleagle.

Finally he was traced to a chicken farm near Branson, Missouri, where he and a friend had been living as the Cook brothers. He walked into a trap on a train and in a gun battle was fatally wounded. He died in a hospital in Springfield, Missouri. The officers found that his white cottage in the Ozark hills was a veritable arsenal. It also was full of detective story magazines. Neighbors had thought that the Cooks were pleasant, polite people.

After Fleagle's death, his home became a tourist attraction. Natives spent much time digging for the "Fleagle gold" but none was ever found.

WILBUR UNDERHILL

Like many another modern criminal, Wilbur Underhill started his career at the bottom of the ladder—bootlegging. Back about 1918, Picher, Oklahoma, near which Underhill had been reared, was a typical mining community with numerous speakeasies, which created a good demand for moonshine whiskey. Underhill soon found that he was able to pick up a few dollars by supplying a small part of that demand.

Underhill was of German-American descent, a tall man, with gray eyes and light, unruly brown hair. His lower jaw carried a peculiar lump on each side.

As Underhill extended his bootlegging activities, he met more and more of the bigger men in the business. At that time, a great deal of the liquor consumed in the Tri-State region came from the stills secreted in the Osage hills. Better roads and the prosperity brought by the oil industry has, however, radically changed this part of the country since Underhill's time, and the region is no longer quite the impregnable bandit hide-out it once was. But at the time of Underhill's youth, even small-time bootleggers had innumerable opportunities to meet many of the nation's boldest criminals, for the Osage hills were then indeed a criminal paradise offering security from the law and at the same time affording ample facilities for rough and boisterous entertainment.

Most of the liquor at that time was produced by Henry Grammer. Grammer's enterprise was enormous. Far back in a dense woods lay his plant. His batteries of stills were operated by criminals from everywhere. Power for the works was supplied by a private electric plant. The property, which was lighted at night in such a way that intrusion would be extremely difficult, was surrounded by armed guards whose business it was to direct away from the premises anyone who innocently happened along and to shoot anyone who might dare attempt to invade the stronghold.

Grammer's deliveries were made in automobiles and trucks which were driven by convicts. These drivers were usually faithful to their boss, but now and then they arranged through an outside confederate for the hi-jacking of their cargoes. Underhill soon saw that he could make more

money if he could sell whole loads of liquor instead of just peddling a few cases at a time. So he became a hi-jacker, at first working and splitting the profits with a Grammer driver, and then proceeding to hi-jack a truck on his own hook.

From bootlegging and hi-jacking, Underhill graduated to burglary. Arrested in Joplin, Missouri, on a burglary charge, at the age of nineteen, Underhill was convicted and sentenced to the Missouri penitentiary for two years. However, within a year after his release from the Joplin sentence, he was sent again to the penitentiary, his second conviction being on a charge of armed robbery. For good behavior, his sentence was shortened.

A short time after his release, Underhill, with Ray Terrill and Matt and George Kimes, robbed a bank in a small Oklahoma town. Terrill and the Kimes brothers were friends from his old hi-jacking days. This gang staged several raids on banks, but they finally dissolved their outfit. Underhill, according to the Kimes brothers and Terrill, was always wanting to kill someone, which they figured was tempting trouble a little too much. So, Underhill elected to go out by himself and for himself, now under the alias of Henry Wilbur.

On a Christmas Eve, George Fee was clerking in a drug store in Okmulgee, Oklahoma, when a man entered, drew a gun, and demanded the store's money. Fee thought the man was joking, hesitated. Underhill fired, scooped the money out of the cash register, and fled. Before he died, Fee was able to furnish a description of his assailant.

A week later Underhill was arrested in Tulsa, taken to Okmulgee and placed in jail. But someone smuggled some hack saws into the jail, and Underhill cut his way through the bars, escaping to the ground by means of an improvised rope made of bed sheets.

Officers figured rightly that Underhill would soon appear in his old home town, Picher. They prepared a trap, and Underhill walked into it, but he shot his way out. Earl Neal, an oil worker, who was an innocent bystander, was killed in the line of Underhill's fire. Underhill was captured later and sentenced to life imprisonment for the murder of the drug clerk, Fee, while other possible charges were left pending.

In prison, Underhill shortly attempted an escape but failed, and was sentenced to solitary confinement. After being released from "solitary," he was sent with an outside road construction gang. His long awaited chance arrived, and one day Underhill slipped from the line of convicts, fled like a wild animal into heavy brush, and made straight for a bluff from which he dove into a river and swam to safety.

Shortly afterward, Underhill turned up in Wichita, Kansas, where he lived in a hotel. Among the guests of the hotel—farmers, cattlemen, oil men, and plain business men—he moved unrecognized and was accepted as a legitimate business man. He wore good clothing and paid his bills promptly. However, a robbery was committed one day, and it was reported that the stolen goods had been seen in Underhill's room.

Policeman Merle Colver was sent to Underhill's room to investigate the report that the stolen articles had been seen there. Colver never asked any questions, for, as he stood outside the door, Underhill suddenly let it fly open and fired point blank at the officer, who fell mortally wounded. Underhill was captured by other policemen as he tried to escape.

Kansas had no capital punishment law, and Underhill pleaded guilty to having killed officer Colver. He was sent to Lansing prison for life. This saved him from being returned to Oklahoma and being sentenced to death for the Neal murder.

In prison once more, Underhill again began to plan an escape. He and Harvey Bailey, with the assistance of help on the outside, planned and executed the famous Memorial Day escape from Lansing, the details of which are told in the account of Bailey.

At large again, Underhill, now with a record of a dozen years of crime, began a bloody series of bank robberies, hold-ups, and murders. Soon he became known as the Tri-State Terror.

Underhill's escapades were spectacular. Once, while fleeing from pursuing officers, he suddenly stopped his car, got out and, armed with a machine gun, made motions indicating that he dared the officers to come any further if they thought they could capture him. Another time, he and a band of desperadoes actually drove the officers of the law outside a town, and then sped furiously through the streets, terrorizing the entire population. It is said that he occasionally robbed small banks by loading their safes on a truck and driving away.

His extreme recklessness soon made most criminals afraid to have anything to do with Underhill. Ultimately, he was charged with violating federal laws, and he found himself being hunted by the federal government.

Government agents tracked him relentlessly, but Underhill was always just one jump ahead. With his childhood sweetheart, Hazel Hudson, he boldly entered Colgate, Oklahoma, and the two were married. Then they disappeared. However, Underhill's downfall presently became only a question of time, for the federal agents drew their net tighter and tighter.

In December, 1933, the government men learned that Underhill and some of his friends could be found in a house at Shawnee, Oklahoma. This information was received late one cold, rainy night.

Seven special agents and eight police officers and deputy sheriffs left Oklahoma City immediately and drove forty-three miles to Shawnee at top speed. They parked their three cars at some distance from Underhill's hide-out and carefully planned their approach.

But a neighbor's dog heard the men and barked. A deputy swore under his breath at the dog, and in hushed tones the special agent in charge urged the men to hurry. Fortunately, they were able to take their positions before the dog's barking warned Underhill. Then the agent in charge raised his sub-machine gun. Scarcely fifty feet away stood Underhill in a lighted bedroom, evidently preparing to retire. On a table, visible to the agent, were two converted Luger automatics, each capable of firing thirty-one shots at the speed of a machine gun.

"This is the law," shouted the special agent. "Put your hands up, Wilbur, and don't reach for those guns."

Underhill stood motionless for a split second and then whirled himself past the table, seizing both guns. The special agent called out again. Underhill answered with a barrage from the automatics. The officers instantly opened fire from several vantage points and Underhill fell.

A deputy shouted, "We've got him!" But the special agent in charge, a veteran of many such battles, commanded the men to stand back. His judgment was right, for in a moment Underhill had gotten to his feet, both Lugers blazing into the night. This time 15 guns spat back at him.

But suddenly from the front part of the house another gun menaced the officers. A friend of Underhill, Ralph Rowe, had joined the battle. Underhill's wife screamed frantically as the two desperadoes, now out of sight fought on. The officers, using machine guns, rifles, and pistols, relentlessly poured a continuous stream of lead into the house. Suddenly the firing from the front widow ceased. Rowe had finally been wounded and was out of the fight. Then Underhill leaped into full view from his firing position, emptied his guns at the officers. He stood still for a fraction of a second. His heavy weapons—machine guns and shotguns—were in his car, which was in the garage. For once, Underhill was almost beaten at his own game of killing. Struck by a bullet, Underhill staggered, but still was able to make for a door leading into a hallway. The special agent called to him to halt. Underhill slammed the door.

"He's headed out!" someone shouted. The officers covered the front door as Underhill burst out and raced down the steps through a hail of deadly crossfire from the officers' sputtering sub-machine guns. Underhill stumbled forward, but did not fall. Another burst of fire. Underhill staggered again, undoubtedly wounded seriously, but he disappeared around the corner of a nearby house on the run.

The drizzling rain had turned into a downpour, making the hunt for Underhill even more difficult. With powerful flashlights, the officers searched all open garages, all the alleys—they checked every square inch of the neighborhood where Underhill might have hidden. But Underhill was not to be found. Bloodhounds were rushed to the scene, but the dogs only prowled about, unable to pick up a scent on the drenched earth.

In the meantime, however, Sheriff Stanley Rogers of Oklahoma City, heading another posse, was scouring other sections of the town. He heard a rumor that a staggering man had been seen at the rear of a furniture store. He and his man sped to the store, made entrance, and there, sprawled on a bed in a furniture display, they found Underhill, his body ripped by 13 bullets. But the Tri-State Terror was still alive! Nearly a week later, however, his wounds finally proved fatal.

KEATING AND HOLDEN

An ex-taxi driver, good looking, well built, witty, Francis L. Keating, rose to notoriety as a train robber. In 1929 he and Thomas Holden leaped into the railway postal car of the Port Huron and Chicago train at Chicago, overpowered the mail clerks, tossed two mail sacks out at a crossing and leaped from the train into a waiting auto. They escaped with one hundred and thirty-five thousand dollars, none of which was ever recovered.

Holden and Keating were captured and convicted in 1928. They were sentenced to twenty-five years in the federal prison at Leavenworth, Kansas.

In prison Keating formed the center of a group to which Frank Nash gravitated. He was one of the "big time" men who told Nash about the methods in the bigger cities.

Keating and Holden became trusties. Immediately they started planning an escape. Charlie Harmon obtained some extra trusty passes and forged the warden's name to them. George Kelly Barnes, later known as Machine Gun Kelly, photographed the two men and put their pictures on the passes.

Dressed in trusty raincoats, Keating and Holden were ushered by Kelly through the main corridor where a new guard was stationed. Then they calmly walked out of the prison. Clothes had been hidden by outside conspirators in a nearby haystack. Their prison uniforms discarded, Keating and Holden hitchhiked to Kansas City, Missouri. There they registered at a hotel under aliases and telegraphed to friends in Chicago for money. Two thousand dollars were said to have been sent them immediately. Keating and Holden taxied to the airport, and flew to Chicago. Thus ended one of the best planned of all prison breaks.

By the time Frank Nash had escaped, Keating and Holden were back in the gang and flush with money. They were said to have sent an "underground" message to Nash in prison telling him of the easy picking awaiting him in Chicago.

But when the famous criminal reunion took place in St. Paul, in 1931, Keating was present accompanied by a former manicurist named Marge, run-away sister of a Chicago policeman. Romance, it was said, originated when she manicured Keating's nails in a Chicago barber shop.

Keating became a member of Frank Nash's gang, which had headquarters in St. Paul, Chicago and Kansas City. Keating also made the rounds of the resorts, White Bear lake in Minnesota, Lake Geneva, Wis-

consin, and the lake shore resorts near Chicago. Occasionally he dropped down to Hot Springs, Arkansas, to play a little golf and take the baths.

Not much is known of Keating's life. He apparently was an amiable, efficient cog in the criminal machine. Like the others, he lived in excellent apartment houses and hotels, played golf on exclusive courses, wore good clothes, and spent money freely. One of his traits, which impressed Frank Nash, fresh from Oklahoma, was his liking for fifty-cent cigars.

Sometimes Keating teamed with Holden, Harvey Bailey and Frank Nash. Again he was with Bernard Phillips, former traffic policeman, who had been fired for extortion, turned to auto stealing and then served a prison term at Leavenworth. Phillips, Keating, Bailey and Nash robbed several banks together. George Kelly, free from his three year sentence on prohibition violation, also joined them at intervals.

Keating was present at the robbery of the Kraft State Bank at Menomonie, Wisconsin, when Frank Weber and Charlie Harmon were killed. He split the proceeds along with Miller, Nash, Harvey Bailey and Tom Holden. Then they all fled to Chicago to make plans for the prison break that was to release Earl Thayer and Grover Durrill.

Keating, Holden, Nash and Harold Fontaine were said to be the outside conspirators. Fontaine bought a big barrel of shoe paste. Guns were put in inner tube wrappings and thrust far down into the paste.

A truck was obtained to transport the barrel to St. Louis. Keating and Holden drove the truck while Nash sat in the back with the barrel and Fontaine sat in front with a machine gun. The barrel, marked with red paint, was shipped from St. Louis, and a wire sent to the convicts. The prison break was unsuccessful, however. So Keating, Holden and Nash called their women and set out on extensive travels. In the spring of 1932, they met in Hot Springs, Arkansas.

Keating went back north where he was known as Jimmy Stanley. Federal agents checking on Charlie Harmon's death found that Keating, under the name of Stanley, had recently patronized a golf equipment firm in Kansas City. Agents were sent to all the golf courses. At the Old Mission course, Keating, Holden, Harvey Bailey and Big Phip—as Bernard Phillips was known—were playing golf.

Phillips saw the agents approaching and fled. The others were arrested. Marge Keating, Lillian Holden and a woman describing herself as Mary Phillips were sitting in a parked car awaiting their men. They were held for investigation but released. Mary Phillips real name was said to be Winnie.

Keating and Holden were returned to Leavenworth. Phillips, who escaped arrest, was later killed. According to underworld reports, he was suspected of having tipped the officials to the whereabouts of the others. He was tortured, stabbed with an ice pick repeatedly, killed and thrown into a ditch.

CHARLES PRESTON HARMON

One of the minor members of the Frank Nash-Verne Miller-Keating-Holden gang was Charlie Harmon.

It is interesting to note, in recording the rapid rise and equally rapid descent of big time gangsters, that Harmon originally was one of the men who introduced Nash into criminal aristocracy. Later, his disciple was thought to have assisted in putting Harmon to death.

In 1930, when Harmon met Nash in prison, Harmon was a two-time convict from Texas. He had previously served a term in the state prison at Huntsville. A trusty, he is believed to have assisted in the escape of Francis (Jimmy) Keating and Thomas Holden, train robbers, who walked out of prison on forged trusty passes bearing photographs taken by a man named George Kelly, who was then working in the record room of the prison. Kelly later rose to fame as Machine Gun Kelly.

Harmon was married to a Texas girl named Paula. She came from a respectable family, had graduated from high school and from there went to a girls' finishing school. Afterwards she married a steamship officer and then divorced him. She took a business course and became an efficient comptometer operator, working for a large Texas firm. She met Harmon just after he was released from the Huntsville, Texas, prison, and in a short time married him.

Many of the women of big time gangsters had excellent educations and came from decent families. Just why those women would risk their reputations, their lives, and expose their families to scandal for the sake of gangster lovers remains a mystery. It may have been the lure of excitement. Most of them, when captured, would profess ignorance of the doings of their men. But many of them were active aids, driving get-away cars, nursing wounded men, arranging hide-outs, etc.

When Charlie Harmon was sent to Leavenworth prison, Paula went to Chicago and opened a house of prostitution. When Harmon was released, Paula went by plane to meet him. They met Frank Nash and Deafy Farmer in Kansas City and all went to the Farmer's home near Joplin, Missouri. Then they continued on to Hot Springs, Arkansas, where the Harmons rented a house and stayed for about six weeks. Charlie and Paula quarreled. Underworld gossip had it that Charlie disapproved of her activities while he was in prison. She went back to Chicago and to her house.

Charlie went back to Chicago and there was a reconciliation with Paula. She closed her house and together they went to St. Paul.

But Charlie and Paula continued to quarrel. According to Charlie, they somehow never got along so well after he went to prison and she started running a house of prostitution. There was another split-up. Paula went to visit her new friends, the Farmers. The gang molls did a good deal of visiting around, usually dashing from city to city by plane. Frank Nash was still with the Farmers and Verne Miller was there, with his moll, Vivian. They all returned to St. Paul.

Again the Harmons were reconciled. But they seem never to have gotten along with the rest of the gang. The women didn't care much for Paula, according to gossip. Perhaps they, too, disliked her former occupation.

Charlie, possibly to his surprise, found that his old prison pupil, Frank Nash, was quietly assuming the leadership of the gang. In prison Charlie had talked to Jelly Nash—in low-toned conversations—of the advantages of big time stuff, finger men, political connections, the disposal of stolen securities. Now he found that Nash was ahead of him, and was respected by such men as Verne Miller and Harvey Bailey.

He dangled around the edge of the set during the summer of 1931. The leaders did not trust him very much. He was a bad loser, they said, and not too good a companion in their leisure hours. He played golf with them and boasted of the handmade clubs he purchased from a Kansas City firm. Those clubs were to play an important part in the life of the gang in a short time.

Down in Leavenworth, Earl Thayer and Grover Durrill, old companions of Frank Nash in the Al Spencer days, were getting restless. They wanted to escape in order to join Nash in his new enterprises. The underworld grapevine buzzed with plans and speculations. Nash praised Durrill and Thayer. They were reliable. They had nerve. But the gang already was complete. Two more members would simply mean a smaller division of the loot.

But there was Charlie Harmon. They didn't really care for him, and he was always around and got in on the jobs. There was Frank Weber, and he was unimportant, too. However, Harmon was a bad loser. So

thoughts buzzed. If Thayer and Durrill were to crash out of the prison and join the others—someone must go.

Harmon was included in the hundred thousand dollar robbery of the Kraft State Bank at Menomonie, Wisconsin. A vice president of the bank was taken along as a hostage. The gangsters crowded into the purring auto parked by the curb and fled. They were hotly pursued. Gunfire started between the bandit car and the car first in pursuit. The lifeless body of the vice president was tossed into the road. Then followed the body of Frank Weber. The car gained as pursuers stopped to investigate. The bandits had escaped.

Two days later, the body of Charlie Harmon was found in a lonely stretch of woods. Soil under his fingernails, bloody scratches on the ground, showed that he had been alive when he had been thrown out.

Gossip in underworld circles said that some of the shots fired by the bandits had been aimed at targets within the car—Charlie Harmon was in the way—and now he was gone.

Paula Harmon read the newspapers and took a plane for Texas. She is supposed never to have received Charlie's share of the loot. She disappeared from gang circles until Fred Barker, who had met her in St. Paul and in other gang centers, remembered her idly, and mentioned her to Vivian and Verne Miller. Then she came back from Texas to be Fred Barker's moll.

The superstitious might be justified in saying that Charlie Harmon obtained revenge from the grave. For the prison break designed to furnish his successor failed. Thayer was recaptured and Durrill killed himself rather than be caught. And months later, federal agents traced Harmon's treasured hand made golf clubs to a firm in Kansas City, and there obtained news of Francis Keating and Thomas Holden, who were immediately arrested on the Old Mission golf course of Kansas City, Missouri.

CHARLES (PRETTY BOY) FLOYD

Charles Arthur Floyd, alias Frank Mitchell, alias Pretty Boy Floyd, was an Oklahoma bandit who rose to be a national figure. For some reason, possibly because the name Pretty Boy Floyd was a catchy one, Floyd's exploits became widely known and he was blamed for many crimes he did not commit. At one time he was supposed to be simultaneously in Hollywood making a motion picture, hiding in the Missouri Ozarks, hiding in the Osage hills and robbing banks in the east.

Floyd was only twenty-six years old when he was shot to death by officers. He was a medium sized man, five feet, eight inches tall, with dark hair and gray eyes. He usually weighed around 155 pounds.

Floyd was first arrested in St. Louis, Missouri, September 16, 1925, on a charge of highway robbery. He was sentenced to five years in the Missouri state penitentiary, December 18, 1925.

He next was arrested in March, of 1929, in Kansas City, for investigation and again in May for vagrancy and suspicion of robbery. Each time he was released the next day.

Then he was arrested in Pueblo, Colorado, May 9, 1929, for vagrancy, fined \$50 and sentenced to sixty days in jail. As Frank Mitchell, Floyd was arrested in Akron, Ohio, March 8, 1930, for investigation. His next arrest was in Toledo, Ohio, May 20, 1930, for suspicion. He was going under the name of Floyd then. He was sentenced November 24, 1930, to serve from twelve to fifteen years in Ohio state prison on a bank robbery charge and escaped en route to prison.

Floyd was a good time man. He played around the resorts, frequently posing as a wealthy tourist from Kansas City. In his native Osage hills, he had many hide-outs. He and his faithful companion, Adam Richetti, would lie around, getting drunk and sending to town for women.

Floyd was reckless. He lacked the suavity, the ability to plan, the cool calculation of the Nash gang, the Barkers and Alvin Karpis. He took risks.

For instance, on the day before the Union Station massacre in Kansas City, June 17, 1933, Pretty Boy and Richetti were in Boliver, Missouri. Sheriff Jack Killingsworth was summoned to a garage run by a brother of Richetti. Both Richetti and Floyd were there. They had a number of persons lined up again a wall and were threatening to shoot anyone who moved. The sheriff was ordered in the car as a hostage. They drove to Osceola, Missouri, where they changed cars by flagging down an insurance man and moving in with him. The journey continued until late at night when they drove into Kansas City by way of Kansas City, Kansas.

Floyd got out of the car there, went away for a few moments, and came back with an auto and a driver. He put his two machine guns and a steamer trunk in the new car and told the hostages to get the hell out of there.

It was this reckless desperado and his companion, Richetti, who were summoned at the last minute by Verne C. Miller to effect the forcible release of Frank Nash, captured by federal officials. It is said to have been Floyd who gave the order to fire. As a result Nash and several officers were shot to death.

Previously, Floyd had had a pretty easy time. He usually was flush with money and if he were short, he could always borrow. Now the "heat" was on him and he was decidedly unpopular in the underworld. His former haunts were all either closed to him or too well-known to searching officials.

So with Jaunita and Rose Baird, two Kansas City girls, frequent companions of Floyd and Richetti, they fled to Buffalo, N. Y., there to take refuge in a middle-class apartment house.

This time there was no heavy drinking, no night clubbing. They remained indoors except for visits to the grocery stores. Floyd played solitaire constantly and read detective magazines. Finally, he grew bored with the enforced confinement. He decided to come back to the west.

One of the girls was sent out to purchase a car. They started the journey at night, with the men taking turns driving while the other held a machine gun. They entered Ohio. It was a foggy, dreary morning. Suddenly the car left the road and crashed into a telegraph pole. No one was hurt, but the car was damaged. The girls were sent into town for a wrecker. It proved to be a lengthy job. The men remained in the country hiding.

Someone reported two suspicious appearing men lurking by the side of the road. Local officers went to investigate. Floyd fled, but Richetti was captured. Upon his identification, reenforcements were sent to capture Floyd. He chose to fight it out. Soon he was dead, and relatives took the body back to Oklahoma for burial.

EDWARD BENTZ

Edward Wilhiem Bentz did not make the mistake of other bank robbers in courting publicity and being pleased with national notoriety. And so, while he is little known to the general public, he rated high among criminal aristocracy for a quarter of a century.

Bentz was one of nine children born to a peasant family in Minnesota. When his father, a hostler, was killed by a runaway horse, the mother took the children to Tacoma, Washington. There Eddie attended grade and high school. And there he began a series of petty thefts. He was arrested and sent to the State Training school at Chehalis, Washington, for a year and a half, but he escaped.

Fourteen times in the next twenty-six years he was arrested. He escaped from jail twice and was paroled three times. He served about

seven years of sentences totaling thirty-four years. In most arrests, he either forfeited bond or managed to talk his way out.

Bentz, now sentenced to two years in federal prison for bank robbery, is a big farmerish looking man with crinkly reddish hair, a massive chest and a friendly manner. He was well educated, collected old books, operated a movie camera as a hobby and once ran a toy shop.

For years Bentz was regarded in criminal circles as a sort of superman. He was one of the leaders in the million dollar holdup of the Lincoln National Bank and Trust Company of Lincoln, Nebraska, in 1930. For years his yearly income was said to be nearly a hundred thousand dollars.

Bentz was an expert on banking matters. When he wanted to learn the finances of a bank, he would go to the public library and look through the newspaper files for the bank's financial statement. According to his own confession he robbed between "fifty and a hundred banks."

After his first sentence for larceny, he started out as a burglar. But he tired of that and went in for bank robbery, working with old timers in the middlewest in the days when safes were dynamited at night. He was associated with Eddie Doll and James Ripley, a criminal partnership known as the "Gold Dust Twins." They are accredited with the invention of the get-away chart and the present method of daylight bank robbery.

Doll and Ripley were accustomed to hire local men to "finger" the banks for them, obtaining information about how much capital would be on hand. Bentz eliminated this by his public library researches. Presently he became an expert consultant. Other robbers paid him to give them information and advice. Then he decided to go into the hot bond business. He took most of his share of the robberies in securities. These he kept until he thought it safe to market them. Police now are busy trying to find places where he is said to have hidden almost a million dollars worth of stolen bonds.

Eddie tried to avoid any crimes which might come under federal jurisdiction. And he always was careful to maintain a respectable appearance. He stayed in good hotels and apartment houses and occasionally took a furnished room in the home of a respectable family. He made a point of being friendly with the hotel and apartment house managers. He talked about books and photography. He played an excellent game of golf. He took the baths at Hot Springs and played the races at Agua Caliente, giving a perfect picture of a man with a respectable but substantial income.

Then, like other criminals, he fell in love and decided to reform. And he couldn't.

He married a seventeen-year-old girl named Verna, who had run away from her home in Milwaukee, Wisconsin, to Chicago. For a while they went night clubbing and she was thrilled to be the girl and later the bride of a real big time gangster with a machine gun and lots of money. Then she decided she wanted a home.

Bentz bought, under an alias, an expensive house in a good residential district in Portland, Maine. At the same time he went into the toy business, operating the Ultra Products Company. He went on the road to sell his products. But the talents that had made him a skillful criminal did not seem to work so well legitimately. The business lost money. New capital was needed.

Bentz got the new capital—in the old way—from the Caledonian National Bank at Danville, Vermont. But this bank was now protected by the federal officers. Federal heat was on Bentz and he went in hiding. His wife stayed with him for a while, but this was not so exciting. So Verna went home. Eddie went to New York. The one-time expert found that his friends were of the fair-weather variety. Finally he was captured in Brooklyn where he was living with a burglar. Tried, he was sentenced to twenty years in prison.

HARVEY BAILEY

Distinguished looking Harvey Bailey with his firm jaw, quiet ways and gray-touched temples was among the men Frank Nash met on his first journey to St. Paul in 1931. Later Bailey was a member of Nash's gang.

Then, passing under the names of Ben Bloom and Bill Breman, Bailey already was a "big shot" in criminal circles. He was supposed to have participated in the \$1,500,000 robbery of a Lincoln, Nebraska, bank and the notorious Denver mint robbery of the previous decade.

He also was reported to be connected with Al Capone. With Fred (Killer) Burke he was said to own a huge still in Chicago.

Little is known about Bailey's early life. He is described as being nearly six feet tall, with graying black hair, and brown eyes. He was of Scotch-Irish heritage. In 1932 he was about 45 years old.

Bailey first came to the attention of police March 23, 1929, when he was arrested in Omaha, Nebraska, for investigation in connection with a charge of hi-jacking and robbery.

As J. J. Brennan, Bailey was arrested next in Kansas City, Missouri, July 12, 1932, on a charge of robbing a bank at Fort Scott, Kansas. He was sentenced to from ten to fifty years in the Kansas state prison at Lansing and escaped May 30, 1933. Recaptured after the kidnapping of Charles F. Urschel, Oklahoma millionaire, he is now in Alcatraz prison, serving a life sentence.

But behind the skeleton outline of his official identification card, lies a long career of successful crime, stretching from New York and Newark to Colorado. With Frank Nash, Verne Miller, Eddie Green, Francis Keating and Thomas Holden he made numerous forays against banks in Missouri, Kansas and Iowa. Then he would go to Hot Springs to take the baths, play golf and relax.

Will Irwin, writing on bank robbers, in a national magazine, says that Harvey Bailey invented the scheme of disguising a furniture van by painting on its sides the names of a fictitious firm. An expert carpenter built a heavy folding runway which could be stored in the body of the van. The small fast car containing the bandits and the loot met the van in a remote spot and was driven inside. Then the bandits calmly drove past dozens of searching policemen.

From St. Paul and the Nash gang, Bailey is said to have migrated to Kansas City and Chicago and to have become connected with the Barker-Karpis gang.

Bailey was playing golf on the Old Mission golf course in Kansas City, Missouri, with Francis (Jimmy) Keating and Thomas Holden when federal officials, hunting Keating and Holden in connection with the robbery of two messengers from the First American National Bank of Duluth, Minnesota, surrounded them. As a matter of routine Bailey also was detained and searched.

On him was found a bond taken in the robbery of a Fort Scott, Kansas, bank. Bailey was said to have robbed the bank in company with Fred Barker and Alvin Karpis.

Bailey was taken to Fort Scott, Kansas, and sentenced to from ten to fifty years in the Kansas state prison at Lansing. But it didn't take the well-groomed, distinguished looking, golf playing Bailey long to weary of prison walls. The underworld grapevine carried tidings that Harvey Bailey wanted to "crash out." Wilbur Underhill, Oklahoma bandit, wanted to go along. Arrangements were made with Hazel Hudson, nee Jarrett, sweetheart of Underhill, for hide-outs in Oklahoma.

Frank Nash was one of the outside assistants in the prison break which occurred, ironically enough, just before Nash's own death in the Union Station massacre of Kansas City, Missouri.

On Decoration day, 1933, the American Legion teams of Topeka and

Leavenworth were playing baseball at the state prison. The score was two to two in the fourth inning. Suddenly, six convicts surrounded Kirk Prather, the prison warden. A looped wire was thrown over his head, binding him. Convicts produced guns from under their uniforms.

Guards in the tower turrets could not shoot for fear of wounding the warden. Then Harvey Bailey ordered them to throw down their keys and a rope and ladder.

Bailey and Underhill went over the wall, taking the warden with them. Nine other prisoners followed. Bailey was wounded in the calf of his right leg, but he continued.

The convicts scattered outside. All but six of them had simply taken advantage of the opportunity and had no carefully laid plans. But a car immediately arrived for the six, headed by Bailey and Underhill, and they sped toward Oklahoma, taking the warden and a guard along as hostages. On a deserted road near the Kansas-Oklahoma line the prison officials were released and told to walk back without watching the car. The convicts went onward.

While Bailey was in hiding and recovering from his wound, Nash was killed. There had been a bank robbery in Oklahoma and Underhill and Bailey signed—with several others—a confession to the robbery so they would not be suspected of attempting to free Nash. The others were guilty but Bailey and Underhill were simply seeking an alibi. The unique confession, containing full details of the robbery as well as the fingerprints of the signers, was mailed to officials while the robbers scattered. They preferred the risk of facing a state charge of bank robbery to possible suspicion of murdering G-men.

The shooting of Frank Nash and the fleeing of Verne Miller immediately afterward broke up the old group centering around Nash. Most of them turned to the Barker-Karpis gang. Bailey already was connected with that group. But he also was friendly with George (Machine Gun) Kelly and his wife, Katherine. Kelly now decided to branch out as a leader of criminal aristocracy. He would step into Nash's vacant shoes. And at the same time he would go into that newly profitable snatch racket.

Many of the true bandits looked down on kidnappers. Verne Miller refused to have anything to do with the Barkers after they entered that game. But Bailey was not so particular. He had been in prison and now he wanted some easy money. Kelly, together with his wife, Katherine, sometimes called Kathryn, and a bandit named Albert Bates, planned to kidnap Charles F. Urschel of Oklahoma City, Oklahoma. Bailey joined them.

Urschel was seized by two men who walked into his home as he and his wife and Mr. and Mrs. Walter R. Jarrett were playing bridge. Jarrett was taken along but released about twelve miles outside Oklahoma City, after being robbed. Urschel was blindfolded and held for nine days until a ransom of two hundred thousand dollars was paid.

But Urschel kept his head and carefully related to officials every detail he could remember of his kidnapping. The place where he had been held was discovered. It was on a farm belonging to Katherine Kelly's mother, Mrs. R. G. Shannon. Raids began.

By January 10, 1935, Bailey, Bates, Kelly, Mrs. Kelly and Mrs. R. G. Shannon had been arrested, convicted and given life imprisonment sentences. But Harvey Bailey was not yet through.

He was confined in the "escape-proof jail" of Dallas, Texas, while awaiting transportation to a federal prison. Soon he escaped. He had sawed his way out of his cell and intimidated the staff with a gun. However, he was captured within a few hours.

Bailey had been a federal prisoner under the "Lindbergh law" governing kidnapping when a prisoner is taken across a state line. So the

federal officials investigated his escape. The bars bore the marks of hack saws and of a Stillson wrench, which apparently had been used on the outside of the cell. The jail was searched and in the desk of one of the jailors a wrench, still adjusted to the size of the bars on Bailey's cell, was found. Thomas L. Manion, one of the staff of the jail, confessed to obtaining hack saws and even helping Bailey escape from his cell. Bailey, it seemed, had promised to pay him a large sum of money as soon as he could rob a bank.

But Harvey Bailey, mint robber, bank robber, kidnapper, now is serving a life sentence on Alcatraz island penitentiary, the last home of the desperate criminals. A hack-saw is no good there nor can confederates drop guns over the wall at night.

FRED (KILLER) BURKE.

Fred Burke's name is said to be Tom Camp. He broke into crime as a footpad and a rum runner. Then, in 1926, within about two weeks, four banks in Wisconsin, Indiana and Michigan were robbed of approximately a hundred thousand dollars each. Burke was said to be the leader in these crimes.

The daylight robberies were conducted with a heretofore unheard-of violence. Machine guns were fired on passersby in the streets.

Burke, according to Will Irwin, writer on crime topics, was one of the most dangerous of murderers. Dillinger and Floyd, Irwin believes, were mere bunglers compared to Burke.

Burke was said to have been the main killer in the St. Valentine's day massacre of Bugs Moran's gang in Chicago. All in all, police accuse him of committing eleven murders, and he, for seven or eight years, eluded justice.

With Harvey Bailey he is supposed to have operated a giant still near Chicago in the days of Al Capone's power. He also is said to have helped Bailey with several bank robberies.

Chance played its part in Burke's arrest. Hiding out from police, he went to work as a farm hand near Green City, Missouri, fell in love with his employer's daughter and married her. She did not know that he was a fugitive from justice, and it is possible that he may have intended to abandon crime and live on his accumulated loot.

He drove into Michigan and committed a minor traffic violation. A policeman approached. Burke shot and killed him. He fled back to the farm, where he was known as Mr. White.

A photograph of the swarthy Burke was published in a detective story magazine along with a notice of a reward for information leading to his capture.

An employee in a local restaurant recognized Burke's picture as "Mr. White." He told officials, adding that White spent a lot of money for a farm hand. Police surprised the dangerous killer when he was in bed and easily captured him. Taken to Michigan he was sentenced to life imprisonment.

SHOTGUN GEORGE ZIEGLER

Among the suave, distinguished-looking men who flocked around Frank Nash and Verne C. Miller was Shotgun George Ziegler, whose real name appears to have been Goetz.

Like his friends, he also met a brutal fate. Nash was gunned to death by conspirators seeking his release. But Miller apparently was shot by double-crossers who had hired him as a cheap gunman. And Shotgun George Ziegler literally talked himself to death. Underworld gossip said he was killed by his partners in crime because his tongue had become dangerously loose.

The Nash-Miller gang stands high in the annals of gangdom. They were more cultured, more brainy than the Floyd and Dillinger groups. They fitted better into swanky backgrounds. Nash, for instance, with his quotations from Milton and Swinburne, was far from being the typical criminal, although he had had a long career from the hard riding outlaws of the red dust country of Oklahoma to bank robberies in the northern cities. Miller with his luxurious homes, his tailored clothes, his fifty cent cigars, and his expensive dinners, certainly was not the popular conception of the hardboiled gunman. These men did not talk in the "deses" and "doses" portrayed in gang films. Verne Miller, in fact, disliked any type of rough talking.

George Ziegler was a golf fanatic and an amateur landscape architect. Sometimes, when flush with money, he would pose as a landscape artist, and actually obtained and carried out contracts. Too, he occasionally pretended to be a "government" landscape gardening expert.

Ziegler was a quietly dressed, keen appearing man. His "moll," Irene, was a reserved, good looking, quiet woman. They could, and did, pass everywhere as a respectable couple—until George lost control of his speech.

Many of the bandits who rose to notoriety in the 1930's never attempted any legitimate work. They usually started as youngsters, bootlegging or getting away with small robberies. Prison sentences brought them into contact with more experienced men. They made acquaintances in gangdom. And they started "up" the line into bigger activities.

But many of the Nash-Miller associates had previously had lawful occupation. Verne Miller, as has already been related, once was a showman, then a law enforcement officer.

Shotgun George Ziegler was a graduate of an engineering school, where he acted as a cheer leader. Then he was an enlisted aviator in the World War. Later he was a Chicago lifeguard until he was accused of attempting to rape a seven-year-old girl. His family put up bond for his appearance for trial and George "took it on the lam."

Staying in Chicago, he eventually became affiliated with Al Capone's gang according to officials. For a time his name was linked with Fred (Killer) Burke, Gus Winkler and Harvey Bailey. He was supposed to have been one of the gunmen in the St. Valentine's day massacre of Chicago gangsters. Meanwhile, however, he graduated into bank robbery.

He met Frank Nash when the Millers brought him to St. Paul. Already he was an important criminal figure, and some underworld persons said that Ziegler knew more about Chicago crime than any except Al Capone.

Ziegler joined forces with Nash, Miller, Francis (Jimmy) Keating and Tommy Holden for various bank robberies. Then he became affiliated with the Barker-Karpis outfit when that organization numbered about twenty-five, including hangers-on. He went with them to Reno where several banks were robbed, and he was said also to have taken a hand in some of the Barker-Karpis kidnappings.

But a human mind can stand only so much strain. Something finally had to give way. Ziegler was a queer type, streaked with love of beauty, as evidenced in his occasional landscaping jobs, and with decency and kindness. It is said that he supported the wife of a dead gangster while she slowly died of cancer and afterwards he buried her. He is supposed to have educated the son of a former bank robber after the boy's parents had been murdered, and frequently lectured the boy on the value of going straight.

Something had to give way and in George it was ability to keep still. He became like a garrulous old man who rambles on and on apparently not realizing his boresome repetitions. But there were many listeners George would not have bored. He seemingly had lost his sense of discretion. Sitting in a restaurant, he would suddenly start criticizing fellow

criminals and in a loud voice recall exploits of his own and of his companions. Someone would hush him, usually his wife.

When he joined forces with the Barker-Karpis crew, he liked to sit around with Kate (Ma) Barker and talk, talk of the days when they kidnapped a Minnesota millionaire named Hamm, talk of the days when they lived lavishly at Reno with "fresh" money coming in constantly from looted banks. Mrs. Barker listened and they spoke. George was talking too much. He was getting more difficult to silence. One of these days an occupant of a nearby table would be a stool pigeon or even a detective in plain clothes. If arrested, he might babble all the doings of the entire group. George knew too much and he was talking.

Some of the gang women did not like the quiet Irene, George's woman, Ma Barker rarely liked any of the women of her fellows in crime. George grew more and more in disfavor. And there were rumors that he was going mad.

But he was still a valuable man. He might babble, but he still gave good advice at times. For instance, he is supposed to have protested against the kidnapping of Edward George Bremer, banker and brewer, living at St. Paul, Minnesota. But the boys were low in funds in 1933, and the kidnapping was planned. Someone was going to finger the St. Paul millionaire. Ziegler apparently was convinced that the deed would "put the heat on" some of their St. Paul friends and protectors. But Mrs. Barker was in favor of the crime and her word was law with her gang.

According to details later revealed, it was Ziegler who arranged the hide-out in Bensonville, Illinois. He announced that he would be away on another landscaping trip. He even arranged for a temporary escort for Irene.

Bremer was kidnapped January 17, 1934, and held in Illinois for three weeks. A ransom of \$200,000 was paid. Shotgun George returned to his home from his landscaping trip.

But he still talked. He talked about the \$100,000 ransom kidnapping of William Hamm, St. Paul brewer, in which he had participated. He talked about how the hot money in the Bremer case was hidden at the home of a relative of his.

Shotgun George had simply seen too much horror. Too many times had he watched the agonized faces of kidnapped men, wondering if relatives could buy their freedom and if even then they would not be killed. Too many times had he seen death inflicted. A mind so sensitive to beauty could not stand it. He babbled. And he talked himself to death.

On the evening of March 20, 1934, a telephone call sent him to a restaurant on Cermak road in Cicero, Illinois. Ziegler chatted for a while with the proprietor. Then he went through the door to the street. Sawed-off shotguns flamed in the night, and Shotgun George sank to the pavement, dead.

But even in death Ziegler talked. Officials found papers on him revealing the location of his apartment. More evidence was uncovered there, linking him with the Bremer kidnapping. Also, according to reports, they learned that his companions had been the three Barkers, Russell Gibson, Bill Weaver, Volney Davis and Alvin (Old Creepy) Karpis.

Friends of Ziegler resented the manner of his death and they talked a little. The Barkers, who thought they had eliminated a danger, found that they had merely jumped from the frying pan into the fire. But that belongs in the chronicle of Ma Barker and her fierce brood.

JOHN DILLINGER

John Dillinger, once hailed as Public Enemy No. 1 of the United States, was a crude bandit when compared to Frank Nash and Verne Miller.

The Dillinger gang was a loosely organized group and while Dil-

linger was publicly accepted as the titular leader, his name apparently was attached to the group chiefly because there was so much publicity about Dillinger and his daring escape from the Crown Point, Indiana, jail armed with a wooden gun. Also Dillinger shot a federal agent. So his name blazed in headlines. He never was as important in criminal aristocracy as many men who received less publicity.

Dillinger first came to public attention shortly after he was paroled from the Indiana state prison in May of 1933. In the autumn of the same year four friends of his broke out of the same institution. They were Russell Clark, Charles Makley, John Hamilton and Harry Pierpont.

Dillinger had intended to help them in their get-away. But meanwhile he had gotten into trouble. Police of Dayton, Ohio, arrested him on a charge of bank robbery. He was taken to the Lima, Ohio, jail.

His four friends decided to help him out. They affected his escape by killing Sheriff Jesse Sarber. There followed a series of bank robberies said to have been committed by Dillinger, Hamilton, Pierpont, Makley, Clark, and an ex-convict named Harry Copeland. The robberies were successful and they all went to Florida for the winter, taking their women along. Dillinger's moll was Evelyn Frechette.

The bandits returned, made another foray against banks and then went to Tucson for a vacation. There they apparently were extremely reckless. One member of the group even told a salesman that they were the "famous Dillinger gang."

Makley, Pierpont, Dillinger and Clark were arrested. Hamilton and Copeland happened to be absent. All but Dillinger were taken to Lima to be tried on the charge of murdering the sheriff. Makley and Pierpont were given death sentences. Pierpont was executed, but Makley was killed while attempting to break out of prison. Clark was sentenced to life imprisonment.

This gang seems to be remarkable, not for the cleverness of their crimes, but for the amount of trouble they could get into. Clark got drunk in a Chicago tavern, was arrested by Chicago police and held for Ohio authorities. However, he managed to be extradited to Indiana and accepted a twenty-five year sentence for bank robbery.

Meanwhile Dillinger was in the Crown Point, Indiana, jail on a bank robbery charge. He escaped by means of the now famous wooden gun, stole a car belonging to Sheriff Lillian Holley, and fled over the state line. This brought Dillinger to the attention of federal authorities who could now prosecute him on a charge of violating the Dyer Act by transporting a stolen vehicle across a state line.

Apparently Dillinger's plans had been well known for Eddie Green, that efficiency expert of crime, had assembled a gang for him including Homer Van Meter, Tommy Carroll, John Hamilton and Baby Face Nelson.

Three days after Dillinger's escape this gang, which included Green, robbed the Securities National Bank of Sioux Falls, South Dakota, of \$49,500.

But Dillinger's bad luck continued. A week later he and his gang robbed the First National Bank of Mason City, Iowa, of \$55,000. Dillinger and John Hamilton were both shot in the back.

Eddie Green arranged for a doctor and they recovered. Then on March 31, 1934, federal officers investigating a report of "suspicious characters" encountered Dillinger, Evelyn Frechette and Homer Van Meter at a St. Paul apartment house. The three managed to shoot their way out. But the G-man heat was getting intense.

The federal agents found a telephone number in the Dillinger apartment which led them to Eddie Green's home. Eddie was gone but presently two Negro maids arrived. They had been instructed by Green to get his clothes, take them to their home and wait for him there. The Special Agents of the Federal Bureau of Investigation also waited for

Eddie. When Green arrived there was a gun battle and Eddie was wounded. By some freak, Green fancied that he had been hurt in an auto accident and was with friends. So he talked freely to police who watched by his hospital bedside and among the bits of information were several about Dillinger.

Dillinger managed to elude them but his sweetheart, Evelyn Frechette, was soon captured and sentenced to prison for two years on a charge of harboring fugitives.

Presently federal officers trailed Dillinger to a resort fifty miles north of Rhinelander, Wisconsin. A barking dog warned him of the approach of strangers and he escaped after killing Special Agent W. Carter Baum. He dashed to Chicago to hide and had a plastic surgery operation, hoping to disguise himself so that he might again go about openly.

Underworld gossip says that Dillinger almost died under the ether. However, the operation was not successful enough. Dillinger was still easily recognized. Dillinger was caught through his craving for amusement. He liked to frequent the night spots and he was extremely fond of motion pictures. He finally was trapped and killed in front of the Biography theater in Chicago.

Much has been written about Dillinger, giving him, according to crime experts, a false courage and cleverness. He had a sort of cheap wit which made him ask filling station attendants what they would do if John Dillinger appeared. Also, encountering a man wearing the same lodge emblem (Dillinger wore his hoping that it would help him out of scrapes), he introduced himself by his prison number in Indiana. But his wit never reached the point that Jesse James' did.

Dillinger lacked the brains of Homer Van Meter, who would pose as a government man and talk banking with bank executives. He was afraid of Baby Face Nelson. He took advice from John Hamilton.

With Dillinger's death the last of the famous gangs was wiped out. There is a rumor that John Hamilton is dead and was buried by the gang in an abandoned mine in the north.

LESTER (BABY FACE NELSON) GILLIS

Lester Gillis, who was afterward to be known throughout the nation as a kill-crazy, reckless desperado, displayed the same traits when he was a child. He was a rowdy braggart, cruel street urchin playing in the packing house district of Chicago. Even then he was a cop-hater and his favorite game was to pretend to be shooting the policemen.

Presently he was suspected of petty thefts. Young Lester boasted that the cops were hunting him. He joined a crowd of auto thieves, stealing cars for joy rides and then abandoning them. Then he grew girl-crazy and acquired the nickname of Baby Face. He began selling stolen autos for money to spend on the girls.

Captured, he was convicted and sent to the St. Charles School for Boys.

When he got out of the reformatory, Baby Face continued his career of crime. Next he was sent to the Illinois state prison at Joliet on a charge of bank robbery. He escaped. Then he drifted west to San Francisco and got mixed up with a bootlegging outfit. There he acquired his faithful friend and errand boy, John Paul Chase. To him Nelson, as he was now known, boasted of his bravery, of his exploits, of his ready money.

Nelson was going under the name of Jimmy Burnett. Outwardly he was boyish appearing with blue eyes, light hair and short stature. He had gone to Vallejo to a hospital run by an ex-safe blower. His wife, Helen Gillis, needed an operation. And he felt that Chase would come in handy.

Chase's first job was to drive east for the mother of Helen Gillis, alias Helen Nelson, Baby Face's wife. Following this task Baby Face, his wife, his mother-in-law and Chase all drove to Minneapolis where they

rented an apartment and Baby Face joined members of his old gang.

These were the men who were to join Dillinger when he escaped from the Crown Point, Indiana, jail. As soon as Dillinger was released there were two or three bank robbers. Eddie Green was in the crowd.

Then Nelson was accused of murdering Theodore W. Kiddèr, a Minneapolis citizen. Apparently Nelson had just felt murderous and killed Kidder for no reason.

Nelson, his wife, and their small baby, hurried away from Minneapolis. They raced to Bremerton, Washington, where the child was left with Helen's sister. Chase went along as chauffeur and general errand boy. The child was safely placed in the sister's custody and the group left. They hurried to Reno where Nelson had once been a gambler's chauffeur. Then Nelson had to hurriedly depart. It was reported that he had shot and killed a missing witness in a criminal case.

Nelson hurried to Chicago. Then with Dillinger and other members of the gang he went to a gang hide-out at Rhineland, Wisconsin, in April of 1934. Special agents trailed Dillinger there and Baby Face killed Special Agent W. Carter Baum, making Nelson now an object of interest to the federal investigators.

Nelson went on the run, halting for an occasional bank robbery, including the looting of the Merchants National Bank at South Bend, Indiana. Then Dillinger was killed and Nelson was again in flight. He went to a Nevada lake resort. But officials were investigating at Reno so this was not safe. He fled east. Word passed along the special agents that he was expected at a resort near Chicago. Inspector Samuel Cowley of the Federal Bureau of Investigation and Special Agent Herman Hollis went there to wait for him.

Nelson's car was spotted. The federal agents set out in pursuit. There was an exchange of gunfire and the water pump in the bandits' machine was hit. The federal car swerved and came back.

Hollis fired a shotgun, wounding Baby Face Nelson, who stumbled around to the rear of his car. John Paul Chase who was in the car, returned the fire. Meanwhile Helen Nelson was hiding in a ditch.

Inspector Cowley was fatally wounded. So was Hollis. Nelson staggered into the government car. Chase and Helen Nelson hastily drove him to the home of a friend. There he died. He was stripped of his clothing and his nude body was found by officials in a ditch.

CLYDE BARROW AND BONNIE PARKER

Clyde Champion Barrow, notorious bank robber and killer, and his gunwoman companion, Bonnie Parker, were killed by officials in ambush near Sailes, Bienville Parish, Louisiana, May 23, 1934, after one of the most colorful and spectacular manhunts in modern crime history. Barrow was then wanted for murder, robbery and on state charges of kidnapping.

Federal Bureau of Investigation became interested in Barrow and his moll late in December, 1932, when a stolen car was found abandoned near Jackson, Michigan. It had been driven from Pawhuska, Oklahoma. The car was traced to Clyde Barrow, Bonnie Parker, and Barrow's brother, L. C. Barrow. They were then wanted by federal officials for violating the Dyer Act. Official records showed that Clyde had been released from the Texas state prison, February 2, 1932, by a "general parole" and had no ostensible means of livelihood.

On May 20, 1933, the United States Commissioner of Dallas, Texas, issued a warrant against Clyde Barrow and Bonnie Parker, charging them with transporting a stolen car across a state line. The federal officials by then had acquired a great deal of information about Barrow and his cigar-smoking girl friend. They continued to get more information, but not the Barrows.

When Buck Barrow, brother of Clyde, was released from the Texas state prison March 23, 1933, pardoned by the governor, he joined Clyde. Buck's long record of criminal activities began to grow, but he soon was shot to death by officials July 29, 1933, at Perry, Iowa.

Clyde and Bonnie escaped capture in more than one gun fight, the most spectacular being in Platte County, Missouri, July 19, 1933, when a bystander and a member of the gang were wounded. Barrow and Bonnie were traced to Iowa and engaged officers in a gun fight five days later. One of the officers and a member of the gang were wounded.

Scores of high caliber guns of all makes and descriptions were recovered in these raids. At one time, thirty-nine .45 caliber Colt automatic pistols and a number of automatic rifles were seized. Many of the pistols had been stolen from National Guard armories.

A trap was set by Dallas, Texas, officials November 22, 1933, near Grand Prairie, Texas, but Clyde and Bonnie escaped. They held up an attorney on the highway and took his car, which they abandoned at Miami, Oklahoma. December 21, 1933, Clyde and Bonnie robbed a Shreveport, Louisiana, citizen.

Then, January 16, 1934, five prisoners, including the notorious Raymond Hamilton who was serving sentences totaling more than 200 years, were liberated from the Eastham State Prison farm at Waldo, Texas, by Clyde and Bonnie. Two guards were shot by the escaping prisoners with automatics, which had been hidden in a ditch by Barrow. As the prisoners ran, Barrow covered their retreat with bursts of machine gun fire.

The Barrows continued their path of death. April 1, 1934, they encountered two young highway patrolmen near Grapevine, Texas. Before the officers could draw their guns they were shot down by Clyde and Bonnie. On April 6, 1934, a constable at Miami, Oklahoma, fell mortally wounded by Clyde and Bonnie, who also abducted and wounded a police chief.

Among other crimes charged against these two were the murder of two officers at Joplin, Missouri, in April of 1933; the kidnapping of a man and woman at Hico, Louisiana; the murder of a man at Hillsboro, Texas; murder of a sheriff at Stringtown, Oklahoma; kidnapping of a deputy at Carlsbad, New Mexico; attempt to murder a deputy at Wharton, Texas; stealing of an automobile at Victoria, Texas; murder and robbery at Sherman, Texas; murder at Dallas, Texas; abduction of the sheriff and chief of police at Wellington, Texas; murder at Joplin, Missouri, and murder at Columbia, Missouri.

By April 13, 1934, the federal agents had traced a connection with the Methvin family living near Sailes, Louisiana. Clyde and Bonnie had been there frequently. The activities of the Methvins were watched. On May 23, 1934, officials learned that Clyde and Bonnie were driving to Sailes. The officers concealed themselves in bushes along the highway before dawn. During the early daylight hours, Bonnie and Clyde appeared. The officials opened fire on them and both were killed.

THE KYLE-CRETZER GANG

On March 29, 1937, the Rose City Branch of the First National Bank, Portland, Oregon, was robbed of \$18,195 in currency by three men, who made their getaway in a 1937 Ford sedan, later determined to have been stolen in Portland two days before the bank robbery.

Special Agents of the Federal Bureau of Investigation, United States Department of Justice, cooperating with the Portland police department, learned that a man named James D. Courey had parked an automobile in a Portland garage about thirty minutes prior to the bank robbery, and had returned for his car at 7:30 p. m. on the evening of the day the bank was robbed.

Special Agents of the Los Angeles Field Division of the Federal Bureau of Investigation, cooperating with the Los Angeles Police Department, located this automobile in a garage in Los Angeles, and on April 6, 1937, as the result of a surveillance maintained at this garage and of all persons frequenting it, Special Agents apprehended John Oscar Hetzer, alias Paul Parker, age 26, who at the time of his apprehension was driving an automobile owned by James D. Courey. After extensive questioning by special agents, Hetzer admitted his participation in the robbery of the Rose City Branch of the First National Bank, Portland, Oregon, and implicated his brother-in-law, James D. Courey, alias Muller and a man named Shorty McKay. At the time of the arrest of Hetzer federal agents recovered \$7,189, which was identified as part of the loot from the Rose City Branch of the First National Bank of Portland, Oregon.

Continuing the investigation, the Federal Bureau of Investigation discovered that Courey was registered at the Stuart Hotel, Los Angeles, California, under the name of James Hilare. Special Agents knocked on the door of his room, identifying themselves as Federal officers and demanding admission, which was refused. Before the door could be forced open, Courey committed suicide by shooting himself. It was subsequently determined that Courey had a safe deposit box in one of the local banks in Los Angeles, and on April 9, 1937, this was entered by means of a search warrant, and Special Agents found therein \$2,303, \$1,000 of which was contained in two packages bearing the stamp of the Rose City Branch of the First National Bank, Portland, Oregon. This brought the total amount of the loot from this bank recovered by Special Agents to \$9,492.

After his death the fingerprints of Courey were forwarded to the Identification Division of the Federal Bureau of Investigation at Washington, D.C., where they were positively identified as the fingerprints of Milto David Hartman, age 24, who had a previous criminal record in the State of California. The investigation by the Federal Bureau of Investigation disclosed the fact that Hartman, alias Courey, had participated in the robberies of the following banks:

Rose City Branch, First National Bank, Portland, Oregon, robbed March 29, 1937; Union Avenue Branch of the United States National Bank, Portland, Oregon, robbed January 31, 1935; the same bank robbed on March 7, 1933, when it was operated as the Union State Bank; Broadway Branch of the Seattle First National Bank, Seattle, Washington, robbed July 27, 1936; Bank of America, National Trust and Savings Association, Melrose and Bronson Branch, Los Angeles, California, robbed March 2, 1936; Bank of America, National Trust and Savings Association, Western and Melrose Branch, Los Angeles, California, robbed July 5, 1934; Bank of America, National Trust and Savings Association, Vineyard and Washington Branch, Los Angeles, California, robbed January 24, 1936; Seaboard National Bank, Wilshire and Vermont Branch, Los Angeles, California, robbed July 1, 1936; Security First National Bank, Ambassador Hotel Branch, Los Angeles, California, robbed November 29, 1935; Bank of America, National Trust and Savings Association, Sunset-Clark Branch, Los Angeles, California, robbed January 28, 1937; 40th and Piedmont Branch of the American Trust Company, Oakland, California, robbed January 23, 1936.

Hetzer was unable to give any information relative to the individual known by him as Shorty McKay, but with that alias to go by the Federal Bureau of Investigation identified Shorty McKay as Arnold Thomas Kyle, who was subsequently named as the third bandit who participated in the robbery of the Rose City Branch of the First National Bank, Portland, Oregon. On April 7, 1937, a complaint was filed before a United States Commissioner at Portland, Oregon, charging John Oscar Hetzer and Arnold Thomas Kyle with the robbery of that bank. Hetzer was in-

dicted by the Federal Grand Jury at Portland, Oregon, on May 20, 1937, and on May 26, 1937, was sentenced on a plea of guilty to serve twenty years in a Federal penitentiary, and was fined \$11,000 for his participation in the robbery of the Rose City Branch of the First National Bank of Portland, Oregon.

Investigation as to the background and associates of Arnold Thomas Kyle showed that he was a constant associate of his brother-in-law, Joseph Paul Cretzer, age 27, and the finger-print records of the Federal Bureau of Investigation revealed lengthy criminal records for both Cretzer and Kyle, and further investigation by Special Agents resulted in the identification of Arnold Thomas Kyle as having also participated in the robbery of the following banks:

Seaboard National Bank, Wilshire and Vermont Branch, Los Angeles, California, robbed July 1, 1936; Bank of America, National Trust and Savings Association, Melrose and Bronson Branch, Los Angeles, California, robbed March 2, 1936; 40th and Piedmont Branch of the American Trust Company, Oakland, California, robbed January 23, 1936; Bank of America, National Trust and Savings Association, Vineyard and Washington Branch, Los Angeles, California, robbed January 24, 1936; Security First National Bank of Los Angeles; Ambassador Hotel Branch, Los Angeles, California, robbed November 29, 1935.

A memorandum sent the writer by J. Edgar Hoover, head of the Federal Bureau of Investigation says that it was also determined that Joseph Paul Cretzer had participated in the robbery of the following banks: Broadway Branch of the Seattle First National Bank, Seattle, Washington, robbed July 27, 1936; Seaboard National Bank, Wilshire and Vermont Branch, Los Angeles, California, robbed July 1, 1936; United States National Bank, Branch 30, Portland, Oregon, robbed January 31, 1935; Bank of America, National Trust and Savings Association, Vineyard and Washington Branch, Los Angeles, California, robbed January 24, 1936; Security First National Bank, Ambassador Hotel Branch, Los Angeles, California, robbed November 29, 1935; 40th and Piedmont Branch of the American Trust Company, Oakland, California, robbed January 23, 1936.

On April 28, 1937, an indictment was returned by the Federal Grand Jury at Los Angeles, California, charging Cretzer and Kyle with the robbery of the Bank of America, National Trust and Savings Association, Melrose and Bronson Branch, Los Angeles, California, robbed March 2, 1936. There are also other indictments and complaints outstanding against these individuals.

Subsequent to the discovery of the identities of Cretzer and Kyle, an intensive search was instituted by the Federal Bureau of Investigation for these two men, the remaining members of what was probably one of the best organized gangs of bank robbers this country has known.

During the course of the investigation, on May 3, 1937, two men entered the El Rio garage at Las Vegas, Nevada, and at the point of revolvers robbed a customer of \$30 and obtained \$6 from the cash register in the garage, and after taping and binding the customer, the garage attendant and his girl companion, escaped in a 1937 Pontiac sedan, which had been stored in the garage by a patron. The two men then drove this car from Las Vegas, Nevada, to Saint George, Utah, and Cedar, Utah, evading police blockades at both places and finally abandoned the stolen automobile at Wendover, Nevada. Arnold Thomas Kyle has been identified as one of the two bandits.

Arnold Thomas Kyle is 28 years of age, married and formerly the operator of a truck line between Hollywood, California, and Phoenix, Arizona. His criminal record in the Identification Division of the Federal Bureau of Investigation reveals that he was first arrested at Miles City, Montana, in 1924, on a charge of burglary for which he received a two

year sentence. This arrest is unsupported by fingerprints. On June 4, 1930, Kyle was arrested by the police department at The Dalles, Oregon, for carrying a concealed weapon and on that same date was turned over to the sheriff's office at Portland, Oregon. On June 16, 1930, he was released to the United States marshal at Portland, Oregon, and was sentenced to serve eight months in a federal penitentiary for violation of the National Motor Vehicle Theft Act. On June 8, 1931, he was arrested by the police department at Los Angeles, California, as a suspect on a burglary and robbery charge. The robbery charge was dismissed and he was sentenced to from five years to life in the state prison at San Quentin, California, on the burglary charge on August 13, 1931. He was received in the state prison at San Quentin, California, on August 22, 1931, and was released on parole on September 7, 1935. Since the time of his release it is known that he has engaged in at least six bank robberies and the theft of an automobile.

Joseph Paul Cretzer is 27 years of age, a native of Colorado, and is married to the sister of Arnold Thomas Kyle. Cretzer has a long criminal record dating back to August 20, 1927, when he was arrested by the police department at Colorado Springs, Colorado, on a charge of automobile theft. In connection with one arrest he was committed to the Boys' Industrial School in Colorado on September 30, 1927, but later escaped from that institution.

Kyle and Cretzer, who had been living in luxury and posing as honest businessmen in Los Angeles during the period of time they had been engaged in the perpetration of various bank robberies, fled from that city at the time Hartman, alias Courey, committed suicide as he was about to be apprehended, and an intensive search looking to their location and apprehension has been conducted by the Federal Bureau of Investigation since that time.

An Identification Order was issued for Joseph Paul Cretzer by the Federal Bureau of Investigation on July 27, 1937. An Identification Order was issued for Arnold Thomas Kyle on August 7, 1937, and on November 23, 1937, a wanted circular was issued for these two individuals. Each of the Identification Orders and the wanted circular has been widely distributed throughout the entire country.

HUNT-GANT GANG

The most notorious band of criminals operating in the southern part of the United States had its origin in the Everglades of Florida, and has been publicized as the Hunt-Gant gang, led by Alva Dewey Hunt and Hugh Gant. Both Hunt and Gant are actively sought in a nationwide investigation being conducted by Special Agents of the Federal Bureau of Investigation, United States Department of Justice for bank robberies perpetrated by them in Florida and Alabama. A reward of \$1,000 was announced on July 27, 1937, for information furnished the F.B.I. resulting in the apprehension of Hunt and Gant or \$500 for information resulting in the apprehension of either Hunt or Gant, according to a memorandum sent the writer by J. Edgar Hoover, director.

Hugh Gant and Alva Dewey Hunt are brothers-in-law and for years have been members of a band of dangerous criminals operating in Florida and adjoining states. This gang first began operations in about 1920. Apparently the leader up until 1933 was Riley Gant, the older brother of Hugh Gant. Riley Gant was shot and killed in August, 1933, while attempting to rob a store at Penny Farms, Florida. In the early days the gang specialized in auto thefts, stealing automobiles, changing motor and serial numbers, making out fictitious title papers and arranging with fences to dispose of the automobiles. They also engaged extensively in post office robberies and burglaries as well as other robberies and thefts,

Alva Dewey Hunt was born November 23, 1898, in the State of Florida, the exact location being unknown; however, his place of birth is thought to be Bushnell, Florida, inasmuch as the Hunt family seemed to have been well established there over a long period of years. Hunt began his criminal history with an arrest on February 19, 1924, by the police department at Jacksonville, Florida on a charge of auto theft. He was last arrested by the sheriff's office, Orlando, Florida, on April 2, 1932, on a charge of breaking and entering and grand larceny. Hunt was released pending appeal from a conviction in connection with this charge and forfeited bail. Alva Dewey Hunt was also convicted on a charge of violating the National Motor Vehicle Theft Act and sentenced to one year and one day in the U.S. Penitentiary, Atlanta, Georgia. This sentence expired on February 5, 1931.

Hugh Gant was born at Webster, Florida, January 2, 1900, and he began his criminal career with an arrest by the police department, Tampa, Florida, on November 4, 1927, being charged with auto theft. Hugh Gant was last arrested on September 6, 1933, on a charge of auto theft and post office robbery and escaped the same day. In recent years, the gang apparently has turned to bank robbery as a more lucrative profession. Gant and Hunt began their bank robbery activities on February 28, 1935, when the Haines City, Florida, State Bank was robbed of more than \$4,000. Both Hunt and Gant have been identified in connection with this robbery. On May 3, 1935, Hunt and Gant broke into a warehouse at St. Petersburg, Florida, and stole a 1935 Buick sedan which they used as a getaway car in the robbery of the Bowling Green, Florida, State Bank on May 17, 1935. On August 1, 1935, Hunt and Gant stole a Ford coach, St. Augustine, Florida, and a few days later robbed a State Bank at Mulberry, Florida. A state warrant has been issued for the arrest of Gant in connection with the St. Cloud bank robbery.

The Dixie County State Bank at Cross City, Florida, was robbed on January 14, 1936, and during the robbery the cashier and a customer were struck over the head with pistols and slightly injured. More than \$4,000 was obtained by the bandits who made their getaway in a stolen car. A posse gave chase. About midnight of the same day, the bandits were encountered, shots were fired, but no injuries were inflicted. During the getaway the bandits held up two young men driving a Ford sedan and took their automobile from them, after they had struck one of the men over the head with the butt of a pistol and injured him. This bank was insured by the Federal Deposit Insurance Corporation, and the robbery became the subject of investigation by the F.B.I. Hugh Gant and Alva Dewey Hunt were subsequently identified as two of the four bandits who perpetrated this robbery.

At the time of this robbery, Gant was the subject of another investigation by the F.B.I. involving a violation of the National Motor Vehicle Theft Act. An indictment was returned against him for this offense by the federal grand jury at Mobile, Alabama, on September 17, 1932, under the name of Harry A. Smith.

Gant and Hunt were indicted on December 16, 1936, by the federal grand jury at Gainesville, Florida, charging them with the above bank robbery.

On March 3, 1936, the Columbia Bank at Ybor City, Florida, was robbed by four or five bandits, who obtained approximately \$30,459.81. Gant and Hunt were tentatively identified as two of the robbers. On April 4, 1936, Hunt and Gant stole a 1935 Oldsmobile sedan at Bainbridge, Georgia, which they later used in robbing the Farmers and Merchants Bank at Foley, Alabama, June 2, 1936, of \$7,242.31. An indictment has also been returned to the federal grand jury at Mobile, Alabama, on September 23, 1936, charging them with this robbery, as this bank was insured by the Federal Deposit Insurance Corporation.

Of the two, Hunt is much the bolder. He makes his friends easily and it has been observed that many of the persons contacted in the course of this investigation advised that it is through fear that Gant is protected while Hunt receives their protection because of their liking for him. He is reputedly good natured, well-mannered and dresses nicely and has an outward air of respectability. Hunt has an uncontrollable desire for women and has had numerous paramours in the past few years who accompany him on his many travels. He is a heavy drinker and spends his money freely. Hunt at one time owned a garage at Los Angeles, California.

IRVING CHARLES CHAPMAN

The First National Bank of Atlanta, Texas, was robbed on August 31, 1936, by Irving Charles Chapman, Louis Sadler and Hugh Lindsey. One thousand nine hundred twenty-eight dollars was obtained by the bandits in the robbery, during the course of which the burglar alarm was sounded and citizens arriving at the bank engaged in a gun battle with the bandits in which Chapman was shot down and captured near the entrance to the bank. Lindsey was captured after an exchange of gunfire in which four innocent bystanders were wounded, and Sadler escaped, but was later apprehended.

Chapman, Lindsey and Sadler were later convicted in State Court at Linden, Texas, for this robbery and sentenced to serve sixty, seventy-five and twenty-five years, respectively, in the State Penitentiary. On November 28, 1936, Chapman was removed from the State Penitentiary at Huntsville, Texas, to Red River County, Texas, and sentenced to serve twenty-five years on a charge of kidnapping. He was subsequently returned to the State Penitentiary at Huntsville, Texas, and was transferred to the Eastham State Prison Farm near Weldon, Texas.

On the morning of July 8, 1937, nine prisoners at the Eastham State Prison Farm made a break for freedom armed with two rifles which they had obtained in some unknown manner. A guard was wounded and J. D. Reed, serving a sentence of five years for stealing chickens, was killed during the break. Four of the prisoners were recaptured shortly thereafter, but Chapman accompanied by Roy P. Traxler, a notorious Oklahoma outlaw, and Fred Tindol, who at that time was serving a sentence of life imprisonment for robbery with firearms, successfully eluded capture, appearing at the home of a farmer near the prison farm. The farmer endeavored to prevent them from obtaining his automobile and was shot and wounded by the desperadoes, who compelled him to go with them, holding him as a hostage for a short time.

The outlaws later held up the city marshal of Trinity, Texas, took his automobile from him, and proceeded to Alto, Texas. Upon arrival there, they parked the car taken from the city marshal by the side of the road. Three Texas Highway Patrolmen seeing the city marshal's car, stopped, were held up by Traxler, Chapman and Tindol and their automobile was taken from them. The three outlaws then made their escape in the patrol car.

The chase leading to the capture of Chapman, Traxler and Tindol led over a large portion of the states of Oklahoma and Texas, and was engaged in by a large number of law enforcement officers, including Special Agents of the Federal Bureau of Investigation, United States Department of Justice, according to information issued by J. Edgar Hoover.

On July 15, 1937, the outlaws appeared near Ada, Oklahoma, and kidnapped Baird Markham, Jr., who was transported to a point near Sapulpa, Oklahoma, where he was released, but his automobile taken by the bandits. The chase continued, the outlaws appearing at different places in Oklahoma, and on July 21, 1937, Traxler and Tindol held up two citizens at Kingston, Oklahoma, commandeered their automobile and took

the citizens with them as hostages. While Traxler and Tindol were riding with the hostages, they succumbed to exhaustion from the rigors of their flight. Their hostages took advantage of the opportunity and shot and killed Tindol and wounded Traxler. It was determined that Chapman had separated from Traxler and Tindol during the course of their mad flight and thus evaded capture.

The robbery of the First National Bank, Atlanta, Texas, was a crime within the investigative jurisdiction of the Federal Bureau of Investigation and indictments had been returned by a Federal Grand Jury at Tyler, Texas, on October 9, 1936, charging Chapman and others with that robbery. He was also indicted by a Federal Grand Jury at Beaumont, Texas, on March 19, 1937, for a previous robbery of that bank, which occurred on June 6, 1934. Another indictment was returned against him by a Federal Grand Jury at Shreveport, Louisiana, February 21, 1933, for a violation of the National Motor Vehicle Theft Act.

Irving Charles Chapman was born on December 29, 1898, at Philadelphia, Mississippi, has a criminal record dating back to 1931, and has a reputation of being one of the most clever and dangerous bank robbers who have operated in this country. He first came to the attention of the Federal Bureau of Investigation during the course of an investigation of a violation of the National Motor Vehicle Theft Act in 1932, at which time Chapman was a fugitive from justice and with two others had escaped from the Caddo Parish jail, Shreveport, Louisiana, by sawing the bars of a cell and using a rope made of mattress covers to lower themselves from the eighth story of the jail. At the time of this escape, Chapman was serving a sentence of from nine to fourteen years for bank robbery. He was next arrested by the police department at Little Rock, Arkansas, on March 18, 1933, on a charge of bank robbery; was released to the sheriff's office at El Dorado, Arkansas, and freed on \$6,000 bond pending the trial of his case. The bond was forfeited on June 7, 1933. Prior to Chapman's incarceration in the Caddo Parish jail, he had been arrested on four occasions; twice on charges of highway robbery; once on a charge of assault to kidnap, and once for carrying concealed weapons and hi-jacking. Subsequent to the forfeiture of his bail on June 7, 1933, Chapman was arrested by the sheriff's office at Gulfport, Mississippi, on a charge of bank robbery, grand larceny and burglary on October 20, 1934 and was sentenced to serve fifteen years in the State Penitentiary. He was released to the sheriff's office at El Dorado, Arkansas, on December 4, 1934, and received an additional fifteen-year sentence for bank robbery, at which time he was returned to the State Penitentiary at Tucker, Arkansas, from which he escaped on August 25, 1936. He was next apprehended at the time of the robbery of the First National Bank at Atlanta, Texas, on August 31, 1936.

Subsequent to the escape from the Eastham State Prison Farm, at which place a federal detainer had been placed against Chapman, an intensive investigation was instituted by the Federal Bureau of Investigation looking to the apprehension of Chapman, and on September 8, 1937, an identification order was issued which was distributed throughout the entire country.

Exposure of Hoover Before and After He Became President

Our readers will be glad to have, in compact and readily usable form, the complete record of Herbert Hoover. Five books tell the story of Hoover. There is L. M. Birkhead's book on *President Hoover and Quakerism*; Heinz Norden's book on *Herbert Hoover—the Man*; and three books by E. Haldeman-Julius, namely *Herbert Hoover—the Fatuous Failure in the White House*, *Hoover's Record As President* and *Hoover's Record Before He Was President*.

A full-length critical analysis, like nothing that has ever been written about a President during his term of office, is contained in these books, especially in the three books by Mr. Haldeman-Julius. These three are naturally of most piquant interest, as they expose the failure of Hoover as President, debunk his ideas about politics and economics and—most sensational of all—tell the true story of how Herbert Hoover made millions and what was the real character and conduct of the man.

All together, these five books constitute an excellent list, for reading and reference and propaganda, of realistic as opposed to eulogistic and mythical studies of Hoover and of Hooverism. These five books may be said to comprise a sort of who's who and what's what of Hooverism.

In this special set of five books you have the story of the Chinese swindle in which Hoover was a leading agent thirty years ago—the story of Hoover's career as a Great Promoter (not a Great Engineer)—and the story of Hoover's disgraceful failure in the White House. Only 50 cents for this set of five books, all about Herbert Hoover. (Add 5c for carriage and packing charges.)

The Lindbergh-Hauptmann Kidnap-Murder Case

BY MARCET HALDEMAN-JULIUS

A New Book Which Gives in Thrilling Details All the Inside Facts of This Famous Case. A Large-Sized Volume (5½ by 8½ Inches). Printed in Large, Clear Type, on a Good Grade of Paper, and Attractively Bound in Card Covers.

Here at last is a complete account of America's most notorious and sensational crime—from the snatching of Baby Lindbergh to Hauptmann's march to the death-house. Never before in history has a criminal case so excited the imagination of the public, been so packed with thrills and surprises, developed so many unexpected twists, attracted so many odd and grotesque personalities, provoked so many rumors and conjectures.

CONTENTS

Chapter I.	The Kidnaping
Chapter II.	The Search
Chapter III.	The Discovery of the Body
Chapter IV.	The Ransom Negotiations
Chapter V.	The Arrest of Hauptmann
Chapter VI.	The Hauptmann Trial
Chapter VII.	The End

The foregoing table of contents emphasizes one of the most important features of this work—the thoroughness and accuracy with which it covers every phase of the sensational crime. Every significant detail, every bit of relevant evidence, has been included, making this book the most complete account ever published of the Lindbergh-Hauptmann case.

No one could possibly form an intelligent opinion of this case merely by reading the day-by-day accounts which appeared in the papers. There was a great mass of irrelevant detail, there were gaps which memory could not bridge, during the long intervals in which there were no further developments, there was a political angle which gave rise to many false implications, and there was the sensational Roman-Holiday atmosphere of the trial itself. All these factors combined to give the

public an incomplete, confused and chaotic impression.

NOW, you can learn the **WHOLE** truth about this shocking crime. The storm of excitement has subsided, and Hauptmann, the convicted murderer, is ashes. Was he a martyred victim of a miscarriage of justice, or a fiendish criminal who met a well-merited fate? Marcet Haldeman-Julius gives you the answer, in "The Lindbergh-Hauptmann Kidnap-Murder Case." This real-life detective story is more thrilling than fiction. It takes you behind the scenes with the leading characters—the heroes, the villains, the comedians—of this stirring drama. You take a peek into the Lindbergh home at the time the abduction was discovered, you get intimate glimpses of the frantic activities of police, G-men and public officials, and you witness preparations for the greatest man-hunt in the annals of criminology. Grim and taciturn Colonel Lindbergh, stolid Colonel Schwartzkopf, the unfortunate Violet Sharpe, eccentric Dr. Condon, sinister Hauptmann, hoaxers, fools, rogues, shadowy figures of the underworld—all come alive in the pages of this book, and perform again, for you, their respective parts in the great tragedy.

You will be charmed by the easy, fluent, and eminently readable manner in which Marcet Haldeman-Julius has written this astonishing, real-life detective story, a large-sized volume packed with thrills, surprises, entertainment, pathos and gripping drama. Mrs. Julius' long and varied experience as a reporter of famous trials insures expert treatment of her subject matter.

"The Lindbergh-Hauptmann Kidnap-Murder Case" is regularly priced at \$1, but you may have a **FREE** copy by subscribing for a year of "The American Freeman," the Questions and Answers Magazine. (Renewal subscriptions are also entitled to this premium.) Simply send us \$1 (add 20c for packing, handling, and carriage; add 10c to check), and we will enter your name for a one-year subscription to "The American Freeman" (Canada and foreign, \$1.25), and mail you a **FREE** copy of "The Lindbergh-Hauptmann Kidnap-Murder Case." (Remit by cash, postal money order, or "small" U.S. stamps.) Address:

Famous Dates in History

A CHRONOLOGY OF THE WORLD'S GREAT EVENTS

By REX R. EASTMAN

A

Concise,

Chronological History

of the World. Tells in Graphic Outline

the Thrilling Story of Man's Progress from Savagery to Civilization. Over 80,000 Words, 128 Pages, 5½ x 8½ Inches.

"DATES ARE THE MILESTONES OF HISTORY"

Do you know: When the first newspaper was published in America? What the "Opium War" was, and when it began? When the first white child was born in America? The date of the inauguration of the Olympic Games? When the Ethiopians annihilated an Italian army? The answers to these questions, and thousands of others equally interesting, will be found in *Famous Dates in History*.

This authoritative reference book was compiled from a definite point of view: a determination to outline in bold relief those events of history which are of supreme importance from the standpoint of culture, human liberty, freedom and happiness—in contrast to the conventional work of history, which is so often distorted by class or religious bias. When you read *Famous Dates in History*, you will see unfolded the pageant of man's age-long struggle for freedom: dates which are milestones marking the road of man's progress toward emancipation.

Famous Dates in History Contains the Following Chapters:

I. The Ancient World

II. The Renaissance

III. The Middle Ages

IV. Modern Times

Modern works of history do not emphasize dates, yet a knowledge of dates is essential in obtaining a sure grasp of this vitally important subject. For this reason alone you should own a copy of *Famous Dates in History*—it will refresh your memory, enlarge your knowledge and serve as an instantly available source-book whose value will grow with use. This book is more than a mere dry collection of unrelated dates: it is a carefully correlated reference work, authentic and accurate, yet as thrilling as a mystery story. The student of history will find this work an invaluable supplement to his texts; the busy man or woman will be delighted with its convenient arrangement and all-embracing scope.

Famous Dates in History is, in fact, a very concise history of the world. Dates standing by themselves have little significance or interest; it is only when one grasps their relation to history as a whole that they stand out vividly as mileposts in man's march toward civilization. This point of view has been emphasized in *Famous Dates in History*: the subject matter has been carefully arranged for the convenience of the reader, making it easy to find any given date, and when the date itself is not self-explanatory, it is accompanied by a commentary.

In line with our policy of publishing educational books at a price that all can afford, we are offering this important reference work to our readers for only \$1 (add 20c for packing, handling and carriage charges). Rush your order TODAY.

How to Become a Writer

TWENTY-FIVE EASY LESSONS IN PRACTICAL AUTHORSHIP

By E. HALDEMAN-JULIUS

A Practical Guide for the Aspiring Writer. Tells the Secrets of Successful Authorship in Clear, Concise Language. Contains 128 Pages (5½ x 8½ inches); Over 60,000 Words. Printed in Large, Legible Type, on a Good Grade of Paper. Attractively Bound.

"Writing Is a Trade Which Can Be Mastered"

You wish to be a writer: you feel that you have it in you to succeed in this fascinating business of stringing words together in stories, articles, novels, and other mediums of literary expression. But perhaps you are baffled by the technical difficulties which face the beginning writer. You are puzzled by such problems as the proper choice of words, the correct angle of approach, the methods of collecting and organizing your material. You have the itch to express yourself through the printed word, but you are uncertain as to which branch of literary endeavor you wish to follow: shall you be essayist, historian, biographer, novelist, dramatist, poet, or short-story writer?

It is to answer questions such as these that E. Haldeman-Julius has written **HOW TO BECOME A WRITER**. All the ripe experience acquired in his long career in literary and journalistic fields—as a newspaper reporter, editor, novelist, and publisher—has gone into the preparation of this book. E. Haldeman-Julius thoroughly understands the problems which confront the beginning writer, for he has "been through the mill" himself. Therefore, **HOW TO BECOME A WRITER** is not an academic treatise; it is, instead, a clear-cut presentation of the most essential and fundamental principles of the art of literary composition. And, best of all, the material is organized in such a manner that you can understand and assimilate it at once.

Mr. Haldeman-Julius, in this work, makes it his guiding principle that writing must first be a trade; later it may become an art. His primary object is to make you familiar with "the tools of the trade." He assumes that you, the reader, are a person of at least average intelligence and that you are, therefore, potentially, a writer. He then proceeds to outline, in logical order, the rules and principles by which you may gain a mastery of authorship. He is careful to make no rash promises—he does not "guarantee to make you

a successful writer"—because he knows that no such guarantee can be offered in good faith. He presents no magic formula—no short-cut to successful authorship—and he emphasizes the necessity of hard work. But it is his sincere belief that if you possess the basic qualities of a writer—normal intelligence, a zest for life in all its many-colored phases, and a willingness to work—you can, with the aid of his latest book, **HOW TO BECOME A WRITER**, realize your ambition.

You will be delighted with the easy, intimate way in which the author goes about his task of teaching you to be a writer. Instead of the dry, pedantic style found in many manuals of this type, Mr. Haldeman-Julius addresses you informally, as though he were speaking to you in friendly conversation. It is as though you were seated at the desk of a busy editor and publisher who was taking "time out" to give you the benefit of all his knowledge and experience. He explains fully and clearly the principles which have guided him—and the writers whose works he has published—he points out the pitfalls which beset the path of the beginner and how best to avoid them, and he hammers home each point before he leaves it to pass on to the next.

As an aspiring writer, you will want to own a copy of **HOW TO BECOME A WRITER**—and here's the good news! You may have a copy of this important book **FREE**, by merely sending \$1 (add 20c for packing, handling, and carriage) for a year's subscription to **THE AMERICAN FREEMAN**, the Questions and Answers Magazine. (Canada and foreign, \$1.25). In order to assure yourself of a **FREE** copy of **HOW TO BECOME A WRITER**, send in your order **TODAY**. (Remit by cash, postal money order, or "small" U.S. stamps. Add 10c to personal check.)

HALDEMAN-JULIUS PUBLICATIONS, GIRARD, KANSAS

WEAVERS OF WORDS

Henry Thomas, Ph. D., the brilliant author of "The Story of the Human Race," has delivered a new manuscript, and we have decided to publish it. The title of this new masterpiece—"Weavers of Words"—will be known to as many hundreds of thousands as ordered and enjoyed Dr. Thomas' "The Story of the Human Race."

"Weavers of Words" is just off the press, but we have decided NOT TO SELL THIS GIGANTIC WORK OF FASCINATING SCHOLARSHIP. We plan to give it away—FREE! A complete set of these five books (in two large volumes) can become your own personal property if you will act immediately.

This new work, which is just off the press, contains 150,000 words, printed in clear type, on a good grade of paper. The pages are 5½ by 8½ inches. Bound in neat, attractive, artistic covers.

"Weavers of Words" is in five great sections. Glance at the table of contents, study what this new work has in store for you. You will get:

Section 1. THE CLASSICS OF EUROPE. 1. Homer, the Blind Singer of Argos. 2. Aeschylus, the Father of Tragedy. 3. Aristophanes, the Man who Laughed Like a God. 4. Herodotus, the Prince of Story Tellers. 5. Lucretius, Who Wrote a Bible for Atheists. 6. Virgil, the Peaceful Poet of a Warlike Race.

Section 2. THE CLASSICS OF ASIA. 1. Job, Who Held Debate with God. 2. Confucius, the Author of the Golden Rule. 3. Kalidasa, the Greatest of Oriental Dramatists. 4. Omar, the Prophet of Pessimism. 5. The Perennial Charm of the Arabian Nights. 6. A Glimpse into the Japanese Classics.

Section 3. THE REVIVAL OF EUROPEAN LITERATURE. 1. Boccaccio, Who Perfected the Short Story. 2. Chaucer, the First Supberb Singer of England. 3. Villon, "Our Sad, Bad, Glad, Mad Brother." 4. Erasmus, the Humanist. 5. Rabelais, the Humorist. 6. Montaigne, the Skeptic.

Section 4. THE BIRTH OF THE MODERN SPIRIT. 1. Cervantes, the Gentle Cynic. 2. Shakespeare, "God Doubled Creation in Creating Thee." 3. Milton, the Poet of Rebellion. 4. Moliere, the Nimblest Jester of Them All. 5. Fielding, Who Wrote the Prize Novel of the Ages. 6. Voltaire, the High Priest of Unbelief.

Section 5. THE STANDARD BEARERS OF THE NEW FREEDOM. 1. Shelley, the Apostle of Anarchy. 2. Heine, the Aristophanes of the Ghetto. 3. Walt Whitman, the Interpreter of Democracy. 4. J. L. Perez, the Father of Yiddish Literature. 5. The Irony of Anatole France. 6. Bitter Laughter of Mark Twain.

IN PRAISE OF FOLLY

GREAT MASTERPIECE OF IRONY AND WISDOM BY ERASMUS,
SIXTEENTH CENTURY FREETHINKER, IS NOW
PUBLISHED FOR FREE DISTRIBUTION

One of the most notable and important classics in the literature of sixteenth century humanism is that masterpiece of irony and wisdom, "IN PRAISE OF FOLLY," by Erasmus—a charming rationalist and the greatest humanist scholar of his century. Throughout the whole range of literature you will not find a more delightful, provocative, amusing, ripely and soundly intelligent work on that perennially interesting subject, Human Nature.

"IN PRAISE OF FOLLY" is a title which has a double meaning. In ostensible form, the book is an address given by Folly to her host of admirers (i. e., the human race) and pointing out the many blessings which Folly confers upon her devotees. This pretense is gravely maintained throughout the book, which conceals its rich humor only just below the surface of a well-simulated gravity. Between the lines, of course—or under the lines—the reader is given many lessons of wisdom, lessons indeed which seem to cover practically the whole of common life.

Erasmus did the work of an intellectual and moral revolutionist. His humanistic message, as given at its best in this masterpiece, "IN PRAISE OF FOLLY," was simply bubbling over with blithe yet ironical and profound heresy. But he wrote this book, in defiance of all censorship, which sheds light and joy to this day—a book which will always make men think, with the finest combination of sportive, jocose characterization and smiling wisdom fresh from contact with the common contrasts of life.

Erasmus—a Light in the Medieval Darkness

IN THE DARK SUPERSTITION AND CRUELTY OF THE MIDDLE
AGES, THE MIND OF ERASMUS SHONE AS A KINDLY,
WISELY ILLUMINATING PROPHECY OF MODERNISM

We are bringing this rare classic—"IN PRAISE OF FOLLY"—out of its seclusion of centuries into the hands of the masses. Previously sold in expensive editions as high as \$100 per copy, we are publishing it COMPLETE in a popular form for FREE CIRCULATION among subscribers to The American Freeman—either new subscriptions or renewals. This is a large book, bound in neat, attractive, card covers, containing 30,000 words, and 5½ by 8½ inches in size.

You can get "In Praise of Folly" FREE, by sending in your subscription at once for a year of The American Freeman, at only \$1 per year (\$2 Canadian and foreign).

Mistakes of Moses

Robert G. Ingersoll's Wit, Eloquence and Logic at Its Best—An Inimitable Summary and Criticism of the Bible Story of Creation

A glorious iconoclasm of merrily mingled laughter and logic—that is what the reader will find in Robert G. Ingersoll's famous attack upon the Bible story of creation and the fall of man, entitled delightfully *Some Mistakes of Moses*. Wit, lively and clear, sparkles in every line. Ingersoll races along with his subject. He is in his best form, full of the joy and vigor of reason in smashing images of

CONTENTS OF THE BOOK

Free Schools. The Politicians. Man and Woman. The Pentateuch. Monday. Tuesday. Wednesday. Thursday. "He Made the Stars Also." Friday. Saturday. Let Us Make Man. Sunday. The Necessity for a Good Memory. The Garden. The Fall. Dampness. Bacchus and Babel. Faith in Filth. The Hebrews. The Plagues. The Flight. Confess and Avoid. "Inspired" Slavery. "Inspired" Marriage. "Inspired" War. "Inspired" Religious Liberty. Conclusion.

bunk. He is the very ideal of intellectual virility as he rips open the sainted shams and lands his light, quick and powerful blows at myths and superstitions. Fundamentalism, today so widespread among classes that are numerous and vociferous, had no greater opponent than Colonel Ingersoll; and his *Mistakes of Moses* remains the best answer to the Fun-

damentalists. Just look at the chapter headings in the box printed above and you will appreciate, in anticipation, the thoroughness and joyousness with which Ingersoll performs his mighty sham-smashing job. He didn't overlook a thing. It is all here—all the errors and absurdities and grotesqueries and cruelties of the Mosaic account; and all is exposed to Colonel Ingersoll's civilized humor and scorn and debunked by the illumination of reason and common sense and real history and science.

This is a large book, 5½ by 8½ inches in size, bound in stiff card covers, selling at only 75 cents a copy. Add 8 cents for packing and carriage charges. Add 10c to personal checks.

Modern Sex Book

Here's a new kind of sex book—chapters written by different authors. Instead of being a rehash of previous sex books, THE MODERN SEX BOOK has the freshness of originality, dealing as it does with the very latest ideas and discoveries in the world of sexual and emotional behavior.

A mere glance at the table of contents will show you how unusual THE MODERN SEX BOOK is and how necessary it is for every mature-minded person in this modern, swift age to read these exciting, informative, entertaining and life-building pages.

THE MODERN SEX BOOK contains about 60,000 words. Seven hefty, chatty, informal, useful chapters, by authors who know the various signs and meanings of this complicated age. 128 large pages; 5½ x 8½ inches; bound in attractive card covers. Every chapter of this new, important, significant book is copyrighted—written especially for this new and fascinating MODERN SEX BOOK. Here's what you get:

1. "My Husband is Impotent—What Shall I Do?" This section is by an anonymous author. A reading of its amazingly intimate revelations will explain why it was necessary for this woman to keep her name off the Ms.

2. "How to Keep Your Virginity." By Elisabeth Hamilton. Contains these sections: The Pick-Up. Business Contacts. Drinking Parties. Petting Parties, etc. It goes into a problem that means a great deal to many modern women—how to avoid having to give one's favors to sexually undesirable males. Men also will want to read this chapter.

3. "How to Get a Man." By Elisabeth Hamilton. Contains these sections: The Battle of the Sexes. Meet the Man. The Follow-Up. The Matrimonial Mood.

4. "How Cold Women Can Become Passionate." By Elisabeth Hamilton. Contains these sections: The Woman's Viewpoint. Childhood Inhibitions. Fear of Results. The Husband's Part. Illicit Affairs.

5. "How to Cure the Jitters." By Esley Leeds. Contains these sections: Why We Have Jitters. Talking Your Troubles Away. The Diet Cure. Drowning Your Sorrows. Change of Surroundings. New Places. New Faces. Reading. Working Off the Jitters. Riding a Hobby.

6. "The Bad Girl's Handbook." By Esley Leeds. Contains these sections: What Is a Bad Girl? The Gold-Digger. The Drinking Damsel. Behavior On a Date. Accidents Will Happen.

7. "Sex and the Whip (Flagellation)." By Anton S. Booker. Contains these sections: The Whip's Strange Fascination. The Whip in Brothels. The Whip Outside the Brothel. Flagellomania and Homosexuality. Peeping Flagellants, or Voyeurs.

THE MODERN SEX BOOK SHOULD BE WIDELY CIRCULATED. It contains advice, suggestions, real help and a thoroughly human, understanding touch. This MODERN SEX BOOK was written by modern authors for MODERN READERS. Instead of going into puritanical spasms, THE MODERN SEX BOOK offers its readers a helping hand. Use the order blank now:

SEND ME "THE MODERN SEX BOOK"

How to Improve Your English in Speech and Writing

By REX R. EASTMAN

This New, Popularized Self-Teaching Manual Will Give You the Equivalent of a College Course in English. Contains Seven Big Chapters—128 Pages, 5½ x 8½ Inches. Over 80,000 Words. Printed in Large, Clear Type.

A command of the English language—the ability to speak and write clearly, concisely and accurately—is almost essential for business and social success. Those who have this command of English feel self-confident, sure of themselves; when they have an idea, they can express it, either orally or in writing, in a way that others can easily understand. If you do not have this facility in the use of English, and wish to acquire it, you will find that our latest reference work, *How to Improve Your English in Speech and Writing*, is the answer to your problem.

How to Improve Your English in Speech and Writing is exactly what it claims to be—a self-teaching manual. By following the clear, easily understood plan of study which it outlines, you can quickly gain a mastery of the English language, both in speech and in writing. This manual, which is the equivalent of a college course in English, will be especially helpful to the person who seeks to educate himself, and who does not have access to an instructor or enjoy the benefits of classroom practice.

CONTENTS

Introduction

- I. The Elements of Grammar
- II. Simple Rules of Spelling
- III. How to Punctuate
- IV. Effective Rhetoric and Composition

V. The Importance of Clarity and Simplicity

VI. Common Errors and How to Avoid Them

VII. Hints on Writing Letters

The writer of *How to Improve Your English in Speech and Writing* has taken the utmost pains to make this manual simple and easily understood by the reader. Every important rule or principle of grammar, spelling, punctuation, rhetoric, composition, etc., is carefully explained and clearly illustrated by means of well-chosen examples. The writer is careful to develop his ideas in orderly sequence, so that each rule or principle which he gives is a logical outcome of the rule or principle which preceded it. As a result, the study of the English language becomes a fascinating game in which the student is able to measure his own progress from day to day.

If you are interested in becoming a fluent and correct speaker and writer, you will want to own a copy of *How to Improve Your English in Speech and Writing*. Rush your order AT ONCE, as this edition is strictly limited. Price, \$1 (add 20c for packing, handling and carriage).

HALDEMAN-JULIUS PUBLICATIONS, GIRARD, KANSAS

--The Right Word--

A Handy Guide to the Correct English Usages

— THE IMPORTANCE OF WORDS —

If you are interested in the correct expression of your ideas, you cannot afford to be without this valuable book. Every business and professional man, every stenographer, secretary, teacher, student, newspaperman, and many others will find this book of inestimable value.

Few things are more important to modern man than words. They are the universal means of communicating thought; indispensable tools of expression, and invaluable aids in the complete enjoyment of modern existence.

It is important, therefore, that we not only should know words, but that we also should know how to use them. The incorrect use of a word may brand you as socially ineligible, it may result in misunderstanding that leads to unhappiness, or it may mean failure in an important business deal, when otherwise success might crown your efforts.

Careless use of words gives the impression of slovenliness and inefficiency, whereas a decent respect for the niceties of language marks a man or woman as being accurate, refined, and discriminating.

The foregoing facts have impelled Haldeman-Julius Publications to issue "The Right Word," a handy reference work of correct usages of the English language.

Written by Willis F. Forbes, a practical newspaperman of 20 years' experience, it presents in a simple and concise form a comprehensive guide to the proprieties of the language.

Arranged in alphabetical form and generously cross-indexed, "The Right Word" explains the proper usage of about 5,000 English words that frequently are misused.

If you are interested in correct expression, you cannot afford to be without this marvelous guide.

The Jumbo Joke Book

A Treat for All Who Appreciate Snappy Humor. Hundreds
of Side-Splitting Jokes Suitable for Every Occasion

COMPILED BY REX R. EASTMAN

Here is your chance to get a mammoth collection of new and screamingly funny jokes at the bargain price of only \$1 (add 20 cents for packing, handling and carriage). *The Jumbo Joke Book* is a large volume—128 pages, 5½ x 8½ inches—and contains over 80,000 words of rip-snortin' humor. All jokes are carefully classified under the following heads:

Doctors	Yankees	Irish	Drunks	Hoboes
Dentists	Preachers	Jews	Farmers	Marriage
Lawyers	Negroes	Scotch	Americans	

If you own a copy of *The Jumbo Joke Book*, you will never be at a loss for a funny story with which to entertain your friends. You will find it a great help in preparing a speech or any type of public address, as a snappy, rib-tickling joke will always put your audience in a receptive mood. Much of Abraham Lincoln's popularity, both as an individual and a public speaker, arose from his ability to produce a funny yarn at the appropriate moment.

The Jumbo Joke Book will help you to gain this same sort of popularity by providing you with a rich mine of humor. Be the first person in your community to own a copy of this laugh-provoking book. You will get hours of enjoyment and laughter from *The Jumbo Joke Book*. Price \$1 (add 20c for packing, handling and carriage). Address your order to Haldeman-Julius Publications, Girard, Kansas.

DOES MAN LIVE AGAIN?

A Stenographic Report of a Debate on Immortality between a Famous
Jurist and a Distinguished Lawyer and Philosopher

CLARENCE DARROW VS. JUDGE M. A. MUSMANNO

Two keen thinkers—one a believer in life after death, and the other, Clarence Darrow, a skeptic and doubter—met at Pittsburgh, Pa., in a debate which rang with laughter, applause, eloquence, wit, sarcasm, philosophy, science and religion. There is solid thought, sane philosophy and merry humor in this entertaining, intellectual battle.

This debate is No. 5 of *THE REVIEWER*. The first four numbers of *THE REVIEWER* are by Isaac Goldberg, dealing with "What the Catholic Church Wants in America," "The Music of George Gershwin," "The Protocols of the Elders of Zion," and "Joseph McCabe: Warrior of Freethought."

In all, there will be 10 issues of *THE REVIEWER*. A subscription to all 10 numbers costs only \$1 (Canada and foreign, \$1.25). Subsequent issues will be announced later, but it is safe to assure all subscribers that each number of *THE REVIEWER* will be crammed with important, timely, interesting, entertaining and instructive material, written by a literary critic of international reputation. Remit by cash, money order or U.S. stamps of small denominations. (Add 10c to personal check for exchange.) Address: Haldeman-Julius Publications, Girard, Kansas.

LITTLE BLUE BOOK NO. **50**
Edited by E. Haldeman-Julius

Common Sense

Thomas Paine

TEN CENT POCKET SERIES NO. 50

Edited by E. Haldeman-Julius

Common Sense

Thomas Paine

**HALDEMAN-JULIUS COMPANY
GIRARD, KANSAS**

EXPLANATORY NOTICE.*

The North American Republic consists of twenty-four regularly organized States, and an immense extent of territory not yet formed into States, which, with the exception of some mountain ridges, is wholly susceptible of cultivation. It contains upwards of two millions of square miles, and is therefore thirteen times as large as France, twenty-three times as large as England, and would, were it peopled as densely as these countries, contain FOUR HUNDRED MILLIONS OF PEOPLE. It is watered on its eastern, western, and part of its southern sides by the ocean, and on part of its northern frontier by immense lakes. It is intersected in

*This clear and concise statement of the origin of the American war for independence is from an edition of *Common Sense* published in 1848 by J. Watson, 3 Queen's Head Passage, Paternoster Row, London. At that time the English publishers were permitted to print Paine's political writings unmutilated, as they now appear, without molestation by the government: but the early editions of both *Common Sense* and the *Rights of Man* were issued in a very imperfect form to avoid prosecution; all adverse criticism of the king or parliament, of tyrants and tyranny, being sternly suppressed. The vacant lines in the pages of the edition of *Common Sense* published by J. Almon, opposite Burlington-house in Piccadilly, 1776, and the many suppressed passages in the *Rights of Man* published by H. D. Symonds, Paternoster-Row, 1792, of J. S. Jordon, 166 Fleet-street, 1791, and many others, are all mute yet eloquent witnesses of the injustice and tyranny exercised by the British government in the 18th century.—Am. Pub.

all directions by magnificent rivers, and has more facilities for water conveyance than any other continental country; it abounds in mines and minerals, and produces everything necessary for the sustenance and enjoyment of mankind.

The population of the United States has been several times doubled in periods of less than twenty-five years, it now contains upwards of twelve millions of people, and bids fair at no very distant period to be more populous and powerful than any nation ever was.

Such is the present state, and such the prospects of a nation originally settled by men who either fled from religious intolerance and persecution to seek peace in the wilderness—by men whose notions of liberty were too high to permit them to endure the tyranny they were subjected to at home,—or by men who sought their fortunes as commercial speculators or cultivators of the land. From Britons thus circumstanced has sprung a people who have increased in number, wealth, and intelligence with a rapidity of which history furnishes no parallel.

From the time that the commerce of the North American Colonies became worth the notice of the British Government, it was put under the most pernicious and absurd restraints, for the supposed advantage of the mother country, and laws were occasionally passed here to regulate their internal affairs.

In the war which preceded the peace of 1762, the Colonists took a very decided part, and greatly contributed to the conquests made from

the French. Canada, which had been taken from that people, was retained by the British, and Florida was ceded to us by Spain. Thus secured from attack by foreign neighbors, Great Britain and her Colonies were more than ever attached to each other. The Americans were proud of the land of their ancestors and gloried in their descent from Englishmen. This state of harmony was, however, of short duration. The unexampled expenses of war required additional taxes to a large amount, and the difficulty this occasioned led the government in 1764 seriously to contemplate the levying of taxes in the colonies. This was objected to by the colonists, unless they were permitted to send representatives to the British Parliament; to this the government would not consent, and a dispute commenced which ended in the separation of the two countries.

Some at least if not all the colonies contended that they possessed every legislative power not surrendered by compact: whilst in Britain it was contended on the part of the government that "Parliament possessed the power of binding them in all cases whatever."

The dispute became serious, but so contemptible was the power of the colonists considered in the eyes of the English government that in a debate in the House of Commons General Grant, who should have known better, declared that "with five regiments of infantry he would undertake to traverse the whole country and drive the inhabitants from one end of it to the other." This contempt was not only entertained by the government and its adher-

ents, but by the people, who were eager to compel their American brethren to submission by force of arms, against which the voice of a few wise men was of no avail. The colonists continuing to refuse the unconditional submission demanded, recourse was had to arms, and on the night of the 18th of April, 1775, they were attacked by the king's troops at Lexington, and here the first American blood was spilt by their English brethren. The Americans repelled the aggression, appointed GEORGE WASHINGTON Commander-in-chief, and a desultory civil war desolated the colonies. The people were undecided in opinion, some were for submission, and others who deprecated the conduct of government, and publicly declared their detestation, disapproved of resistance as useless, and few were disposed to risk their lives and property in a contest of which none appeared able to foretell the consequences. The doctrine of independence was a novelty hitherto but slightly advocated by its friends, and they, from the want of numbers and the timidity always attendant on newly-started notions, were looked upon as rash and dangerous, or teacherous and designing men, more deserving of suspicion and censure than of applause and imitation.

It was in this crisis, this interval between fear and principle, that Thomas Paine, then unknown as a public character, published the pamphlet *Common Sense*.* Taking a broader

*"At the close of the year 1775," says Calvin Blanchard in his *Life of Paine*, "when the American Revolution had progressed as far as the

and longer view than his contemporaries, seeing the inevitable consequence of submission,

battles of Lexington and Bunker Hill, John Adams, Benjamin Rush, Benjamin Franklin, and George Washington, had met together to read the terrible dispatches they had received. Having done which, they pause in gloom and silence. Presently Franklin speaks: 'What, he asks, 'is to be the end of all this? Is it to obtain justice of Great Britain, to change the ministry, to soften a tax? Or is it for'—— He paused; the word independence yet choked the bravest throat that sought to utter it.

"At this critical moment, Paine enters. Franklin introduces him, and he takes his seat. He well knows the cause of the prevailing gloom, and breaks the deep silence thus: 'These States of America must be independent of England. That is the only solution of this question!' They all rise to their feet at this political blasphemy. But, nothing daunted, he goes on; his eye lights up with patriotic fire as he paints the glorious destiny which America, considering her vast resources, ought to achieve, and adjures them to lend their influence to rescue the Western Continent from the absurd, unnatural, and unprogressive predicament of being governed by a small island, three thousand miles off. Washington leaped forward, and taking both his hands, besought him to publish these views in a book.

"Paine went to his room, seized his pen, lost sight of every other object, toiled incessantly, and in December, 1775, the work entitled *Common Sense*, which caused the Declaration of Independence, and brought both people and their leaders face to face with the work they had to accomplish, was sent forth on its mission. 'That book,' says Dr. Rush, 'burst forth from the press with an effect that has been rarely produced by types and paper, in any age or country.'

"'Have you seen the pamphlet, *Common Sense*?' asked Major General Lee, in a letter to Washington: 'I never saw such a masterly, irresistible

the probable result of a declaration of independence, correctly appreciating the reasons which could be urged on either side, and pre-eminently possessing the power of clearly stating what he strongly conceived, he addressed himself to the Americans in language which every one could understand, and none could successfully controvert. This remarkable and inestimable production may be described from the anathemas of the enemies of liberty. It has received the highest possible praise from the pen of Cheetham, one of Thomas Paine's most venal and shameless calumniators, who thus characterizes the work:

"This pamphlet of forty-seven octavo pages, holding out relief by proposing INDEPENDENCE to an oppressed and despairing people, was published in January, 1776. Speaking a language which the colonists had felt, but not thought, its popularity, terrible in its consequences to the mother country, was unexampled in the history of the press. At first involving the colonists, it was thought, in the crime of rebellion, and pointing to a road leading inevitably to ruin, it was read with alarm and indignation, but when the reader (and

performance. It will, if I mistake not, in concurrence with the transcendent folly and wickedness of the ministry, give the coup-de-grace to Great Britain. In short, I own myself convinced by the arguments, of the necessity of separation.'

"The tribute of Paine's greatest enemy was in these words: 'The cannon of Washington was not more formidable to the British than the pen of the author of Common Sense.'"—Am. Pub.

everybody read it), recovering from the first shock, re-perused it, its arguments, ravishing his feelings and appealing to his pride, re-animated his hopes and satisfied his understanding, that *Common Sense*, backed by the resources and force of the colonies, poor and feeble as they were, could alone rescue them from the unqualified oppression with which they were threatened. The unknown author, in the moments of enthusiasm which succeeded, was hailed as an angel sent from heaven to save from all the horrors of slavery, by his timely, powerful, and unerring councils, a faithful but abused,—a brave but misrepresented people.

“When *Common Sense* arrived at Albany, the Convention of New York was sitting there. General Scott, a leading member, alarmed at the boldness and novelty of its arguments, mentioned his fears to several of his distinguished colleagues, and suggested a private meeting in the evening, for the purpose of writing an answer. They accordingly met, and Mr. McThesson read the pamphlet through. At first it was deemed necessary and expedient to answer it without delay, but casting about for the requisite arguments, they concluded to adjourn and meet again. In a few evenings they re-assembled, but so rapid was the change of opinion in the colonies at large in favor of independence, that they agreed not to oppose it.”

Dr. Gordon in his *History of the American Revolution* writes thus, “The publications which have appeared have greatly promoted the spirit

of independence, but no one so much as the pamphlet under the signature of *Common Sense*, written by Thomas Paine, an Englishman. Nothing could have been better timed* than this performance—it has produced astonishing effects."

Testimonies of this sort from friends and enemies could easily be multiplied, and proofs almost without end could be adduced to show how much the cause of mankind was promoted by Thomas Paine in thus assisting to lay the foundation of the American Republic,—the example of which will in time be followed by every people on the earth.

*"Paine was the first to advise the Americans to assert their independence," says Richard Carlile in his *Life of Paine*. "This he did in his famous pamphlet, entitled *Common Sense*, which, for its consequences and rapid effect, was the most important production that ever issued from the press. This pamphlet appeared at the commencement of the year 1776, and electrified the minds of the oppressed Americans. They had not ventured to harbor the idea of independence, and they dreaded war so much as to be anxious for reconciliation with Britain. One incident which gave a stimulus to the pamphlet *Common Sense* was, that it happened to appear on the very day that the King of England's speech reached the United States, in which the Americans were denounced as rebels and traitors, and in which speech it was asserted to be the right of the legislature of England to bind the Colonies in all cases whatsoever! Such menace and assertion as this could not fail to kindle the ire of the Americans, and *Common Sense* came forward to touch their feelings with the spirit of independence in the very nick of time."—*Am. Pub.*

The principles maintained in *Common Sense* are applicable to all times, and to all mankind. They should be carefully studied by every one who is at all desirous to possess that information without which he must ever remain a slave at heart,†

†Paine's own opinion of Common Sense may be inferred from the fact, that previous to his death he directed that his body should be interred on his farm at New Rochelle, and a plain stone placed over his grave bearing this inscription:

THOMAS PAINE,
AUTHOR OF
COMMON SENSE

COMMON SENSE.¹

Thomas Paine.

INTRODUCTION.

PERHAPS the sentiments contained in the following pages, are not *yet* sufficiently fashionable to procure them general Favor; a long Habit of not thinking a Thing *wrong*, gives it a superficial appearance of being *right*, and raises at first a formidable outcry in defense of Custom. But the Tumult soon subsides. Time makes more Converts than Reason.

As a long and violent abuse of power is generally the means of calling the right of it in question (and in matters too which might never

¹This pamphlet, whose effect has never been paralleled in literary history, was published January 10, 1776, with the following title:

Common Sense: Addressed to the Inhabitants of America, on the following Interesting Subjects, viz.: I. Of the Origin and Design of Government in General; with Concise Remarks on the English Constitution. II. Of Monarchy and Hereditary Succession. III. Thoughts on the Present State of American Affairs. IV. Of the Present Ability of America; with some Miscellaneous Reflections.

Man knows no master save creating Heaven,
Or those whom choice and common good ordain.
—Thomson.

Philadelphia: Printed, and Sold, by R. Bell, in Third Street MDCCLXXVI.

have been thought of, had not the sufferers been aggravated into the inquiry,) and as the King of England hath undertaken in his *own right*, to support the Parliament in what he calls *Theirs*, and as the good People of this Country are grievously oppressed by the Combination, they have an undoubted privilege to enquire into the Pretensions of both, and equally to reject the Usurpation of *either*.

In the following Sheets, the Author hath studiously avoided every thing which is personal among ourselves. Compliments as well as censure to individuals make no part thereof. The wise and the worthy need not the triumph of a Pamphlet; and those whose sentiments are injudicious or unfriendly will cease of themselves, unless too much pains is bestowed upon their conversions.

The cause of America is in a great measure the cause of all mankind. Many circumstances have, and will arise, which are not local, but universal, and through which the principles of all lovers of mankind are affected, and in the event of which their affections are interested. The laying a country desolate with fire and sword, declaring war against the natural rights of all mankind, and extirpating the defenders thereof from the face of the earth, is the concern of every man to whom nature hath given the power of feeling; of which class, regardless of party censure, is

THE AUTHOR.

Postscript to Preface in the third edition.

P. S. The Publication of this new Edition hath been delayed, with a view of taking notice (had it been necessary) of any attempt to refute the Doctrine of Independence: As no answer hath yet appeared, it is now presumed that none will, the time needful for getting such a Performance ready for the Public being considerably past.

Who the Author of this Production is, is wholly unnecessary to the Public, as the Object for Attention is the *Doctrine itself*, not the *Man*. Yet it may not be unnecessary to say, That he is unconnected with any party, and under no sort of Influence, public or private, but the influence of reason and principle.

Philadelphia, February 14, 1776.

COMMON SENSE.

ON THE ORIGIN AND DESIGN OF GOVERNMENT
IN GENERAL, WITH CONCISE REMARKS
ON THE ENGLISH CONSTITUTION.

SOME writers have so confounded society with government, as to leave little or no distinction between them; whereas they are not only different, but have different origins. Society is produced by our wants, and government by our wickedness; the former promotes our happiness *positively* by uniting our affections, the latter *negatively* by restraining our vices. The one encourages intercourse, the other creates distinctions. The first is a patron, the last a punisher.

Society in every state is a blessing, but Government, even in its best state, is but a necessary evil; in its worst state an intolerable one: for when we suffer, or are exposed to the same miseries *by a Government*, which we might expect in a country *without Government*, our calamity is heightened by reflecting that we furnish the means by which we suffer.. Government, like dress, is the badge of lost innocence; the palaces of kings are built upon the ruins of the bowers of paradise. For were the impulses of conscience clear, uniform and irresistibly obeyed, man would need no other law-giver; but that not being the case, he finds

it necessary to surrender up a part of his property to furnish means for the protection of the rest; and this he is induced to do by the same prudence which in every other case advises him, out of two evils to choose the least. Wherefore, security being the true design and end of government, it unanswerably follows that whatever form thereof appears most likely to ensure it to us, with the least expense and greatest benefit, is preferable to all others.

In order to gain a clear and just idea of the design and end of government, let us suppose a small number of persons settled in some sequestered part of the earth, unconnected with the rest; they will then represent the first peopling of any country, or of the world. In this state of natural liberty, society will be their first thought. A thousand motives will excite them thereto; the strength of one man is so unequal to his wants, and his mind so unfitted for perpetual solitude, that he is soon obliged to seek assistance and relief of another, who in his turn requires the same. Four or five united would be able to raise a tolerable dwelling in the midst of a wilderness, but one man might labour out the common period of life without accomplishing any thing; when he had felled his timber he could not remove it, nor erect it after it was removed; hunger in the mean time would urge him to quit his work, and every different want would call him a different way. Disease, nay even misfortune, would be death; for though neither might be mortal, yet either would disable him from living, and reduce him to a state in which he

might rather be said to perish than to die.

Thus necessity, like a gravitating power, would soon form our newly arrived emigrants into society, the reciprocal blessings of which would supercede, and render the obligations of law and government unnecessary while they remained perfectly just to each other; but as nothing but Heaven is impregnable to vice, it will unavoidably happen that in proportion as they surmount the first difficulties of emigration, which bound them together in a common cause, they will begin to relax in their duty and attachment to each other: and this remissness will point out the necessity of establishing some form of government to supply the defect of moral virtue.

Some convenient tree will afford them a State House, under the branches of which the whole Colony may assemble to deliberate on public matters. It is more than probable that their first laws will have the title only of Regulations and be enforced by no other penalty than public disesteem. In this first parliament every man by natural right will have a seat.

But as the Colony encreases, the public concerns will encrease likewise, and the distance at which the members may be separated, will render it too inconvenient for all of them to meet on every occasion as at first, when their number was small, their habitations near, and the public concerns few and trifling. This will point out the convenience of their consenting to leave the legislative part to be managed by a select number chosen from the whole body, who are supposed to have the same con-

cerns at stake which those have who appointed them, and who will act in the same manner as the whole body would act were they present. If the colony continue encreasing, it will become necessary to augment the number of representatives, and that the interest of every part of the colony may be attended to, it will be found best to divide the whole into convenient parts, each part sending its proper number: and that the *elected* might never form to themselves an interest separate from the *electors*, prudence will point out the propriety of having elections often: because as the *elected* might by that means return and mix again with the general body of the *electors* in a few months, their fidelity to the public will be secured by the prudent reflection of not making a rod for themselves. And as this frequent interchange will establish a common interest with every part of the community, they will mutually and naturally support each other, and on this, (not on the unmeaning name of king,) depends the *strength of government, and the happiness of the governed.*

Here then is the origin and rise of government; namely, a mode rendered necessary by the inability of moral virtue to govern the world; here too is the design and end of government, viz. Freedom and security. And however our eyes may be dazzled with show, or our ears deceived by sound; however prejudice may warp our wills, or interest darken our understanding, the simple voice of nature and reason will say, 'tis right.

I draw my idea of the form of government

from a principle in nature which no art can overturn, viz. that the more simple any thing is, the less liable it is to be disordered, and the easier repaired when disordered; and with this maxim in view I offer a few remarks on the so much boasted constitution of England. That it was noble for the dark and slavish times in which it was erected, is granted. When the world was overrun with tyranny the least remove therefrom was a glorious rescue. But that it is imperfect, subject to convulsions, and incapable of producing what it seems to promise, is easily demonstrated.

Absolute governments, (tho' the disgrace of human nature) have this advantage with them, they are simple; if the people suffer, they know the head from which their suffering springs; know likewise the remedy; and are not bewildered by a variety of causes and cures. But the constitution of England is so exceedingly complex, that the nation may suffer for years together without being able to discover in which part the fault lies; some will say in one and some in another, and every political physician will advise a different medicine.

I know it is difficult to get over local or long standing prejudices, yet if we will suffer ourselves to examine the component parts of the English constitution, we shall find them to be the base remains of two ancient tyrannies, compounded with some new Republican materials.

First.—The remains of Monarchical tyranny in the person of the King.

Secondly.—The remains of Aristocratical tyranny in the persons of the Peers.

Thirdly.—The new Republican materials, in the persons of the Commons, on whose virtue depends the freedom of England.

The two first, by being hereditary, are independent of the People; wherefore in a *constitutional sense* they contribute nothing towards the freedom of the State.

To say that the constitution of England is an *union* of three powers, reciprocally *checking* each other, is farcical; either the words have no meaning, or they are flat contradictions.

To say that the Commons is a check upon the King, presupposes two things.

First.—That the King it not to be trusted without being looked after; or in other words, that a thirst for absolute power is the natural disease of monarchy.

Secondly.—That the Commons, by being appointed for that purpose, are either wiser or more worthy of confidence than the Crown.

But as the same constitution which gives the Commons a power to check the King by withholding the supplies, gives afterwards the King a power to check the Commons, by empowering him to reject their other bills; it again supposes that the King is wiser than those whom it has already supposed to be wiser than him. A mere absurdity!

There is something exceedingly ridiculous in the composition of Monarchy; it first excludes a man from the means of information, yet empowers him to act in cases where the highest judgment is required. The state of a king shuts

him from the World, yet the business of a king requires him to know it thoroughly; wherefore the different parts, by unnaturally opposing and destroying each other, prove the whole character to be absurd and useless.

Some writers have explained the English constitution thus: the King, say they, is one, the people another; the Peers are a house in behalf of the King, the commons in behalf of the people; but this hath all the distinctions of a house divided against itself; and though the expressions be pleasantly arranged, yet when examined they appear idle and ambiguous; and it will always happen, 'that the nicest construction that words are capable of, when applied to the description of something which either cannot exist, or is too incomprehensible to be within the compass of description, will be words of sound only, and though they may amuse the ear, they cannot inform the mind: for this explanation includes a previous question, viz. *how came the king by a power which the people are afraid to trust, and always obliged to check?* Such a power could not be the gift of a wise people, neither can any power, *which needs checking*, be from God; yet the provision which the constitution makes supposes such a power to exist.

But the provision is unequal to the task; the means either cannot or will not accomplish the end, and the whole affair is a *Felo de se*: for as the greater weight will always carry up the less, and as all the wheels of a machine are put in motion by one, it only remains to know which power in the constitution has the

most weight, for that will govern: and tho' the others, or a part of them, may clog, or, as the phrase is, check the rapidity of its motion, yet so long as they cannot stop it, their endeavours will be ineffectual: The first moving power will at last have its way, and what it wants in speed is supplied by time.

That the crown is this overbearing part in the English constitution needs not be mentioned, and that it derives its whole consequence merely from being the giver of places and pensions is self-evident; wherefore, though we have been wise enough to shut and lock a door against absolute Monarchy, we at the same time have been foolish enough to put the Crown in possession of the key.

The prejudice of Englishmen, in favour of their own government, by King, Lords and Commons, arises as much or more from national pride than reason. Individuals are undoubtedly safer in England than in some other countries: but the will of the king is as much the law of the land in Britain as in France, with this difference, that instead of proceeding directly from his mouth, it is handed to the people under the formidable shape of an act of parliament. For the fate of Charles the First hath only made kings more subtle—not more just.

Wherefore, laying aside all national pride and prejudice in favour of modes and forms, the plain truth is that *it is wholly owing to the constitution of the people, and not to the constitution of the government* that the crown is not as oppressive in England as in Turkey.

An inquiry into the *constitutional errors* in

the English form of government, is at this time highly necessary; for as we are never in a proper condition of doing justice to others, while we continue under the influence of some leading partiality, so neither are we capable of doing it to ourselves while we remain fettered by any obstinate prejudice. And as a man who is attached to a prostitute is unfitted to choose or judge of a wife, so any prepossession in favour of a rotten constitution of government will disable us from discerning a good one.

OF MONARCHY AND HEREDITARY SUCCESSION.

MANKIND being originally equals in the order of creation, the equality could only be destroyed by some subsequent circumstance: the distinctions of rich and poor may in a great measure be accounted for, and that without having recourse to the harsh ill-sounding names of oppression and avarice. Oppression is often the *consequence*, but seldom or never the *means* of riches; and tho' avarice will preserve a man from being necessitously poor, it generally makes him too timorous to be wealthy.

But there is another and great distinction for which no truly natural or religious reason can be assigned, and that is the distinction of men into KINGS and SUBJECTS. Male and female are the distinctions of nature, good and bad the distinctions of Heaven; but how a race of men came into the world so exalted above the rest, and distinguished like some new species, is worth inquiring into, and whether they are the means of happiness or of misery to mankind.

In the early ages of the world, according to the scripture chronology there were no kings; the consequence of which was, there were no wars; it is the pride of kings which throws mankind into confusion. Holland, without a king hath enjoyed more peace for this last century than any of the monarchical governments in Europe. Antiquity favours the same remark; for the quiet and rural lives of the first Patriarchs have a snappy something in them, which vanishes when we come to the history of Jewish royalty.

Government by kings was first introduced into the world by the Heathens, from whom the children of Israel copied the custom. It was the most prosperous invention the Devil ever set on foot for the promotion of idolatry. The Heathens paid divine honours to their deceased kings, and the Christian World hath improved on the plan by doing the same to their living ones. How impious is the title of sacred Majesty applied to a worm, who in the midst of his splendor is crumbling into dust!

As the exalting one man so greatly above the rest cannot be justified on the equal rights of nature, so neither can it be defended on the authority of scripture; for the will of the Almighty as declared by Gideon, and the prophet Samuel, expressly disapproves of government by Kings. All anti-monarchical parts of scripture, have been very smoothly glossed over in monarchical governments, but they undoubtedly merit the attention of countries which have their governments yet to form. *Render unto Cesar the things which are Cesar's*, is the scrip-

ture doctrine of courts, yet it is no support of monarchical government, for the Jews at that time were without a king, and in a state of vassalage to the Romans.

Near three thousand years passed away, from the Mosaic account of the creation, till the Jews under a national delusion requested a king. Till then their form of government (except in extraordinary cases where the Almighty interposed) was a kind of Republic, administered by a judge and the elders of the tribes. Kings they had none, and it was held sinful to acknowledge any being under that title but the Lord of Hosts. And when a man seriously reflects on the idolatrous homage which is paid to the persons of kings, he need not wonder that the Almighty, ever jealous of his honour, should disapprove a form of government which so impiously invades the prerogative of Heaven.

Monarchy is ranked in scripture as one of the sins of the Jews, for which a curse in reserve is denounced against them. The history of that transaction is worth attending to.

The children of Israel being oppressed by the Midianites, Gideon marched against them with a small army, and victory thro' the divine interposition decided in his favour. The Jews, elate with success, and attributing it to the generalship of Gideon, proposed making him a king, saying, *Rule thou over us, thou and thy son, and thy son's son.* Here was temptation in its fullest extent; not a kingdom only, but an hereditary one; but Gideon in the piety of his soul replied, *I will not rule over you, neither shall my son rule over you.* THE LORD SHALL

RULE OVER YOU. Words need not be more explicit: Gideon doth not decline the honour, but denieth their right to give it; neither doth he compliment them with invented declarations of his thanks, but in the positive style of a prophet charges them with disaffection to their proper Sovereign, the King of Heaven.

About one hundred and thirty years after this, they fell again into the same error. The hankering which the Jews had for the idolatrous customs of the Heathens, is something exceedingly unaccountable; but so it was, that laying hold of the misconduct of Samuel's two sons, who were intrusted with some secular concerns, they came in an abrupt and clamorous manner to Samuel, saying, *Behold thou art old, and thy sons walk not in thy ways, now make us a king to judge us like all the other nations.* And here we cannot observe but that their motives were bad, viz. that they might be like unto other nations, i. e. the Heathens, whereas their true glory lay in being as much unlike them as possible. *But the thing displeased Samuel when they said, give us a King to judge us; and Samuel prayed unto the Lord, and the Lord said unto Samuel, hearken unto the voice of the people in all that they say unto thee, for they have not rejected thee, but they have rejected me, THAT I SHOULD NOT REIGN OVER THEM.* According to all the works which they have done since the day that I brought them up out of Egypt even unto this day, wherewith they have forsaken me, and served other Gods: so do they also unto thee. Now therefore hearken unto their voice, howbeit, protest sol-

emly unto them and show them the manner of the King that shall reign over them, i. e. not of any particular King, but the general manner of the Kings of the earth whom Israel was so eagerly copying after. And notwithstanding the great distance of time and difference of manners, the character is still in fashion. And Samuel told all the words of the Lord unto the people, that asked of him a King. And he said, This shall be the manner of the King that shall reign over you. He will take your sons and appoint them for himself for his chariots and to be his horsemen, and some shall run before his chariots (this description agrees with the present mode of impressing men) and he will appoint him captains over thousands and captains over fifties, will set them to ear his ground and to reap his harvest, and to make his instruments of war, and instruments of his chariots, And he will take your daughters to be confectionaries, and to be cooks, and to be bakers (this describes the expense and luxury as well as the oppression of Kings) and he will take your fields and your vineyards, and your olive yards, even the best of them, and give them to his servants. And he will take the tenth of your seed, and of your vineyards, and give them to his officers and to his servants (by which we see that bribery, corruption, and favouritism, are the standing vices of Kings) and he will take the tenth of your men servants, and your maid servants, and your goodliest young men, and your asses, and put them to his work: and he will take the tenth of your sheep, and ye shall be his servants, and ye shall

cry out in that day because of your king which ye shall have chosen, AND THE LORD WILL NOT HEAR YOU IN THAT DAY. This accounts for the continuation of Monarchy; neither do the characters of the few good kings which have lived since, either sanctify the title, or blot out the sinfulness of the origin; the high encomium of David takes no notice of him officially as a King, but only as a man after God's own heart. Nevertheless the people refused to obey the voice of Samuel, and they said, Nay, but we will have a king over us, that we may be like all the nations, and that our king may judge us, and go out before us and fight our battles. Samuel continued to reason with them but to no purpose; he set before them their ingratitude, but all would not avail; and seeing them fully bent on their folly, he cried out, I will call unto the Lord, and he shall send thunder and rain (which was then a punishment, being in the time of wheat harvest) that ye may perceive and see that your wickedness is great which ye have done in the sight of the Lord, IN ASKING YOU A KING. So Samuel called unto the Lord, and the Lord sent thunder and rain that day, and all the people greatly feared the Lord and Samuel. And all the people said unto Samuel, Pray for thy servants unto the Lord thy God that we die not, for WE HAVE ADDED UNTO OUR SINS THIS EVIL, TO ASK A KING. These portions of scripture are direct and positive. They admit of no equivocal construction. That the Almighty hath here entered his protest against monarchical government is true, or the scripture is false. And a man hath good reason to

believe that there is as much of kingcraft as priestcraft in withholding the scripture from the public in popish countries. For monarchy in every instance is the popery of government.

To the evil of monarchy we have added that of hereditary succession; and as the first is a degradation and lessening of ourselves, so the second, claimed as a matter of right, is an insult and imposition on posterity. For all men being originally equals, no one by birth could have a right to set up his own family in perpetual preference to all others for ever, and tho' himself might deserve some decent degree of honours of his contemporaries, yet his descendants might be far too unworthy to inherit them. One of the strongest natural proofs of the folly of hereditary right in Kings, is that nature disapproves it, otherwise she would not so frequently turn it into ridicule, by giving mankind an *Ass for a Lion*.

Secondly, as no man at first could possess any other public honors than were bestowed upon him, so the givers of those honors could have no power to give away the right of posterity, and though they might say "We choose you for our head," they could not without manifest injustice to their children say "that your children and your children's children shall reign over ours forever." Because such an unwise, unjust, unnatural compact might (perhaps) in the next succession put them under the government of a rogue or a fool. Most wise men in their private sentiments have ever treated hereditary right with contempt; yet it is one of those evils which when once estab-

lished is not easily removed: many submit from fear, others from superstition, and the more powerful part shares with the king the plunder of the rest.

This is supposing the present race of kings in the world to have had an honorable origin: whereas it is more than probable, that, could we take off the dark covering of antiquity and trace them to their first rise, we should find the first of them nothing better than the principal ruffian of some restless gang, whose savage manners of pre-eminence in subtilty obtained him the title of chief among plunderers; and who by increasing in power and extending his depredations, overawed the quiet and defenseless to purchase their safety by frequent contributions. Yet his electors could have no idea of giving hereditary right to his descendants, because such a perpetual exclusion of themselves was incompatible with the free and restrained principles they professed to live by. Wherefore, hereditary succession in the early ages of monarchy could not take place as a matter of claim, but as something casual or complementary; but as few or no records were extant in those days, the traditionary history stuff'd with fables, it was very easy, after the lapse of a few generations, to trump up some superstitious tale conveniently timed, Mahomet-like, to cram hereditary right down the throats of the vulgar. Perhaps the disorders which threatened, or seemed to threaten, on the decease of a leader and the choice of a new one (for elections among ruffians could not be very orderly) induced many at first to favour heredi-

tary pretensions; by which means it happened, as it hath happened since, that what at first was submitted to as a convenience was afterwards claimed as a right.

England since the conquest hath known some few good monarchs, but groaned beneath a much larger number of bad ones: yet no man in his senses can say that their claim under William the Conqueror is a very honourable one. A French bastard landing with an armed Banditti and establishing himself king of England against the consent of the natives, is in plain terms a very paltry rascally original. It certainly hath no divinity in it. However it is needless to spend much time in exposing the folly of hereditary right; if there are any so weak as to believe it, let them promiscuously worship the Ass and the Lion, and welcome. I shall neither copy their humility, nor disturb their devotion.

Yet I should be glad to ask how they suppose kings came at first? The question admits but of three answers, viz. either by lot, by election, or by usurpation. If the first king was taken by lot, it establishes a precedent for the next, which excludes hereditary succession. Saul was by lot, yet the succession was not hereditary, neither does it appear from that transaction that there was any intention it ever should. If the first king of any country was by election, that likewise establishes a precedent for the next; for to say, that the right of all future generations is taken away, by the act of the first electors, in their choice not only of a king but of a family of kings for ever, hath no

parallel in or out of scripture but the doctrine of original sin, which supposes the free will of all men lost in Adam; and from such comparison, and it will admit of no other, hereditary succession can derive no glory. For as in Adam all sinned, and as in the first electors all men obeyed; as in the one all mankind were subjected to Satan, and in the other to sovereignty; as our innocence was lost in the first, and our authority in the last; and as both disable us from re-assuming some former state and privilege, it unanswerably follows that original sin and hereditary succession are parallels. Dishonourable rank! inglorious connection! yet the most subtle sophist cannot produce a juster simile.

As to usurpation, no man will be so hardy as to defend it; and that William the Conqueror was an usurper is a fact not to be contradicted. The plain truth is, that the antiquity of English monarchy will not bear looking into.

But it is not so much the absurdity as the evil of hereditary succession which concerns mankind. Did it ensure a race of good and wise men it would have the seal of divine authority, but as it opens a door to the *foolish*, the *wicked*, and the *improper*, it hath in it the nature of oppression. Men who look upon themselves born to reign, and others to obey, soon grow insolent. Selected from the rest of mankind, their minds are early poisoned by importance; and the world they act in differs so materially from the world at large, that they have but little opportunity of knowing its true interests, and when they succeed to the govern-

ment are frequently the most ignorant and unfit of any throughout the dominions.

Another evil which attends hereditary succession is, that the throne is subject to be possessed by a minor at any age; all which time the regency acting under the cover of a king have every opportunity and inducement to betray their trust. The same national misfortune happens when a king worn out with age and infirmity enters the last stage of human weakness. In both these cases the public becomes a prey to every miscreant who can tamper successfully with the follies either of age or infancy.

The most plausible plea which hath ever been offered in favor of hereditary succession is, that it preserves a nation from civil wars; and were this true, it would be weighty; whereas it is the most bare-faced falsity ever imposed upon mankind. The whole history of England disowns the fact. Thirty kings and two minors have reigned in that distracted kingdom since the conquest, in which time there has been (including the revolution) no less than eight civil wars and nineteen Rebellions. Wherefore instead of making for peace, it makes against it, and destroys the very foundation it seems to stand upon.

The contest for monarchy and succession, between the houses of York and Lancaster, laid England in a scene of blood for many years. Twelve pitched battles besides skirmishes and sieges were fought between Henry and Edward. Twice was Henry prisoner to Edward, who in his turn was prisoner to Henry. And so un-

certain is the fate of war and the temper of a nation, when nothing but personal matters are the ground of a quarrel, that Henry was taken in triumph from a prison to a palace, and Edward obliged to fly from a palace to a foreign land; yet, as sudden transitions of temper are seldom lasting, Henry in his turn was driven from the throne, and Edward re-called to succeed him. The parliament always following the strongest side.

This contest began in the reign of Henry the Sixth, and was not entirely extinguished till Henry the Seventh, in whom the families were united. Including a period of 67 years, viz. from 1422 to 1489.

In short, monarchy and succession have laid (not this or that kingdom only) but the world in blood and ashes. 'Tis a form of government which the word of God bears testimony against, and blood will attend it.

If we enquire into the business of a King, we shall find that in some countries they may have none; and after sauntering away their lives without pleasure to themselves or advantage to the nation, withdraw from the scene, and leave their successors to tread the same idle round. In absolute monarchies the whole weight of business civil and military lies on the King; the children of Israel in their request for a king urged this plea, "that he may judge us, and go out before us and fight our battles." But in countries where he is neither a Judge nor a General. as in England, a man would be puzzled to know what *is* his business.

The nearer any government approaches to a

Republic, the less business there is for a King. It is somewhat difficult to find a proper name for the government of England. Sir William Meredith calls it a Republic; but in its present state it is unworthy of the name, because the corrupt influence of the Crown, by having all the places in its disposal, hath so effectually swallowed up the power, and eaten out the virtue of the House of Commons (the Republican part in the constitution) that the government of England is nearly as monarchical as that of France or Spain. Men fall out with names without understanding them. For 'tis the Republican and not the Monarchical part of the Constitution of England which Englishmen glory in, viz. the liberty of choosing an House of Commons from out of their own body—and it is easy to see that when Republican virtues fail, slavery ensues. Why is the constitution of England sickly, but because monarchy hath poisoned the Republic; the Crown hath engrossed the Commons.

In England a King hath little more to do than to make war and give away places; which, in plain terms, is to empoverish the nation and set it together by the ears. A pretty business indeed for a man to be allowed eight hundred thousand sterling a year for, and worshipped into the bargain! Of more worth is one honest man to society, and in the sight of God, than all the crowned ruffians that ever lived.

THOUGHTS ON THE PRESENT STATE OF
AMERICAN AFFAIRS.

IN the following pages I offer nothing more than simple facts, plain arguments, and common sense: and have no other preliminaries to settle with the reader, than that he will divest himself of prejudice and prepossession, and suffer his reason and his feelings to determine for themselves: that he will put on, or rather that he will not put off, the true character of a man, and generously enlarge his views beyond the present day.

Volumes have been written on the subject of the struggle between England and America. Men of all ranks have embarked in the controversy, from different motives, and with various designs; but all have been ineffectual, and the period of debate is closed. Arms as the last resource decide the contest; the appeal was the choice of the King, and the Continent has accepted the challenge.

It hath been reported of the late Mr. Pelham (who tho' an able minister was not without his faults) that on his being attacked in the House of Commons on the score that his measures were only of a temporary kind, replied, "*they will last my time.*" Should a thought so fatal and unmanly possess the Colonies in the present contest, the name of ancestors will be

remembered by future generations with detestation.

The Sun never shined on a cause of greater worth. 'Tis not the affair of a City, a County, a Province, or a Kingdom; but of a Continent—of at least one-eighth part of the habitable Globe. 'Tis not the concern of a day, a year, or an age; posterity are virtually involved in the contest, and will be more or less affected even to the end of time, by the proceedings now. Now is the seed-time of Continental union, faith and honour. The least fracture now will be like a name engraved with the point of a pin on the tender rind of a young oak; the wound would enlarge with the tree, and posterity read in it full grown characters.

By referring the matter from argument to arms, a new era for politics is struck—a new method of thinking hath arisen. All plans, proposals, &c. prior to the nineteenth of April, *i. e.* to the commencement of hostilities,* are like the almanacks of the last year; which tho' proper then, are superceded and useless now. Whatever was advanced by the advocates on either side of the question then, terminated in one and the same point, *viz.* a union with Great Britain; the only difference between the parties was the method of effecting it; the one proposing force, the other friendship; but it hath so far happened that the first hath failed, and the second hath withdrawn her influence.

As much hath been said of the advantages of reconciliation, which, like an agreeable

*At Lexington, Massachusetts, 1775.—Editor.

dream, hath passed away and left us as we were, it is but right that we should examine the contrary side of the argument, and enquire into some of the many material injuries which these Colonies sustain, and always will sustain, by being connected with and dependant on Great Britain. To examine that connection and dependance, on the principles of nature and common sense, to see what we have to trust to, if separated, and what we are to expect, if dependant.

I have heard it asserted by some, that as America has flourished under her former connection with Great Britain, the same connection is necessary towards her future happiness, and will always have the same effect. Nothing can be more fallacious than this kind of argument. We may as well assert that because a child has thrived upon milk, that it is never to have meat, or that the first twenty years of our lives is to become a precedent for the next twenty. But even this is admitting more than is true; for I answer roundly that America would have flourished as much, and probably much more, had no European power taken any notice of her. The commerce by which she hath enriched herself are the necessaries of life, and will always have a market while eating is the custom of Europe.

But she has protected us, say some. That she hath engrossed us is true, and defended the Continent at our expense as well as her own, is admitted; and she would have defended Turkey from the same motive, *viz.* for the sake of trade and dominion.

Alas! we have been long led away by ancient prejudices and made large sacrifices to superstition. We have boasted the protection of Great Britain, without considering, that her motive was *interest* not *attachment*; and that she did not protect us from *our enemies* on *our account*; but from *her enemies* on *her own account*, from those who had no quarrel with us on any *other account*, and who will always be our enemies on the *same account*. Let Britain waive her pretensions to the Continent, or the Continent throw off the dependance, and we should be at peace with France and Spain, were they at war with Britain. The miseries of Hanover last war ought to warn us against connections.

It hath lately been asserted in parliament, that the Colonies have no relation to each other but through the Parent Country, *i. e.* that Pennsylvania and the Jerseys and so on for the rest, are sister Colonies by the way of England; this is certainly a very roundabout way of proving relationship, but it is the nearest and only true way of proving enmity (or enemyship, if I may so call it.) France and Spain never were, nor perhaps ever will be, our enemies as *Americans*, but as our being the *subjects of Great Britain*.

But Britain is the parent country, say some. Then the more shame upon her conduct. Even brutes do not devour their young, nor savages make war upon their families. Wherefore, the assertion, if true, turns to her reproach; but it happens not to be true, or only partly so, and the phrase *parent or mother country* hath been

jesuitically adopted by the King and his parasites, with a low papistical design of gaining an unfair bias on the credulous weakness of our minds. Europe, and not England, is the parent country of America. This new World hath been the asylum for the persecuted lovers of civil and religious liberty from *every part of* Europe. Hither have they fled, not from the tender embraces of the mother, but from the cruelty of the monster; and it is so far true of England, that the same tyranny which drove the first emigrants from home, pursues their descendants still.

In this extensive quarter of the globe, we forget the narrow limits of three hundred and sixty miles (the extent of England) and carry our friendship on a larger scale; we claim brotherhood with every European Christian, and triumph in the generosity of the sentiment.

It is pleasant to observe by what regular gradations we surmount the force of local prejudices, as we enlarge our acquaintance with the World. A man born in any town in England divided into parishes, will naturally associate most with his fellow parishioners (because their interests in many cases will be common) and distinguish him by the name of *neighbour*; if he meet him but a few miles from home, he drops the narrow idea of a street, and salutes him by the name of *townsman*; if he travel out of the county and meet him in any other, he forgets the minor divisions of street and town, and calls him *countryman*, *i. e. countyman*; but if in their foreign excursions they should associate in France, or

any other part of *Europe*, their local remembrance would be enlarged into that of *Englishmen*. And by a just parity of reasoning, all Europeans meetings in America, or any other quarter of the globe, are *countrymen*; for England, Holland, Germany, or Sweden, when compared with the whole, stand in the same places on the larger scale, which the divisions of street, town, and county do on the smaller ones; Distinctions too limited for Continental minds. Not one third of the inhabitants, even of this province, [Pennsylvania], are of English descent. Wherefore, I reprobate the phrase of Parent or Mother Country applied to England only, as being false, selfish, narrow and ungenerous.

But, admitting that we were all of English descent, what does it amount to? Nothing. Britain, being now an open enemy, extinguishes every other name and title: and to say that reconciliation is our duty, is truly farcical. The first king of England, of the present line (William the Conqueror) was a Frenchman, and half the peers of England are descendants from the same country; wherefore, by the same method of reasoning, England ought to be governed by France.

Much hath been said of the united strength of Britain and the Colonies, that in conjunction they might bid defiance to the world: But this is mere presumption; the fate of war is uncertain, neither do the expressions mean anything; for this continent would never suffer itself to be drained of inhabitants, to support

the British arms in either Asia, Africa, or Europe.

Besides, what have we to do with setting the world at defiance? Our plan is commerce, and that, well attended to, will secure us the peace and friendship of all Europe; because it is the interest of all Europe to have America a free port. Her trade will always be a protection, and her barrenness of gold and silver secure her from invaders.

I challenge the warmest advocate for reconciliation to show a single advantage that this continent can reap by being connected with Great Britain. I repeat the challenge; not a single advantage is derived. Our corn will fetch its price in any market in Europe, and our imported goods must be paid for by them where we will.

But the injuries and disadvantages which we sustain by that connection, are without number; and our duty to mankind at large, as well as to ourselves, instruct us to renounce the alliance: because, any submission to, or dependence on, Great Britain, tends directly to involve this Continent in European wars and quarrels, and set us at variance with nations who would otherwise seek our friendship, and against whom we have neither anger nor complaint. As Europe is our market for trade, we ought to form no partial connection with any part of it. It is the true interest of America to steer clear of European contentions, which she never can do, while, by her dependence on Britain, she is made the make-weight in the scale of British politics.

Europe is too thickly planted with Kingdoms to be long at peace, and whenever a war breaks out between England and any foreign power, the trade of America goes to ruin, *because of her connection with Britain*. The next war may not turn out like the last, and should it not, the advocates for reconciliation now will be wishing for separation then, because neutrality in that case would be a safer convoy than a man of war. Every thing that is right or reasonable pleads for separation. The blood of the slain, the weeping voice of nature cries, 'TIS TIME TO PART. Even the distance at which the Almighty hath placed England and America is a strong and natural proof that the authority of the one over the other, was never the design of Heaven. The time likewise at which the Continent was discovered, adds weight to the argument, and the manner in which it was peopled, encreases the force of it. The Reformation was preceded by the discovery of America: As if the Almighty graciously meant to open a sanctuary to the persecuted in future years, when home should afford neither friendship nor safety.

The authority of Great Britain over this continent, is a form of government, which sooner or later must have an end: And a serious mind can draw no true pleasure by looking forward, under the painful and positive conviction that what he calls "the present constitution" is merely temporary. As parents, we can have no joy, knowing that this government is not sufficiently lasting to ensure any thing which we may bequeath to posterity:

And by a plain method of argument, as we are running the next generation into debt, we ought to do the work of it, otherwise we use them meanly and pitifully. In order to discover the line of our duty rightly, we should take our children in our hand, and fix our station a few years farther into life; that eminence will present a prospect which a few present fears and prejudices conceal from our sight.

Though I would carefully avoid giving unnecessary offence, yet I am inclined to believe, that all those who espouse the doctrine of reconciliation, may be included within the following descriptions.

Interested men, who are not to be trusted, weak men who *cannot* see, prejudiced men who will not see, and a certain set of moderate men who think better of the European world than it deserves; and this last class, by an ill-judged deliberation, will be the cause of more calamities to this Continent than all the other three.

It is the good fortune of many to live distant from the scene of present sorrow; the evil is not sufficiently brought to their doors to make them feel the precariousness with which all American property is possessed. But let our imaginations transport us a few moments to Boston; that seat of wretchedness will teach us wisdom, and instruct us for ever to renounce a power in whom we can have no trust. The inhabitants of that unfortunate city who but a few months ago were in ease and affluence, have now no other alternative than to stay and starve, or turn out to beg. Endangered by the fire of their friends if they con-

tinue within the city and plundered by the soldiery if they leave it, in their present situation they are prisoners without the hope of redemption, and in a general attack for their relief they would be exposed to the fury of both armies.

Men of passive tempers look somewhat lightly over the offences of Great Britain, and, still hoping for the best, are apt to call out, *Come, come, we shall be friends again for all this.* But examine the passions and feelings of mankind: bring the doctrine of reconciliation to the touchstone of nature, and then tell me whether you can hereafter love, honour, and faithfully serve the power that hath carried fire and sword into your land? If you cannot do all these, then are you only deceiving yourselves, and by your delay bringing ruin upon posterity. Your future connection with Britain, whom you can neither love nor honour, will be forced and unnatural, and being formed only on the plan of present convenience, will in a little time fall into a relapse more wretched than the first. But if you say, you can still pass the violations over, then I ask, hath your house been burnt? Hath your property been destroyed before your face? Are your wife and children destitute of a bed to lie on, or bread to live on? Have you lost a parent or a child by their hands, and yourself the ruined and wretched survivor? If you have not, then are you not a judge of those who have. But if you have, and can still shake hands with the murderers, then are you unworthy the name of husband, father, friend or lover, and whatever

may be your rank or title in life, you have the heart of a coward, and the spirit of a sycophant.

This is not inflaming or exaggerating matters, but trying them by those feelings and affections which nature justifies, and without which we should be incapable of discharging the social duties of life, or enjoying the felicities of it. I mean not to exhibit horror for the purpose of provoking revenge, but to awaken us from fatal and unmanly slumbers, that we may pursue determinately some fixed object. 'Tis not in the power of Britain or of Europe to conquer America, if she doth not conquer herself by delay and timidity. The present winter is worth an age if rightly employed, but if lost or neglected the whole Continent will partake of the misfortune; and there is no punishment which that man doth not deserve, be he who, or what, or where he will, that may be the means of sacrificing a season so precious and useful.

'Tis repugnant to reason, to the universal order of things, to all examples from former ages, to suppose that this Continent can long remain subject to any external power. The most sanguine in Britain doth not think so. The utmost stretch of human wisdom cannot, at this time, compass a plan, short of separation, which can promise the continent even a year's security. Reconciliation is *now* a fallacious dream. Nature hath deserted the connection, and art cannot supply her place. For, as Milton wisely expresses, "never can true reconcilment grow where wounds of deadly hate have pierced so deep."

Every quiet method for peace hath been ineffectual. Our prayers have been rejected with disdain; and hath tended to convince us that nothing flatters vanity or confirms obstinacy in Kings more than repeated petitioning—and nothing hath contributed more than that very measure to make the Kings of Europe absolute. Witness Denmark and Sweden. Wherefore, since nothing but blows will do, for God's sake let us come to a final separation, and not leave the next generation to be cutting throats under the violated unmeaning names of parent and child.

To say they will never attempt it again is idle and visionary; we thought so at the repeal of the stamp act, yet a year or two undeceived us; as well may we suppose that nations which have been once defeated will never renew the quarrel.

As to government matters, 'tis not in the power of Britain to do this continent justice: the business of it will soon be too weighty and intricate to be managed with any tolerable degree of convenience, by a power so distant from us, and so very ignorant of us; for if they cannot conquer us, they cannot govern us. To be always running three or four thousand miles with a tale or petition, waiting for four or five months for an answer, which, when obtained, requires five or six more to explain it in, will in a few years be looked upon as folly and childishness. There was a time when it was proper, and there is a proper time for it to cease.

Small islands not capable of protecting them-

selves are the proper objects for government¹ to take under their care; but there is something absurd, in supposing a Continent to be perpetually governed by an island. In no instance hath nature made the satellite larger than its primary planet; and as England and America, with respect to each other, reverse the common order of nature, it is evident that they belong to different systems. England to Europe: America to itself.

I am not induced by motives of pride, party, or resentment to espouse the doctrine of separation and independence; I am clearly, positively, and conscientiously persuaded that it is the true interest of this Continent to be so; that every thing short of *that* is mere patch-work, that it can afford no lasting felicity,—that it is leaving the sword to our children, and shrinking back at a time when a little more, a little further, would have rendered this Continent the glory of the earth.

As Britain hath not manifested the least inclination towards a compromise, we may be assured that no terms can be obtained worthy the acceptance of the Continent, or any ways equal to the expense of blood and treasure we have been already put to.

The object contended for, ought always to bear some just proportion to the expense. The removal of North, or the whole detestable junto, is a matter unworthy the millions we have expended. A temporary stoppage of trade was an inconvenience, which would have suf-

¹In some later editions "kingdoms."—Editor

ficiently balanced the repeal of all the acts complained of, had such repeals been obtained; but if the whole Continent must take up arms, if every man must be a soldier, 'tis scarcely worth our while to fight against a contemptible ministry only. Dearly, dearly do we pay for the repeal of the acts, if that is all we fight for; for, in a just estimation 'tis as great a folly to pay a Bunker-hill price for law as for land. As I have always considered the independancy of this Continent, as an event which sooner or later must arrive, so from the late rapid progress of the Continent to maturity, the event cannot be far off. Wherefore, on the breaking out of hostilities, it was not worth the while to have disputed a matter which time would have finally redressed, unless we meant to be in earnest: otherwise it is like wasting an estate on a suit at law, to regulate the tresspasses of a tenant whose lease is just expiring. No man was a warmer wisher for a reconciliation than myself, before the fatal nineteenth of April, 1775, but the moment the event of that day was made known, I rejected the hardened, sullen-tempered Pharoah of England for ever; and disdain the wretch, that with the pretended title of FATHER OF HIS PEOPLE can unfeelingly hear of their slaughter, and composedly sleep with their blood upon his soul.

But admitting that matters were now made up, what would be the event? I answer, the ruin of the Continent. And that for several reasons.

First. The powers of governing still remain

ing in the hands of the King, he will have a negative over the whole legislation of this Continent. And as he hath shown himself such an inveterate enemy to liberty, and discovered such a thirst for arbitrary powers, is he, or is he not, a proper person to say to these colonies, *You shall make no laws but what I please!!* And is there any inhabitant of America so ignorant as not to know, that according to what is called the *present constitution*, this Continent can make no laws but what the king gives leave to; and is there any man so unwise as not to see, that (considering what has happened) he will suffer no law to be made here but such as suits *his* purpose? We may be as effectually enslaved by the want of laws in America, as by submitting to laws made for us in England. After matters are made up (as it is called) can there be any doubt, but the whole power of the crown will be exerted to keep this continent as low and humble as possible? Instead of going forward we shall go backward, or be perpetually quarrelling, or ridiculously petitioning. We are already greater than the King wishes us to be, and will he not hereafter endeavor to make us less? To bring the matter to one point, Is the power who is jealous of our prosperity, a proper power to govern us? Whoever says *No*, to this question, is an Independent for independency means no more than this, whether we shall make our own laws, or, whether the King, the greatest enemy this continent hath, or can have, shall tell us *there shall be no laws but such as I like*.

But the King, you will say, has a negative

in England; the people there can make no laws without his consent. In point of right and good order, it is something very ridiculous that a youth of twenty-one (which hath often happened) shall say to several millions of people older and wiser than himself, "I forbid this or that act of yours to be law." But in this place I decline this sort of reply, though I will never cease to expose the absurdity of it, and only answer that England being the King's residence, and America not so, makes quite another case. The King's negative here is ten times more dangerous and fatal than it can be in England; for there he will scarcely refuse his consent to a bill for putting England into as strong a state of defense as possible, and in America he would never suffer such a bill to be passed.

America is only a secondary object in the system of British politics. England consults the good of this country no further than it answers her own purpose. Wherefore, her own interest leads her to suppress the growth of ours in every case which doth not promote her advantage, or in the least interferes with it. A pretty state we should soon be in under such a second hand government, considering what has happened. Men do not change from enemies to friends by the alteration of a name: And in order to show that reconciliation now is a dangerous doctrine, I affirm, *that it would be policy in the King at this time to repeal the acts, for the sake of reinstating himself in the government of the provinces;* In order that HE MAY ACCOMPLISH BY CRAFT AND SUBTLETY, IN

THE LONG RUN, WHAT HE CANNOT DO BY FORCE AND VIOLENCE IN THE SHORT ONE. Reconciliation and ruin are nearly related.

Secondly. That as even the best terms which we can expect to obtain can amount to no more than a temporary expedient, or a kind of government by guardianship, which can last no longer than till the Colonies come of age, so the general face and state of things in the interim will be unsettled and unpromising. Emigrants of property will not choose to come to a country whose form of government hangs but by a thread, and who is every day tottering on the brink of commotion and disturbance; and numbers of the present inhabitants would lay hold of the interval to dispose of their effects, and quit the Continent.

But the most powerful of all arguments is, that nothing but independance, *i. e.* a Continental form of government, can keep the peace of the Continent and preserve it inviolate from civil wars. I dread the event of a reconciliation with Britain now, as it is more than probable that it will be followed by a revolt some where or other, the consequences of which may be far more fatal than all the malice of Britain.

Thousands are already ruined by British barbarity; (thousands more will probably suffer the same fate.) Those men have other feelings than us who have nothing suffered. All they now possess is liberty; what they before enjoyed is sacrificed to its service, and having nothing more to lose they disdain submission. Besides, the general temper of the Colonies,

towards a British government will be like that of a youth who is nearly out of his time; they will care very little about her: And a government which cannot preserve the peace is no government at all, and in that case we pay our money for nothing; and pray what is it that Britain can do, whose power will be wholly on paper, should a civil tumult break out the very day after reconciliation? I have heard men say, many of whom I believe spoke without thinking, that they dreaded an independence, fearing that it would produce civil wars: It is but seldom that our first thoughts are truly correct, and that is the case here; for there is ten times more to dread from a patched up connection than from independence. I make the sufferer's case my own, and I protest, that were I driven from house and home, my property destroyed, and my circumstances ruined, that as a man, sensible of injuries, I could never relish the doctrine of reconciliation, or consider myself bound thereby.

The Colonies have manifested such a spirit of good order and obedience to Continental government, as is sufficient to make every reasonable person easy and happy on that head. No man can assign the least pretence for his fears, on any other grounds, than such as are truly childish and ridiculous, viz., that one colony will be striving for superiority over another.

Where there are no distinctions there can be no superiority; perfect equality affords no temptation. The Republics of Europe are all

(and we may say always) in peace. Holland and Switzerland are without wars, foreign or domestic: Monarchical governments, it is true are never long at rest: the crown itself is a temptation to enterprising ruffians at home; and that degree of pride and insolence ever attendant on regal authority, swells into a rupture with foreign powers in instances where a republican government, by being formed on more natural principles, would negotiate the mistake.

If there is any true cause of fear respecting independance, it is because no plan is yet laid down. Men do not see their way out. Wherefore, as an opening into that business I offer the following hints; at the same time modestly affirming, that I have no other opinion of them myself, than that they may be the means of giving rise to something better. Could the straggling thoughts of individuals be collected, they would frequently form materials for wise and able men to improve into useful matter.

Let the assemblies be annual, with a president only. The representation more equal, their business wholly domestic, and subject to the authority of a Continental Congress.

Let each Colony be divided into six, eight, or ten, convenient districts, each district to send a proper number of Delegates to Congress, so that each Colony send at least thirty. The whole number in Congress will be at least 390. Each congress to sit and to choose a President by the following method. When the Delegates are met, let a Colony be taken from the whole thirteen Colonies by lot, after which let the

Congress choose (by ballot) a president from out of the Delegates of that Province. In the next Congress, let a Colony be taken by lot from twelve only, omitting that Colony from which the president was taken in the former Congress, and so proceeding on till the whole thirteen shall have had their proper rotation. And in order that nothing may pass into a law but what is satisfactorily just, not less than three fifths of the Congress to be called a majority. He that will promote discord, under a government so equally formed as this, would have joined Lucifer in his revolt.

But as there is a peculiar delicacy from whom, or in what manner, this business must first arise, and as it seems most agreeable and consistent that it should come from some intermediate body between the governed and the governors, that is, between the Congress and the People, let a Continental Conference be held in the following manner, and for the following purpose,

A Committee of twenty-six members of congress, *viz.* Two for each Colony. Two Members from each House of Assembly, or Provincial Convention; and five Representatives of the people at large, to be chosen in the capital city or town of each Province, for, and in behalf of the whole Province, by as many qualified voters as shall think proper to attend from all parts of the Province for that purpose; or, if more convenient, the Representatives may be chosen in two or three of the most populous parts thereof. In this conference, thus assembled, will be united the two grand prin-

ciples of business, *knowledge* and *power*. The Members of Congress, Assemblies, or Conventions, by having had experience in national concerns, will be able and useful counsellors, and the whole, being empowered by the people, will have a truly legal authority.

The conferring members being met, let their business be to frame a Continental Charter, or Charter of the United Colonies; (answering what is called the Magna Charta of England) fixing the number and manner of choosing Members of Congress, Members of Assembly, with their date of sitting; and drawing the line of business and jurisdiction between them: Always remembering, that our strength is Continental, not provincial. Securing freedom and property to all men, and above all things, the free exercise of religion, according to the dictates of conscience; with such other matter as it is necessary for a charter to contain. Immediately after which, the said conference to dissolve, and the bodies which shall be chosen conformable to the said charter, to be the Legislators and Governors of this Continent for the time being: Whose peace and happiness, may God preserve. AMEN.

Should any body of men be hereafter delegated for this or some similar purpose, I offer them the following extracts from that wise observer on Governments, Dragonetti. "The science," says he, "of the Politician consists in fixing the true point of happiness and freedom. Those men would deserve the gratitude of ages, who should discover a mode of government that contained the greatest sum of individual

happiness, with the least national expense." (Dragonetti on "Virtues and Reward.")

But where, say some, is the King of America? I'll tell you, friend, he reigns above, and doth not make havoc of mankind like the Royal Brute of Great Britain. Yet that we may not appear to be defective even in earthly honours, let a day be solemnly set apart for proclaiming the Charter; let it be brought forth placed on the Divine Law, the Word of God; let a crown be placed thereon, by which the world may know, that so far as we approve of monarchy, that in America the law is king. For as in absolute governments the King is law, so in free countries the law ought to be king; and there ought to be no other. But lest any ill use should afterwards arise, let the Crown at the conclusion of the ceremony be demolished, and scattered among the people whose right it is.

A government of our own is our natural right: and when a man seriously reflects on the precariousness of human affairs, he will become convinced, that it is infinitely wiser and safer, to form a constitution of our own in a cool deliberate manner, while we have it in our power, than to trust such an interesting event to time and chance. If we omit it now, some Massanello* may hereafter arise, who,

*Thomas Anello, otherwise Massanello, a fisherman of Naples, who after spiriting up his countrymen in the public market place, against the oppression of the Spaniards, to whom the place was then subject, prompted them to revolt, and in the space of a day became King.—Author.

laying hold of popular disquietudes, may collect together the desperate and the discontented, and by assuming to themselves the powers of government, finally sweep away the liberties of the Continent like a deluge. Should the government of America return again into the hands of Britain, the tottering situation of things will be a temptation for some desperate adventurer to try his fortune; and in such a case, what relief can Britain give? Ere she could hear the news, the fatal business might be done; and ourselves suffering like the wretched Britons under the oppression of the Conqueror. Ye that oppose independance now, ye know not what ye do: ye are opening a door to eternal tyranny, by keeping vacant the seat of government. There are thousands and tens of thousands, who would think it glorious to expel from the Continent, that barbarous and hellish power, which hath stirred up the Indians and the Negroes to destroy us; the cruelty hath a double guilt, it is dealing brutally by us, and treacherously by them.

To talk of friendship with those in whom our reason forbids us to have faith, and our affections wounded thro' a thousand pores instruct us to detest, is madness and folly. Every day wears out the little remains of kindred between us and them; and can there be any reason to hope, that as the relationship expires, the affection will encrease, or that we shall agree better when we have ten times more and greater concerns to quarrel over than ever?

Ye that tell us of harmony and reconciliation, can ye restore to us the time that is past?

Can ye give to prostitution its former innocence? neither can ye reconcile Britain and America. The last cord now is broken, the people of England are presenting addresses against us. There are injuries which nature cannot forgive; she would cease to be nature if she did. As well can the lover forgive the ravisher of his mistress, as the Continent forgive the murders of Britain. The Almighty hath implanted in us these unextinguishable feelings for good and wise purposes. They are the Guardians of his Image in our hearts. They distinguish us from the herd of common animals. The social compact would dissolve, and justice be extirpated from the earth, or have only a casual existence were we callous to the touches of affection. The robber and the murderer would often escape unpunished, did not the injuries which our tempers sustain, provoke us into justice.

O! ye that love mankind! Ye that dare oppose not only the tyranny but the tyrant, stand forth! Every spot of the old world is overrun with oppression. Freedom hath been hunted round the Globe. Asia and Africa have long expelled her. Europe regards her like a stranger, and England hath given her warning to depart. O! receive the fugitive, and prepare in time an asylum for mankind.

OF THE PRESENT ABILITY OF AMERICA: WITH
SOME MISCELLANEOUS REFLECTIONS.

I HAVE never met with a man, either in England or America, who hath not confessed his opinion, that a separation between the countries would take place one time or other: And there is no instance in which we have shown less judgment, than in endeavoring to describe, what we call, the ripeness or fitness of the continent for independence.

As all men allow the measure, and vary only in their opinion of the time, let us, in order to remove mistakes, take a general survey of things, and endeavor if possible to find out the *very* time. But I need not go far, the inquiry ceases at once, for the *time hath found us*. The general concurrence, the glorious union of all things, proves the fact.

'Tis not in numbers but in unity that our great strength lies: yet our present numbers are sufficient to repel the force of all the world. The Continent hath at this time the largest body of armed and disciplined men of any power under Heaven: and is just arrived at that pitch of strength, in which no single colony is able to support itself, and the whole, when united, is able to do any thing. Our land force is more than sufficient, and as to Naval affairs, we cannot be insensible that Britain

would never suffer an American man of war to be built, while the Continent remained in her hands. Wherefore, we should be no forwarder an hundred years hence in that branch than we are now; but the truth is, we should be less so, because the timber of the Country is every day diminishing, and that which will remain at last, will be far off or difficult to procure.

Were the Continent crowded with inhabitants, her sufferings under the present circumstances would be intolerable. The more seaport-towns we had, the more should we have both to defend and to lose. Our present numbers are so happily proportioned to our wants, that no man need be idle. The diminution of trade affords an army, and the necessities of an army create a new trade.

Debts we have none: and whatever we may contract on this account will serve as a glorious memento of our virtue. Can we but leave posterity with a settled form of government, an independent constitution of its own, the purchase at any price will be cheap. But to expend millions for the sake of getting a few vile acts repealed, and routing the present ministry only, is unworthy the charge, and is using posterity with the utmost cruelty; because it is leaving them the great work to do, and a debt upon their backs from which they derive no advantage. Such a thought's unworthy a man of honour, and is the true characteristic of a narrow heart and a piddling politician.

The debt we may contract doth not deserve our regard if the work be but accomplished

No nation ought to be without a debt. A national debt is a national bond; and when it bears no interest, is in no case a grievance. Britain is oppressed with a debt of upwards of one hundred and forty millions sterling, for which she pays upwards of four millions interest. And as a compensation for her debt, she has a large navy; America is without a debt, and without a navy; yet for the twentieth part of the English national debt, could have a navy as large again. The navy of England is not worth at this time more than three millions and a half sterling.

The first and second editions of this pamphlet were published without the following calculations, which are now given as a proof that the above estimation of the navy is a just one. See Entic's "Naval History," Intro., p. 56.

The charge of building a ship of each rate, and furnishing her with masts, yards, sails, and rigging, together with a proportion of eight months boatswain's and carpenter's sea-stores, as calculated by Mr. Burchett, Secretary to the navy.

For a ship of 100 guns,	.	.	35,553 l.
90	.	.	29,886
80	.	.	23,638
70	.	.	17,785
60	.	.	14,197
50	.	.	10,606
40	.	.	7,558
30	.	.	5,846
20	.	.	3,710

And hence it is easy to sum up the value, or cost, rather, of the whole British navy, which, in the year 1757, when it was at its greatest

glory, consisted of the following ships and guns.

Ships	Guns	Cost of One	Cost of All
6	100	55,553 l.	213,318 l.
12	90	29,886	358,632
12	80	23,638	283,656
43	70	17,785	764,755
35	60	14,197	496,895
40	50	10,605	424,240
45	40	7,558	340,110
58	20	3,710	215,180
85	sloops, bombs, and fireships, one with another at	2,000	170,000
Cost,			3,266,786 l.
Remains for guns,			233,214
Total,			3,500,000 l.

No country on the globe is so happily situated, or so internally capable of raising a fleet as America. Tar, timber, iron, and cordage are her natural produce. We need go abroad for nothing. Whereas the Dutch, who make large profits by hiring out their ships of war to the Spaniards and Portuguese, are obliged to import most of the materials they use. We ought to view the building a fleet as an article of commerce, it being the natural manufactory of this country. 'Tis the best money we can lay out. A navy when finished is worth more than it cost: And is that nice point in national policy, in which commerce and protection are united. Let us build; if we want them not, we can sell; and by that means replace our paper currency with ready gold and silver.

In point of manning a fleet, people in general run into great errors; it is not necessary that one-fourth part should be sailors. The

Terrible privateer, captain Death, stood the hottest engagement of any ship last war, yet had not twenty sailors on board, though her complement of men was upwards of two hundred. A few able and social sailors will soon instruct a sufficient number of active landsmen in the common work of a ship. Wherefore we never can be more capable of beginning on maritime matters than now, while our timber is standing, our fisheries blocked up, and our sailors and shipwrights out of employ. Men of war, of seventy and eighty guns, were built forty years ago in New England, and why not the same now? Ship building is America's greatest pride, and in which she ~~will~~, in time, excel the whole world. The greatest empires of the east are mainly inland, and consequently excluded from the possibility of rivalling her. Africa is in a state of barbarism; and no power in Europe hath either such an extent of coast, or such an internal supply of materials. Where nature hath given the one, she hath withheld the other; to America only hath she been liberal to both. The vast empire of Russia is almost shut out from the sea; wherefore her boundless forests, her tar, iron and cordage are only articles of commerce.

In point of safety, ought we to be without a fleet? We are not the little people now which we were sixty years ago; at that time we might have trusted our property in the streets, or fields rather, and slept securely without locks or bolts to our doors and windows. The case is now altered, and our methods of defence ought to improve with our increase of property. A common pirate, twelve months ago, might

have come up the Delaware, and laid the city of Philadelphia under contribution for what sum he pleased; and the same might have happened to other places. Nay, any daring fellow, in a brig of fourteen or sixteen guns, might have robbed the whole Continent, and carried off half a million of money. These are circumstances which demand our attention, and point out the necessity of naval protection.

Some perhaps will say, that after we have made it up with Britain, she will protect us. Can they be so unwise as to mean that she will keep a navy in our harbors for that purpose? Common sense will tell us that the power which hath endeavoured to subdue us, is of all others the most improper to defend us. Conquest may be effected under the pretence of friendship; and ourselves, after a long and brave resistance, be at last cheated into slavery. And if her ships are not to be admitted into our harbours, I would ask, how is she going to protect us? A navy three or four thousand miles off can be of little use, and on sudden emergencies, none at all. Wherefore if we must hereafter protect ourselves, why not do it for ourselves? Why do it for another?

The English list of ships of war is long and formidable, but not a tenth part of them are at any time fit for service, numbers of them are not in being; yet their names are pompously continued in the list, if only a plank be left of the ship; and not a fifth part of such as are fit for service can be spared on any one station at one time. The East and West Indies, Mediterranean, Africa, and other parts, over which

Britain extends her claim, make large demands upon her navy. From a mixture of prejudice and inattention we have contracted a false notion respecting the navy of England, and have talked as if we should have the whole of it to encounter at once, and for that reason supposed that we must have one as large; which not being instantly practicable, has been made use of by a set of disguised Tories to discourage our beginning thereon. Nothing can be further from truth than this; for if America had only a twentieth part of the naval force of Britain, she would be by far an over-match for her; because, as we neither have, nor claim any foreign dominion, our whole force would be employed on our own coast, where we should, in the long run, have two to one the advantage of those who had three or four thousand miles to sail over before they could attack us, and the same distance to return in order to refit and recruit. And although Britain, by her fleet, hath a check over our trade to Europe, we have as large a one over her trade to the West Indies, which, by laying in the neighborhood of the Continent, lies entirely at its mercy.

Some method might be fallen on to keep up a naval force in time of peace, if we should judge it necessary to support a constant navy. If premiums were to be given to merchants to build and employ in their service ships mounted with twenty, thirty, forty, or fifty guns (the premiums to be in proportion to the loss of bulk to the merchant), fifty or sixty of those ships, with a few guardships on constant duty, would keep up a sufficient navy, and that with-

out burdening ourselves with the evil so loudly complained of in England, of suffering their fleet in time of peace to lie rotting in the docks. To unite the sinews of commerce and defence is sound policy; for when our strength and our riches play into each other's hand, we need fear no external enemy.

In almost every article of defence we abound. Hemp flourishes even to rankness, so that we need not want cordage. Our iron is superior to that of other countries. Our small arms equal to any in the world. Cannon we can cast at pleasure. Saltpetre and gunpowder we are every day producing. Our knowledge is hourly improving. Resolution is our inherent character, and courage hath never yet forsaken us. Wherefore, what is it that we want? Why is it that we hesitate? From Britain we can expect nothing but ruin. If she is once admitted to the government of America again, this Continent will not be worth living in. Jealousies will be always arising; insurrections will be constantly happening; and who will go forth to quell them? Who will venture his life to reduce his own countrymen to a foreign obedience? The difference between Pennsylvania and Connecticut, respecting some unlocated lands, shows the insignificance of a British government, and fully proves that nothing but Continental authority can regulate Continental matters.

Another reason why the present time is preferable to all others is, that the fewer our numbers are, the more land there is yet unoccupied, which, instead of being lavished by the

king on his worthless dependents, may be hereafter applied, not only to the discharge of the present debt, but to the constant support of government. No nation under Heaven hath such an advantage as this.

The infant state of the Colonies, as it is called, so far from being against, is an argument in favour of independence. We are sufficiently numerous, and were we more so we might be less united. 'Tis a matter worthy of observation that the more a country is peopled, the smaller their armies are. In military numbers, the ancients far exceeded the moderns; and the reason is evident, for trade being the consequence of population, men became too much absorbed thereby to attend to anything else. Commerce diminishes the spirit both of patriotism and military defence. And history sufficiently informs us that the bravest achievements were always accomplished in the non-age of a nation. With the increase of commerce England hath lost its spirit. The city of London, notwithstanding its numbers, submits to continued insults with the patience of a coward. The more men have to lose, the less willing are they to venture. The rich are in general slaves to fear, and submit to courtly power with the trembling duplicity of a spaniel.

Youth is the seed-time of good habits as well in nations as in individuals. It might be difficult, if not impossible, to form the Continent into one government half a century hence. The vast variety of interests, occasioned by an increase of trade and population, would create confusion. Colony would be against colony.

Each being able would scorn each other's assistance; and while the proud and foolish gloried in their little distinctions the wise would lament that the union had not been formed before. Wherefore the present time is the true time for establishing it. The intimacy which is contracted in infancy, and the friendship which is formed in misfortune, are of all others the most lasting and unalterable. Our present union is marked with both these characters; we are young, and we have been distressed; but our concord hath withstood our troubles, and fixes a memorable era for posterity to glory in.

The present time, likewise, is that peculiar time which never happens to a nation but once, viz., the time of forming itself into a government. Most nations have let slip the opportunity, and by that means have been compelled to receive laws from their conquerors, instead of making laws for themselves. First, they had a king, and then a form of government; whereas the articles or charter of government should be formed first, and men delegated to execute them afterwards; but from the errors of other nations let us learn wisdom, and lay hold of the present opportunity—to *begin government at the right end.*

When William the Conqueror subdued England, he gave them law at the point of the sword; and, until we consent that the seat of government in America be legally and authoritatively occupied, we shall be in danger of having it filled by some fortunate ruffian, who may treat us in the same manner, and then,

where will be our freedom? where our property?

As to religion, I hold it to be the indispensable duty of government to protect all conscientious professors thereof, and I know of no other business which government hath to do therewith. Let a man throw aside that narrowness of soul, that selfishness of principle, which the niggards of all professions are so unwilling to part with, and he will be at once delivered of his fears on that head. Suspicion is the companion of mean souls, and the bane of all good society. For myself, I fully and conscientiously believe that it is the will of the Almighty that there should be a diversity of religious opinions among us. It affords a larger field for our Christian kindness; were we all of one way of thinking, our religious dispositions would want matter for probation; and on this liberal principle I look on the various denominations among us to be like children of the same family, differing only in what is called their Christian names.

In page [97] I threw out a few thoughts on the propriety of a Continental Charter (for I only presume to offer hints, not plans) and in this place I take the liberty of re-mentioning the subject, by observing that a charter is to be understood as a bond of solemn obligation, which the whole enters into, to support the right of every separate part, whether of religion, professional freedom, or property. A firm bargain and a right reckoning make long friends.

I have heretofore likewise mentioned the ne-

cessity of a large and equal representation; and there is no political matter which more deserves our attention. A small number of electors, or a small number of representatives, are equally dangerous. But if the number of the representatives be not only small, but unequal, the danger is increased. As an instance of this, I mention the following: when the petition of the associators was before the House of Assembly of Pennsylvania, twenty-eight members only were present; all the Bucks county members, being eight, voted against it, and had seven of the Chester members done the same, this whole province had been governed by two counties only; and this danger it is always exposed to. The unwarrantable stretch likewise, which that house made in their last sitting, to gain an undue authority over the delegates of that province, ought to warn the people at large how they trust power out of their own hands. A set of instructions for their delegates were put together, which in point of sense and business would have dishonoured a school-boy, and after being approved by a few, a very few, without doors, were carried into the house, and there passed *in behalf of the whole colony*; whereas, did the whole colony know with what ill will that house had entered on some necessary public measures, they would not hesitate a moment to think them unworthy of such a trust.

Immediate necessity makes many things convenient, which if continued would grow into oppressions. Expedience and right are different things. When the calamities of America re-

quired a consultation, there was no method so ready, or at that time so proper, as to appoint persons from the several houses of assembly for that purpose; and the wisdom with which they have proceeded hath preserved this Continent from ruin. But as it is more than probable that we shall never be without a CONGRESS, every well wisher to good order must own that the mode for choosing members of that body deserves consideration. And I put it as a question to those who make a study of mankind, whether representation and election is not too great a power for one and the same body of men to possess? When we are planning for posterity, we ought to remember that virtue is not hereditary.

It is from our enemies that we often gain excellent maxims, and are frequently surprised into reason by their mistakes. Mr. Cornwall (one of the Lords of the Treasury) treated the petition of the New York Assembly with contempt, because *that* house, he said, consisted but of twenty-six members, which trifling number, he argued, could not with decency be put for the whole. We thank him for his involuntary honesty.*

To CONCLUDE, however strange it may appear to some, or however unwilling they may be to think so, matters not, but many strong and striking reasons may be given to show that nothing can settle our affairs so expeditiously

*Those who would fully understand of what great consequence a large and equal representation is to a state, should read Burgh's Political Disquisitions.—Author.

as an open and determined declaration for independence. Some of which are,

First—It is the custom of Nations, when any two are at war, for some other powers, not engaged in the quarrel, to step in as mediators, and bring about the preliminaries of a peace; But while America calls herself the subject of Great Britain, no power, however well disposed she may be, can offer her mediation. Wherefore, in our present state we may quarrel on for ever.

Secondly—It is unreasonable to suppose that France or Spain will give us any kind of assistance, if we mean only to make use of that assistance for the purpose of repairing the breach, and strengthening the connection between Britain and America; because, those powers would be sufferers by the consequences.

Thirdly—While we profess ourselves the subjects of Britain, we must, in the eyes of foreign nations, be considered as Rebels. The precedent is somewhat dangerous to their peace, for men to be in arms under the name of subjects; we, on the spot, can solve the paradox; but to unite resistance and subjection requires an idea much too refined for common understanding.

Fourthly—Were a manifesto to be published, and despatched to foreign Courts, setting forth the miseries we have endured, and the peaceful methods which we have ineffectually used for redress; declaring at the same time that not being able longer to live happily or safely under the cruel disposition of the British Court, we had been driven to the necessity of breaking off all connections with her; at the same time,

assuring all such Courts of our peaceable disposition towards them, and of our desire of entering into trade with them; such a memorial would produce more good effects to this Continent than if a ship were freighted with petitions to Britain.

Under our present denomination of British subjects, we can neither be received nor heard abroad; the custom of all Courts is against us, and will be so, until by an independence we take rank with other nations.

These proceedings may at first seem strange and difficult, but like all other steps which we have already passed over, will in a little time become familiar and agreeable; and until an independence is declared, the Continent will feel itself like a man who continues putting off some unpleasant business from day to day, yet knows it must be done, hates to set about it, wishes it over, and is continually haunted with the thoughts of its necessity.

APPENDIX TO COMMON SENSE.

SINCE the publication of the first edition of this pamphlet, or rather, on the same day on which it came out, the King's Speech made its appearance in this city [Philadelphia]. Had the spirit of prophecy directed the birth of this production, it could not have brought it forth at a more seasonable juncture, or at a more necessary time. The bloody-mindedness of the one shows the necessity of pursuing the doctrine of the other. Men read by way of revenge. And the speech, instead of terrifying, prepared a way for the manly principles of Independence.

Ceremony, and even silence, from whatever motives they may arise, have a hurtful tendency when they give the least degree of countenance to base and wicked performances; wherefore, if this maxim is admitted, it naturally follows that the King's Speech, as being a piece of finished villainy, deserved and still deserves, a general execration, both by the Congress and the people. Yet, as the domestic tranquility of a nation depends largely on the *chastity* of what might properly be called NATIONAL MANNERS, it is often better to pass some things over in silent disdain than to make use of such new methods of dislike as might introduce the least innovation on that guardian of our peace and safety. And, perhaps, it is chiefly

owing to this prudent delicacy that the King's Speech hath not before now suffered a public execution. The speech, if it may be called one, is nothing better than a wilful audacious libel against the truth, the common good, and the existence of mankind; and is a formal and pompous method of offering up human sacrifices to the pride of tyrants. But this general massacre of mankind is one of the privileges and the certain consequences of kings; for as nature knows them *not*, they know *not her*, and although they are beings of our *own* creating, they know not *us*, and are become the Gods of their creators. The speech hath one good quality, which is, that it is not calculated to deceive, neither can we, even if we would, be deceived by it. Brutality and tyranny appear on the face of it. It leaves us at no loss: And every line convinces, even in the moment of reading, that he who hunts the woods for prey, the naked and untutored Indian, is less Savage than the King of Britain.

Sir John Dalrymple, the putative father of a whining jesuitical piece, fallaciously called "*The address of the people of England to the inhabitants of America*," hath perhaps from a vain supposition that the people *here* were to be frightened at the pomp and description of a king, given (though very unwisely on his part) the real character of the present one: "But," says this writer, "if you are inclined to pay compliments to an administration, which we do not complain of (meaning the Marquis of Rockingham's at the repeal of the Stamp Act) it is very unfair in you to withhold them from that

prince, *by whose NOD ALONE they were permitted to do any thing.*" This is toryism with a witness! Here is idolatry even without a mask: And he who can calmly hear and digest such doctrine, hath forfeited his claim to rationality—an apostate from the order of manhood—and ought to be considered as one who hath not only given up the proper dignity of man, but sunk himself beneath the rank of animals, and contemptibly crawls through the world like a worm.

However, it matters very little now what the king of England either says or does; he hath wickedly broken through every moral and human obligation, trampled nature and conscience beneath his feet, and by a steady and constitutional spirit of insolence and cruelty procured for himself an universal hatred. It is *now* the interest of America to provide for herself. She hath already a large and young family, whom it is more her duty to take care of than to be granting away her property to support a power who is become a reproach to the names of men and Christians—YE, whose office it is to watch the morals of a nation, of whatsoever sect or denomination ye are of, as well as ye who are more immediately the guardians of the public liberty, if ye wish to preserve your native country uncontaminated by European corruption, ye must in secret wish a separation. But leaving the moral part to private reflection, I shall chiefly confine my further remarks to the following heads:

First, That it is to the interest of America to be separated from Britain.

Secondly, Which is the easiest and most practicable plan, RECONCILIATION OR INDEPENDENCE? with some occasional remarks.

In support of the first, I could, if I judged it proper, produce the opinion of some of the ablest and most experienced men on this continent; and whose sentiments on that head are not yet publicly known. It is in reality a self-evident position: for no nation in a state of foreign dependance, limited in its commerce, and cramped and fettered in its legislative powers, can ever arrive at any material eminence. America doth not yet know what opulence is; and although the progress which she hath made stands unparalleled in the history of other nations, it is but childhood compared with what she would be capable of striving at, had she, as she ought to have, the legislative powers in her own hands. England is at this time proudly coveting what would do her no good were she to accomplish it; and the continent hesitating on a matter which will be her final ruin if neglected. It is the commerce and not the conquest of America by which England is to be benefited, and that would in a great measure continue were the countries as independent of each other as France and Spain; because in many articles neither can go to a better market. But it is the independance of this country of Britain, or any other, which is now the main and only object worthy of contention, and which, like all other truths discovered by necessity, will appear clear and stronger every day.

First, Because it will come to that one time or other.

Secondly, Because the longer it is delayed the harder it will be to accomplish.

I have frequently amused myself both in public and private companies with silently remarking the specious errors of those who speak without reflecting. And among the many which I have heard, the following seems the most general, viz. that had this rupture happened forty or fifty years hence, instead of now, the continent would have been more able to have shaken off the independence. To which I reply, that our military ability, *at this time*, arises from the experience gained in the last war, and which in forty or fifty years time would be totally extinct. The continent would not, by that time, have a general, or even a military officer left; and we, or those who may succeed us, would be as ignorant of martial matters as the ancient Indians; and this single position, closely attended to, will unanswerably prove that the present time is preferable to all others. The argument turns thus: At the conclusion of the last war we had experience, but wanted numbers; and forty or fifty years hence we shall have numbers, without experience; wherefore, the proper point of time must be some particular point between the two extremes, in which a sufficiency of the former remains, and a proper increase of the latter is obtained: And that point of time is the present time.

The reader will pardon this digression, as it does not properly come under the head I first

set out with, and to which I again return by the following position, viz.:

Should affairs be patched up with Britain, and she to remain the governing and sovereign power of America (which, as matters are now circumstanced, is giving up the point entirely) we shall deprive ourselves of the very means of sinking the debt we have, or may contract. The value of the back lands, which some of the provinces are clandestinely deprived of, by the unjust extension of the limits of Canada, valued only at five pounds sterling per hundred acres, amount to upward of twenty-five millions, Pennsylvania currency; and the quit-rents, at one penny sterling per acre, to two millions yearly.

It is by the sale of those lands that the debt may be sunk, without burthen to any, and the quit-rent reserved thereon will always lessen, and in time will wholly support the yearly expense of government. It matters not how long the debt is in paying, so that the lands when sold be applied to the discharge of it, and for the execution of which the Congress for the time being will be the continental trustees.

I proceed now to the second head, viz. Which is the easiest and most practicable plan, Reconciliation or Independence, with some occasional remarks.

He who takes nature for his guide is not easily beaten out of his argument, and on that ground, I answer generally—*That independance being a single simple line, contained within ourselves; and reconciliation, a matter exceedingly perplexed and complicated, and in which a*

treacherous capricious court is to interfere, gives the answer without a doubt.

The present state of America is truly alarming to every man who is capable of reflection. Without law, without government, without any other mode of power than what is founded on, and granted by, courtesy. Held together by an unexampled occurrence of sentiment, which is nevertheless subject to change, and which every secret enemy is endeavoring to dissolve. Our present condition is Legislation without law; wisdom without a plan; a constitution without a name; and, what is strangely astonishing, perfect independance contending for dependance. The instance is without a precedent, the case never existed before, and who can tell what may be the event? The property of no man is secure in the present unbraced system of things. The mind of the multitude is left at random, and seeing no fixed object before them, they pursue such as fancy or opinion presents. Nothing is criminal; there is no such thing as treason; wherefore, every one thinks himself at liberty to act as he pleases. The Tories would not have dared to assemble offensively had they known that their lives, by that act, were forfeited to the laws of the state. A line of distinction should be drawn between English soldiers taken in battle, and inhabitants of America taken in arms. The first are prisoners, but the latter traitors. The one forfeits his liberty, the other his head.

Notwithstanding our wisdom, there is a visible feebleness in some of our proceedings which

gives encouragement to dissensions. The Continental Belt is too loosely buckled: And if something is not done in time, it will be too late to do any thing, and we shall fall into a state in which neither Reconciliation nor Independance will be practicable. The king and his worthless adherents are got at their old game of dividing the Continent, and there are not wanting among us Printers who will be busy in spreading specious falsehoods. The artful and hypocritical letter which appeared a few months ago in two of the New York papers, and likewise in two others, is an evidence that there are men who want both judgment and honesty.

It is easy getting into holes and corners, and talking of reconciliation: But do such men seriously consider how difficult the task is, and how dangerous it may prove, should the Continent divide thereon? Do they take within their view all the various orders of men whose situation and circumstances, as well as their own, are to be considered therein? Do they put themselves in the place of the sufferer whose *all* is *already* gone, and of the soldier, who hath quitted *all* for the defence of his country? If their ill-judged moderation be suited to their own private situations *only*, regardless of others, the event will convince them that "they are reckoning without their host."

Put us, say some, on the footing we were in the year 1763: To which I answer, the request is not now in the power of Britain to comply with, neither will she propose it; but if it were, and even should be granted, I ask, as a

reasonable question, By what means is such a corrupt and faithless court to be kept to its engagements? Another parliament, nay, even the present, may hereafter repeal the obligation, on the pretence of its being violently obtained, or unwisely granted; and, in that case, Where is our redress? No going to law with nations; cannon are the barristers of crowns; and the sword, not of justice, but of war, decides the suit. To be on the footing of 1763, it is not sufficient that the laws only be put in the same state, but that our circumstances likewise be put in the same state; our burnt and destroyed towns repaired or built up, our private losses made good, our public debts (contracted for defence) discharged; otherwise we shall be millions worse than we were at that enviable period. Such a request, had it been complied with a year ago, would have won the heart and soul of the Continent, but now it is too late. "The Rubicon is passed."

Besides, the taking up arms, merely to enforce the repeal of a pecuniary law, seems as unwarrantable by the divine law, and as repugnant to human feelings, as the taking up arms to enforce obedience thereto. The object, on either side, doth not justify the means; for the lives of men are too valuable to be cast away on such trifles. It is the violence which is done and threatened to our persons; the destruction of our property by an armed force; the invasion of our country by fire and sword, which conscientiously qualifies the use of arms: and the instant in which such mode of

defence became necessary, all subjection to Britain ought to have ceased; and the independence of America should have been considered as dating its era from, and published by, *the first musket that was fired against her*. This line is a line of consistency; neither drawn by caprice, nor extended by ambition; but produced by a chain of events, of which the colonies were not the authors.

I shall conclude these remarks, with the following timely and well-intended hints. We ought to reflect, that there are three different ways by which an independancy may hereafter be effected; and that *one* of those *three*, will, one day or other, be the fate of America, viz. By the legal voice of the people in Congress; by a military power; or by a mob: It may not always happen that our soldiers are citizens, and the multitude a body of reasonable men; virtue, as I have already remarked, is not hereditary, neither is it perpetual. Should an independancy be brought about by the first of those means, we have every opportunity and every encouragement before us, to form the noblest, purest constitution on the face of the earth. We have it in our power to begin the world over again. A situation, similar to the present, hath not happened since the days of Noah until now. The birthday of a new world is at hand, and a race of men, perhaps as numerous as all Europe contains, are to receive their portion of freedom from the events of a few months. The reflection is awful, and in this point of view, how trifling, how ridiculous, do the little paltry cavilings of a few weak or

interested men appear, when weighed against the business of a world.

Should we neglect the present favorable and inviting period, and independence be hereafter effected by any other means, we must charge the consequence to ourselves, or to those rather whose narrow and prejudiced souls are habitually opposing the measure, without either inquiring or reflecting. There are reasons to be given in support of independence which men should rather privately think of, than be publicly told of. We ought not now to be debating whether we shall be independent or not, but anxious to accomplish it on a firm, secure, and honorable basis, and uneasy rather that it is not yet begun upon. Every day convinces us of its necessity. Even the Tories (if such beings yet remain among us) should, of all men, be the most solicitous to promote it; for as the appointment of committees at first protected them from popular rage, so, a wise and well established form of government will be the only certain means of continuing it securely to them. Wherefore, if they have not virtue enough to be WHIGS, they ought to have prudence enough to wish for independence.

In short, Independence is the only Bond that ties and keep us together. We shall then see our object, and our ears will be legally shut against the schemes of an intriguing, as well as cruel, enemy. We shall then, too, be on a proper footing to treat with Britain; for there is reason to conclude, that the pride of that court will be less hurt by treating with the American states for terms of peace, than with

those, whom she denominates "rebellious subjects," for terms of accommodation. It is our delaying in that, encourages her to hope for conquest, and our backwardness tends only to prolong the war. As we have, without any good effect therefrom, withheld our trade to obtain a redress of our grievances, let us now try the alternative, by independantly redressing them ourselves, and then offering to open the trade. The mercantile and reasonable part of England, will be still with us; because, peace, with trade, is preferable to war without it. And if this offer be not accepted, other courts may be applied to.

On these grounds I rest the matter. And as no offer hath yet been made to refute the doctrine contained in the former editions of this pamphlet, it is a negative proof, that either the doctrine cannot be refuted, or, that the party in favor of it are too numerous to be opposed. WHEREFORE, instead of gazing at each other with suspicious or doubtful curiosity, let each of us hold out to his neighbor the hearty hand of friendship, and unite in drawing a line, which, like an act of oblivion, shall bury in forgetfulness every former dissention. Let the names of Whig and Tory be extinct; and let none other be heard among us, than those of *a good citizen; an open and resolute friend; and a virtuous supporter of the RIGHTS OF MANKIND, and of the FREE AND INDEPENDENT STATES OF AMERICA.*

A HINDU BOOK OF LOVE (THE KAMA SUTRA)

Why should we be interested in a Hindu manual of love? Surely we need not go all the way to India to find pornography. We can find enough of that in certain of our popular magazines and best-selling novels. We can find it in illustrated advertisements of hosiery and lingerie even more than in those books which have had trouble with the Vice Society. Personally I have no prejudice against books of real or supposed aphrodisiac effects. However, I have no intention of writing such an one here.

The *Kama Sutra* is, literally speaking, to some extent pornographical. That is to say, it treats among other things of the harlot (or *porne*, in classical Greek). It is in no way libidinous. Since, however, it calls things by recognizable names, it is not likely to be soon available for general circulation in an English unexpurgated edition. That is a pity, because reading the book can hardly have any other than an educational effect. Not that the Hindu sage made any great scientific contributions to our knowledge of sex. Occidental investigators have understood the nature and the application of the sexual impulse better than the wise men of the East.

Nevertheless, since Oriental philosophers and scholars have been quite as intelligent,

although not so well versed in scientific method, as their brethren in the West, it is well for us to examine their systems of sexual ethics. When they depart from European standards, are they in every way worse?

For that matter, standards of sexual morality differ widely in the various European countries. Prudery is more common in Great Britain than it is in Germany or France or the Netherlands. It is more firmly established in the United States than even in England. A French version of the *Kama Sutra* (Bibliothèque des Curieux, Paris, 1921) circulates freely, as does the German translation by Richard Schmidt (Berlin, Barsdorfs Verlag).

However, all Europeans are far from the viewpoint of India in this matter. To quote Edward Sellon, "Upon this adoration of the procreative and sexual *Sacti* (or power) seen throughout nature, hinges the whole gist of the Hindu faith." In other words, the phallus, which comes pretty close to being our Devil, is the God of India.

That is not strange. Jehovah is God chiefly because he made the universe and the men who inhabit it. The generative power is what men of the West as well as the inhabitants of the East worship. With us, however, the sense of modesty has been perverted in such a way as to make that statement appear all but blasphemous.

We are all blinded by our own prejudices, by the customs of our country and by the manners and morals peculiar to our own age.

"They change with place, they shift with race;
and in the veriest space of time

Each Vice has worn a Virtue's crown; all
Good was banned as Sin or Crime."

These are the words of Richard F. Burton, who knew from intimate personal experience how much the morality of the Orient differs from that of the West. There is nothing absolute and unchangeable about systems of ethics, codifications of right and wrong.

Vatsyayana, author of the *Kama Sutra*, was not a hack writer. He did not delve into sex because it paid two cents a word. Neither was he a Pullman car teller of smutty stories. He wrote his "Aphorisms of Love" in high seriousness, and with no feeling of shame.

I quote what he said about his own work. He speaks of himself in the third person:

"After having read and meditated the works of Babharvya and other ancient writers, and carefully examined the significance of the rules they propounded, Vatsyayana has composed the 'Aphorisms of Love,' according to the precepts of the Sacred Writings, for the benefit of the world, after he had led the life of a student and become totally absorbed in the contemplation of the divinity.

"This work was not done to serve as a simple instrument for satisfying our desires. A person who, possessing the true principles of this science, carefully cultivates his godliness, his acquisitiveness, and his sexual power, at the same time keeping in mind the customs of his people, is sure finally to master his senses.

"In short, an intelligent and prudent person who occupies himself with pious virtue, with wealth, and also with sex, without becoming the slave of his desires, will succeed in everything which he undertakes."

Vatsyayana is only one of the pious philosophers of India who wrote manuals of love. His life is enshrouded in mystery. The scholars have not even been able to fix it within a certain century. He lived somewhere between the first and the sixth centuries of the Christian era. He wrote in Sanskrit, the classical language of India.

PIETY, WEALTH AND SEXUAL POWER

As we have seen, Vatsyayana makes a sort of mystical trinity of the acquiring of wealth, piety or virtue, and the sexual libido. To quote:

"The human being, whose cycle of life is a hundred years, should practice piety, the acquisition of wealth, and love at different periods, and in such manner that he can attune himself to the three without the slightest discord. He should acquire instruction in his childhood; in youth and maturity he should occupy himself with love and with acquiring property, and in his old age he should devote himself to religion, striving thus to gain immunity from subsequent transmigration. But, considering the uncertainty of life, he might mingle the three at an earlier period. One thing is to be noted: he should lead the life

of a religious student until he has finished his education.

"Religion (or *Dharma*) is the obedience to the commands of the *Shastra* to do certain things, such as sacrifices, which are not generally observed because they do not pertain to this world and have no visible effect; and not to do certain things, such as to eat meat, which prohibition is observed quite frequently because it is definite, and has visible effects.

"Religion is taught by the holy writings and by them who explain them.

"*Artha* is the acquisition of the arts, earth, gold, beasts of burden and cattle, wealth, equipages, and friends. It is also the protection and care of that which has been acquired, and the increasing one's wealth.

"*Artha* is taught by the officers of the King and by merchants well versed in commerce."

"*Kama* is the enjoyment of acquired objects, by the five senses of hearing, touch, sight, taste, and smell, assisted by the soul in unison with the brain. The essential point here is a special contact between the sense organ and its object, and the resulting consciousness of pleasure is called *Kama*.

"*Kama* is taught by the *Kama Sutra*"—that is, the book of love aphorisms from which I am quoting—"and by the practice of citizens.

"When all three, *Dharma*, *Artha*, and *Kama*, are united, the order given is that of their relative importance. That is, piety is more important than wealth, and wealth more important than sex. However, *Artha* must be held first by the King, because upon wealth de-

pendes the substance of the people. In the same way, because *Kama* is the occupation of the prostitutes, they ought to prefer it to the other two. These are exceptions to the general rule.

"Several scholars object that since religion relates to matters which are not of this earth, it may properly be treated in a book; that likewise the matter of acquiring wealth, since the practice is possible only through the knowledge of certain rules, may be taught in books; but that sensual enjoyment is a thing enjoyed by brute beasts, and which may be seen everywhere, and therefore needs no book to teach it.

"This is not exactly true. Sexual relations, being dependent on man and woman, require the application of certain rules taught by the holy books. The non-use of special means which we see in brute creation is due to the fact that animals have no hindrances set before them; to the fact also that their females are ready for sexual commerce only at certain seasons; and chiefly because their meeting and mating is not preceded by any sort of thought.

"The Lokayatikas" (a sect of skeptics) "say that the religious commandments need not be observed, because the reward they offer, if indeed they offer any reward, is a future one. Who would be foolish enough to allow to pass into the hands of another that which he has in his own? Besides, it is better to have a pigeon today than a peacock tomorrow. A piece of copper which we are sure to get is better

than a piece of gold the possession of which is doubtful."

Thus we see our manual of love interrupted by a religious discussion, by a defense of the true faith. I think it is sufficiently interesting so we may read further:

"The holy writings which order the practice of *Dharma*, leave no doubt; sacrifices, which are made for the destruction of one's enemies or in order to secure rain, have a visible result; the sun, the moon, the stars, the planets, and the other celestial bodies seem to operate intentionally for the good of the world; the existence of the world is made certain by the observance of the rules concerning the four classes of men and the four stages of their life."

The four classes (castes) of men are the Brahmans or priests, the Kshatriya or warriors, the Vaisya or agricultural and merchant class, and the Sudra, or peasants and laborers. The four stages of life are those of the religious student, of the head of a household, of a hermit, and of a pious man. Without a caste system, thought Vatsyayana, the world could not exist at all. We may pass over a few pages more of his apologetics.

THE ARTS AND SCIENCES OF LOVE

When Dr. Iwan Bloch proposed a new science, *Sexualwissenschaft* or sexology, he meant that it should be studied intensively by specialists. To the theologians of India, as we

have seen, the study and cultivation of love was a part of their religion. It was no esoteric mystery, but it was open to all. In Vatsyayana's words:

"A man should study the Aphorisms of Love and the arts and sciences related to love at the same time with those arts and sciences which have to do with religion and with the accumulation of wealth. Even young girls should study the Aphorisms of Love and the branches of knowledge accessory to it, before they get married and, with the consent of their husbands, afterwards also.

"To be sure, certain learned men object that women should not study the Aphorisms of Love, or indeed any branch of knowledge.

"However, Vatsyayana does not agree with this objection; for women already are familiar with the practice of love. . . . We know by experience that certain women, such as the daughters of princes and their ministers, as well as prostitutes, are really well versed in the Aphorisms of Love.

"A woman, consequently, should learn the Aphorisms of Love, or at least part of them, studying their application under the direction of an intimate woman friend. . . . Her teacher should be a married woman, and should come under one of the following categories: the daughter of her foster-mother, whose childhood was spent with hers; a friend worthy of all her confidence; an old servant; an old beggar-woman who formerly lived in the household; or her own sister, to whom she has always confided her whole heart.

"At the same time that she studies the Aphorisms of Love, she should also study

1. Singing.
2. The playing of musical instruments.
3. Dancing.
4. The harmonized arrangement of dancing, singing, and musical instruments.
5. Writing and drawing.
6. Tattooing.
7. Clothing and decorating an idol with rice and flowers.
8. The disposition and arrangement of beds or couches of flowers, or of flowers, upon the earth.
9. The coloration of teeth, clothes, hair, nails, and the body; that is, their dyeing, their painting, and the various other ways of changing their color.
10. The arrangement of color glasses on the floor.
11. The art of making beds and of spreading out rugs and cushions for resting on.
12. Playing musical glasses containing water.
13. The storing of water in aqueducts, cisterns and reservoirs." (This does not seem to have much real connection with the branch of education just previously mentioned, and I do not quite see why it is necessary for a young girl to understand this. Whatever we say of other Indian wise men in this connection, Vatsyayana certainly believed in the right of a woman to become educated.)
14. Painting, arranging furniture, decorating.

15. The preparation of rosaries, necklaces, garlands, and crowns.

16. The preparation of turbans and chaplets, of egrets and bouquets of flowers.

17. Scenic representations. The acting of plays.

18. The preparation of ear-rings.

19. The art of preparing perfumes and scents.

20. The arrangements of jewelry and decorations, along with the whole art of matching costumes.

21. Magic or sorcery." (In the English medieval writers, we find the study of magic held in good repute, so long as it was white magic, and not black magic, which was sacred to the Devil. However, I do not know that magic seems to them a proper study for young girls. Vatsyayana's views were, certainly feminine.)

"22. Sleight-of-hand.

23. The art of cookery.

24. The preparation of lemonade, sherbets and other sour drinks, and spirituous extracts with suitable perfumes and colors.

25. The art of sewing.

26. The preparation of artificial flowers and birds.

27. The solution of puzzles, riddles, and conundrums.

28. A game of making versés, the first word of which must be the same as the last word in the verse made by the preceding player.

29. The art of mimicry or imitation.

30. Reading.

31. The study of words difficult to pronounce.
32. Fencing, and self-defence with the stick and the bow.
33. The art of reasoning.
34. The work of a carpenter.
35. Architecture.
36. The knowledge of the different sorts of money, jewels, and precious stones.
37. Chemistry and mineralogy.
38. The colors of precious stones and pearls.
39. The understanding of mines and quarries.
40. Gardening, and the art of treating plant diseases.
41. The art of conducting fights between cocks, quail and rams." (A ladylike study, isn't it—by our standards?)
42. The art of teaching parrots and starlings to sing.
43. The art of applying perfumed unguents to the body, and of applying pomade to the hair, as well as the whole art of hair-dressing.
44. Understanding different forms of handwriting.
45. The art of talking in different styles.
46. The knowledge of the languages and dialects of the different provinces.
47. The art of decorating wagons with flowers.
48. The art of tracing mystic diagrams and preparing charms and enchantments. How to knot bracelets.
49. Various games which exercise the in-

genuity of the players, as well as their command of language.

50. Verse writing.

51. The knowledge of dictionaries and vocabularies.

52. The art of disguise.

53. The art of changing the appearance of things, as to make cotton look like silk and to make ordinary and cheap articles take on the appearance of fine and rare objects.

54. The various gambling games.

55. The art of getting other people's property by means of enchantments.

56. Various games of childhood.

57. Etiquette.

58. The science of war.

59. The art of gymnastics.

60. The art of understanding the character of a man by means of his facial features. (Physiognomy.)

61. The art of scanning verse.

62. Arithmetical games.

63. Preparing artificial flowers.

64. Modelling figures and images in clay."

These, then, are the sixty-four branches of knowledge which every woman, or at least every woman of high rank, should study. I have in several cases shortened and simplified Vatsyayana's descriptions of these studies. Some of the branches overlap, but yet they offer in the sum total quite a formidable group. I should suppose that a woman thoroughly grounded in magic, physiognomy, and the art of acquiring her neighbor's property by means of the proper enchantment, might be forgiven

even if she were a little clumsy at modelling in clay.

To return to Vatsyayana:

"A courtesan endowed with a good disposition, possessing beauty as well as other attractions, and also well-versed in the arts and studies named above, is called *Ganika*, which means a courtesan of high degree; she has the right to a seat of honor in a company of men. Always respected by the King and praised by the literary men, finding her favors to be sought by all, she becomes the object of universal consideration. In the same way, the daughter of a king, or the daughter of a minister of state, if she possesses the arts listed above, can be assured of the preference of her husband, even if he has thousands of other women. Besides, a woman who has been separated from her husband and who finds herself in a difficult position, can easily make her own living, even in a foreign country, if she knows these arts. The very knowledge of all these things is attractive in a woman, though the practice of the arts is possible only under definite circumstances. As for a man versed in these arts, if he talks in an agreeable manner and according to the rules of gallantry about them, he can easily conquer the hearts of women, even those he has known for but a short time."

THE LIFE OF A CITIZEN

Kama, although it is most conveniently translated by *love* or *sex*, really means, as we have seen, all sensual pleasure. Accordingly Vatsy-

ayana tells us how the man possessed of a fortune should live:

"He should take a house in a city or in a large village or in the neighborhood of honorable men, or in a place frequented by a large number of people. This residence should be situated near a water-course, and it should be divided into various compartments to serve different purposes. It should be surrounded by a garden and contain two principal divisions, interior and exterior. The interior division should be occupied by the women; the other, richly perfumed, should contain a bed, soft and pleasant to look upon, covered with a perfectly white sheet, a little elevated in the middle, upon which should be garlands of flowers, with a canopy above, and two pillows, one at each end. There should also be a sort of sofa or day-bed, at the head of which should be a small table, upon which to place perfumed unguents for the night, flowers, pots of collyrium and other substances giving off a pleasant odor, essences serving to perfume the mouth, and citron peel. Near the sofa, on the floor, a cuspidor, a box for holding articles of clothing, a lute hung upon an elephant's tusk, a drawing-table, a pot of perfumes, some books, and some garlands of yellow amaranths. A little farther, upon the floor, there should be a round seat, a gaming-box, and a table upon which to play dice. Outside the exterior apartment, there should be large bird-cages or aviaries. There should be a separate room for spinning, wood-cutting, and similar diversions. In the garden should be two swings, one being of the revolv-

ing variety; also a bower of climbing plants covered with flowers, with a turf bank to rest upon.

"The head of the house, when he gets up in the morning, after having occupied himself with the indispensable duties, should wash his teeth and then apply upon his body moderate quantities of unguents and perfumes, he should apply collyrium (an eye-wash) upon his eye-lashes and beneath his eyes, he should color his lips with lacquer, and look at himself in the mirror. Then, having eaten betel leaves and other things which sweeten the breath, he should attend to his usual affairs. Every day he should take a bath, every other day he should anoint himself with oil, every three days he should apply to his body a sort of soap, every four days he should have his whole head and face shaved, and the other parts of his body should be shaved every five or six days.

"All this should be punctually attended to; he should be careful, also, to remove the perspiration from his arm-pits. He should take his meals in the morning, in the afternoon, and again in the evening, as Charayana prescribes. After breakfast, he should occupy himself with teaching parrots and other birds to speak. Then should come cock-fights, quail-fights, and ram-fights. A limited time should be devoted to theatrical representations, then should come the noon siesta. Afterwards, the head of the house, accompanied by a friend, should await in his previously decorated and perfumed chamber the coming of his wife, or he should send a messenger to her or go herself to find her.

When she comes, he and his friend should bid her welcome and talk with her kindly and pleasantly. This should be the last occupation of the day.

"The diversions and amusements which the citizens should from time to time participate in include festivals in honor of the various gods, social gatherings of the two sexes, drinking parties, picnics, and other social events.

"At a particularly favorable time an assembly of citizens should take place in the temple of Saraswati. This should be the occasion for testing the talent of singers or other artists who have come into the city, and on the next day there should be a distribution of rewards. The artists should be retained or sent away according to whether the assembly has liked their performances or not. The members of the assembly should act together in times of distress as well as in times of prosperity, and it is the duty of these citizens to grant hospitality to strangers and foreigners who have come to the assembly. This applies of course to all the other festivals celebrated in honor of the various gods.

"When men of the same age, dispositions, and talents, enjoying the same pleasures, join together to seek the company of courtesans or go to an assemblage of citizens in order to converse together pleasantly, this is called a social gathering. Common amusements are completing verses partly made by others, and testing the instruction of each individual in the various arts. Women of great beauty who have tastes similar to those of the men and

attractions with which they can captivate hearts are always honored at these social meetings."

These women would generally be courtesans or concubines. Although, as we have seen, Vatsyayana recommended instruction in many arts for the respectable daughters of citizens, his advice was seldom followed. Among the Hindus, as among the ancient Greeks, wives were in general less cultured and less able to converse intelligently with their husbands than were the kept women of the higher grades.

As for drinking parties (and, alas, we shall soon need notes to explain what these were) Vatsyayana says:

"Men and women should drink in one another's houses. Then the men should give drink to the public women," that is, to the concubines and courtesans. A list is given of suitable drinks, the names of which are now meaningless to us.

"In the morning the men, after having dressed, should ride on horse-back in the gardens, accompanied by public women and followed by servants. They should engage in suitable exercises and pass the time in agreeable distractions, such as promoting fights between cocks, quail, and rams. Then they should go home in the afternoon, bringing back bouquets of flowers.

"In the same way, in summer, they should bathe in a body of water from which dangerous animals have previously been removed.

"Other pleasures of society are passing the night away playing dice, going walking by

moon-light, celebrating a holiday in honor of the spring, picking fruits, eating lotus fibres and tender grain, picnics into the woods when the trees put on their new foliage, water sports, decorating one another with flowers, fighting with flowers, and other sports peculiar to the various provinces. Such amusements as these should always be enjoyed by the citizens.

"They should be enjoyed by a man who is diverting himself with a single courtesan, or by a courtesan who is taking her recreation in the company of servants or of citizens.

"A *Pithamarda* is a man without any fortune, alone in the world, whose only property consists of his T-shaped chair, his supply of soap, and a red cloak. He comes from a good country and is versed in all the arts. He is received into the company of citizens and into the homes of public women to teach the arts.

"A *Vita* is a man who enjoys the advantages of fortune, for being a fellow countryman of the citizens to whom he attaches himself, and possessing the qualities of the head of a house, having his wife with him, he is honored in the social gatherings of citizens and in the homes of the public women, whose assistance enables him to live."

He was evidently a man whose knowledge of manners and social ease enabled him to get along. Perhaps he was also a teacher of *Kama*, an instructor in the art of enjoying the good things of life. Along with the *Vidushaka*, a sort of jester, who was, however, always of high rank, the *Vita* contributed to the social amenities.

"These different persons serve as intermediaries in the quarrels and reconciliations between citizens and public women.

"This also applies to beggars, to women who have their hair shaved off, to adulterous women, and to old public women who are versed in all the arts.

"Thus a citizen who lives in a city or in a village, respected by all, should maintain relations with the persons of his caste who are worthy of his company. In being of service to them, he will oblige them by his example to enter into relations of mutual service and help."

THE VARIOUS CLASSES OF WOMEN

Vatsyayana discusses the limitations and prohibitions of caste as they apply to love and marriage:

"When sexual union is practiced by men of the four castes according to the marriage regulations of the Sacred Writings, with virgins of their own caste, it is a means of acquiring legal children and thus perpetuating their names and reputations, and it is not opposed to the customs of the world. On the contrary, the practice of sexual relations with women of a higher caste or with such as are no longer virgins, though they are of the same caste, is prohibited. Relations with women of inferior castes or with those who have lost caste, with courtesans and concubines, or with women who have left their husbands to live

with another, are neither commanded nor prohibited.

Women whom one may lawfully enjoy are of three sorts: maidens, wives who have deserted their husbands, and those who sell themselves publicly. Gonikaputra believes that there is a fourth class, women to whom one may turn on a special occasion, although they are already married. These special occasions come out of one or another of the following pieces of reasoning:

1. The woman is willing, and many others have enjoyed her. Consequently I may have relations with her although she is of a higher caste than I, without violating the rules of religion.

2. The woman has left her husband, and others before me have enjoyed her; therefore nothing prevents me from having sexual relations with her.

3. The woman has gained the heart of her great and powerful husband, and she has some control over him, who is my enemy's friend; if then she has relations with me, she will persuade her husband to abandon my enemy.

4. This woman's very powerful husband is thinking of doing me evil; she can, if I am intimate with her and dear to her, persuade her husband to change his mind.

5. By allying myself with this woman, I shall find an occasion to kill her husband and seize his immense wealth.

6. The union of this woman with me presents no danger, and she will bring me a fortune which I very much need, considering my

poverty and my inability to earn a living. It would thus be a method of taking to myself without any difficulty her great wealth.

7. This woman loves me ardently, and she is familiar with some of my weaknesses. Consequently, if I refuse to have relations with her, she will make my faults public in such a way as to sully my character and my reputation. Or perhaps she will bring against me a serious charge which I shall find it difficult to disprove, and I shall be ruined. Or perhaps she will urge her husband, who is powerful and over whom she possesses influence, to withdraw his favors and his good will from me. She will help my enemy, or urge her husband to help him.

8. This woman's husband has violated the chastity of my wives. I will revenge myself upon him.

9. With the assistance of this woman I will kill an enemy of the king who has taken refuge with her, and whom the king has commanded me to slay.

9. The woman whom I love is under the influence of this one. By means of making love to this one I can obtain the one I really want.

10. This woman will obtain for me a rich and beautiful maiden who is difficult to approach because she stands under the control of another man.

Finally: My enemy is the friend of this woman's husband. I might be able through the woman to cause a dissolution of this friendship.

"For these reasons and for other similar

ones one may address oneself to other men's wives, but it must be especially understood that this is permitted only for special reasons, and never merely to satisfy a carnal desire."

In other words, a violation of the sexual code is immoral, whereas thievery and even murder are not. This is a view much held by the moral censors of our own time and country.

"It is forbidden to have relations with the following classes of women: Lepers, lunatics, outcasts, those who reveal secrets, those who are immodest, those who are extremely pale or extremely dark, those who aren't feeling well, those who come within the incestuous degrees of relationship, those who live ascetic lives under a vow, and the wives of a relative, a learned Brahman, or the king.

"The disciples of Brabhavya say that it is permitted to have relations with any woman who is notoriously immoral. But Gonikaputra is of the opinion that, even in such a case, the wives of a relative, a learned Brahman, or the king should be excepted."

THE ARTS OF LOVE

Vatsyayana carefully classifies men and women according to the intensity of their libido. He attempts to determine what part the woman plays in the act of coition, and what pleasure she derives from it. Many of the subjects he analyzes subjectively and philosophically have been fairly definitely settled by Occidental scientific investigators. Of course, this whole

field is for various reasons particularly difficult for the scientists.

There are four sorts of love, according to Vatsyayana, that which results from a habitual act, that which arises out of the imagination, that which comes from faith, and that which results from the perception of exterior objects. Love which arises from seeing the body of a beautiful woman is of the last class. This sort is the best, he says, because the others are only internal and vague.

Homer speaks of his gods and his heroes as "mingling in love." It is chiefly this physical conception of love that Vatsyayana holds. The sexual union, that is, the major union of coition and the lesser unions of the embrace and the kiss, is what concerns him, together with various preliminary and auxiliary matters. Surely I need not point out here the obvious fact that all love, no matter how much "sublimated" or idealized, rests upon a physical basis.

The kiss is discussed in a chapter of its own. The nature of the osculation, the various parts of the body which should be kissed, the degree of intensity of the kiss, are each carefully considered. There is nothing scientific about the classifications and descriptions, of course. As there is nothing novel about the Hindu kisses, we may well pass this section by. The chapter ends with this statement: "Whatever one of the lovers does to the other must be returned in kind; that is, if the woman kisses the man, the man must kiss her in return; if she strikes him, he must strike her in return."

Scratching and biting are investigated in the two succeeding chapters. Is there anything strange or exotic in this? Havelock Ellis quotes an experienced modern Englishwoman to the effect that she had only met one man whose sexuality was without a strain of cruelty. Sadism is the name by which we call this joy in inflicting pain, and masochism is the pleasure in having pain inflicted. It is worth noting that Vatsyayana does not assume that one is confined to the male, the other to the female. If the woman strikes the man, he is to assume that she will enjoy being struck as well as striking. Or, since the woman's pleasure is not much considered, we can at least assume that Vatsyayana believed every man to be both sadist and masochist. Prudery hides the matter, so far as we moderns are concerned, and it bursts out in "sheik novels" and similar pieces of artistry. The kiss, according to Albert Eulenburg, is nothing more than a symbolical bite.

The various parts of the body which should be scratched are carefully listed. An old sage, however, is quoted to the effect that "if the impetuosity of the passion is excessive, no attention is paid to what spot is scratched."

Since love is reduced in Vatsyayana's book to one of the fine arts (part of the dance of life, as Mr. Ellis would say) each detail is carefully considered in relation to the whole. Moreover, this whole dance is a sacred thing. Therefore there is nothing unholy about erotic scratching, which is a part of the system of love, which forms with piety and money-making

the great mystical trinity of India. There is no reason why a great sage should not concern himself with the way in which nails should be cut and polished in order best to serve love-making.

Since the art of love is not universally held sacred among us, it is better not to reproduce here Vatsyayana's catalogue of the so-called figures of Venus. These are the various positions and ways in which coition may be carried out. Many of these are imitations of the acts of mammals and birds. "These different sorts of congress," we are told, "carried out according to the usages of each country and the fancy of each individual, engender love, friendship and respect in the hearts of women."

It is remarkable that in discussing the blows given by lovers, Vatsyayana considers only those inflicted with the open hand or the closed fist. The rod and the lash as part of the equipment of a brothel date back to the dawn of history. The *Kama Sutra* does discuss and condemn the erotic use of various cutting and piercing implements. It was customary in ancient India, at least in certain provinces, to slash the cheeks and the breasts of one's mistress to indicate the fervor of one's affections.

Note that the Hindu sage took for granted the fact that every normal and healthy individual was prepared to enjoy pain. This view, which has been advanced in modern times by the Marquis de Sade, is not that of Krafft-Ebing and his followers. The sadist, like the man

who pursues other sexual aberrations, is to them a degenerate.

Vatsyayana says, "The characteristics of the male sex are, according to general opinion, severity and impetuosity; while weakness, tenderness, sensitiveness, and an inclination to evade unpleasant things are the distinctive marks of the feminine sex. The excitement of passion and certain matters which have become habitual may sometimes apparently produce contrary results, but the natural condition is always that described above."

We are all more or less Puritans, and many things which seemed perfectly naturable and respectable to the old Hindu philosophers are classified by us among the acts of psychopathic persons. If it is true that to the pure all things are pure, then the whole civilization of modern Europe is mud-flecked, as compared with that of ancient India, or even ancient Greece. With these words I pass over a good many pages of the *Kama Sutra*. Reading Krafft-Ebing's *Psychopathia Sexualis*, it should already be clear, is not a substitute for this omitted section. The modern physician says in his very title that the people with whom he is dealing are mentally ill. Vatsyayana speaks to respectable citizens of sound mind and healthy body. Merely to explore all the curious byways of love is to him no symptom of disease, no piece of sin.

Clearly this is a very different manner of looking at the matter than ours. It is a viewpoint that we ought unblinkingly and unsmirkingly to consider. To understand a strange

sin is surely to forgive it. Yet it is futile to say this, for we cherish our blind spots most of all.

ACQUIRING A WIFE

How to pick a wife—this is a question of interest to all of us, married or single. Let us see what Vatsyayana has to say about it.

“When a maiden marries a man of the same caste according to the rules of the sacred writings, the results of the union are the acquisition of piety and wealth, children, an increase in the number of their friends, and an affinity and love between them without any dissensions. For this reason, the man should choose a girl of good family, whose parents are alive, and whose age is at least three years less than his.”

Evidently the Hindu sage, if he was familiar with mother-in-law jokes, was not frightened by them. Perhaps this advice not to have anything to do with a girl whose parents are dead has a connection with the religious rites of suttee. It is good form—or was, before the British conquered India—for a Hindu widow to permit herself to be cremated on her husband's funeral pile. However, as the following passage makes clear, Vatsyayana was thinking as well of the material assistance a bride's parents could afford the groom:

“She should belong to a very respectable family, rich, in a good position, surrounded by many relatives and friends. She should also be beautiful, endowed with good qualities, with

marks of good luck on her body. Her nails, teeth, ears and eyes should be regular and even, complete in number and exactly as they ought to be. She should be of good health. However, it would be reprehensible to choose one who is no longer a virgin.

"In order to bring about a marriage with such a girl as has just been described, the man's relatives and friends should lend their assistance. They should tell the girl's parents about all the faults and vices of every other man who is courting her, and at the same time they should greatly exaggerate the merits of their friend, especially as to the nobility of his descent, in such a way as to make the parents like him. They should talk to such relatives as have an influence with the girl's mother. One of his friends might disguise himself as an astrologer and fortune-teller, and prognosticate good luck and future riches for his friend, declaring that the position of the planets and the auguries on his body are auspicious."

It was believed that a man was lucky if his right eye blinked a little, while the mark of ~~luck~~ in a woman was the blinking of her left eye.

"Before agreeing to a marriage, each side should be convinced of the fortune, lucky signs, and other favorable indications; for, as Ghotakamukha says, a man should not get married capriciously. One should not marry a girl who sleeps, weeps, or leaves the house at the time when her parents are being asked for her hand. One should not marry a girl betrothed

to another. The following are also to be avoided:

One who remains hidden when her suitor appears.

One who has an unpleasant-sounding name.

One who has a flat nose.

One whose nostrils are high.

One who is shaped like a boy.

One who does not stand up straight.

One who has a protuberant forehead.

One who is bald.

One who does not love purity.

One who has been polluted by others.

One who has a tumor or goitre.

One who is in any way disfigured.

One who is already sexually mature.

One who has an older sister still unmarried.

One whose feet and hands perspire too much.

"Also a girl who bears the name of one of the twenty-seven stars, or the name of a tree or of a river, is not considered desirable. The same holds of girls whose name ends in *r* or *l*. According to some authors, it is impossible to be happy in marriage without taking a girl to whom one is attached; consequently, one should marry only a girl one loves.

"When a girl becomes ripe for marriage, her parents should dress her coquettishly and let her be seen everywhere where she can be seen by everyone. Every afternoon, after having decked her out elegantly, they should send her with her young companions to games, sacrifices, and marriage ceremonies, so she can be seen to advantage. They must display her as though she were a sort of merchandise. They

should gather together with good words and indications of friendship the persons of good appearance and prospects whom their relatives or their friends have brought them with a view to marrying their daughter. These suitors should be introduced to the girl, dressed and bejewelled in her very best. When this has been done, they will await the pleasure of fortune, and decide upon a certain day for arranging the marriage. On this day, when the persons concerned have arrived, the parents of the girl will invite them to bathe and dine, and will say to them, 'Everything happens in due time'; and they will postpone the decision for a later date."

The bath in the Oriental world is a luxury, perhaps it should be explained. To invite a guest to use his bath is for the Hindu no more an insult than inviting him to the theatre would be.

THE NEWLY-MARRIED COUPLE

Although, as we have seen, some of the Hindu philosophers have recommended love as a prerequisite to marriage, this is surely "love at first sight." The man in the case could not usually see very much of the young virgin whom he wished to marry. He could not court her directly. Therefore such courtship as takes place with us during the period of betrothal, or before that time, had to take place among the old Hindus after marriage.

"During the three days immediately follow-

ing the wedding, the man and the woman should sleep on the floor, abstaining from sexual pleasures, and seasoning their food with alkali or salt. The next seven days, they should bathe to the sound of joyful musical instruments, dress and ornament themselves, dine together, and exchange polite conversation with their relatives and with others who have been present at the wedding ceremonies. This applies to people of all castes." (Ordinarily a Brahman would not dine with a person of lower caste.)

"The evening of the tenth day, the husband should begin to talk gently to his young wife in such a way as to inspire confidence in her. Some authors assert that, in order to win her over completely, he should not speak to her at all during three days. The disciples of Babhravya, however, say that if a man remains mute for three days, it is to be feared that the young bride may be disgusted to see him inert and motionless, like a statue, for so long. He will begin to seem weak and epicene to her. Vatsyayana is of the opinion that the husband should begin by gaining his wife's confidence, but that he should abstain at first from sexual pleasures.

"Women, being gentle by nature, wish to be handled gently; if they must suffer brutal assaults from men whom they hardly know, they sometimes come as a result to hate the marriage relation, or even to hate the male sex. Therefore the husband should approach his bride in a manner not displeasing to her, and

he should employ such measures as will slowly but surely win her faith and confidence.

"When the girl has consented to be embraced, the man should put some betel nuts or betel leaves into her mouth. If she refuses to take them, he should speak conciliating words to her, beg her to accept them, make her solemn promises. As a last resort, he should get down on his knees before her; for, as a rule, no matter how stormy or irritated a woman may be, she is always susceptible to the entreaties of a man who has kneeled before her.

"At the moment when he gives her the betel, the husband should kiss her gently on the lips, uttering no sound. This first point gained, he will engage her in conversation. In order to begin this, he should ask her questions about matters which he does not know, or pretends not to know. The answers to these questions will be short. If the bride does not answer her husband's first questions, he should not become brusque, or lose his temper. He should ask the same questions, this time in a more conciliating tone. If she does not reply at the second questioning, the husband should insist upon her answering. As Ghotakamukha observes, 'All brides listen to what their husbands say, but often they do not say a word themselves.' If the husband is firm but gentle, his wife will answer at last, at least by an inclination of the head. If not properly handled, she will not reply even by gesture.

"If the man has known her before marriage, he may carry on a conversation with her

through an intermediary, such as a woman who has her confidence and also that of the husband. On such an occasion the girl will smile, her head bent toward the ground; if the woman intermediary says more than the bride wants to hear, she will scold her and try to pick a quarrel. The woman friend should jokingly say something that the young bride doesn't want to have said, adding, 'That's what she says,' and then she should smile and glance knowingly toward the husband.

"If the young woman is on familiar terms with her husband, she will place near him, without saying anything, the betel nuts, the unguents, and the garlands which he may have asked for. These she has perhaps hidden in her garments, prepared for the occasion."

Remember that the bride is a girl of twelve or thirteen, and her husband perhaps sixteen or seventeen. We can understand, then, the need of a friendly older woman to start things smoothly. Although, as we have seen, the young husband is advised not to treat his wife brutally, this is primarily for his own sake. In the India of still earlier days, we are told that the women were held pretty much men's equals. In Vatsyayana's time, and ever since then, the man has been as the sun and his woman or his women as satellites. It is said that the very text in the old writings which is taken to command the burning of a widow was merely a commendation of the faithful wife, and a promise that she should be rewarded for being true to him and attached to him unto death.

To return to the young married couple:

"A man who acts according to the inclinations of his bride, should try to make her tractable in such a way that she can love him and give him her confidence. It is not possible to succeed either by blindly following the girl's inclinations or by opposing them altogether. It is necessary to adopt the median course. The man who knows how to make women like him, how to make them watch over their own honor, how to make them feel confidence in him, such a man is sure to have women's love. But he who lets a girl go because she seems too timid and frightened only wins her disrespect. She considers him as a beast who does not know how to govern the spirit of a woman. However, a girl taken by force into marital relations by a man who does not understand the feminine heart, become nervous, restless, depressed. She feels a sudden and violent disgust for the man who has violated her. She falls into a state of despair, and becomes the enemy of the whole male sex; or, if she particularly detests her husband, she has recourse to other men."

It is more or less in the tone of a treatise on how to tame a colt. Perhaps a spirited horse is better to be trained with kindness than with the whip. A wife, besides, can commit adultery if her husband becomes too disagreeable.

COURTSHIP

I have said that courtship was for the India of Vatsyayana's days something that took place after marriage. However, there were some exceptions to this rule:

"A poor man who has good qualities, a man whose family is of low rank and whose qualities are ordinary, a man dependent on his father, his mother, or his brothers, should not marry without having been careful to make himself loved and honored by the girl, from her very childhood. Thus a young bachelor who is not living with his parents, but in his uncle's house, should try to win his uncle's daughter, or another girl, even one who is already betrothed to some other man. This way of wooing a girl, according to Ghotakamukha, is blameless, because it is a way of acquiring wealth, and as good a way as any other form of marriage.

"When a youth has in his way started to court a girl whom he loves, he should pass much of his time with her, amusing her with various games and pastimes suitable to her age and condition, such as picking flowers and assembling them harmoniously, playing house, cooking, playing dice, matching coins, jacks and similar games which may be in fashion in that part of the country and pleasing to the girl. He should also arrange other games which are played by a number of people, such as hide and go seek, blind man's buff, and the like; also various gymnastic exercises, which

the girl may attend in company with her friends and her servants.

"The young man should be as kind and courteous as possible to any woman whom the young girl considers worthy of her confidence. Above all, he should attach himself by his amiability and by little services to the daughter of the wet-nurse of the girl he is wooing. If he can win her over to his side, even when she understands what his intentions are, she will put no obstacle in his way, and may perhaps facilitate the union between the desired girl and him. Knowing his real character, she will not cease to speak of his good qualities to the girl's relatives, even though the man has not asked her to do this." (It is assumed that the girl of low rank would make no attempt to divert the wooing to herself.)

"In every way the man should try to do what is pleasing to the girl, and to obtain for her whatever she desires. Thus she will have toys and baubles which most of her companions do not possess. He will bring her balls of bright colors; he will give her dolls of cloth, wood, of buffalo's tusks, of ivory, of wax, composition, and clay; cooking utensils, wooden figures, such as a man and woman sitting together; a pair of rams, nannygoats, or sheep; also temples of earth, bamboo, and various sorts of wood, consecrated to the different goddesses; cages containing birds of different kinds; water-cases of elegant and diverse shapes, guitars, yellow unguent; finally, sandal-wood, saffron, and the nuts and leaves of the betel. He should give her these things

at different times, whenever he has a chance to meet her; some of them he should give her privately, others in public, according to circumstances. In brief, he should try in every way to convince her that he is ready to do whatever she wishes.

"If he arranges with her a meeting in some secluded place, he should tell her that he has given her presents secretly because he did not wish to displease her parents and his own; he will add that whatever he has given her, others would willingly have received. If the girl seems to like him, he may tell her funny stories, so long as she is willing to hear them. He may show her tricks of sleight-of-hand, if she is interested. He may show how well he can practice any of the arts at which he is adept. If she is fond of singing, he may make music for her. On festive days especially, he should give her presents, bouquets of flowers, ornaments, and the like.

"All this time, he should wear fine clothes and take good care of his personal appearance, for young girls fall in love with the men they see who are good-looking and well-dressed. When women feel love, they make no efforts to conquer the object of their affections.

"Nevertheless, here are the signs and visible acts by which the love of a young girl is shown:

"She never looks at the young man's face, and she blushes when she sees him; she manages to give him fleeting glimpses of her arms and legs; she watches him furtively when he

goes away; when he asks her a question, she bashfully turns away her head and answers him indistinctly, in disconnected phrases; she likes to be in his company; when she sees him in the distance, she speaks loudly to her servants, thus hoping to catch his attention; under one pretext or another, she shows him various objects; she tells him fables and stories very slowly, in order to prolong the conversation; she embraces and kisses the baby she is holding while he looks on; she puts ornamental marks on his servants' foreheads; carries out lively and graceful movements when her servants speak gayly to her in her lover's presence; confides in his friends, and shows them respect and deference; is good to his servants, chats with them, asks them to do things for her, as though she were their mistress, and listens attentively to them when they speak to someone else about their master; she goes into his house when his foster-mother's daughter invites her there, and with her assistance, arranges matters so she can talk and play with him; she tries to avoid being seen by her beloved when she is not dressed and ornamented at her best; she sends him by a messenger her earrings, her ring, and her garland of flowers, when he has expressed a desire to see them; always carries with her something that he has given her; looks sad when her relatives talk to her of another suitor; and seeks to avoid the company of those persons who speak in favor of this rival suitor.

"When the young girl begins to show her love by such signs as those mentioned above,

her lover should try to conquer her entirely by such means as these:

"When they play together, he will intentionally hold her hand. He will show her a couple of miniature figures cut into a leaf" (evidently something in the nature of a Hermaphroditus) "and, at intervals, other things of the same sort. When they engage in aquatic sports, he will dive at a distance from her and come up near her. He will seem charmed with the new foliage of the trees, and other similar things. He will tell her how he is suffering because of his love for her. He will tell her the beautiful dream he has had with regard to other women. At parties and assemblies of the caste, he should sit beside her and touch her hands and feet under one pretext or another. Every time he gives her a present or receives one from her, his countenance should express the intensity of his love.

"He should spill upon her the water which he has received to rinse his mouth; and if he finds himself with her in a solitary place, he should make love to her, telling her the true state of his heart, but not distressing her in any way."

Perhaps this matter is self-explanatory. The young man does the girl an honor, of course, by pouring upon her hair or upon her body the perfumed water which has been provided to make his own breath sweet. This little explanation is less important than an understanding of the whole basis for such a courtship as is here described. It is by no means the proper thing to do, in the eyes of the girl's

parents. The philosophers recommend it to young men who cannot otherwise obtain a rich and otherwise desirable virgin. In Mohammedan India, as elsewhere in Islam, this would be impossible, owing to the existence of the strictly-guarded seraglio. Let us return to our courtship:

"Every time when he sits on the same seat or the same bed with her, he should say to her, 'I have something special to tell you'; and if she agrees to go to a quiet place to hear him, he should express his love by means of gestures and signs more than by words. When he knows that she loves him, he should pretend to be ill, and have her sent for to speak to him. Then he will take her hand and carry it to his eyes and to his forehead, and he will ask her to prepare some medicine for him, saying, 'This duty is yours, yours and nobody else's.'

"When she must go away, he should let her depart, begging her, however, to come again to see him. This pretended illness should be continued for three days and three nights. Finally, when the girl has acquired the habit of coming to see him, he should hold long conversations with her; for, as Ghotakamukha says, 'no matter how passionately a man loves a girl, he never wins his victory without using a good many words.' When the man has finally found the girl entirely conquered, he may begin to enjoy marital relations with her."

If she does not let herself be taken so easily. Vatsyayana suggests other ways of gaining her confidence, through her foster-mother or

through her trusted friends or through servants. The great religious philosopher seems to find nothing wrong in all this.

HOW A HINDU CINDERELLA SHOULD ACT

Supposing a Hindu virgin is not sufficiently sought after by eligible young men what should she and her parents do about it? Vatsyayana supplies some suggestions:

"A young girl who is endowed with good qualities and who has been well educated, but whose family is of an inferior class or not very wealthy, and who is consequently not sought after by her equals; or an orphan, who conscientiously observes the rules of her family as well as the laws of caste, should, when she arrives at a marriageable age, try to attach herself to a strong and good-looking young man or someone else who might be weak-minded enough to marry her without asking consent of his parents.

"She should employ to this end such means as will win love for her, and she should seek out occasions to see and meet the desired man. Her mother, too, should bend all her efforts to arrange a meeting between them at the house of friends. The young girl should arrange matters so she can find herself alone in some quiet place with her beloved, and after a while she should give him some flowers, a betel nut or betel leaves, and some perfume. She should show him that she is adept at the various arts. She should discuss with him the

proper way to conquer the heart of a maiden.

"However, according to ancient authors, no matter how ardent the affection of a girl for a man may be, she should not offer herself or make the first proposals. A girl who acts in this way is likely to be undervalued and rebuffed. She should submit to all his embraces, if she is willing, without showing any pleasure or any understanding of what he is about. When he wishes to kiss her, she should refuse to permit it; she should persistently resist this and further advances. Only when she is certain that she is really loved, that her lover is entirely and unalterably devoted to her, should she give herself over to him, persuading him to marry her immediately afterward. After she has lost her virginity, she should immediately tell her intimate friends."

SOME HINDU MARRIAGE PROBLEMS

After marriage, the problems of Hindu ladies and gentlemen are in some cases similar to our own, in others quite different. For example:

"The causes of a new marriage while a man's wife is still alive are the following:

1. The wife's bad reputation, or her madness.

2. The disgust which a husband feels for his first wife.

3. The wife's sterility.

4. The birth of girls only.

5. The husband's extreme lewdness.

"From the beginning of the marriage, a wife

should exert herself to gain her husband's love, always showing herself devoted, good-humored, and clever. If she bears him no children, she should herself advise her husband to marry a second wife. When the new wife is married and installed in the house, the first one should give her a position superior to her own, treating her like a sister.

"In the morning, the older one should make the younger one dress and ornament herself in their husband's presence, and she ought never to be jealous of the attentions he pays her. If the newer wife does something displeasing to her husband, the older one should advise her as well as she can. She should treat the other woman's children as though they were her own, respect her servants more than her own, be good to her friends, and honor her relatives.

"If there are a number of wives, the first one should ally herself with the next in rank and age, and she should incite the wife who has recently enjoyed the favors of the husband to seek a quarrel with the favorite of the day. Then she should pity her, and after having united the other women, she should encourage them to denounce the favorite as being quarrelsome and wicked, but always without in any way compromising herself. If the favorite has a quarrel with the husband, the oldest wife should take her part and give her false encouragement in order to make the quarrel worse. If, after all this, she sees that the husband continues to love the favorite, she should change her tactics, and work hard to

effect a reconciliation between them, in order to avoid arousing her husband's displeasure.

"The youngest wife should consider the oldest as her mother, and should give nothing away, even to her parents, without telling her. She should confide in her absolutely, and never approach the husband without the oldest wife's permission. She should never betray the secrets which the oldest wife confides to her, and she should cherish her children even more than her own. She should never speak to her husband of the fact that her pride is hurt by the presence of a rival. She should secretly obtain from him some special signs of his particular affection for her. She should never, in pride or anger, tell anyone how her husband loves her and how she loves him; for a woman who reveals her husband's secrets incurs his displeasure. As for seeking to obtain her husband's favor, she should always do this when nobody else is present. If the oldest wife is sterile, she should offer her sympathy."

Vatsyayana next discusses the possibility that a widow may remarry. Evidently, then, the suttee law did not yet exist, or was not universally observed. The question of just how ancient the requirement of the widow's immolation is, has for some time been troubling Hindu scholars. Probably it is comparatively recent. To return to our household of plural wives:

"A woman whose husband does not love her and whom the other wives persecute, should ally herself with the favorite wife" (against whom the others would naturally be united,

and who would therefore welcome such an ally) "and learn from her the arts of pleasing a husband. She should watch over all her husband's children, and she should take a leading part in religious observances. She should never obtrusively seek her husband's favors, or reproach him in any way for neglecting her. She should try to arrange a conciliation when he has quarreled with one of his wives, and to help him when he wishes secretly to meet one of them. She should try to find out her husband's weaknesses, but she should never reveal them to others. In general, she should act so that her husband will consider her a good and devoted wife."

THE KING'S WIVES

There are special ordinances for the seraglio of a king:

"The women employed in the harem should offer to the king, in the name of his wives, flowers, unguents, and articles of clothing. The king, having accepted these, should present them to the servants, just as he does with what he has worn the preceding day. In the afternoon the king, dressed and bejewelled in his best, should visit his seraglio. After having paid due respect and addressed proper salutations to each wife, he should carry on an agreeable conversation with them all. After that he should visit his concubines and his dancers.

"When the king wakes up after his noon sies-

ta, the woman whose duty it is to indicate which of his wives is to pass the night with him, comes to him with the attendants of any chosen wife, that is to say, of the one whose regular turn it is, together with the attendants of any wife who feels that her turn has been overlooked, or who has been ill at the time of her regular turn. The attendants offer to the king unguents and perfumes sent by these wives, telling him in each case why their mistress believes she has a right to his company. That one of his wives whose unguents are accepted thereby knows herself to be chosen."

OTHER MEN'S WIVES

We have already seen that in certain cases Vatsyayana considers it proper to seduce the wives of other men. For instance, a man might die of his love if he did not have relations with a certain woman. The symptoms of this love disease, arranged in order of their seriousness, are, according to our philosopher and guide, the following:

Love induced by seeing the woman.

Spiritual attachment.

Constant thinking of her.

Insomnia.

Emaciation of the body.

Disgust for old games and pleasures.

Putting aside modesty.

Madness.

Fainting fits.

Death.

"Ancient authors say that a man should take note of the disposition, the sincerity, and the purity of a young woman, together with the intensity of her passions, deducing all these things from the shape of her body and certain characteristic marks. But Vatsyayana believes that these signs are deceptive, and that women must be judged by their conduct and by the movements of their body.

"As a general rule, according to Gonikaputra, a woman falls in love with every handsome man she sees, and a man with every beautiful woman; but often, for various reasons, they do not see each other closer. A woman in love pays no attention to justice. She does not try to conquer a man for some ulterior purpose, but only because of her love. When a man approaches her, she instinctively defends herself against him, even if she is inclined to favor him. If the man insists, she finally consents. A man who falls in love, however, masters his feelings by considerations of morality and wisdom, and though he thinks often of the woman in question, he does not surrender to her attempts to win him. Sometimes a man makes an effort to conquer the object of his affections; and if he fails, he gives up the attempt. It sometimes happens that when he has won a woman's heart, he becomes indifferent to her.

"The reasons why a married woman repulses a man who attempts to seduce her are as follows:

1. Love of her husband.
2. The desire for legitimate children.

3. The lack of a suitable opportunity.
4. Anger at being approached too familiarly by a man.
5. Difference in social rank.
6. Lack of certainty, because the man concerned travels a good deal.
7. A suspicion that the man may be attached to some other woman.
8. Fear that the man may not keep his intentions secret.
9. The thought that the man is too much devoted to his friends, and not sufficiently devoted to her.
10. Fear that he may not be serious.
11. Shame because the man is famous, or of higher rank than hers.
12. Fear that his passion may be too weak or too strong.
13. Modesty, or shame, because the man is so clever.
14. The memory of having been on terms of pure friendship with him.
15. Contempt, because he is inexperienced and unfamiliar with the ways of the world.
16. Mistrust of his character.
17. Indignation because he does not seem to know that she loves him.
18. The supposition that he is a weakling.
19. Fear that his passion may somehow harm her.
20. Mistrust of him and his intentions.
21. Fear of being discovered.
22. Disappointment in him because of his gray hair or his looking stingy.

23. Fear that he may have been sent by her husband to test her chastity.

24. The thought that he may be too scrupulous about morals."

Evidently this overscrupulousness would not include any feeling of doubt about the justice of seducing another man's wife, however. Note, too, that moral scruples are not listed among the wife's twenty-four reasons for sending away a lover.

"When the man finds out what the cause of his rejection is, he should try to overcome it. If the woman is ashamed because of his talents or rank, he should show her how much he loves her. If the woman alleges a lack of opportunity, he should show her some easy means of access to her. If she feels too great a respect for him, he should encourage her to familiarities. If she suspects him of having a bad character, he should prove to her his valor and his wisdom.

"The following sorts of men are usually most successful with women:

1. Men well versed in the science of love.
2. Men who are good story-tellers.
3. Men who have known the women in question since their childhood.
4. Men who have gained their confidence.
5. Men who give them presents.
6. Men who have never been in love before."

There are twenty-four classes of men named in all, but we may pass over the rest to turn to Vatsyayana's list of the women who are easiest to win over:

"1. Women who stay at the door of their house.

2. Women who are always to be seen in the street.

3. Women who pass their time gossiping in a neighbor's house.

4. Women who always keep looking at you.

5. Women who deliver messages.

6. Women who look sideways at you.

7. Women whose husbands have taken other wives without just cause.

8. Women who detest their husbands or are hated by them.

9. Women who have nobody to watch them and support them."

The list goes on to include widows, immoral women, and others who are supposed to offer an easy approach.

THE COURTESAN

I will pass over vatsyayana's hints on seducing one's neighbors's wife, and turn to his chapters on the courtesan:

"In their relations with men, the courtesans find not only sexual pleasures but also a means of subsistence. When a courtesan entertains a man because of her love, the action is natural; but in case she does it merely to earn money, it is artificial or unnatural. In this latter case, however, she should act as though she loved him naturally, for men become attached to such women as seem to love them. She should seem to be acting entirely from motives of love, and

not thinking of the mercenary side at all. In the interest of her future reputation, she should not take money from him in any illegal way.

"A courtesan, well dressed and ornamented, should sit or stand at the door of her house, and without making herself too conspicuous, she should look up and down the street in such a way as to be seen by the passers-by, for she must be displayed in the same manner as merchandise which is offered for sale.

"She should become friendly with such persons as can help her to stir up quarrels between men and other women, and can otherwise protect and help her in her affairs. These persons include police-officers and city watchmen; officials of the law courts; astrologers; scholars; teachers of the arts of love; merchants of flowers, perfumes, and spirituous liquors; barbers; and beggars.

"The men whom a courtesan should cultivate for the sake of gain include those with an independent income, those who hold important royal positions, those who are naturally generous, only sons of rich parents, ascetics who are secretly troubled by desire, physicians of the King, and old acquaintances.

"For love and for the sake of her reputation, she should turn to men of high rank, poets, good story-tellers, energetic men, those who are religious, free from anger, liberal, fond of their parents, sociable, clever at completing verses and other such games, free from all illness or bodily defect, not given over to drink, able to attract women but not entirely devoted to love, free from envy and jealousy."

* The courtesan, Vatsyayana tells us, should be free from avarice. She should be devoted to love and well acquainted with its arts, as well as the fine arts and the various crafts. She should avoid the following kinds of men:

"Those who are consumptive or sickly; those who have worms or maggots in their mouth, those who are always jealous; those who are stingy; those who are pitiless; sorcerers; those who care nothing about their reputation; thieves; and, finally, those who are too bashful or modest.

"Ancient authors say that in giving themselves to men, courtesans are actuated by one of the following motives: love, fear, the desire of money, pleasure, vengeance, curiosity, disappointment, piety, the desire of fame, compassion, the resemblance of the man to a beloved person, and poverty. Vatsyayana believes that the desire for wealth, the search of happiness, and love are the only causes of a courtesan's relations with a man."

The courtesan should not give herself too readily to a man, in Vatsyayana's opinion. There should be much sending of intermediaries, exchanging of presents, and the like. The woman discussed here is evidently in the nature of the Greek hetæra. She has servants and wealth, and evidently she does not give herself to poor men. As we have seen, she might even hope to become famous.

THE CONCUBINE

The courtesan may be taken by a man into his house, to remain there permanently as a sort of inferior wife, or concubine. In such a case, according to our philosopher of love,

"She should live with her lover as if she were married, she should behave like a chaste wife and she should try to satisfy him in every way. Her task, briefly, is to give him pleasure, but she need not fall in love with him, though she should act as though she were really attached to him.

"She should not ask outright for money. She ought to have a mother dependent upon her, whom she can represent as very avaricious. If she has no mother, she may let some trustworthy woman play the part. The real or pretended mother should show hostility to her lover, and take her away from him by force. The girl should pretend to be angry, dejected, afraid, and ashamed, but in no case should she disobey her mother.

"She should tell her mother that the man has fallen ill, and under this pretext she should go to see him. Here are the various things she should do to make sure of his favor:

"She should send her servant to pick up the flowers he has worn the day before, in order that she may wear them as a sign of her affection; she should ask for the betel nuts and leaves which he has left over; she should express astonishment at his skill in the practice of love; she should let him teach her the sixty-

four forms of pleasure taught by Babhravya; she should keep his secrets; she should confide her own desires and secrets in him; she should satisfy all his whims; she should look worried when he becomes thoughtful, or seems to be thinking of something else than her and love; she should express herself as being fond of everything he likes; she should be gay or sad according as he is the one or the other; she should express the desire to see his wives; she should show neither complete indifference nor excessive emotion when she chances to meet him; she should not express her love for him by means of words, but with acts, signs, hints; she should remain silent when he is asleep, tired, or ill; she should reply to him vivaciously and gayly, when she has become sufficiently familiar with him; she should listen attentively to all he has to say, except that which relates to her rivals; she should not praise other people, or censure people who have the same faults as her lover; she should wear any ornament he may have given her; she should not eat when her lover seems to be discouraged or ill; she should ask him to take her with him if he leaves the country, whether voluntarily or by an order of banishment; she should tell him that she does not want to survive him; she should tell him that the whole object of her life is to be united to him; she should offer to the Divinity the sacrifices offered in advance, when he has become rich or secured some desire, or recovered from an illness; she should put his name into the songs she sings; she should sit on his lap and fall asleep there; she should

wish to bear him a child; she should show respect to his family, his color" (the Hindus, although of the Caucasian race, are in some cases as dark as negroes) "his friends, his good qualities, his likeable disposition; she should ask him to sing, if he is proud of his musical ability; she should tell him that in the other world she will continue to be his mistress.

"If the man undertakes a journey, she should make him swear that he will return promptly; during his absence she should wear no ornaments except those that bring good luck. If the time set for his return is passed, she should make astrological calculations to determine his fate. If she feels depressed or if the auguries are unlucky, she should carry out some ceremony or sacrifice which will tend to appease the Deity.

"When the man has returned, she should worship Kama, god of love, and the other gods as well. Then she should have her friends bring her a case full of water, out of which she should pour an oblation for the crow which eats the offerings that we make to the shades of our deceased parents. After the first visit, she should ask her lover to carry out certain rites, which he will do if he is sufficiently attached to her.

"A man is said to be fully attached to his concubine when his love is disinterested, when he has the same objects in mind as she, when he is entirely free from jealous suspicions, and when he does not quarrel with her over the matter of money."

SOME GOOD ADVICE TO COURTESANS

As has been clear from the beginning of this book, to the old Hindus the whole matter of love was mystically mingled with religion and with money. Accordingly, a great philosopher could pause to consider how a harlot or a concubine could make herself rich:

“Money is obtained from a lover, in two ways, one natural and legal, the other way being to use tricks. Some old authors say that if a woman can get from her lover by natural means as much money as she needs, she should not use any artifices. However, Vatsyayana thinks that she can get twice as much by using such tricks as those described below, and consequently she should use them all. These are the artifices:

1. She should ask him for money for various purposes, such as to buy food, drink, flowers, perfumes, ornaments and clothes; and she should not buy these things, but keep the money. Else she should buy them for a lower price, and keep the rest.

2. She should praise his intelligence.

3. She should tell him that she needs money to fulfill religious vows.

4. She should tell him that her jewels have been stolen.

5. She should tell him that she has had property destroyed by a fire or by the negligence of her servants.

6. She should tell him that she has lost the ornaments he has given her.

7. She should have her friends tell him how much it has cost her in travelling expenses to come to see him.

8. She should enter into debts on his account.

9. She should have a quarrel with her mother over some expense she has incurred on her lover's account.

10. When her lover's friends give a party, she should decline to go, saying she has no presents to give them.

11. She should fail to go through certain religious performances, saying she has not sufficient money to arrange the ceremonies.

12. She should engage artisans to do a piece of work, and charge it to her lover."

But why go on with the list? It is not a very different set of tricks from that employed by any intelligent kept woman of the present century and our own country. Next follows a list of various methods of getting rid of a lover who is no longer desirable. Then comes some advice about entering into a new union with an old lover:

"When a courtesan abandons a lover after having got all his money away from him, she should consider new relations with an old lover. She should only pursue him if he has become rich again or if part of his fortune remains to him and if he is still attached to her. If this man is just then living with another woman, she should consider the matter well before acting.

"When a woman can choose between two lovers, with one of whom she has had relations and the other one being a stranger, the sages are generally of the opinion that the former is preferable, because, as she is already familiar with his tastes and his character, she can easily satisfy him. But Vatsyayana thinks that an old lover, who has already spent a large part of his fortune, cannot or will not give more money, and that consequently the new lover is to be preferred."

As for the woman who has a new lover every night:

"If a courtesan can obtain a good deal of money every day by having a large clientele, she should not attach herself to a single lover; in this case she should fix her price for the night after having considered the place, the season, the amount her client is able to pay, her own good qualities, and also what other courtesans are charging.

"The ancient wise men say that if a courtesan is offered equal pay by two lovers at the same time, she should give the preference to the one that offers her exactly what she needs at the time. But Vatsyayana is of the opinion that she should accept the man who offers her gold, because it is the best medium of exchange. Of all these things: gold, silver, copper, bell-metal, iron, vases, furniture, beds, clothing, perfumery, oil, wheat, cattle, and so on, the first, gold, is superior to all the rest."

Here we have clearly defined the time when money took the place of a system of barter.

The gold seems not yet to have been coined, but the advantage of its ready acceptance everywhere was already seen.

"If the conquest of two lovers is equally easy and if they offer the same things, the courtesan should consider their personal qualities and the signs which they bear of good or of evil fortune.

"If there are two lovers, one of whom is attached to the courtesan and the other of whom is simply very generous, the old wise men say that she should give the preference to the generous one; but Vatsyayana is of the opinion that it is better to accept the one who is attached to the courtesan, because he may become generous, as even a miser gives money to a woman when he is smitten with her, while the lover who is simply generous will not remain long attached to her. If, however, a poor and a rich man seek her out, she will naturally prefer the latter."

Various other cases are set down in which the poor harlot does not know which of two admirers to accept. We are reminded of the donkey discussed by medieval European philosophers, which is set at an equal distance from two equally attractive bundles of hay, and which starves to death because it cannot make up its mind which to take. So we can imagine a Hindu courtesan standing in the street all night, or in the doorway of her house, unable to make her mind up. If she follows the ancient sages, she will take this young man; but yet Vatsyayana's advice points clearly to the other.

Philosophers are philosophers everywhere, and harlots are harlots in India or France or in the United States of America. Therefore I don't really suppose that any courtesan ever had two equally-matched lovers clamoring for her at the same moment. If she had, she took one because she liked the way his hair curled, or for some equally weighty reason. He was the lucky fellow, and his poor disappointed rival had to seek elsewhere a fair one, skilled in the Aphorisms of Love and the tricks for separating him from his money.

AN ESSAY ON THE ARISTOCRATIC RADICALISM OF FRIEDRICH NIETZSCHE ¹

(1889)

FRIEDRICH NIETZSCHE appears to me the most interesting writer in German literature at the present time. Though little known even in his own country, he is a thinker of a high order, who fully deserves to be studied, discussed, contested and mastered. Among many good qualities he has that of imparting his mood to others and setting their thoughts in motion.

During a period of eighteen years Nietzsche has written a long series of books and pamphlets. Most of these volumes consist of aphorisms, and of these the greater part, as well as the more original, are concerned with moral prejudices. In this province will be found his lasting importance. But besides this he has dealt with the most varied problems; he has written on culture and history, on art and women, on companionship and solitude, on the State and society, on life's struggle and death.

He was born on October 15, 1844; studied philology; became in 1869 professor of philology at Basle; made the acquaintance of Richard Wagner and became warmly attached to him, and associated also with the distinguished historian of the Renaissance, Jakob Burkhardt. Nietzsche's admiration and affection for Burkhardt were lasting. His feeling for Wagner, on the other hand, underwent a complete revulsion in the course of years. From having been Wagner's prophet he developed into his most passionate opponent. Nietzsche was always heart and soul a musician; he even tried his hand as a composer in his **Hymn to Life** (for chorus and orchestra, 1888), and his intercourse with Wagner left deep traces in his earliest writings. But the opera of **Parsifal**, with its tendency to Catholicism and its advancement of the ascetic ideals which had previously been entirely foreign to Wagner, caused Nietzsche to see in the great composer a danger, an enemy, a morbid phenomenon, since this last work showed him all the earlier operas in a new light.

During his residence in Switzerland Nietzsche came to know a large circle of interesting people. He suffered, however, from extremely severe headaches, so frequent that they incapacitated him for about two hundred days in the year and brought him to the verge of the grave. In 1879 he resigned his professorship. From 1882 to 1888 his state of health improved, though extremely slowly. His eyes were still so weak that he was threatened with blindness. He was compelled to be extremely careful in his mode of life and

¹ "The expression 'aristocratic radicalism,' which you employ, is very good. It is, permit me to say, the cleverest thing I have yet read about myself."

—NIETZSCHE, Dec. 2, 1887.

to choose his place of residence in obedience to climatic and meteorological conditions. He usually spent the winter at Nice and the summer at Sils-Maria in the Upper Engadine. The years 1887 and 1888 were astonishingly rich in production; they saw the publication of the most remarkable works of widely different nature and the preparation of a whole series of new books. Then, at the close of the latter year, perhaps as the result of overstrain, a violent attack of mental disorder occurred, from which Nietzsche never recovered.

As a thinker his starting-point is Schopenhauer; in his first books he is actually his disciple. But, after several years of silence, during which he passes through his first intellectual crisis, he reappears emancipated from all ties of discipleship. He then undergoes so powerful and rapid a development—less in his thought itself than in the courage to express his thoughts—that each succeeding book marks a fresh stage, until by degrees he concentrates himself upon a single fundamental question, the question of moral values. On his earliest appearance as a thinker he had already entered a protest, in opposition to David Strauss, against any moral interpretation of the nature of the Cosmos and assigned to our morality its place in the world of phenomena, now as semblance or error, now as artificial arrangement. And his literary activity reached its highest point in an investigation of the origin of the moral concepts, while it was his hope and intention to give to the world an exhaustive criticism of moral values, an examination of the value of these values (regarded as fixed once for all). The first book of his work, **The Transvaluation of all Values**, was completed when his malady declared itself.

1

Nietzsche first received a good deal of notice, though not much commendation, for a caustic and juvenile polemical pamphlet against David Strauss, occasioned by the latter's book, **The Old Faith and the New**. His attack, irreverent in tone, is directed not against the first, warlike section of the book, but against the constructive and complementary section. The attack, however, is less concerned with the once great critic's last effort than with the mediocracy in Germany, to which Strauss's last word represented the last word of culture in general.

A year and a half had elapsed since the close of the Franco-German War. Never had the waves of German self-esteem run so high. The exultation of victory had passed into a tumultuous self-glorification. The universal view was that German culture had vanquished French. Then this voice made itself heard, saying—

Admitting that this was really a conflict between two civilizations, there would still be no reason for crowning the victorious one; we should first have to know what the vanquished one was worth; if its value was very slight—and this is what is said of French culture—then there was no great honor in the victory. But in the next place there can be no question at all in this case of a

victory of German culture; partly because French culture still persists, and partly because the Germans, now as heretofore, are dependent on it. It was military discipline, natural bravery, endurance, superiority on the part of the leaders and obedience on the part of the led, in short, **factors that have nothing to do with culture**, which gave Germany the victory. But finally and above all, German culture was not victorious for the good reason that **Germany as yet has nothing that can be called culture**.

It was then only a year since Nietzsche himself had formed the greatest expectations of Germany's future, had looked forward to her speedy liberation from the leading-strings of Latin civilization, and heard the most favorable omens in German Music.¹ The intellectual decline, which seemed to him—rightly, no doubt—to date indisputably from the foundation of the Empire, now made him oppose a ruthless defiance to the prevailing popular sentiment.

He maintains that culture shows itself above all else in a unity of artistic style running through every expression of a nation's life. On the other hand, the fact of having learnt much and knowing much is, as he points out, neither a necessary means to culture nor a sign of culture; it accords remarkably well with barbarism, that is to say, with want of style or a motley hotchpotch of styles. And his contention is simply this, that with a culture consisting of hotchpotch it is impossible to subdue any enemy, above all an enemy like the French, who have long possessed a genuine and productive culture, whether we attribute a greater or a lesser value to it.

He appeals to a saying of Goethe to Eckermann; "We Germans are of yesterday. No doubt in the last hundred years we have been cultivating ourselves quite diligently, but it may take a few centuries yet before our countrymen have absorbed sufficient intellect and higher culture for it to be said of them that it is a long time since they were barbarians."

To Nietzsche, as we see, the concepts of culture and homogeneous culture are equivalent. In order to be homogeneous a culture must have reached a certain age and have become strong enough in its peculiar character to have penetrated all forms of life. Homogeneous culture, however, is of course not the same thing as native culture. Ancient Iceland had a homogeneous culture, though its flourishing was brought about precisely by active intercourse with Europe; a homogeneous culture existed in Italy at the time of the Renaissance, in England in the sixteenth, in France in the seventeenth and eighteenth centuries, although Italy built up her culture of Greek, Roman and Spanish impressions, France hers of classical, Celtic, Spanish and Italian elements, and although the English are the mixed race beyond all others. True, it is only a century and a half since the Germans began to liberate themselves from French culture, and hardly more than a hundred years since they entirely escaped from the Frenchmen's school, whose influence may nevertheless be traced even today; but still no one can justly deny the existence of a German culture, even if it is yet comparatively young and in a state of growth. Nor will anyone who has a sense for the agreement between German music and German philosophy, an ear for the harmony between German music and German

¹ "The Birth of Tragedy," p. 150 ff. (English edition.)

lyrical poetry, an eye for the merits and defects of German painting and sculpture, which are the outcome of the same fundamental tendency that is revealed in the whole intellectual and emotional life of Germany, be disposed in advance to deny Germany a homogeneous culture. More precarious will be the state of such smaller countries whose dependence on foreign nations has not unfrequently been a dependence raised to the second power.

To Nietzsche, however, this point is of relatively small importance. He is convinced that the last hour of national cultures is at hand, since the time cannot be far off when it will only be a question of a European or European-American culture. He argues from the fact that the most highly developed people in every country already feel as Europeans, as fellow-countrymen, nay, as confederates, and from the belief that the twentieth century must bring with it the war for the dominion of the world.

When, therefore, from the result of this war a tempestuous wind sweeps over all national vanities, bending and breaking them, what will then be the question?

The question will then be, thinks Nietzsche, in exact agreement with the most eminent Frenchmen of our day, whether by that time it has been possible to train or rear a sort of caste of pre-eminent spirits who will be able to grasp the central power.

The real misfortune is, therefore, not that a country is still without a genuine, homogeneous and perfected culture, but that it thinks itself cultured. And with his eye upon Germany Nietzsche asks how it has come about that so prodigious a contradiction can exist as that between the lack of true culture and the self-satisfied belief in actually possessing the only true one—and he finds the answer in the circumstance that a class of men has come to the front which no former century has known, and to which (in 1873) he gave the name of "Culture-Philistines."

The Culture-Philistine regards his own impersonal education as the real culture; if he has been told that culture presupposes a homogeneous stamp of mind, he is confirmed in his good opinion of himself, since everywhere he meets with educated people of his own sort, and since schools, universities and academies are adapted to his requirements and fashioned on the model corresponding to his cultivation. Since he finds almost everywhere the same tacit conventions with respect to religion, morality and literature, with respect to marriage, the family, the community and the State, he considers it demonstrated that this imposing homogeneity is culture. It never enters his head that this systematic and well-organized philistinism, which is set up in all high places and installed at every editorial desk, is not by any means made culture just because its organs are in concert. It is not even bad culture, says Nietzsche; it is barbarism fortified to the best of its ability, but entirely lacking the freshness and savage force of original barbarism; and he has many graphic expressions to describe Culture-Philistinism as the morass in which all weariness is stuck fast, and in the poisonous mists of which all endeavour languishes.

All of us are now born into the society of cultured philistinism, in it we all grow up. It confronts us with prevailing opinions, which we unconsciously adopt; and even when opinions are divided, the division is only into party opinions—public opinions.

An aphorism of Nietzsche's reads: "What is public opinion? It is private indolence." The dictum requires qualification. There are cases where public opinion is worth something: John Morley has written a good book on the subject. In the face of certain gross breaches of faith and law, certain monstrous violations of human rights, public opinion may now and then assert itself as a power worthy to be followed. Otherwise it is as a rule a factory working for the benefit of Culture-Philistinism.

On entering life, then, young people meet with various collective opinions, more or less narrow-minded. The more the individual has it in him to become a real personality, the more he will resist following a herd. But even if an inner voice says to him: "Become thyself! By thyself!" he hears its appeal with despondency. Has he a self? He does not know; he is not yet aware of it.

He therefore looks about for a teacher, an educator, one who will teach him, not something foreign, but how to become his own individual self.

We had in Denmark a great man who with impressive force exhorted his contemporaries to become individuals. But Søren Kierkegaard's appeal was not intended to be taken so unconditionally as it sounded. For the goal was fixed. They were to become individuals, not in order to develop into free personalities, but in order by this means to become true Christians. Their freedom was only apparent; above them was suspended a "Thou shalt believe!" and a "Thou shalt obey!" Even as individuals they had a halter round their necks, and on the farther side of the narrow passage of individualism, through which the herd was driven, the herd awaited them again—one flock, one shepherd.

It is not with this idea of immediately resigning his personality again that the young man in our day desires to become himself and seeks an educator. He will not have a dogma set up before him, at which he is expected to arrive. But he has an uneasy feeling that he is packed with dogmas. How is he to find himself in himself. how is he to dig himself out of himself? This is where the educator should help him. An educator can only be a liberator.

It was a liberating educator of this kind that Nietzsche as a young man looked for and found in Schopenhauer. Such a one will be found by every seeker in the personality that has the most liberating effect on him during his period of development. Nietzsche says that as soon as he had read a single page of Schopenhauer, he knew he would read every page of him and pay heed to every word, even to the errors he might find. Every intellectual aspirant will be able to name men whom he has read in this way.

It is true that for Nietzsche, as for any other aspirant, there remained one more step to be taken, that of liberating himself from the liberator. We find in his earliest writings certain favorite expressions of Schopenhauer's which no longer appear in his later works. But the liberation is here a tranquil development to independence, throughout which he retains his deep gratitude; not, as in his relations with Wagner, a violent revulsion which leads him to deny any value to the works he had once regarded as the most valuable of all.

He praises Schopenhauer's lofty honesty, beside which he can only place Montaigne's, his lucidity, his constancy, and the purity of his relations with society, State and State-religion, which are

in such sharp contrast with those of Kant. With Schopenhauer there is never a concession, never a dallying.

And Nietzsche is astounded by the fact that Schopenhauer could endure life in Germany at all. A modern Englishman has said: "Shelley could never have lived in England: a race of Shelleys would have been impossible." Spirits of this kind are early broken, then become melancholy, morbid or insane. The society of the Culture-Philistines makes life a burden to exceptional men. Examples of this occur in plenty in the literature of every country, and the trial is constantly being made. We need only think of the number of talented men who sooner or later make their apologies and concessions to philistinism, so as to be permitted to exist. But even in the strongest the vain and weary struggle with Culture-Philistinism shows itself in lines and wrinkles. Nietzsche quotes the saying of the old diplomatist, who had only casually seen and spoken to Goethe: "*Voilà un homme qui a eu de grands chagrins*," and Goethe's comment, when repeating it to his friends: "If the traces of our sufferings and activities are indelible even in our features, it is no wonder that all that survives of us and our struggles should bear the same marks." And this is Goethe, who is looked upon as the favorite of fortune!

Schopenhauer, as is well known, was until his latest years a solitary man. No one understood him, no one read him. The greater part of the first edition of his work, *Die Welt als Wille und Vorstellung*, had to be sold as waste paper.

In our day Taine's view has widely gained ground, that the great man is entirely determined by the age whose child he is, that he unconsciously sums it up and ought consciously to give it expression.¹ But although, of course, the great man does not stand outside the course of history and must always depend upon predecessors, an idea nevertheless always germinates in a single individual or in a few individuals; and these individuals are not scattered points in the low-lying mass, but highly gifted ones who draw the mass to them instead of being drawn by it. What is called the spirit of the age originates in quite a small number of brains.

Nietzsche who, mainly no doubt through Schopenhauer's influence, had originally been strongly impressed by the dictum that the great man is not the child of his age but its step-child, demands that the educator shall help the young to educate themselves in opposition to the age.

It appears to him that the modern age has produced for imitation three particular types of man, one after the other. First Rousseau's man, the Titan who raises himself, oppressed and bound by the higher castes, and in his need calls upon holy Nature. Then Goethe's man; not Werther or the revolutionary figures related to him, who are still derived from Rousseau, nor the original Faust figure, but Faust as he gradually develops. He is no liberator, but a spectator, of the world. He is not the man of action. Nietzsche reminds us of Jarno's words to Wilhelm Meister: "You are vexed and

¹ The author of these lines has not made himself the advocate of this view, as has sometimes been publicly stated, but on the contrary has opposed it. After some uncertainty I pronounced against it as early as 1870, in "*Den franske Æsthetik i vore Dage*," pp. 105, 106, and afterwards in many other places.

bitter, that is a very good thing. If you could be thoroughly angry for once, it would be better still."

To become thoroughly angry in order to make things better, this, in the view of the Nietzsche of thirty, will be the exhortation of Schopenhauer's man. This man voluntarily takes upon himself the pain of telling the truth. His fundamental idea is this: A life of happiness is impossible; the highest a man can attain to is a heroic life, one in which he fights against the greatest difficulties for something which, in one way or another, will be for the good of all. To what is truly human, only true human beings can raise us; those who seem to have come into being by a leap in Nature; thinkers and educators, artists and creators, and those who influence us more by their nature than by their activity: the noble, the good in a grand style, those in whom the genius of good is at work.

These men are the aim of history.

Nietzsche formulates this proposition: "Humanity must work unceasingly for the production of solitary great men—this and nothing else is its task." This is the same formula at which several aristocratic spirits among his contemporaries have arrived. Thus Renan says, almost in the same words: "In fine, the object of humanity is the production of great men . . . nothing but great men; salvation will come from great men." And we see from Flaubert's letters to George Sand how convinced he was of the same thing. He says, for instance: "The only rational thing is and always will be a government of mandarins, provided that the mandarins can do something, or rather, can do much . . . It matters little whether a greater or smaller number of peasants are able to read instead of listening to their priest, but it is infinitely important that many men like Renan and Littré may live and be heard. Our salvation now lies in a real aristocracy."¹ Both Renan and Flaubert would have subscribed to Nietzsche's fundamental idea that a nation is the roundabout way Nature goes in order to produce a dozen great men.

Yet, although the idea does not lack advocates, this does not make it a dominant thought in European philosophy. In Germany, for instance, Eduard von Hartmann thinks very differently of the aim of history. His published utterances on the subject are well known. In conversation he once hinted how his idea had originated in his mind: "It was clear to me long ago," he said, "that history, or, to use a wider expression, the world process, must have an aim, and that this aim could only be negative. For a golden age is too foolish a figment." Hence his visions of a destruction of the world voluntarily brought about by the most gifted men. And connected with this is his doctrine that humanity has now reached man's estate, that is, has passed the stage of development in which geniuses were necessary.

In the face of all this talk of the world process, the aim of which is annihilation or deliverance—deliverance even of the suffering godhead from existence—Nietzsche takes a very sober and sensible stand with his simple belief that the goal of humanity

¹ Nietzsche: "Thoughts out of Season," II., p. 155 f. (English edition). Renan: "Dialogues et Fragments Philosophiques," p. 103. Flaubert: "Lettres a George Sand," p. 139 ff.

is not to be infinitely deferred, but must be found in the highest examples of humanity itself.

And herewith he has arrived at his final answer to the question, What is culture? For upon this relation depend the fundamental idea of culture and the duties culture imposes. It imposes on me the duty of associating myself by my own activity with the great human ideals. Its fundamental idea is this: it assigns to every individual who wishes to work for it and participate in it, the task of striving to produce, within and without himself, the thinker and artist, the lover of truth and beauty, the pure and good personality, and thereby striving for the perfection of Nature, towards the goal of a perfected Nature.

When does a state of culture prevail? When the men of a community are steadily working for the production of single great men. From this highest aim all the others follow. And what state is farthest removed from a state of culture? That in which men energetically and with united forces resist the appearance of great men, partly by preventing the cultivation of the soil required for the growth of genius, partly by obstinately opposing everything in the shape of genius that appears amongst them. Such a state is more remote from culture than that of sheer barbarism.

But does such a state exist? perhaps some one will ask. Most of the smaller nations will be able to read the answer in the history of their native land. It will there be seen, in proportion as "refinement" grows, that the refined atmosphere is diffused, which is unfavorable to genius. And this is all the more serious, since many people think that in modern times and in the races which now share the dominion of the world among them, a political community of only a few millions is seldom sufficiently numerous to produce minds of the very first order. It looks as if geniuses could only be distilled from some thirty or forty millions of people. Norway with Ibsen, Belgium with Maeterlinck and Verhaeren are exceptions. All the more reason is there for the smaller communities to work at culture to their utmost capacity.

In recent times we have become familiar with the thought that the goal to be aimed at is happiness, the happiness of all, or at any rate of the greatest number. Wherein happiness consists is less frequently discussed, and yet it is impossible to avoid the question, whether a year, a day, an hour in Paradise does not bring more happiness than a lifetime in the chimney-corner. But be that as it may: owing to our familiarity with the notion of making sacrifices for a whole country, a multitude of people, it appears unreasonable that a man should exist for the sake of a few other men, that it should be his duty to devote his life to them in order thereby to promote culture. But nevertheless the answer to the question of culture—how the individual human life may acquire its highest value and its greatest significance—must be: By being lived for the benefit of the rarest and most valuable examples of the human race. This will also be the way in which the individual can best impart a value to the life of the greatest number.

In our day a so-called cultural institution means an organization in virtue of which the "cultured" advance in serried ranks and thrust aside all solitary and obstinate men whose efforts are directed to higher ends; therefore even the learned are as a rule lacking in any sense for budding genius and any feeling for the

value of struggling contemporary genius. Therefore, in spite of the indisputable and restless progress in all technical and specialized departments, the conditions necessary to the appearance of great men are so far from having improved, that dislike of genius has rather increased than diminished.

From the State the exceptional individual cannot expect much. He is seldom benefited by being taken into its service; the only certain advantage it can give him is complete independence. Only real culture will prevent his being too early tired out or used up, and will spare him the exhausting struggle against Culture-Philistinism.

Nietzsche's value lies in his being one of these vehicles of culture: a mind which, itself independent, diffuses independence and may become to others a liberating force, such as Schopenhauer was to Nietzsche himself in his younger days.

2

Four of Nietzsche's early works bear the collective title, **Thoughts out of Season** (*Unzeitgemasse Betrachtungen*), a title which is significant of his early-formed determination to go against the stream.

One of the fields in which he opposed the spirit of the age in Germany is that of education, since he condemns in the most uncompromising fashion the entire historical system of education of which Germany is proud, and which as a rule is everywhere regarded as desirable.

His view is that what keeps the race from breathing freely and willing boldly is that it drags far too much of its past about with it, like a round-shot chained to a convict's leg. He thinks it is historical education that fetters the race both in enjoyment and in action, since he who cannot concentrate himself on the moment and live entirely in it, can neither feel happiness himself nor do anything to make others happy. Without the power of feeling unhistorically, there is no happiness. And in the same way, forgetfulness, or, rather, non-knowledge of the past is essential to all action. Forgetfulness, the unhistorical, is as it were the enveloping air, the atmosphere, in which alone life can come into being. In order to understand it, let us imagine a youth who is seized with a passion for a woman, or a man who is swayed by a passion for his work. In both cases what lies behind them has ceased to exist—and yet this state (the most unhistorical that can be imagined) is that in which every action, every great deed is conceived and accomplished. Now answering to this, says Nietzsche, there exists a certain degree of historical knowledge which is destructive of a man's energy and fatal to the productive powers of a nation.

In this reasoning we can hear the voice of the learned German philologist, whose observations have mostly been drawn from German scholars and artists. For it would be unreasonable to suppose that the commercial or peasant class, the soldiers or manufacturers of Germany suffered from an excess of historical culture. But even in the case of German savants, authors and artists the evil

here pointed out may be of such a nature as not to admit of remedy by simply abolishing historical education. Those men whose productive impulse has been checked or killed by historical studies were already so impotent and ineffective that the world would not have been enriched by their productions. And moreover, what paralyses is not so much the heterogeneous mass of dead historical learning (about the actions of governments, political chess-moves, military achievements, artistic styles, etc.), as the knowledge of certain great minds of the past, by the side of whose production anything that can be shown by a man now living appears so insignificant as to make it a matter of indifference whether his work sees the light or not. Goethe alone is enough to reduce a young German poet to despair. But a hero-worshipper like Nietzsche cannot consistently desire to curtail our knowledge of the greatest.

The want of artistic courage and intellectual boldness has certainly deeper-lying causes; above all, the disintegration of the individuality which the modern order of society involves. Strong men can carry a heavy load of history without becoming incapacitated for living.

But what is interesting and significant of Nietzsche's whole intellectual standpoint is his inquiry as to how far life is able to make use of history. History, in his view, belongs to him who is fighting a great fight, and who needs examples, teachers and comforters, but cannot find them among his contemporaries. Without history the mountain chain of great men's great moments, which runs through milleniums, could not stand clearly and vividly before me. When one sees that it only took about a hundred men to bring in the culture of the Renaissance, it may easily be supposed, for example, that a hundred productive minds, trained in a new style, would be enough to make an end of Culture-Philistinism. On the other hand, history may have pernicious effects in the hands of unproductive men. Thus young artists are driven into galleries instead of out into nature, and are sent, with minds still unformed, to centres of art, where they lose courage. And in all its forms history may render men unfit for life; in its **monumental** form by evoking the illusion that there are such things as fixed, recurring historical conjunctions, so that what has once been possible is now, in entirely altered conditions, possible again; in its **antiquarian** form by awakening a feeling of piety for ancient, bygone things, which paralyses the man of action, who must always outrage some piety or other; finally in its **critical** form by giving rise to the depressing feeling that the very errors of the past, which we are striving to overcome, are inherited in our blood and impressed on our childhood, so that we live in a continual inner conflict between an old and a new nature.

On this point, as on others already alluded to, Nietzsche's quarrel is ultimately with the broken-winded education of the present day. That **education** and **historical education** have in our time almost become synonymous terms, is to him a mournful sign. It has been irretrievably forgotten that culture ought to be what it was with the Greeks: a motive, a prompting to resolution; nowadays culture is commonly described as inwardness, because it is a dead internal lump, which does not stir its possessor. The most "educated" people are walking encyclopedias. When they act, they

do so in virtue of a universally approved, miserable convention, or else from simple barbarism.

With this reflection, no doubt of general application, is connected a complaint which was bound to be evoked by modern literary Germany in particular; the complaint of the oppressive effect of the greatness of former times, as shown in the latter-day man's conviction that he is a late-comer, an after-birth of a greater age, who may indeed teach himself history, but can never produce it.

Even philosophy, Nietzsche complains, with a side-glance at the German universities, has been more and more transformed into the history of philosophy, a teaching of what everybody has thought about everything; "a sort of harmless gossip between academic grey-beards and academic sucklings." It is boasted as a point of honor that freedom of thought exists in various countries. In reality it is only a poor sort of freedom. One may think in a hundred ways, but one may only act in one way—and that is the way that is called "culture" and is in reality "only a form, and what is more a bad form, a uniform."

Nietzsche attacks the view which regards the historically cultured person as the justest of all. We honor the historian who aims at pure knowledge, from which nothing follows. But there are many trivial truths, and it is a misfortune that whole battalions of inquirers should fling themselves upon them, even if these narrow minds belong to honest men. The historian is looked upon as objective when he measures the past by the popular opinions of his own time, as subjective when he does not take these opinions for models. That man is thought best fitted to depict a period of the past, who is not in the least affected by that period. But only he who has a share in building up the future can grasp what the past has been, and only when transformed into a work of art can history arouse or even sustain instincts.

As historical education is now conducted, the mass of impressions communicated is so great as to produce numbness, a feeling of being born old of an old stock—although less than thirty human lives, reckoned at seventy years each, divide us from the beginning of our era. And with this is connected the immense superstition of the value and significance of universal history. Schiller's phrase is everlastingly repeated: "The history of the world is the tribunal of the world," as though there could be any other historical tribunal than thought; and the Hegelian view of history as the ever-clearer self-revelation of the godhead has obstinately held its own, only that it has gradually passed into sheer admiration of success, an approval of any and every fact, be it never so brutal. But greatness has nothing to do with results or with success. Demosthenes, who spoke in vain, is greater than Philip, who was always victorious. Everything in our day is thought to be in order, if only it be an accomplished fact; even when a man of genius dies in the fulness of his powers, proofs are forthcoming that he died at the right time. And the fragment of history we possess is entitled "the world process"; men cudgel their brains, like Eduard von Hartmann, in trying to find out its origin and final goal—which seems to be a waste of time. Why you exist, says Nietzsche with Søren Kierkegaard, nobody in the world can tell you in advance; but since you

do exist, try to give your existence a meaning by setting up for yourself as lofty and noble a goal as you can.

Significant of Nietzsche aristocratic tendency, so marked later, is his anger with the deference paid by modern historians to the masses. Formerly, he argues, history was written from the standpoint of the rulers; it was occupied exclusively with them, however mediocre or bad they might be. Now it has crossed over to the standpoint of the masses. But the masses—they are only to be regarded as one of three things: either as copies of great personalities, bad copies, clumsily produced in a poor material, or as foils to the great, or finally as their tools. Otherwise they are matter for statisticians to deal with, who find so-called historical laws in the instincts of the masses—aping, laziness, hunger and sexual impulse. What has set the mass in motion for any length of time is then called great. It is given the name of a historical power. When, for example, the vulgar mob has appropriated or adapted to its needs some religious idea, has defended it stubbornly and dragged it along for centuries, then the originator of that idea is called great. There is the testimony of thousands of years for it, we are told. But—this is Nietzsche's and Kierkegaard's idea—the noblest and highest does not affect the masses at all, either at the moment or later. Therefore the historical success of a religion, its toughness and persistence, witness against its founder's greatness rather than for it.

When an instance is required of one of the few enterprises in history that have been completely successful, the Reformation is commonly chosen. Against the significance of this success Nietzsche does not urge the facts usually quoted: its early secularization by Luther; his compromises with those in power; the interest of princes in emancipating themselves from the mastery of the Church and laying hands on its estates, while at the same time securing a submissive and dependent clergy instead of one independent of the State. He sees the chief cause of the success of the Reformation in the uncultured state of the nations of northern Europe. Many attempts at founding new Greek religions came to naught in antiquity. Although men like Pythagoras, Plato, perhaps Empedocles, had qualifications as founders of religions, the individuals they had to deal with were far too diversified in their nature to be helped by a common doctrine of faith and hope. In contrast with this, the success of Luther's Reformation in the North was an indication that northern culture was behind that of southern Europe. The people either blindly obeyed a watchword from above, like a flock of sheep; or, where conversion was a matter of conscience, it revealed how little individuality there was among a population which was found to be so homogeneous in its spiritual needs. In the same way, too, the original conversion of pagan antiquity was only successful on account of the abundant intermixture of barbarian with Roman blood which had taken place. The new doctrine was forced upon the masters of the world by barbarians and slaves.

The reader now has examples of the arguments Nietzsche employs in support of his proposition that history is not so sound and strengthening an educational factor as is thought: only he who has learnt to know life and is equipped for action has use for history and is capable of applying it; others are oppressed by it and

rendered unproductive by being made to feel themselves late-comers, or are induced to worship success in every field.

Nietzsche's contribution to this question is a plea against every sort of historical optimism; but he energetically repudiates the ordinary pessimism, which is the result of degenerate or enfeebled instincts—of decadence. He preaches with youthful enthusiasm the triumph of a tragic culture, introduced by an intrepid rising generation, in which the spirit of ancient Greece might be born again. He rejects the pessimism of Schopenhauer, for he already abhors all renunciation; but he seeks a pessimism of healthiness, one derived from strength, from exuberant power, and he believes he has found it in the Greeks. He has developed this view in the learned and profound work of his youth, *The Birth of Tragedy, or Hellenism and Pessimism*, in which he introduced two new terms, *Appollonian* and *Dionipian*. The two Greek deities of art, Appolo and Dionysus, denote the antithesis between plastic art and music. The former corresponds to dreaming, the latter to drunkenness. In dreams the forms of the gods first appeared to men; dreams are the world of beauteous appearance. If, on the other hand, we look down into man's lowest depths, below the spheres of thought and imagination, we come upon a world of terror and rapture, the realm of Dionysus. Above reign beauty, measure and proportion; but underneath the profusion of Nature surges freely in pleasure and pain. Regarded from Nietzsche's later standpoint, the deeper motive of this searching absorption in Hellenic antiquity becomes apparent. Even at this early stage he suspects, in what passes for morality, a disparaging principle directed against Nature; he looks for its essential antithesis, and finds it in the purely artistic principle, farthest removed from Christianity, which he calls Dionysian.

Our author's main psychological features are now clearly apparent. What kind of a nature is it that carries this savage hatred of philistinism even as far as to David Strauss? An artist's nature, obviously. What kind of a writer is it who warns us with such firm conviction against the dangers of historical culture? A philologist obviously, who has experienced them in himself, has felt himself threatened with becoming a mere aftermath and tempted to worship historical success. What kind of a nature is it that so passionately defines culture as the worship of genius? Certainly no Eckermann-nature, but an enthusiast, willing at the outset to obey where he cannot command, but quick to recognize his own masterful bias, and to see that humanity is far from having outgrown the ancient antithetical relation of commanding and obeying. The appearance of Napoleon is to him, as to many others, a proof of this; in the joy that thrilled thousands, when at last they saw one who knew how to command.

But in the sphere of ethics he is not disposed to preach obedience. On the contrary, constituted as he is, he sees the apathy and meanness of our modern morality in the fact that it still upholds obedience as the highest moral commandment, instead of the power of dictating to one's self one's own morality.

His military schooling and participation in the war of 1870-71 probably led to his discovery of a hard and manly quality in himself, and imbued him with an extreme abhorrence of all softness and effeminacy. He turned aside with disgust from the morality of pity

in Schopenhauer's philosophy and from the romantic-catholic element in Wagner's music, to both of which he had previously paid homage. He saw that he had transformed both masters according to his own needs, and he understood quite well the instinct of self-preservation that was here at work. The aspiring mind creates the helpers it requires. Thus he afterwards dedicated his book, **Human, all-too-Human**, which was published on Voltaire's centenary, to the "free spirits" among his contemporaries; his dreams created the associates that he had not yet found in the flesh.

The severe and painful illness which began in his thirty-second year and long made him a recluse, detached him from all romanticism and freed his heart from all bonds of piety. It carried him far away from pessimism, in virtue of his proud thought that "a sufferer has no right to pessimism." This illness made a philosopher of him in a strict sense. His thoughts stole inquisitively along forbidden paths: This thing passes for a value. Can we not turn it upside-down? This is regarded as good. Is it not rather evil—Is not God refuted? But can we say as much of the devil?—Are we not deceived? and deceived deceivers, all of us? . . .

And then out of this long sickliness arises a passionate desire for health, the joy of the convalescent in life, in light, in warmth, in freedom and ease of mind, in the range and horizon of thought, in "visions of new dawns," in creative capacity, in poetical strength. And he enters upon the lofty self-confidence and ecstasy of a long uninterrupted production.

3

It is neither possible nor necessary to review here the long series of his writings. In calling attention to an author who is still unread, one need only throw his most characteristic thoughts and expressions into relief, so that the reader with little trouble may form an idea of his way of thinking and quality of mind. The task is here rendered difficult by Nietzsche's thinking in aphorisms, and facilitated by his habit of emphasizing every thought in such a way as to give it a startling appearance.

English utilitarianism has met with little acceptance in Germany; among more eminent contemporary thinkers Eugen Dühring is its chief advocate; Friedrich Paulsen also sides with the Englishmen. Eduard von Hartmann has attempted to demonstrate the impossibility of simultaneously promoting culture and happiness. Nietzsche finds new difficulties in an analysis of the concept of happiness. The object of utilitarianism is to procure humanity as much pleasure and as little of the reverse as possible. But what if pleasure and pain are so intertwined that he who wants all the pleasure he can get must take a corresponding amount of suffering into the bargain? Clarchen's song contains the words: "**Himmelhoch, jauchzend, zum Tode betrübt.**" Who knows whether the latter is not the condition of the former? The Stoics believed this, and, wishing to avoid pain, asked of life the minimum of pleasure. Probably it is equally unwise in our day to promise men intense joys, if they are to be insured against great sufferings,

We see that Nietzsche transfers the question to the highest spiritual plane, without regard to the fact that the lowest and commonest misfortunes, such as hunger, physical exhaustion, excessive and unhealthy labour, yield no compensation in violent joys. Even if all pleasure be dearly bought it does not follow that all pain is interrupted and counterbalanced by intense enjoyment.

In accordance with his aristocratic bias he then attacks Bentham's proposition: the greatest possible happiness of the greatest possible number. The ideal was, of course, to procure happiness for everybody; as this could not be done, the formula took the above shape. But why happiness for the greatest number? We might imagine it for the best, the noblest, the most gifted; and we may be permitted to ask whether moderate prosperity and moderate well-being are preferable to the inequality of lot which acts as a goad, forcing culture ever upward.

Then there is the doctrine of unselfishness. To be moral is to be unselfish. It is good to be so, we are told. But what does that mean—good? Good for whom? Not for the self-sacrificer, but for his neighbor. He who praises the virtue of unselfishness, praises something that is good for the community but harmful to the individual. And the neighbor who wants to be loved unselfishly is not himself unselfish. The fundamental contradiction in this morality is that it demands and commends a renunciation of the ego, for the benefit of another ego.

At the outset the essential and invaluable element of all morality is, in Nietzsche's view, simply this, that it is a prolonged constraint. As language gains in strength and freedom by the constraint of verse, and as all the freedom and delicacy to be found in plastic art, music and dancing is the result of arbitrary laws, so also does human nature only attain its development under constraint. No violence is thereby done to Nature; this is the very nature of things.

The essential point is that there should be obedience, for a long time and in the same direction. Thou shalt obey, some one or something, and for a long time—otherwise thou wilt come to grief; this seems to be the moral imperative of Nature, which is certainly neither categorical (as Kant thought), nor addressed to the individual (Nature does not trouble about the individual), but seems to be addressed to nations, classes, periods, races—in fact, to mankind. On the other hand, all the morality that is addressed to the individual for his own good, for the sake of his own welfare, is reduced in this view to mere household remedies and counsels of prudence, recipes for curbing passions that might want to break out; and all this morality is preposterous in form, because it addresses itself to all and generalizes what does not admit of generalization. Kant gave us a guiding rule with his categorical imperative. But this rule has failed us. It is of no use saying to us: Act as others ought to act in this case. For we know that there are not and cannot be such things as identical actions, but that every action is unique in its nature, so that any precept can only apply to the rough outside of actions.

But what of the voice and judgment of conscience? The difficulty is that we have a conscience behind our conscience, an intellectual one behind the moral. We can tell that the judgment of So-and-So's conscience has a past history in his instincts, his origi-

nal sympathies or antipathies, his experience or want of experience. We can see quite well that our opinions of what is noble and good, our moral valuations, are powerful levers where action is concerned; but we must begin by refining these opinions and independently creating for ourselves new tables of values.

And as regards the ethical teachers' preaching of morality for all, this is every bit as empty as the gossip of individual society people about each other's morals. Nietzsche gives the moralists this good advice: that, instead of trying to educate the human race, they should imitate the pedagogues of the seventeenth and eighteenth centuries, who concentrated their efforts on the education of a single person. But as a rule the moral ranters are themselves quite uneducated persons, and their children seldom rise above moral mediocrity.

He who feels that in his inmost being he cannot be compared with others, will be his own lawgiver. For one thing is needful: to give style to one's character. This art is practised by him who, with an eye for the strong and weak sides of his nature, removes from it one quality and another, and then by daily practice and acquired habit replaces them by others which become second nature to him; in other words, he puts himself under restraint in order by degrees to bend his nature entirely to his own law. Only thus does a man arrive at satisfaction with himself, and only thus does he become endurable to others. For the dissatisfied and the unsuccessful as a rule avenge themselves on others. They absorb poison from everything, from their own incompetence as well as from their poor circumstances, and they live in a constant craving for revenge on those in whose nature they suspect harmony. Such people ever have virtuous precepts on their lips; the whole jingle of morality, seriousness, chastity, the claims of life; and their hearts ever burn with envy of those who have become well balanced and can therefore enjoy life.

For millenniums morality meant obedience to custom, respect for inherited usage. The free, exceptional man was immoral, because he broke with the tradition which the others regarded with superstitious fear. Very commonly he took the same view and was himself seized by the terror he inspired. Thus a popular morality of custom was unconsciously elaborated by all who belonged to the tribe; since fresh examples and proofs could always be found of the alleged relation between guilt and punishment—if you behave in such and such a way, it will go badly with you. Now, as it generally does go badly, the allegation was constantly confirmed; and thus popular morality a pseudo-science on a level with popular medicine, continually gained ground.

Manners and customs represented the experiences of bygone generations concerning what was supposed to be useful or harmful; the sense of morality, however, does not attach to these experiences as such, but only to their age, their venerability and consequent incontestability. In the state of war in which a tribe existed in old times, threatened on every side, there was no greater gratification, under the sway of the strictest morality of custom, than cruelty. Cruelty is one of the oldest festal and triumphal joys of mankind. It was thought that the gods, too, might be gratified and festively disposed by offering them the sight of cruelties—and thus the

idea insinuated itself into the world that voluntary self-torture, mortification and abstinence are also of great value, not as discipline, but as a sweet savour unto the Lord.

Christianity as a religion of the past unceasingly practiced and preached the torture of souls. Imagine the state of the medieval Christian, when he supposed he could no longer escape eternal torment. Eros and Aphrodite were in his imagination powers of hell, and death was a terror.

To the morality of cruelty has succeeded that of pity. The morality of pity is lauded as unselfish, by Schopenhauer in particular.

Eduard von Hartmann, in his thoughtful work, *Phanomenologie des sittlichen Bewusstseins* (pp. 217-240), has already shown the impossibility of regarding pity as the most important of moral incentives, to say nothing of its being the only one, as Schopenhauer would have it. Nietzsche attacks the morality of pity from other points of view. He shows it to be by no means unselfish. Another's misfortune affects us painfully and offends us—perhaps brands us as cowards if we do not go to his aid. Or it contains a hint of a possible danger to ourselves; moreover, we feel joy in comparing our own state with that of the unfortunate, joy when we can step in as the stronger, the helper. The help we afford gives us a feeling of happiness, or perhaps it merely rescues us from boredom.

Pity in the form of actual fellow-suffering would be a weakness, nay, a misfortune, since it would add to the world's suffering. A man who seriously abandoned himself to sympathy with all the misery he found about him, would simply be destroyed by it.

Among savages the thought of arousing pity is regarded with horror. Those who do so are despised. According to savage notions, to feel pity for a person is to despise him; but they find no pleasure in seeing a contemptible person suffer. On the other hand, the sight of an enemy's suffering, when his pride does not forsake him in the midst of his torment—that is enjoyment, that excites admiration.

The morality of pity is often preached in the formula, love thy neighbor.

Nietzsche in the interests of his attack seizes upon the word **neighbor**. Not only does he demand, with Kierkegaard, a setting-aside of morality for the sake of the end in view, but he is exasperated that the true nature of morality should be held to consist in a consideration of the immediate results of our actions, to which we are to conform. To what is narrow and pettifogging in this morality he opposes another, which looks beyond these immediate results and aspires, even by means that cause our neighbor pain, to more distant objects; such as the advancement of knowledge, although this will lead to sorrow and doubt and evil passions in our neighbor. We need not on this account be without pity, but we may hold our pity captive for the sake of the object.

And as it is now unreasonable to term pity unselfish and seek to consecrate it, it is equally so to hand over a series of actions to the evil conscience, merely because they have been maligned as egotistical. What has happened in recent times in this connection is that the instinct of self-denial and self-sacrifice, everything altruistic, has been glorified as if it were the supreme value of morality.

The English moralists, who at present dominate Europe, explain the origin of ethics in the following way: Unselfish actions were originally called **good** by those who were their objects and who benefited by them; afterwards this original reason for praising them was forgotten, and unselfish actions came to be regarded as good in themselves.

According to a statement of Nietzsche himself it was a work by a German author with English leanings, Dr. Paul Ree's **Der Ursprung der moralischen Empfindungen** (Chemnitz, 1877), which provoked him to such passionate and detailed opposition that he had to thank this book for the impulse to clear up and develop his own ideas on the subject.

The surprising part of it, however, is this: Dissatisfaction with his first book caused Ree to write a second and far more important work on the same subject—**Die Entstehung des Gewissens** (Berlin, 1885)—in which the point of view offensive to Nietzsche is abandoned and several of the leading ideas advanced by the latter against Ree are set forth, supported by a mass of evidence taken from various authors and races of men.

The two philosophers were personally acquainted. I knew them both, but had no opportunity of questioning either on this matter. It is therefore impossible for me to say which of the two influenced the other, or why Nietzsche in 1887 alludes to his detestation of the opinions put forward by Ree in 1877, without mentioning how near the latter had come to his own view in the work published two years previously.

Ree had already adduced a number of examples to show that the most diverse peoples of antiquity knew no other moral classification of men than that of nobles and common people, powerful and weak; so that the oldest meaning of **good** both in Greece and Iceland was noble, mighty, rich.

Nietzsche builds his whole theory on this foundation. His train of thought is this—

The critical word **good** is not due to those to whom goodness has been shown. The oldest definition was this: the noble, the mightier, higher-placed and high-minded held themselves and their actions to be **good**—of the first rank—in contradistinction to everything low and low-minded. Noble, in the sense of the class-consciousness of a higher caste, is the primary concept from which develops **good** in the sense of 'spiritually aristocratic. The lowly are designated as **bad** (not evil). Bad does not acquire its unqualified depreciatory meaning till much later. In the mouth of the people it is a laudatory word; the German word **schlecht** is identical with **schlicht** (cf. **schlechtweg** and **schlechterdings**).

The ruling caste call themselves sometimes simply the Mighty, sometimes the Truthful; like the Greek nobility, whose mouthpiece Theognis was. With him beautiful, good and noble always have the sense of aristocratic. The aristocratic moral valuation proceeds from a triumphant affirmation, a yea-saying, which we find in the Homeric heroes: We, the noble, beautiful and brave—we are the good, the beloved of the gods. These are strong men, charged with force, who delight in warlike deeds, to whom, in other words, happiness is activity.

It is of course unavoidable that these nobles should misjudge

and despise the plebian herd they dominate. Yet as a rule there may be traced in them a pity for the downtrodden caste, for the drudge and beast of burden, an indulgence towards those to whom happiness is rest, the Sabbath of inactivity.

Among the lower orders, on the other hand, an image of the ruling caste distorted by hatred and spite is necessarily current. In this distortion there lies a revenge.¹

In opposition to the aristocratic valuation (good=noble, beautiful, happy, favored by the gods) the slave morality then is this: The wretched alone are the **good**; those who suffer and are heavy laden, the sick and the ugly; they are the only pious ones. On the other hand, you, ye noble and rich, are to all eternity the **evil**, the cruel, the insatiate, the ungodly, and after death the damned. Whereas noble morality was the manifestation of great self-esteem, a continual yea-saying, slave morality is a continual Nay, a **Thou shalt not**, a negation.

To the noble valuation **good—bad** (bad=worthless) corresponds the antithesis of slave morality, **good—evil**. And who are the evil in this morality of the oppressed? Precisely the same who in the other morality were the good.

Let any one read the Icelandic sagas and examine the morality of the ancient Northmen, and then compare with it the complaints of other nations about the vikings' misdeeds. It will be seen that these aristocrats, whose conduct in many ways stood high; were no better than beasts of prey in dealing with their enemies. They fell upon the inhabitants of Christian shores like eagles upon lambs. One may say they followed an eagle ideal. But then we cannot wonder that those who were exposed to such fearful attacks gathered round an entirely opposite moral ideal, that of the lamb.

In the third chapter of his **Utilitarianism**, Stuart Mill attempts to prove that the sense of justice has developed from the animal instinct of making reprisal for an injury or a loss. In an essay on "the transcendental satisfaction of the feeling of revenge" (supplement to the first edition of the **Werth des Lebens**) Eugen Dühring has followed him in trying to establish the whole doctrine of punishment upon the instinct of retaliation. In his **Phänomenologie** Eduard von Hartmann shows how this instinct strictly speaking never does more than involve a new suffering, a new offence, to gain external satisfaction for the old one, so that the principle of requital can never be any distinct principle.

Nietzsche makes a violent, passionate attempt to refer the sum total of false modern morality, not to the instinct of requital or to the feeling of revenge in general, but to the narrower form of it which we call spite, envy and **rancune**. What he calls slave morality is to him purely spite-morality; and this spite-morality gave new names to all ideals. Thus impotence, which offers no reprisal, became goodness; craven baseness became humility; submission to him who was feared became obedience; inability to assert one's self became reluctance to assert one's self, became forgiveness, love of one's enemies. Misery became a distinction; God chastens whom he loves. Or it became a preparation, a trial and a training; even

¹ Nietzsche supports his hypothesis by derivations, some doubtful, others incorrect; but their value is immaterial.

more—something that will one day be made good with interest, paid back in bliss. And the vilest underground creatures, swollen with hate and spite, were heard to say: We, the good, we are the righteous. They did not hate their enemies—they hated injustice, ungodliness. What they hoped for was not the sweets of revenge, but the victory of righteousness. Those they had left to love on earth were their brothers and sisters in hatred, whom they called their brothers and sisters in love. The future state they looked for was called the coming of their kingdom, of God's kingdom. Until it arrives they live on in faith, hope and love.

If Nietzsche's design in this picture was to strike at historical Christianity, he has given us—as any one may see—a caricature in the spirit and style of the eighteenth century. But that his description hits off a certain type of the apostles of spite-morality cannot be denied, and rarely has all the self-deception that may lurk beneath moral preaching been more vigorously unmasked. (Compare *Beyond Good and Evil* and *The Genealogy of Morals*.)¹

4

Nietzsche would define man as an animal that can make and keep promises.

He sees the real nobility of man in his capacity for promising something, answering for himself and undertaking a responsibility—since man, with the mastery of himself which this capacity implies, necessarily acquires in addition a mastery over external circumstances and over other creatures, whose will is not so lasting.

The consciousness of this responsibility is what the sovereign man calls his conscience.

What, then, is the past history of this responsibility, this conscience? It is a long and bloody one. Frightful means have been used in the course of history to train men to remember what they have once promised or willed, tacitly or explicitly. For milleniums man was confined in the strait-jacket of the morality of custom, and by such punishments as stoning, breaking on the wheel or burning, by burying the sinner alive, tearing him asunder with horses, throwing him into the water with a stone on his neck or in a sack, by scourging, flaying and branding—by all these means a long memory for what he had promised was burnt into that forgetful animal, man; in return for which he was permitted to enjoy the advantages of being a member of society.

According to Nietzsche's hypothesis, the consciousness of guilt originates simply as consciousness of a debt. The relation of contract between creditor and debtor, which is as old as the earliest primitive forms of human intercourse in buying, selling, bartering, etc.—this is the relation that underlies it. The debtor (in order to inspire confidence in his promise of repayment) pledges something he possesses: his liberty, his woman, his life; or he gives his credi-

¹ Where Nietzsche's words are quoted, in the course of this essay, considerable use has been made of the complete English translation of his works, edited by Dr. Oscar Levy.—Tr.

tor the right of cutting a larger or smaller piece of flesh from his body, according to the amount of the debt. (The Roman Code of the Twelve Tables; again in *The Merchant of Venice*.)

The logic of this, which has become somewhat strange to us, is as follows: as compensation for his loss the creditor is granted a kind of voluptuous sensation, the delight of being able to exercise his power upon the powerless.

The reader may find violence in Ree (*op. cit.*, p. 13 ff.) for Nietzsche's dictum, that for milleniums this was the view of mankind: The sight of suffering does one good.

The infliction of suffering on another is a feast at which the fortunate one swells with the joy of power. We may also find evidence in Ree that the instincts of pity, fairness and clemency, which were afterwards glorified as virtues, were originally regarded almost everywhere as morally worthless, nay, as indications of weakness.

Buying and selling, as well as everything psychologically connected therewith and older than any form of social organization, contain the germs, in Nietzsche's view, of compensation, assessing, justice and duty. Man soon became proud of himself as a being who measures values. One of the earliest generalizations was this: Everything has its price. And the thought that everything can be paid for was the oldest and most naive canon of justice.

Now the whole of society, as it gradually develops, stands in the same relation to its members as the creditor to the debtor. Society protects its members; they are assured against the state of outlawry—on condition that they do not break their pledges to the community. He who breaks his word—the criminal—is relegated to the outlawry involved in exclusion from society.

As Nietzsche, who is so exclusively taken up by the psychological aspect, discards all accessories of scholarship, it is impossible to examine directly the accuracy of his assertions. The historical data will be found collected in Ree's paragraphs on resentment and the sense of justice, and in his section on the buying-off of revenge, i.e., settlement by fines.

Other thinkers besides Nietzsche (such as E. von Hartmann and Ree) have combated the view that the idea of justice has its origin in a state of resentment, and Nietzsche has scarcely brought to light any fresh and convincing proof; but what is characteristic of him as a writer is the excess of personal passion with which he attacks this view, obviously because it is connected with the reasoning of modern democracy.

In many a modern cry for justice there rings a note of plebian spite and envy. Involuntarily many a modern savant of middle-class or lower middle-class origin has attributed an unwarrantable importance to the atavistic emotions prevalent among those who have been long oppressed: hatred and rancour, spite and thirst for revenge.

Nietzsche does not occupy himself for an instant with the state of things in which revenge does duty as the sole punitive justice; for the death feud is not a manifestation of the thrall's hatred of his master, but of ideas of honor among equals. He dwells exclusively on the contrast between a ruling caste and a caste of slaves, and shows a constantly recurring indignation with doctrines which have

caused the progressive among his contemporaries to look with indulgence on the instincts of the populace and with suspicion or hostility on master spirits. His purely personal characteristic, however, the unphilosophical and temperamental in him, is revealed in the trait that, while he has nothing but scorn and contempt for the down-trodden class or race, for the **slave morality** resulting from its suppressed rancour, he positively revels in the ruling caste's delight in its power, in the atmosphere of healthiness, freedom, frankness and truthfulness in which it lives. Its acts of tyranny he defends or excuses. The image it creates for itself of the slave caste is to him far less falsified than that which the latter forms of the master caste.

Nor can there be serious question of any real injustice committed by this caste. For there is no such thing as right or wrong in itself. The infliction of an injury, forcible subjection, exploitation or annihilation is not in itself a wrong, cannot be such, since life in its essence, in its primary functions, is nothing but oppression, exploitation and annihilation. Conditions of justice can never be anything but exceptional conditions, that is, as limitations of the real desire of life, the object of which is power.

Nietzsche replaces Schopenhauer's **Will to Life** and Darwin's **Struggle for Existence** by the **Will to Power**. In his view the fight is not for life—bare existence—but for power. And he has a great deal to say—somewhat beside the mark—of the mean and paltry conditions those Englishmen must have had in view who set up the modest conception of the struggle for life. It appears to him as if they had imagined a world in which everybody is glad if he can only keep body and soul together. But life is only an expression for the minimum. In itself life seeks, not self-preservation alone, but self-increase, and this is precisely the "will to power." It is therefore obvious that there is no difference of principle between the new catchword and the old; for the struggle for existence necessarily leads to the conflict of forces and the fight for power. Now a system of justice, seen from this standpoint, is a factor in the conflict of forces. Conceived as supreme, as a remedy for every kind of struggle, it would be a principle hostile to life and destructive of the future and progress of humanity.

Something similar was in the mind of Lassalle, when he declared that the standpoint of justice was a bad standpoint in the life of nations. What is significant of Nietzsche is his love of fighting for its own sake, in contrast to the modern humanitarian view. To Nietzsche the greatness of a movement is to be measured by the sacrifices it demands. The hygiene which keeps alive millions of weak and useless beings who ought rather to die, is to him no true progress. A dead level of mediocre happiness assured to the largest possible majority of the miserable creatures we nowadays call men, would be to him no true progress. But to him, as to Renan, the rearing of a human species higher and stronger than that which now surrounds us (the "Superman"), even if this could only be achieved by the sacrifice of masses of such men as we know, would be a great, a real progress. Nietzsche's visions put forth in all seriousness, of the training of the Superman and his assumption of the mastery of the world, bear so strong a resemblance to Renan's dreams, thrown out half in jest, of a new Asgard, a regular manu-

factory of *Æsir* (*Dialogues philosophiques*, 117), that we can scarcely doubt the latter's influence. But what Renan wrote under the overwhelming impression of the Paris Commune, and, moreover, in the form of dialogue, allowing both **pro** and **con.** to be heard, has crystallized in Nietzsche into dogmatic conviction. One is therefore surprised and hurt to find that Nietzsche never mentions Renan otherwise than grudgingly. He scarcely alludes to the aristocratic quality of his intellect, but he speaks with repugnance of that respect for the gospel of the humble which Renan everywhere discloses, and which is undeniably at variance with his hope of the foundation of a breeding establishment for supermen.

Renan, and after him Taine, turned against the almost religious feelings which were long entertained in the new Europe towards the first French Revolution. Renan regretted the Revolution betimes on national grounds; Taine, who began by speaking warmly of it, changed his mind on closer inquiry. Nietzsche follows in their footsteps. It is natural for modern authors, who feel themselves to be the children of the Revolution, to sympathize with the men of the great revolt; and certainly the latter do not receive their due in the present anti-revolutionary state of feeling in Europe. But these authors, in their dread of what in political jargon is called Cæsarism, and in their superstitious belief in mass movements, have overlooked the fact that the greatest revolutionaries and liberators are not the united small, but the few great; not the small ungenerous, but the great and generous, who are willing to bestow justice and well-being and intellectual growth upon the rest.

There are two classes of revolutionary spirits: those who feel instinctively drawn to Brutus, and those who equally instinctively are attracted by Cæsar. Cæsar is the great type; neither Frederick the Great nor Napoleon could claim more than a part of his qualities. The modern poetry of the 'forties teems with songs in praise of Brutus, but no poet has sung Cæsar. Even a poet with so little love for democracy as Shakespeare totally failed to recognize his greatness; he gave us a pale caricature of his figure and followed Plutarch in glorifying Brutus at his expense. Even Shakespeare could not see that Cæsar placed a very different stake on the table of life from that of his paltry murderer. Cæsar was descended from Venus; in his form was grace. His mind had the grand simplicity which is the mark of the greatest; his nature was nobility. He, from whom even today all supreme power takes its name, had every attribute that belongs to a commander and ruler of the highest rank. Only a few men of the Italian Renaissance have reached such a height of genius. His life was a guarantee of all the progress that could be accomplished in those days. Brutus's nature was doctrine, his distinguishing mark the narrowness that seeks to bring back dead conditions and that sees omens of a call in the accident of a name. His style was dry and laborious, his mind unfertile. His vice was avarice, usury his delight. To him the provinces were conquests beyond the pale. He had five senators of Salamis starved to death because the town could not pay. And on account of a dagger-thrust, which accomplished nothing and hindered nothing of what it was meant to hinder, this arid brain has been made a sort of genius of liberty, merely because men have

failed to understand what it meant to have the strongest, richest and noblest nature invested with supreme power.

From what has been said above it will easily be understood that Nietzsche derives justice entirely from the active emotions, since in his view revengeful feelings are always low. He does not dwell on this point, however. Older writers had seen in the instinct of retaliation the origin of punishment. Stuart Mill, in his **Utilitarianism**, derived justice from already established punitive provisions (**justum** from **jussum**), which were precautionary measures, not reprisals. Ree, in his book on the **Origin of Conscience**, defended the kindred proposition that punishment is not a consequence of the sense of justice, but **vice versa**. The English philosophers in general derive the bad conscience from punishment. The value of the latter is supposed to consist in awakening a sense of guilt in the delinquent.

Against this Nietzsche enters a protest. He maintains that punishment only hardens and benumbs a man; in fact, that the judicial procedure itself prevents the criminal from regarding his conduct as reprehensible; since he is made to witness precisely the same kind of acts as those he has committed—spying, entrapping, outwitting and torturing—all of which are sanctioned when exercised against him in the cause of justice. For long ages, too, no notice whatever was taken of the criminal's "sin"; he was regarded as harmful, not guilty, and looked upon as a piece of destiny; and the criminal on his side took his punishment as a piece of destiny which had overtaken him, and bore it with the same fatalism with which the Russians suffer to this day. In general we may say that punishment tames the man, but does not make him "better."

The bad conscience, then, is still unexplained. Nietzsche proposes the following brilliant hypothesis: The bad conscience is the deep-seated morbid condition that declared itself in man under the stress of the most radical change he has ever experienced—when he found himself imprisoned in perpetuity within a society which was inviolable. All the strong and savage instincts such as adventurousness, rashness, cunning, rapacity, lust of power, which till then had not only been honored, but actually encouraged, were suddenly put down as dangerous, and by degrees branded as immoral and criminal. Creatures adapted to a roving life of war and adventure suddenly saw all their instincts classed as worthless, nay, as forbidden. An immense despondency, a dejection without parallel, then took possession of them. And all these instincts that were not allowed an outward vent, turned inwards on the man himself—feelings of enmity, cruelty, delight in change, in hazard, violence, persecution, destruction—and thus the bad conscience originated.

When the State came into existence—not by a social contract, as Rousseau and his contemporaries assumed—but by a frightful tyranny imposed by a conquering race upon a more numerous, but unorganized population, then all the latter's instinct of freedom turned inwards; its active force and will to power were directed against man himself. And this was the soil which bore such ideals of beauty as self-denial, self-sacrifice, unselfishness. The delight in self-sacrifice is in its origin a phase of cruelty; the bad conscience is a will for self-abuse.

Then by degrees guilt came to be felt as a debt, to the past,

to the ancestors; a debt that had to be paid back in sacrifices—at first of nourishment in its crudest sense—in marks of honor and in obedience; for all customs, as the work of ancestors, are at the same time their commands.¹ There is a constant dread of not giving them enough; the firstborn, human and animal, are sacrificed to them. Fear of the founder grows in proportion as the power of the race increases. Sometimes he becomes transformed into a god, in which the origin of the god from fear is clearly seen.

The feeling of owing a debt to the deity steadily grew through the centuries, until the recognition of the Christian deity as universal god brought about the greatest possible outburst of guilty feeling. Only in our day is any noticeable diminution of this sense of guilt to be traced; but where the consciousness of sin reaches its culminating point, there the bad conscience eats its way like a cancer, till the sense of the impossibility of paying the debt—atoning for the sin—is supreme and with it is combined the idea of eternal punishment. A curse is now imagined to have been laid upon the founder of the race (Adam), and all sin becomes original sin. Indeed, the evil principle is attributed to Nature herself from whose womb man has sprung—until we arrive at the paradoxical expedient in which tormented Christendom has found a temporary consolation for two thousand years: God offers himself for the guilt of mankind, pays himself in his own flesh and blood.

What has here happened is that the instinct of cruelty, which has turned inwards, has become self-torture, and all man's animal instincts have been reinterpreted as guilt towards God. Every Nay man utters to his nature, to his real being, he flings out as a Yea, an affirmation of reality applied to God's sanctity, his capacity of judge and executioner, and in the next place to eternity, the "Beyond," pain without end, eternal punishment in hell.

In order rightly to understand the origin of ascetic ideals, we must, moreover, consider that the earliest generations of spiritual and contemplative natures lived under a fearful pressure of contempt on the part of the hunters and warriors. The unwarlike element in them was despicable. They had no other means of holding their own than that of inspiring fear. This they could only do by cruelty to themselves, mortification and self-discipline in a hermit's life. As priests, soothsayers and sorcerers they then struck superstitious terror into the masses. The ascetic priest is the unsightly larva from which the healthy philosopher has emerged. Under the dominion of the priests our earth became the ascetic planet; a squalid den careering through space, peopled by discontented and arrogant creatures, who were disgusted with life, abhorred their globe as a vale of tears, and who in their envy and hatred of beauty and joy did themselves as much harm as possible.

Nevertheless the self-contradiction we find in asceticism—life turned **against** life—is of course only apparent. In reality the ascetic ideal corresponds to a decadent life's profound need of healing and tending. It is an ideal that points to depression and exhaustion; by its help life struggles against death. It is life's device for self-preservation. Its necessary antecedent is a morbid con-

¹ Compare Lassalle's theory of the original religion of Rome. G. Brandes "Ferdinand Lassalle" (London and New York, 1911), pp. 76 ff.

dition in the tamed human being, a disgust with life, coupled with the desire to be something else, to be somewhere else, raised to the highest pitch of emotion and passion.

The ascetic priest is the embodiment of this very wish. By its power he keeps the whole herd of dejected, faint-hearted, despairing and unsuccessful creatures fast to life. The very fact that he himself is sick makes him their born herdsman. If he were healthy, he would turn away with loathing from all this eagerness to re-label weakness, envy, pharisaism, and false morality as virtue. But, being himself sick, he is called upon to be an attendant in the great hospital of sinners—the Church. He is constantly occupied with sufferers who seek the cause of their pain outside themselves; he teaches the patient that the guilty cause of his pain is himself. Thus he diverts the rancour of the abortive man and makes him less harmful, by letting a great part of his resentment recoil on himself. The ascetic priest cannot properly be called a physician; he mitigates suffering and invents consolations of every kind, both narcotics and stimulants.

The problem was to contend with fatigue and despair, which had seized like an epidemic upon great masses of men. Many remedies were tried. First, it was sought to depress vitality to the lowest degree: not to will, not to desire, not to work, and so on; to become apathetic (Pascal's *Il faut s'abêtir*). The object was sanctification, a hypnotizing of all mental life, a relaxation of every purpose, and consequently freedom from pain. In the next place, mechanical activity was employed as a narcotic against states of depression: the "blessing of labour." The ascetic priest, who has to deal chiefly with sufferers of the poorer classes, reinterprets the task of the unfortunate drudge for him, making him see in it a benefit. Then again, the prescription of a little, easily accessible joy, is a favorite remedy for depression; such as gladdening others, helping them in love of one's neighbor. Finally, the decisive cure is to organize all the sick into an immense hospital, to found a congregation of them. The disinclination that accompanies the sense of weakness is thereby combated, since the mass feels strong in its inner cohesion.

But the chief remedy of the ascetic priest was, after all, his reinterpretation of the feeling of guilt as "sin." The inner suffering was a punishment. The sick man was the sinner. Nietzsche compares the unfortunate who receives this explanation of his qualms with a hen round which a chalk circle has been drawn: he cannot get out. Wherever we look, for century after century, we see the hypnotic gaze of the sinner, staring—in spite of Job—at guilt as the only cause of suffering. Everywhere the evil conscience and the scourge and the hairy shirt and weeping and gnashing of teeth, and the cry of "More pain! More pain!" Everything served the ascetic ideal. And then arose epidemics like those of St. Vitus's dance and the flagellants, witches' hysteria and the wholesale delirium of extravagant sects (which still lingers in otherwise beneficially disciplined bodies such as the Salvation Army).

The ascetic ideal has as yet no real assailants; there is no decided prophet of a new ideal. Inasmuch as since the time of Copernicus science has constantly tended to deprive man of his earlier belief in his own importance, its influence is rather favorable to asceticism than otherwise. At present the only real enemies and

underminers of the ascetic ideal are to be found in the charlatans of that ideal, in its hypocritical champions, who excite and maintain distrust of it.

As the senselessness of suffering was felt to be a curse, the ascetic ideal gave it a meaning; a meaning which brought a new flood of suffering with it, but which was better than none. In our day a new ideal is in process of formation, which sees in suffering a condition of life, a condition of happiness, and which in the name of a new culture combats all that we have hitherto called culture.

5

Among Nietzsche's works there is a strange book which bears the title, **Thus Spake Zarathustra**. It consists of four parts, written during the years 1883-85, each part in about ten days, and conceived chapter by chapter on long walks—"with a feeling of inspiration, as though each sentence had been shouted in my ear," as Nietzsche wrote in a private letter.

The central figure and something of the form are borrowed from the Persian **Avesta**. Zarathustra is the mystical founder of a religion whom we usually call Zoroaster. His religion is the religion of purity; his wisdom is cheerful and dauntless, as that of one who laughed at his birth; his nature is light and flame. The eagle and the serpent, who share his mountain cave, the proudest and the wisest of beasts, are ancient Persian symbols.

This work contains Nietzsche's doctrine in the form, so to speak, of religion. It is the Koran, or rather the **Avesta**, which he was impelled to leave—obscure and profound, high-soaring and remote from reality, prophetic and intoxicated with the future, filled to the brim with the personality of its author, who again is entirely filled with himself.

Among modern books that have adopted this tone and employed this symbolic and allegorical style may be mentioned Mickiewicz's **Book of the Polish Pilgrims**, Slowacki's **Anheli**, and **The Words of a Believer**, by Lamennais, who was influenced by Mickiewicz. A newer work, known to Nietzsche, is Carl Spitteler's **Prometheus and Epimetheus** (1881). But all these books, with the exception of Spitteler's, are biblical in their language. **Zarathustra**, on the other hand, is a book of edification for free spirits.

Nietzsche himself gave this book the highest place among his writings. I do not share this view. The imaginative power which sustains it is not sufficiently inventive, and a certain monotony is inseparable from an archaistic presentment by means of types.

But it is a good book for those to have recourse to who are unable to master Nietzsche's purely speculative works; it contains all his fundamental ideas in the form of poetic recital. Its merit is a style that from the first word to the last is full-toned, sonorous and powerful; now and then rather unctuous in its combative judgments and condemnations; always expressive of self-joy, nay, self-intoxication, but rich in subtleties as in audacities, sure, and at

times great. Behind this style lies a mood as of calm mountain air, so light, so ethereally pure, that no infection, no bacteria can live in it—no noise, no stench, no dust assails it, nor does any path lead up.

Clear sky above, open sea at the mountain's foot, and over all a heaven of light, an abyss of light, an azure bell, a vaulted silence above roaring waters and mighty mountain-chains. On the heights Zarathustra is alone with himself, drawing in the pure air in full, deep breaths, alone with the rising sun, alone with the heat of noon, which does not impair the freshness, alone with the voices of the gleaming stars at night.

A good, deep book it is. A book that is bright in its joy of life, dark in its riddles, a book for spiritual mountain-climbers and dare-devils and for the few who are practiced in the great contempt of man that loathes the crowd, and in the great love of man that only loathes so deeply because it has a vision of a higher, braver humanity, which it seeks to rear and train.

Zarathustra has sought the refuge of his cave out of disgust with petty happiness and petty virtues. He has seen that men's doctrine of virtue and contentment makes them ever smaller: their goodness is in the main a wish that no one may do them any harm; therefore they forestall the others by doing them a little good. This is cowardice and is called virtue. True, they are at the same time quite ready to attack and injure, but only those who are once for all at their mercy and with whom it is safe to take liberties. This is called bravery and is a still baser cowardice. But when Zarathustra tries to drive out the cowardly devils in men, the cry is raised against him, "Zarathustra is godless."

He is lonely, for all his former companions have become apostates; their young hearts have grown old, and not old even, only weary and slothful, only commonplace—and this they call becoming pious again. "Around light and liberty they once fluttered like gnats and young poets, and already are they mystifiers, and mumblers and mollycoddles." They have understood their age. They chose their time well. "For now do all night-birds again fly abroad. Now is the hour of all that dread the light."

Zarathustra loathes the great city as a hell for anchorites' thoughts. "All lusts and vices are here at home; but here are also the virtuous, much appointable and appointed virtue. Much appointable virtue with scribe-fingers and hardy sitting-flesh and waiting-flesh, blessed with little breast-stars and padded, haunchless daughters. Here is also much piety and much devout spittle-licking and honey-slaverling before the God of hosts. For 'from on high' drip-peth the star and the gracious spittle; and upward longeth every starless bosom."

And Zarathustra loathes the State, loathes it as Henrik Ibsen did and more profoundly than he.

To him the State is the coldest of all cold monsters. Its fundamental lie is that it is the people. No; creative spirits were they who created the people and gave it a faith and a love; thus they served life; every people is peculiar to itself, but the State is everywhere the same. The State is to Zarathustra that "where the slow suicide of all is called life." The State is for the many too many. Only where the State leaves off does the man who is not superfluous begin; the man who is a bridge to the Superman.

From 'states Zarathustra has fled up to his mountain, into his cave.

In forbearance and pity lay his greatest danger. Rich in the little lies of pity he dwelt among men.

"Stung from head to foot by poisonous flies and hollowed out like a stone by many drops of malice, thus did I sit among them, saying to myself: Innocent is everything petty of its pettiness. Especially they who call themselves the good, they sting in all innocence, they lie in all innocence; how could they be just towards me?

"He who dwelleth among the good, him teacheth pity to lie. Pity breedeth bad air for all free souls. For the stupidity of the good is unfathomable.

"Their stiff wise men did I call wise, not stiff. Their grave-diggers did I call searchers and testers—thus did I learn to confound speech. The grave-diggers dig for themselves diseases. From old refuse arise evil exhalations. Upon the mountains one should live."

And with blessed nostrils he breathes again the freedom of the mountains. His nose is now released from the smell of all that is human. There sits Zarathustra with old broken tables of the law around him and new half-written tables, awaiting his hour; the hour when the lion shall come with the flock of doves, strength in company with gentleness, to do homage to him. And he holds out to men a new table, upon which such maxims as these are written—

Spare not thy neighbor! My great love for the remotest ones commands it. Thy neighbor is something that must be surpassed.

Say not: I will do unto others as I would they should do unto me. What **thou** doest, that can no man do to thee again. There is no requital.

Do not believe that thou mayst not rob. A right which thou canst seize upon, shalt thou never allow to be given thee.

Beware of good men. They never speak the truth. For all that they call evil—the daring venture, the prolonged distrust, the cruel Nay, the deep disgust with men, the will and the power to cut into the quick—all this must be present where a truth is to be born.

All the past is at man's mercy. But, this being so, it might happen that the rabble became master and drowned all time in its shallow waters, or that a tyrant usurped it all. Therefore we need a new nobility, to be the adversary of all rabble and all tyranny, and to inscribe on new tables the word "noble." Certainly not a nobility that can be bought, nor a nobility whose virtue is love of country. No, teaches Zarathustra, exiles shall ye be from your fatherlands and forefatherlands. Not the land of your fathers shall ye love, but your children's land. This love is the new nobility—love of that new land, the undiscovered, far-off country in the remotest sea. To your children shall ye make amends for the misfortune of being your fathers' children. Thus shall ye redeem all the past.

Zarathustra is full of lenity. Others have said: Thou shalt not commit adultery. Zarathustra teaches: The honest should say to each other, "Let us see whether our love continue; let us fix a term, that we may find out whether we desire a longer term." What cannot be bent, will be broken. A woman said to Zarathustra, "Indeed, I broke the marriage, but first did the marriage break me."

Zarathustra is without mercy. It has been said: Push not a leaning wagon. But Zarathustra says: That which is ready to fall, shall ye also push. All that belongs to our day is falling and decaying. No one can preserve it, but Zarathustra will even help it to fall faster.

Zarathustra loves the brave. But not the bravery that takes up every challenge. There is often more bravery in holding back and passing by and reserving one's self for a worthier foe. Zarathustra does not teach: Ye shall love your enemies, but: Ye shall not engage in combat with enemies ye despise.

Why so hard? men cry to Zarathustra. He replies: Why so hard, once said the charcoal to the diamond; are we not near of kin? The creators are hard. Their blessedness it is to press their hand upon future centuries as upon wax.

No doctrine revolts Zarathustra more than that of the vanity and senselessness of life. This is in his eyes ancient babbling, old wives' babbling. And the pessimists who sum up life with a balance of aversion, and assert the badness of existence, are the objects of his positive loathing. He prefers pain to annihilation.

The same extravagant love of life is expressed in the **Hymn to Life**, written by his friend, Lou von Salome, which Nietzsche set for chorus and orchestra. We read here—

“So truly loves a friend his friend
As I love thee, O Life in myst'ry hidden!
If joy or grief to me thou send;
If loud I laugh or else to weep am bidden,
Yet love I thee with all thy changeful faces;
And should'st thou doom me to depart,
So would I tear myself from thy embraces,
As comrade from a comrade's heart.”

And the poem concludes—

“And if thou hast now left no bliss to crown me,
Lead on! thou hast thy sorrow still!”¹

When Achilles chose to be a day-laborer on earth rather than a king in the realm of the shades, the expression was a weak one in comparison with this passionate outburst, which paradoxically thirsts even for the cup of pain.

Eduard von Hartmann believes in a beginning and end of the “world process.” He concludes that no eternity can lie behind us; otherwise everything possible must already have happened, which—according to his contention—is not the case. In sharp contrast to him, on this point as on others, Zarathustra teaches, with, be it said, a somewhat shallow mysticism—which is derived from the ancient Pythagoreans' idea of the circular course of history and is

¹ Translated by Herman Scheffauer. Text and pianoforte score are given in Vol. XVII (Ecce Homo) of the English edition of Nietzsche's works.

influenced by Cohelet's Hebrew philosophy of life—the eternal recurrence; that is to say, that all things eternally return and we ourselves with them, that we have already existed an infinite number of times and all things with us. The great clock of the universe is to him an hour-glass, which is constantly turned and runs out again and again. This is the direct antithesis of Hartmann's doctrine of universal destruction, and curiously enough it was put forward at about the same time by two French thinkers: by Blanqui in *L'Eternite par les Astres* (1871), and by Gustave Le Bon in *L'Homme et les Societes* (1881).

At his death Zarathustra will say: Now I disappear and die; in a moment I shall be nothing, for the soul is mortal as the body; but the complex of causes in which I am involved will return, and it will continually reproduce me.

At the close of the third part of *Zarathustra* there is a chapter headed "The Second Dance Song." Dance, in Nietzsche's language, is always an expression for the lofty lightness of mind, which is exalted above the gravity of earth and above all stupid seriousness. This song, extremely remarkable in its language, is a good specimen of the style of the work, when it soars into its highest flights of poetry. Life appears to Zarathustra as a woman; she strikes her castanets and he dances with her, flinging out all his wrath with life and all his love of life.

"Lately looked I into thine eyes, O Life! Gold saw I gleaming in thy night-eye—my heart stood still with the joy of it.

"A golden skiff saw I gleaming upon shadowy waters, a sinking, drinking, reblinking, golden swinging-skill.

"At my foot, dancing-mad, didst thou cast a glance, a laughing, questioning, melting, swinging-glance.

"Twice only did thy little hands strike the castanets—then was my foot swinging in the madness of the dance.

.

"I fear thee near, I love thee far; thy flight allureth me, thy seeking secureth me; I suffer, but for thee, what would I not gladly bear!

"For thee, whose coldness inflameth, whose hatred misleadeth, whose flight enchaineth, whose mockery pleadeth!

"Who would not hate thee, thou great bindress, inwindress, temptress, seekress, findress! Who would not love thee, thou innocent, impatient, wind-swift, child-eyed sinner!"

In this dialogue between the dancers, Life and her lover, these words occur: O Zarathustra, thou art far from loving me as dearly as thou sayest; thou art not faithful enough to me. There is an old, heavy booming-clock; it boometh by night up to thy cave. When thou hearest this clock at midnight, then dost thou think until noon that soon thou wilt forsake me.

And then follows, in conclusion, the song of the old midnight clock. But in the fourth part of the work, in the section called "The Sleepwalker's Song," this short strophe is interpreted line by line; in form half like a mediæval watchman's chant, half like the hymn of a mystic, it contains the mysterious spirit of Nietzsche's esoteric doctrine concentrated in the shortest formula—

Midnight is drawing on, and as mysteriously, as terribly, and as cordially as the midnight bell speaketh to Zarathustra, so calleth he to the higher men: At midnight many a thing is heard which may not be heard by day; and the midnight speaketh: **O man, take heed!**

Whither hath time gone? Have I not sunk into deep wells? The world sleepeth. And suddering it asketh: Who is to be master of the world? **What saith the deep midnight?**

The bell boometh, the wood-worm burroweth, the heart-worm gnaweth: **Ah! the world is deep.**

But the old bell is like a sonorous instrument; all pain hath bitten into its heart, the pain of fathers and forefathers; and all joy hath set it swinging, the joy of fathers and forefathers—there riseth from the bell an odor of eternity, a rosy-blessed, golden-wine perfume of old happiness, and this song: The world is deep, **and deeper than the day had thought.**

I am too pure for the rude hands of the day. The purest shall be masters of the world, the unacknowledged, the strongest, the midnight-souls, who are brighter and deeper than any day. **Deep is its woe.**

But joy goeth deeper than heart's grief. For grief saith: Break my heart! Fly away, my pain! **Woe saith: Begone!**

But, ye higher men, said ye ever Yea to a single joy, then said ye also Yea unto all woe. For joy and woe are linked, enamored, inseparable. And all beginneth again, all is eternal. **All joys desire eternity, deep, deep, eternity.**

This, then, is the midnight song—

“Oh Mensch! Gieb Acht!
Was spricht die tiefe Mitternacht?
‘Ich schlief, ich schlief—
Aus tiefem Traum bin ich erwacht:—
Die Welt ist tief,
Und tiefer als der Tag gedacht.
Tief ist ihr Weh—
Lust—tiefer noch als Herzeleid:
Weh spricht: Vergeh!
Doch alle Lust will Ewigkeit—
—will tiefe, tiefe Ewigkeit!’”

6

Such is he, then, this warlike mystic, poet and thinker, this immoralist who is never tired of preaching. Coming to him fresh from the English philosophers, one feels transported to another world. The Englishmen are all patient spirits, whose natural bent is towards the accumulation and investigation of a mass of small facts in order thereby to discover a law. The best of them are Aristotelian minds. Few of them fascinate us personally or seem to be of very complex personality. Their influence lies more in what they do than in what they are. Nietzsche, on the other hand, like Schopenhauer, is a guesser, a seer, an artist, less interesting in what he does than in what he is.

Little as he feels himself a German, he nevertheless continues the metaphysical and intuitive tradition of German philosophy and has the German thinker's profound dislike of any utilitarian point of view. In his passionate aphoristical form he is unquestionably original; in the substance of his thought he reminds one here and there of many another writer, both of contemporary Germany and of France; but he evidently regards it as perfectly absurd that he should have to think a contemporary for anything, and storms like a German at all those who resemble him in any point.

I have already mentioned how strongly he reminds one of Ernest Renan in his conception of culture and in his hope of an aristocracy of intellect that could seize the dominion of the world. Nevertheless he has not one appreciative word to say for Renan.

I have also alluded to the fact that Eduard von Hartmann was his predecessor in his fight against Schopenhauer's morality of pity. In this author, whose talent is indisputable, even though his importance may not correspond with his extraordinary reputation, Nietzsche, with the uncritical injustice of a German university professor, would only see a charlatan. Hartmann's nature is of heavier stuff than Nietzsche's. He is ponderous, self-complacent, fundamentally Teutonic, and, in contrast to Nietzsche, entirely unaffected by French spirit and southern sunshine. But there are points of resemblance between them, which are due to historical conditions in the Germany that reared them both.

In the first place, there was something analogous in their positions in life; since both as artillerymen had gone through a similar schooling; and in the second place, in their culture, inasmuch as the starting-point of both is Schopenhauer and both nevertheless retain a great respect for Hegel, thus uniting these two hostile brothers in their veneration. They are further in agreement in their equally estranged attitude to Christian piety and Christian morality, as well as in their contempt, so characteristic of modern Germany, for every kind of democracy.

Nietzsche resembles Hartmann in his attacks on socialists and anarchists, with the difference that Hartmann's attitude is here more that of the savant, while Nietzsche has the bad taste to delight in talking about "anarchist dogs," expressing in the same breath his own loathing of the State. Nietzsche further resembles Hart-

mann in his repeated demonstration of the impossibility of the ideals of equality and of peace, since life is nothing but inequality and war: "What is good? To be brave is good. I do not say, the good cause sanctifies war, but the good war sanctifies every cause." Like his predecessor, he dwells on the necessity of the struggle for power and on the supposed value of war to culture.

In both these authors, comparatively independent as they are, the one a mystical natural philosopher, the other a mystical immoralist, is reflected the all-dominating militarism of the new German Empire. Hartmann approaches on many points the German snobbish national feeling. Nietzsche is opposed to it on principle, as he is to the statesman "who has piled up for the Germans a new tower of Babel, a monster in extent of territory and power and for that reason called great," but something of Bismarck's spirit broods nevertheless over the works of both. As regards the question of war, the only difference between them is that Nietzsche does not desire war for the sake of a fantastic redemption of the world, but in order that manliness may not become extinct.

In his contempt for woman and his abuse of her efforts for emancipation Nietzsche again agrees with Hartmann, though only in so far as both here recall Schopenhauer, whose echo Hartmann is here only a moralizing doctrinaire with a somewhat offensive dash of pedantry, one can trace beneath Nietzsche's attacks on the female sex that subtle sense of woman's dangerousness which points to painful experience. He does not seem to have known many women, but those he did know, he evidently loved and hated, but above all despised. Again and again he returns to the unfitness of the free and great spirit for marriage. In many of these utterances there is a strongly personal note, especially in those which persistently assert the necessity of a solitary life for a thinker. But as regards the less personal arguments about woman, old-world Germany here speaks through the mouth of Nietzsche, as through that of Hartmann; the Germany whose women, in contrast to those of France and England, have for centuries been relegated to the domestic and strictly private life. We may recognize in these German writers generally that they have an eye for the profound antagonism and perpetual war between the sexes, which Stuart Mill neither saw nor understood. But the injustice to man and the rather tame fairness to woman, in which Mill's admirable emancipatory attempt occasionally results, is nevertheless greatly to be preferred to Nietzsche's brutal unfairness, which asserts that in our treatment of women we ought to return to "the vast common sense of old Asia."

Finally, in his conflict with pessimism Nietzsche had Eugen Dühring (especially in his *Werth des Lebens*) as a forerunner, and this circumstance seems to have inspired him with so much ill-will, so much exasperation indeed, that in a polemic now open, now disguised, he calls Dühring his ape. Dühring is a horror to him as a plebeian, as an Antisemite, as the apostle of revenge, and as the disciple of the Englishmen and of Comte; but Nietzsche has not a word to say about Dühring's very remarkable qualities, to which such epithets as these do not apply. But we can easily understand, taking Nietzsche's own destiny into consideration, that Dühring, the blind man, the neglected thinker who despises official scholars, the philosopher who teaches outside the universities, who, in spite

of being so little pampered by life, loudly proclaims his love of life—should appear to Nietzsche as a caricature of himself. This was, however, no reason for his now and then adopting Dühring's abusive tone. And it must be confessed that, much as Nietzsche wished to be what, for that matter, he was—a Polish *szlachcic*, a European man of the world and a cosmopolitan thinker—in one respect he always remained the German professor: in the rude abuse in which his uncontrolled hatred of rivals found vent; and, after all, his only rivals as a modern German philosopher were Hartmann and Dühring.

It is strange that this man, who learned such an immense amount from French moralists and psychologists like La Rochefoucauld, Chamfort, and Stendhal, was able to acquire so little of the self-control of their form. He was never subjected to the restraint which the literary tone of France imposes upon every writer as regards the mention and exhibition of his own person. For a long time he seems to have striven to discover himself and to become completely himself. In order to find himself he crept into his solitude, as Zarathustra into his cave. By the time he had succeeded in arriving at full independent development and felt the rich flow of individual thought within him, he had lost all external standards for measuring his own value; all bridges to the world around him were broken down. The fact that no recognition came from without only aggravated his self-esteem. The first glimmer of recognition further exalted this self-esteem. At last it closed above his head and darkened this rare and commanding intellect.

As he stands disclosed in his incompleted life-work, he is a writer well worth studying.

My principal reason for calling attention to him is that Scandinavian literature appears to me to have been living quite long enough on the ideas that were put forward and discussed in the last decade. It looks as though the power of conceiving great ideas were on the wane, and even as though receptivity for them were fast vanishing; people are still busy with the same doctrines, certain theories of heredity, a little Darwinism, a little emancipation of woman, a little morality of happiness, a little freethought, a little worship of democracy, etc. And as to the culture of our "cultured" people, the level represented approximately by the *Revue des Deux Mondes* threatens to become the high-water mark of taste. It does not seem yet to have dawned on the best among us that the finer, the only true culture begins on the far side of the *Revue des Deux Mondes* in the great personality, rich in ideas.

The intellectual development of Scandinavia has advanced comparatively rapidly in its literature. We have seen great authors rise above all orthodoxy, though they began by being perfectly simple-hearted believers. This is very honorable, but in the case of those who cannot rise higher still, it is nevertheless rather meagre. In the course of the 'seventies it became clear to almost all Scandinavian authors that it would no longer do to go on writing on the basis of the Augsburg Confession. Some quietly dropped it, others opposed it more or less noisily; whilst most of those who abandoned it entrenched themselves against the public, and to some extent against the bad conscience of their own childhood, behind the established

Protestant morality; now and then, indeed, behind a good, everyday soup-stock morality—I call it thus because so many a soup has been served from it.

But be that as it may, attacks on existing prejudices and defence of existing institutions threaten at present to sink into one and the same commonplace familiarity.

Soon, I believe, we shall once more receive a lively impression that art cannot rest content with ideas and ideals for the average mediocrity, any more than with remnants of the old catechisms; but that great art demands intellects that stand on a level with the most individual personalities of contemporary thought, in exceptionality, in independence in defiance and in aristocratic self-supremacy.

II

(December, 1899)

MORE than ten years have gone by since I first called attention to Friedrich Nietzsche. My essay on "Aristocratic Radicalism" was the first study of any length to be devoted, in the whole of Europe, to this man, whose name has since flown round the world and is at this moment one of the most famous among our contemporaries. This thinker, then almost unknown and seldom mentioned, became, a few years later, the fashionable philosopher in every country of Europe, and this while the great man, to whose lot had suddenly fallen the universal fame he had so passionately desired, lived on without a suspicion of it all, a living corpse cut off from the world by incurable insanity.

Beginning with his native land, which so long as he retained his powers never gave him a sign of recognition, his writings have now made their way in every country. Even in France, usually so loth to admit foreign, and especially German, influence, his character and his doctrine have been studied and expounded again and again. In Germany, as well as outside it, a sort of school has been formed, which appeals to his authority and not unfrequently compromises him, or rather itself, a good deal. The opposition to him is conducted sometimes (as by Ludwig Stein) on serious and scientific lines although from narrow pedagogic premises; sometimes (as by Herr Max Nordau) with sorry weapons and with the assumed superiority of presumptuous mediocrity.

Interesting articles and books on Nietzsche have been written by Peter Gast and Lou von Salome in German and by Henri Lichtenberger in French; and in addition Nietzsche's sister, Frau Elizabeth Forster-Nietzsche, has not only published an excellent edition of his collected works (including his youthful sketches), but has written his Life (and published his Correspondence).

My old essay on Nietzsche has thus long ago been outstripped by later works, the writers of which were able to take a knowledge of Nietzsche's work for granted and therefore to examine his writings without at the same time having to acquaint the reader with their contents. That essay, it may be remembered, occasioned an exchange of words between Prof. Hoffding and myself, in the course of which I had the opportunity of expressing my own views more clearly and of showing what points they had in common with Nietzsche's, and where they diverged from his.¹ As, of course, these pole-

¹ See "Tilskueren" (Copenhagen) for August and November-December 1889, January, February-March, April and May 1890.

mical utterances of mine were not translated into foreign languages, no notice was taken of them anywhere abroad.

The first essay itself, on the other hand, which was soon translated, brought me in a number of attacks, which gradually acquired a perfectly stereotyped formula. In an article by a Germanized Swede, who wanted to be specially spiteful, I was praised for having in that essay broken with my past and resolutely renounced the set of liberal opinions and ideas I had hitherto championed. Whatever else I might be blamed for, it had to be acknowledged that twice in my life I had been the spokesman of German ideas, in my youth of Hegel's and in my maturer years of Nietzsche's. In a book by a noisy German charlatan living in Paris, Herr Nordau, it was shortly afterwards asserted that if Danish parents could guess what I was really teaching their children at the University of Copenhagen, they would kill me in the street—a downright incitement to murder, which was all the more comic in its pretext, as admission to my lectures has always been open to everybody, the greater part of these lectures has appeared in print, and, finally, twenty years ago the parents used very frequently to come and hear me. It was repeated in the same quarter that after being a follower of Stuart Mill, I had in that essay turned my back on my past, since I had now appeared as an adherent of Nietzsche. This last statement was afterwards copied in a very childish book by a Viennese lady who, without a notion of the actual facts, writes away, year in, year out, on Scandinavian literature for the benefit of the German public. This nonsense was finally disgorged once more in 1899 by Mr. Alfred Ipsen, who contributed to the London *Athenoeum* surveys of Danish literature, among the virtues of which impartiality did not find a place.

In the face of these constantly repeated assertions from abroad, I may be permitted to make it clear once more—as I have already shown in *Tilskueren* in 1890 (p. 259)—that my principles have not been in the slightest way modified through contact with Nietzsche. When I became acquainted with him I was long past the age at which it is possible to change one's fundamental view of life. Moreover, I maintained many years ago, in reply to my Danish opponents, that my first thought with regard to a philosophical book was by no means to ask whether what it contains is right or wrong: "I go straight through the book to the man behind it. And my first question is this: What is the value of this man, is he interesting, or not? If he is, then his books are undoubtedly worth knowing. Questions of right or wrong are seldom applicable in the highest intellectual spheres, and their answering is not unfrequently of relatively small importance. The first line I wrote about Nietzsche were therefore to the effect that he deserved to be studied and contested. I rejoiced in him, as I rejoice in every powerful and uncommon individuality." And three years later I replied to the attack of a worthy and able Swiss professor, who had branded Nietzsche as a reactionary and a cynic, in these words, amongst others: "No mature reader studies Nietzsche with the latent design of adopting his opinions, still less with that of propagating them. We are not children in search of instruction, but skeptics in search of men, and we rejoice when we have found a man—the rarest thing there is."

It seems to me that this is not exactly the language of an adherent, and that my critics might spare some of their powder and shot as regards my renunciation of ideas. It is a nuisance to be forced now and then to reply in person to all the allegations that are accumulated against one year by year in the European press; but when others never write a sensible word about one, it becomes an obligation at times to stand up for one's self.

My personal connection with Nietzsche began with his sending me his book, **Beyond Good and Evil**. I read it, received a strong impression, though not a clear or decided one, and did nothing further about it—for one reason, because I receive every day far too many books to be able to acknowledge them. But as in the following year **The Genealogy of Morals** was sent me by the author, and as this book was not only much clearer in itself, but also threw new light on the earlier one, I wrote Nietzsche a few lines of thanks, and this led to a correspondence which was interrupted by Nietzsche's attack of insanity thirteen months later.

The letters he sent me in that last year of his conscious life appear to me to be of no little psychological and biographical interest.

Correspondence Between Friedrich Nietzsche and George Brandes

1. Brandes to Nietzsche.

Copenhagen, Nov. 26, 1887.

Dear Sir,

A year ago I received through your publisher your work **Beyond Good and Evil**; the other day your latest book reached me in the same way. Of your other books I have **Human, all-too-Human**. I had just sent the two volumes I possess to the binder, when **The Genealogy of Morals** arrived, so that I have not been able to compare it with the earlier works, as I mean to do. By degrees I shall read everything of yours attentively.

This time, however, I am anxious to express at once my sincere thanks for the book sent. It is an **honor** to me to be known to you, and known in such a way that you should wish to gain me as a reader.

A new and original spirit breathes to me from your books. I do not yet fully understand what I have read; I cannot always see your intention. But I find much that harmonizes with my own ideas and sympathies, the depreciation of the ascetic ideals and the profound disgust with democratic mediocrity, your aristocratic radicalism. Your contempt for the morality of pity is not yet clear to me. There were also in the other work some reflections on women in general which did not agree with my own line of thought. Your nature is so absolutely different from mine

that it is not easy for me to feel at home. In spite of your universality you are very German in your mode of thinking and writing. You are one of the few people with whom I should enjoy to talk.

I know nothing about you. I see with astonishment that you are a professor and doctor. I congratulate you in any case on being intellectually so little of a professor.

I do not know what you have read of mine. My writings only attempt the solution of modest problems. For the most part they are only to be had in Danish. For many years I have not written German. I have my best public in the Slavonic countries, I believe. I have lectured in Warsaw for two years in succession, and this year in Petersburg and Moscow, in French. Thus I endeavor to break through the narrow limits of my native land.

Although no longer young, I am still one of the most inquisitive of men and one of the most eager to learn. You will therefore not find me closed against your ideas, even when I differ from you in thought and feeling. I am often stupid, but never in the least narrow.

Let me have the pleasure of a few lines if you think it worth the trouble.

Yours gratefully,
George Brandes.

2. Nietzsche to Brandes.

Nice, Dec. 2, 1887

My Dear Sir,

A few readers whom one honors and beyond them no readers at all—that is really what I desire. As regards the latter part of this wish, I am bound to say my hope of its realization is growing less and less. All the more happy am I in *satis sunt pauci*, that the *pauci* do not fail and have never failed me. Of the living amongst them I will mention (to name only those whom you are certain to know) my distinguished friend Jakob Burkhardt, Hans von Bulow, H. Taine, and the Swiss poet Keller; of the dead, the old Hegelian Bruno Bauer and Richard Wagner. It gives me sincere pleasure that so good a European and missionary of culture as yourself will in future be numbered amongst them; I thank you with all my heart for this proof of your goodwill.

I am afraid you will find it a difficult position. I myself have no doubt that my writings in one way or another are still "very German." You will, I am sure, feel this all the more remarkedly, being so spoilt by yourself; I mean, by the free and graceful French way in which you handle

the language (a more familiar way than mine). With me a great many words have acquired an incrustation of foreign salts and taste differently on my tongue and on those of my readers. On the scale of my experiences and circumstances the predominance is given to the rarer, remoter, more attenuated tones as against the normal, medial ones. Besides (as an old musician, which is what I really am), I have an ear for quarter-tones. Finally—and this probably does most to make my books obscure—there is in me a distrust of dialectics, even of reasons. What a person already holds “true” or has not yet acknowledged as true, seems to me to depend mainly on his courage, on the relative strength of his courage (I seldom have the courage for what I really know).

The expression **Aristocratic Radicalism**, which you employ, is very good. It is, permit me to say, the cleverest thing I have yet read about yourself.

How far this mode of thought has carried me already, how far it will carry me yet—I am almost afraid to imagine. But there are certain paths which do not allow one to go backward and so I go forward, because I **must**.

That I may not neglect anything on my part that might facilitate your access to my cave—that is, my philosophy—my Leipzig publishers shall send you all my older books **en bloc**. I recommend you especially to read the new prefaces to them (they have nearly all been republished); these prefaces, if read in order, will perhaps throw some light upon me, assuming that I am not obscurity in itself (obscure in myself) as **obscurissimus obscurorum virorum**. For that is quite possible.

Are you a musician? A work of mine for chorus and orchestra is just being published, a “Hymn to Life.” This is intended to represent my music to posterity and one day to be sung “in my memory”; assuming that there is enough left of me for that. You see what posthumous thought I have. But a philosophy like mine is like a grave—it takes one from among the living. **Bene vixit qui bene latuit**—was inscribed on Descartes’ tombstone. What an epitaph, to be sure!

I too hope we may meet some day,

Yours,

Nietzsche.

N. B.—I am staying this winter at Nice. My summer address is Sils-Maria, Upper Engadine, Switzerland—I have resigned my professorship at the University. I am three parts blind.

3. Brandes to Nietzsche.

Copenhagen, Dec. 15, 1887

My Dear Sir,

The last words of your letter are those that have made most impression on me; those in which you tell me that your eyes are seriously affected. Have you consulted good oculists, the best? It alters one's whole psychological life if one cannot see well. You owe it to all who honor you to do everything possible for the preservation and improvement of your sight.

I have put off answering your letter because you announced the sending of a parcel of books, and I wished to thank you for them at the same time. But as the parcel has not yet arrived I will send you a few words today. I have your books back from the binder and have gone into them as deeply as I was able amid the stress of preparing lectures and all kinds of literary and political work.

December 17

I am quite willing to be called a "good European," less so to be called a "missionary of culture." I have a horror of all missionary effort—because I have come across none but **moralizing** missionaries—and I am afraid I do not altogether believe in what is called culture. Our culture as a whole cannot inspire **enthusiasm**, can it? and what would a missionary be without enthusiasm! In other words, I am more isolated than you think. All I meant by being German was that you write more for yourself, think more of yourself in writing, than for the general public; whereas most non-German writers have been obliged to force themselves into a certain discipline of style, which no doubt makes the latter clearer and more plastic, but necessarily deprives it of all profundity and compels the writer to keep to himself his most intimate and best individuality, the anonymous in him. I have thus been horrified at times to see how little of my inmost self is more than hinted at in my writings.

I am no connoisseur in music. The arts of which I have some notion are sculpture and painting; I have to thank them for my deepest artistic impressions. My ear is undeveloped. In my young days this was a great grief to me. I used to play a good deal and worked at thorough-bass for a few years, but nothing came of it. I can enjoy good music keenly, but still am one of the uninitiated.

I think I can trace in your works certain points of agreement with my own taste: your predilection for Beyle,

for instance, and for Taine; but the latter I have not seen for seventeen years. I am not so enthusiastic about his work on the Revolution as you seem to be. He deplores and harangues an earthquake.

I used the expression "aristocratic radicalism" because it so exactly defines my own political convictions. I am a little hurt, however, at the offhand and impetuous pronouncements against such phenomena as socialism and anarchism in your works. The anarchism of Prince Kropotkin, for instance, is no stupidity. The name, of course, is nothing. Your intellect, which is usually so dazzling, seems to me to fall a trifle short where truth is to be found in a nuance. Your views on the origin of the moral ideas interest me in the highest degree.

You share—to my delighted astonishment—a certain repugnance which I feel for Herbert Spencer. With us he passes for the god of philosophy. However, it is a rule a distinct merit with these Englishmen that their not very high-soaring intellect shuns hypotheses, whereas as hypothesis has destroyed the supremacy of German philosophy. Is not there a great deal that is hypothetical in your ideas of caste distinction as the source of various moral concepts?

I know Ree whom you attack, have met him in Berlin; he was a quiet man, rather distinguished in his bearing, but a somewhat dry and limited intellect. He was living—according to his own account, as brother and sister—with a quite young and intelligent Russian lady, who published a year or two ago a book called *Der Kampf um Gott*, but this gives no idea of her genuine gifts.

I am looking forward to receiving the books you promise me. I hope in future you will not lose sight of me.

Yours,

George Brandes

4. Nietzsche to Brandes.

Nice, Jan. 8, 1888

. . . . You should not object to the expression "missionary of culture." What better way is there of being one in our day than that of "missionizing" one's disbelief in culture? To have understood that our European culture is a vast problem and by no means a solution—is not such a degree of introspection and self-conquest nowadays culture itself?

I am surprised my books have not yet reached you. I shall not omit to send a reminder to Leipzig. At Christmas

time Messieurs the publishers are apt to lose their heads. Meanwhile may I be allowed to bring to your notice a daring curiosity over which no publisher has authority, an **ineditum** of mine that is among the most personal things I can show. It is the fourth part of my **Zarathustra**; its proper title, with regard to what precedes and follows it, should be—

Zarathustra's Temptation

An Interlude

Perhaps this is my best answer to your question about my problem of pity. Besides which, there are excellent reasons for gaining admission to "me" by this particular secret door; provided that one crosses the threshold with your eyes and ears. Your essay on Zola reminded me once more, like everything I have met with of yours (the last was an essay in the Goethe Year-book), in the most agreeable way of your natural tendency towards every kind of psychological optics. When working out the most difficult mathematical problems of the **ame moderne** you are as much in your element as a German scholar in such case is apt to be out of his. Or do you perhaps think more favorably of present-day Germans? It seems to me that they become year by year more clumsy and rectangular **in rebus psychologicis** (in direct contrast to the Parisians, with whom everything is becoming **naunce** and mosaic), so that all events below the surface escape their notice. For example, my **Beyond Good and Evil**—what an awkward position it has put them in! Not one intelligent word has reached me about this book, let alone an intelligent sentiment. I do not believe even the most well-disposed of my readers has discovered that he has here to deal with the logical results of a perfectly definite philosophical **sensibility**, and not with a medley of a hundred promiscuous paradoxes and heterodoxies. Nothing of the kind has been "experienced"; my readers do not bring to it a thousandth part of the passion and suffering that is needed. An "immoralist!" This does not suggest anything to them.

By the way, the Goncourts in one of their prefaces claim to have invented the phrase **document humain**. But for all that M. Taine may well be its real originator.

You are right in what you say about "haranguing an earthquake"; but such Quixotism is among the most honorable things on this earth.

With the greatest respect,

Yours,

Nietzsche

5. Brandes to Nietzsche.

Copenhagen, Jan. 11, 1888

My Dear Sir,

Your publisher has apparently forgotten to send me your books, but I have today received your letter with thanks. I take the liberty of sending you herewith one of my books in proof (because unfortunately I have no other copy at hand), a collection of essays intended for export, therefore not my best wares. They date from various times and are all too polite, too laudatory, too idealistic in tone. I never really say all I think in them. The paper on Ibsen is no doubt the best, but the translation of the verses, which I had done for me, is unfortunately wretched.

There is one Scandinavian writer whose works would interest you, if only they were translated: **Soren Kierkegaard**; he lived from 1813 to 1855, and is in my opinion one of the profoundest psychologists that have ever existed. A little book I wrote about him (translated, Leipzig, 1879) gives no adequate idea of his genius, as it is a sort of polemical pamphlet written to counteract his influence. But in a psychological respect it is, I think, the most subtle thing I have published.

The essay in the Goethe Year-book was unfortunately shortened by more than a third, as the space had been reserved for me. It is a good deal better in Danish.

If you happen to read Polish, I will send you a little book that I have published only in that language.

I see the new **Rivista Contemporanea** of Florence has printed a paper of mine on Danish literature. You must not read it. It is full of the most ridiculous mistakes. It is translated from the Russian, I must tell you. I had allowed it to be translated into Russian from my French text, but could not check this translation; now it appears in Italian from the Russian with fresh absurdities; amongst others in the names (on account of the Russian pronunciation), G for H throughout.

I am glad you find in me something serviceable to yourself. For the last four years I have been the most detested man in Scandinavia. Every day the papers rage against me, especially since my last long quarrel with Bjornson, in which the moral German papers all took part against me. I dare say you know his absurd play, **A Gauntlet**, his propaganda for male virginity and his covenant with the spokeswoman of "the demand for equality in morals." Anything like it was certainly unheard of till now. In Sweden these

insane women have formed great leagues in which they vow "only to marry virgin men." I suppose they get a guarantee with them, like watches, only the guarantee for the future is not likely to be forthcoming.

I have read the three books of yours that I know again and again. There are two or three bridges leading from my inner world to yours: Cæsarism, hatred of pedantry, a sense for Beyle, etc., but still most of it is strange to me. Our experiences appear to be so infinitely dissimilar. You are without doubt the most suggestive of all German writers.

Your German literature! I don't know what is the matter with it. I fancy all the brains must go into the General Staff or the administration. The whole life of Germany and all your institutions are spreading the **most hideous uniformity**, and even authorship is stifled by publishing.

Your obliged and respectful,

George Brandes

6. Nietzsche to Brandes.

Nice, Feb. 19, 1888

..... You have laid me under a most agreeable obligation with your contribution to the idea of "Modernity," for it happens that this winter I am circling round this paramount problem of values, very much from above and in the manner of a bird, and with the best intention of looking down upon the modern world with as unmodern an eye as possible. I admire—let me confess it—the tolerance of your judgment, as much as the moderation of your sentences. How you suffer these "little children" to come unto you! Even Heyse!

On my next visit to Germany I propose to take up the psychological problem of Kierkegaard and at the same time to renew acquaintance with your older literature. It will be of use to me in the best sense of the word—and will serve to restore good humor to my own severity and arrogance of judgment.

My publisher telegraphed to me yesterday that the books had gone to you. I will spare you and myself the story of why they were delayed. Now, my dear Sir, may you put a good face on a bad bargain, I mean on this Nietzsche literature.

I myself cherish the notion of having given the "new Germans" the richest, most actual and most independent books of any they possess; also of being in my own person *sche literature*.

a capital event in the crisis of the determination of values. But this may be an error; and, what is more, a piece of foolishness—I do not want to **have** to believe anything [of the sort] about myself.

One or two further remarks: they concern my firstlings (the **Juvenilia** and **Juvenalia**).

The pamphlet against Strauss, the wicked merrymaking of a “very free spirit” at the expense of one who thought himself such, led to a terrific scandal; I was already a **Professor ordinarious** at the time, therefore in spite of my twenty-seven years a kind of authority and something **acknowledged**. The most unbiassed view of this affair, in which almost every “notability” took part for or against me, and in which an insane quantity of paper was covered with printer’s ink, is to be found in Karl Hillebrand’s **Zeiten, Volker und Menschen**, second volume. The trouble was not that I had jeered at the senile bungling of an eminent critic, but that I had caught German taste in **flagranti** in compromising tastelessness; for in spite of all party differences of religion and theology it had unanimously admired Strauss’s **Alten und Neuen Glauben** as a masterpiece of freedom and subtlety of thought (even the style!). My pamphlet was the first onslaught on German culture (that “culture” which they imagined to have gained the victory over France). The word “Culture-Philistine,” which I then invented, has remained in the language as a survival of the raging turmoil of that polemic.

The two papers on Schopenhauer and Richard Wagner appear to me today to contain self-confessions, above all promises to myself, rather than any real psychology of those two masters, who are at the same time profoundly related and profoundly antagonistic to me—(I was the first to distil a sort of unity out of them both; at present this superstition is much to the fore in German culture—that all Wagnerites are followers of Schopenhauer. It was otherwise when I was young. Then it was the last of the Hegelians who adhered to Wagner, and “Wagner and Hegel” was still the watchword of the ’fifties).

Between **Thoughts out of Season** and **Human, all-too-Human** there lies a crisis and a skin-casting. Physically too: I lived for years in extreme proximity to death. This was my great good fortune: I forgot myself, I outlived myself . . . I have performed the same trick once again.

So now we have each presented gifts to the other: two travellers, it seems to me, who are glad to have met.

I remain,

Yours most sincerely,

Nietzsche.

7. Brandes to Nietzsche.

Copenhagen, March 7, 1888

My Dear Sir,

I imagine you to be living in fine spring weather; up here we are buried in abominable snowdrifts and have been cut off from Europe for several days. To make things worse, I have this evening been talking to some hundred imbeciles, and everything looks grey and dreary around me, so to revive my spirits a little I will thank you for your letter of February 19 and your generous present of books.

As I was too busy to write to you at once, I sent you a volume on German Romanticism which I found on my shelves. I should be very sorry, however, that you should interpret my sending it otherwise than as a silent expression of thanks.

The book was written in 1873 and revised in 1886; but my German publisher has permitted himself a number of linguistic and other alterations, so that the first two pages, for instance, are hardly mine at all. Wherever he does not understand my meaning, he puts something else, and declares that what I have written is not German.

Moreover, the man promised to buy the rights of the old translation of my book, but from very foolish economy has not done so; the consequence is that the German courts have suppressed my book in two instances as pirated (!)—because I had included in it fragments of the old translation—while the real pirate is allowed to sell my works freely.

The probable result of this will be that I shall withdraw entirely from German literature.

I sent that volume because I had no other. But the first one on the **emigres**, the fourth on the English and the fifth on the French romanticists are all far, far better; written **con amore**.

The title of the book, **Moderne Geister**, is fortuitous. I have written some twenty volumes. I wanted to put together for abroad a volume on personalities whose names would be familiar. That is how it came about. Some things in it have cost a good deal of study, such as the paper on Tegner, which tells the truth about him for the first time. Ibsen will certainly interest you as a personality. Unfortunately as a man he does not stand on the same level that he reaches as a poet. Intellectually he owes much to Kierkegaard, and he is still strongly permeated by theology. Bjornson in his latest phase has become just an ordinary lay-preacher.

For more than three years I have not published a book; I felt too unhappy. These three years have been among the hardest of my life, and I see no sign of the approach of better times. However, I am now going to set about the publication of the sixth volume of my work and another book besides. It will take a deal of time.

I was delighted with all the fresh books, turning them over and reading them.

The youthful books are of great value to me; they make it far easier to understand you; I am now leisurely ascending the steps that lead up to your intellect. With *Zarathustra* I began too precipitately. I prefer to advance upwards rather than to dive head first as though into a sea.

I knew Hillebrand's essay and read years ago some bitter attacks on the book about Strauss. I am grateful to you for the word culture-philistine; I had no idea it was yours. I take no offense at the criticism of Strauss, although I have feelings of piety for the old gentleman. Yet he was always the Tübingen collegian.

Of the other works I have at present only studied *The Dawn of Day* at all closely. I believe I understand the book thoroughly, many of its ideas have also been mine, others are new to me or put into a new shape, but not on that account strange to me.

One solitary remark, so as not to make this letter too long. I am delighted with the aphorism on the hazard of marriage (Aphorism 150). But why do you not dig deeper here? You speak somewhere with a certain reverence of marriage, which by implying an emotional ideal has idealized emotion—here, however, you are more blunt and forcible. Why not for once say the full truth about it? I am of opinion that the institution of marriage, which may have been very useful in taming brutes, causes more misery to mankind than even the Church has done. Church, monarchy, marriage, property, these are to my mind four old venerable institutions which mankind will have to reform from the foundations in order to be able to breathe freely. And of these marriage alone kills the individuality, paralyzes liberty and is the embodiment of a paradox. But the shocking thing about it is that humanity is still too coarse to be able to shake it off. The most emancipated writers, so called, still speak of marriage with a devout and virtuous air which maddens me. And they gain their point, since it is impossible to say what one could put in its place for the mob. There is nothing else to be done but slowly to transform opinion. What do you think about it?

I should like very much to hear how it is with your eyes. I was glad to see how plain and clear your writing is.

Externally, I suppose, you lead a calm and peaceful life down there? Mine is a life of conflict which wears one out. In these realms I am even more hated now than I was seventeen years ago; this is not pleasant in itself, though it is gratifying in so far as it proves to me that I have not yet lost my vigor nor come to terms on any point with sovereign mediocrity.

Your attentive and grateful reader,
George Brandes.

8. Nietzsche to Brandes.

Nice, March 27, 1888

My Dear Sir,

I should much have liked to thank you before this for so rich and thoughtful a letter: but my health has been troubling me, so that I have fallen badly into arrears with all good things. In my eyes, I may say in passing, I have a dynamometer for my general state; since my health in the main has once more improved, they have become stronger than I had ever believed possible—they have put to shame the prophecies of the very best German oculists. If Messieurs Grafe et hoc genus omne had turned out right, I should long ago have been blind. As it is, I have come to No. 3 spectacles—bad enough—but I still see. I speak of this worry because you were sympathetic enough to inquire about it, and because during the last few weeks my eyes have been particularly weak and irritable.

I feel for you in the North, now so wintry and gloomy; how does one manage to keep one's soul erect there? I admire almost every man who does not lose faith in himself under a cloudy sky, to say nothing of his faith in "humanity," in "marriage," in "property," in the "State." . . . In Petersburg I should be a nihilist: here I believe as a plant believes, in the sun. The sun of Nice—you cannot call that a prejudice. We have had it at the expense of all the rest of Europe. God, with the cynicism peculiar to him, lets it shine upon us idlers, "philosophers" and sharpers more brightly than upon the far worthier military heroes of the "Fatherland."

But then, with the instinct of the Northerner, you have chosen the strongest of all stimulants to help you to endure life in the North: war, the excitement of aggression, the Viking raid. I divine in your writings the practiced soldier; and not only "mediocrity," but perhaps especially the more independent or individual characters of the Northern mind may be constantly challenging you to fight. How

much of the "parson," how much theology is still left behind in all this idealism! . . . To me it would be still worse than a cloudy sky, to have to make oneself angry over things **which do not concern one.**

So much for this time; it is little enough. Your **German Romanticism** has set me thinking, how this whole movement actually only reached its goal as music (Schumann, Mendelssohn, Weber, Wagner, Brahms); as literature it remained a great promise. The French were more fortunate. I am afraid I am too much of a musician not to be a romanticist. Without music life to me would be a mistake.

With cordial and grateful regards I remain, dear Sir,

Yours,

Nietzsche

9. Brandes to Nietzsche

Copenhagen, April 3, 1888

My Dear Sir,

You have called the postman the medium of ill-mannered invasions. That is very true as a rule, and should be **sat. sapienti** not to trouble you. I am not an intruder by nature, so little in fact that I lead an almost isolated life, am indeed loth to write letters, and, like all authors, loth to write at all.

Yesterday, however, when I had received your letter and taken up one of your books, I suddenly felt a sort of vexation at the idea that nobody here in Scandinavia knew anything about you, and I soon determined to make you known at a stroke. The newspaper cutting will tell you that (having just finished a series of lectures on Russia) I am announcing fresh lectures on your writings. For many years I have been obliged to repeat all my lectures, as the University cannot hold the audiences; that is not likely to be the case this time, as your name is so absolutely new, but the people who will come and get an impression of your works will not be of the dullest.

As I should very much like to have an idea of your appearance, I **beg you to give me a portrait of yourself.** I enclose my last photograph. I would also ask you to tell me quite briefly when and where you were born and in what years you published (or better, wrote) your works, as they are not dated. If you have any newspaper that contains these details, there will be no need to write. I am an unmethodical person and possess neither dictionaries of authors nor other books of reference in which your name might be found.

The youthful works—the **Thoughts out of Season**—have been very useful to me. How young you were and enthusiastic, how frank and naive! There is much in the maturer books that I do not yet understand; you appear to me often to hint at or generalize about entirely intimate, personal data, giving the reader a beautiful casket without the key. But most of it I understand. I was enchanted by the youthful work on Schopenhauer; although personally I owe little to Schopenhauer, it seemed to speak to me from the soul.

One or two pedantic corrections: **Joyful Wisdom**, p. 116. The words quoted are no Chamfort's last, they are to be found in his **Characteres et Anecdotes**: dialogue between M. D. and M. L. in explanation of the sentence: **Peu de personnes et peu de choses m'interessent, mais rien ne m'interesse moins que moi**. The concluding words are: **en vivant et en voyant les hommes, il faut que le coeur se brise ou se bronze**.

On p. 118 you speak of the elevation "in which Shakespeare places Cæsar." I find Shakespeare's Cæsar pitiable. An act of high treason. And this glorification of the miserable fellow whose only achievement was to plunge a knife into a great man.

Human, all-too-Human, II, p. 59. A holy lie. "It is the only holy lie that has become famous." No, Desdemona's last words are perhaps still more beautiful and just as famous, often quoted in Germany at the time when Jacobi was writing on Lessing. Am I not right?

These trifles are only to show you that I read you attentively. Of course, there are very different matters that I might discuss with you, but a letter is not the place for them.

If you read Danish, I should like to send you a handsomely got-up little book on Holberg, which will appear in a week. Let me know whether you understand our language. If you read Swedish, I call your attention to Sweden's only genius, August Strindberg. When you write about women you are very like him.

I hope you will have nothing but good to tell me of your eyes.

Yours sincerely,

George Brandes

10. Nietzsche to Brandes.

Torini (Italia) ferma in posta, April 10, 1888

But, my dear Sir, what a surprise is this! Where have you found the courage to propose to speak in public of a **vir obscurissimus**? . . . Do you imagine that I am known in the beloved Fatherland? They treat me there as if I were something singular and absurd, something that for the present need not be **taken seriously** . . . Evidently they have an inkling that I do not take them seriously either: and how could I, nowadays, when "German intellect" has become a **contradictio in adjecto**!—My best thanks for the photograph. Unfortunately I have none to send in return: my sister, who is married and lives in South America, took with her the last portraits I possessed.

Enclosed is a little **vita**, the first I have ever written.

As regards the dates of composition of the different books they are to be found on the back of the cover of **Beyond Good and Evil**. Perhaps you no longer have this cover.

The Birth of Tragedy was written between the summer of 1870 and the winter of 1871 (finished at Lugano, where I was living with the family of Field-Marshal Moltke.)

The Thoughts out of Season between 1872 and the summer of 1875 (there were to have been thirteen; luckily my health said No!).

What you say about **Schopenhauer as Educator** gives me great pleasure. This little work serves me as a touchstone; he to whom it says nothing **personal** has probably nothing to do with me either. In reality it contains the whole plan according to which I have hitherto lived; it is a rigorous **promise**.

Human, all-too-Human, with its two continuations, summer of 1876-1879. **The Dawn of Day**, 1880. **The Joyful Wisdom**, January, 1882. **Zarathustra**, 1883-1885 (each part in about ten days. Perfect state of "inspiration." All conceived in the course of rapid walks: absolute certainty, as though each sentence were shouted to one. While writing the book, the greatest physical elasticity and sense of power).

Beyond Good and Evil, summer of 1885 in the Upper Engadine and the following winter at Nice.

The Genealogy decided on, carried out and sent ready for press to the printer at Leipzig, all between July 10 and

30, 1887. (Of course there are also **philologica** of mine, but they do not concern you and me.)

I am now making an experiment with Turin; I shall stay here till June 5 and then go to the Engadine. The weather so far is wintry, harsh and unpleasant. But the town superbly calm and favorable to my instincts. The finest pavement in the world.

Sincere greetings from

Yours gratefully,

Nietzsche.

A pity I understand neither Danish nor Swedish.

Vita.—I was born on October 15, 1884, on the battle-field of Lutzen. The first name I heard was that of Gustavus Adolphus. My ancestors were Polish noblemen (Niezky); it seems the type has been well maintained, in spite of three generations of German mothers. Abroad I am usually taken for a Pole; this very winter the visitors' list at Nice entered me **comme Polonais**. I am told my head occurs in Matejko's pictures. My grandmother belonged to the Schiller-Goethe circles of Weimar; her brother was Herder's successor in the position of General Superintendent at Weimar. I had the good fortune to be a pupil of the venerable Pforta School, from which so many who have made a name in German literature have proceeded (Klopstock, Fichte, Schlegel, Ranke, etc., etc.). We had masters who would have (or have) done honor to any university. I studied at Bonn, afterwards at Leipzig; old Ritschl, then the first philologist in Germany, singled me out almost from the first. At twenty-two I was a contributor to the **Litterarisches Centralblatt** (Zarncke). The foundation of the Philological Society of Leipzig, which still exists, is due to me. In the winter of 1868-1869 the University of Basle offered me a professorship; I was as yet not even a Doctor. The University of Leipzig afterwards conferred the doctor's degree on me, in a very honorable way, without any examination, and even without a dissertation. From Easter 1869 to 1879 I was at Basle; I was obliged to give up my rights as a German subject, since as an officer (Horst Artillery) I should have been called up too frequently and my academic duties would have been interfered with. I am none the less master of two weapons, the sabre and the cannon—and perhaps of a third as well At Basle everything went very well, in spite of my youth; it sometimes happened, especially with candidates for the doctor's degree, that the examinee was older than the examiner. I had the great good fortune to form a cordial friendship with Jakob Burkhardt, an unusual thing with

that very hermit-like and secluded thinker. A still greater piece of good fortune was that from the earliest days of my Basle existence an indescribably close intimacy sprang up between me and Richard and Cosima Wagner, who were then living on their estate of Tribschen, near Lucerne, as thought on an island, and were cut off from all former ties. For some years we had everything, great and small, in common, a confidence without bounds. (You will find printed in Volume VII of Wagner's complete works a "message" to me, referring to **The Birth of Tragedy**.) As a result of these relations I came to know a large circle of persons (and "personesses"), in fact pretty nearly everything that grows between Paris and Petersburg. By about 1876 my health became worse. I then spent a winter at Sorrento, with my old friend, Baroness Meysenbug (**Memoirs of an Idealist**) and the sympathetic Dr. Ree. There was no improvement. I suffered from an extremely painful and persistent headache, which exhausted all my strength. This went on for a number of years, till it reached such a climax of habitual suffering, that at that time I had 200 days of torment in the year. The trouble must have been due entirely to local causes, there is no neuropathic basis for it of any sort. I have never had a symptom of mental disturbance; not even of fever, nor of fainting. My pulse was at that time as slow as that of the first Napoleon (= 60). My speciality was to endure extreme pain, **cru, vert**, with perfect clarity, for two or three consecutive days, accompanied by constant vomiting of bile. The report has been put about that I was in a madhouse (and indeed that I died there). Nothing is further from the truth. As a matter of fact my intellect only came to maturity during that terrible time: witness the **Dawn of Day**, which I wrote in 1881 during a winter of incredible suffering at Genoa, away from doctors, friends or relations. This book serves me as a sort of "dynamometer": I composed it with a minimum of strength and health. From 1882 on I went forward again very slowly, it is true: the crisis was past (my father died very young, just at the age at which I was myself so near to death). I have to use extreme care even today; certain conditions of a climatic and meteorological order are indispensable to me. It is not from choice but from necessity that I spend the summer in the Upper Engadine and the winter at Nice . . . After all, my illness has been of the greatest use to me: it has released me, it has restored to me the courage to be myself . . . And, indeed, in virtue of my instincts, I am a brave animal, a military one even. The long resistance has somewhat exasperated my pride. Am I a philosopher, do you ask?— But what does that matter! . . .

11. Brandes to Nietzsche.

Copenhagen, April 29, 1888

My Dear Sir,

The first time I lectured on your works, the hall was not quite full, an audience of perhaps a hundred and fifty, since no one knew who and what you are. But as an important newspaper reported my first lecture, and as I have myself written an article on you, interest was roused, and next time the hall was full to bursting. Some three hundred people listened with the greatest attention to my exposition of your works. Nevertheless, I have not ventured to repeat the lectures, as has been my practice for many years, since the subject is hardly of a popular nature. I hope the result will be to get you some good readers in the North.

Your books now stand on one of my shelves, very handsomely bound. I should be very glad to possess everything you have published.

When, in your first letter, you offered me a musical work of yours, a **Hymn to Life**, I declined the gift from modesty, being no great judge of music. Now I think I have deserved the work through my interest in it and should be much obliged if you would have it sent to me.

I believe I may sum up the impression of my audience in the feeling of a young painter, who said to me: "What makes this so interesting is that it has not to do with books, **but with life.**" If any objection is taken to your ideas, it is that they are "too out-and-out."

It was unkind of you not to send me a photograph; I really only sent mine to put you under an obligation. It is so little trouble to sit to a photographer for a minute or two, and one knows a man far better when one has an idea of his appearance.

Yours very sincerely,

George Brandes.

12. Nietzsche to Brandes.

Turin, May 4, 1888

My Dear Sir,

What you tell me gives me great pleasure and—let me confess it—still more surprise. Be sure I shall owe you for

it: you know, hermits are not given to forgetting.

Meanwhile I hope my photograph will have reached you. It goes without saying that I took steps, not exactly to be photographed (for I am extremely distrustful of haphazard photographs), but to abstract a photograph from somebody who had one of me. Perhaps I have succeeded; I have not yet heard. If not, I shall avail myself of my next visit to Munich (this autumn probably) to be taken again.

The **Hymn to Life** will start on its journey to Copenhagen one of these days. We philosophers are never more grateful than when we are mistaken for artists. I am assured, moreover, by the best judges that the **Hymn** is thoroughly fit for performance, singable, and sure in its effect (—clear in form; this praise gave me the greatest pleasure). Mottl, the excellent court conductor at Carlsruhe (the conductor of the Bayreuth festival performances, you know), has given me hopes of a performance.

I have just heard from Italy that the point of view of my second **Thought out of Season** has been very honorably mentioned in a survey of German literature contributed by the Viennese scholar, Dr. von Zackauer, at the invitation of the **Archivio storico** of Florence. He concludes his paper with it.

These last weeks at Turin, where I shall stay till June 5, have turned out better than any I have known for years, above all more philosophic. Almost every day for one or two hours I have reached such a pitch of energy as to be able to view my whole conception from top to bottom; so that the immense multiplicity of problems lies spread out beneath me, as though in relief and clear in its outlines. This requires a maximum of strength, for which I had almost given up hope. It all hangs together; years ago it was already on the right course; one builds one's philosophy like a beaver, one is forced to and does not know it: but one has to see all this, as I have now seen it, in order to believe it.

I am so relieved, so strengthened, in such good humor—I hang a little farcical tail on to the most serious things. What is the reason of all this? Have I got the good **north winds** to thank for it, the north winds which do not always come from the Alps?—they come now and then even from Copenhagen!

With greetings,

Your gratefully devoted,
Nietzsche.

13. Nietzsche to Brandes

Turin, May 23, 1888

My Dear Sir,

I should not like to leave Turin without telling you once more what a great share you have had in my first **successful** spring. The history of my springs, for the last fifteen years at least, has been, I must tell you, a tale of horror, a fatality of decadence and infirmity. Places made no difference; it was as though no prescription, no diet, no climate could change the essentially depressing character of this time of year. But behold, Turin! And the first good news, **your** news, my dear Sir, which proved to me that I am alive . . . For I am sometimes apt to forget that I am alive. An accident, a question reminded me the other day that one of life's leading ideas is positively quenched in me, the idea of the **future**. No wish, not the smallest cloudlet of a wish before me! A bare expanse! Why should not a day from my seventieth year be exactly like my day to-day? Have I lived too long in proximity to death to be able any longer to open my eyes to fair possibilities?—But certain it is that I now limit myself to thinking from day to day—that I settle today what is to be done tomorrow—and not for a single day beyond it! This may be irrational, unpractical, perhaps also unchristian—that preacher on the Mount forbade this very “taking thought for the morrow”—but it seems to me in the highest degree philosophical. I gained more respect for myself than I had before:—I understood that I had unlearned how to wish, without even wanting to do so.

These weeks I have employed in “transvaluing values.”—You understand this trope?—After all, the alchemist is the most deserving kind of man there is! I mean the man who makes of what is base and despised something valuable, even gold. He alone confers wealth, the others merely give change. My problem this time is rather a curious one; I have asked myself what hitherto has been best hated, feared, despised by mankind—and of that and nothing else I have made my “gold.” . . .

If only I am not accused of false-coining! Or rather; that is what **will** happen.

Has my photograph reached you? My mother has shown me the great kindness of relieving me from the appearance of ungratefulness in such a special case. It is to be hoped the Leipzig publisher, E. W. Fritzsche, has also done his duty and sent off the Hymn.

In conclusion I confess to a feeling of curiosity. As it

was denied me to listen at the crack of the door to learn something **about myself**, I should like to hear something in another way. Three words to characterize the subjects of your different lectures—how much should I learn from three words!

With cordial and devoted greetings,

Your,

Nietzsche.

14. Brandès to Nietzsche.

Copenhagen, May 23, 188

My Dear Sir,

For letter, portrait and music I send you my best thanks. The letter and the music were an unqualified pleasure, the portrait might have been better. It is a profile taken at **Naumburg**, characteristic in its attitude, but with too little expression. You **must** look different from this; the writer of **Zarathustra** must have many more secrets written in his own face.

I concluded my lectures on Fr. Nietzsche before Whitsuntide. They ended, as the papers say, in applause "which took the form of an ovation." The ovation is yours almost entirely. I take the liberty of communicating it to you herewith in writing. For I can only claim the credit of reproducing, clearly and connectedly, and intelligibly to a Northern audience, what you had originated.

I also tried to indicate your relation to various contemporaries, to introduce my hearers into the workshop of your thought, to put forward my own favorite ideas, where they coincided with yours, to define the points on which I differed from you, and to give a psychological portrait of Nietzsche the author. Thus much I may say without exaggeration: your name is now very **popular** in all intelligent circles in Copenhagen, and all over Scandinavia it is at least **known**. You have nothing to thank me for; it has been a **pleasure** to me to penetrate into the world of your thoughts. My lectures are not worth printing, as I do not regard pure philosophy as my special province and am unwilling to print anything with a subject in which I do not feel sufficiently competent.

I am glad you feel so invigorated physically and so well disposed mentally. Here, after a long winter, we have mild spring weather. We are rejoicing in the first green leaves and in a very well-arranged Northern exhibition that has been opened at Copenhagen. All the French artists

of eminence (painters and sculptors) are also exhibiting here. Nevertheless, I am longing to get away, but have to stay.

But this cannot interest you. I forgot to tell you: if you do not know the Icelandic sagas, you must study them. You will find there a great deal to confirm your hypotheses and theories about the morality of a master race.

In one trifling detail you seem to have missed the mark. Gothic has certainly nothing to do with good or God. It is connected with giessen, he who emits the seed, and means stallion, man.

On the other hand, our philologists here think your suggestion of bonus—duonus is much to the point.

I hope that in future we shall never become entirely strangers to one another.

I remain your faithful reader and admirer,

George Brandes.

15. Nietzsche to Brandes. (post-card.)

Turin, May 27, 1888

What eyes you have! You are right, the Nietzsche of the photograph is not yet the author of Zarathustra—he is a few years too young for that.

I am very grateful for the etymology of Goth; it is simply godlike.

I presume you are reading another letter of mine today.

Your gratefully attached

N.

16. Nietzsche to Brandes.

Sils-Maria, Sept. 13, 1888

My Dear Sir,

Herewith I do myself a pleasure—that of recalling myself to your memory, by sending you a wicked little book, but one that is none the less very seriously meant; the product of the good days of Turin. For I must tell you that since then there have been evil days in superfluity; such a decline in health, courage and “will to life,” to talk Schop-

enhauer, that the little spring idyll scarcely seemed credible any longer. Fortunately I still possessed a document belonging to it, the **Case of Wagner. A Musician's Problem**. Spiteful tongues will prefer to call it **The Fall of Wagner**.

Much as you may disclaim music (—the most importunate of all the Muses), and with however good reason, yet pray look at this piece of **musician's psychology**. You my dear Mr. Cosmopolitan, are far too European in your ideas not to hear in it a hundred times more than my so-called countrymen, the "musical" Germans.

After all, in this case I am a connoisseur in **rebus et personis**—and, fortunately, enough of a musician by instinct to see that in this ultimate question of values, the problem is accessible and **soluble** through music.

In reality this pamphlet is almost written in French—I dare say it would be easier to translate it into French than into German.

Could you give me one or two more Russian or French addresses to which there would be some sense in sending the pamphlet?

In a month or two something **philosophical** may be expected; under the very inoffensive title of **Leisure Hours of a Psychologist** I am saying agreeable and disagreeable things to the world at large—including that intelligent nation, the Germans.

But all this is in the main nothing but recreation beside the main thing: the name of the latter is **Transvaluation of All Values**. Europe will have to discover a new Siberia, to which to consign the author of these experiments with values.

I hope this high-spirited letter will find you in one of your usual **resolute** moods.

With kind remembrances,

Yours,

Dr. Nietzsche.

Address till middle of November: Torino (Italia) ferma in posta.

17. Brandes to Nietzsche.

Copenhagen, Oct. 6, 1888

My Dear Sir,

Your letter and valued gift found me in a raging fever of work. This accounts for my delay in answering.

The mere sight of your handwriting gave me pleasurable excitement.

It is sad news that you have had a bad summer. I was foolish enough to think that you had already got over all your physical troubles.

I have read the pamphlet with the greatest attention and much enjoyment. I am not so unmusical that I cannot enter into the fun of it. I am merely not an expert. A few days before receiving the little book I heard a very fine performance of *Carmen*; what glorious music! However, at the risk of exciting your wrath I confess that Wagner's *Tristan and Isolde* made an indelible impression on me. I once heard this opera in Berlin, in a despondent, altogether shattered state of mind, and I felt every note. I do not know whether the impression was so deep because I was so ill.

Do you know Bizet's widow? You ought to send her the pamphlet. She would like it. She is the sweetest, most charming of women, with a nervous tic that is curiously becoming, but perfectly genuine, perfectly sincere and full of fire. Only she has married again (an excellent man, a barrister named Straus, of Paris). I believe she knows some German. I could get you her address, if it does not put you against her that she has not remained true to her god—any more than the Virgin Mary, Mozart's widow or Marie Louise.

Bizet's child is ideally beautiful and charming.—But I am gossiping.

I have given a copy of the book to the greatest of Swedish writers, August Strindberg, whom I have entirely won over to you. He is a true genius, only a trifle mad like most geniuses (and non-geniuses). The other copy I shall also place with care.

Paris I am not well acquainted with now. But send a copy to the following address: Madame la Princesse Anna Dmitrievna Tenicheff, Quai Anglais 20, Petersburg. This lady is a friend of mine; she is also acquainted with the musical world of Petersburg and will make you known there. I have asked her before now to buy your works, but they were all forbidden in Russia, even **Human, all-too-Human**.

It would also be as well to send a copy to Prince Urussov (who is mentioned in Turgenev's letters). He is greatly interested in everything German, and is a man of rich gifts, an intellectual gourmet. I do not remember his address for the moment, but can find it out.

I am glad that in spite of all bodily ills you are working so vigorously and keenly. I am looking forward to all the things you promise me.

It would give me great pleasure to be read by you, but unfortunately you do not understand my language. I have produced an enormous amount this summer. I have written two long new books (of twenty-four and twenty-eight sheets), **Impressions of Poland** and **Impression of Russia**, besides entirely rewriting one of my oldest books, *Æsthetic Studies*, for a new edition and correcting the proofs of all three books myself. In another week or so I shall have finished this work; then I give a series of lectures, writing at the same time another series in French, and leave for Russia in the depth of winter to revive there.

That is the plan I propose for my winter campaign. May it not be a Russian campaign in the bad sense.

I hope you will continue our friendly interest in me.

I remain,

Your faithfully devoted,

George Brandes.

18. Nietzsche to Brandes.

Turin, Oct. 20, 1888

My Dear Sir,

Once more your letter brought me a pleasant wind from the north; it is in fact so far the only letter that puts a "good face," or any face at all on my attack on Wagner. For people do not write to me. I have irreparably offended even my nearest and dearest. There is, for instance, my old friend, Baron Seydlitz of Munich, who unfortunately happens to be President of the Munich Wagner Society; my still older friend, Justizrath Krug of Cologne, president of the local Wagner Society; my brother-in-law, Dr. Bernhard Forster in South America, the not unknown Anti-Semite, one of the keenest contributors to the **Bayreuther Blatter**—and my respected friend, Malwida von Meysenbug, the authoress of **Memoirs of an Idealist**, who continues to confuse Wagner with Michel Angelo . . .

On the other side I have been given to understand that I must be on my guard against the female Wagnerite: in certain cases she is said to be without scruple. Perhaps Bayreuth will defend itself in the German Imperial manner, by the prohibition of my writings—as "dangerous to the public morals"; for here the Emperor is a party to the case. My dictum, "we all know the inæsthetic concept of the Christian **Junker**," might even be interpreted as **lese-majeste**.

Your intervention on behalf of Bizet's widow gave me

great pleasure. Please let me have her address; also that of Prince Urussov. A copy has been sent to your friend, the Princess Dmitrievna Tenicheff. When my next book is published, which will be before very long (the title is now **The Twilight of the Idols. Or, How to Philosophize with the Hammer**), I should much like to send a copy to the Swede you introduce to me in such laudatory terms. But I do not know where he lives. This book is my philosophy in nuce—radical to the point of criminality . . .

As to the effect of **Tristan**, I, too, could tell strange tales. A regular dose of mental anguish seems to me a splendid tonic before a Wagnerian repast. The **Reichsgerichtsrath** Dr. Wiener of Leipzig gave me to understand that a Carlsbad cure was also a good thing . . .

Ah, how industrious you are! And idiot that I am, not to understand Danish! I am quite willing to take your word for it that one can "revive" in Russia better than elsewhere; I count any Russian book, above all Dostoiivsky (translated into French, for Heaven's sake not German!!) among my greatest sources of relief.

Cordially and, with good reason, gratefully,

Yours,

Nietzsche.

19. Brandes to Nietzsche.

Copenhagen, Nov. 16, 1888

My Dear Sir,

I have waited in vain for an answer from Paris to learn the address of Madam Bizet. On the other hand, I now have the address of Prince Urussov. He lives in Petersburg, Sergiev'skaia 79.

My three books are now out. I have begun my lectures here.

Curious it is how something in your letter and in your book about Dostoievsky coincides with my own impressions of him. I have mentioned you, too, in my work on Russia, when dealing with Dostoievsky. He is a great poet, but an abominable creature, quite Christian in his emotions and at the same time quite **sadique**. His whole morality is what you have baptized slave-morality.

The mad Swede's name is August Strindberg; he lives here. His address is Holte, near Copenhagen. He is particularly fond of you, because he thinks he finds in you his

own hatred for women. On this account he calls you "modern" (irony of fate). On reading the newspaper reports of my spring lectures, he said: "It is an astonishing thing about this Nietzsche; much of what he says is just what I might have written." His drama, *Pere*, has appeared in French with a preface by Zola.

I feel mournful whenever I think of Germany. What a development is now going on there! How sad to think that to all appearance one will never in one's lifetime be a historical witness of the smallest good thing.

What a pity that so learned a philologist as you should not understand Danish. I am doing all I can to prevent my books on Poland and Russia being translated, so that I may not be expelled, or at least refused the right of speaking when I next go there.

Hoping that these lines will find you still at Turin or will be forwarded to you, I am,

Yours very sincerely,

George Brandes.

20. Nietzsche to Brandes.

Torino, via Carlo Alberto, 6, III.

Nov. 20, 1888

My Dear Sir,

Forgive me for answering at once. Curious things are now happening in my life, things that are without precedent. First the day before yesterday; now again. Ah, if you knew what I had just written when your letter paid me its visit.

With a cynicism that will become famous in the world's history, I have now related myself. The book is called **Ecce Homo**, and is an attack on the Crucified without the slightest reservation; it ends in thunders and lightnings against everything that is Christian or infected with Christianity, till one is blinded and deafened. I am in fact the first psychologist of Christianity and, as an old artilleryman, can bring heavy guns into action, the existence of which no opponent of Christianity has even suspected. The whole is the prelude to the **Transvaluation of all Values**, the work that lies ready before me: I swear to you that in two years we shall have the whole world in convulsions. I am a fate.

Guess who came off worst in **Ecce Homo**? Messieurs the Germans! I have told them terrible things . . . The

Germans, for instance, have it on their conscience that they deprived the last great epoch of history, the Renaissance, of its meaning—at a moment when the Christian values, the **decadence** values, were worsted, when they were conquered in the instincts even of the highest ranks of the clergy by the opposite instincts, the instincts of life. To **attack** the Church—that meant to re-establish Christianity. (Cesare Borgia as pope—that would have been the meaning of the Renaissance, its proper symbol.)

You must not be angry either, to find yourself brought forward at a critical passage in the book—I wrote it just now—where I stigmatize the conduct of my German friends towards me, their absolute leaving me in the lurch as regards both fame and philosophy. Then you suddenly appear, surrounded by a halo . . .

I believe implicitly what you say about Dostoievsky; I esteem him, on the other hand, as the most valuable psychological material I know—I am grateful to him in an extraordinary way, however antagonistic he may be to my deepest instincts. Much the same as my relation to Pascal, whom I almost love, since he has taught me such an infinite amount; the only **logical** Christian.

The day before yesterday I read, with delight and with a feeling of being thoroughly at home, **Les marries**, by Herr August Strindberg. My sincerest admiration, which is only prejudiced by the feeling that I am admiring myself a little at the same time.

Turin is still my residence.

Your

Nietzsche, now a monster.

Where may I send you the **Twilight of the Idols**? If you will be at Copenhagen another fortnight, no answer is necessary.

21. Brandes to Nietzsche.

Copenhagen, Nov. 23, 1888

My Dear Sir,

Your letter found me today in full fever of work; I am lecturing here on Goethe, repeat each lecture twice and yet people wait in line for three quarters of an hour in the square before the University to get standing-room. It amuses me to study the greatest of the great before so many. I must stay here till the end of the year.

But on the other side there is the unfortunate circumstance that—as I am informed—one of my old books, lately translated into Russia, has been condemned in Russia to be publicly burnt as “irreligious.”

I already had to fear expulsion on account of my two last works on Poland and Russia; now I must try to set in motion all the influence I can command, in order to obtain permission to lecture in Russia this winter. To make matters worse, nearly all letters to and from me are now confiscated. There is great anxiety since the disaster at Borki. It was just the same shortly after the famous attempts. Every letter was snapped up.

It gives me lively satisfaction to see that you have again got through so much. Believe me, I spread your propaganda wherever I can. So late as last week I earnestly recommended Henrik Ibsen to study your works. With him too you have some kinship, even if it is a very distant kinship. Great and strong and unamiable, but yet **worthy** of love, is this singular person. Strindberg will be glad to hear of your appreciation. I do not know the French translation you mention; but they say here that all the best things in **Giftas (Maries)** have been left out, especially the witty polemic against Ibsen. But read his drama **Pere**; there is a great scene in it. I am sure he would gladly send it you. But I see him so seldom; he is so shy on account of an extremely unhappy marriage. Imagine it, he abhors his wife **intellectually** and cannot get away from her **physically**. He is a monogamous misogynist!

It seems curious to me that the polemical trait is still so strong in you. In my early days I was passionately polemical; now I can only expound; silence is my only weapon of offence. I should as soon think of attacking Christianity as of writing a pamphlet against werewolves, I mean against the belief in werewolves.

But I see we understand one another. I too love **Pascal**. But even as a young man I was **for** the Jesuits against Pascal (in the **Provinciales**). The worldly-wise, they were right, of course; he did **not** understand them; but they understood him and—what a master-stroke of impudence and sagacity!—they themselves published his **Provinciales** with notes. The best edition is that of the Jesuits.

Luther against the Pope, there we have the same collision. Victor Hugo in the preface to the *Feuilles d'Automne* has this fine saying: **On convoque la diete de Worms mais on peint la chapelle Sixtine. Il y a Luther, mais il y a Michel-Ange . . . et remarquons en passant que Luther est dans les vieilleries qui croulent autour de nous et que Michel-Ange n'y est pas.**

Study the face of Dostoievsky: half a Russian peasant's

face, half a criminal physiognomy, flat nose, little piercing eyes under lids quivering with nervousness, this lofty and well-formed forehead, this expressive mouth that speaks of torments innumerable, of abysmal melancholy, of unhealthy appetites, of infinite pity, passionate envy! An epileptic genius, whose exterior alone speaks of the stream of gentleness that filled his spirit, of the wave of acuteness almost amounting to madness that mounted to his head, and finally of the ambition, the immense effort, and of the ill-will that results from pettiness of soul.

His heroes are not only poor and pitiable creatures, but simple-minded sensitive ones, noble strumpets, often victims of hallucination, gifted epileptics, enthusiastic candidates for martyrdom—just those types which we should suspect in the apostles and disciples of the early days of Christianity.

Certainly nothing could be farther removed from the Renaissance.

I am excited to know how I can come into your book.

I remain your faithfully devoted

George Brandes.

22. Unstamped. Without further address, undated.
Written in a large hand on a piece of paper (not note-paper) ruled in pencil, such as children use.
Post-mark: Turin, January 4, 1889.

To the friend Georg

When once you had discovered me, it was easy enough to find me: the difficulty now is to get rid of me . . .

The Crucified.

As Herr Max Nordau has attempted with incredible coarseness to brand Nietzsche's whole life-work as the production of a mad-man, I call attention to the fact that signs of powerful exaltation only appear in the last letter but one, and that insanity is only evident in the last letter of all, and then not in an unqualified form.

But at the close of the year 1888 this clear and masterly mind began to be deranged. His self-esteem, which had always been very great, acquired a morbid character. His light and delicate self-irony, which appears not unfrequently in the letters here given, gave place to constantly recurring outbursts of anger with the German public's failure to appreciate the value of his works. It ill became a man of Nietzsche's intellect, who only a year before

(see Letter No. 2) had desired a small number of intelligent readers, to take such offence at the indifference of the mob. He now gave expression to the most exalted ideas about himself. In his last book but one he had said: "I have given the Germans the profoundest books of any they possess"; in his last he wrote: "I have given mankind the profoundest book it possesses." At the same time he yielded to an impulse to describe the fame he hoped to attain in the future as already his. As the reader will see, he had asked me to furnish him with the addresses of persons in Paris and Petersburg who might be able to make his name known in France and Russia. I chose them to the best of my judgment. But even before the books he sent had reached their destinations, Nietzsche wrote in a German review: "And thus I am treated in Germany, I who am already studied in Petersburg and Paris." That his sense of propriety was beginning to be deranged was already shown when sending the book to Princess Tenicheff (see Letter No. 18). This lady wrote to me in astonishment, asking what kind of a strange friend I had recommended to her: he had been sufficiently wanting in taste to give the sender's name on the parcel itself as "The Antichrist." Some time after I had received the last deranged and touching letter, another was shown me, which Nietzsche had presumably sent the same day, and in which he wrote that he intended to summon a meeting of sovereigns in Rome to have the German Emperor shot there; this was signed "Nietzsche-Cæsar." The letter to me was signed "The Crucified." It was thus evident that this great mind in its final megalomania had oscillated between attributing to itself the two greatest names in history, so strongly contrasted.

It was exceedingly sad thus to witness the change that in the course of a few weeks reduced a genius without equal to a poor helpless creature, in whom almost the last gleam of mental life was extinguished for ever.

III

(August 1900)

It sometimes happens that the death of a great individual recalls a half-forgotten name to our memory, and we then disinter for a brief moment the circumstances, events, writings or achievements which gave that name its renown. Although Friedrich Nietzsche in his silent madness had survived himself for eleven and a half years, there is no need at his death to resuscitate his works or his fame. For during those very years in which he lived on in the night of insanity, his name has acquired a lustre unsurpassed by any contemporary reputation, and his works have been translated into every language and are known all over the world.

To the older among us, who have followed Nietzsche from the time of his arduous and embittered struggle against the total indifference of the reading world, this prodigiously rapid attainment of the most absolute and world-wide renown has in it something in the highest degree surprising. No one in our time has experienced anything like it. In the course of five or six years Nietzsche's intellectual tendency—now more or less understood, now misunderstood, now involuntarily caricatured—became the ruling tendency of a great part of the literature of France, Germany, England, Italy, Norway, Sweden and Russia. Note, for example, the influence of this spirit on Gabriele d'Annunzio. To all that was tragic in Nietzsche's life was added this—that, after thirsting for recognition to the point of morbidity, he attained it in an altogether fantastic degree when, though still living, he was shut out from life. But certain it is that in the decade 1890-1900 no one engaged and impressed the minds of his contemporaries as did this son of a North German clergyman, who tried so hard to be taken for a Polish nobleman, and whose pride it was that his works were conceived in French, though written in German. The little weaknesses of his character were forgotten in the grandeur of the style he imparted to his life and his production.

To be able to explain Nietzsche's rapid and overwhelming triumph, one would want the key to the secret of the psychological life of our time. He bewitched the age, though he seems opposed to all its instincts. The age is ultra-democratic; he won its favor as an aristocrat. The age is borne on a rising wave of religious reaction; he conquered with his pronounced irreligion. The age is struggling with social questions of the most difficult and far-reaching kind; he, the thinker of the age, left all these questions on one side as of secondary importance. He was an enemy of the humanitarianism of the present day and of its doctrine of happiness; he

had a passion for proving how much that is base and mean may conceal itself beneath the guise of pity, love of one's neighbor and unselfishness; he assailed pessimism and scorned optimism; he attacked the ethics of the philosophers with the same violence as the thinkers of the eighteenth century had attacked the dogmas of the theologians. As he became an atheist from religion, so did he become an immoralist from morality. Nevertheless the Voltairians of the age could not claim him, since he was a mystic; and contemporary anarchists had to reject him as an enthusiast for rulers and castes.

For all that, he must in some hidden way have been in accord with much that is fermenting in our time, otherwise it would not have adopted him as it has done. The fact of having known Nietzsche, or having been in any way connected with him, is enough at present to make an author famous—more famous, sometimes, than all his writings have made him.

What Nietzsche as a young man admired more than anything else in Schopenhauer and Richard Wagner was "the indomitable energy with which they maintained their self-reliance in the midst of the hue and cry raised against them by the whole cultured world." He made this self-reliance his own, and this was no doubt the first thing to make an impression.

In the next place the artist in him won over those to whom the aphorisms of the thinker were obscure. With all his mental acuteness he was a pronounced lyricist. In the autumn of 1888 he wrote of Heine: "How he handled German! One day it will be said that Heine and I were without comparison the supreme artists of the German language." One who is not a German is but an imperfect judge of Nietzsche's treatment of language: but in our day all German connoisseurs are agreed in calling him the greatest stylist of German prose.

He further impressed his contemporaries by his psychological profundity and abstruseness. His spiritual life has its abysses and labyrinths. Self-contemplation provides him with immense material for investigation. And he is not content with self-contemplation. His craving for knowledge is a passion; covetousness he calls it: "In this soul there dwells no unselfishness; on the contrary, an all-desiring self that would see by the help of many as with its own eyes and grasp as with its own hands; this soul of mine would even choose to bring back all the past and not lose anything that might belong to it. What a flame is this covetousness of mine!"

The equally strong development of his lyrical and critical qualities made a fascinating combination. But it was the cause of those reversals of his personal relations which deprive his career (in much the same way as Søren Kierkegaard's) of some of the dignity it might have possessed. When a great personality crossed his path he called all his lyricism to arms and with clash of sword on shield hailed the person in question as a demigod or a god (Schopenhauer and Richard Wagner). When later on he discovered the limitations of his hero, his enthusiasm was apt to turn to hatred, and this hatred found vent without the smallest regard to his former worship. This characteristic is offensively conspicuous in Nietzsche's behavior to Wagner. But who knows whether this very lack of dig-

nity has not contributed to increase the number of Nietzsche's admirers in an age that is somewhat undignified on this point!

In the last period of his life Nietzsche appeared rather as a prophet than as a thinker. He predicts the **Superman**. And he makes no attempt at logical proof, but proceeds from a reliance on the correctness and sureness of his instinct, convinced that he himself represents a life-promoting principle and his opponents one hostile to life.

To him the object of existence is everywhere the production of genius. The higher man in our day is like a vessel in which the future of the race is fermenting in an impenetrable way, and more than one of these vessels is burst or broken in the process. But the human race is not ruined by the failure of a single creature. Man, as we know him, is only a bridge, a transition from the animal to the superman. What the ape is in relation to man, a laughing-stock or a thing of shame, that will man be to the superman. Hitherto every species has produced something superior to itself. Nietzsche teaches that man too will and must do the same. He has drawn a conclusion from Darwinism which Darwin himself did not see.

In the last decade of the nineteenth century Nietzsche and Tolstoy appeared as the two opposite poles. Nietzsche's morality is aristocratic as Tolstoy's is popular, individualistic as Tolstoy's is evangelical; it asserts the self-majesty of the individual, where Tolstoy's proclaims the necessity of self-sacrifice.

In the same decade Nietzsche and Ibsen were sometimes compared. Ibsen, like Nietzsche, was a combative spirit and held entirely aloof from political and practical life. A first point of agreement between them is that they both laid stress on not having come of small folk. Ibsen made known to me in a letter that his parents, both on the father's and the mother's side, belonged to the most esteemed families of their day in Skien in Norway, related to all the patrician families of the place and country. Skien is no world-city, and the aristocracy of Skien is quite unknown outside it; but Ibsen wanted to make it clear that his bitterness against the upper class in Norway was in no wise due to the rancour and envy of the outsider.

Nietzsche always made it known to his acquaintances that he was descended from a Polish noble family, although he possessed no pedigree. His correspondents took this for an aristocratic whim, all the more because the name given out by him, Niezky, by its very spelling betrayed itself as not Polish. But the fact is otherwise. The true spelling of the name is Nicki, and a young Polish admirer of Nietzsche, Mr. Bernard Scharlitt, has succeeded in proving Nietzsche's descent from the Nicki family, by pointing out that its crest is to be found in a signet which for centuries has been an heirloom in the family of Nietzsche. Perhaps not quite without reason, Scharlitt therefore sees in Nietzsche's master-morality and his whole aristocratizing of the view of the world an expression of the *szlachcic* spirit inherited from Polish ancestors.

Nietzsche and Ibsen, independently of each other but like Renan, have sifted the thought of breeding moral aristocrats. It is the favorite idea of Ibsen's Rosmer; it remains Dr. Stockmann's. Thus

Nietzsche speaks of the higher man as the preliminary aim of the race, before Zarathustra announces the superman.

They meet now and then on the territory of psychology. Ibsen speaks in **The Wild Duck** of the necessity of falsehood to life. Nietzsche loved life so greatly that even truth appeared to him of worth only in the case of its acting for the preservation and advancement of life. Falsehood is to him an injurious and destructive power only in so far as it is life-constricting. It is not objectionable where it is necessary to life.

It is strange that a thinker who abhorred Jesuitism as Nietzsche did should arrive at this standpoint, which leads directly to Jesuitism. Nietzsche agrees here with many of his opponents.

Ibsen and Nietzsche were both solitary, even if they were not at all careless as to the fate of their works. It is the strongest man, says Dr. Stockmann, who is most isolated. Who was most isolated, Ibsen or Nietzsche? Ibsen, who held back from every alliance with others, but exposed his work to the masses of the theatre-going public, or Nietzsche, who stood alone as a thinker but as a man continually—even if, as a rule, in vain—spied after the like-minded and after heralds, and whose works, in the time of his conscious life, remained unread by the great public, or in any case misunderstood.

Decision does not fall lightly to one who, by a whim of fate, was regarded by both as an ally. Still more difficult is the decision as to which of them has had the deepest effect on the contemporary mind and which will longest retain his fame. But this need not concern us. Wherever Nietzsche's teaching extends, and wherever his great and rare personality is mastered, its attraction and repulsion will alike be powerful; but everywhere it will contribute to the development and moulding of the individual personality.

IV

(1909)

SINCE the publication of Nietzsche's collected works was completed, Frau Forster-Nietzsche has allowed the Insel-Verlag of Leipzig to issue, at a high price and for subscribers only, Friedrich Nietzsche's posthumous work *Ecce Homo*, which has been lying in manuscript for more than twenty years, and which she herself had formerly excluded from his works, considering that the German reading public was not ripe to receive it in the proper way—which we may doubtless interpret as a fear on her part that the attitude of the book towards Germanism and Christianity would raise a terrible outcry.

Now that Nietzsche holds undisputed sway over German minds and exercises an immense influence in the rest of Europe and in America, it will certainly be read with emotion and discreetly criticized.

It gives us an autobiography, written during Nietzsche's last productive months, almost immediately before the collapse of his powers, between October 15 and November 4, 1888; and in the course of this autobiography each of his books is briefly characterized.

Here as elsewhere Nietzsche's thoughts are centred on the primary conceptions of ascent and descent, growth and decay. Bringing himself into relation with them, he finds that, as the victim of stubborn illness and chronically recurring pain, he is a decadent; but at the same time, as one who in his inmost self is unaffected by his illness, nay, whose strength and fulness of life even increase during its attacks, he is the very reverse of a decadent, a being who is in process of raising himself to a higher form of life. He once more emphasizes the fact that the years in which his vitality was lowest were just those in which he threw off all melancholy and recovered his joy in life, his enthusiasm for life, since he had a keen sense that a sick man has no right to pessimism.

He begins by giving us plain, matter-of-fact information about himself, speaking warmly and proudly of his father. The latter had been tutor to four princesses of Altenburg before he was appointed to his living. Out of respect for Friedrich Wilhelm IV. he gave his son the Hohenzollern names of Friedrich Wilhelm, and he felt the events of 1848 very keenly. His father only reached the age of thirty-six, and Nietzsche lost him when he was himself five years old. But he ascribes to paternal heredity his ability to feel at home in a world of high and delicate things (*in einer Welt hoher und zarter Dinge*). For all that, Nietzsche does not forget to bring in,

here as elsewhere, the supposition of his descent from Polish noblemen; but he did not know this for a fact, and it was only established by Scharlitt's investigation of the family seal.

He describes himself as what we should call a winning personality. He has "never understood the art of arousing ill-feeling against himself." He can tame every bear; he even makes clowns behave decently. However out of tune the instrument "man" may be, he can coax a pleasing tone out of it. During his years of teaching, even the laziest became diligent under him. Whatever offence has been done him, has not been the result of ill-will. The pitiful have wounded him more deeply than the malicious.

Nor has he given vent to feelings of revenge or rancour. His conflict with Christianity is only one instance among many of his antagonism to resentful feelings. It is an altogether different matter that his very nature is that of a warrior. But he confers distinction on the objects of his attacks, and he has never waged war on private individuals, only on types; thus in Strauss he saw nothing but the Culture-Philistine.

He attributes to himself an extremely vivid and sensitive instinct of cleanliness. At the first contact the filth lying at the base of another's nature is revealed to him. The unclean are therefore ill at ease in his presence; nor does the sense of being seen through make them any more fragrant.

And with true psychology he adds that his greatest danger—he means to his spiritual health and balance—is loathing of mankind.

The loathing of mankind is doubtless the best modern expression for what the ancients called misanthropy. No one knows what it is till he has experienced it. When we read, for instance, in our youth of Frederick the Great that in his later years he was possessed and fettered by contempt for men, this appears to us an unfortunate peculiarity which the king ought to have overcome; for of course he must have seen other men about him besides those who flattered him for the sake of advantage. But the loathing of mankind is a force that surprises and overwhelms one fed by hundreds of springs concealed in subconsciousness. One only detects its presence after having long entertained it unawares.

Nietzsche cannot be said to have overcome it; he fled from it, took refuge in solitude, and lived outside the world of men, alone in the mountains among cold, fresh springs.

And even if he felt no loathing for individuals, his disgust with men found a collective outlet, since he entertained, or rather worked up, a positive horror of his countrymen, so powerful that at last it breaks out in everything he writes. It reminds us dimly of Byron's dislike of Englishmen, Stendhal's of Frenchmen, and Heine's of Germans. But it is of a more violent character than Stendhal's or Heine's, and it has a pathos and contempt of its own. He shows none of it at the outset. In his first book, *The Birth of Tragedy*, he is no less partial to Germany than Heine was in his first, romantically Teutonic period. But Nietzsche's development carried him with a rush away from Germanism, and in his last book of his the word "German" has become something like his worst term of abuse.

He believes only in French culture; all other culture is a mis-

understanding. It makes him angry to see those Frenchmen he values most infected by German spirit. Thus Taine is, in his opinion, corrupted by Hegel's influence. This impression is right in so far as Hegel deprived Taine of some of the essentially French element which he originally possessed, and of which certain of his admirers before now have painfully felt the loss. But he overlooks the effect of the study of Hegel in promoting at the same time what one might call the extension of Taine's intellectual horizon. And Nietzsche is satisfied with no narrower generalization of the case than this: Wherever Germany extends, she ruins culture.

As though to make sure of wounding German national pride, he declares that Heinrich Heine (not Goethe) gave him the highest idea of lyric poetry, and that as concerns Byron's *Manfred*, he has no words, only a look, for those who in the presence of this work dare to utter the name of *Faust*. The Germans, he maintains in connection with *Manfred*, are incapable of any conception of greatness. So uncritical has he become that he puts *Manfred* above *Faust*.

In his deepest instincts Nietzsche is now, as he asserts, so foreign to everything German, that the mere presence of a German "retards his digestion." German intellect is to him indigestion; it can never be finished with anything. If he has been so enthusiastic in his devotion to Wagner, if he still regards his intimate relationship with Wagner as the most profound refreshment of his life, this was because in Wagner he honored the foreigner, because in him he saw the incarnate protest against all German virtues. In his book, *The Case of Wagner*, he had already hinted that Richard Wagner, the glory of German nationalism, was of Jewish descent, since his real father seems to have been the step-father, Geyer. I could not have survived my youth without Wagner, he says; I was condemned to the society of Germans and had to take a counter-poison; Wagner was the counter-poison.

Here, by way of exception, he generalizes his feeling. We who were children in the 'fifties, he says, necessarily became pessimists in regard to the concept "German." We cannot be anything else than revolutionaries. And he explains this expression thus: We can assent to no state of affairs which allows the canting bigot to be at the top. (Hoffding's protest against the use of the word "radicalism" applied to Nietzsche, in *Moderne Filosofer*, is thus beside the mark.) Wagner was a revolutionary; he fled from the Germans. And, Nietzsche adds, as an artist, a man has no other home than Paris—the city which, strangely enough, he was never to see. He ranks Wagner among the later masters of French romanticism—Delacroix, Berlioz, Baudelaire—and wisely says nothing about the reception of Wagnerian opera in Paris under the Empire.

In everything Nietzsche now adopts the French standpoint—that, for instance, of the elderly Voltaire towards Shakespeare. He declares here, as he has done before, that his artist's taste defends Moliere, Corneille and Racine, not without bitterness (*nicht ohne Ingrimm*) against such a wild (*wustes*) genius as Shakespeare. Strangely enough he repeats here his estimate of Shakespeare's Cæsar as his finest creation, weak as it is: "My highest formula for Shakespeare is that he conceived the type of Cæsar." It must be added that here again Nietzsche assents to the unhappy delusion

that Shakespeare never wrote the works that bear his name. Nietzsche is "instinctively" certain that they are due to Bacon, and, ignoring repeated demonstrations of the impossibility of this fatuous notion, he supports his conjecture by the grotesque assertion that if he himself had christened his *Zarathustra* by a name not his own—by Wagner's, for instance—the acumen of two thousand years would not have sufficed to guess who was its originator; no one would have believed it possible that the author of *Human all-too-Human* had conceived the visions of *Zarathustra*.

He allows the Germans no honor as philosophers: Leibniz and Kant were "the two greatest clogs upon the intellectual integrity of Europe." Just when a perfectly scientific attitude of mind had been attained, they managed to find byways back to "the old ideal." And no less passionately does he deny to the Germans all honor as musicians: "A German cannot know what music is. The men who pass as German musicians are foreigners, Slavs, Croats, Italians, Dutchmen or Jews. I am Pole enough to give up all other music for Chopin—except Wagner's *Siegfried-Idyll*, some things of Liszt, and the Italians Rossini and Pietro Gasti" (by this last name he appears to mean his favorite disciple, Koselitz, who wrote under the pseudonym of Peter Gast).

He abhors the Germans as "idealists." All idealism is falsehood in the face of necessity. He finds a pernicious idealism in Henrik Ibsen too, "that typical old maid," as well as in others whose object it is to poison the clean conscience, the natural spirit, of sexual love. And he gives us a clause of his moral code, in which, under the head of Vice, he combats every kind of opposition to Nature, or if fine words are preferred, every kind of idealism. The clause runs: "Preaching of chastity is a public incitement to unnatural practices. All depreciation of the sexual life, all sullyng of it with the word 'impure,' is a crime against Life itself—is the real sin against the holy spirit of Life."

Finally he attacks what he calls the "licentiousness" of the Germans in historical matters. German historians, he declares, have lost all eye for the values of culture; in fact, they have put this power of vision under the ban of the Empire. They claim that a man must in the first place be a German, must belong to the race. If he does, he is in a position to determine values or their absence: the Germans are thus the "moral order of the universe" in history; compared with the power of the Roman Empire they are the champions of liberty; compared with the eighteenth century they are the restorers of morality and of the Categorical Imperative. "History is actually written on Imperial German and Antisemitic lines—and Herr von Treitschke is not ashamed of himself."

The Germans have on their conscience every crime against culture committed in the last four centuries. As Nietzsche in his later years was never tired of asserting, they deprived the Renaissance of its meaning, they wrecked it by the Reformation; that is, by Luther, an impossible monk who, owing to his impossibility, attacked the Church and in so doing restored it. The Catholics would have every reason to honour Luther's name.

And when, upon the bridge between two centuries of decadence,

a **force majeure** of genius and will revealed itself, strong enough to weld Europe into political and economic unity, the Germans finally, with their "Wars of Liberation," robbed Europe of the meaning of Napoleon's existence, a prodigy of meaning. Thus they have upon their conscience all that followed, nationalism, the **nevrose nationale** from which Europe is suffering, and the perpetuation of the system of little states, of petty politics.

Last of all, the Germans have upon their conscience their attitude to himself, their indifference, their lack of recognition, the silence in which they buried his life's work. The Germans are bad company. And although his autobiography ends with a poem in which he affects a scorn of fame, "that coin in which the whole world pays, but which he receives with gloved hands and tramples underfoot with loathing"—yet his failure to win renown in Germany during his lifetime contributed powerfully to foster his antipathy.

The exaltation that marks the whole tone of the work, the unrestrained self-esteem which animates it and is ominous of the near approach of madness, have not deprived **Ecce Homo** of its character of surpassing greatness.

THE ART OF KISSING

I

THE ORIGIN OF KISSING

Defining a Kiss.—The most helpful dictionary, before attempting the tough task of defining a word, gives us the names of its father and mother, and often of its grandparents, as well as something of the history of its wanderings. We shall take our cue from the dictionary, and see what *kiss* and its synonyms came from. *Kiss*, that enchanter's magical wand conjuring up the entrance to the temple of the highest physical pleasure, comes from the Anglo-Saxon *coss*, a kiss; and is, by general gossip, descended from the Gothic *kustus*, a proof or test, which in turn is a close relative of the Latin *gustus*, a taste. It is also kin to the Anglo-Saxon *coesan*, to choose. We have so far, then, a test, a taste, and a choice, all involved in the pleasant idea of a kiss.

There are only a few other words in English with the same meaning. The antiquated *buss* is of uncertain origin, a byblow of unknown race; although it is clearly close to the Bavarian *bussen*, to kiss, and may be related to the Spanish and Portuguese *buz*, a kiss of reverence, which seems to have come from the Turkish *bus*, Persian *busa*, and Hindu *bosa*, a kiss. Some words, you see, roam further than the distance from Lake Kissimmee, Florida,

that Paradise of osculation, to distant Lapland, the only spot in Europe where kissing is not known. *Osculation*, the more highbrow word, has a prettier parentage, coming from the Latin *osculari*, to kiss, which developed from Latin *osculum*, a little mouth, the pretty mouth, this being the diminutive of *os*, mouth. *Smack*, defined as "a kiss, especially in a coarse or noisy manner," is akin to the German *schmatzen* and *schmacken*, to knock, or to smack the lips. *Salute*, the courtly word for kiss, comes from the Latin *salus*, safety, which grew out of *salvus*, from which we get salvation, and also a salvo of guns. Here we must quarrel with the word's parents: a kiss does not, as a rule, spell safety—it should rather be a glorious peril; the salvation it brings is at least not of the religious kind; and, if it sounds like a salvo of guns, we should ask the lady to put on a Maxim silencer thereafter, in order to avoid waking the neighbors.

So much for the family tree of kissing. As to its meaning, the dictionary says that a kiss is "a salute or caress, given with the lips." What an incredible understatement! Imagine a drowning man describing a life-buoy as a floating contrivance stuffed with cork! We much prefer Sam Slick's definition or description, that a kiss is like creation, because it is made out of nothing, and is very good. An old poet came closer than the dictionary, when he wrote:

What is a kiss? alacke! at worst,
A single drop to quench a thirst,
Tho' oft it proves in happier hour
The first sweet drop of one long shower.

Roots of Kissing.—Havelock Ellis, in Appendix A to volume IV of his *Studies in the Psychology of Sex*, has done most toward establishing the origins of kissing. The kiss as we know it, the tactile or touch kiss (as distinguished from the more widespread olfactory or smell kiss) is a specialized development of the sense of touch. The same is largely true, as Ellis points out, of the whole expression of physical love: the sexual embrace itself may be spoken of as a method of obtaining, through a specialized organization of the skin, the most exquisite and intense sensations of touch. The tactile kiss is confined to man, and largely to the civilized European man; but its roots go far below him, in the long upward climb of life.

Even as low as the insects, as Ellis points out, manifestations resembling the kiss are found. Thus snails and other insects, during their active mating, caress each other with their antennæ. Among birds, the bills are used for touches and caresses which partake of the nature of the kiss. Many mammals have touches and lickings, during the love episode, which are of kindred nature. Dogs, especially, smell, lick, and gently bite their mates. Yet too much significance must not be seen in these phenomena, since all our senses are merely extensions and specializations of the primitive sense of touch.

To travel closer to the immediate ancestors of our kiss, consider the baby. He regards his most reliable witness, in every case, as his tongue. Anything that his tongue can reach, or

that can be carried up to his tongue, is promptly tasted and, if found agreeable, licked. Animals far below the mammals share this trait with the human infant. Especially among the mammals, including man, the trait is prominent: and it traces back to the infant's pleasure in sucking the maternal nipple. The lowest mammal, it may be remembered, which is the intermediate stage to the forms of life below the mammalian, has no breasts: the young lick the mother's entire body, which exudes milk at many places. Among mammals, the overpowering instinct to touch with the lips and tongue, that food may be found and life preserved, is specialized into the inner command to touch and suck the nipple for the same purpose. Out of this grows the trait among children of kissing and licking everything and everyone that they like, including people and pet animals.

On the mother's side, there is an impulse almost as strong to lick her young. The mother cat will commence licking her young almost at the moment of birth; other mammals share the trait. The world's leading scientists are inclined to find the immediate origin of the kiss as we know it in the kiss bestowed by the mother upon her child. Negative evidence is of value here. The maternal kiss is not universal throughout the human world; but it is much more widely distributed than the love kiss, as we know it. Furthermore, there is no locality in which the love kiss is found, where the maternal kiss is missing.

Freud, the psychoanalyst, has laid great em-

phasis on the close love tie uniting mother and child—a tie frequently too close for the good of either. We have pointed out what the great Viennese overlooked: that the first separate male among animals, appearing at about the stage of the barnacles, was produced as a pocket-husband by the much larger female; and that the first separate male thus mated with his own mother. The roots of this mother-and-son complex, horrendously named the *Œdipus* complex, are found in this fact. Now we learn that the love kiss originated in the maternal kiss, as we might have expected to find.

An old poser is, Which kissed first, the man or the woman? The answer is simple: the woman. The mother's kiss, in the history of the race, preceded the kiss of love, as it does in the case of each one of us.

Another element enters into the kiss as we know it—the impulse to bite, increased during active loving. The teeth are used widely among animals, to grasp the female mate more firmly during the love episode. Of course, with the spread of the feminist movement during the last century, women have taken over much of man's activity, in all lines. Thus when we read references to a "biting blonde" we do not understand a blond Nordic sheik, but one of the sex long libeled as gentler.

The Two Kinds of Kisses.—Throughout the world there are two main varieties of kisses: the touch, tactile, or lip kiss, *osculus Europeanus*, and the nose or olfactory kiss, *osculus Asiaticus*. Most of this study will be devoted to the lip kiss: but the first lesson in the art

of kissing should be devoted to the **exotic** method called the nose kiss. This method may be stored for future reference by those essaying the kiss for the first time; but hardened veterans in love's sweet practice may at once proceed to try it out, along the lines indicated below.

So far, we have assumed the necessity for a manual of osculation. This is as good a place as any to indicate the two essential reasons for this book.

First, kissing is an art, and not a gift. Indeed, the whole practice of love is one of the most charming of the applied arts. No man or woman is born a perfect kisser, or a perfect lover. The teacher may be experience—there is no more competent instructor. But unless you wish your Cupid's Boulevard to be full of unnecessary ups and downs, of countless incidents where a little more knowledge on your part would have caused the love incident to become immeasurably more pleasurable both to the kisser and the kissed, you will not suffer from a few lessons given by an O.O.D.—doctor of osculations. Society, as now constituted, is sadly lacking in proper facilities for learning the technique of love and kissing. A hundred years from now, every well-equipped school will contain departments of Erotology, teaching theory as well as laboratory experimentation. If I live that long, I expect to become at one leap a full-fledged professor in kissing. I may even rise higher.

Second, American men and women are woefully ignorant on the proper technique of love,

and of the kiss. There is a Puritan tradition behind many of us, which forbids kissing any woman but one's wife (or, by grudging extension, one's fiancée): and which even forbids kissing one's wife on Sundays and holy days. The latter prohibition, some husbands hold, might well be broadened; but the very spice of love lies in kissing one who is not one's wife or husband, if popular belief is at all right. This Puritan tradition has had its weight; it has made women offer lips no more attractive than damp salt mackerel, and men try to kiss a human being as if she were the man's mother-in-law. Then there is the recoil from this tradition, which makes a man's first kiss like a vacuum cleaner, often alarming the girl for life; and a girl's first kiss so marvelous, that all proper sense of climax is lost. There is ample room for a little common science on the heavenly art of kissing.

Leaping away, then, from the European or lip kiss, we find that much more widely distributed throughout the world of men is the nose or olfactory kiss. As performed by the Japanese, this kiss involves three distinct stages:

1. The man lays his nose gently upon the beloved girl's cheek.
2. He draws in a long nasal inspiration, lowering his eyelids as if in the extremity of bliss.
3. The lips give a slight smack, without touching the girl's cheek.

Kisses similar to this are the staple product in China, India, Ceylon, much of Africa. The connoisseur in kisses might try this variety: but, compared to many of the Occidental varie-

ties, it will seem as tepid and insipid as warmed-over buckwheat cakes, or campaign pledges a week after election. Yet, throughout most of the world, our kiss is regarded as inelegant to the highest degree; and the nose kiss as the height of human ecstasy. Similarly a man who had never eaten anything but hardtack might regard it as the height of culinary art.

II

THE HISTORY OF LIP KISSING

In Antiquity.—The antiquity of lip kissing may be traced, in no very pronounced form, to the Aryan and Semitic peoples. Among the ancient Arabs, and their Semitic relatives, the Hebrews, the kiss had many uses, most of these being related to religion. The kiss was used as a direct method of worship of some gods: "Let the men that sacrifice kiss the calves" (*Hosea* xiii 2). Similarly the Lord said to Elijah: "Yet I have left me seven thousand in Israel, all the knees which have not bowed unto Baal, and every mouth which hath not kissed him" (*I Kings* xix 18). A stranger religious rite is referred to by Job (xxxi 27) when he refers to kissing his hand to the moon or sun, as a symbol of worship.

The kiss of salutation, especially among men, was common. Thus Jacob kissed his father Isaac; Joseph kissed all his brethren, his sons, and his father; Aaron kissed Moses, and Moses in turn kissed his father-in-law Jethro; Samuel, when he anointed Saul as king, kissed him; David kissed Jonathan, and later his son Absalom; and Absalom kissed all who came to see him, in order to win their allegiance by this grant of near-royal favor. Later all the Macedonian Christians kissed Paul, as he was leaving them. This kiss was extended, among the early Christians, to in-

clude women as well: the perfect Christian greeted both man and women with a "holy kiss," or a "kiss of charity." There are some Christians whom it would indeed be charity to kiss—but the custom had its advantages. David's kiss to Absalom betokened reconciliation with the rebel; and the king's command, in the Psalms, was that all should kiss the king, the Lord's Son, or be genially wiped out for omitting the kiss of subjection.

The kiss among relatives was not unknown: Laban eldered Jacob for not permitting Laban to kiss his sons and daughters, and Elisha asked permission of Elijah to kiss his father and mother. The kiss betokened approbation also: "Every man shall kiss his lips that giveth a right answer" (*Prov.* xxiv 26). This is a custom we are glad has passed. Indiscriminate kissing from many men in public life, for instance, we would regard as a punishment beyond any that savage ingenuity could devise. The woman who had sinned kissed the feet of Jesus, in token of her reformed adoration. And there was the kiss of treachery, given by an enemy, warned against in Proverbs, and used by Joab in murdering Amasa, and by Judas in delivering Jesus to the posse that sought him.

So far, we have not had the kiss of love, between man and woman. Naomi's kisses to her daughters-in-law were not quite the love that we mean, but we find it, too, sparsely scattered through the Bible. Thus, upon their first meeting, we read: "And Jacob kissed Rachel, and lifted up his voice and wept" (*Gen.* xxix 11). The kiss is understandable, for

Rachel is said to have been a young and attractive damsel; but why the weeping? Something must be left out of the story: perhaps she would let him kiss her but once. And, in the great love song of the Old Testament, we find what we are seeking: "Then let him kiss me with the kisses of his mouth" (*Song of Solomon* i 2). We can overlook countless kissings of the dust, to show humble subjection, for one real description of the kiss of love like this. The Old Testament worthies were on the right track, after all. The other kisses made us feel like the British soldier in Kipling's *Mandalay*:

An' I seed her first a-smokin' of a whackin' white
cheroot,
An' a-wastin' Christian kisses on an 'eathen idol's
foot:
Bloomin' idol made o' mud,
Wot they called the Great Gawd Budd—
Plucky lot she cared for idols when I kissed
'er where she stud!

But we have arrived at last at a real kiss, and with this we can pass onward.

We learn that Arabian women and children kiss the beards of their husbands and fathers, which must be about as thrilling as kissing a shredded wheat biscuit or a clothes brush. The Mohammedans, on their pious pilgrimage to Mecca, kiss the sacred black stone, which was worshipped long before Mohammed was born. In Egypt, the inferior kisses the hand of a superior, generally on the back, but sometimes on the palm; the son kisses the hand of his father, the wife that of her husband, the slave and servant that of their master. Here the kiss spells subjection. We know that, among

the Greeks, Homer scarcely knew the kiss, and later poets mentioned it only rarely.

When we come to Rome, the kiss has a more varied practice. There was the religious kiss, similar to Job's: persons were treated as atheists who would not kiss their hands when they entered a temple. In early Roman ages, the kiss was given by inferiors to superiors; in the pre-Cæsarean republic, this fell into disrepute. The emperors restored the practice of kissing hands, which gradually was etherealized until the crowd had to kiss their hands to the emperors, as one would to a god. Solomon spoke of the same custom among the Hebrews, and Cortez found it among the Mexicans whom he pillaged. A strange custom in Rome was to give the dying a last kiss, in order, as they thought, to catch the dying breath. As for kissing among men, let Martial, the old satirist, speak for Rome:

Every neighbor, every hairy-faced farmer presses on you with a strongly scented kiss. Here the weaver assails you, there the fuller and the cobbler, who has just been kissing leather; here the owner of a filthy beard, and the one-eyed gentleman; there one with bleared eyes, and fellows whose mouths are defiled with all manner of abominations.

He gives the other side of the picture, when he describes the kisses of his favorite:

The fragrance of balsam extracted from aromatic trees; the ripe odor yielded by the teeming saffron; the perfume of fruits mellowing in their winter repository; the flowery meadows of spring; amber warmed by the hand of a maiden; a garden that attracts the bees.

That Roman love-kisses were not frigid is indicated by many lines in the poets. Thus Catullus wrote:

Whom wilt thou for thy lover choose?
Whose will they call thee, false one, whose?
Who will thy darted kisses sip,
While thy keen love-bites scar his lip?

Horace, in one of his odes, refers to the same nibbling propensity of Roman women and men:

Or on thy lips the fierce, fond boy
Marks with his teeth the furious joy.

The Spread of Kissing.—With this good start, the admirable custom of kissing spread over the world: but its progress was slow. It did not conquer the Orient: Japan, China, India, still have small use for it. Among nearly all the black races of Africa, not only is the kiss between lovers unknown, but the mother's kiss is usually unknown. Among the American Indians, the lip kiss was not found, although the mouth might be used in the love episode. The Fuegians, in South America, have the custom of lovers rubbing their cheeks together. The present limited kissing among Australian natives may be due to white lessons.

Today, the kiss is known through Europe, and among Europeans everywhere, with the single exception of Lapland. Yet, even in Europe, it is a comparatively modern discovery, spreading first to the higher classes, and then down. One medieval ballad has the lady of the castle discover that a varlet has substituted himself for the absent lord during the night, by remembering that the varlet embraced with-

out kissing. The Celtic tongue, as Rhys found out, has no word for *kiss*, but uses the Latin *pax*, which means literally "peace," because it occurs in the religious phrase *osculum pacis*, kiss of peace. Yet the Welsh Cymri early learned kissing. Its religious use is widespread. Among European pagans, house gods were greeted, on entering and leaving, with a kiss. The Eastern and Western churches have derived from this such customs as kissing the relics of saints, the foot of the pope, and the hands of bishops. The surviving custom of kissing the Testament, on administering an oath in many of our courts, is a vestige of the dying religious usage.

Yet the kiss made its way slightly into the East. The Arabic *Perfumed Garden* recommends the kiss, especially on the inside of the mouth. In feudal times in Europe, the vassal kissed the hand of his superior, or some symbol of the lord. Pliny may have been facetious when he said that the custom of kissing women originated in Rome, as a method of the husband's to test whether his wife had been drinking liquor or not. The custom, when extended to other women, justified itself. In France, the good girl is supposed to save her lips for her husband. This is so true, that Mme. Adam wrote that, when she first let a man kiss her as a girl, she thought she had parted with her virtue, and was sure that a child would follow the kiss. A similar misconception prevails among writers for and censors of American movies, if we are to judge by their product.

But in France the custom was once far more liberal. When the gallant cardinal, John of Lorraine, was presented to the Duchess of Savoy, she gave him her hand to kiss. The indignant churchman exclaimed, "How, madam? Am I to be treated in this manner? I kiss the queen, my mistress, who is the greatest queen in the world; and shall I not kiss you, a dirty little duchess?" Without more words, he caught hold of the princess and kissed her three times on the lips. France, alas, retains the custom of kissing among men. During the World War, every decoration given by a French general was accompanied by a hearty smack upon both cheeks. In an army of Amazons no one might object to this; but deliver me from formal masculine osculation!

In Russia, the Easter salutation is a kiss. Everybody kissed everybody, under the old regime, on this occasion. The Czar, who must have been a glutton for punishment, had to kiss his family, retinue, court, attendants, officers on parade, the palace sentinels, and a select party of private soldiers. In any part of Russia the poorest serf, meeting a high-born dame on the street, had only to say "Christ is risen!" to receive "Christ is truly risen" in reply, accompanied by a resounding kiss. Today it is probable that one of the old serfs is not above kissing a duchess who salutes him with the old sesame. It was the great Catherine of Russia who instituted assemblies of men and women, to aid the cultivation of manners. One of her rules for maintaining decency was: "No gentleman should force a kiss from, or

strike a woman, in the assembly, under pain of execution." If manners were, as this rule indicates, a trifle crude under Catherine, under her husband, Peter the Great, who preceded her, they were a wee mite rougher. In the charming *Peter the Czar*, by Klabund, Peter's love technique is described:

The Grand Elector of Brandenburg led the Polonaise. The Czar led the Duchess of Mecklenburg, a delicate blonde. When the Polonaise had come to its end in the Hall of Mirrors the Czar and his partner were nowhere to be found.

He had drawn her into a side apartment and had violated her behind a portiere. And he was so powerful that she neither could nor would defend herself.

And then he left her.

She drowns herself in the river outside the palace.

But the Czar had already forgotten her Then he fell asleep and dreamed of a mouse of the steppes. She had a face like the Duchess of Mecklenburg and squeaked softly.

He bit off her head and flung the tiny carcass upon the fields.

Peter's technique was a bit too crude. Perhaps, if he had read this handbook of love and kissing, he might have loved the duchess with more diplomacy and more general enjoyment.

In Norway, one perplexing and, at times, delightful salute is furnished by one's hostess. The good woman always tucks her guest into bed for the night, and then gives him a resounding kiss upon the lips. As a rule, however, there is no second kiss. The kiss is known

in Finland, but it is frowned upon as something tending upon the immoral. Iceland—thus does a frigid climate affect current standards of morality!—has elaborate penalties for most forms of kissing, including exclusion from the country for kissing another's man's wife, and a heavy fine for even a permitted kiss from an unmarried woman. Far to the south, in Paraguay, the custom requires you to kiss every lady you are introduced to. Since, at one time, all the females above thirteen chewed tobacco, this is a mixed blessing, even with maidens as attractive as South America produces.

In England, the story is that the kiss was introduced by Rowena, the beautiful daughter of Hengist the Saxon marauder. At a banquet given by King Vortigern to his Saxon allies, the princess is said to have kissed the delighted monarch upon the lips. By the time of Edward IV, a guest was expected, upon arrival and departure, to kiss his hostess and all the ladies of the household. In 1497, when Erasmus was in England, the practice was at its height; the good reformer approved:

If you go to any place, you are received with a kiss by all; if you depart on a journey you are dismissed with a kiss; you return, kisses are exchanged; people come to visit you—a kiss the first thing; they leave you—you kiss them all around. Do they meet you anywhere?—kisses in abundance. Lastly, wherever you move, there is nothing but kisses—and if you had once tasted them! how soft they are! how fragrant! on my honor you would not wish to reside here for ten years only, but for life!

John Bunyan, author of *Pilgrim's Progress*,

writing over a hundred years later, viewed the spectacle more sourly: he abhorred "the common salutation of women," and punctured the arguments of those who called these "holy kisses" thus:

But then, I have asked them why they make bawks? why they did salute the most handsome, and let the ill-favored ones go?

The kiss at the point of death is not unknown in English chronicles. When Nelson was dying on board his flagship, he turned to his faithful friend at his side: "Kiss me, Hardy!" These were the last words he uttered. Sir Walter Scott, when dying, took leave of his friend Lockhart in the same fashion. The kiss among men, once popular in England, came over when England aped French notions of chivalry. Germany has the same custom: in 1888, when the Emperor William met the Czar at St. Petersburg, the two rulers embraced and kissed several times. As the kiss among men entered England, the general kissing of women declined—all due to the innovations of the "old goat," Charles II, at the time of the Restoration. Even canny Scotland has widespread kissing chronicled in several periods.

The state of kissing in the United States today is generally well known: it is a far cry from our liberality to the old Blue Laws of Connecticut, with a heavy penalty for kissing one's wife on Sundays or fast days, and, for all we know, boiling in oil for kissing the wife of another. It is still unlawful to kiss a girl

against her will: the courts awarding damages to the girl varying from \$750 in Pennsylvania and \$2,500 in New York, to \$1.15 in New Jersey. And while there are Anti-Osculation Leagues, with stern medical warnings of the danger of kissing, the custom shows no evidence of diminution. The kissing of children on the mouth, even by parents, is liable to be harmful; if the medicos are to be believed, diphtheria, malaria, scarlet fever, colds and pulmonary taints, blood poison, and at times death, lurk in the kiss. Let the children, then, remain unkissed, except for the cheek: but, with the proper girl, we would brave ten million germs for one taste of what the old Georgia farmer described as "sucking sugar."

III

THE TECHNIQUE OF THE KISS

The First Kiss.—The desire of a man to kiss a girl, and of a girl to be kissed by a man, and to kiss him in return, assumes a heightened form when adolescence is reached by each. Kissing, from the standpoint of its biological function, is a prelude to the ultimate love mating. From the standpoint of inexperienced kissers, it is a temporary substitute for the love hunger,—a substitute which may be all that the man or girl demands for weeks or months or years. From the standpoint of experienced kissers, it is a prelude to the mating; and, where the kissers have not previously mated, is a sort of preliminary test, to see if they are suited.

The immediate object of kissing is mutual pleasurē. If you who read this, whether man or woman, ask me whom you are to kiss, I can only answer that you alone can give the answer. No general rules can be laid down. Many men prefer a girl shorter than themselves: yet the ideal mating might conceivably mean equal height, and there are men who prefer a girl taller. As to whether you wish the girl younger or older than yourself, that too depends upon your inclination at the moment. As a rule, the young man often desires an older woman, who is more experienced and—and, in brief, comes closer to his ideal woman,

based largely upon his mother. As the man grows older, in proportion as his head remains hollow he desires a younger and younger girl. This is partly because he finds an experienced woman superior to himself: and the average "lordly" male, in all sadness I must confess, prefers an inferior woman to one the man's equal or superior. The choice of age for youth has another meaning as well: the older person, consciously or not, wants to restore his own lost youth in the kisses and caresses of a younger person. This, from the standpoint of the older person, is admirable. Some dark men prefer blonde girls, some prefer girls of their own coloring; and in every case generalities cannot be stated with certainty. If you want to kiss a girl or woman, set about doing it, or, at least, finding out if it will be well received.

The immediate object of kissing, mutual pleasure, as distinguished from the ultimate object, the love embrace, requires that both man and girl be willing. There is no pleasure, except in a man slightly perverted, in kissing a girl entirely against her will. So the man's first task is to find out whether the girl wishes, or is ready, for him to kiss her. How can he find out? The one safe rule is, not by asking directly. The girl rightly assumes that the man who asks for a kiss lacks the experience that will make the act worthwhile to her. The indirect methods vary enormously. It's all right to talk about kissing, and get the girl to agree that a kiss isn't any harm, when people *really* like each other. She will see through

the subterfuge, of course, but, unless she despises its obviousness too much, she will not resent it. Another way is to progress by tentative caresses—touching her hand as if by accident, holding it, sitting close and closer to her, kissing (as if shyly) her shoulder, and the like. If the man's caress is clearly distasteful to the girl, the world is tremendously full of other girls. One or more of the others will bring you more happiness in love, be sure of that. Give the unpleased miss up as a bad job, and move on.

But a pretended resistance is another thing. There are many girls who say "No!" to every approach, and yet thereby intend to invite further and further pursuit on the man's part. How can you tell the real from the sham? Rather than miss a good kiss, if there is any doubt in your mind, proceed on the assumption that the girl really wants a kiss. The very feminine girl frequently pretends this resistance: perhaps to entice you on, perhaps because she has been taught that such things are wrong, and does not yet know that they are right; and perhaps because her temperament requires her to be forced every step of the way. If you can stand the shouldering of the temporary responsibility, in other words, if you enjoy the chase of the victim who pretends unwillingness, stick to her until you have kissed her thoroughly. Surprisingly enough, the girl who seems very masculine often has the same trait. Her pretended masculinity may be a sham; and she may long all the time for your kisses and caresses. The only way to find out

is to go ahead: never believe the spoken word in such cases, and believe her actions of rejection only when repeated the Biblical seventy times seven times.

Let us assume that the man has ascertained that the girl is willing to be kissed. If she is to keep up her pretense of opposition, any legitimate surprise kiss is permissible. For my own part, I prefer to leave the protesters to others; the world has enough girls who do not fake this opposition. There is no reason why the protesters should not be left kissless, except for men who enjoy overcoming a struggling faked opposition.

For the girl who is willing to be kissed, the technique of the first kiss requires unusual care and artistry. Don't hurry, as if you had a train to catch. Don't stumble over yourself, and find yourself kissing her ear or hair instead of her mouth—which she will regret as much as you. Take it slowly, in somewhat the following fashion:

If the girl is really being kissed for the first time, or is unused to kissing from men, or shams feeble resistance, it is well to hold her so that she cannot avoid the meeting of lips, when it is finally offered. If you and she are standing, either press her body firmly against your own, or hold one arm so that it can catch and hold her at a moment's indication of squirming away on her part. This with one arm: have the other placed around her shoulder, at the back of her head, so that, if need arises, it can grasp her head and hold it in place for the bestowal of the kiss. If you

are seated, the same rule applies for the two arms; unless you are so sure of your ground that you can place the two hands respectfully on her two cheeks, thereby tilting her face to the proper angle. Then without hurrying, bring your lips up until they meet hers. Keep your lips closed: make the kiss chaste, respectful, and not too long. Its purpose, in other words, is not to frighten the timid un-kissed darling.

Even if you are bored with these slow preliminaries, remember what is in store for you, and let your face register intense pleasure. Let your expression say, either that this is the first kiss you have ever had, and that you already feel transported to Paradise; or that, if you ever kissed before, you have forgotten everything in the universe except this particular girl and her particular kiss. Actually act, at the moment that the kiss is completed, as if that is all you expected from the girl. For the moment that is what she will actually feel. Quickly enough, she will feel differently.

Only in the rarest cases is it wise to stop with one kiss. Better let both of you miss a trip to Europe, than stop at this point. Normally, you will still continue to let your arms and hands touch her as intimately as possible. A reassuring pressure of your fingers upon her arms, a head bowed, and, in cases, a murmured "I'm sorry, darling! I didn't really mean to—" . . . anything to restore her confidence in you, all these come in handy. Then artistically begin to lose control of yourself. Her cheeks next—they must be kissed—oh, so respectfully! A little kiss-nibble at the corner of her mouth tastes

inexpressibly sweet, and continues to restore her confidence in you. It lulls her suspicions, and makes her think that all you wished was the one small kiss.

An important next step comes in well here, and may indeed be used as a prelude, in cases where the girl seems absolutely unwilling. Gently bend down her head, and kiss her on the eyelids. If this is the beginning of the whole matter, you may even explain reassuringly what you are about to do. While you are feasting on this kiss, by accident, as it were, you can so tilt her face that the lips are yours. Stray to the ears, for a kiss and a little nip; and then come down to the neck. This is a warm comfy kiss, and, if the girl wears a dress even moderately low-cut, is especially thrilling to her. Now, for the first time, you can begin to put some soul, some unconstraint, in the caress. Holding her body tightly to yours, kiss her passionately on the neck. The touch is intimate and at the same time not calculated to rouse suspicion. It will rouse her insensibly. Keep this up, until you feel her body relaxing in your arms. Now is the time to return triumphantly to the lips; if she tries to get away, use a reassuring "Just one, darling! Just one tiny little one—" What you say makes no difference; the thing to do is to get there. Once you have rearrived at the lips, you may kiss her as passionately as she is able to stand.

Kissing passionately means kissing with more than the closed lips, in general. The *Persian Perfumed Garden* recommends kissing with the whole inside of the mouth. Let your

lips now surround hers, as if they were going to engulf them. The electric tingling sensation is hers as well as yours. Sooner or later, she will follow your example, and open her lips slightly. Now is the time to let your tongue speak wordlessly for you. After a long and intense kiss, accompanied by a definite hug or squeeze, you can sit back for a moment's breathing-space. Your girl is no longer unkissed: she has reached the class of the kissed girl, the experienced girl.

The Sophisticated Kiss.—The kissing of an experienced girl is a different matter. Again, it is the man's task to decide, from all the evidence furnished by the girl's reception of his tentative approaches, just how experienced she is, and just how she expects to be kissed. A girl only slightly experienced must be kissed, at the beginning, as slowly and only a bit less respectfully than the sweet unkissed; a girl fully experienced in love will regard such tardiness as a proof that the man is, to use the elegant slang, as slow as a train on the Erie. The general rule is to give as much as you are expected to give: and, if you are not too much of a blunderer, it is better to err on the side of giving too much, than too little. Women may forgive an excess of passion in the kiss: for, after all, they too unconsciously desire to be roused into passion. A woman rarely forgives the man who underkisses her, who gives her less than she desires.

A girl's kiss is self-revealing to a man. If the lips are kept closed and the kiss is deco-

rous, this is a warning to go comparatively slow. If the girl's lips are opened, this says that the track is clear. If the mouth is fully opened, and the girl kisses as actively as the man, it might not be a bad idea to cancel all your engagements for the next week or so, and give the girl all the kissing she wants!

With a girl who is experienced, the hug, or body embrace, is very important. This should be more determined now. The first variety is where the man's arm, around the girl's back, presses her bosom against his: and a pressure that temporarily stops the breathing of both of them, at times, is relished by both. A later technique is for the arm to fall at least as low as her waist, and thus lock the two bodies together, while the lips complete the communion. The poet describes it:

Then will people passing
By the lit place
See our shadows marry
In a gray embrace.

The lip kiss now lasts longer than with the inexperienced girl, of course: and tends gradually to become what is called the soul kiss. It need only stop short of the astonishing kiss Mrs. Browning describes in *Aurora Leigh*, a kiss—

As long and silent as the ecstatic night.

We are not amphibious enough to endure such a kiss. We would have to come up to breathe from time to time. But, to those who are able, this sort of sheik buss is recommended. Toward the North Pole, where the night is six

months long, the kiss described has distinct possibilities.

Yet the soul kiss, as the exclusive method, would grow wearisome. The bird peck variety of kiss, which flits tantalizingly all over the girl's face, and strays down to the neck and its environs, is a pleasant intermission between longer osculatory sessions. The three varieties of the soul kiss might be described as (1) that in which the two tongues involved perform a sort of hand wrestle with each other; (2) that in which the girl's tongue is withdrawn inward as far as possible, giving the man the maximum of territory to explore, and (3) that in which the girl does the exploring. Fancier variations of this will suggest themselves. And, of course, in all varieties of the kiss, the thrill is immediately communicated throughout the entire body.

A Girl's Kiss.—Although, as we have seen, the female kissed first in the shape of the maternal lick followed by the maternal kiss—in the ordinary intercourse between man and woman, the man kisses first. The reverse is true, when the girl is more experienced, and is perhaps a woman with a younger man. Then she may with propriety assume the role of the man, gently initiate the un-kissed youth, as in our description of the initiation of the un-kissed girl; and thereafter lead him up the long path to osculatory sheikdom.

In any kissing, where the man has started first, the one wrong thing is for the girl to remain passive, unless this be merely as an intermission. She should lag, in ideal kissing,

a little behind the man; but only a little behind him. As the fire of the kiss tingles throughout the veins of both, it is her cue to respond almost as ardently, and never be merely negative throughout the experience. Few men like the continuing sensation of kissing the stone image on top of a sarcophagus. Nor does the girl secure her greatest pleasure by utter passivity. "It is better to give than to receive" applies to both parties in a kissing episode.

The proper interruption for a spell of kisses given by the man to the girl is for her to reciprocate, and return the kisses. This advice is almost unnecessary, for women are disposed to return with interest the kisses given them.

Love, to man, is leaping fire,
Dying with its fed desire.

But, in woman, it will glow
Most, when man would have it go.

Hope no more of man than this,
Maiden, when you take his kiss:

That his loving will be done
When its victory is won.

Do not scold her drowsy ardor,
Lover; she will cling the harder,

Taught that your love, even at ending,
Lights a life for her long tending.

This is as good a place as any to say a word about the actual significance of the kiss. Pleasant as it is, its indiscriminate use is an abuse. Its proper function is as a prelude, not as a goal achieved. Men and women who play

at kissing, intending to stop there, are playing with a fire that easily becomes uncontrollable. Iwan Bloch, in *The Sexual Life of Our Time*, says that there is a quantitative difference only, and not a qualitative difference, between the chaste stroking of the hair and the first timid kiss, on the one hand, and the ultimate love rapture. Someone has said that the first intentional touching of the skin of the beloved one is a mating half achieved. *The Perfumed Garden* ends its description of loving:

And the most intimate embrace
Leaves the heart cold and unsatisfied
If the rapture of the kiss is wanting.

Goethe describes the ultimate kiss thus:

Eagerly she sucks the flames out of his mouth;
Each is conscious only of the other.

His final word is that it is a true saying that the woman who permits a man to kiss her will ultimately grant him complete possession. Indeed, a sensitive woman values her kiss as highly as the last favor. Unless a kiss be exchanged merely as a test of mutual attraction, it is well to recall that chastity was accurately described by Lester Ward as selection, and not abstinence: and to select with great care those whom you admit to the gate of kissing, which is almost invariably, with men and women of any maturity, the last locked gate upon the way to the earthly Eden.

IV

SPECIAL PROBLEMS

Size of Mouth.—In any kiss, the attitude must be of complete abandonment to the particular kiss involved. It is almost suicidal to go to a kiss with any distaste in the mind—suicidal, that is, to the full pleasure of the kiss. You must make yourself believe that the girl you are kissing, or the man you are kissing, is the most desirable person in the world. For the moment she or he must be: otherwise, it is better to postpone or abandon the kiss. Kiss with your whole heart, or not at all.

When approached in this mood, the problem of the particular geography of the girl's mouth (or the man's, on the part of the girl) becomes, not a matter of taste or distaste, but a matter of engineering. The excessively small mouth is easily kissed, and at times is far less satisfying than a good mouth-filling pair of lips. The medium-sized mouth, in normal cases, gives the greatest pleasure. When the man is confronted with a mouth whose general stretch, if laid on the ground, would apparently reach from Ft. Desbrosses, Alaska, to the corner of Main Street and Zenith Avenue, Skaneateles, New York, the matter is purely one of measuration in applied physics. The safest way is to start at one corner, and gradually progress toward the center, covering ground as effectively as possible in the process. The foolhardy at times make a dive for the very center at the beginning, and may encounter

the emotion of having stepped off of a neck-high stretch in the river into a pool of immeasurable depth. If this is definitely the case, the only thing to do is to paddle toward one side or the other, in the hope of reaching firm ground once more.

Something as to the kissability of a girl is taught, ordinarily, by the external appearance of her teeth. We are indebted to Freud for the discovery that protruding teeth, while they may be esthetically a blemish, are at the same time an advertisement of a passionate nature. Such teeth usually derive from the girl's habit, while an infant and a small child, of continuing to suck at pacifiers, fingers or any object handy, until she has pulled her teeth out of normal alignment. This continuing at sucking indicates a strong sexual nature: and the lack of flawless beauty in such girls is more than made up for by their ample passion. The girl with prominent teeth is usually made love to and mated far before her sister, who is built more on the lines of a Grecian baby grand Venus.

Kissing Relatives.—The matter of selectiveness determines what kind of kiss you give to your relatives. In the South, the custom of discovering that you and any pretty girl you meet are "kissing cousins" is an enjoyable one; and, needless to say, having selected such cousin with proper discrimination, you treat the kiss as the means to enjoyment as great as that with any girl who measures up to your particular standard of female attractiveness. With relatives in general, especially with

homely aunts, mothers-in-law, and esteemed grandmothers, the cheek is always handy, and is recommended, unless you are fond of the taste of vinegar or peppermint-drops, if the old lady is partial to that Victorian comfit.

The girl, in letting male relatives kiss her, had best be guided in similar fashion. Let her prize her lips, as a medium of osculation, so highly that she does not let them be sampled by any whom accidents of blood give a partial right to. If the young man is attractive, or the old man either, and you want the sensation of the kiss, this is your privilege; but a deft movement will always suffice to substitute a cheek for the more intimate lip smack.

Kissing Your Own Sex.—Physical love between women and women, or between men and men, is looked upon with repugnance by the normally developed among civilized people. Far from being the highest form of love, as Socrates and Sappho respectively described it, we know today that this is an innately sterile type of embrace, and is hence to be avoided by the normally matured.

The custom of men kissing each other, still found in certain countries among our civilized brothers, originated in a time when Socratic love was not essentially uncommon. It has largely passed out as a social custom among us. If a man feels much pleasure in it, it is a matter for self-investigation and understanding, and points toward the perverse. It may be largely disregarded in this study.

The custom of women kissing each other is far more common. It is undeniable that the

kiss is, at times, a disease-spreader; lovers willingly run the risk of this contagion. Indeed, modern wisdom holds that germs of many diseases are constantly present in the organisms of all of us; and, if we continue in normal health, with normal care of the body and plenty of fresh air and as much outdoor life as is possible, the body protects itself from yielding to these diseases. Thus lovers, otherwise healthy, may kiss with hardly any fear of contagion. Kissing among women, where there is no such overpowering love interest, is on a different footing. If the woman receives excessive pleasure from it, this is a matter for self-investigation and understanding, and points toward a perversion. If it be taken and given merely as a formal courtesy, this is a matter to be determined by individual preference, and by the customs of the social group in which you move.

The Kiss Complete.—When the love relationship has moved a stage beyond mere lip kissing, it is on the road toward that ultimate enjoyment, in which the whole body of each lover is a viand for the other's delectation. Shakespeare hints such a kiss for us, in *Venus and Adonis*, where he describes the experienced goddess with the callow youth:

Even as an empty eagle, sharp by fast,
Tired with her beak on feathers, flesh, and bone,
Shaking her wings, devouring all in haste,
Till either gorge be stuffed or prey be gone,

Even so she kiss'd his brow, his cheek, his chin,
And where she ends she doth anew begin. . . .
"Fondling," she saith, "since I have hemm'd thee
here

Within the circuit of this ivory pale,
I'll be a park, and thou shalt be my deer;
Feed where thou wilt, on mountain or in dale;
Graze on my lips; and if those hills be dry
Stray lower, where the pleasant fountains lie. . . .

A thousand kisses buys my heart from me;
And pay them at thy leisure, one by one.
What is ten hundred touches unto thee?
Are they not quickly told and quickly gone?
Say, for non-payment that the debt should
double,
Is twenty thousand kisses such a trouble?"

Alas, Adonis was not a soul-kiss sheik: and preferred to be slain by a boar, rather than be loved by a goddess. Something was wrong with that boy.

The caresses and kisses that mark the height of love's ecstasy, in many cases, have no limitation of time or place. The most intimate kisses, as Freud points out, are not perversions, if used as proper preludes to the ultimate mating: they are perversions only when they substitute for the mating. The kiss itself, as he shows, may be a perversion—the lip kiss, that is. So great is its thrill, that there are men and women who use it instead of the mating, to secure love's thrill: and this is not normal. The stern biological compulsion to normal men and women, that they mate fully and reproduce their kind, worded in the old book of Genesis:

And God blessed them, and God said to them, Be fruitful, and multiply, and replenish the earth, still stirs within us: and there is a price to pay, if it be ignored. Those who flee from kissing and love for a lifetime, through some delusion that they have chosen a higher way,

are afflicted with all the morbidities of ingrowing love, which is quite as unnatural and painful as an ingrowing toenail. If man or woman is so unfortunate as never to be approached in love, or as not to find a woman or man who will reciprocate to his or her approaches, why, that is as unfortunate as the lot of the eagle, caged matelessly away from the sky. But such cases are so rare as to be almost negligible. If you want to love, you can, and you can find somewhere your adequate mate. And when the mate is found, and the love rapture grows like the crescent moon toward its full, you will discover the complete kiss, and the ineffable delight that it brings. This is the time to forget all false reticences, all teachings that thus and so is not done by nice people, and all the rest of the shoddy that masquerades as truth. It is love's hour, and your share in it is to yield yourself wholly to the golden spell whose physical rapture is the crest of man's physical existence. In one of the Eagle Sonnets, the lover sings:

You called me, a fantastic architect,
To build you airy and enduring towers
Above a dream-world rudely torn and wrecked,
In the sweet gossip of unhurried hours.

And then the transition:

And now you have another word for me ,
A singing cry out of your hungering
That ends the tease of golden fantasy. . . .
And I am altered to a simpler thing,
Only quick lips to summon rapture near,
And a young body like a lifted spear.

In this high mood of utter giving and receiving, love at its finest comes, and stays, if the lovers have chosen well.

V

KISSING CUSTOMS

The Religious Kiss.—We have already referred to the religious usages concerning kissing, as revealed by the Bible and the records of classical nations. One of the apocryphal books of the New Testament supplements this account, by stating that John the Baptist was conceived in a chaste kiss of his parents. The kissing of holy relics, of the pope's foot and the bishop's hand, are all relics of heathen customs. Charles Reade's *The Cloister and the Hearth* gives the ancestry of some Christian kisses:

Kissing of images and the Pope's toe is eastern paganism. The Egyptians had it of the Assyrians, the Greeks of the Egyptians, and we of the Romans, whose Pontifex Maximus (high priest) had his toe kissed during the Empire. The Druid's kissed their High Priest's toe a thousand years before Christ.

A variant of this crept into England. Anciently the kings and queens of England ceremoniously washed the feet of beggars, and kissed them, thereby imitating Jesus, who washed the feet of his disciples. Moreover, the monarch had to kiss as many feet as the years in his or her age; presenting a gift to each, called a maunday; the day of the ceremony being called Maundy-Thursday. When she was thirty-nine, Queen Elizabeth performed this rite: that is, she smacked the feet of

thirty-nine commoners. James II, in 1731, his forty-eighth year, was the last English sovereign to pretend the humility of this public osculation. In 1530, Cardinal Wolsey, then fifty-nine, kissed the feet of as many poor men, and presented to each twelve pence in money, three ells of canvas to make shirts, a pair of new shoes, a cask of red herrings, and three white herrings. Thus do the pagan rites blossom in advanced religions.

The betrothal and nuptial kiss have origins partly religious. The nuptial kiss in church, at the end of the marriage service, is strictly by the York Missal and the Sarum Manual. Evidently it took a church law, even in those days, to require a man to kiss his own wife.

On Special Occasions.—Among the most popular of fairy tales is that of the Sleeping Beauty, who was aroused out of her years of slumber by the kiss of the handsome prince. Passing by the obvious symbolism in the story, it is interesting that a custom developed throughout Europe, perhaps as a result of the story, which permitted a man who found a woman asleep to kiss her awake. The same right, even in those days, was given to a woman who found a man asleep. In both cases, the wakened must also pay, as forfeit, to the awakener, a pair of gloves.

St. Valentine's Day is another occasion when the kiss is highly in order. Sir Walter Scott's *Fair Maid of Perth* has a full account of the osculatory practices on this holiday.

New Year's Day, however, is the heyday of

the promiscuous kissers. The antiquity of this custom is vouched for by Washington Irving, in his entertaining *Diedrich Knickerbocker's History of New York*. In the broad old days the good burghers of New Amsterdam, with their wives and daughters, dressed themselves in all their finery, and repaired to the governor's house, where the chief official went through the rite of kissing all the women a happy new year. The head usher would follow suit:

Embracing all the young vrouws, and giving every one of them that had good teeth and rosy lips a dozen hearty smacks, he departed, loaded with their kind wishes.

The same usher later was the first to require a kiss from all women who passed Kissing Bridge, on the old highway that led to the troubled water of Hellgate. The custom of New Year kissing in New York has survived with undiminished fervor to today. At proper Watch Parties, gathered to watch the old year out and the new year in, at the stroke of midnight it is expected of every man present that he shall offer the proper osculatory salute to every woman present. When the watch party takes place in one of the prominent restaurants of the Tenderloin district, the results are piquantly surprising. You may go away with the memory of the most entrancing kiss you have ever encountered, given you by an anonymous pair of lips whom you may never meet again. The custom is a good one, and is spreading to other parts of the country.

And Christmas brings in the mistletoe. The

old belief was that, unless a maiden was kissed under the mistletoe at Christmas, she would not be married during the ensuing year. Since married ladies may be kissed as well, it is not quite clear what will happen to them if they are kissed. The old Scandinavian tradition concerning the mistletoe dealt with the death of Balder, fairest of the gods. To assure his life, every tree had given its word that it would not kill him. Then Loki, the mischief-maker of the gods, made an arrow of mistletoe, which had given no oath, and gave it to blind Hoder to shoot, the fatal shot slaying the god. Balder was restored to life, and the mistletoe was given into the care of the goddess Friga, and was never to be an instrument of evil until it again touched the earth. Hence it is always suspended in air, growing as a parasite high in oak and other trees. Its use as a license to kiss dates to the Druids: a branch of the plant is suspended from the ceiling, and any one of the fair sex who, by accident or intention, passes beneath the plant, incurs the penalty of a hearty kiss from any man quick enough or audacious enough to take advantage of the opportunity. When natural mistletoe disappears—it is growing rarer now—you can rest assured that inventive man will popularize an artificial mistletoe, so that the lips of all maidens may be warmed by the kiss of Yuletide cheer.

Kissing Games and Sports.—If we had headed this section "kissing sports," it might have been misunderstood, somewhat like the alibi of the awkward dancer, to his fair partner

with the aggrieved toes: "You know, I'm a little stiff from polo."—"Is that so?" she replied icily. "I have several friends from there."

Kissing games are popular chiefly among children of the former generation, or those living in more backward sections of the country. The modern youngsters scorn them as childish, so engrossed are they in more mature kissing and petting parties. Yet such games as "Postoffice," "Drop the Handkerchief," "Pillow," and "In a Well" were tremendous favorites in my youth—among the girls, that is, who had already reached their adolescence; and were endured, and in precocious cases liked, by the boys who participated. "Post-office," in essence, consisted simply in girls and boys calling each other out, one at a time, for a kiss in the hall. "Drop the Handkerchief" had the wild thrill of the chase added—a chase in which the girls pretended very hard to try to get away, in order to yield more completely.

Many of the English folksongs, such as "The Farmer in the Dell," "King William Was King James's Son," and "The Needle's Eye" are used as ring-games for children, with kissing as an integral part. Certain "nice" children are forbidden to play these games, and thus get started in life with a false Victorian point of view. The games are pleasant enough for the very young; the more serious game of love will come in due time.

At old-fashioned country dances, in backwoods sections of America, the fiddlers who furnished the music used to break the monot-

only by a well-recognized squeaking of their fiddles, which was a signal for the couples to smack each other soundly. There have been outright "kissing bees" held in some of the western states; and even New England has been accused of holding "electric kissing parties," in which men and women rubbed their feet on the rugs until they were charged with electricity, and then kissed in the dark, to the amusement of bystanders who watched the sparks leap from lip to lip—if the accounts are to be believed. In any case, the good old husking bees are well authenticated, where the finding of a red ear of corn gave a young man the right to kiss every girl present; and gave a girl the right to call out her beau and kiss him before the crowd. So society blundered along toward giving its youth some practical knowledge of the opposite sex, to aid in right choice.

In modern England, bank holidays are the signal, in certain localities, for kissing sports quite as general and indiscriminate. The young men and women gathered there would form a rude ring, and then a girl—any girl—would suddenly go up to a young man, and slip a chip into his hand. She would at once run across the green as fast as she was able, or willing; the man thereupon would give chase, run her down, bring her back with his arm around her waist, and kiss her half a dozen times before the onlookers. At times the man gave the chip, and the girl did the chasing.

In Ireland there are occasional kissing festivals. On an Easter Monday not long ago

several hundred young people of the town and neighborhood of Potsferry, County Down, put on their best attire and gathered at a pleasant walk nearby. The sport consisted in the men's kissing the women, married or single, as often as they cared to. Hardly a single woman returned from the festival without having had at least a dozen good hearty smacks.

For the modern expression of this energy, the petting party, so popular among the flapper generation and young college circles, is the chief outlet. Only, the earlier kissing sports and games consisted only of kissing: and the petting party hardly starts with this. Every variety of kissing is indulged in by the accomplished petter: "necking" is the name given to the osculatory pyrotechnics. The petters stop somewhere short of the complete love experience: but they have usually come so close to the ultimate, that there is, to use Byron's phrase brought up to date, not *little* mystery left for the nuptial night, but none.

Kissing Devices.—The kiss sent by mail is the constant way that love letters are ended. A row of crosses or x's ordinarily represents the kisses; but the more astute miss has a better way. Lips well rouged, or rouged over cold cream, when pressed to the page of the letter, leave a perfect impression as a token to send to the lover. Kisses are easily transmitted over the telephone; and as easily over the radio.

The kiss for sweet charity's sake is well known. At many charity bazaars there is a kissing booth, where some attractive miss may

be bussed at so much the smack, all to put panties on the little heathens of Patagonia, or to provide cream for indigent kittens in the Bid-a-wee Home. During the Boer war, Mrs. Potter, the noted actress, sold a kiss to a Hindu for twenty pounds, or about a hundred dollars; devoting the money to the South African War fund. Grace George looked at the matter reasonably, when interviewed on the subject. She reminded the reporter that actresses were paid to allow actors to kiss them, where the play called for this display; and hence she saw no reason why the kiss could not be sold for patriotic reasons.

The stage kiss itself is often a mere feint, a pretended affair in which the actor and actress go through the motions of the kiss without touching lips. But it may be the very reverse, depending upon the actor and actress involved. There are many legends of the insatiable nature of certain actresses. A dramatic critic, writing in the old New York *Press*, said:

During the progress of her once famous kisses, Emma Abbott exhausted many tenors. After her first season in *Carmen*, Olga Nethersole bowled over her Don Jose, who began as a stalwart young Englishman, and ended as a mere shadow, and has since gone into consumption. In one of the Daly farces Ada Rehan and John Drew did some ecstatic kissing, and, if he had not removed to another management, our comedian might now be in heaven. It would appear that, in the theater at least, the ladies can stand more kisses than the men.

The critic goes on to point out that, in grand opera, expert kissers can command high sal-

aries. In his musical version of *Romeo and Juliet*, Gounod makes Romeo hang on Juliet's lips for an interminable number of bars of music. The opening scene in *Tannhauser* shows the tenor exhausted by a kissing bout, while the lovely Venus is wide awake and begging for more. Brunnhilde, in *Die Walküre*, is put to sleep by a kiss strong enough to make her sleep twenty years. Rip Van Winkle's kiss of the old bottle in the Catskills was not more efficacious in inducing slumber. And in Wagner's *Siegfried*, the hero fastens his lips to Brunnhilde's with such perpetual fervor that the orchestra, says the critic, plays enough music to stock a comic opera, before the kiss is ended.

As for the movie kiss, that is of two distinct kinds. The good girl, played by any doll-faced moron, kisses as demurely as Victoria herself. But the siren, the vampire! Here we have the ultimate in extended kissing. Certain states, like Pennsylvania, have found it necessary to limit the number of feet of film that a kiss can last—two hundred feet being the Pennsylvania maximum. I once kissed a girl continuously for seven miles, on the Twentieth Century Limited; and I am sure that the record is infinitely longer than that. When it is remembered that the purified movies permit no display of any of the play of love beyond the kiss, and that on the screen the kiss is potent enough to cause a girl to be a "ruined woman," and to appear in the next reel with twins or triplets, you can see why an osculation of the Theda Bara type is efficiently and comprehensively done.

Yet many a thrill is provided, in the darkened movie auditorium, when the handsome hero and the wily siren or lovely heroine tangle themselves up in a long embrace. You cannot help seeing yourself as one or the other of the kissers; and the experience is highly pleasurable. There is only one more delightful experience, and that is to be doing the kissing yourself.

VI

CELEBRATED KISSES

Kissing the Blarney Stone.—About 1446 Cormac McCarthy built the Castle of Blarney, in County Cork, Ireland. It is a fortification of immense strength, with walls more than eighteen feet thick. When besieged by the Lord-President, McCarthy temporized by promising to surrender the fort to an English garrison. Day after day his lordship looked for a fulfilment of the agreement; day after day the Irish chieftain temporized with honeyed promises, until at last the Englishman became the laughing-stock of the English court. From this comes the belief that "kissing the Blarney Stone" endows its kisser with a sweet, persuasive, and wheedling eloquence, which is in turn called blarney.

The real Blarney Stone, if you seek to kiss it, may be found only by allowing yourself to be lowered from the northern angle of the lofty castle for some score of feet. There you will find the stone with the Latin inscription:

CORMAC MC CARTHY FORTIS ME FIERIFECIT,

A. D. 1446

For those who are skeptical as to the aerial journey clinging to a rope, there is another stone on the summit, likewise called the real

Blarney Stone, bearing the date of 1703. The person who has kissed the stone is henceforth irresistible, when he pours his soft pleadings into the ears of his desired lady. Any trans-oceanic ticket ~~like~~ will quote the price of accommodations to County Cork and return.

A different kind of blarney is evidenced in the kiss for political purposes. You may remember that when the young ensign, Richmond Pearson Hobson, almost successfully sank a boat in Santiago harbor, in the attempt to bottle up the Spanish fleet, and thereafter returned to the United States, he went upon the lecture platform, and at the first lecture was offered a kiss by first one and then all of the young ladies present. His lecture series was a great success from the osculatory standpoint, at least.

The Congressman's kissing the babies of his constituency is a silent blarney that never fails to work. As far back as 1888, McComas of Maryland reduced baby-kissing to a fine art. After pensively gazing at the infant, the Congressman, as if overcome by an overpowering burst of emotion, would seize the infant to his bosom, hold it for a moment with head bowed reverentially, then bring his supple moustaches close to the little face, and—Smack!—the deed was done. In 1912, Congressman Huddleston of Alabama went the Marylander one better, by achieving the record of kissing every child in his Birmingham constituency. Thereafter, he might oppose the corporations, denounce conscription, vote against the war, do what he pleased—he had the babies and their mothers,

and they had their husbands: and he was sure of reelection as long as he desired the position. This is political blarney reduced to maximum efficiency with the least effort.

In England, political kissing depends for its blarney effect upon gold guineas in the mouth of the candidate, which he passes to the wives of the electors as he kisses them. A Norfolk member was expelled from the House for this ingenious method of vote-getting. On one memorable occasion, the Duchess of Devonshire gave a butcher a kiss in exchange for a vote. Many American candidates omit the kissing and let their campaign platform drip with blarney. This is as effective a vote-getter as the other way.

The Poets on Kissing.—Ella Wheeler Wilcox, the American "poetess of passion," uttered this truetalk about the kiss:

The lips that have been innocent of passion's kiss frequently ooze with gossip's poison.

Never to have been kissed is never to have lived. Perhaps it is a secret consciousness of this which renders the unknissed women of earth so bitter in their denunciation of the love-enlightened.

Shelley, who was no slouch as a lover, apostrophized the kiss thus:

See the mountains kiss high heaven,
And the waves clasp one another;
No sister flower would be forgiven
If it disdained its brother;

And the sunlight clasps the earth,
And the moonbeams kiss the sea:
What are all these kissings worth,
If thou kiss not me?

A Western congressman, not otherwise known as a poet, delivered this tribute to his favorite kiss—and who shall say that his dithyrambs lack the true poetic flair?

Talk about kissing! Go away! I have kissed in the North, I have kissed in the South; I have repeated the soul-stirring operation East and West; I have kissed in Texas and away down in Maine; I have kissed at Long Branch and at the Golden Gate—in fact, in every State in the Union; in every language and according to the manners and customs of every nation. I have kissed on the Mississippi and all its tributaries; but, young man, for good sound kissing, give me a full-fledged Caribou girl. When you feel the pegs drawn right through the soles of your feet, from your boots, that's kissing, that is.

This tribute to the efficacy of the Indian kiss is increased, when we recall that this was a custom taught to the red by the white. There is less poetry but more piety in the discussion of a kiss by the Rev. Sidney Smith, the witty divine, who said:

We are in favor of a certain amount of shyness when a kiss is proposed, but it should not be too long, and when the fair one gives it, let it be administered with a warmth and energy; let there be soul in it. If she closes her eyes and sighs immediately after it, the effect is greater. She should be careful not to slobber a kiss, but give it as a humming-bird runs his bill into a honey-suckle, deep but delicate. There is much virtue in a kiss, when well delivered. We have the memory of one we received in our youth which lasted us forty years, and we believe it will be one of the last things we shall think of when we die.

The poetry is more obvious in a poem like *Kisses Three*:

Kisses three he gave to me,
Kisses three—

One was in the restless dusk,
Soft and tentative and shy,
And I did not leave him. I,
Though his kiss was but a husk
Flung to starving lips, I waited,
Waited, while love hesitated,
Fearful it would pass us by.

Then he kissed me once again,
Prisoning my doubtful lips
In a long eclipse. . . .
And the night's vast rhythms beat
Over us with urgent power,
And each whitening, tardy hour
Lingered sweet, sweet. . . .

Once again he kissed me, now
In the pale and furtive dawn,
All distraught, his soul withdrawn;
And his slow lips chilled my brow.
Shall no other night be mine,
When the throbbing hours shine?

Kisses three he gave to me,
Kisses three—

The Octopus Kiss.—There are countless passionate kisses recorded in literature; the octopus kiss in Blasco Ibanez's *Mare Nostrum*, when the strange Freya kisses Captain Ulysses Ferragut in the Aquarium of Naples, is worth quoting:

"Ah!" sighed Freya, throwing herself back as though she were going to faint on Ulysses' breast.

He felt as though a monster of the same class as those in the tank, but much larger—a gigantic octopus from the oceanic depths—must have slipped treacherously behind him and was clutching him in one of its tentacles. He could feel the pressure of

its feelers around his waist, growing closer and more ferocious.

Freya was holding him captive with one of her arms. She had wound herself tightly around him and was clasping his waist with all her force, as though trying to break his vigorous body in two.

Then he saw the head of this woman approaching him with an aggressive swiftness as if she were going to bite him. . . . Her enlarged eyes, tearful and misty, appeared to be very far off. Perhaps she was not even looking at him. . . . Her trembling mouth, bluish with emotion, a round and protruding mouth like an absorbing duct, was seeking the sailor's mouth, taking possession of it and devouring it with her lips.

It was the kiss of a cupping-glass, long, dominating, painful. Ulysses realized that he had never before been kissed in this way. The water from that mouth, surging across her row of teeth, discharged itself in his like swift poison. A shudder unfamiliar until then ran the entire length of his back, making him close his eyes.

He felt as if all his interior had turned to liquid. He had a presentiment that his life was going to date from this kiss, that with it was going to begin a new existence, that he would never be able to free himself from these deadly and caressing lips with their faint savor of cinnamon, of incense, of Asiatic forests haunted with sensuousness and intrigue.

And he let himself be dragged down by the caress of this wild beast, with thought lost and body inert and resigned, like a castaway who descends and descends the infinite strata of the abyss without ever reaching bottom.

So far, this octopus kiss is entered for the championship vampire kiss in all literature.

The Kiss of Death.—The kisses of Joab to Amasa, and of Judas to Jesus, stand forever exemplar of kisses of treachery. There is a romantic story of the great Irish rebellion,

concerning an imprisoned patriot under sentence of death, and his faithful sweetheart. The girl secured permission from the prison authorities to kiss the condemned man good-bye. The kiss was given and received: and, at the moment of kissing, the clever girl passed to her lover, from her mouth to his, a memorandum containing full information of how to escape. Acting on the plan thus revealed, he made good his escape. May every kiss be as fortune-bringing!

There are other kisses which bring, not freedom, but death. Lucian tells the story of the death of Demosthenes. When the Greek had fallen into the hands of Antipater, he asked permission to enter a certain temple in the neighborhood, for a moment of worship. This was granted. As he entered the temple, he carried his hand to his mouth—the old gesture that Job referred to in moon and sun worship, and a common gesture in the Orient and the Mediterranean world. The guards thought that he was merely kissing his hand, as an act of religion. But in his hand he held poison, and in this kiss of death he found his release. Cleopatra, when the kisses of Pompey, Caesar and Antony had staled on her lips, when her castles of hope and aspiration lay in ruins about her, and when the coldly cynical Octavius paid no attention to her charms, placed the asp, the poisonous mud-viper of the Nile, at her breast, and let the snake's kiss give her freedom.

Then there was the tremendous climax of the Haymarket riots in Chicago. Seven an-

archists, including Louis Lingg, were arrested for the protest bomb, flung upon unarmed strikers in answer to the wild charge of the police. Lingg had his sweetheart bring the materials for a final bomb to him in the jail. Some of these materials she smuggled in orange skins, disguised as fruits; some she may have given him in the midst of a kiss. The stern young anarchist—he was only twenty at the time—made four bombs, for the four leaders to use in taking their own lives, to show to the public at large that, if they held the lives of others cheap in their fanatic devotion to an ideal, they held their own lives more cheaply yet. Three of these bombs were discovered: somehow Lingg retained the fourth. He was not willing to injure his jailer, and sent the man, by a pretended excuse, to the far corner of the jail corridor. Then, taking the bomb in his own mouth, he closed his teeth upon it, and so died.

The Kiss and Love.—The tactile, touch, or lip kiss originated from the mother's kiss of her infant, an outgrowth of maternal licking of her young. It grew slowly to express affection between the sexes. A second meaning grew up—to express subjection: somehow affection was alchemized into subjection. Usually one of the parties to a love relationship takes an attitude of subjection to the other—an attitude theoretically far from ideal, but humanly comfortable. For an expression of utter humility, to man or the god man imagined, appropriate gestures were few: bowing the head to the ground or kissing with head

bent being the chief ones: The mouth, containing the organs of taste and in part of breath, stands for the chief outer gate to the man's life and whatever of soul he has: if it kisses in humility its lord, or his hand, or his foot, there is utter symbolic subjection. Kisses of courtesy, as between men and men, grew out of formal expressions of medieval subjection.

The kiss, as a token of subjection, has declined among us. The reason is not too obscure: men and women today are increasingly growing to the point where they realize that they should not stand in subjection to any human lord or any fantasied deity, where they know that they can look the whole world in the face with level eyes. When, to the decline of servility, we add the ever-present fact of the danger of infection from promiscuous kissing of lips or hands or great toes, and when we see certain religious shrines taking no chances, but wiping the relic with some germicide between kisses, it is not hard to see why merely formal kissing is departing.

The kiss to express love is another thing. If we are to have physical love continued on the earth, this reaches its crest in a complete commingling and interweaving of the bodies of the loving ones, as well as a commingling and interweaving of their spirits. The final rapture lies elsewhere: but, after hand has touched hand, the next step is for lip to touch lip. This is the prelude to the fuller loving to follow later. When a man kisses a woman, it is an offer of his love, physically at least, in

its completeness: an offer not hard for the average male to make. When a woman accepts a man's kiss, not passively, but actively, or when she kisses him, this is an acceptance of the man's offer, or an offer on her part of the ultimate intimacy.

Human relationships, in practice, provide little enough opportunity to know members of the opposite sex, before some religious or civil ceremony has bound the man and woman into a relationship too often irksome and tedious, and intricate and expensive to end. Some sort of trial love is needed, to prevent wreckage of the relationship later. As long as society makes no regular provision for this, the kiss as a sort of test of compatibility, especially physical compatibility, has its value. The man or woman, especially the young man or woman, would then kiss until the intangible emotion following some especial kiss was so powerful that the people concerned felt brave enough to dare the uncertain dangers of mating: or until they felt irresistibly drawn into mating.

The ultimate result of the kiss is shown from two angles in two of Shakespeare's sonnets. In the first, he gives the dark picture of physical desire, or lust, in action, which he says is the expenditure of spirit in a shameful waste:

The expense of spirit in a waste of shame
Is lust in action; and, till action, lust
Is perjur'd, murderous, bloody, full of blame,
Savage, extreme, rude, cruel, not to trust,
Enjoy'd no sooner but despised straight,
Past reason hunted, and no sooner had
Past reason hated, as a swallow'd bait

On purpose laid to make the taker mad;
Mad in pursuit and in possession so;
Had, having, and in quest to have, extreme;
A bliss in proof, and prov'd, a very woe;
Before, a joy propos'd; behind, a dream.
All this the world well knows; yet none knows
 well
To shun the heaven that leads men to this hell.

The other side of the picture—and the usual truth lies somewhere between them—is far brighter:

Let me not to the marriage of true minds
Admit impediments. Love is not love
Which alters when it alteration finds,
Or bends with the remover to remove.
O, no! It is an ever-fixed mark
That looks on tempests and is never shaken;
It is a star to every wandering bark,
Whose worth's unknown, although his height be
 taken.
Love's not Time's fool, though rosy lips and cheeks
Within his bending sickle's compass come;
Love alters not with his brief hours and weeks,
But bears it out even to the edge of doom.
If this be error and upon me prov'd,
I never writ, nor no man ever lov'd.

Your kiss may lead to the first drab ending, to the second over-idealistic Eden, or to some pleasant place between. In any case, to remain unkissing and unkissed is to remain something less than man or woman. Your aim should rather be to blossom to your full stature in the gardens of mankind: and a mouth was made for more than words.

Books of Love and Passion:

- 344 Don Juan; A Passion in the Desert. Balzac.
 675 Sarah Bernhardt's Philosophy of Love
 66 Crimes of the Borgias. Balzac
 319 Comtesse de Sainte-Geran. Alexander Dumas
 178 One of Cleopatra's Nights. Theophile Gautier
 345 Clarimonde: A Supernatural Passion. Theophile Gautier
 230 Fleece of Gold. Theophile Gautier
 540 Stories of Many Hues. Remy de Gourmont
 377 A Night in the Luxembourg. Remy de Gourmont
 541 Brightly Colored Tales. Remy de Gourmont
 582 Philosophic Nights in Paris. Remy de Gourmont
 379 The King Enjoys Himself (Drama). Victor Hugo
 21 Carmen. Prosper Merimee
 314 Short Stories. Alphonse Daudet
 196 The Marquis. George Sand
 87 Love: An Essay. Montaigne
 85 The Attack on the Mill. Emile Zola
 888 Memoirs of Madame de Stael
 871 Love Letters of Abelard and Heloise
 438-439 Secret Memoirs of Madame de Pompadour (2 vols.)
 355 Auccassin and Nicolette: Famous French Lovers. Andrew Lang
 107 Dream Woman; Yellow Tiger. Wilkie Collins
 595 The Happy Hypocrite. Max Beerbohm
 285 Euphorian in Texas. George Moore
 307 A Tillyloss Scandal. J. M. Barrie
